In Britain runes appear on a few Jutish brooches and other objects from Kent. There are 7th century runes on the Collingham stone in Yorkshire and the Bewcastle cross in Cumberland; the Ruthwell cross in Dumfriesshire is somewhat later. The earliest English coin, a gold solidus attributed to 460, bears runic characters.

-RUNNING. Running to-day is sport, pure and simple, and may be sub-divided into track-running and cross-country running.

Track-running may be sub-divided into short, middle, and long distance racing. Short distance racing is popularly known as sprinting. A sprint may occur at any time during a race longer than short distance.

Middle distance running, as the name implies, approximates closely at its beginning to short distance and at its maximum length to long distance. Roughly speaking, middle distance running begins with the half-mile race, and concludes short of three miles.

Long distance races, 3 m. and upwards, are run on the same principle, save that the first strings of the opposing teams, for some two-thirds of the distance, often keep a considerable distance behind the leaders. Sound judgment and mutual understanding are required, as otherwise the second string of one or other of the teams may obtain such an advantage that it cannot be wrested from him. For long distance racing the pace for the most part of the distance should be a long, natural, springy stride. Beyond 10 m. running approximates more and more closely to pedestrianism.

The following are some of the leading running records:

Professional	
100 yds.	J. Donaldson (1910), 9½ secs.
120 yds.	J. Donaldson (1909), 11½ secs.
220 yds.	L. McLachlan (1902), 21½ secs.
440 yds.	B. R. Day (1907), 47½ secs.
½ m.	F. Hewitt (1871), 1 m. 53½ secs.
1 m.	W. G. George (1886), 4 m. 12½ secs.
10 m.	G. McCrae (1918), 50 m. 55 secs.
Amateur	
100 yds.	A. F. Duffy (1902), 9½ secs.
	D. J. Kelly (1906), 10½ secs.
	H. P. Drew (1914), 11½ secs.
	C. W. Paddock (1921), 12½ secs.
	C. Coafee (1922), 13½ secs.
	C. Bowman (1927), 14½ secs.
120 yds.	R. E. Walker (1908), 11½ secs.
	H. P. Drew (1914), 12½ secs.
220 yds.	R. Locke (1927), 20½ secs.
440 yds.	J. E. Meredith (1916), 47½ secs.
½ m.	O. Peltzer (1926), 1 m. 51½ secs.
1 m.	P. Nurmi (1923), 4 m. 10½ secs.
6 m.	P. Nurmi (1930), 29 m. 32½ secs.
10 m.	A. Shrubbs (1904), 50 m. 40½ secs.

RUNNIMEDE or **RUNNYMEDE.** Meadow along the S. bank of the Thames, near Egbam,

Rune. Stone found at Kallerup, Denmark, inscribed The Stone of Hurnburg, son of Svitha. It dates from c. 800

20 m. from London. There, or on Charter Island in the stream, King John signed Magna Carta, June 15, 1215. It was kept by the crown when adjacent portions of the Windsor estate, in the parish of Egbam, were sold in 1921, and now belongs to the nation. See John: Magna Carta; also illus. p. 1178.

Runnimeade Magan Carta House, built on the supposed site of the signing of the charter. See p. 1177

RUPEE (Skt. rupya, silver). Indian silver coin, the monetary unit of British India. Its nominal value is 1s 4d. It was first coined in 1542 by the emperor Sher Shah, and passes as current in Afghanistan, Seychelles, Mauritius, etc. Fifteen rupees equal £1 sterling, and the coin is divided into 16 annas. In British East Africa the rupee is the standard coin. A lac of rupees is written 1,00,000 rupees, a crore 1,00,00,000 rupees. See Lac.

Rupee. Obverse and reverse of the Indian silver coin, two-thirds actual size

RUPERT (1619-82). German prince. Son of the Elector Palatine, Frederick V, by Elizabeth, daughter of James I of England, he was born at Prague, Dec. 17, 1619. He fought in the Thirty Years' War on the Protestant side and came to England in 1642. Rupert fought at Worcester, Edgehill, Marston Moor, and Naseby, proving himself a dashing if somewhat erratic leader of cavalry. He commanded the royalist fleet from 1648 until 1650, when most of his ships were destroyed by Blake, off Malaga. After the Restoration he saw further naval service against the Dutch. Prince Rupert died Nov. 29, 1682.

Prince Rupert, Royalist soldier. After Van Dyck

RUPERT (b. 1869). Prince of Bavaria. The eldest son of Louis III, king of Bavaria, and the archduchess, Maria Theresa of Austria-Este.

he was born at Munich, May 18, 1869. He entered the German army as a subaltern in a Bavarian regiment in 1886. In 1904 he became a general and commander of the 1st Bavarian army corps. Rupert commanded the 6th German army and held other commands on the Western front, notably in the Ypres area in 1914-15. In 1917 he held the front from the Oise to the sea, and in 1918 he commanded a group of armies. To the British, Rupert is interesting as a descendant of Charles I. and, according to legitimist ideas, the rightful British sovereign as head of the house of Stewart. In Oct., 1921, on the death of his father, he became the head of the family. See Bavaria; Jacobites; Stewart.

RUPERT'S LAND. Former name for the part of Canada around Hudson Bay. Named after Prince Rupert, one of the founders of the Hudson's Bay Company, it was sold in 1869 to the Dominion, and is now divided among the provinces of Quebec, Ontario, and Manitoba and the North-West Territories. One of Canada's Church of England archbishops is known as the archbishop of Rupert's Land.

The river Rupert flows through Quebec to James Bay. Its length is 380 m. See Canada.

RUPTURE (Lat. ruptura, breaking). In medicine the intrusion of an organ or tissue through an abnormal opening. It is also used for breaking or bursting, e.g. rupture of a blood vessel or aneurism. See Hernia.

RURAL DEAN. Ecclesiastical functionary. Rural deans reported to the bishop on the behaviour of clergy and laity and the condition of church fabrics, and attended the episcopal synods as representatives of the rest of the clergy in their respective deaneries. After a time their duties were virtually absorbed by the archdeacons; but during the 19th century the office again came into prominence.

RUSH (Juncus). Large genus of perennial and a few annual herbs of the order Juncaceae. Natives chiefly of the temperate and cold regions, they have smooth, rounded stems either hollow or filled with white pith. The leaves are flat or rounded like the stems, or reduced to sheaths closely pressed to the stems. The green or brown flowers are very small, but rendered conspicuous by being clustered at the ends or sides of the stems. They grow chiefly on wet soils and sandy sea-shores. The pith was formerly used as wicks for rushlights; and the flattened stems are plaited into mats.

Rush. Leaves and flowers of sea-rush

RUSHDEN. Urban dist. of Northamptonshire. It is 4 m. from Wellingborough on the L.M.S. Rly. S. Mary's church is a fine building, mainly in the Decorated style. Boots and shoes are manufactured. Pop. 13,511.

RUSH NUT (Cyperus esculentus). Perennial sedge of the order Cyperaceae, native of S. Europe. It has a tuberous root-stock and grass-like leaves. The greenish flowers are clustered. The tubers are used as food in S. Europe, and when roasted are said to form a substitute for coffee.

RUSKIN, JOHN (1819-1900). British author. Born in London, Feb. 8, 1819, the son of a wine merchant, he was educated privately and at Christ Church, Oxford, where he won the Newdigate prize for English verse. His interest in art, fostered by travel in Italy, first showed itself in 1841 in an essay on Turner. The next fifteen years or so was occupied with writing the many volumes of Modern Painters. The Seven Lamps of Architecture, and The Stones of Venice. There was a distinctly ethical note in Ruskin's writings on the subject of art.

John Ruskin, British author. Fred Holtzer

Following this line of thought, Ruskin came forward as a social reformer. In 1860 Until this Last, in which he attacked the materialist basis of political economy, appeared in The Cornhill Magazine. In Time and Tide he upheld the importance "of honesty of work and honesty of exchange," and in

Sesame and Lilies he deplored the influence of industrialism upon art and morality: in his opinion it was wholly bad. The Crown of Wild Olive also denounced the evil tendencies of an industrial age. Fors Clavigera, 1871-84, consists of nearly a hundred letters addressed "to the labourers and workmen of Great

Britain." He followed it in 1885-89 with the autobiographical Praeterita, containing the valuable sketch of his religious development. In 1869 Ruskin was elected Slade professor of art at Oxford. He held the post until 1879, and again during 1883-84.

Among the episodes of his chequered life mention should be made of his unhappy marriage, in 1848, with Euphemia Gray, who obtained a decree of nullity in 1855 and married Sir J. E. Millais. In later years his mind was clouded, and he lived at Brantwood, Coniston, where he died on Jan. 20, 1900.

RUSKIN COLLEGE. In Walton Street, Oxford, this was founded in 1899 to enable working men and women to train for public life.

Ruskin College at Ruskin, Florida, U.S.A., was established there in 1907, having been removed from Glen Ellyn, Illinois.

RUSSELL. Name of a famous English family. Early in the 15th century a certain Henry Russell, a merchant, represented Weymouth in Parliament. His grandson, John Russell, married an heiress, and in 1539 was made a baron. His wife brought him the estate of Chenies, in Buckinghamshire, and on the dissolution of the monasteries he secured large estates in London and in the counties of Bedford, Cambridge, and Devon. In 1550 he was made earl of Bedford. Branches of the family hold the titles of Earl Russell and Baron Amphil. See Bedford, Duke of.

RUSSELL, JOHN RUSSELL, 1st EARL (1792-1878). British statesman, known as Lord John Russell. A younger son of the 6th duke

Earl Russell, British statesman

of Bedford, he was born Aug. 18, 1792. In 1813 he entered the House of Commons as M.P. for the family borough of Tavistock. From 1820-26 he represented Huntingdonshire, after which he was, in turn, member for Bandon Bridge, Tavistock, Devonshire, Stroud, and the city of London.

In 1830 Russell joined the Whig ministry as paymaster-general and, although not in the cabinet until June, 1831, he was closely associated with the passing of the Reform Act of 1832, which he introduced. In 1835 he became home secretary and leader of the House of Commons, and he remained in office until the fall of the Whigs in 1841, having been colonial secretary since 1839. In 1845 Russell declared for free trade, and when, in June, 1846, Peel resigned, he became premier, remaining so until Feb., 1852. Of the coalition ministry under Lord Aberdeen, Russell was a member, being foreign secretary for a year and leader of the House of Commons, 1852-55. In 1859 he took the post of foreign secretary under Palmerston, and in 1861 he was made an earl. He succeeded Palmerston as prime minister in Oct., 1865, but resigned in June, 1866, on the failure of his reform bill. He died at Richmond, May 28, 1878.

Russell's title passed to his grandson, John Francis Stanley Russell (b. 1865). The son of Viscount Amberley, he became an engineer and a barrister, and was prominent through his efforts to alter the divorce law, and was also known as a motorist. He joined the labour party, and in 1929 was appointed parliamentary secretary to the ministry of transport. The earl's third wife was Countess Armin (q.v.).

RUSSELL OF KILLOWEN, CHARLES RUSSELL, BARON (1832-1900). British lawyer. Born of Roman Catholic parents at Newry, Nov. 10, 1832, he became a solicitor in 1854. In 1859 he was called to the English bar, practising first in Liverpool, where his ability speedily brought him to the front. He was equally successful in London, and in 1872 became

a Q.C. In 1880 he entered Parliament as Liberal M.P. for Dundalk, and in 1885 was returned for S. Hackney. In 1886 Russell was appointed attorney-general, a post he held again 1892-94. In 1894 he was made a lord of appeal and a life peer, and then lord chief justice. He died Aug. 10, 1900, leaving five sons.

Russell was one of the greatest British advocates and judges of the 19th century. His greatest forensic feat was, perhaps, his appearance for the Irish leader before the Parnell commission. He defended Mrs. Maybrick in 1889. See Maybrick Case.

RUSSELL, LORD WILLIAM (1639-83). English politician. He was born Sept. 29, 1639, the third son of the first duke of Bedford, and was educated privately and at Cambridge. After the Restoration he became member of Parliament for Tavistock, and in 1679 for Bedfordshire. In 1683 he was arrested as participant in the Rye House Plot (q.v.), and, on the flimsiest evidence, found guilty of treason and executed in Lincoln's Inn Fields, London, July 21, 1683. A tablet marks the place where Russell was beheaded.

RUSSELL, BERTRAND ARTHUR WILLIAM, (b. 1872). British philosopher and mathematician. Born at Trelleck, Monmouth, May 18, 1872, the second son of Viscount Amberley, he was educated at Trinity College, Cambridge, where he became lecturer and fellow. He rapidly acquired a wide reputation for his criticisms of the philosophy of H. L. Bergson. One of the leaders of modern symbolic or mathematical logic, Russell wrote many important works on mathematics, philosophy, and sociology. Among his works are *Philosophical Essays*, 1910; *Principles of Social Reconstruction*, 1916; *The Analysis of Matter*, 1927, and *Sceptical Essays*, 1928.

RUSSELL, GEORGE WILLIAM (b. 1867). Irish poet and economist, best known by his pen name of A.E. Born at Lurgan, co. Armagh, April 10, 1867, he spent his early years in Dublin, entering the School of Art in 1883. He worked as an accountant, meanwhile painting and writing lyrical poems of great beauty, and worked with Sir Horace Plunkett in establishing the Irish Agricultural Organization Society. He was also a leader in the Irish literary revival and a pioneer of the Abbey Theatre, Dublin, where his play *Deirdre* was produced in 1902.

RUSSELL, WILLIAM CLARK (1844-1911). British novelist. Born in New York, Feb. 24, 1844, a son of Henry Russell (1812-1900), composer of *Cheer, Boys, Cheer*, he spent seven years at sea, in the British merchant service, and retiring in 1866, took to journalism. In 1874 he produced his first novel, *John Houldsworth*, Chief Mate, the forerunner of some 50 others, among which are *The Wreck of the Grosvenor*, *An Ocean Free Lance*, *Jack's Courtship*, and *List, Ye Landsmen*. He died Nov. 8, 1911.

RUSSELL, SIR WILLIAM HOWARD (1821-1907). British war correspondent. Born at Lily Vale, co. Dublin, March 28, 1821, and

educated at Trinity College, Dublin, he became attached to *The Times* as a reporter, and on the outbreak of the Crimean War was sent on behalf of the paper to the East. His vivid dispatches drew attention to the disgraceful mismanagement of the commissariat and the medical service, and contributed largely to the fall of the Aberdeen ministry. Russell's further experience as a war correspondent included the *Indian Mutiny* and the American Civil War; the Austro-Prussian War of 1866; the Franco-Prussian War of 1870; and the Zulu War, 1879. Knighted in 1895, he died Feb. 10, 1907.

RUSSIA. Country of Europe and Asia, since 1917 under Bolshevik or Soviet rule. Moscow is the capital. Its area is 9,252,000 sq. m. Pop. 147,000,000.

This vast area, covering one-seventh of the world's land area, is controlled by the Union of Soviet Republics. The Union consists of seven republics, or groups of republics, each with its own soviet. The four which formed the union in 1922 are Russia, which includes much of Asiatic Russia and is far the largest of all, Ukraine, White Russia, and Transcaucasia. Three others Turcoman, Uzbekistan, and Tajikistan, joined later. Attached to Russia are the small republics of Bashkir, Chuvash, Crimea, Daghestan, Karelia, Kazak, Kirgiz, Yakutsk and several others. The Transcaucasian republic consists of Armenia, Azerbaijan, and Georgia.

The supreme authority is exercised by the congress of soviets, which consists of representatives of the local soviets on the basis of one deputy for every 25,000 electors, and of representatives of provincial congresses on the basis of one for every 125,000. The congress elects an executive committee of about 400 members, and this constitutes the legislative, administrative, and controlling body. The actual direction of affairs is in the hands of a council of commissaries, 12 or 14 in number. These are the president and vice-president and other members who are the heads of the various departments of state. All citizens over 18 years of age may vote at elections, except only those who employ others for profit, those who live on unearned income, priests and monks of all religions, and certain other classes.

HISTORY. In 1547 Ivan took the title of tsar of all the Russias and began the conquest of Siberia. Peter the Great founded St. Petersburg and introduced western ideas. Under Catherine II Russia became a great power, extending her European territories by annexing much of Poland and the Crimea. In the 19th century Alexander II (1855-1881) attempted to liberalise political institutions by freeing the serfs and establishing a new judicial procedure.

Revolutionary movements, due mainly to the ineptitude and corruption of tsarist bureaucracy, spread widely after the Russo-Japanese War (1904-05). In March, 1917, the Russian nation, under the influence of the suffering and official corruption revealed in the Great War destroyed Tsarism and established a socialist republic. This made way in November, 1917, for a Bolshevik Government under Nikolai Lenin. The Bolsheviks made peace with Germany, sacrificing great territories, and waged successful war against the tsarist armies, defeating them in sections, despite liberal aid given by the Allied Powers.

Nicholas and his family were murdered in a cellar in Ekaterinburg.

The Bolsheviks established a working-class republic, disestablished and disendowed the Church, abolished all private property, made private trade illegal, and deprived all, except members of the working classes, of any rights whatever. They arrested, imprisoned, or secretly exiled large numbers of men and women of the middle and upper classes. Factories were placed under the control of the workers, and attempts made to establish a system of harter between town and country which would eventually abolish the use of money. They simultaneously launched a revolutionary campaign in morals, openly fighting religion and aiming to substitute group and institutional for family life. They also organized the International Communist Party to promote world revolution.

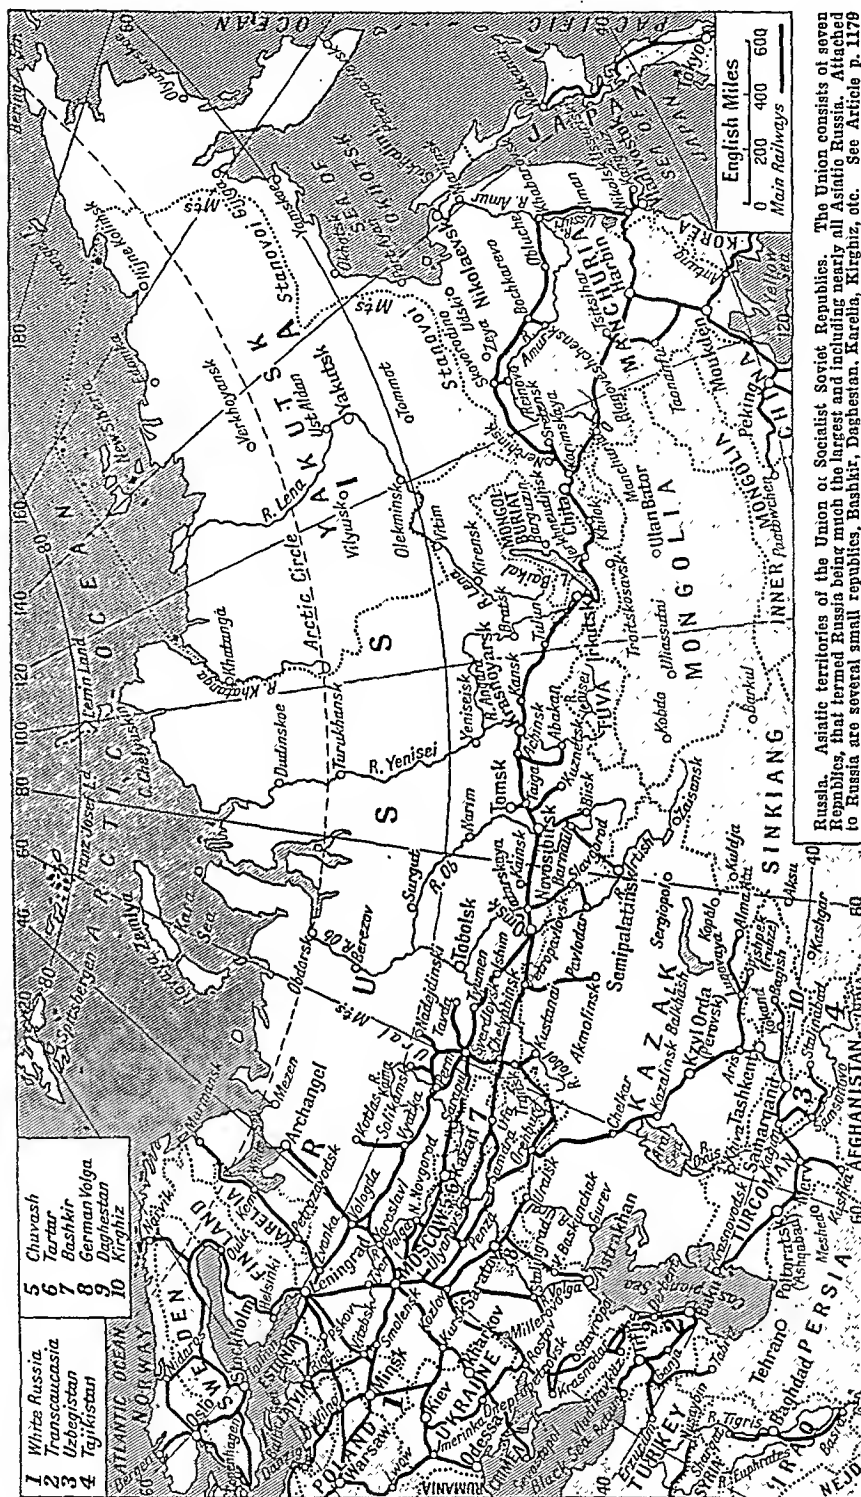

Harshness and inexperience in administration caused widespread suffering and distress, which culminated in a severe famine in 1921. Lenin persuaded his followers to modify Bolshevism by permitting again small private ownership and some private trading under the phrase "new economic policy." Lenin's illness and death in 1924 enabled the extreme Bolsheviks to reassert themselves under Stalin. They instituted a severe persecution of religion, again suppressed most private trading, and attempted to destroy completely private farming by shooting or sending into exile the more prosperous

Russia. 1. Cabdriver clad to resist cold. 2. Farm hands with out-of-date implements. 3. Peasant girl from Perm

farmers. Simultaneously they launched an enormous scheme of industrial expansion, known as the Five Years' Plan, aiming to make Russia a leading manufacturing nation. Stalin's policy again brought Russia to widespread distress. Peasants hid their crops and destroyed their cattle, and hunger and a shortage of all manufactured goods were general in the cities. The Bolsheviks controlled absolutely the press and public meetings and allowed no freedom of criticism. See Bolshevism; map, p. 1180; Ukraine, etc.

RUSSIAN BALLET. The first phase of the serious development of ballet in Russia dates from the 18th century, but at first the imperial ballet was completely under the influence of France and Italy. It was not until well on in the 19th century that the famous ballet master Marius Petipa set himself to reorganize the imperial ballet on more national lines. Training schools were founded in connexion with all the state opera houses, and in the later part of the century the art of ballet was more brilliantly alive in Russia than in any other European country. In 1908 the impresario Serge Diaghilev founded the great touring company which for twenty years had an extraordinary vogue in France, Germany, Spain, and England.

RUSSO-JAPANESE WAR. Struggle carried on in Manchuria in 1904-05. It was due primarily to the refusal of Russia to restore to China Port Arthur, which she had seized. War was declared by Japan on Feb. 6, 1904. Having gained command of the sea, the Japanese armies were landed and, after some initial victories, began the siege of Port Arthur in June. The Russian attempts to relieve the fortress led to some desperate battles, but these were of no avail, and on Jan. 2, 1905, it surrendered, having cost Japan 100,000 casualties. The last major engagement was fought at Mukden in Feb.-

March, 1905, the result of some terrible fighting being to force the Russians from their prepared positions. At sea the Russian Pacific fleets were destroyed, and in May, 1905, the Baltic fleet, which had come almost round the world to assist, was annihilated in Tsushima Strait.

The tsar accepted the mediation of the U.S.A., peace negotiations were opened at Portsmouth, U.S.A., and on Sept. 5, 1905, a treaty was signed. Russia ceded half Sakhalin, the Kwantung Peninsula, and Port Arthur, evacuated Manchuria, and recognized Japan's sphere of influence in Korea.

RUST. Reddish product of the oxidation of iron in water or in the atmosphere. Chemically it is hydrated ferric oxide. There is doubt as to the precise method of its formation. Rusting is not a direct oxidation; iron will not rust in water, even if oxygen be present, if the water be free from acid; but the presence of a small proportion even of such an acid as carbonic will cause rusting. In this case it is supposed that the carbonic acid acts as a catalyst, another theory regarding the action to be electrolytic. Rusting in the atmosphere is brought about by the combined action of air, moisture, and carbonic acid, which the atmosphere always contains.

Rustless or stainless steel contains a proportion of chromium, which renders the metal incombustible. See Steel.

RUSTENBURG. Town of the Transvaal. It is 60 m. by rail from Pretoria, standing under the Magaliesberg Mts., which form an extensive half-circle round the town. The climate is hot, and the town is a centre for tobacco growing. Pop. 1,733 whites.

RUST FUNGI (Uredineae). Order of plant parasites. An example is the rust of wheat. The vegetative portion exists as threads between the cells of the victim, and branches enter the cells and feed upon their contents. They produce several kinds of fructification, which burst through the cuticle. The spores produced on the barberry will not germinate on the barberry, but they will do so on wheat, barley, and rye, when they produce a characteristic rust. See Fungus.

Rust Fungi. Hawthorn twig attacked by *Raestelia lacerata*

RUTH. Moabites, whose story is given in the eighth book of the O.T. known as the Book of Ruth. Daughter-in-law of Naomi, and wife, first of Mahlon, and then of Boaz, she is specially remembered for the disinterested love which displayed itself in her resolute refusal to forsake her mother-in-law in the latter's distress. The words (Ruth 1, 16-17) "Intreat me not to leave thee," etc., are among the most beautiful in all literature. The action is placed in the period of the Judges, and most of the narrative is written in a pure and early style of Hebrew.

RUTHENES. Term in common use for the Ukrainians of the former Austro-Hungarian monarchy and the Polish district of Kholm. The great majority form a Uniat Church. The total Ruthenian pop. is 3,800,000. In a great part of Galicia the Ruthenes form the mass of the labouring population, and have long been dominated by the Polish landed gentry.

The Ruthenian Church, the largest of all Uniat Churches, submitted to Rome at the synod of Brest-Litovsk in 1596, and was extended in 1700 and 1702. It has an archbishop at Lemberg, and uses the old Slavonic liturgy. The church was suppressed in Russian Poland by the Russian government in 1873.

Ruthenia, named after them, is an autonomous dist. of Czechoslovakia. Formerly the N.E. corner of Hungary, mainly inhabited by Ruthenes, it lies between the Tisa (Theiss) and the Forest Carpathians; the boundary on the W. is the Ung river. Its area is 4,886 sq. m. Pop. 702,846.

RUTHENIUM. One of the rare metallic elements of the platinum group. Its symbol is Ru; atomic weight, 101.7; atomic number, 44; melting point, 2,500° C. It is hard, brittle, and one of the least fusible of metals, but the most easily oxidized of the group. The metal is a powerful catalyst, absorbing gases readily.

It occurs in platinum ores of the Urals, associated with osmium and iridium ores, and in laurite, and was first isolated in 1845.

RUTHERFORD, SIR ERNEST (b. 1871). British physicist. Born at Nelson, New Zealand, Aug. 30, 1871, he was educated at Canterbury College, Christchurch, New Zealand University, and Trinity College, Cambridge. He was Macdonald professor of physics at McGill University, Montreal, 1898-1907, professor of physics at Manchester University, 1907-19, and became Cavendish professor of physics and director of the Cavendish Laboratory at Cambridge in 1919.

Rutherford carried out a series of brilliant researches on the ultimate constitution of matter which placed him in the front rank of the world's physicists. For his work on radioactivity he received many honours, including the Nobel prize for chemistry, 1908. Knighted in 1914, he was created O.M., 1925. His works include Radioactivity, 1904; Radioactive Transformations, 1906; Radioactive Substances and their Radiations, 1913.

RUTHERFORD, MARK. Pseudonym of the British novelist William Hale White (1831-1913). Born at Bedford, he was educated at theological colleges at Chesham and Hampstead for the Congregational ministry, but abandoned that career and earned a livelihood by writing. Later he became assistant director of contracts under the admiralty. His early novels, *The Autobiography of Mark Rutherford*, 1881; *Mark Rutherford's Deliverance*, 1885; and *The Revolution in Tanner's Lane*, 1887, though neglected at first, gradually secured recognition for their handling of moral and other problems. He died March 14, 1913.

RUTHERGLEN. Burgh of Lanarkshire, Scotland. It stands on the left bank of the Clyde, 2 m. from Glasgow, on the L.M.S. Rly. The industries include the making of chemicals, cotton, paper, pottery, and rope, also dyeing and shipbuilding. Pop. 24,744. Pron. Ruglenn. Rutherford in Victoria is 170 m. by rail N.E. of Melbourne, close to the Murray. It is an important road junction. Pop. 2,400.

RUTHIN or **RUTHYN.** Borough and market town of Denbighshire, Wales. It stands on the Clwyd, 8 m. from Denbigh, on the L.M.S. Rly. St. Peter's Church dates from the 14th century, and was once collegiate. The grammar school was founded in 1598. The town grew up around a castle built by the English in the 13th century and known as the Red Castle (Welsh, rhudd, din). Henry VII made it a corporate town, and the family of de Grey, who held the title of Grey de Ruthyn, was connected with it. Market days, Mon. and first Tues. in month. Pop. 2,767.

RUTHVEN. Name of a noble Scottish family. Sir William Ruthven was made a peer in 1488. His great-grandson Patrick, the 3rd Lord Ruthven (c. 1520-66), was a leader of the party that slew Rizzio, and he fled to England to escape Mary's vengeance. His son William (c. 1541-84), the 4th lord, was made earl of Gowrie. He was the earl who planned the raid of Ruthven, in which the young James VI was taken from Perth to Ruthven Castle, in 1581.

In 1651 Charles II granted the title of Lord Ruthven to Sir Thomas Ruthven, grandson of the 2nd Lord Ruthven, from whom, through several female descendants, the title has come to the present holder, who belongs to the family of Hore-Ruthven. Pron. Rivven.

RUTHWELL. Village of Dumfriesshire, Scotland. It is 5 m. from Annan, with a station on the L.M.S. Rly. It is famous because of its cross. Dating from the 7th century, this has carvings of the Crucifixion on the front and back and some verses of the extant poem, *The Dream of the Holy Rood*, attributed to Caedmon, in runic letters on the sides. Regarded as a monument of idolatry, the cross was broken by order of the general assembly in 1642, but was restored in 1802. The village of Ruthwell was at one time a burgh.

RUTLAND. County of England. Wholly inland, it is bounded by Lincolnshire, Leicestershire, and Northamptonshire, and has an area of 152 sq. m. It is divided into two parts by the Gwash or Wash, which crosses the county to join the Welland, which forms the S.E. boundary. Much of the land is permanent pasture: many cattle and sheep are reared, wheat is grown, and cheese is made. Oakham is the county town, and Uppingham, with its school, is in the county. Rutland is served by the L.M.S. Rly. It is in the diocese of Peterborough and is a hunting shire. Pop. 18,376.

RUTLAND, EARL AND DUKE OF. English titles borne by the family of Mannors since 1525. Thomas Mannors received from Henry VIII Belvoir Castle and lands in Leicestershire, and was made an earl in 1525. Sir John Mannors, the first earl's second son, obtained Haddon Hall (q.v.) by his marriage with Dorothy Vernon. John, the 9th earl (1638-1711), was made marquess of Granby and duke of Rutland in 1703. The third duke was the father of the soldier marquess of Granby, whose name is frequently found on inn signs. Charles, the 4th duke (1754-87), was lord-lieutenant of Ireland. The family estates are in Leicestershire and Derbyshire. The duke's eldest son bears the courtesy title of marquess of Granby.

John James Robert Mannors (1818-1906), who became the 7th duke in 1888, was born Dec. 13, 1818. Chosen M.P. for Newark in 1841. Lord John Mannors became a prominent member of the Young England Party. He was first commissioner of works in the Tory ministries of 1852, 1854-59, and 1866-68. He was postmaster-general, 1874-80 and 1885-86, and chancellor of the duchy of Lancaster, 1886-92. He died Aug. 4, 1906.

RUWENZORI. Mountain range of Africa. It lies between Lakes Albert and Edward in the Uganda Protectorate, and has been identified with the fabled mountains of the moon.

Ruthwell. The 7th century Celtic Cross

Sir Ernest Rutherford, British physicist
Elliott & Fry

Rutland. Map of the smallest county of England, with an area of 152 sq. m.

The length of the range is about 70 m., with a minimum breadth of about 30 m. The existence of Ruwenzori was first made known by Sir H. M. Stanley during his expedition of 1887-89. Some of the peaks rise to over 16,000 ft. The range feeds the four lakes, Edward, George, Albert, and Victoria, as well as the Semliki river. On the W. is the Ituri forest, the greater part of which is contained within the Belgian Congo.

RUYSDAEL, JAKOB VAN (c. 1628-82). Dutch painter. Born at Haarlem, he studied surgery as a youth, but took up painting on the advice of Nicolas Berchem. He became a citizen of Amsterdam in 1659, but the proceeds from his art were so poor that he was forced to apply to the Mennonite almshouse at Haarlem for maintenance. He painted the environs of Haarlem, and romantic woods, streams, waterfalls, and ruins, becoming one of the greatest landscapists of his time. He died March 14, 1682. Pron. Roisdahl.

RUYSER, MICHAEL ADRIANZSOON DE (1607-76). Dutch sailor. Born at Flushing, March 24, 1607, he went to sea. In 1640 he commanded the Dutch fleet against Spain, whom he defeated at the battle off Cape St. Vincent, Nov. 3, 1641. From 1653-65 he was engaged in various adventures in the Mediterranean and elsewhere. Sent with a fleet against England in 1666, he defeated Monk off the North Foreland, June 1-4, and chased the English up the Thames. The following year he again entered the Thames, burnt Chatham dockyard, and for a while threatened London. His next engagement of importance was at Southwold Bay, where he fought the French and English fleets, but failed to win a decisive victory. The remainder of his life was spent at sea, in constant battles against the French, in one of which he was mortally wounded off Messina, dying at Syracuse, April 29, 1676. Pron. Roiter.

M. A. de Ruys, Dutch sailor

RYAN. Loch or inlet on the N.W. coast of Wigtownshire, Scotland. It extends 8 m. S.E. from the Firth of Clyde to Stranraer, and is from 1½ to 3 m. wide.

RYDAL. Lake of Westmorland, usually known as Rydal Water. It is between Grasmere and Windermere. It is 1,000 yds. long and 500 yds. wide. Near the E. end is Rydal village. In the grounds of Rydal Hall are Rydal Falls. See Lake District.

Rydal Mount is a house overlooking Rydal Water. In it Wordsworth lived from 1813 until his death, April 23, 1850.

RYDE. Borough and watering place of the Isle of Wight. It stands on the N.E. coast 4 m. from Portsmouth. A terminus of the Isle of Wight Rly., it is also connected with Portsmouth and other ports by a steamboat service. There are a long pier, excellent sands, and public gardens. It is a yachting centre. About 2 m. from the town are the ruins of Quarr Abbey, a Cistercian house founded in 1131. The modern abbey belongs to the Benedictines, who settled here on the expulsion of the religious orders from France. Pop. 11,295.

RYE (Secale cereale). Cereal largely grown for grain in North Europe. The so-called "black" bread is made from the flour. In Great Britain it is nearly always cultivated as a forage crop for spring feed. Rye is more tolerant of poor soil than the other cereals. There are summer and winter varieties. The former is sown in spring and matures quickly, though it does not give a large yield. Winter rye ripens at the end of July or early in

7th Duke of Rutland, British statesman

August. The straw is used for thatching, and also makes good litter. See Agriculture; Crops.

RYE. Borough and market town of Sussex, one of the Cinque Ports. It is on the Rother, about 2 m. from the coast, on the Southern

Rye Land Gate, built by Edward III
Frith

Rly., and is 72 m. from London. Among the chief objects of interest are the large church of S. Mary, the Ypres tower built in the 12th century, the Land Gate and other remains of the fortifications. There are many old houses, and the appearance of the town is picturesque. The Mermaid Inn is famous. Pocock's School dates from the 17th century, and there are remains of an Augustinian foundation in the shape of a small chapel. Rye was a flourishing port soon after the Norman Conquest and became one of the chief of the Cinque Ports. The silting up of the harbour has caused the sea to recede. Market day, Wed. (alternate). Pop. 3,918. See Cinque Ports.

RYE GRASS (*Lolium perenne*). Perennial grass, useful in permanent pasture, and in mixed grass farming. Mixed with clover in the proportion of 25 p.c., rye grass forms a good pasture for sheep.

RYE HOUSE PLOT. Alleged plot to murder Charles II and his brother James and organize an insurrection in 1633. The name is derived from Rye House, near Hoddesdon in Hertfordshire. Of those implicated Lord William Russell and Algernon Sidney were beheaded, John Hampden was heavily fined, and the earl of Essex committed suicide. See Russell, Lord William.

Ryhope. Watering place of Durham. It stands on a bay 3 m. from Sunderland, on the L.N.E.R. Pop. 11,650.

RYKOFF, ALEXEI IVANOVITCH (b. 1881). Russian leader. Banished for treason under the tsardom, he escaped and joined the Bolsheviks. Later he was exiled to Siberia, but escaped in 1914. He became President of the Council of Commissaries of the U.S.S.R. In 1929 he was deprived of this post, but was allowed to retain that of president of the council of commissaries of the Great Russian Soviet Republic.

RYLANDS, JOHN (1801-88). British merchant. Born at St. Helens, Feb. 7, 1801, he became head in 1847 of a cotton manufacturing business founded in 1819 by his father and brother. He died at Stretford, Dec. 11, 1888.

The John Rylands library, in Deansgate, Manchester, was erected, equipped, and endowed by Enriqueta Augustina Rylands in memory of her husband. Of its 250,000 books and MSS., the nucleus was the Althorp Library. See Althorp; Manchester.

RYSWICK, TREATY OF. Treaty that, in 1697, ended the European War, that had raged since 1689. Ryswick is a village 2 m. S. of The Hague, where meetings took place

between the representatives of France, England, the Empire, and the Netherlands. The treaty was signed Sept. 20, 1697, by England, Spain, and the Netherlands. The emperor refused at first to agree, but on Oct. 30 came into the peace. The treaty was a humiliation for France, as Louis XIV surrendered all he had taken since 1679 except Strasbourg. He recognized William III as king of England, and promised to cease supporting James II. To him, on the other hand, Nova Scotia and Pondicherry were restored.

RYTON. Urban dist. of Durham. It stands on the river Tyne, 6 m. from Newcastle, with a station on the L.N.E.R. There are iron and steel works, collieries, and quarries. Pop. 14,263.

S. Nineteenth letter of the English and Latin alphabets. It is hard and sharp, as in sit, or soft and flat, as in his. It also represents zh, the French j, as in leisure. S always has a hard sound at the beginning of words. In the termination, sion, if a consonant precedes, sh is heard, as in passion (also in sure, sugar); if a vowel precedes, zh is heard, as in decision. S is mute in isle, island, viscount, Carlisle, Grosvenor, the preceding vowel being at the same time lengthened. See Alphabet.

SAALE. River of Germany, a tributary of the Elbe. It flows from the Fichtelgebirge in Bavaria for 226 m. to the Elbe, 25 m. above Magdeburg. It is canalised for 103 m. and leads by canal to Leipzig. Halle is the chief town on its banks, and another is Saalfeld, 31 m. from Jena.

SAAR OR SARRE. River of France and Germany. It rises in the Vosges Mts. in Alsace, and flows 152 m. into the Moselle, a few miles above Trèves. It is connected by the Saar Canal with the Rhine-Marne Canal.

SAAR BASIN. This district of Central Europe is under the control of the League of Nations. It lies between the new French frontier of the dept. of Moselle (Lorraine) and the detached portion of Oldenburg. Until 1934 the dist. is to be governed by a commission of five, chosen by the League of Nations; then a plébiscite is to decide for continuance of the status quo, or union with France, or with Germany. The area is 726 sq. m. The chief towns are Saarlouis, named after Louis XIV, who founded it as a fortress, and Saarbrücken. Pop. 770,000.

SAARBRÜCKEN. Town of the Saar Basin. It is 40 m. S.E. of Trèves, is the centre of an extensive coal district, and manufactures cloth, porcelain, leather, tobacco, oil, vinegar, and beer. It was founded in the 10th century Pop. 125,000.

SABADILLA (*Schoenocaulon officinale*). Bulbous perennial of the natural order Liliaceae. A native of Mexico, it has exceedingly long, narrow, grass-like leaves and a long, cylindrical spike of tiny yellow flowers. The seeds yield the drug veratrine, a powerful irritant poison, sometimes used as a remedy in neuralgia and rheumatism.

Sabadilla. Flower and leaf

SABAEAN. Ancient people in S.W. Arabia. Speaking a S. Semitic dialect, the Sabaeans engaged in agriculture, mining, and caravan transport. They controlled a gold and spice trade (Isaiah 60), and took toll of early commerce with India and E. Africa.

SABATIER, PAUL (1858-1928). French scholar. Born at S. Michel de Chabrillanoux, Aug. 3, 1858, his father was a Protestant

pastor. Educated at the university of Paris, he became in 1885 pastor of a church in Strasbourg, but in 1889 was expelled for refusing to abandon his French nationality. From 1889-93 he was pastor at S. Cierge in the Cévennes. He wrote a notable Life of S. Francis and A Frenchman's Thoughts on the War. He died March 20, 1928.

Sabatier's elder brother, Louis Auguste (1839-1901), was a professor at Strasbourg.

SABATINI, RAFAEL (b. 1875). British author. Born of Italian and English parentage, at Jesi, Italy, he was educated in Switzerland and Portugal. He is the author of a number of vividly written historical novels and tales. His books include The Tavern Knight, 1904; Bardelys the Magnificent, 1906 (dramatised 1910); Anthony Wilding, 1910; The Sea Hawk, 1915; The Snare, 1917; The Historical Nights' Entertainment, 1918-19; Scaramouch, 1921; and Captain Blood, 1922. He wrote a Life of Cesare Borgia, 1912, and Torquemada and the Spanish Inquisition, 1913.

SABBATH (Heb. shabbath, from shabath, to desist). In the Jewish religion, the seventh day of the week, kept sacred by worship and cessation of work. In the oldest parts of the Mosaic law, e.g. Ex. 23, 12, rest on the seventh day is enjoined. The Sabbath was observed by many Christians during the first three centuries, in addition to Sunday.

According to the Mosaic law, the Sabbatical Year was every seventh year (Ex. 23; Lev. 25; Deut. 15 and 21; Neh. 10). During it the land was to lie fallow; spontaneous growth was to be shared; with certain exceptions, debts were to be remitted. See Sunday.

SABINES. Ancient Italian people, comprising the Sabini, Sabelli, and Samnites of central and south Italian tribes. Their earliest home was Amitemnum, at the foot of the Apennines. They were for long the greatest power in Italy and are famous as the people

whose women were treacherously seized by the Romans at the festival of the Consualia. The Sabines were incorporated with Rome in 268 B.C.

Sable. Small mammal with valuable fur

SABLE (*Mustela zibellina*). Small carnivorous mammal. It belongs to the weasel tribe and resembles a marten. It is about 18 ins. long and its fur is of great value for commercial purposes. It was formerly common in N. Asia, but incessant trapping has restricted its range to the E. districts of Siberia.

In heraldry, sable is the name for black, represented in drawing by thin vertical and horizontal lines crossing one another. See Heraldry.

SABOT (Fr. wooden shoe). Shoe worn in France and Belgium. Carved in a single piece, the shape varies according to local custom. Pron. sah-bo.

The word sabotage is used in a special sense for outbreaks of violence in industrial disputes, especially the destruction and injury of works, machinery, etc., by employees.

SABRE (Magyar szablya). Heavy one-edged sword, generally curved towards the point, used by mounted troops. The regulation British cavalry sabre is a straight blade, 32 ins. long, and weighs 2 lb. The sabre is also used for fencing and duelling. See illus. p. 1183.

SACCHARIN (Gr. saccharon, sugar). Intensely sweet crystalline compound. Discovered by Remsen and Fahlberg at Baltimore in 1879, it is chemically benzoyl sulphonimide, and is employed in place of sugar in

aerated, heverages and for sweetening food for diabetic persons. It possesses antiseptic properties, and is in no sense a food. The name saccharin is also applied to a body, formed by the action of linc on invert sugar, used in brewing.

The saccharimeter is a form of polariscope employed for determining the amount of sugar in a liquid.

SACHEVERELL, HENRY (c. 1674-1724). English writer. Born at Marlborough, and educated at Magdalen College, Oxford, where he met Addison, he became chaplain at S. Saviour's, Southwark. He wrote a series of violently worded pamphlets and sermons in support of the High Church and Tory causes which led to his suspension from preaching for three years, and to what are known as the Sacheverell riots. In 1713 he was given the living of S. Andrew's, Holborn, and he died at Highgate, June 5, 1724. Pron. Sak-kev-c-rel.

SACHS, HANS (1494-1576). German poet and dramatist. He was born at Nuremberg, Nov. 5, 1494, became a Meistersinger, and travelled through Germany, living by his trade of shoe-making and indulging his art as singer. He died Jan. 19, 1576. Inspired by the Reformation, he left more than 6,000 separate productions, including 4,275 master songs and upwards of 200 pieces in dramatic form, valuable for their presentation of life in 16th century Germany.

Sack (Fr. sec, dry). Name given in the 16th and 17th centuries to a white wine similar to sherry or canary.

SACKBUT (Fr. saqueboute). Medieval wind instrument from which the modern trombone has been developed. Canon Galpin derives the name from the Spanish sacar, to draw, and bucha, pipe. The biblical "sack-but" (Dan., 3) was a stringed instrument.

SACK TREE (Antiaris saccidora). Tree of the order Artocarpaceae. A native of the East Indies, it has a tough inner bark from which ropes and matting are made. It is also made

to yield seamless rice-bags. The trunk is cut in lengths corresponding to the depth of sack required, soaked and beaten to separate the bark from the wood;

Sackbut. Musical instrument

then the bark is turned inside out, and the wood sawn off to leave a thin section for the bottom of the sack.

SACKVILLE. English family, now represented by that of Sackville-West. The founder, Richard Sackville, a Kentish landowner, held office under Henry VIII and was knighted. His son, Thomas Sackville the poet, was made earl of Dorset in 1604. This title, and that of duke, conferred on Lionel Sackville in 1720, were held

by members of the family until the death of the 5th duke in 1843. The estates, including Knole Park, passed to the Baroness Buckhurst, a daughter of the 3rd duke and the wife of Earl De La Warr. Her son was made Baron Sackville in 1876.

Victoria, a daughter of the 3rd baron and wife of Harold Nicolson, won the Hawthornden prize in 1927 with a poem The Land.

SACKVILLE, GEORGE SACKVILLE, 1ST Viscount (1716-85). British soldier and politician. A younger son of the 1st duke of Dorset, he fought at Fontenoy, led the British force at Minden, and as a secretary of state in 1775 had a good deal to do with directing the war in America. He retired in 1782 and was made a viscount. He took the name of Germain on inheriting estates under the will of Lady Betty Germain (d. 1769). He died on August 26, 1785.

Viscount Sackville, British soldier

SACRAMENT (Lat. sacramentum, a sacred thing or oath). Term which came into use in the 2nd century for the sacred ceremonies of the Church. The Roman Catholic Church recognizes seven sacraments, baptism, confirmation, holy communion, ordination, matrimony, penance, and extreme unction. They are according to its catechism "a visible sign of invisible grace instituted for our justification." To Roman Catholics they are the means of divine grace and can only be lawfully administered by a priest. The Church of England in its prayer book only recognizes two sacraments, baptism and holy communion. They are "the outward and visible sign of an inward and spiritual grace." Some high churchmen, however, accept the Roman Catholic idea of seven sacraments, and regard these as the sole channels of the divine grace. The Greek Church holds very similar views to the Roman one.

The Protestant evangelical churches, Presbyterians, Methodists, and others, speak of baptism and holy communion, especially the latter, as sacraments, but do not hold the sacramental idea that divine grace can only

come through a sacrament. Sacramentarians was the name applied by the Lutherans to the followers of Zwingli, who denied the Real Presence of Christ in the Eucharist, and maintained that the consecrated elements were sacramental symbols, and not the immediate vehicle of grace.

SACRAMENTO. City of California, U.S.A. The state capital and the co. seat of Sacramento co., it stands on the Sacramento river, 88 m. by rly. N.E. of San Francisco. Its leading industries are flour and grist milling, canning, slaughtering, and meat-packing, iron-founding, and the manufacture of carriages, brooms, pumps, furniture, and soap. There are extensive rly. repair shops. Settled in 1839, Sacramento became the state capital in 1854. Pop. 66,000.

The Sacramento river rises in the N. of California, and flows S. and W. to Suisun Bay, about 50 m. above San Francisco. It is about 400 m. long; or 600 m. if Pitt River, its main head-stream, be included.

SACRIFICE (Lat. sacer, sacred; facere, to make). In a religious sense, an offering to a divinity, especially at an altar or shrine. The custom is common to most religions. Among the Jews of O.T. times, a sacrifice was a means of communion with Jehovah; a gift of tribute; and a means of atonement.

With the rise of Christianity material offerings were replaced, or believers were enjoined to replace them, by prayer, praise, thanksgiving, a humble and contrite heart, and Christian service. The word is used of the Crucifixion.

SACRILEGE (Lat. sacer, sacred; legere, to collect, steal). In English law, larceny from a church; and, in eccles. law, the alienation to lay purposes of property given to pious uses. By law it is a felony to break into any church, chapel, meeting house, or other place of divine worship. It is a like offence for anyone who, having committed a felony in such a place, breaks out.

SADDLE. Seat for a rider on horseback. Saddles are usually of leather, padded, secured by a girth, and provided with stirrups. A saddle is also a pneumatic or leather seat for the rider of a bicycle. As applied to machinery, etc., a saddle is a bridge-piece or carriage made to travel on a guideway or bed. Examples are the member carrying the slide or tool-rest of a lathe, a seating for a cylindrical steam boiler, a block over which the cables of a suspension bridge pass, or to which they are anchored, and the bearing of an axle box.

Saddlery is a term for saddles, harness, bridles, stirrups, and other accessories of horses and carriages. The Saddlers' Company, one of the London Livery Companies, was chartered in 1272. It has a hall in Cheapside.

Saddle. 1. Man's hunting saddle. 2. Woman's side saddle

Courtesy of J. I. Soutter & Co

Saddleback. Mountain of Cumberland. Also called Blencathara, it is 4 m. from Keswick and is 2,847 ft. high.

SADDLEWORTH. Urban dist. of Yorkshire (W.R.). It is on the Tame, 14 m. from Manchester, on the L.M.S. Rly. Woollens are manufactured. Pop. 12,565.

SADDUCEES. Jewish religious party. Named after Zadok, a high priest, they arose about 200 B.C. as the party of the priestly aristocracy. They denied the resurrection of the dead and the existence of angels and spirits; and maintained that the letter of the law was sufficient in itself and needed no explanation from tradition or the teaching of the rabbis. The sect disappeared after the final destruction of the Temple.

SADLER'S WELLS. London theatre, in the hor. of Islington. It derives its title from a surveyor named Sadler, who, in 1683, discovered a mineral well here and built a music hall on the site. The music hall was replaced in 1765 by a theatre, rebuilt in 1879. The theatre, which had a great vogue, 1844-62,

Sadler's Wells. Front view of the London theatre, prior to reconstruction

Sabre. 1. Oriental weapon. 2. Persian. 3. Light cavalry weapon. 4. Heavy cavalry sabre, 1815. See p. 1182

under Samuel Phelps, as a home of Shakespearean drama, was purchased in 1925 by a committee with the object of rebuilding it by public subscription and conducting it on the lines of the Old Vic in S.E. London.

SADOWA, BATTLE OF. Prussian victory over the Austrians in the Seven Weeks' War, July 3, 1866. The Austrian army, having retired along the line of the Elbe, were attacked by the Prussians at the bridge of Sadowa, near Königgrätz, early in the morning. By nightfall the Austrians had lost 40,000 men. The numbers engaged were, Prussians, 221,000; Austrians, 205,000.

SAFE. Structure for the secure storage of valuables against fire and burglary. In modern safes the walls are built of sheet iron and steel, or the outer wall is of cast steel, the inner wall laminated, and the space between filled with insulating material in which are embedded drill-proof steel rods. The doors are made so that no join is visible between the door and the safe. The locks usually consist of a handle or spindle which actuates the bolts, the latter being held in position by time or combination locks. The great safe deposits and bank vaults are not only protected by massive doors weighing often several hundred tons, but by electrical alarms to near-by police stations.

In 1928 the Midland Bank introduced automatic safes, to enable traders and others who carry on business after banking hours to deposit their money in safety.

SAFEGUARDING. Term used for the policy of protecting British industries from foreign competition, especially competition from the products of sweated labour. The McKenna duties, introduced in 1916 by Mr. R. McKenna, were at the rate of 33½ per cent on motor vehicles, cinema films, clocks, and musical instruments, but they are not usually classed as safeguarding duties.

In 1921 the Safeguarding of Industries Act provided for a duty on certain imports, described as key industries, optical glass, for instance. In addition, other kinds of goods could be safeguarded in this way if a case was made out. This was done for three classes of articles made in Germany, gloves, glassware, and hollow-ware, and on these a safeguarding duty of 33½ was imposed.

In 1925 the principle of safeguarding was extended. It was provided that any industry affected by unfair competition could apply to the Board of Trade. An inquiry would then be held and, if the case for a duty was proved, an import duty, usually 33½ per cent, would be imposed. Under this proviso, imports of lace, gloves, incandescent gas mantles, and cutlery were taxed for five years. They expired, therefore, in 1930, when a Labour Government being again in office, they were not renewed. It was arranged that the McKenna duties, however, should remain, as lowered the duty on imports of silk and artificial flowers imposed in 1925.

SAFETY FIRST. Public movement for prevention of street and industrial accidents. In London a Safety First Council was formed in 1916, and this led to the foundation of the National Safety First Association, with headquarters at 119, Victoria Street, London, S.W.1.

SAFETY LAMP. Lamp used by miners which can be burned safely in an atmosphere containing the inflammable gas called fire-damp. The first practical lamp was made either by Sir Humphry Davy or by George Stephenson. Davy was the first to make his lamp public, 1815. Its principle is a hollow cylinder of wire or copper gauze surrounding the flame. Dr. Clanny improved the Davy lamp by substituting a glass cylinder for the lower part of the gauze, enabling the lamp to give out more light, and this construction is found in all modern designs. The gauze cylinder is generally protected from draughts by a metal cover or bonnet. See Davy, Sir H.

SAFETY VALVE. Contrivance fitted to vessels containing liquids or gases under pressure, to give relief if the pressure exceeds a prearranged limit. The valve of safety apparatus used on stationary steam boilers is circular, and pressed down against an annular seat by a weight or spring. In locomotive and marine boilers an adjustable spring restrains the valve or valves, acting directly or through a lever, as in the Ramsbottom type.

Safety Valve. Ramsbottom type as used for locomotives

SAFFLOWER, SAFFRON THISTLE, OR BASTARD SAFFRON (*Carthamus tinctorius*). Annual herb of the order Compositae, a native of Europe, Asia, and Africa. The leaves are oval with spiny teeth. The orange flowers are aggregated in terminal heads. They form a valuable dye stuff, yielding pink, rose, crimson, and scarlet, which is used chiefly for silks. Mixed with talc and the whole finely ground, safflower becomes rouge.

SAFFRON (*Crocus sativus*). Perennial herb of the order Iridaceae, a native of Europe and Asia. The root-stock is a corm like that of the garden crocus, but larger. The grass-like narrow leaves are delicately fringed along the edges and keel; and the light purple flowers appear in autumn. The stigma and upper part of the style are orange-coloured, and constitute the saffron of commerce. It is occasionally used in medicine and food, and yields an orange dye.

Saffron. Corm and flower

SAFFRON WALDEN. Mun. bor. and market town of Essex. It is 44 m. from London on the L.N.E.R. The church of S. Mary the Virgin is a fine Perpendicular edifice. The town has a 16th century grammar school and a museum. There are remains of a Norman castle. The industries include brewing and malting. The place was made a bor. in 1694. Known at first as Walden, its other name was due to the saffron crocus grown here until about 1750. Market day, Tues. Pop. 5,876.

SAGA (Icel. from *segja*, to say). In Icelandic literature, a prose narrative. The typical saga is a prose epic. The oldest sagas, some of which were written before A.D. 1100, are biographies. Ari (1067-1148) was the first great saga writer. After Sturla Thorðsson (1215-84) the saga decayed.

The great sagas give a vivid picture of Icelandic society in the period of its greatest vigour. The finest is, perhaps, that of *Burnt Njal* (c. 1250). Of sagas drawn from myths and legends the most famous is that of the *Volsungs*. Of historical sagas those describing the Viking discoveries in America are notable. In the 13-14 centuries sagas were drawn from the cycles of Alexander and Arthur.

SAGE (*Salvia officinalis*). Low shrub of the order Labiatae. A native of S. Europe, it is about a foot high, with a woolly stem and downy branches. The leaves are opposite, oblong, and wrinkled. The purple flowers are in whorls which form a spray. The plant has aromatic and bitter properties and is used in culinary preparations. See illus. below.

SAGITTARIA. Genus of about twelve species of perennial marsh and aquatic herbs. One of them, the arrowhead, is a native of Britain, Europe, and Asia; the others are all American. The leaves, which are floating or erect, spring from a short, thick root-stock, and in about half the species are arrow-shaped; in others lance-shaped or oval. The white flowers are produced in three to five whorls, the upper ones being males, the lower females.

SAGITTARIUS (Lat. archer). Ancient constellation and ninth sign of the Zodiac.

It follows the Scorpion on the line of the ecliptic, and lies near the S. horizon of British skies. The constellation contains many famous star clusters and nebulae.

SAGO. Trees of the order Palmae, natives of New Guinea, Malaya, etc. The stout trunks are terminated by a crown of long, leather-shaped leaves. The smooth sago palm (*Metroxylon laevis*) is the larger species, and distinguished from the prickly sago palm (*M. rumphii*) by the leaf-stalks of the latter being armed with long, sharp spines. The sago of commerce is prepared from the soft inner portion of the trunks by washing and pounding, by which process the starchy matter is separated. The name sago palm is also applied to the fern palms (*Cycas*), from whose seeds a kind of sago is prepared. See illus. below.

SAGUENAY. River of Quebec, Canada, a tributary of the St. Lawrence. It issues from Lake St. John by two rapids, its length is 120 m., and Tadoussac stands at its mouth; if its headstream, the Peribonka, is included, it is 405 m. in length. The Ashwamuchuan, which flows into Lake St. John, is sometimes called the Upper Saguenay.

SAHARA. Desert of N. Africa. It stretches from the Atlantic to the Nile, and includes the S. portion of Morocco, Algeria, Tunisia, and Libia Italiana, with portions of Egypt. The surface is broken by dunes, and in some places is below sea level, whilst in others it is marked by lofty plateaux crowned by mountain ranges. The atmosphere of the Sahara is relatively heavy.

Portions are dotted with fertile oases which mark the great caravan routes from the Mediterranean to the W. Sudan, from Tripoli, Benghazi, and other ports through Fezzan.

Much of the desert, especially in the regions N. of the Niger, is capable of sustaining herds of cattle. Huge tracts are strewn with rocks or covered with stones. The greater part of the Sahara forms part of French West Africa. In 1928 the French Government approved a plan for a railway, 2,250 miles long, from Algiers to Timbuktu. At various times proposals have been put forward to flood the Sahara and so make it fit for cultivation.

SAHIL. Village of Mesopotamia. It is in the estuary of the Shatt-el-Arab, 9 m. from Sahain. It gives its name to the battle fought there between the British and the Turks, Nov. 17, 1914. The Turks stood in a strongly entrenched position, but when the British and Indian troops advanced they suddenly broke and fled. The British casualties were about 350, and those of the Turks about 2,000.

Sage. Cutting of the aromatic herb. See article above

SAIGON. Capital of French Cochinchina. On the Saigon river, 40 m from the S. China Sea, it is the chief commercial centre of the colony, and also the principal French military and naval base in the Far East. The harbour is accessible to the largest steamers and is equipped with shipbuilding yards and repair shops. It is connected by rly. and electric trams with Cholon, a native commercial city, with 170,000 inhabitants. Saigon was ceded to France in 1862. Pop. 130,000.

SAIL. Sheet of canvas used to catch the wind and so drive forward a vessel. Sails are usually made of a strong fabric called sailcloth. There are many kinds of sail, named according to shape or position. See Jib; Lateen Sail.

SAILLY. Name of several villages of France: (1) In the dept. of Pas-de-Calais on the river Lys, 12 m. S.E. of Béthune. (2) In the dept. of Pas-de-Calais, 22 m. E. of Arras. (3) In the dept. of Nord, 5 m. N.W. of Cambrai. Sailly-le-Sec is a village on the N. bank of the Somme, 4 m. E.N.E. of Corbie.

Sailly-Saillisel is a village in the dept. of Somme, slightly S. of Lesboeufs. Prominent in the Great War, it changed hands several times. The village was adopted by Marylebone.

Sainfoin.
Field herb

SAINFOIN (*Onobrychis sativa*). Deep-rooted leguminous plant, suitable for haying or grazing purposes on calcareous soils in the warmer parts of Britain. Its long leaves have six to ten pairs of leaflets, with one at the end, and the pink flowers are arranged in conspicuous racemes. The pod is wrinkled and contains one brown seed. Pron. San-foyn.

SAINT (Lat. sanctus, holy). One whose life has been consecrated to the service of God. Thousands of saints are commemorated in the Bollandist *Acta Sanctorum*; those having days allotted to them in the English Prayer Book number 73. In accordance with ancient custom, churches, abbeys, monasteries, convents, hospitals, colleges, and many school churches are dedicated to or named after saints. The word enters largely into toponymy, and many countries and callings have their patron saints.

ST. ABB'S HEAD. Rocky headland of the Berwickshire coast, 4 m. N.W. of Eyemouth. S. Ebba founded a monastery here in the 7th century. The headland, 310 ft. high, is surmounted by a lighthouse. St. Abb's, formerly Coldinghamshore, a seaside resort and fishing village, lies 2½ m. S.E.

ST. AGNES. Seaport of Cornwall. It is 9 m. from Truro, on the G.W.R. Around are tin mines. John Opie, the painter, was a native. Near the town is St. Agnes beacon, 597 ft. high, and St. Agnes Head is about a mile away. Pop. 3,347.

St. Agnes is the name of one of the Scilly Islands. Pop. 130.

St. Andrews, Scotland. General view, from the cathedral, of the Scottish burgh and headquarters of golf

ST. ALBANS. Mun. bor., city, and market town of Hertfordshire. It is 21 m. N.W. of London, on the L.M.S. and L.N.E.

St. Albans Cathedral. West Front, showing the Norman tower and Gothic nave

Rlys. To the S., in Verulam Woods (named from the river Ver), are remnants of the British-Roman city of Verulamium, the objective of archaeological excavations in 1930.

The cruciform church, partly renovated by Sir Gilbert Scott and thoroughly restored by Baron Grimthorpe, was constituted in 1875 the cathedral of a new diocese. It has a central Norman tower faced with Roman tiles, 145 ft. high. The 14th century Abbey Gatehouse is the home of St. Albans grammar school. Three churches, S. Peter's, S. Stephen's, and S. Michael's, all restored, were founded in Saxon times. S. Michael's contains the tomb of Francis Bacon. Straw plaiting, brewing, and printing are carried on. Market days, Wed. and Sat. Pop. 25,593.

Two battles were fought here between Yorkists and Lancastrians, May 22, 1455, and Feb. 17, 1461. In the first the Yorkists, under the duke of York and earl of Warwick, defeated the Royalists under Henry VI; in the second the Yorkists, under Warwick, were routed.

ST. ALBANS, DUKE OF. British title borne by the family of Beaulieu since 1684. In 1660 Henry Jermyn, the favourite of Henrietta Maria, was made earl of St. Albans. On his death, in 1684, Charles II made his son, Charles Beaulieu (1670-1726), duke of St. Albans. Nell Gwynn was the boy's mother. The 9th duke married the actress, Harriet Mellon, widow of the banker Thomas Coutts. The family estates are at Bestwood, near Nottingham.

ST. ALDWYN, MICHAEL EDWARD HICKS-BEACH, 1st EARL (1837-1916). British statesman. Born Oct. 23, 1837, he succeeded his father in 1854 in a baronetcy dating from 1619. Educated at Eton and Oxford, he became an M.P. in 1864. As a Unionist he was twice chief secretary for Ireland, and secretary for the colonies 1878-80. He was chancellor of

the exchequer in 1885-86 and again 1895-1902. In 1906 he was made a viscount, and in 1915 an earl. He died April 30, 1916.

ST. ANDREWS. City, burgh, and seaport of Fifeshire. Once the eccles. metropolis of Scotland, it is situated on St. Andrews Bay, 12 m. from Dundee on the L.N.E. Rly. Its attractions include the ruins of a 16th century castle and a 12th-13th century cathedral, of which some walls and towers alone remain. The Martyrs' Memorial is noteworthy. Madras

College is a celebrated school, and another is the girls' school that occupies the buildings of S. Leonard's College. Of the city gates only the West Port remains. St. Andrews is the headquarters of golf. The Royal and Ancient Club, founded in 1754, has its fine links here. The city has a small harbour and some shipping and fishing.

St. Andrews is said to owe its origin to the fact that S. Regulus, bearing the bones of the apostle, settled here in the 7th century. In the 9th century it was made a bishopric. Later its bishop became primate of Scotland and was an archbishop until 1688. It was made a royal burgh in 1124. Pop. 9,336.

The university of St. Andrews was founded in 1411 by Henry Wardlaw (d. 1440), who was consecrated bishop of St. Andrews in 1403. The colleges of S. Salvator and S. Leonard were founded in 1450 and 1512. In 1747 these were formed into the United College. The college buildings include S. Mary's College, which has part of the original edifice. University College, Dundee, dating from 1880, is part of the university.

St. Andrews University. Buildings of the United College of S. Salvator and S. Leonard

ST. ANNE'S HILL. Eminence near Chertsey, Surrey. In 1928 Sir William Berry (later Baron Camrose) gave 23 acres on top of the hill to Chertsey for an open space.

ST. ANNE'S-ON-SEA. District of Lancashire. Formerly a separate urban dist., it was made in 1922, together with the urban dist. of Lytham, into the borough of Lytham St. Anne's (q.v.).

ST. ASAPH. City and market town of Flintshire, Wales. It is 5 m. from Denbigh, on the L.M.S. Rly., near the junction of the Clywd and Elwy. The cathedral is a plain cruciform edifice dating mainly from the 15th century, and was restored by Sir Gilbert Scott. An agricultural trade is carried on. The city, called in Welsh Llanellwy, grew up around a monastery founded about 560. The church became the cathedral and took the name of Asaph, the successor of Kentigern. Market day, Thurs. 1,833. See illus. p. 1186.

ST. AUSTELL. Market town and urban dist. of S. Cornwall. It stands above St. Austell Bay, 14 m. from Truro, on the G.W.R.

The church of Holy Trinity, dating partly from the 13th century, has a splendid Perpendicular tower. Around are many old tin and copper mines, which yield a good deal of china clay. Market day, Fri. Pop. 3,247.

St. Asaph Flintshire. Cathedral from the south-west. See p. 1185

ST. BARTHOLOMEW, MASSACRE OF. Name given to the murder of the Huguenots in France which began on S. Bartholomew's Day (Aug. 24), 1572. A plot to murder Coligny having failed, the queen mother Catherine de Medici, the Guises and others, taking advantage of the fact that many Huguenots had come to Paris to attend the marriage of Henry of Navarre and the king's sister Marguerite, persuaded Charles IX to strike at their foes. He consented, and the massacre spread to the provinces, lasting until Oct. 3. One authority states that 50,000 were killed, but 25,000 is probably nearer the mark.

ST. BARTHOLOMEW. Church and hospital in London. The church of S. Bartholomew the Great, in Smithfield, is remarkable

St. Bartholomew's, London. Nave of the Norman church, looking east

for its magnificent Norman pillars and arched recesses. It is the choir and transepts of the church belonging to the priory founded in 1123 by Rahere, whose tomb is within. The lady chapel, rebuilt in 1896, was at one time a printing office. The crypt and cloisters are also notable.

Rahero also founded a hospital near his priory and this has developed into one of the great London hospitals. It was rebuilt in 1760, and extensions were opened in 1793 and 1907. In the great hall are some valuable portraits, and in the precincts is the church of S. Bartholomew the Less. The hospital has 687 beds and a convalescent home at Swanley.

ST. BEES OR **ST. BEGUA.** Town of Cumberland, 4 m. S. of Whitehaven, on the L.M.S. Rly. It derived its name from St. Begha, an Irish princess, who is said to have established a nunnery here about A.D. 650. This was succeeded by a Benedictine priory, to which the present church belonged. The grammar school, founded in 1587, is a large public school. Pop. 1,609.

ST. BERNARD DOG. Large dog of the mastiff group. It derives its name from the hospice on the Great St. Bernard Pass, where

these dogs were used for finding travellers lost in the snow. The original breed of the Great St. Bernard is of unknown descent. That in Britain has descended from a famous show dog, Barry, but is said to depart from the old type. The St. Bernard has a high head, deep-set eyes, pendulous lips, and moderate-sized pendent ears. The feet are large. The dog has remarkable intelligence.

ST. BERNARD PASS, GREAT. Mountain pass of the Pennine Alps, between Valais in Switzerland and Piedmont in Italy. It reaches an alt. of 8,110 ft., and was known to the Romans as Mons Poeninus. By this pass Napoleon led his army into Italy in 1800. The hospice, founded about 962 by S. Bernard de Menthon, has a church dating from 1680.

The Little St. Bernard Pass is a mt. route over the Graian Alps, between Italy and Savoy. It attains an alt. of 7,176 ft. and has a hospice with observatory. Hannibal is reputed to have crossed the Alps by this pass.

ST. BLAZEY.

Market town of Cornwall 4 m. from St. Austell, on the G.W.R. It has an important trade in connexion with the local tin mines. Market day, Sat. Pop. 3,146.

ST. BONIFACE.

City of Manitoba, Canada. It stands on the Red river, opposite Winnipeg, and is served by the C.P.R. and the C.N. Rlys. Bricks, flour, and agricultural implements are made, and there are lumber yards and grain elevators. It is the seat of a R. C. archbishop. Pop. 14,000.

St. Brelade. Village on the S.W. coast of Jersey. It is picturesquely situated on the W. side of St. Brelade's Bay. Pop. 2,300.

ST. BRIAVELS. Village of Gloucestershire. Overlooking the Wye, 7 m. from Chepstow, on the G.W. and L.M.S. joint rly., it is noted for its church and the ruins of its castle. Of the 11th century castle the ruined keep remains. Pop. 1,210.

ST. BRIDE'S OR **S. BRIDGER'S.** London church on S. side of Fleet Street. Burnt in 1666, it was rebuilt by Wren in 1680 and is noted for its tall steeple. Near by are St. Bride's and Bridewell schools, and the St. Bride Foundation Institute for printers. See Bridewell.

St. Budeaux. Village of Devonshire. It is 4 m. from Plymouth, on the S.R. Pop. 1,803.

ST. CATHARINES. City of Ontario, Canada. On the Welland Canal, near Lake Ontario, it is the centre of a fruit-growing district, and machinery, paper, etc., are manufactured. Pop. 19,881.

ST. CLOUD. Town of France. On the Seine, just outside Paris, it is notable for its park and as a pleasure resort. In the park was a palace, built about 1600 by a duke of Orléans. Pop. 13,519.

The Ordinances of St. Cloud were certain repressive laws suddenly promulgated here by Charles X and his ministers, July 26, 1830. They caused the so-called July revolution in Paris, which led to the abdication of Charles X. St. Cloud Ware is a semi-transparent porcelain produced at St. Cloud, 1697-1773.

ST. CYR. Village of France, 14 m. N.W. of Paris. Louis XIV founded a seminary here for impoverished daughters of the nobility, at the instigation of Madame de Maintenon.

Napoleon I, in 1806, transformed this into a now famous military school for infantry and cavalry cadets. Pop. 6,190.

St. Bernard Dog. Champion specimen of the breed

ST. DAVIDS. City of Pembrokeshire, Wales, 1 m. from the N. side of St. Bride's Bay. S. David, the patron saint of Wales, founded the see, and died here in 601. Its earlier Roman name was Menevia. The Gothic cathedral, begun in 1180, was restored in 1862-78. The episcopal palace and S. Mary's College are interesting ruins. St. David's Head (100 ft. high), 3 m. N.W., is the most westerly point of

Wales. Pop. 1,644. See illus. below.

ST. DAVIDS, JOHN WYNFORD PHILLIPS, 1ST VISCOUNT (b. 1860). British financier. The eldest son of the Rev. Sir J. E. Phillips, the holder of an old baronetcy and the owner of estates in Pembrokeshire, he was born May 30, 1860. He was educated at Felsted School and Keble College, Oxford. He was Liberal M.P. for Mid-Lanark 1888-94; and Pembrokeshire 1898-1908, when he was made

Great St. Bernard, Switzerland. The hospice, founded by S. Bernard for travellers crossing the Alps; in the background, Mt. Velan

a baron. Becoming connected with various companies working chiefly in S. America, he was soon the head of a group with interests in many parts of the world. In 1918 he was made a viscount.

ST. DENIS. Town of France, in the dept. of Seine. It is on the Seine, 4 m. N. of Paris. The famous early Gothic church of S. Denis (restored 1806-47) was the burial place of most of the kings of France from 638. There are flour and cotton mills, chemical and dye works, and manufactures of machinery. The wharves form part of the port of Paris. Pop. 80,000.

ST. DONAT'S. Village of Glamorganshire. It is famous for its castle, founded in the 11th century. In the state rooms are carvings by Grinling Gibbons. The castle was bought and restored in the 20th century by Mr. W. R. Hearst. There is a church with a 14th century cross in the churchyard.

ST. DUNSTAN'S HOSTEL. London institution for the training of the blind. It is situated in Regent's Park. Sir C. A. Pearson having turned his attention to the welfare of soldiers and sailors blinded in the Great War, St. Dunstan's Lodge, a residence designed

St. Davids, Pembrokeshire. The Gothic cathedral from the south-east. See above

in 1830 for the marquess of Hertford, was placed at his disposal, and he opened it as a hostel and training centre with 14 blinded inmates, in March, 1915. Massage, shorthand writing, telephone operating, boot repairing, joinery, basket making, and market gardening are taught, and practically all the men learn to master Braille and the use of the typewriter.

SAINTE-BEUVE, CHARLES AUGUSTIN (1804-69). French critic. He was born at Boulogne-sur-Mer, Dec. 23, 1804. His father was a native of Picardy and a commissioner of taxes. Educated at Boulogne until he was 14, he studied at the Lycée Charlemagne, Collège Bourbon, and the School of Medicine, Paris. A friend of Victor Hugo, he at first wrote romantic verse, but gave this up for the work of historian and critic. His lectures at

C. A. Sainte-Beuve
French critic

Lausanne, 1837, on Port-Royal, formed the nucleus of his most important work, *L'Histoire de Port-Royal*, 5 vols., 1840-48. Librarian of the Mazarin Library, 1840, and an Academician, 1845, he went to Liège University, his lectures here being published in 1860 as *Chateaubriand et son Groupe Littéraire*. After 1851 he was professor in the Collège de France, and 1857-61 at the École Normale. Made a senator in 1865, he died in Paris, Oct. 13, 1869.

Sainte-Beuve was the greatest literary critic of his time, and his numerous criticisms and appreciations, *Premiers Lundis*, *Causeries du Lundi*, *Nouveaux Lundis*, etc., are of permanent value.

SAINTE-CHAPELLE. Building in Paris. It was built in 1245-48 as a shrine for the sacred relics brought by St. Louis from the Holy Land in 1239; these included the Crown of Thorns and a piece of the true cross. One of the most beautiful Gothic buildings in the world, it contains some exquisite stained glass. The gilded spire is modern. The relics are now in Notre Dame, Paris.

Sainte-Chapelle, Paris. Exterior, with the graceful Gothic spire

ST. ELMO'S FIRE. Electrical discharge sometimes observed at night during thundery weather between the tops of masts, flagstuffs, trees, and housetops, and the air. The name is a corruption of S. Ermo, the popular rendering of S. Erasmus, patron saint of sailors in the Mediterranean.

ST. ELOI. Village of Belgium, in the prov. of W. Flanders. It is 2 m. S. of Ypres and 9½ m. N. of Armentières.

What are known as the battles of St. Eloi were fought here between the British and the Germans in 1915 and 1916. In 1915 the British, under Smith-Dorrien, were holding that portion of the line which encircled the village and included a large mound to the S.E. The Germans, on March 14, after mining the mound, occupied the village. On the following day the British recaptured all the lost trenches and, except for the mound, all the lost ground was recovered.

The second battle began on March 27, 1916, the British taking the offensive, and continued till April 19. The mound changed hands several times, but while the Germans

secured all the craters, the village remained in the hands of the British.

ST. ETIENNE. Town of France, capital of the dept. of Loire. Situated on the Furens, 36 m. S.W. of Lyons, it is a mining and manufacturing centre, owing its importance to the coal found in the vicinity. It manufactures silk, ribbons, velvets, and other textiles, ironmongery, bicycles, etc. There is an important school of mines. Pop. 193,700.

ST. GALL. City of Switzerland, capital of the canton of St. Gall. It stands on the Steinach, 9 m. by rly. S.W. of Rorschach, on Lake Constance. The abbey church of its famous monastery, restored 1756-68, was made a cathedral in 1846. The abbey library contains some of the most precious MSS. in the world. The city originated round a Benedictine abbey, which enclosed the cell of S. Gall, an Irish hermit, who lived here from 614 to 640. It became one of the chief centres of learning in Europe. Pop. 64,500.

SAINT-GAUDENS, AUGUSTUS (1848-1907). American sculptor. He was born in Dublin, March 1, 1848, of mixed French and Irish parentage, and was taken to New York when six months old. Beginning his career as a cameo cutter, he was president of the Society of American Artists, the friend of R. L. Stevenson (of whom he executed a memorable bust), and the sculptor of the Farragut statue in New York and the Lincoln at Chicago, a replica of which was unveiled at Westminster in 1920. He died Aug. 3, 1907.

St. George's Channel. Channel separating Ireland from Wales and connecting the Irish Sea with the Atlantic Ocean.

ST. GEORGE'S DAY. Feast day of St. George. It is held on April 23, the date of his martyrdom, a council held at Oxford in 1222 commanding that it be a holiday.

ST. GERMAIN-EN-LAYE. Town of France. In the dept. of Seine-et-Oise, it overlooks the Seine and the forest of St. Germain, 13 m. W. of Paris. The town dates from the 10th century, and grew round a convent in the forest, then known as Ledia. It became a royal residence in the time of Louis VI. Its imposing Renaissance château, begun by Charles V, has been a national museum since 1861. The forest extends over 10,000 acres, with a circuit of 21 m. Pop. 22,180.

The treaty of St. Germain-en-Laye is a document signed between the allied and associated powers and Austria, Sept. 10, 1919. The complement of the treaty of Versailles (q.v.), it settled the territorial and political status of Austria following the Great War. Its text was handed to the Austrian delegates on July 20, and it was ratified by the Austrian assembly on Oct. 17.

ST. GERMANS. Parish of Cornwall. It stands on an arm of Plymouth Sound, 9 m. from Plymouth, on the G.W.R. The beautiful church of St. Germans has a Norman front, the remainder being mainly Perpendicular work. St. Germans was in the 10th and 11th centuries the see of the bishop of Cornwall. Pop. 1,986.

The title of earl of St. Germans has been held since 1815 by the Cornish family of Eliot. In 1784 Edward Eliot, M.P. for Cornwall, was made a baron, and his son John was created an earl in 1815. In 1922 Granville John (b. 1867) became the 7th earl. The family seat is Port Eliot, near St. Germans.

ST. GOTTHARD or **ST. GOTHARD.** Group of mts., pass, and rly. of Switzerland. The mts. form a division of the Lepontine Alps, spread into four cantons, and hold the sources of the Rhine, Rhône, Reuss, and Ticino. The Sasso, or peak of St. Gotthard, is 8,235 ft. high; Pizzo Rotondo, 10,489 ft.; Piz Lukmanier, 9,115 ft.

The St. Gotthard is crossed by one of the oldest and most famous of the Alpine passes

(6,935 ft.) from Switzerland to Italy. The hospice on the summit is first mentioned in 1331. The St. Gotthard Rly., from Lucerne

St. Gotthard. The Alpine pass, near Giornico showing three lines of railway, one above the other

to Milan, now electrified, tunnels the range near Goeschenen in Uri and emerges above Airolo in Ticino. Built in 1872-82, it reaches an alt. of 3,786 ft., and has 80 tunnels and more than 300 bridges. The main tunnel, 28 ft. wide by 21 ft. high, is 9½ m. long. The rly. was purchased by the Swiss government in 1909.

ST. HELENA. British island in the S. Atlantic, an Admiralty coaling station. It is 800 m. S.E. of Ascension Island, 1,200 m. from the nearest point of Africa, and 1,500 m. N.W. of Walvis Bay. Of volcanic origin, the island is rugged, and rises to 2,700 ft. in the S.W.; the coast cliffs vary from 600 to 2,000 ft. sheer. Fibre, tow, rope, and twine are the main exports. The area is 47 sq. m. The people, of mixed origin, number 3,700. Administration is by a governor, and at the chief place, Jamestown, on the N.W., is an observatory, also a telegraph station.

A Portuguese sailor, João da Nova, discovered the island in 1502. Napoleon died here in exile in 1821.

ST. HELENS. Co. bor. and market town of Lancashire. It stands on a tributary of the Mersey, 14 m. from Liverpool, on the L.M.S. and L.N.E. Rlys. The town is the chief centre of the glass manufacture; other industries are the making of chemicals, patent medicines, and pottery. Iron, brass, and copper are worked, and around are extensive collieries. St. Helens sends one member to Parliament. In 1919 the town council purchased the estate of Winslehurst for a garden city. Market days, Mon. and Sat. Pop. (1921) 102,640.

ST. HELEN'S. Urban dist. of the Isle of Wight. It is 4 m. from Ryde, on the Southern Rly. It takes its name from that of a church which was pulled down about 1800, but the tower of which still stands. Pop. 5,705.

ST. HELIER. Seaport, market town, and the capital of Jersey. It stands on the S. side of the island and has regular steamboat communication with Southampton and ports in France. The town has a good harbour, protected by a breakwater, and its chief industries are fishing, shipbuilding, and brewing. In Elizabeth Castle Charles II and Clarendon lived during their exile. Fort Regent dates from 1806. Market days, Wed. and Sat. Pop. 26,314. See Jersey.

ST. HELIER, FRANCIS HENRY JEUNE, 1ST BARON (1843-1905). British judge. Born March 17, 1843, at St. Helier, Jersey, he was educated at Harrow and Balliol College, Oxford, and was called to the bar in 1868. Having won a high reputation in eccles. cases, he was appointed judge of the probate, divorce, and admiralty division, 1891, and president the following year. He resigned in Jan., 1905, when he was created a peer, and died April 9, 1905.

ST. HELIER. Suburb of London. In Surrey, between Mitcham and Sutton, the land here was acquired by the L.C.C. for housing, and many houses have been built. It was named after Lady St. Helier, a member of the L.C.C. and the author of *Memories of Fifty Years*, 1909.

ST. HYACINTHE. City of Quebec, Canada. It stands on the Yamaska, 36 m. from Montreal, near the U.S. border. There are some manufacturing industries. Pop. 10,859.

ST. IVES. Mun. bor. and market town of Huntingdonshire. It stands on the Ouse, 3 m. from Huntingdon on the L.N.E. and L.M.S. Rlys. There is an agricultural trade and important cattle markets are held. St. Ives was named after a 6th century missionary. An old bridge crosses the river, and on it is a 15th century building, originally a chapel. Market day, Mon. Pop. 2,797.

ST. IVES. Mun. bor., market town, and seaport of Cornwall. It is 8 m. from Penzance on the G.W.R. The town is pic-

St. Ives, Huntingdonshire. The old bridge with its medieval chapel

turesquely situated and has a 15th century church, and copper, slate, fishing, boat-building, and rope-making industries. There are good sands and bathing. St. Ives is named after a 5th century Irish princess, In or Hia. Market day, Sat. Pop. 6,845.

ST. JAMES'S PALACE. London building, in Pall Mall, S.W. It stands on the site of a 12th century leper hospital, dedicated to S. James the Less, which Henry VIII transformed into a manor house, at the same time enclosing the park. After Whitehall was burnt, St. James's Palace was a royal residence, 1698-1837. Royal levées are still held here, and representatives of foreign powers are accredited formally to the Court of St. James's. Of Henry VIII's brick building, all that remains are the gateway facing St. James's Street, the chapel royal, and the presence chamber or Tapestry Room.

St. James's Park, in London, extends from Whitehall to Buckingham Palace, includes the Horse Guards Parade, the Mall, and Birdcage Walk, and covers 93 acres.

St. James's Square, London, opens from Pall Mall, and is bounded N., W., and E. by York, King, and Charles Streets respectively. At No. 14 is the London Library.

St. James's Street is a London thoroughfare connecting Piccadilly with Pall Mall, and is noted for its clubs, including Arthur's, Boodle's, Brooks's, Conservative, Devonshire, Thatched House, and White's.

ST. JOHN. River of N. America. It rises in Maine and flows between that state and New Brunswick for some distance before entering the Canadian province. It is 450 m.

long, about 300 m. being Canadian water, and falls into the bay of Fundy. St. John stands at the mouth, and it is navigable to Fredericton. On it are Grand Falls, where the water drops 53 ft.

St. John is also the name of a lake in Quebec. Its waters are carried to the St. Lawrence by the river Saguenay.

ST. JOHN. City of New Brunswick, Canada. Situated on a peninsula at the mouth of the St. John river, 483 m. from Montreal, it is the winter terminus of the C.P.R., has a commodious harbour with good docks, and a regular steamer service to S. Africa and the West Indies. Industries include those connected with lumber, the manufacture of boots and shoes, cotton and woollen goods, furniture, soap, vinegar, and fishing and fish-curing. Pop. about 60,000.

ST. JOHN OF BLETSOE. BARON. English title borne since 1558 by the family of St. John. The first holder was Oliver St. John of Bletsoe, Bedfordshire, who also became Baron Beauchamp. When the second baron died in 1596 the two baronies were separated, but that of St. John was kept by the St. John family.

ST. JOHN, FLORENCE (1854-1912). Stage name of Maggie Greig, British actress and vocalist. Born at Tavistock, she was a star of musical comedy. She died Jan. 30, 1912.

ST. JOHN OF JERUSALEM. Order of chivalry. Its title came from a hospital founded at Jerusalem about 1070 by Amalfi merchants who formed themselves into a religious order the members of which were obliged to aid and defend pilgrims.

Driven from the Holy Land, 1290, the order went to Limasol, in Cyprus, and in 1310 to Rhodes. Forced from Rhodes in 1522, the knights, numbering some 4,000, went to Candia and Sicily, and settled in Malta in 1530. Charles V granted the island to the order, and Malta remained in their hands until 1798. The order then became religious in character, its headquarters being established at Rome in 1879.

Admission is restricted to those who bear 16 quarterings and profess the R.C. faith. The English order of S. John of Jerusalem, which has women members, received a charter in 1888. It devotes itself to organizing hospital and Red Cross work, notably the St. John Ambulance Association. Its chancery is at St. John's Gate, Clerkenwell, London, E.C. The ribbon of the order is black.

The Ambulance Association provides instruction in the treatment of sick and injured persons, in nursing, and conducts examinations and confers diplomas. See Red Cross.

ST. JOHN'S. Capital of Newfoundland. It stands on a fine harbour on the E. coast of the island, 560 m. from Halifax, N.S. It has a dry dock and a regular steamer service to Liverpool, New York, and Halifax. It is the headquarters of the fisheries, as well as the banking and general business centre. The city was founded by Sir Humphrey Gilbert in 1582. Pop. 41,000.

ST. JOHN'S. Town of Quebec, Canada, formerly called Dorchester. It stands on the Richelieu about 30 m. from Montreal, has a trade in lumber and farm produce, and

manufactures bricks, furniture, and straw hats. Pop. 7,734.

ST. JOHN'S. One of the colleges of Oxford University. It was founded in 1555 by Sir Thomas White, a member of the Merchant Taylors' Co., and is in St. Giles. The older buildings consist of two beautiful quadrangles, and the garden is perhaps the most beautiful in Oxford.

One of the colleges of Cambridge University is also called St. John's. Built on the site of an Augustinian hospital, 1135, it was founded in 1511 under the will of Lady Margaret, countess of Richmond and Derby. Of its four courts one is approached, across the Cam, by a covered bridge of one arch known as the Bridge of Sighs, 1827-31. The hall, is rivalled in elegance and proportion only by that of Trinity. The beautiful library, the gift of John Williams, bishop of London, contains many treasures. The Gothic chapel, designed by G. G. Scott, was opened in 1869.

ST. JOHN'S WOOD. Residential district of London. In the bor. of Marylebone, and built over in the 19th century, it lies N.W. of Regent's Park. Near to the St. John's Wood Road station of the Met. Rly. are Lord's cricket ground and S. John's Church, where is the grave of Joanna Southcott. The district derives its name from being once the property of S. John's Priory, Clerkenwell.

ST. JOHN'S WORT (*Hypericum perforatum*). Perennial herb of the order

Hypericaceae. A native of Europe, Asia, and N. Africa, it has slender, two-ridged brown stems, branching above, and opposite oblong leaves whose veins are pellucid, as are the glands with which the leaf is freely dotted. On holding a leaf to the light these appear like perforations. The bright yellow flowers are an inch across, and appear in clusters at the end of the branches. H. calycinum, a related species, is sometimes called Rose of Sharon.

ST. JUST. Urban dist. and market town of Cornwall. It is 7 m. from Penzance, and is surrounded by ancient tin and copper mines. In a round, or amphitheatre, here, Cornish miracle plays were performed. Market day, Sat. Pop. 5,700.

ST. JUST, LOUIS ANTOINE LÉON DE (1767-94). French revolutionary. Born at Decize, Nièvre, Aug. 25, 1767, he was educated at Soissons, supported the revolutionary movement, and was elected to the assembly in Sept., 1792. Closely allied with Robespierre, he was a member of the committee of public safety, 1793. Becoming president of the convention, he was a follower of Robespierre, with whom he was guillotined, July 28, 1794.

ST. KILDA. Island of the Outer Hebrides, Scotland. It belongs to Harris, Inverness-shire, and is 40 m. W. of North Uist. The chief of a group of about 17 rocky islets, its circumference is about 7 m.; its highest point is 1,220 ft.; it has lofty, precipitous cliffs around the coast, except in the S.E., where is the landing place. Sea-fowl abound. At their own request the population of 35 were removed to the mainland in 1930.

St. John of Jerusalem. Left, star worn by the knights; right, badge of the Ambulance Association

St. James's Palace, London. Gateway built by Henry VIII

St. John's. Court House in the capital of Newfoundland

St. Kilda is also the name of a watering place of Victoria, $3\frac{1}{2}$ m. from Melbourne.

ST. KITTS or **St. Christopher**. Third largest of the Leeward Islands, in the British West Indies. It lies 46 m. W.N.W. of Antigua, and has an area of 65 sq. m. Basseterre is the chief town. With Nevis and Anguilla, St. Kitts forms an administrative unit, which sends representatives to the federal legislative council of the Leeward Islands. The three islands form a presidency under an administrator, assisted by executive and legislative councils. Pop. 26,000.

ST. LAWRENCE. River of North America. It begins as the St. Louis, which enters Lake Superior near Duluth, and has a total length of 1,900 m. Below Lake Ontario it bears the name St. Lawrence. Its basin contains more than half the fresh water in the world, and includes Niagara. The river proper has an average width of $1\frac{1}{2}$ m.; it is 100 m. across the mouth near Anticosti Island. From the Atlantic Ocean, at the Strait of Belle Isle, to the head of Lake Superior is a water stretch of 2,264 m., which is navigable with the aid of canals. Ocean steamers reach Montreal, 986 m. from the ocean.

The Gulf of St. Lawrence is an arm of the N. Atlantic Ocean on the N.E. coast of America. It receives the waters of the St. Lawrence river, contains Anticosti, Prince Edward and the Magdalen islands, and is 500 m. from N. to S. and 240 m. across. See Canada.

ST. LEGER. British horse race. It takes place at Doncaster on the Wednesday of the annual Sept. meeting. The race was inaugurated by Col. St. Leger, of Parkhill, Doncaster, in 1776. Originally it was a sweepstake for three-year-olds, over a course of 2 m.; the first winner was Lord Rockingham's Sampson. Afterwards the course was altered to 1 m. 6 fur. 132 yds. Horses which had previously won the 2,000 guineas and the Derby have occasionally won the St. Leger also. Edward VII (then prince of Wales) won the St. Leger with his Derby winner, Diamond Jubilee, in 1896.

St. Leonard's Forest. Tract of land in Sussex, N.E. of Horsham. It formed part of the Andredsweald of the Saxons.

ST. LEONARD'S-ON-SEA. Watering place of Sussex, included in the borough of Hastings (q.v.). It is on the S.R. There are a pavilion, a pier, and fine promenade.

ST. LOUIS. Principal city and port of entry of Missouri, U.S.A. It is pleasantly situated on the Mississippi, 18 m. below its junction with the Missouri, has a river frontage of 19 m., and covers rather more than 61 sq. m. There are some 2,700 acres of parks, and many notable public structures. Washington University and St. Louis University are the chief institutions for higher education. Tobacco is the principal manufacture, upwards of 80,000,000 lb. being produced annually. Other industries include slaughtering and meat packing, zinc and lead smelting, printing and publishing, flour milling, and the manufacture of foundry and machine-shop products, clothing, boots and shoes, wagons, carriages, stoves, hardware, and bricks. An active trade in mules is carried on, and large quantities of cotton, wool, and coal are exported. St. Louis was founded in 1746 as a fur trading station. Pop. 848,000.

St. Louis, Missouri. The Broadway Court House

St. Mark's, Venice. Western façade and chief entrance of the Romanesque cathedral, on the Piazza San Marco

East St. Louis stands on the Mississippi, in Illinois, opposite St. Louis, Missouri, is an important rly. terminus, and is noted for its extensive stockyards, pork and beef packing houses, and mule markets. There are iron foundries, blast furnaces, pneumatic tool and silica works, glass works, rolling mills, etc. It has several parks. Pop. 66,767.

ST. LUCIA. Largest of the Windward Islands in the British West Indies. It is 25 m. N. of St. Vincent and 25 m. S. of Martinique. Its main importance is due to the excellence of the harbour of Castries, the chief town. The administrator is assisted by a nominated executive and legislative council. The island was discovered in 1502, and became British in 1803. Its area is 233 sq. m. Pop. 56,900.

St. Lucia Bay is a shallow, land-locked lagoon on the coast of Zululand, Natal. It was annexed by the British, Dec. 18, 1884.

ST. MALO. Seaport and watering place of N.W. France. In the dept. of Ille-et-Vilaine, on a rocky peninsula at the mouth of the Rance, opposite Dinard, it is surrounded by ancient towered ramparts, with eight gates, and has a castle built in the 14th-15th century, used as a barracks. The church, founded in the 12th century, is mainly of 15th-16th century work. Motor boats, called vedettes, connect with Dinard and Dinan; steam trams with Paramé, St. Servan, and Cancale; and steamers with the Channel Islands and Southampton. Timber and coal are imported; cattle, game, and dairy produce exported.

St. Malo is named after a Welsh monk, S. Malo or S. Maclou, who was bishop here in the 6th century. Pop. 13,137.

St. Margaret's. Residential dist. of Middlesex. On the S.R., it forms part of the urban dist. of Heston and Isleworth.

ST. MARGARET'S. London church. Adjoining Westminster Abbey, it was founded as the parish church of Westminster in the 12th century and was rebuilt in the 16th. In 1614 it was made the official church of the House of Commons, which it still is. Its bells are rung

when a new Speaker is admitted. It is rich in memorial windows and monuments. Its rector is usually chaplain to the Speaker and a canon of Westminster.

ST. MARGARET'S BAY. Watering place of Kent. It is 4 m. from Dover, on the Southern Rly. The bathing is good, and there are golf links.

ST. MARK'S. Cathedral in Venice. It is the largest of the Italian Byzantine churches, covering an area of 46,000 sq. ft. and measuring 260 ft. by 215 ft. externally. It was constructed of brick, which has since been overlaid with coloured marble, in the form of a Greek cross. The façade on the Piazza San Marco consists of two storeys, of which the lower has the main entrance in the centre of a line of five semi-circular arches, the design being repeated on a slightly smaller scale in the upper storey. See illus. above.

ST. MARTIN'S - IN - THE - FIELDS. London church. It is situated on the east side of Trafalgar Square and was built in 1721-26, on the site of an earlier church. During the Great War it was continuously open as a resting place for soldiers, and later, when Rev. H. R. L. Sheppard was rector, its services were frequently broadcast. The churchyard has been covered in.

ST. MARTIN'S SUMMER. Name given to the warm, calm, dry weather frequently experienced in the British Isles in the autumn. See Indian Summer; Martinmas.

ST. MARY'S. Largest of the Scilly Islands. About 27 m. W.S.W. of Land's End, it is about 2 m. in length and breadth. Star Castle is an Elizabethan fortress. Hugh Town, on the W. coast, is the capital of the group. It has a good harbour and a pier. Pop. 1,400.

ST. MARY'S. River between Lakes Superior and Huron, N. America. It is 40 m. long and is divided by islands into two main channels which each expand at intervals to a width of 10 m. Between the two lakes the fall is 21 ft., most of which occurs in the sault or rapids, which are about 1 m. long. Since 1855 canals have made the rapids navigable. See Sault Ste. Marie.

St. Mary's is also the name of a loch or lake in the W. of Selkirkshire, Scotland, 3 m. in length. It figures in Scott's poems.

St. Malo, France. View of Grande Plage and 14th century castle

ST. MAURICE. River of Canada. A left-bank tributary of the St. Lawrence, it flows for 325 m. through Quebec, and joins the main stream at Three Rivers.

ST. MAWES. Summer resort of Cornwall. It stands on St. Mawes Harbour, an arm of Falmouth Bay, 3 m. E. of Falmouth. St. Mawes Castle (1542) was captured by Fairfax in 1646. Pop. 600.

ST. MICHAEL AND ST. GEORGE. British order of knighthood. It was founded in 1818 especially for natives of the Ionian Islands and the Mediterranean area. Later it became an order to reward services rendered in the British overseas dominions generally. Its statutes have been remodelled several times, one occasion being in 1902. The order has three grades: G.C.M.G., knight grand cross; K.C.M.G., knight commander; and C.M.G., companion. The first two are distinguished as Sir.

St. Michael and St. George. Collar, badge, and stars of the order

The badge is a white cross of 14 points, having in the centre the figure of S. Michael trampling on Satan. The motto is *Auspiciis melioris*

aevis (Augury of a better age). The ribbon is of Saxe blue with crimson centre. Membership is limited to 100 knights grand cross, 300 knights, and 600 companions. The prince of Wales is grand master, and the order has a chapel in S. Paul's cathedral.

ST. MICHAEL'S MOUNT. Rock in Mounts Bay, Cornwall. About 3 m. E. of Ponzance, and connected with the mainland by a low-tide causeway, it rises over 200 ft., and has at its summit a 6th century castle, long the seat of the St. Aubyn family. Mont St. Miel (q.v.), in Brittany, is sometimes known as St. Michael's Mount.

ST. MIHEL. Town of France. It stands on the slopes of the Côtes de Meuse, on the right bank of the river, 11 m. N.N.W. of Commercy and 20 m. S. by E. of Verdun. Its buildings include an 8th century Benedictine abbey and the churches of S. Michel and S. Étienne. Captured by the Germans, Sept. 25, 1914, it remained in their possession until Sept., 1918, when American and French troops retook it. A Franco-American monument was unveiled in 1919. Pop. 4,542.

ST. MORITZ. Watering place of the upper Engadine, in the canton of Grisons. It stands at an alt. of 6,090 ft., on the lake of St. Moritz, 27 m. S.E. of Coire (Chur). It is a favourite resort both for its winter sports, and for its chalybeate, sulphureous, and carbonic springs in summer. The noted Cresta run is here. Pop. 2,669.

ST. NAZAIRE. Town of France. It stands on the Loire near the sea, some 40 m. W. of Nantes, of which it is the port. There are regular sailings to S. America. Trade is carried on in grain, salt, tobacco, coffee, sardines, and cognac. In the Great War the British established a temporary base here and at Nantes for a few weeks in Aug.-Sept., 1914. Pop. 39,711.

ST. NEOTS. Urban dist. and market town of Huntingdonshire. It stands on the Ouse, 8 m. S.W. of Huntingdon, on the L. N. E. R. Named after S. Neot, whose relics were translated

from Cornwall to Eynesbury, near by, in 974. St. Neots has a fine parish church. The industries include paper making. Market day, Thursday. Pop. 4,109.

ST. OMER. Town of France, 42 m. from Lille. It stands on the Aa, and is connected with the sea by a canal. The chief buildings

St. Michael's Mount, Cornwall. Granite rock crowned by an historic castle

include the church of Notre Dame, once a cathedral, the churches of S. Denis and S. Sepulchre, and the town hall. The Hôtel Colbert houses a museum. A massive tower, 190 ft. high, and other remains are reminders of the abbey of S. Bertin, founded here in the 7th century by S. Omer. The buildings of the Jesuit college, opened in 1592, remain, although put to other uses. In the Great War, from Oct. 12, 1914, to March 31, 1916, St. Omer was the British headquarters. Pop. 18,858.

ST. OSYTH. Village of Essex. It stands on a creek of the Colne, 10 m. from Colchester, and owes its name to a nunery founded in honour of Osyth, a queen martyred by the Danes. Later a priory was built here, and remains of this are included in the house built in the 16th century and called St. Osyth's priory. St. Osyth has a large church with a massive western tower and a tidal mill.

ST. PANCRAS. Met. bor. of the eo. of London. Bounded E. by Islington, S. by Holborn, W. by Marylebone and Hampstead, and N. by Hornsey, it includes the districts of Somers Town, Chalk Farm, Camden Town, Kentish Town, and part of Highgate; the railway termini of Euston, St. Pancras and King's Cross, University College, and the North London or University College Hospital. The old church, dating from about 1180, in the St. Pancras Road, rebuilt in 1847-48, was succeeded as the parish church in 1822 by that in the Euston Road. Pop. 211,366.

ST. PATRICK. Irish order of knighthood. It was founded in 1783 by George III, after Ireland had obtained legislative independence, and its constitution was revised in 1905. It consists of only one class of knights, distinguished as K.P. and limited to 22. They wear a collar adorned with harps alternating with double roses and double knots, the roses being alternately red within white and white

St. Paul's, London. Left, west front of the cathedral built by Wren; the north-west tower, on the left, contains the peal of bells; in the other tower are the clock and the old bell called Great Paul. On the right is shown the interior of the choir, looking towards the High Altar. See p. 1191

within red. The hadge which hangs therefrom is an oval composed of a red saltire surrounded by a green crown within a circle of sky blue. The motto is *Quis Separabit* (Who shall separate?), surrounded by a wreath of shamrock. The ribbon is sky blue.

ST. PATRICK'S DAY.

Anniversary of the death of the national saint of Ireland, March 17. On it Irish soldiers and others wear the shamrock. It is omitted from the Church of England calendar. See Patrick.

ST. PATRICK'S PURGATORY.

Name of a cave on an island in Lough Derg, co. Donegal, Irish Free State. The island is called Station Island. St. Patrick's Purgatory has long been a place of pilgrimage from all parts of Europe.

ST. PAUL. City of Minnesota, U.S.A. The state capital, it stands on the Mississippi river, opposite Minneapolis. Among prominent buildings are the state capital and the Roman Catholic cathedral. Educational institutions include Hamline University. St. Paul is an important rly. and commercial centre. There is a large horse market. Printing and publishing are leading industries, and manufactures consist largely of foundry and machine shop products and fur goods. There are also meat packing establishments. Pop. 246,001.

ST. PAUL'S. Cathedral of London. Its foundation stone was laid June 21, 1675, the entire structure being completed in 1710. The third cathedral church built on this site, it was preceded by a Norman building which was virtually destroyed by the Great Fire in 1666; this in its turn followed a Saxon church, which was burnt in 1086. The present church was designed by Sir Christopher Wren. A product of the late Renaissance in Great Britain, it is unique among British cathedrals as the only non-Gothic building of its class. Wren's original plan was that of a Greek cross; but the clergy stipulated that the form should be a Latin cross, with a long nave and aisles, and Wren modified the design accordingly.

Its central feature is the dome, crowned by its cupola and lantern with the golden ball and cross. Constructionally, the dome is two-fold, consisting of an inner and outer shell. The two flanking towers at the W. end are crowned by cupolas. Linking the campanile towers together is the main portico, in two storeys, crowned by a triangular pediment. Two broad flights of stone steps lead up to the entrance. On the N. and S. sides the two-storey construction is repeated in the semi-circular porticoes, two orders, Corinthian and Composite, being used for these. The crypt extends under the entire building, and contains the tombs of Nelson, Wellington, and other famous men.

In April, 1925, to allow for more extensive repairs, the dome area was closed, and services were held in the nave. These were completed in 1930, when the cathedral was reopened. In the churchyard, which is converted into a public garden and gives its name to the surrounding thoroughfares, are remains of the famous open-air pulpit known as Paul's Cross. A handsome memorial cross with a kind of pulpit at the base was erected here in 1910. See Altar; London; Ludgate Hill, illus.; Renaissance; also illus. p. 1190.

ST. PAUL'S SCHOOL. English public school. Founded by John Colet (q.v.) in 1509, the first school was at the east end of the old cathedral. The third and last building on the same site was occupied until 1884, when the school was removed to Hammersmith,

St. Patrick. Collar, badge, and star of the Irish order

where large new buildings were erected. Its head is the high master.

ST. PETER. Lake of Canada, in Quebec. It is an expansion of the St. Lawrence river, 40 m. below Montreal. It is 30 m. long, 7 m. wide, and 130 sq. m. in area.

ST. PETER PORT.

Town of Guernsey, the capital of the island. It stands on the E. coast and has an extensive harbour. There is regular steamboat service to other Channel Islands. On a rocky island in the harbour is Castle Cornet, an old fort, and S. of the town is Fort George. The chief buildings are the Town Church, dating from the 13th and 14th centuries, the court house, where the island legislature meets, and Elizabeth College. Pop. 16,213. See Guernsey.

ST. PETER'S. Cathedral in Rome, the chief church of Roman Catholic Christendom, wherein the popes are crowned. A medieval cathedral formerly occupied the site of the present structure, but by the middle of the 15th century this had fallen into ruins. Plans having been prepared by Donato Bramante, the foundation stone was laid in 1506.

In the hands of several architects, both the plan and the details of the cathedral underwent much modification. Bramante had planned

St. Peter's, Rome. Western façade of S. Pietro in Vaticano, metropolitan cathedral and the largest church in the world. On the right is the main entrance to the Vatican palace, which rises behind

a Greek cross; Peruzzi's alterations were based on the plan of a Greek cross inscribed in a square; Sangallo, while retaining this form, modified the external design; Michelangelo completed the design for the dome and lantern so effectively that, though he did not live to see its completion, his work was faithfully carried out by Della Porta and Fontana. Maderna reconstructed the nave, and introduced a great deal of architectural detail that has been almost universally condemned. Finally, about 1660, Giovanni Bernini added the piazza with its colonnades.

ST. PIERRE. Island near Newfoundland, forming part of the French colony of St. Pierre and Miquelon. St. Pierre, with adjacent islets, has an area of 10 sq. m. The town of St. Pierre is the capital of the colony. The chief industry is the cod fishery. Pop. 3,040.

SAINT-PIERRE, JACQUES HENRI BERNARDIN DE (1737-1814). French author. Born at Havre, Jan. 19, 1737, and educated at Caen and Rouen, he became an engineer and

spent some time in rather aimless wanderings about Europe. After three years in Mauritius he returned, in 1771, to France, where he

became a friend of Rousseau, under whose influence he wrote his *Études de la Nature* and his *Harmonies de la Nature*. His famous idyll, *Paul et Virginie*, published in 1789, though over-sentimental for modern taste, still retains its charm. Saint-Pierre died Jan. 21, 1814.

B. de Saint-Pierre, French author

ST. QUENTIN. Town of France. It is situated on the Somme, 95 m. N.E. of Paris. Industries include the making of textiles, sugar, and machinery. Among notable buildings are the collegiate church, dating from the 13th to the 15th century, and the 14th century town hall. During the German occupation, 1914-18, most of the town was destroyed, the collegiate church, burnt by the Germans, being partly reopened in 1920. Pop. 49,201.

St. Quentin figured prominently in the Great War. The St. Quentin sector, as it was called, was the scene of several Allied attacks in 1916-17, with the town, an important railway centre, as their objective. It was on the Allied front St. Quentin-La Fère that the great German attack on the British Fifth Army took place on March 21, 1918. Sometimes called the battle of St. Quentin, this is more correctly the second battle of the Somme (q.v.).

ST. RAPHAËL. Fishing town of France, in the dept. of Var. It is on the Mediterranean Sea, 2 m. S.E. of Fréjus. Napoleon landed here on his return from Egypt in 1799, and embarked from here for Elba in 1814. The buildings include an old church, once fortified, and the modern one of Notre Dame de la Victoire. There are relics of a Roman aqueduct. From here starts the Corniche d'Or, a fine coast road to La Napoule, completed in 1903. The town is a bathing and winter resort. Pop. 5,000.

C. C. Saint-Saëns, French composer

SAINT-SAËNS, CHARLES CAMILLE (1835-1921). French composer. Born in Paris, Oct. 9, 1835, he studied under Benoist and Halévy at the Conservatoire, was organist of S. Merri, 1853-58, and of the Madeleine, 1858-77. The most successful of his operas

were Samson and Delilah, produced at Weimar, 1877, and at the Opéra, Paris, 1892; and Henry VIII, 1883. His orchestral symphonic poems have much dramatic force. Saint-Saëns published several volumes of criticism, essays, etc. He died Dec. 17, 1921.

ST. SAMPSON. Town of Guernsey. It is on the E. coast, 2½ m. N. of St. Peter Port. It has a tidal harbour, sheltered by a breakwater 650 ft. long, a 12th century church, and an extensive trade in stone. Pop. 6,000.

SAINTSBURY, GEORGE EDWARD BATEMAN (b. 1845). British scholar. He was born at Southampton, Oct. 23, 1845, and educated at King's College School

G. E. B. Saintsbury,
British scholar
Russell

and Merton College, Oxford. After eight years as a schoolmaster, and 20 years as a journalist, he was professor of rhetoric and English literature at Edinburgh University, 1895-1915. His numerous works, characterised by great range of knowledge and marked individuality of style, include *A Short History of French Literature*, 1882; *A Short History of English Literature*, 1898; *A History of Criticism*, 1900-4; *A History of English Prosody*, 1906-10; *The English Novel*, 1913; *Notes on a Cellar Book*, 1920, and three *Scrap Books*, the last appearing in 1924.

ST. SERVAN. Town of France. It stands at the mouth of the Rance, about a mile from St. Malo. It is defended by a fort known as the "Cité." The Tour de Solidor dates from the 14th century. Pop. 12,622.

SAINT-SIMON, CLAUDE HENRI, COMTE DE (1760-1825). French economist. Born in Paris, Oct. 17, 1760, he fought against the British in the American War of Independence. Imprisoned as an aristocrat during the French Revolution, he yet sympathised with its principles, but suffered from disillusionment as he realized the incapacity of the mob for government. He died May 19, 1825.

Saint-Simon's socialist theories are expounded chiefly in *The Industrial System*, 1821. The corner stone of the socialist community, as outlined by him, was to be an aristocracy of intellect, a body of experts regulating society in a scientific way.

SAINT-SIMON, LOUIS DE ROUVROY, DUC DE (1675-1755). French writer. He was born at Versailles, Jan. 16, 1675, and became a soldier. In 1696 he married Gabriel de Durfort, and on the death of Louis XIV he

became a member of the council of regency. In 1721 he went to Spain to arrange the marriage of Louis XV with the Infanta, and shortly after his return, 1723, retired to La Ferté-Vidame, where he devoted a great part of his time to the writing of his famous memoirs. He died in Paris, March 2, 1755.

Duc de Saint-Simon,
French writer

Some portions of Saint-Simon's Memoirs were published from time to time surreptitiously, but it was not until 1839 that they were issued in full. His memoirs are unmatched for their pen-portraits of people whom the writer had met, and are invaluable for the light they throw on the life of his period.

ST. SOPHIA. Mosque in Istanbul (q.v.). It was originally a Christian church, of which the foundation stone was laid by Justinian, Feb. 23, 532. The church was completed within six years, and on Dec. 26, 537, was formally dedicated to Hagia Sophia (Holy Wisdom). In ground plan the church is nearly square, the measurements, excluding the apse and narthex, being 250 ft. by 237 ft. The main building is reached through an outer and an inner narthex. A great central door, or royal gate, leads into an oval-shaped nave, of which the centre consists of a square (107 ft. sides) bounded by massive piers, of which the semicircular arches support a great dome. On either side of the nave is an aisle in two storeys, and the semicircular ends of the nave are crowned by semi-domes linked up with the main dome. The walls are of brick, lined with precious marbles, and the columns are con-

St. Sophia, Istanbul. Top, view from the south, showing the minarets added by the Turks. Below, interior of the nave, with its splendid Byzantine architecture

ST. THOMAS. City of Ontario, Canada. It stands on Kettle Creek, near Lake Erie, 167 m. from Toronto, and is served by the C.N. Rlys. and the C.P.R. - The industries include rly. shops, flour mills, and the making of clothing and agricultural implements, and the city is a market for the fruit and other produce of the vicinity. Pop. 16,026.

ST. THOMAS'S HOSPITAL. Charitable medical institution in London. The buildings are on the Albert Embankment, adjoining Westminster Bridge. It was founded in the reign of William II out of the proceeds of a ferry over the Thames near London Bridge. Destroyed by fire in 1207 and rebuilt in 1228, the hospital was endowed and incorporated by Edward VI in 1553. The present building was opened by Queen Victoria in 1871. It contains over 1,000 beds, and has a large and excellent medical school attached to the hospital. See London.

ST. VALENTINE'S DAY. Feast of S. Valentine (Valentinus), an Italian saint, celebrated Feb. 14. The feast has been regarded since the Middle Ages as a lovers' festival. A friend or sweetheart chosen on that day was a "valentine" for the rest of the year.

ST. VINCENT. One of the Windward Islands, West Indies. A British possession, it lies S. of St. Lucia. In the N. is the volcano of Soufrière. The fertile valleys yield sugar, arrowroot, cacao, spices, and Sea Island cotton. In 1902 the Soufrière erupted, simultaneously with Mont Pelée, and a third of the island was devastated. Kingstown is the capital. The area is 150 sq. m. Pop. 51,426.

ST. VINCENT, CAPE. Promontory forming the S.W. corner of Portugal. It is famed for several naval battles fought in its vicinity. The most important is that fought on Feb. 14, 1797, when the British under Jervis overwhelmed the Spanish fleet. This victory, which was largely due to the genius of Nelson, frustrated the scheme for the Spanish-French invasion of England. There is a lighthouse on the cape, and near is Sagres.

The gulf of St. Vincent is an indentation of the coast of S. Australia. It is separated from Spencer Gulf by Yorke Peninsula; off the mouth lies Kangaroo Island. It is 90 m. long and 40 m. wide.

The city of Adelaide is on the E. shore.

structed of porphyry and verd antique.

The church became a Mahomedan mosque in 1453, but beyond a number of minarets and other adjuncts, added by the Turks to its exterior, little alteration was made, and it remains a perfect specimen of Byzantine craftsmanship.

ST. THOMAS. One of the Virgin Isles, W. Indies, belonging to the U.S.A. It is situated about 38 m. E. of Porto Rico, is 14 m. long, and has an area of 32 sq. m. The capital is Charlotte Amalie.

ST. VINCENT, JOHN JERVIS, EARL OF (1735-1823). British sailor. Born Jan. 9, 1735, he went to sea at the age of fourteen. In 1775 he was appointed to command the *Foudroyant*, in which he had several actions with the French, took part in the relief of Gibraltar, and in the battle off Cape Spartel, 1782. In 1794 he sailed to the West Indies and captured Martinique and Guadeloupe. In 1795 he was appointed commander-in-chief in the Mediterranean, and off Cape St. Vincent he effected a brilliant victory, 1797, over the Spanish fleet. For this he was made an earl. He commanded the Channel fleet, 1799-1801, and was first lord of the admiralty 1801-4. He died March 13, 1823, when his earldom became extinct. A nephew became Viscount St. Vincent, and this title persists.

Earl St. Vincent,
British sailor
J. Keenan

ST. VITUS'S DANCE. Popular name for chorea (q.v.). Sufferers from epidemic dancing mania in medieval Germany resorted to the shrines of S. Vitus or Guy, a boy who was martyred under Valerian or Diocletian.

SAKARIA. River of Asia Minor. It rises in the ranges E. of Kutaya, and, after a sinuous course, flows into the Black Sea about 90 m. E. of Istanbul (Constantinople).

The battle of Sakaria was fought between the Greeks and the Turks in Aug.-Sept., 1921. The Turks gained a slight advantage, but the losses on both sides were about equal.

SAKÉ. Japanese national beverage. A kind of beer, made chiefly from rice, it is an alcoholic, fermented beverage produced by a complicated process in which bacteria obtained from *Aspergillus oryzae* play an important part. The first fermentation lasts for about a month, the second for a little over a week. Light in colour and unpleasing to the European palate, saké quickly produces intoxication.

SAKHALIN OR **SAGHALIEN.** Island of E. Asia divided between Soviet Russia and Japan. It is situated on the W. side of the sea of Okhotsk, and is separated from the mainland by the gulf of Tartary. Larch, fir, spruce, and birch occur in the extensive forests. Fishing is the chief industry. There are important coalfields. The island was used by the Russians as a penal colony. The S. portion, known as Karafuto, was ceded by Russia to Japan in 1905, at the close of the Russo-Japanese War. The total area is 24,560 sq. m. The area of Karafuto is about 13,934 sq. m. and the pop. 221,243.

SAKI (Pithecia). Group of American monkeys with non-prehensile tails. The body is usually covered with long, dark hair, and the face is yellow or whitish. They occur only in Guiana and the valley of the Amazon.

SAKKARA OR **SAQQARA.** Village near the left Nile bank midway between Gizeh (El Giza) and Dahshur, in Egypt. The plateau westward was used under the Old Kingdom as a necropolis. Of its many pyramids, mostly in ruins, the IIIrd dynasty step pyramid of Tcheser is a transitional mastaba (q.v.). The VIth dynasty pyramid of Unas contains a basalt sarcophagus. The Vth and VIth dynasty tombs are many-chambered structures with exquisite mural reliefs. See Apis; Serapis.

SAL (*Shorea robusta*). Timber tree of the order Dipterocarpaceae. A native of India, it attains a height of about 100 ft., has alternate oval leaves and clusters of sweet-smelling yellow flowers. The resin from the trunk yields dammar, and the tough, close-grained wood, stronger and heavier than teak is extensively used in shipbuilding.

SALA, GEORGE AUGUSTUS HENRY (1828-95). British journalist. Born Nov. 24, 1828, in London, where, and in Paris, he had a desultory education, he became a clerk, then a theatrical scene painter and book illustrator.

G. A. Sala,
British journalist

In 1848 he edited *Chat*; he wrote regularly for *Household Words*. 1851-56; and in 1857 began his long connexion with *The Daily Telegraph*, for which he acted as special correspondent with the North during the American Civil War, 1861-66; with the French, in the Franco-Prussian War,

1870-71; in Russia, 1876; in Australia, 1885; and elsewhere. He founded and edited *Temple Bar* and wrote several novels and books of travel. He died at Brighton, Dec. 8, 1895.

SALAAM (Arab. salām, peace). Oriental salutation. Strictly the salaam is the verbal salutation between Mahomedans, but the word is applied in the East to any salutation, especially to a ceremonious obeisance, such as that performed in India by bending low the head and body and placing the palm of the right hand on the forehead.

SALADIN (Ar. Salah-ud-din, honouring the faith). Sultan of Syria and Egypt. He spent his youth in Damascus, of which city his father was governor. For five years he fought the Christians who came to the aid of Egypt, and by 1170 he had become vizier. On the death, in 1174, of his master, Nur-ed-din, sultan of Syria, Saladin hastened north and by the following year had made himself master of the realm and been declared sultan. The next few years were spent in extending his territory and in strengthening his hand for the inevitable struggle with the Christians which he opened in 1187 by a brilliant sweep through Palestine, culminating in the capture of Jerusalem, Oct. 2, 1187. Saladin died at Damascus, March 4, 1193.

The Saladin tithe was a tax levied in England in 1188 to procure money for the third crusade.

SALAMANCA (anc. Salmantica). City of Spain. It is 172 m. by rly. N.W. of Madrid, on the river Tormes, here crossed by a bridge of 27 arches, more than half of Roman construction. The city contains many relics of the time when it was the seat of one of the most celebrated universities in Europe. Its great colonnaded square is one of the finest in Spain. The 12th century cathedral is a fine example of the Transition style, while the new one, built 1513-1734, is an imposing Gothic building. The university was founded about 1230. Long famous for its

leather-work, the city also makes cloth, linen, and pottery. It is an important rly. junction. Pop. 36,530

The battle of Salamanca was a British victory in the Peninsular War, July 22, 1812. Wellington had taken up his position south of Salamanca and was guarding the road to Ciudad Rodrigo, by which his communications passed to Portugal. He was then attacked by the French, who were repulsed after a sanguinary fight.

SALAMANDER (*Salamandra*). Genus of tailed hatrachians. It consists of three species only, natives of Europe and W. Asia. In general form resembling the newts (q.v.), they differ in having five toes on each of the short, stout limbs, in the tail being rounded instead of compressed, and in the body being of heavier build. The spotted S. (S.

maculosa) of Europe (except Britain), Algeria, and Asia Minor, is usually 5 or 6 ins., but occasionally 8 ins., in length. It is black in colour with patches of yellow on the back and limbs. The animal is poisonous, its venom consisting of a milky fluid squirted from the pores of the smooth skin. The head is as broad as long. The females retain their eggs until the larvae are ready to hatch, then seek the water and deposit either eggs or larvae. When the tadpole stage is completed the young leave the water, and live henceforth in moist situations on land. See Axolotl.

Salamander in heraldry.
See below

SALAMAN- DER. Legendary creature, supposed to live in fire. It had the form of a dragon, and its skin was so incombustible that a fireproof cloth, really made of asbestos, was said to be made from it. According to Paracelsus, a salamander is an elemental spirit of the fire. In heraldry the salamander is a four-

Salamanca, Spain. City from the left bank of the river showing the Gothic cathedral

legged and long-tailed creature, surrounded by flames. See illus. above.

SALAMIS. Island of Greece, in the Saronic Gulf, W. of Athens. Crescent-shaped, it covers 36 sq. m. Pop. 12,000.

Salamis is famous for the naval engagement fought between the Greeks and Persians, 480 B.C. To bring the Persians to action, Themistocles sent a messenger declaring that the Greeks intended to withdraw and advising them to blockade the entrances to the bay of Eleusis, and so cut off their retreat. The Persians proceeded to do so, feeling confident of success with 1,000 ships against 360. After a fight of over several hours, victory at last rested with the Greeks.

Another Salamis was a town of Cyprus, afterwards called Konstantia.

SAL AMMONIAC. Ammonium chloride NH_4Cl . It is used as an electrolyte in batteries, as a flux in soldering, in dyeing and calico printing. In medicine sal ammoniac is used in bronchitis and pneumonia as an expectorant.

SALANDRA, ANTONIO (b. 1853). Italian statesman. Born near Foggia, Aug. 31, 1853, he became a lawyer. Elected to parliament, 1886, he served in the treasury, 1891-96; was minister of agriculture, 1899-1900; and of finance, 1906, 1908-10. In 1914 he became premier, and was at the head of the government which placed Italy on the side of the Allies and entered the Great War, 1915. He resigned in 1917, but represented Italy at the Peace Conference of 1919.

SALCOMBE. Urban dist. and watering place of Devonshire. It stands on the W. side of Salcombe Haven, an opening on the S. coast of the county, 11 m. from Dartmouth. The station is Kingsbridge, on the G.W.R. At one time the Salcombe clippers were noted. There was once a castle here. Pop. 2,201.

Salamander. Specimen of black or alpine salamander
W. S. Berridge, F.Z.S.

SALE. Contract whereby one person, called the seller, or vendor, transfers or agrees to transfer property to another, called the buyer or purchaser, in return for a money payment, called the price. If the price is not in money, the transaction is barter.

SALE OF GOODS ACT. This is a law of 1893 codifying the law relating to the sale of goods in the United Kingdom. It introduced little new law, and was a very successful attempt to compress into some 60 sections the results of an enormous number of decisions on this important business subject, together with one or two statutory provisions. It defines sale and distinguishes between a sale and an agreement to sell. The first is where the property is, by the contract itself, transferred to the buyer. The second is where the transfer of the property is to take place at a future time or on the fulfilment of a condition.

SALE. Urban dist. of Cheshire. It stands on the Mersey, 5 m. from Manchester, and is served by the L.M.S., L.N.E., and Cheshire Lines Rlys., also by the Bridgewater Canal. It is really a residential suburb of Manchester. Pop. 16,337.

Sale is the name of a township of Victoria, Australia. On the Thomson river, 128 m. by rail from Melbourne, it is the chief town in Gippsland and a centre of gold mining and dairying. Pop. 4,020.

SALEM. City of the Jebusites, of which, in Abraham's time, Melchizedek was king (Gen. 14, 18; Heb. 7, 1-2). It has been identified with Jerusalem (Ps. 76, 2), of which it still serves as a poetical name.

SALEM. City of Massachusetts, U.S.A. A port of entry, on the N. side of Massachusetts Bay, it is 16 m. N.E. of Boston. Among its buildings are the city hall, custom house, court house, and armoury. Some interesting old houses remain, including the one in which Hawthorne was born, his House of the Seven Gables, and the witch house, so called because witches were examined here. There are manufactures of machinery, boots and shoes, and lumber products. Salem was settled in 1626, and the names of John Endecott and Roger Williams are associated with its early

history. In 1692 a number of persons were tried for witchcraft here, and 20 put to death. In 1774 the first assembly of Massachusetts met here. Pop. 42,821.

SALERNO (anc. Salernum). Seaport and city of Italy. It stands at the head of the gulf of Salerno, 34 m. by rly. S.E. of Naples, and is built on the slopes of a hill dominated by an ancient castle. The cathedral, built by Robert Guiscard (1076-84), is architecturally and historically interesting, with fine bronze doors, splendid marble ambons, and ivory carvings. There are some manufactures. In the Middle Ages the medical school of Salerno was world famous, as was its university, founded in 1150 and closed in 1817. Pop. 63,106.

SALFORD. City and county borough of Lancashire. It stands on the W. bank of the Irwell, which divides it from Manchester, 190 m. from London, and is served by the L.M.S. Rly. The buildings include the town hall, municipal buildings, technical institute and museum and art gallery, and there is a fine Roman Catholic cathedral. Among the many open spaces are Peel Park, Albert Park, Seedley Park, and Kersal Moor. The industries resemble those of Manchester. Here are the principal docks of the Manchester Ship Canal. Salford was made a city in 1926. Pop. 239,100. See Manchester.

SALICIN (Lat. salix, willow). Crystalline substance prepared from the bark of various species of willows and poplars. It occurs as colourless, intensely bitter crystals, and is used in medicine in practically the same way as salicylic acid.

SALICYLIC ACID. One of the carbon, hydrogen, and oxygen compounds. It occurs in many plants, is the chief component of oil of wintergreen, and is found in small quantities in many fruits. It is a powerful antiseptic, and being odourless and with little taste in small quantities, it has been used in the preservation of food, for which purpose, however, it is regarded with disfavour by many authorities. The salts of salicylic acid are called salicylates.

SALISBURY. City of Wiltshire, also the county town. It stands on the Avon, 84 m. from London, with stations on the G.W. and Southern Rlys. The glory of Salisbury is its cathedral, a perfect specimen of Early English, finely situated near the Avon. Built mainly in the 13th century, it is 473 ft. long and the spire is 404 ft. high. Features include the cloisters, chapter house, lady chapel, and library. In the close are the King's House, renovated for a training college, the bishop's palace, and other old buildings. Other churches include S. Thomas's, founded as a chapel to the cathedral in the 13th century, S. Martin's, and S. Edmund's, originally collegiate. The city has a large market place, and the poultry cross still stands. The hall built by John Halle and the Joiners' Hall are notable. The city proper is laid out in squares, known as chequers. Industries include brewing, while it is an agricultural and a military centre.

Salisbury was founded in 1220 by Bishop Poore, who decided to move his cathedral city from Old Sarum to its present site. The city is officially called New Sarum. Pop. 30,000. See Sarum.

SALISBURY. City of Rhodesia, capital of S. Rhodesia. It stands at an alt. of 4,825 ft. and is 300 m. by rail from Bulawayo and 374 from Beira. The buildings include government house, town house, library, and a court house.

There is an Anglican cathedral. The city is the centre of a mining and agricultural district. Pop. (white) 8,045. See Rhodesia.

SALISBURY, EARL AND MARQUESS OF. English titles now held by the family of Cecil. The title of earl was granted about 1149 to Patriek de Salisbury, a feudal lord in Wiltshire, and was held by other powerful nobles. From Thomas de Montacute it passed to his son-in-law, Richard Neville, falling into abeyance when his son, the earl of Warwick, was killed in 1471.

In 1605 Robert Cecil, son of the great Lord Burghley, was created earl of Salisbury. He was made secretary of state in 1596 and succeeded his father as Elizabeth's chief adviser. From 1608 until his death, May 24, 1612, he was lord treasurer, and in the confidence of James I. James, the 7th earl, lord chamberlain, 1783-1804, was made marquess of Salisbury in 1789. James, the 2nd marquess (1791-1868), was lord privy seal, 1852, and lord president, 1858-59. His marriage with Frances Mary Gascoyne introduced that name into the family. Their son, the 3rd marquess, was the prime minister. His eldest son is known as Viscount Cranborne. The family seat is Hatfield House, Hertfordshire. See Burghley, Lord; Cecil; Hatfield.

Robert Cecil, earl of Salisbury, English statesman
Zucchero

SALISBURY, ROBERT ARTHUR TALBOT GASCOYNE CECIL, 3RD MARQUESS OF (1830-1903). British statesman. The second son of the 2nd marquess, he was born at Hatfield, Feb. 3, 1830. He went from Eton to Christ Church, Oxford, and became a fellow of All Souls College. In 1853 he entered Parliament as M.P. for Stamford, where he made his name by his incisive attacks on the Liberal ministry. He was also a regular contributor to The Saturday and The

Lord Salisbury, English statesman
Russell

Quarterly Reviews, his writings, like his speeches, being attempts, pungent and powerful, to stay the tide of democracy. In 1865 he became, by the death of his elder brother, Viscount Cranborne, and in 1868 he succeeded to the titles and estates. In 1866 he began his long official career as secretary for India, but, disagreeing with the policy of Disraeli, he resigned in 1867. However, in 1874 he again became secretary for India in Disraeli's cabinet, and he remained there until made foreign secretary in 1878.

In 1881, on Beaconsfield's death, Salisbury became leader of the Conservative party, and as such he took office as prime minister in 1885. His term of office was brief, but he returned after the general election of 1886 and was in power until 1892. After three years in opposition, he became premier for the third time in 1895, this time as the head of a ministry which included Joseph Chamberlain and other Liberal Unionists. He was himself foreign secretary as well as prime minister until 1900. He resigned in July, 1902, and died Aug. 22, 1903.

Lord Salisbury took a keen interest in scientific matters and was president of the British Association in 1894. Of his five sons, Robert and Hugh won fame in politics. William was made bishop of Exeter in 1916, Edward was financial adviser to the government of Egypt. Lord Salisbury's Life was written by his daughter Gwendolen. See Cecil.

Salisbury. West front of the cathedral, ornamented with modern statues and sculptures. The 14th century spire is 404 ft. high

SALISBURY, JAMES EDWARD HUBERT GASCOYNE CECIL, 4TH MARQUESS OF (b. 1861). British politician. Born in London, Oct. 23, 1861, the eldest son of the 3rd marquess, he was educated at Eton and University College, Oxford. As Viscount Cranborne he was M.P. for the Darwen division, 1885-92, and for Rochester, 1893-1903, and was under-secretary for foreign affairs, 1900-3. From 1903-5 he was lord privy seal, and in 1905 president of the board of trade. Lord Salisbury was lord president of the council, Oct., 1922-Jan., 1924, and became lord privy seal and leader of the Conservative Government in the House of Lords in Nov., 1924, retaining office until 1929.

SALISBURY PLAIN. District of Wiltshire. Composed of rolling chalky downs, it is about 20 m. long by 15 broad, and lies to the N. of Salisbury. On the plain is Stonehenge, as well as Amesbury and other villages. A large part is used for military purposes. The chief camps are at Bulford, Tidworth, Larkhill, and Netheravon. The air force has a centre at Upavon. See Stonehenge.

SALIVA (Lat. spittle). Secretion poured into the mouth from the salivary glands. It contains about 0.5 p.c. of solids, chiefly mucin and ptyalin, and is slightly alkaline. The functions of the saliva are two-fold; first, to moisten and lubricate food, thereby facilitating swallowing; and secondly, by virtue of its ptyalin, to act upon starchy constituents of the food, preparing them for digestion by splitting them into simpler bodies.

Excessive flow of saliva is called salivation. It may be due to ulceration of the mouth, or to chronic poisoning by mercury and certain other drugs. It is most often seen in persons taking mercury for the treatment of syphilis, and is then an indication that the mercurial treatment should be stopped.

SALLUST (86-34 B.C.). Roman historian whose full name was Gaius Sallustius Crispus. He was born at Amiternum in central Italy and had a distinguished public career, ending with the governorship of Numidia, a post which he owed to Julius Caesar, with whose fortunes he had been largely associated. Returning to Rome a wealthy man, he spent the latter part of his life in luxurious retirement, devoting himself to literature. Only two of his historical works have been preserved complete, a history of the war with Jugurtha, and a history of the conspiracy of Catiline. His chief work, of which only fragments remain, was a history of Rome from 78-67.

SALMON (*Salmo salar*). Large food-fish of the Teleostean family, Salmonidae, inhabiting the seas and rivers on both sides of the Atlantic. Large salmon are about 4 ft. to 5 ft. long, and weigh from 20 lb. to about 40 lb. The flesh is pink.

Between Sept. and Jan. salmon that have reached maturity in the sea enter the rivers and journey upstream to the shallow waters near the source. At the spawning ground the female deposits her eggs, which are fertilised by the male. After the larval stage the fish, now nearly a year old, becomes a parr. About six months later the young salmon, now called smolts, begin to congregate in large companies in the broader waters of the rivers ready for their journey seaward. They are now about 5 ins. long. Some return from the sea a year later, but most of them remain for two or three years. The returned fish, mostly sexually

mature males, and known as grilse, may weigh 10 lb. or more. The females and many males remain at sea several years longer.

SALMON FISHING. The right of fishing a salmon river belongs to the riparian land-owners, who often lease the sporting rights for very large rents. The capture of salmon on economic lines is effected by nets when the fish are proceeding up the river for spawning. There is a close time for salmon in English waters; for nets from Sept. 1, and for rods from Nov. 2, both ending on Feb. 1; but the ministry of agriculture and fisheries has power to vary the dates for different rivers. In Scotland there is a further difference; and Ireland has its own dates. See Angling.

SALMOND, SIR JOHN MAITLAND (b. 1881). British airman. Born July 17, 1881, a son of Major-General Sir W. Salmond, he entered the army in 1901, and served in South Africa, 1901-2. He joined the R.F.C. in 1912, and in Jan., 1918, he succeeded Sir H. M. Trenchard (q.v.) as head of the fighting air force in France. Salmond was in Iraq from 1922 to 1924, and from 1925-29 had charge of the air defences at home. In 1929 he was made a member of the air council and in 1930 chief of the air staff. In 1919 he was knighted, and in 1929 was made an air chief marshal.

His brother, Sir William Geoffrey Hanson Salmond (b. 1878), was also a soldier. In 1913 he joined the air force, and in 1919 he commanded the R.A.F. in Egypt. He went to India in 1927 as head of the air force there.

SALOMÉ. Name of the sister of Herod the Great, assassinated for plotting against his sons; and of the daughter of Herodias, who, at her mother's instigation, danced before Herod Antipas, and as a reward was granted the head of John the Baptist. It was the name also of the sister of Mary, the mother of Jesus. Oscar Wilde wrote a play called Salome.

SALONICA or **SALONIKA.** City of Greece. Situated at the head of the gulf of the same name, it is the terminus of the rly. from Belgrade-Nish, and is an important rly. junction. It has a magnificent harbour. Its ancient name was Thessalonica, and it was thus known to S. Paul, who addressed the two Epistles to the Thessalonians to its Christian people.

During the Great War a British-French force turned the city and the surrounding country into a vast fortified camp. In 1916 a revolution against the Greek government broke out, and shortly afterwards a provisional government was established under Venizelos, with Salonica as its centre. The city was half destroyed by fire, Aug. 18, 1917. By an arrangement with Greece, Yugoslavia has access to the port and a free zone in the harbour. A university was founded in 1925. Pop. 236,524.

EXPEDITION TO SALONICA. On Oct. 3-8, 1915, the Allies landed 20,000 forces at Salonica, and by the end of the month the expedition comprised between 30,000 and 40,000 men, mainly French, under General Sarrail, with some British under Sir Bryan Mahon. On Oct. 11 Bulgaria invaded Serbia, and French troops proceeded up the Vardar to effect a junction with the S. Serbian army. The British took up a position near Lake Doiran, and covered the French right. The Allied effort to expel the Bulgarians from Serbia, involving heavy fighting in Nov.-Dec., failed, and the Allies decided to hold Salonica as a base for future operations.

During the winter the force grew to 300,000 men, to whom in May, 1916, were added 100,000 Serbians from Corfu. General Milne

Salonica. General view of the harbour and quays, showing the famous Byzantine White Tower

succeeded Mahon on May 9, 1916, in command of the British, who in June and July occupied the right bank of the Struma. The French took up the line from Lake Doiran to a point W. of the Vardar, where they linked up with the Serbians. The campaign during this year was marked by some Allied successes, including the capture of Monastir. In May, 1917, the Allies undertook a general offensive, in which Greek forces assisted, but it failed in its purpose. On Sept. 15, 1918, the final offensive began which ended in the unconditional surrender of Bulgaria and the expulsion of the Germans and the Austrians from the Balkans.

Salop. Abbreviated name frequently used for the English co. of Shropshire (q.v.).

SALSETTE. Island of Bombay Presidency, India. It is situated N. of Bombay Island, with which it is connected by a causeway and bridge. Near Thana, on the E. coast, the chief town, are rock caves with colossal statues of Buddha. Ruins of Portuguese convents, churches, and villas are a reminder of the Portuguese occupation, which ended in 1739. Its area is 241 sq. m. Pop. 125,000.

SALSIFY or **SALSIFY** (*Tragopogon porrifolius*). Biennial plant of the order Compositae. It has an edible root, and is known generally as the vegetable oyster. It requires deeply dug soil, similar to that suitable for parsnips, and a sunny, open position.

The purple flowers are seen in May or June, and should be removed as soon as they appear, for the benefit of the root. The roots are ready for use at the end of Oct., and throughout the winter, and may be preserved in the same way as parsnips.

SALT. Chloride of sodium, NaCl. Salt is widely distributed in nature, and occurs in several forms. The chief are as an ingredient of sea water, as rock salt or massive salt deposits, in brine deposits and springs. A number of impurities, these being chiefly gypsum and magnesium and calcium chlorides.

Salt is freely soluble in water, to the extent of 36 parts in 100. It is apparently essential to many forms of life, acts as an emetic in large doses, and has a therapeutic effect when applied in the form of baths. It is largely used as a meat preservative, in the manufacture of butter, etc., and in the preparation of caustic soda, sodium carbonate, soda ash, and other sodium and chlorine compounds. Salt is obtained in two ways. The simplest method is by the evaporation of sea water. Brine is also evaporated, and in the case of some salt deposits water is poured down a well in the

Sir John Salmond, British airman
Langflier

Salmon leaping while being played on a line

Salsify. Leaves and root

deposit, the artificial brine brought to the surface and then evaporated. Where there are large rock salt deposits the salt is mined. The salt mines in Wieliczka, near Cracow, have galleries running over six miles E. and W. and two miles N. and S.

Spirits of salt is the name given by Glauber to hydrochloric acid (q.v.), which he first prepared by pouring oil of vitriol (sulphuric acid) upon sea salt.

SALT, Sir Titus (1803–76). British manufacturer.

Born at Marley, Yorks, Sept. 20, 1803, he went to Bradford as an apprentice in the woollen trade. With his father he started in business in 1824, and developing great inventive genius devised a method of using alpaca

Salt. A pile of salt collected from the evaporation pans

Sir Titus Salt, British manufacturer

for the manufacture of cloth. The business of woollen and worsted manufacturers then grew so enormously that the town of Saltaire was erected for it just outside Bradford. For a short time Salt was Liberal M.P. for Bradford. He was made a baronet in 1869, and died on September 20, 1876.

SALTAIRE. Town of Yorkshire (W.R.). On the Aire, 4 m. from Bradford, it is served by the L.M.S. Rly., and owes its name and origin to Sir Titus Salt, who established his mills here. Other mills were built, as were churches, schools, etc. Pop. 13,500.

SALTASH. Borough, seaport, and market town of Cornwall. It stands on the Tamar, 4 m. from Devonport, on the G.W. Rly. The chief industries are fishing and malting, and there is a coasting trade. The fine bridge across the Tamar here was built by Brunel. Market days, first and third Mon. Pop. 3,631.

SALTBURN-BY-THE-SEA. Urban dist. and watering place of Yorkshire (N.R.). On the E. coast, 4 m. from Redcar, it has a station on the L.N.E. Rly. Its attractions include good sands and bathing. Pop. 4,688.

SALTCOATS. Burgh and watering place of Ayrshire, Scotland. It stands on the E. shore of the Firth of Clyde, 30 m. from Glasgow, on the L.M.S. Rly. The name is due to the salt industry which flourished here from about 1600–1800. Pop. 13,477.

SALTIRE. In heraldry, one of the ordinaries. A four-limbed figure, composed of two bands placed over each other diagonally, it has been described by some heraldic writers as a park gate or barrier, by others as a house gable, but it is generally recognized as the cross of S. Andrew, or erux decussata. A shield may be divided "per saltire," and charges grouped "in saltire." See Heraldry.

SALT LAKE CITY. City of Utah, U.S.A. The state capital, it is 11 m. S.E. of Great Salt Lake, and is the headquarters of the Mormons. Among a number of buildings belonging to the Mormons are the granite temple and the tabernacle. Other structures include the city and co. building, the Federal building, S. Mark's cathedral, and the state capitol. Salt Lake City is the seat of the university of Utah. Manufactures include boots and shoes, confectionery, tobacco, and cigars. There are also large smelters, and an

extensive business in minerals and live stock is carried on. Salt Lake City was founded by Mormons under Brigham Young in 1847. Pop. 130,948. See Mormons.

SALTNEY. Town of Flintshire, Wales. It stands on the Dee, 2 m. from Chester, on the G.W. Rly. There are docks and wharves, and ironworks. The G.W. Rly has carriage shops here. Pop. 3,500.

SALTPETRE. Potassium nitrate or nitre KNO_3 . It is a colourless solid, with a bitter, salty taste, and is found as a superficial deposit on the soil of many hot climates. The name is also given to Chile saltpetre, or sodium nitrate, NaNO_3 , and calcium nitrate (wall or lime saltpetre) $\text{Ca(NO}_3)_2$. Saltpetre is found in superficial deposits in Spain, in India and other parts of Asia, and in N. America. A powerful oxidising agent, it is used in metallurgy, the manufacture of gunpowder, as a brine in salting meat, etc.

Chile saltpetre is found in deposits spread over a large area in S. America, and known locally as caliche. It is largely used in the manufacture of ordinary saltpetre, nitric acid manufactures, as a manure, etc. Wall or lime saltpetre is manufactured by fixation of nitrogen from the air. This variety of saltpetre is employed as a manure. See Potassium.

SALTWORT

(Salsola kali). Annual herb of the natural order Chenopodiaceae. It is a native of Europe, Asia, Africa, Australia, N. and S. America. Its small greenish flowers are without petals and are produced at the base of the leaves. It grows on sea-shores and was formerly important as the source of barilla, an impure carbonate of soda, which is still used in the production of glass and soap.

Saltwort. Leaves and flowers of the seashore plant

SALVADOR. Republic of Central America. It lies between the Pacific Ocean and Honduras, with Guatemala on the W. and the Gulf of Fonseca on the E. On the N. spurs of the Sierra Madro extend into Salvador; the Pacific coast plain is narrow, and is backed by the coast range of mountains, which contain the majority of the numerous volcanoes. Between the two mountain ridges lies a lofty fertile valley, the most populous area in the republic. The country is liable to earthquakes. Coffee is the chief crop and the chief export; cacao, balsam, sugar, indigo, and tobacco are grown. Cattle are numerous. The minerals include gold, silver, copper, iron, and mercury. San Salvador is the capital. The republic is a member of the League of Nations. Its area is 13,176 sq. m. and its population 1,722,579. See Central America.

Salt Lake City. Main street of the capital of Utah. It is 132 ft. wide

employed in connexion with the raising of wrecks, or rescue of vessels which have been abandoned or disabled.

The more usual methods of raising a wreck are by lifting her with hawsers, by filling her with compressed air, or by pumping her out. When a sunken vessel is to be lifted, wire

Salvage. Raising a sunken German warship at Scapa Flow

"The Times" copyright

hawsers are passed under her hull and made fast to special lighters placed on each side of the wreck. The lighters are lowered in the water by filling their ballast tanks from the sea. After the hawsers are made fast, the lighters are pumped out, which gives them increased buoyancy. This, added to the lift of the tide as it rises, enables the vessel to be hauled off the bottom and carried in the wire cradle to a place of security.

When compressed air is employed this is forced into the wreck by powerful compressors which drive out the water until the ship becomes buoyant. For pumping operations the salvage engineer uses large steam and motor driven pumps possessing a capacity of up to 800 tons per hour, and submersible electric pumps. The latter work under water.

LAW OF SALVAGE. The salvage of vessels abandoned at sea or in the hands of an enemy is governed by statute, and in all matters connected with it the admiralty division of the high court has jurisdiction. In the case of recapture from an enemy there is a fixed rate of salvage, namely, one-eighth of the value in the case of warships, and one-sixth in that of private vessels. In other cases the rate is either fixed by agreement between the owners of the rescued ship and the salvors, or is decided by the judge of the admiralty court, according to the amount of labour and risk involved.

SALVAGE CORPS. The business of salvaging property from burning buildings is of great importance in connexion with the settlement of insurance claims, and in London and one or two other large cities is specially attended to by salvage corps maintained by contributions from the principal insurance companies. The London salvage corps, which was established in 1866, is recruited from men of the Royal Navy, and cooperates with the fire brigade. The headquarters are at 63–66, Watling Street, E.C. See Fire Brigade.

SALVATION ARMY. Religious organization founded by William Booth (q.v.). Its origin was the East End Revival Society, begun by him in East London, which became the Christian Mission in 1865. Borrowing the idea of military rank and discipline, Booth selected the name Salvation Army in 1877, and was himself called general, having under him colonels, adjutants, corporals, and others. The motto adopted was Through Blood and Fire, and the buildings were called barracks. The army initiated on novel lines its work in foreign countries; in India, beginning in 1882, its officers adopted native costumes, and generally its policy was to gain confidence by intimate association with the poorest and least regarded of the population.

In 1912 Booth's eldest son, William Bramwell Booth, became head of the Army, and

he held office until 1929, when the high council was called together for the first time in its existence to decide upon the future control of the army. Meeting at Sunbury Court, the council almost unanimously declared the general deposed, and E. J. Higgins (q.v.) was elected as his successor.

The Army publishes a large amount of literature on its own behalf, and has been singularly fortunate in developing journalistic ability in the conduct of its weekly newspaper, *The War Cry*, founded in Dec., 1879, its monthly magazine, *All the World*, founded in 1885, and many other periodicals in languages suited to the home and foreign field. The Army has its own printing works at St. Albans.

In December, 1928, the number of officers, cadets, and employees was 35,074, and of unpaid officers, 110,025. The Army operated in 82 countries and used 72 languages. Connected with it are 323 industrial homes, 90 maternity homes and 104 children's homes, 12 farms, and 2,007 industrial schools, as well as shelters and cheap food depots.

SALVINI, TOMMASO (1829-1915). Italian actor. He was born at Milan, Jan. 1, 1829, and first attracted attention in Rome in 1847 by playing Orestes to Adelaide Ristori's Electra in Alfieri's Orestes. His greatest part was Othello, a part he first played at Vicenza in 1856. Other great rôles which he filled were Hamlet, Romeo, Macbeth, King Lear, Conrad in Giacometti's *La Morte Civile*, Oedipus in Nicolini's play of that name, Paolo in Silvio Pellico's *Francesca da Rimini*, and Saul in Alfieri's *Saul*. Salvini died at Florence, Dec. 31, 1915.

Tommaso Salvini,
Italian actor

SAL VOLATILE OR AROMATIC SPIRITS OF AMMONIA. Alcoholic solution containing ammonium carbonate and ammonium hydroxide, with small amounts of oil of nutmeg and oil of lemon. It is used as a stimulant in cases of fainting. Pron. Sal volatilly.

SALWEEN. River of Asia. It rises in Tibet and flows through China into the Shan States, whence it flows through Lower Burma to its mouth on the gulf of Martaban, near Moulmein. Its length is estimated at 1,800 m. West of the river is the Salween dist. of Burma. It is a small inland, unfertile area, bounded E. by Siam and N. by Karenni. Its area is 2,666 sq. m. Pop. 50,379.

SALZBURG. City of Austria, capital of the prov. of Salzburg. It stands on the Salzach, 156 m. W.S.W. of Vienna. The chief building is the cathedral, a model of S. Peter's at Rome. Other churches include the Franciscan church of the 13th century, and the churches of S. Sebastian, with the tomb of Paracelsus, and S. Peter, a Romanesque basilica of the 12th century. The palace was long a residence of the Hapsburg family. The Mirabell palace, once an archiepiscopal residence, is now public property. The Benedictine abbey of S. Peter and the Capuchin monastery are two of several religious houses. The Neutor is a tunnel, cut in the Monchsberg, to connect the old town with one of its

suburbs. In 1928 the Benedictine theological faculty was made into a Roman Catholic university. Pop. 37,856.

The duchy of Salzburg, now the province, originated in the lands ruled by the archbishop of Salzburg, and until 1802 was an important German state.

SAMARA. Town of Russia, capital of the prov. of the same name. It stands on the Volga, near its junction with the Samara. It is connected with the interior by three rly. systems, and is an important centre for the transport of grain, cattle, tobacco, and oil. There are large granaries. A university was established in 1919. Pop. 171,952.

SAMARIA. Prov. in central Palestine. It was colonised by the remnants of the tribes of Manasseh and Ephraim, with an admixture of Assyrian immigrants. The city of Samaria was founded about 920 B.C. by Omri, who transferred the seat of government to it from Shechem. Destroyed by Sargon, it was rebuilt by Herod the Great, who styled it Sebaste. It was captured by the British in Sept., 1918.

THE SAMARITANS. Inhabitants of the region of Samaria, a small community of whom still exists in Nablus, the ancient Shechem. After the fall of Samaria, 721 B.C., Sargon deported a large part of the population, and replaced it with captives brought from Babylonia, Syria, and Arabia (2 Kings 17, 24-41). These, and later colonists, mingled with the old Hebrew population that remained, and the resultant new and mixed race came to be known as the Samaritans. The foreign colonists decided to worship Jehovah, the god of the land, but they blended this worship with their own heathen cults. This syncretism offended the Jews, who were strict worshippers of Jehovah, and accounts for that strife between Jews and Samaritans. Their language is a dialect of Western Aramaic.

SAMARIUM. Rare earth metal of the cerium group, chemical symbol Sa, atomic weight 150.43; atomic number 62. Its oxide was discovered in 1879 by Lecoq de Boisbaudran in samarskite.

SAMARKAND OR SAMARQAND. Town of Central Asia, capital of the Uzbek Soviet Socialist Republic (Uzbekistan). It stands near the Zarafshan (Kara Daria). Samarkand, the ancient Maracanda and the capital of Sogdiana, in the 14th century became the capital of the empire of Timur, who was buried here, and the centre of the intellectual life of Mahomedan Asia. After Timur's death, which took place in 1405, Samarkand was subject to Bokhara, until it was taken by the Russians in 1868. Pop. 101,400.

SAMARRA. Town in Iraq. On the left bank of the Tigris, it is 65 m. N.W. by N. of Bagdad. Its brick mosque has a square-based minaret 163 ft. high, ascended by an external spiral stairway recalling the old Babylonian zigurrats. It is a place of pilgrimage for Shia Moslems. It was captured by the British, April 23, 1917.

Samarra. Castle of the prince-bishops overlooking the town

In 1917-19 the British Mesopotamian force carried out photographic surveys of the Samarra region from the air. The results, supplemented by ground surveys, revealed the planning of an ancient city 20 m. long and 2½ m. wide, above and below the present town,

between the Tigris and an ancient canal. Gold coins, pottery, and tear-bottles were found. Pop. 8,000.

SAMBAR DEER (*Cervus unicolor*). Species of large deer found in India and Ceylon. It stands about 4½ ft. at the shoulder, has dark, yellowish-brown hair, and bears a fine pair of branched antlers which sometimes exceed 3 ft. in length. The neck bears a conspicuous mane of long hair. The sambar has its habitation in the forests and visits its grazing grounds chiefly by night.

Sambar Deer. Male specimen of the large deer of India and Ceylon

SAMBOURNE, EDWARD LINLEY (1844-1910). British artist. Born in London, Jan. 4, 1844, and educated at the City of London School and the S. Kensington School of Art, he began to contribute to Punch in 1867. He joined the regular staff in 1871, and succeeded Sir John Tenniel as chief cartoonist in 1900. Sambourne died at Kensington, Aug. 3, 1910.

SAMBRE. River of France and Belgium. Rising in the dept. of Aisne, it flows N.E. through Nord into the Meuse at Namur in Belgium. Its length is 112 m. It is connected with the Oise and Schelde by canals.

BATTLE OF THE SAMBRE. British victory in the Great War. It opened Nov. 1, 1918, and involved the capture of the Hermann Stellung, one of the great German lines which ran along the Sambre and the Oise canal. The preliminary to the main battle was the capture of Valenciennes by an enveloping movement, so as to spare the town itself. The British encircled Le Quesnoy in the centre, and pressed far into the forest of Mormal.

On Nov. 6 the Canadians took Angre, crossing the Aunelle and Honnelle rivers; and early next day the Guards entered Bayai. In the night of Nov. 7-8 there were clear signs that the Germans were in general retreat. On Nov. 9 Maubeuge was captured by the Guards, and on Nov. 9 and 10 the advance continued. Fighting continued until about 3 minutes to 11, when the Armistice ended the war. In this battle the British advanced 25 m. and took 19,000 prisoners and 460 guns.

SAMOA OR NAVIGATORS' ISLANDS. Group of islands in the W. Pacific. They lie 130 m. N. of Tonga, and 400 to 500 m. N.E. of Fiji. By an agreement between Britain and Germany made in 1899 and ratified by the U.S.A. in 1900, Britain renounced all rights in favour of Germany in the case of Savaii, Upolu, Apolima, and Manono, and in respect of Tutuila and the remainder in favour of the U.S.A. As a consequence of the Great War the German islands became the territory of Western Samoa, administered by New Zealand under mandate. The total area is more than 1,250 sq. m., and the only good harbour is at Pago Pago. Copra, cacao, and fruit are the principal products. Apia, on Upolu, is the chief British town.

Samoa. Native warrior in typical headdress

SAMOS. Greek island in the Aegean Sea. It lies off the W. coast of Asia Minor about 40 m. S.W. of Smyrna, and has an area of about 180 sq. m. Colonised by the Ionians about 1000 B.C., Samos passed to the Persians in the 6th century, but regained its freedom after the victory of Mycale, 479. Rome took it in 84 B.C. The chief city was Samos, near which was the Heraeum, or temple of Hera. The modern capital is Vathy. The island was a centre of art and gave its name to the glazed earthenware known as Samian. Pop. 70,000. See Greece.

SAMOYEDE. Breed of dog. In common with other Arctic breeds it has a foxy head, small, erect ears, and a tail curled over the back. Although capable of drawing heavy weights, the dogs are on the small side, the males weighing about 50 lb., and the hitches about 10 lb. less.

The Samo-yeds, after whom the dogs are named, are a people of Altaian stock living in the extreme north of Europe and Asia.

SAMPAN. Light boat. It is about 15 ft. long, and is in common use in the Eastern inland and coastal waters. It is wholly or partly covered in and is sometimes used as a houseboat.

SAMPHIRE (*Crithmum maritimum*). Fleshy perennial herb of the order Umbelliferae. It is a native of the coasts of the Mediterranean, Black Sea, and N. Atlantic, growing on rocks above sea level, and common on rock's round Great Britain. It has a woody base and stout stem, which, like the leaves, is of a blue-green tint. The real outline of the leaves is wedge-shaped, but they are so broken up into slender, rounded leaflets that the latter look like leaves. The minute flowers are white, but the umhels in which they are clustered give the general effect of yellow. The leaves have a salt, spicy flavour, and are made into a pickle.

SAMPLER (late Lat. exemplarium, a copy). Piece of embroidery, usually on canvas or silk. Samplers, which in England date from the 17th century onwards, continued in fashion until well into the 19th century, and many interesting specimens are preserved.

SAMSON. Biblical character. A man of miraculous strength, he was a redoubtable foe of the Philistines until Delilah cut off his hair and he fell into the hands of his enemies, who put out his eyes. His strength having been restored to him in answer to prayer, he pulled away the supports of the building where the Philistines were feasting and with them was destroyed. Milton's poem, *Samson Agonistes*, deals with his unhappy fate.

SAMSON, CHARLES RUMNEY (b. 1883). British airman. Born in 1883, he entered the navy in 1898. In 1910 he became an airman, and was in command of the aeroplane and armoured car support of the R.N.A.S. in the autumn of 1914. In Jan., 1915, he dropped bombs on the German positions in Brussels, and in Feb. commanded the aeroplane attack on Zeebrugge and Ostend. Having served in Gallipoli and Egypt, he took command of the seaplane carrier *Ben My Chree* on the Syrian coast. In 1922 he was made an air commodore.

Samos. Specimen of Samian ware found among Roman remains at Manchester

SAMUEL. First prophet of Israel and the last of the judges. He was born at Ramah, in answer to the prayers of his mother Hannah, was dedicated to the service of God from birth, and was taken to Eli the priest to serve him as a boy attendant. The misconduct of Samuel's sons, who were expected to succeed to the judgeship, led to a popular demand for a king, and Saul was chosen. Samuel was often brought into conflict with him, and later he anointed the youth David, who afterwards took refuge with him from the king's anger. In his later days he seems to have conducted a school of the prophets, and he had a house of his own at Ramah, where he was buried.

SAMUEL, THE BOOKS OF. The O.T. First and Second Books of Samuel are so called in the Hebrew Bible because one of the chief characters in their story is the prophet Samuel. In the Septuagint (cod. Vat.) they are called the First and Second Books of Kingdoms, and in the Vulgate the First and Second Books of Kings (our 1 and 2 Kings being the Fourth and Fifth Books).

The contents of the books of Samuel fall into five sections: (1) Eli and Samuel, 1 Sam. 1-7; (2) Samuel and Saul, 1 Sam. 8-14; (3) Saul and David, 1 Sam. 15-31; (4) David, 2 Sam. 1-20; (5) an Appendix, 2 Sam. 20-24. The period covered is therefore from about 1070 or 1050 to 970 B.C. The only ancient source mentioned in the books is the Book of Jasher (2 Sam. 1, 18; cf. Josh. 10, 13). From this, David's elegy over Saul and Jonathan is said to have been taken.

SAMUEL, SIR HERBERT LOUIS (b. 1870). British politician. Born in Liverpool, Nov. 6, 1870, he entered the House of Commons in 1902 as M.P. for the Cleveland division. In 1905 he joined the Liberal Government as under-secretary to the home office, and in 1909 entered the Cabinet as chancellor of the duchy. From 1910 to 1914 he was postmaster-general, and in 1914 was transferred to the local government board as president. When the Coalition Government was formed in 1915 he reverted to his earlier post of postmaster-general, and in 1916 he was for a short time home secretary. From 1920 to 1925 he was high commissioner for Palestine, and in 1926 was chairman of the commission that inquired into the state of the coalmining industry. In 1929 he re-entered the House of Commons as M.P. for the Darwen division and acted as one of the Liberal leaders.

SAMURAI (Japanese). Name of a Japanese military class. In early

feudal times the term was applied to all who bore arms, but eventually it was restricted to the gentry, and roughly corresponded to the esquires of medieval times, as distinguished from the daimio or nobles. On the abolition of the feudal system in 1871 the samurai were forbidden to wear swords, and in 1878 the designation was changed to shizoku or gentry.

C. R. Samson, British naval airman Elliott & Fry

SAN. River of Poland. Rising in the Beskid Mts (Carpathians), it flows N.N.W., passing Przemysl (q.v.), thence N.W., and joins the Vistula 4 m. N.E. of Sandomir. Its length is about 260 m. It was the scene of much fighting during the Great War.

SAN ANTONIO. City of Texas, U.S.A. It stands on the San Antonio river, 212 m. by rly. W. of Houston. The San Fernando cathedral is notable. San Antonio is an invalid resort, with hot mineral wells. Its manufactures include iron and steel, textiles, and leather goods. It is the centre of a rich oil area, and is the seat of a large military establishment. In 1836 Fort Adams was stormed by Mexicans, the entire garrison of 188 being massacred. Pop. 250,000. See Texas.

SANCHI. Village of Bhopal, India. It is famous for its topes, or memorial mounds, perhaps the oldest buildings in the land. The largest of these, probably built by Asoka, has four gateways, on which are sculptures symbolising the life of Buddha. Long in a state of ruin these topes have been restored. See Asoka.

Sanchi. Imposing Buddhist shrine raised by Asoka, showing one of the sculptured stone gateways

SANCROFT, WILLIAM (1617-93). English prelate. Born at Fressingfield, Suffolk, Jan. 30, 1617, he was educated at Emmanuel College, Cambridge. After the Restoration he became master of Emmanuel College. Later he was successively dean of York and of S. Paul's. In Jan., 1678, he was consecrated archbishop of Canterbury, and he was one of the Seven Bishops who in May, 1688, drew up and signed the petition against the second declaration of indulgence. Refusing to recognize William III as the lawful sovereign, he was suspended in 1689 and deprived of the archbishopric in Feb., 1690. He died Nov. 24, 1693. See Nonjurors.

SANCTUARY (Lat. sanctus, sacred). In a religious sense, any consecrated place, or a place where sacred things are kept. Specifically, the term was applied to the Temple at Jerusalem, especially to that part of it, the sanctum sanctorum, or Holy of Holies, which none but the high priest might enter, and then only on the sacred Day of Atonement.

Christian churches, like pagan temples, at one time

Sampler in embroidery, dated 1794

afforded temporary sanctuary from the processes of the law, a privilege abolished in England in the 17th century, but still supposed to attach to Holyrood in Scotland. The Sanctuary at Westminster was a privileged precinct. That part of a church in which the altar is placed is known as the sanctuary.

SANCTUS, THE (Lat. holy). Hymn said or sung before the prayer of consecration at the Holy Communion service. The words Holy, Holy, Holy, etc., are based on Is. 6, 3; Ps. 118, 26; and Matt. 21, 9: but the closing words were altered in 1549 from Hosanna in the Highest to Glory be to Thee, O Lord most High. In the Roman Catholic rite, except in the pontifical chapel and during exposition of the Sacrament, a small bell, called the sacring bell is rung.

SAND. Loose, incoherent mass of small particles of various minerals, chiefly quartz, mica, and felspar. It is formed by the chemical and mechanical disintegration of rocks by weathering and other causes. Sands which contain the greatest amount of quartz are nearly white, and form the silver or glass sands of commerce. Green sands, which cover a large part of the bed of the ocean, contain glauconite. New sands are composed of sharp-edged particles, and coarse sands are known as grits. The older sands are smoother, consequent on the constant movements of the particles together. Sand is valuable in agriculture; as an ingredient in bricks; and as a polishing, cutting, cleaning, or etching agent.

SANDSTORM. A desert storm in which large quantities of sand are carried by the wind is called a sandstorm. They are of two kinds. The first, caused by a strong current of air blowing steadily in a constant direction, facilitates the building of sand dunes. The second is a cyclonic swirl of wind, which carries enormous quantities of sand, and frequently causes much destruction. The simoom is the sandstorm of the Sahara, Arabian, Sind, and Baluchistan deserts.

SAND CLOCK. Instrument used by the Greeks for measuring time. In one form, sand passed successively through the compartments of a drum-shaped cylinder acting as a pulley to a cord with a counter-weight, the rapidity of motion being determined by the quantity of the sand, or the bore of the orifice through which it escaped.

SAND. River of S. Africa. It rises in the Orange Free State and flows mainly E. until it joins the Vet. On its banks was signed the convention by which, in 1852, Great Britain granted independence to the emigrant farmers beyond the Vaal river. See South Africa.

SAND, GEORGE (1804-76). Pen-name of Armandine Lucile Aurore Dupin, French novelist. Born in Paris, July 5, 1804, her father was Maurice Dupin, an officer and a grandson of Marshal Saxe. She married a man named Dudevant in 1822 and had two children, but in 1831 she left him and settled in Paris, where her lovers included Alfred de Musset and Chopin.

Between 1831, when she entered the life of the Latin Quarter, and her death at Nohant, June 8, 1876, she wrote 120 volumes: novels, autobiography, letters, and plays. Her first novel, *Rose et Blanche*, 1831, was written in collaboration with Jules Sandeau and published as by Jules Sand. Among its successors are *Mauprat*, 1837; *Consuelo*, 1842-44; *La Mare au Diable*, 1846; *Lucrezia Floriani*, 1847; *La Petite Fadette* and *François le Champi*, 1848; *Elle et Lui*, 1859; *Mlle. la Quintinie*, 1863; *Her Histoire de ma Vie*, 1876, fills several volumes.

SANDAL (Persian, slipper). Light shoe consisting of a sole attached to the foot by means of straps or thongs. They were

Sandal. Type worn in ancient Rome

generally worn by the Greeks and Romans and other people of antiquity, and among the Romans especially were very elaborate and showed exquisite workmanship in every detail. Sandals were made of leather, wood, cork, wickerwork, and even gold and silver.

SANDAL MAGNA. Village of Yorkshire (W.R.). It is 3 m. from Wakefield, on the L.N.E. Rly. It is famous for the remains of its castle, built about 1300. This was a stronghold of Richard, duke of York, who from Sandal went to the battle of Wakefield. Pop. 2,905.

SANDALWOOD (*Santalum album*). Small evergreen tree of the order Santalaceae. A native of the East Indies, it has oval or lance-shaped leaves with pale undersides. The heart-wood when dry gives off a sweet perfume, and is esteemed for incense. Sandalwood oil, distilled from the wood, is a viscid pale yellow oil with strong aromatic odour, and is used in medicine.

Sandalwood. Leaves and flower sprays of evergreen tree

SANDARAC. Variety of resin found in N. Africa. A product of the sandarac tree (*Callitris quadrivalvis*), a conifer of Algeria, it is a pale yellow resin which becomes brittle on drying, and is soluble in turpentine. Known also as gum juniper, it is used in the manufacture of varnishes. Australian sandarac, from allied species, is called white pine resin.

Sandhurst. Buildings of the Royal Military College, where officers are trained for the British army

SANDBACH. Urban dist. and market town of Cheshire. It stands 4 m. N.E. of Crewe on the L.M.S. Rly. In the market place are two crosses assigned by some to the 7th century. The buildings include a fine old church, the town hall, and the grammar school. Market day, Thurs. Pop. 6,086.

SAND-BOX TREE OR **MONKEY'S DINNER** **BELL** (*Hura crepitans*). Evergreen tree of the order Euphorbiaceae. A native of tropical America, it grows to a height of about 40 ft. and has glossy, heart-shaped leaves. The small, inconspicuous, reddish flowers are succeeded by a large fruit, the size of an orange, but compressed above and below, with rounded ribs. When dry these ribs split with a loud report, to release the seeds. Unripe fruits, after the extraction of the seeds, were bound round with wire and used to hold the fine sand formerly employed in place of blotting-paper.

SANDBY, PAUL (1725-1809). British artist. Born at Nottingham, he was appointed draughtsman to the survey of the Scottish Highlands, and drawing master at Woolwich. He was an original member of the Academy, and one of the first to apply water colour to topographical drawings. Sandby greatly in-

fluenced the development of water colour art and introduced the aquatint process of engraving. He died in London, Nov. 9, 1809.

SANDERLING (*Calidris arenaria*). Shore bird, related to the plover. It is about 8 ins. long, and has brown and grey plumage on the upper parts, with white beneath, and a long and straight beak. It is a migratory bird, arriving in Great Britain in Aug., and leaving about April, but breeding farther N.

Sand Grouse. Specimen of Pallas's sand grouse From the Cambridge Natural History (Macmillan)

SANDGATE. Urban dist. and watering place of Kent. It is 2 m. W. of Folkestone, on the Southern Rly. The castle, built by Henry VIII, is now a museum. Near is Shorncliffe Camp. Pop. 2,777.

SAND GROUSE. Game bird of the family Pteroclididae, related to the pigeon. Occurring in Africa, in Central and S. Asia, and occasionally in Europe, the best known species is Pallas's sand grouse (*Syrhaptes paradoxus*). The plumage is buff, grey, and black, and is well adapted to make the bird inconspicuous in its native haunts. It feeds upon insects and vegetable matter. See illus. above.

SAND HOPPER (*Talitrus locusta*). Amphipod crustacean, which swarms in the sand between tide marks, and may usually be found under decaying animal matter. It is dirty white in colour, and burrows rapidly in the sand when alarmed. It serves a useful purpose as a scavenger of the shore.

SANDHURST. Village of Berkshire. It is 4½ m. S.S.E. of Wokingham, on the Southern Rly. Its chief interest is the Royal Military College. Here candidates for commissions in

the cavalry, infantry, and other arms are trained. They must be between 18 and 19½ years at the time of entrance, which is after a competitive examination. Cadets for the Indian army are also trained here.

The title of Viscount Sandhurst was held by the family of Mansfield from 1871 to 1921. William Rose Mansfield, the 1st viscount (1819-76), having been chief of the staff during the Mutiny, was commander-in-chief in India 1865-70, and in Ireland 1870-75. His son, William, the 2nd viscount (1855-1921), was governor of Bombay 1895-1900, and lord chamberlain 1912-21. The title became extinct on his death, Nov. 2, 1921.

SAND LAUNCE OR **SAND EEL** (*Ammodytes*). Genus of small carnivorous fishes of the family Ophidiidae. They have long bodies, with a dorsal fin extending nearly the whole length of the back and a pointed head with protruding lower jaw. They frequent sandy shores and swim near the surface of the water. When the tide is out they bury themselves in the sand. They feed chiefly upon small sprats and the fry of other fish, and are themselves much in demand as bait for anglers. Great Britain has two species.

George Sand, French novelist After A. Charpentier

SAND LIZARD (*Lacerta agilis*). British lizard. The average size of the male is $7\frac{1}{2}$ ins.; the female is a little larger. The male is a pronounced green colour, the female brown and grey, and they affect sandy districts. The eggs are deposited in the sand, and are hatched out by the heat of the sun. See Lizard.

Sand Lizard. Small reptile that lives in sandy districts
W. S. Berridge, F.Z.S.

Alternative name of the West Indian republic and also of its capital, usually known as Santo Domingo (q.v.).

SANDOW, EUGEN (1867-1925). Wrestler and physical culturist. Born at Königsberg, April 2, 1867, he was educated at Göttingen, and acquired a reputation as an amateur gymnast and wrestler. Proceeding to Brussels, he toured in Holland before coming to England to secure an engagement at the Crystal Palace. His crowning achievement as a wrestler, however, was his defeat of his former adversary, the Italian Sali, and two others, who were permitted to attack him simultaneously. On Jan 28, 1891, he defeated Hercules in a weight-lifting contest, and was awarded the world's championship belt. In 1897 he wrote *Strength and How to Obtain It*, and in 1898 founded *Physical Culture*, a periodical publication. Sandow died Oct. 14, 1925.

SANDOWN. Urban dist. and watering place of the Isle of Wight. It stands on Sandown Bay, an opening of the S.E. coast of the island, 6 m. from Ryde, on the Southern Rly. It has fine sands, a pier, good bathing, and golf links. Pop. 7,664.

SANDOWN PARK. Racecourse in Surrey. It is 15 m. S.W. of London, near Esher station on the Southern Rly. The July meeting is one of the most popular, the principal race being the Eclipse Stakes, run over a distance of $1\frac{1}{4}$ m.

SANDPIPER. Group of migratory birds related to the plover. The common sandpiper (*Totanus hypoleucos*) is not uncommon about streams between April and Sept., especially in the wilder parts of Scotland. It nests in hollows beside streams. The purple sandpiper (*T. striata*) is found about the coasts of Great Britain during the autumn and winter, and has blackish upper parts with purple reflections. The curlew sandpiper (*T. subarquata*) has a curved beak like a curlew, and is found in the migrating season on the E. coast of Great Britain. The wood sandpiper (*T. glareola*), which closely resembles the green sandpiper, is found in autumn on the E. and S. coasts.

Sandpiper. Specimen of common sandpiper or summer snipe
W. S. Berridge, F.Z.S.

SANDRINGHAM. Royal residence in Norfolk. It is 6 m. N.E. of King's Lynn and 2 m. E. of Wolferton station on the L.N.E. Rly. Sandringham House was built by Edward VII when prince of Wales. Of red brick in the Elizabethan style, it stands in a picturesque park. York Cottage is a secondary residence.

Sandringham, in Victoria, Australia, 11 m. by rly. S. of Melbourne on the shores of Port Phillip, is a residential suburb of the capital.

SANDWICH. Borough and market town of Kent, also one of the Cinque Ports. On the right bank of the Stour, 2 m. from the sea and

13 from Dover, it is on the Southern Rly. Among the chief buildings are the guildhall, S. Clement's church, with Norman tower, S. Peter's church, S. Mary's church, S. Bartholomew's Hospital, with a beautiful Early English chapel, and S. Thomas's Hospital. Of the town's fortifications, Fisher's Gate and the Barbican remain. The grammar school is an old foundation. There are fine golf links. Sandwich was one of the chief English ports, but it decayed owing to the gradual closing of the channel. Market day, alternate Monday. Pop. 3,161.

Sandwich, Kent. Barbican or toll gate of the historic town

San Francisco. The oldest seaport on the N. Pacific coast of America, seen from Goat Island in the bay

SANDWICH, EDWARD MONTAGU, 1ST EARL OF (1625-72). English sailor. Born July 27, 1625, he fought for the Parliament at Marston Moor and Naseby. Created earl of Sandwich in 1660, he distinguished himself in the Dutch war of 1664-65, and was ambassador to Spain, 1666-68. Returning to take part in the second Dutch war, he was killed in his victory of Southwold Bay, May 28, 1672.

John Montagu, the 4th earl, was born Nov. 3, 1718. From 1748-51 he was first lord of the admiralty, and from 1763-65 was a principal secretary of state. Having been postmaster-general, he was again secretary of state, 1770-71, and first lord of the admiralty, 1771-82. An associate of Wilkes, and a member of the hell-fire club, he won from the populace, when he took part in prosecuting Wilkes, the name of *Jemmy Twitcher*. He died April 30, 1792. This earl gave his name to the Sandwich Islands and also to the article of food. The present earl is his descendant. His eldest son is called Viscount Hinchinbrooke.

Sandwich Islands. Alternative name for the Hawaiian Islands. See Hawaii.

Sandringham House, Norfolk. Country residence of the King and Queen

SANDWORT (*Arenaria*). Genus of annual and perennial herbs of the order Caryophyllaceae, natives of temperate and cold regions. They have slender, jointed stems, swollen at the nodes, where the pairs of broad or narrow stalkless leaves arise. The flowers are small and of regular form, in loose, forking clusters, mostly white—a few rosy or purple.

SANDY. Village of Bedfordshire. It is 7 m. E. of Bedford, on the L.N.E. Rly. Evidences of Roman occupation have been excavated. Pop. 3,409.

SANDY HOOK. Sandy peninsula of New Jersey, U.S.A. Partly enclosing New York Lower Bay, it has a lighthouse. The America Cup (q.v.) course lies off Sandy Hook.

SAN FRANCISCO. City of California, U.S.A. It stands on San Francisco Bay, which has access to the ocean through a strait known as the Golden Gate. The city is built on the slope of a semicircle of hills. Below the twin peaks of Las Pajas stands the Mission Dolores, a relic of the old Spanish days. Market Street is the main business thorough-

fare. The shopping district extends into Grant Avenue and Post Street. The city hall, the municipal centre, and the post office are just off Market Street. The U.S. Branch Mint is a massive building of classical design. Chinatown is near Noh Hill. In Pacific Street is the "Barbary Coast," the region of dancé halls, saloons, and wild amusement, frequented by sailors. The Presidio is a military post. Golden Gate Park runs over the heights to the Pacific, and leads to Sutra Heights, overlooking the Seal Rocks and their sea-lions.

San Francisco is the seat of the university of California (at Berkeley) and Leland Stanford Junior University (near Palo Alto). At the Union Iron Works many warships have been built. There is a large shipping trade. The earthquake of 1906 did enormous damage, but the city was greatly improved by replacing the old wooden houses with brick or concrete structures. Pop. 698,963. See Earthquake.

SANGALLO. Florentine family of architects. Giuliano (d. 1516) was employed by Lorenzo the Magnificent to design various buildings, including a convent by the gate of San Gallo, Florence, from which he took his name. Settling in Rome, he became one of the founders of the Roman school of architecture. He returned to Florence to build fortresses for defence against Pisa, and in 1514 was made architect to S. Peter's in conjunction with Raphael.

SANGER, GEORGE (1827-1911). Circus proprietor and showman, who called himself Lord George Sanger. He was born at Newbury, Dec. 23, 1827, and later took over the circus which his father, John Sanger, had started in 1821. In 1871 Sanger purchased Astley's amphitheatre and menagerie, and about the same time leased the Agricultural Hall, Islington. Besides these, he ran circuses at Birmingham, Liverpool, Glasgow, Dundee, Aberdeen, Bath, Bristol, and Plymouth. In 1905 he disposed of his circus property. He was shot dead by an employee, Nov. 28, 1911.

SANHEDRIN (Gr. synedrion, council). Supreme council or senate of the Jews. Established apparently shortly before the time of Antiochus the Great, its exact origin is unknown. It consisted of persons of the upper classes, seventy-one in number, who met under the presidency of the high priest. It acted as the supreme court of justice, with jurisdiction over Jews in all countries, and was allowed considerable freedom of action by both Greeks and Romans.

SANICLE (*Sanicula europaea*). Perennial herb of the order Umbelliferae. A native of Europe, Asia, and Africa, it has a stout, creeping root-stock, and long-stalked, glossy leaves, cut into five wedge-shaped lobes. The minute white or pink flowers are clustered in compound umbels about $\frac{1}{2}$ in. across. The leaves have a bitter taste, and were held in high repute for their supposed healing virtues.

SANITATION. Branch of hygiene. Sanitation implies the adoption of those sanitary measures which conduce to preserve the health of the community. Strictly the term is synonymous with hygiene; but it has grown to be regarded as limited in its application to the material provisions of health in connexion with the home.

The local sanitary authorities are charged with the duty of securing the provision and maintenance of proper sanitary conditions. The public health legislation which they administer enables them to make public sanitary provisions and services—such as a public water supply; the collection, removal, and disposal of household refuse; public sewers and arrangements for the disposal of sewage. Their local by-laws lay down the permissible mode of construction, including the sanitation of all new buildings; and it is the duty of local sanitary authorities to see that nuisances arising from defective sanitation are promptly abated. See Hygiene; Public Health.

SANJAK OR **SANYAT** (Turkish, standard). Name given to an administrative subdivision of Turkey. The empire was divided into vilayets or governments, each under a vali or governor-general. Each vilayet was subdivided into sanjaks, over which supervision was exercised by inferior authorities responsible to the vali. The name is retained in some districts formerly under Turkish rule, e.g. the sanjak of Novi Pazar in Yugoslavia.

Ira D. Sankey
American evangelist

SANKEY, IRA DAVIN (1840-1908). American evangelist. Born at Edinburgh, Penn., Aug. 28, 1840, he devoted himself to mission work and became famous through his association with D. L. Moody, which began in 1870. The pair conducted revival services all over the U.S.A., and met also with great success in their visits to Great Britain in 1873-75, 1881-84, and 1891-92. Responsible for the musical part of the services, Sankey used his fine voice with great effect. He was the compiler of the popular Sacred Songs and Solos, 1873. In 1903 he became blind, and he died Aug. 14, 1908. See Moody, D. L.

SANKEY, JOHN SANKEY, 1ST BARON (b. 1866). British lawyer. Born Oct. 26, 1866, the son of Thomas Sankey, he was educated at Lancing and Jesus College, Oxford. Having been called to the bar in 1892, in 1909 he was made chancellor of the diocese of Llandaff. In 1914 he became a judge of the high court. On account of his acquaintance with the coal mining industry, he was chosen in 1919 to preside over the commission that inquired into the wages and conditions of labour in the mines. Sankey was knighted in 1914. In

1928 he was made a lord justice of appeal, and in 1929 he joined the labour ministry as lord chancellor and was made a peer.

SAN MARINO. European republic. Surrounded by Italian territory, it lies 12 m. S.W. of Rimini, between the provinces of

San Marino. Citadel of the mountain republic in the heart of Italy

Forlì and Pesaro e Urbino, claims to be the oldest state in Europe, and is one of the smallest states in the world. Authority rests in the great council of 60 popularly elected members, a third of whom are renewable every three years, and from whom two selected councillors act as regents for periods of six months. The frontier is 24 m. long, and encloses an area of 38 sq. m. The state is hilly, embracing spurs of the Apennines, one of which is the capital, San Marino. In 1631 the pope formally acknowledged its independence, which was recognized by Italy in 1862. Pop. 13,013.

SAN MARTIN, JOSÉ DE (1778-1850). Spanish soldier. Born in Spanish America, Feb. 25, 1778, he was educated in Spain and served in the army. In 1812 he went to America and led the army which, after several victories, freed Chile from Spanish rule. In 1820 he entered Lima and was chosen protector of Peru, but in 1822 he gave way to Bolívar. San Martín returned to Europe, and died at Boulogne, Aug. 17, 1850.

SANNA-I-YAT. Village of Iraq (Mesopotamia). It stands on the river Tigris some 12 m. from Kut, and came into prominence during the Great War. When Townshend, in Dec., 1915, was besieged in Kut, the Turks converted Sanna-i-yat into an almost impregnable fortress. The British relief force made a number of efforts to storm it and on 'failing,' withdrew their line. In Dec., 1916, the British occupied an entrenched position opposite that of the Turks at Sanna-i-yat, and the village was in British hands on Feb. 23, 1917. See Kut.

SANQUHAR.

Burgh of Dumfriesshire. It stands on the Nith, 26 m. from Dumfries, with a station on the L.M.S. Rly. In the vicinity are coal mines, and the town is an agricultural centre. There are ruins of a castle. A monument marks the site of the town cross, to which were affixed in 1680 and 1685, by the Covenanters Richard Cameron and James Renwick, the Sanquhar Declarations. Pop. 1,700.

Lord Sankey,
British politician
Russell

SAN REMO. City of Italy. It is 26 m. E.N.E. of Nice on the Riviera and is a resort of sufferers from pulmonary troubles.

The old city, crowning a steep hill, with narrow crooked streets and badly built houses, is in contrast with the new city along the coast. It was the scene of a conference of the Allied Powers in April, 1920. Pop. 24,739.

SAN SALVADOR. Capital of the republic of Salvador, Central America. The dist. is subject to earthquakes, and the buildings are low, most of them, including the cathedral, being of wood. Indigo and tobacco are the chief agricultural products. Pop. 89,066.

There is a town in the N. of Angola called San Salvador. In the 15th century it was an important Portuguese settlement, and there are remains of ecclesiastical establishments.

SANSCULOTTES (Fr. without breeches). Term applied by the court to the common people in the French Revolution. According to Littré, the Sansculottes were so called because they gave up the knee-breeches in fashion previous to the Revolution, and wore trousers or pantaloons. The excesses of the Revolutionaries gave a sinister association to the word, which is occasionally used of persons of advanced political ideas.

SAN SEBASTIAN. Seaport and watering place of Spain. It stands on the Bay of Biscay, 11 m. by rly. W. of Irun, on the French frontier. It was chosen as a summer residence of the court in 1886, and speedily became the most fashionable seaside resort in Spain. Long a formidable fortress, San Sebastian has often been besieged, notably in 1719, 1794, and 1808, when it was taken by the French; in 1813, when Wellington drove out the French and utterly destroyed the town; and in 1836, by the Carlists. Pop. 76,016.

Other but smaller San Sebastians are a town on the island of Gomera in the Canaries, and a town in Porto Rico.

SANSKRIT. Old sacred language of the Hindus, in which all their literature is written. It is a member of the Indo-European family. The name means "carefully made," as opposed to Prakrit (common, natural). Its most ancient form is to be found in the Vedas, certain parts of which probably go back to about 2000 B.C.

The Sanskrit of the Vedas may to some extent be considered a popular dialect, differing from classical Sanskrit as the Greek of Homer from classical Greek. About the 4th century B.C. the famous grammarian Pāṇini stereotyped the rules of grammar and syntax, and from that time Sanskrit became to all intents and purposes a dead

language. Sanskrit is usually written and printed in the Devanagari character, a development of the Semitic alphabet. In the matter of grammatical forms it is richer than Greek and Latin. It has eight cases, including an instrumental and a locative and the verbal formations are extremely varied.

Like the language, Sanskrit literature may be divided into two main periods, the Vedic and the classical, beginning in the 5th or 6th century. Veda (knowledge) is the name given to four collections of hymns: Rig-Veda, Yajur-Veda, Sama-Veda, Atharva-Veda, the Veda of verses, of sacrificial formulae, of chants of the priestly family of the Atharvas.

SANSOVINO, ANDREA, OR CONTUCCI (1460-1529). Italian sculptor and architect. Born at Monte San Savino, Tuscany, he studied

under Antonio Pollaiuolo. After a visit to Portugal he returned to Florence in 1490, when he was employed in the decoration of S. Spirito, and, in 1500, executed the statues of Christ and S. John Baptist over the east door of the baptistery. His chief work, however, was the Sforza monument in S. Maria del Popolo, Rome, 1506.

SANT, JAMES (1820-1916). British artist. Born at Croydon, April 23, 1820, he studied at the Royal Academy schools, and became a regular exhibitor of subject pictures at the Royal Academy exhibitions, also making a reputation as a portrait painter. Elected A.R.A. in 1861, he became R.A. in 1869. His picture, *The Schoolmaster's Daughter*, is in the diploma gallery of the R.A. One of Sant's most popular pictures, widely circulated in reproduction, was *The Soul's Awakening*, exhibited in 1888. He died July 12, 1916.

SANTA BARBARA. City of California, U.S.A. On the Pacific coast, it is 105 m. by rly. W.N.W. of Los Angeles. The Franciscan Mission dates from 1786. Pop. 22,435.

SANTA CLAUS. Corruption of Saint Nicholas, the patron saint of children. Under this name he is especially associated with the giving of presents about the Christmas season. The Dutch custom of hanging up a stocking in which Santa Claus can put his gifts on Christmas Eve has become widespread among children. See Nicholas.

SANTA CRUZ. Group of islands in the Pacific Ocean, included in the British Protectorate of the Solomon Islands. Nitendi, Tupua, and Vanikoro are the largest islands of the group which lies S.E. of the Solomons and N. of the New Hebrides. The coral islets known as the Swallow Islands are included. Nitendi, sometimes called Santa Cruz, has an area of 212 sq. m. Tinakula is an active volcano.

SANTA CRUZ or St. Croix. Island of the Lesser Antilles, belonging to the U.S.A. It is in the Caribbean Sea, 60 m. E.S.E. of Porto Rico, and has an area, including some islets, of 84 sq. m. The capital is Christiansted. The island was successively held by the Spaniards, English, and Dutch. In 1651 it was bought for the Knights of Malta, who sold it in 1664 to the French West India Co., by whom it was sold to Denmark in 1733. In 1801 it was taken by the British, who soon restored it. Retaken by the British in 1807, it was again restored in 1814 to the Danes, who sold it to the U.S.A. in 1916. Pop. 15,500.

SANTA CRUZ. Seaport and coaling station on the island of Tenerife. It is the capital of the island and also of the Canary Isles. The houses, built in the Spanish style, have flat roofs and central patios or courtyards. The exports include silk, sugar, cochineal, tomatoes, bananas, potatoes, wine, and brandy. It was twice bombarded by British fleets: under Blake, April 20, 1657, and Nelson, July 24, 1797. Nelson lost his arm in this action. Pop. 56,309.

SANTA FÉ (Span. Holy Faith). City of central Argentina, capital of the province of the same name. It stands on the Rio Salado, 95 m. N. of Rosario (q.v.), and its port is Colastiné on the Paraná, 7 m. away. It has a cathedral, university, and schools. The chief industry is shipbuilding, and the principal exports are timber, cattle, and wool. Pop. 59,574.

Another Santa Fé is the capital of the state of New Mexico. It stands on the Santa Fé river, 50 m. W. of Las Vegas. Pop. 7,200.

SANTANDER. Seaport and watering place of Spain. It stands on a sheltered bay, 316 m. by rly. N. of Madrid. There is an old town and a new town, the latter laid out with large open plazas and boulevards. The 13th century cathedral has been spoilt by restoration. It has a fine harbour. The exports

include flour, wine, metals, and foodstuffs. There are manufactures of paper, flour, beer, cotton, and iron goods. Pop. 82,239.

SANTA SCALA (Ital. holy steps). Staircase belonging to the Lateran palace in Rome. It consists of a flight of 28 marble steps, said to have been ascended by Christ when he was in the house of Pilate at Jerusalem. They are protected with wood and are ascended only on the knees. An adjacent flight is provided for the descent.

SANTIAGO. Capital of Chile. It is 68 m. E.S.E. of Valparaiso, and is one of the best built and most attractive cities of Latin America. The Plaza de Armas in the centre of the town is the heart of its life, and here on the W. stands the cathedral, on the N. the post office buildings, while there are arched commercial structures on the E. and S. Congress building, in the Callo

Compañía, is an imposing structure. To the S. stands the Plaza de la Moneda, the whole of one side being occupied by the Palacio de la Moneda, with the residence of the president. Grouped in this part of the city are most of the other government buildings.

One of the most notable features of the city is the magnificent Avenida de las Delicias, also known as the Alameda, a spacious boulevard bordered with oak, elm, and acacia trees. The hill (Cerro) of Santa Lucia, where the Spanish governor of Chile, Pedro de Valdivia, in 1541 made his camp and fortified himself against the Araucanian Indians at the founding of the city, has been turned into a public resort, and there are numerous other public parks. The university dates from 1743. Among the many churches the most notable, other than the cathedral, is that of La Merced. Pop. 507,296.

SANTIAGO. City of Cuba. It lies on the bay of Santiago, 540 m. S.E. of Havana. Ironfoundry and the manufacture of machine shop products and tobacco are carried on, and the port has a large trade. It was the capital of Cuba from 1515 to 1556. Pop. 62,083.

SANTIAGO. City of Spain. It is 26 m. by rly. N.N.E. of its port, Carril, and 33 m. S.S.W. of Corunna. The cathedral, one of the most striking examples of early Romanesque architecture in the peninsula, contains the shrine of the patron saint of Spain, James the Greater or Sant' Iago. The cloisters are regarded as the finest in Spain. Santiago possesses numerous churches, chapels, and religious fraternities, with hospitals, hospices, etc., for pilgrims. The university was founded in 1504. The Hospital Real was founded by Ferdinand and Isabella for pilgrims, while the convents of San Martin and San Francisco are worthy of note. The city is the headquarters of the Order of Knights of Santiago.

SANTLEY, SIR CHARLES (1834-1922). British singer. Born at Liverpool, Feb. 28, 1834, he studied at Milan, and later in London under Garcia, and made a speedy success as a baritone oratorio singer. He first appeared in grand opera at Covent Garden, 1859, and from 1875 toured extensively with the Carl Rosa Opera Company. He sang in the U.S.A. in 1871 and 1891, and in Australia, 1890. Knighted in 1907, he published *The Art of Singing*, 1908, and *Reminiscences*, 1909, and composed some sacred music, and several songs under the pseudonym of Ralph Betterton. He died Sept. 22, 1922.

Sir Charles Santley.
British singer

SANTO DOMINGO. Republic of the W. Indies. It occupies the E. coast portion (about two-thirds) of the island of Haiti (q.v.). Its area is estimated at 19,332 sq. m. The chief industry is agriculture, and exports include sugar, tobacco, cocoa, and coffee. There are large forested tracts throughout the country. Cattle rearing is extensively carried on. The capital is Santo Domingo (or San Domingo), and the chief port is Puerto Plata.

The Dominican Republic was established in 1844. A proposal to annex it in 1869 was rejected by the U.S. senate. After a period of disorder the United States intervened in 1916 and placed naval officers in charge of the departments of state. In 1922 a provisional government was set up, and in 1924 Horacio Vasquez was elected president. The U.S.A. forces withdrew after the signing of a new convention, which provided the country with a loan secured on the customs, which remained under American control. A revised constitution was passed in 1929. Pop. 897,405.

SANTO DOMINGO. Capital of the republic of Santo Domingo. It stands at the mouth of the river Ozama, on the S. coast. The principal buildings are the cathedral, arsenal, government palace, and former Jesuit college. A large trade is carried on, chiefly in sugar and coffee. The bones of Columbus were brought here about 1542, and remained in the cathedral until 1795. In Sept., 1930, much destruction and loss of life resulted from a hurricane. Pop. 30,957.

SANTOS. Seaport of Brazil. It is on the Atlantic seaboard, 200 m. S.W. of Rio de Janeiro. A great coffee port, it owes its importance almost entirely to the exigencies of the coffee planters of São Paulo. Hides, cacao, tobacco, frozen meat, and bananas are also exported. Pop. 101,000.

SANTOS-DUMONT, ALBERTO (b. 1873). Brazilian airman. Born at São Paulo, Brazil, July 20, 1873,

Santiago, Spain. Romanesque cathedral of S. James

he studied aeronautics, made his first balloon voyage in 1897, and devoted his attention to the problem of the navigable balloon. Between 1898 and 1906 he constructed numerous small airships, from which the non-rigid airship developed. He won the Deutsch prize of £10,000 at Paris in 1901. During the next few years he turned his energies to inventing

heavier-than-air machines, and on Aug. 22, 1906, he made the first hops from the ground with a power-driven machine, and on Oct. 23 achieved a flight of 800 ft. He published *My Airships: a Story of My Life*, 1904. See Aeronautics.

SAÔNE. River of France. It rises in the Vosges, and flows S. into the Rhône at Lyons. It traverses the plains of Burgundy, and is connected with the Rhine by the Rhine and Rhône canal, and with the Loire by the Canal du Centre.

A department of France is called Saône et Loire. In the E. of the country, its area is 3,330 sq. m. Cereal crops are largely grown. Cattle, horses, sheep, and pigs are reared. Mâcon is the chief town. In the Middle Ages the department was included in Burgundy. Pop. 549,240.

SÃO PAULO. City of Brazil. It lies 45 m. inland from its port, Santos. The new municipal theatre is one of the finest buildings of its type in the world. The magnificent Ypiranga palace was built as a memorial of the declaration of independence of 1822. The marketing and distribution of coffee is the chief industry, followed by meat packing. The city originally

A. Santos-Dumont,
Brazilian inventor

São Paulo. Finely built railway station of this Brazilian city

nated in 1554 as a Jesuit mission station. Pop. 625,000. See Brazil.

SAP. Juices of plants. The ascending sap consists of water in which mineral salts are dissolved, collected by the root hairs from the soil, and conducted through the roots and the wood cells and vessels of the stem and leaf stalks to the leaves. Here it is vaporized by contact with the air circulating around the cells of the leaf, and passes out through the stomata. The mineral matter is retained and combined with carbon extracted from the air, and from the mixture sugar, amides, etc., are formed. These are carried away in the descending sap through the phloem, or soft cellular tissue on the outside of the fibrovascular bundles, to those parts of the plant where they are required as cell-forming materials for present or future purposes. See Plant.

SAPODILLA PLUM or **BULLY-TREE** (Aehras sapota). Evergreen tree of the natural order Sapotaceae. A native of Central America and W. Indies, it has wide-spreading branches, the bark is astringent, and the juice milky. It has elliptic-oblong leaves, and large, whitish, urn-shaped flowers. The fruit is apple-shaped, luscious, and edible.

SAPONIN. Glucoside, which occurs in several plants, characterised by its property of giving a froth when shaken with water. The chief sources are soapwort, soap bark, and senega root. Saponin is a white powder which causes sneezing when distributed in the air. It is used for giving a froth to aerated and other beverages, and for washing where soap would injure.

SAPPAN TREE (Caesalpinia sappan). East Indian tree of the order Leguminosae. It grows to a height of 40 ft., has prickly branches, with leaves divided into 10 or 12 pairs of oval leaflets, and clustered sprays of yellow flowers. The dull red wood, known

as Brazil wood, hnkum wood or sappan wood, is used as a dyestuff. An orange dye is obtained from the roots.

SAPPER. Originally a soldier employed in cutting saps and also in building fortifications. From 1813 to 1856 there was a corps in the British army called the royal sappers and miners, but in 1856 this was merged in the corps of royal engineers. The word sapper is still used for privates in this branch of the service. The Indian army retains the term, its engineer units being known as sappers and miners. See Engineers, Royal.

SAPPHIRE. Blue variety of the mineral corundum. It has the same composition as the ruby, Al_2O_3 , and is found usually in the same localities. Slightly harder than the ruby, dichroic, the most valuable varieties are of a pure cornflower blue in colour. Sapphires are often spotted with yellow and white, and the blue colour disappears if the gem is heated. White topaz is sometimes called water sapphire, while yellow sapphire is a yellow variety of corundum. Colourless corundum is known as white sapphire or leucosapphire. The most valuable sapphires are found in Siam with the ruby, and Ceylon has long been known for the gem. See Corundum; Gem.

SAPPHO. In astronomy, one of the minor planets. It was discovered in 1864, and revolves round the sun at a mean distance of 275,000,000 m. Together with Iris and Victoria, it was used by Sir D. Gill to establish a measurement of the sun's distance.

SAPPHO (c. 580 B.C.). Greek poetess. She lived at Mitylenē, and with her contemporary Alcaeus was one of the greatest of the Aeolic group of poets and the leader of a literary society of women. Of noble birth, she is said to have been banished for political reasons and to have gone to Sicily. The story that unrequited love for Phaon led her to leap from the Leucadian rocks is fictitious.

Of her numerous poems, apart from many small fragments, only two are extant, including the magnificent ode to Aphrodite. These show that her genius was extraordinary, and she has been called the greatest woman poet. Her work, almost entirely erotic, is marked by depth of passion and exquisite grace. She is known to have employed at least 50 metres.

SAPROPHYTES. Plants which, lacking chlorophyll, are unable to manufacture carbohydrates in their leaves from the carbonic-acid gas of the atmosphere. Saprophytes live upon the decaying remains of animals or plants. Most of them get this from the humus of the soil. In saprophytes the leaves are lacking, or are reduced to small scales. Flowering plants that are saprophytes obtain their

Sapodilla Plum. Foliage and flower; inset, fruit.

food through the intervention of a fungus, called Mycorrhiza, attached to their rootlets. Most of the fungi that grow in the ground or on dead trees are saprophytes, as distinguished from those that attack living plants. See Botany; Parasite; Plant.

SARACEN. Name formerly applied to Mahomedans. The name was given in classic times to the Arab tribes of Syria and the adjacent deserts, and thence came to include all Arabs. In the Middle Ages the term Saracen was applied to Mahomedans generally, but especially to those who fought the Crusaders in Palestine and Spain. See Arabia; Crusades; Mahomedanism; Saladin.

SÁRAGOSSA (Sp. Zaragoza). City of Spain. It stands on the Ebro, 212 m. by rly. N.E. of Madrid. The former capital of

Saragossa. 1. The 16th century leaning clock tower. 2. Bridge over the Ebro and Cathedral del Pilar

Spanish national heroine, Augustina (d. 1857) was so called for her courage during the defence of Saragossa against the French, 1808-9. Her deeds are described in Byron's *Childe Harold*. Pop. 155,520.

SARAH or **SARA.** Biblical character. A Hebrew word, meaning princess, it was the name of Abraham's wife, and was long very popular among both Jews and Christians.

SARASATE, PABLO MARTÍN MELITÓN (1844-1908). Spanish violinist. Born at Pampeluna, March 10, 1844, he early showed signs of great technical ability, and studied at the Paris Conservatoire from 1856-59. He speedily made a European reputation as a violin virtuoso, strengthened after he ceased to strive after mere brilliance. He first played in London at the Crystal Palace, 1861, visited the U.S.A. in 1870, and toured in most parts of the world.

P. M. M. Sarasate,
Spanish violinist

He died at Biarritz, Sept. 21, 1908.

SARATOGA SPRINGS. Watering place of New York. It is 38 m. from Albany and has mineral springs, the waters of which are good for rheumatism and dyspepsia. It is reached by several railways and situated amid beautiful scenery. Industries include paper-making machinery, silk goods, etc. Pop. 13,880.

Near here two battles were fought in the American War of Independence. One, on Sept. 19, 1777, was indecisive, both sides losing heavily. The other, on Oct. 7, ended in the defeat of the British force under Sir John Burgoyne, which surrendered a few days later. It was agreed that the English soldiers should be allowed to leave America, on promising not to serve again, but Congress refused to agree to these terms.

SARAWAK. British protected state in the N.W. of Borneo. It is bounded N.E. by Brunei, and elsewhere by Dutch Borneo and the S. China Sea. The est. area is about 50,000 sq. m. Important towns are Kuching, the capital, and Sibü. The chief agricultural products are coffee, pepper, sago, rubber,

camphor, rattans, and tapioca. Coal and petroleum are found. There are large exports of timber, mostly to Hong Kong. Sarawak is administered by a raja, Sir Charles Vyner Brooke. Portions of Sarawak were ceded to Sir James Brooke (q.v.) in 1842. Pop. about 600,000. See Borneo.

SARCEY, FRANCISQUE (1827-99). French writer and critic. Born Oct. 8, 1827, he became a teacher. He published critical articles in various journals, and also several novels, including *Le Nouveau Seigneur de Village*, 1862, and acted as dramatic critic for *L'Opinion Nationale*, 1859-67. His fame rested chiefly, however, on his regular dramatic criticism which appeared in *Le Temps* from 1867 until his death on May 16, 1899.

SARCOMA (Gr. sarx, flesh). Malignant tumour which differs from cancer in being formed from connective tissue, and in containing more fibrous tissue. Sarcomata may originate in the skin or subcutaneous tissues, the periosteum which invests bone, the deeper parts of bone, the breast, testicle, or any other organ of the body which contains connective tissue. The tumour may occur at any age, but is more common below the age of 40, while cancer tends to occur after that age.

A sarcoma as it extends invades adjacent tissues, and the growing tumour may come to press upon a vital organ and so cause death. In its early stages a sarcoma is confined to the locality in which it originates.

SARCOPHAGUS (Gr. sarx, flesh; phagcin, to eat). Coffin, usually of stone, especially one bearing sculptural enrichments or funerary inscriptions. The term denotes the supposed caustic action of certain stones. Originating in early Egypt for providing the dead with a house of eternity, the reproduction of contemporary dwellings passed into a mummiform type. The finest in England is the semi-translucent coffin of Seti I (Soane Museum).

Christian art adapted pagan sculpture to its ends; famous examples are the Julius Bassus, the Helena, the Constantia at Rome, and the S. Barbara at Ravenna. See Invalides; Phoenicia.

SARD. Variety of the cornelian. It ranges in colour from a light chestnut hue to an orange brown, and is much valued as a setting for signet rings.

SARDA CANAL. Indian irrigation canal opened in 1928. With its channels it is about 4,000 m. long. It irrigates about 7,000,000 acres of land in the United Provinces. It cost over £7,000,000 and took eight years to make.

SARDANAPÁLUS. Legendary Assyrian king. According to Ctesias, Diodorus, and other Greek writers, he was an effeminate voluptuary who reigned in the 9th century B.C. Besieged in Nineveh for two years by a Median satrap Arbaces, he caused himself, his harem, and treasure to be burned on a funeral pyre, 400 ft. high. The name and date are reminiscent of Ashurbanipal, the rebellious son of Shalmaneser III, about 825. The story embodies also confused memories of authentic events two centuries later, especially under the peaceably disposed but not effeminate Ashurbanipal (q.v.), and under his brother Shamash-shum-ukin, who in 648 burned himself in his palace in Babylon. See Nineveh.

SARDINE. Word originally used for a small fish of the herring family, when it is preserved in oil. The name is a corruption of

Sardinia, as many fish for preserving were taken around that island. It has been held, however, that the word sardine is applicable only to the pilehard (q.v.).

SARDINIA. Island in the Mediterranean. It has an area of 9,299 sq. m., and is separated from Corsica by the Strait of Bonifacio. It is chiefly mountainous. Minerals include silver-lead, manganese, and iron ores. Forests cover a fifth of the area. Wheat, wine, and olive oil are produced. Charcoal, fish, salt, wine, olives, and minerals are the principal exports. There are universities at Cagliari, the capital, and Sassari. The island abounds in remains of the Bronze Age. Pop. 955,303.

Sardinia was under Spanish viceroys from 1478 to 1713, when it passed to Austria, and in 1720 to Savoy, whose duke, Victor Amadeus II, became king of Sardinia. In 1730 Victor Amadeus abdicated in favour of his son, Charles Emmanuel I, but the latter's son was driven from his throne by Napoleon in 1796, and Savoy and Nice were annexed to France. The Congress of Vienna, 1814, reinstated the house of Savoy and added the territory of the former republic of Genoa to their realm.

The kingdom thus comprised Genoa, Savoy, Aosta, Piedmont, Nice, and Sardinia. Victor Emmanuel I abdicated in 1821 in favour of his brother, Charles Felix, upon whose death ten years later the crown of Sardinia passed to the Carignano branch in the person of Charles Albert. His son, by participation in the Crimean War, raised Sardinia to a seat in the council of nations, and by the sacrifice of Nice and Savoy, Cavour bought the assistance of Napoleon III to drive the Austrians from Italy; but the kingdom ceased to exist when Victor Emmanuel was crowned king of Italy in 1861. See Cavour; Italy (map); Savoy; Victor Emmanuel.

SARDIS. Capital of the old kingdom of Lydia. Captured by the Persians in 546 B.C., it figured later in the Ionian revolt. After Alexander the Great took it in 334 B.C. it became a Greek city of importance. It was the seat of one of the earliest Christian bishoprics, and was one of the seven churches of Asia addressed in the Apocalypse. The city was destroyed by Tamerlane in the 15th century, and is now represented by a village called Sart, about 50 m. N.E. of Smyrna.

SARDONYX. Variety of onyx. It displays alternate rings of white and brown. It is mounted in jewelry with a plain table surface, carved or engraved, and is used for other ornamental purposes. See Gem.

SARDOU, VICTORIEN (1831-1908). French dramatist. Born in Paris, Sept. 7, 1831, he achieved success in 1860 with *Monsieur Garat* and *Les Prés Saint-Gervais*. A writer of extraordinary fertility and cleverness, he succeeded in almost all forms of drama, in the comedy of intrigue, e.g. *Les Pattes de Mouche*, 1860, familiar in English as *A Scrap of Paper*; in the comedy of manners; in political comedy, e.g. *Rabagas*; and in historical drama, e.g. *Patrie*, *Thérémidor*, and *Madame Sans-Gêne*. Many of his later melodramas, e.g. *La Tosea*, were written for Sarah

Bernhardt, and Sardou also wrote two plays, *Robespierre*, 1902, and *Dante*, 1903, for Henry Irving. He died in Paris, Nov. 8, 1908.

SARGASSO SEA. Region of the Atlantic Ocean off the American coast about the latitude of Florida, reaching about halfway towards Africa. It is composed of floating masses of seaweed characterised by numerous berry-like bladders. This dense gulf weed (*Sargassum bacciferum*) is the home of many small marine animals. Columbus discovered the Sargasso Sea, which long had an unenviable reputation as being dangerous to navigation.

SARGENT, JOHN SINGER (1856-1925). Anglo-American painter. Born in Florence, of American parents, he studied at Florence, and in Paris under Carolus-Duran. Settling in Chelsea, he soon attracted attention as a portrait painter. He became A.R.A. in 1894 and R.A. in 1897; and was a conspicuous exhibitor at the Salon. Among his works are portraits of Ellen Terry as Lady Macbeth, the Misses Wertheimer, Mrs. Carl Meyer and Children, Joseph Chamberlain, and "Carmenita." Later the slashing bravura of his earlier style refined itself, and sunlit landscapes occupied him. His *Carnation*, *Lily*, *Lily*, *Rose*, is in the Tate Gallery. He died April 14, 1925. See p. 730.

John S. Sargent, Anglo-American painter

SARGON. King of Assyria, 722-705 B.C. The Biblical spelling represents the euneiform Sharrukin, assumed by a military usurper who

founded the Sargonid, the last Assyrian dynasty. After the capture of Samaria he deported its inhabitants. He overthrew Hamath, 720; Carchemish, 717; Ashdod, 711 (Is. 20); and Mita of Mushku and Merodach-baladan of Babylon, 709. His son Sennacherib succeeded him. See Assyria; Samaria.

Another Sargon, or Sharrukin, was king of Akkad, Babylonia. The Neo-Babylonian tradition which dates him about 3800 B.C. is regarded by many scholars as 1,000 years too early.

SARI BAIR. Hill of Gallipoli peninsula. In the S.W., a few miles from the coast, it gives its name to a steep rock, Sari Bair Point, midway between Suvla Bay and Gaba Tepe (q.v.). Its height is 972 ft. The hill was prominent in the Allied campaign in Gallipoli in the Great War. See Dardanelles; Gallipoli, Campaign in; Suvla Bay.

SARK. One of the Channel Islands. About 1,270 acres in area, it lies 6 m. E. of Guernsey, and consists of two peninsulas, Great Sark and Little Sark, joined by a causeway called the Coupée. It has a tiny harbour on the E. coast known as Creux, and is remarkable for its fine cliffs and caves. It is a dependency of Guernsey. Pop. 500. See Channel Islands.

SARK. Stream of Dumfriesshire, Scotland. It rises in the Collin Hags and flows into the estuary of the Esk at the E. end of Solway Firth. For 7 of its 13 m. it forms the boundary between England and Scotland.

SARNIA. City and port of Ontario, Canada. On the river St. Clair, near Lake Huron, 170 m. from Toronto, it is a station on the C.N. Rlys., and steamers go from here to

Sargon, king of Assyria. From a relief

Victorien Sardou, French dramatist

ports on the Great Lakes and the St. Lawrence. Here are lumber mills Pop. 14,877.

SAROS or **XEROS**, GULF OF. Inlet of the Aegean Sea, the ancient Sinus Melas. It is N.W. of the peninsula of Gallipoli. Its length is 40 m. and its width at the broadest about 20 m. See Dardanelles.

SARRAIL, MAURICE PAUL EMMANUEL (1856-1929) French soldier. Born at Carcas-sonne, April 6, 1856, he joined the French army in 1874. After a spell of active service in Algeria, 1877-78, he became a lieutenant in the Foreign Legion in 1882. He was made commandant of the infantry school at St. Maixent, 1901. He became director of infantry in 1907, general commanding the 12th infantry division, 1911, head of the 8th army corps, 1913, and of the 6th corps, 1914. Shortly after the outbreak of the Great War he was given command of the third army, and he took part in the first battle of the Marne, Sept., 1914. In Aug., 1915, he was appointed commander of the French army at Salonica, and in Jan., 1916, was made commander-in-chief of the whole expedition. In 1923 he was appointed high commissioner in Syria, but in 1925 he was recalled. Sarraill died in Paris, March 23, 1929. See Marne; Salonica.

Maurice Sarraill,
French soldier

SARRUSOPHONE. Name of a family of brass wind instruments invented in 1863 by Sarrus, a French army bandmaster. They have a conical bore and are fitted with a double reed, while the mechanism is akin to that of the bassoon. The compass is two octaves and a fourth, that of the soprano in B flat being

The tenor and bass instruments, in B flat, are one and two octaves respectively lower in pitch than the above. The compass of the contralto in E flat is

The baritone and double bass, also in E flat, are respectively one or two octaves lower than the contralto.

SARSAPARILLA. Product of several species of Smilax, woody vines, natives of warm parts of America. The roots of the plant are dried, and from them by boiling is prepared a cooling drink.

SARSFIELD, PATRICK (1645-93). Irish soldier. Born near Dublin, of a landowning family, he entered the English army in 1678 and served in France. He was actively loyal to James II during his short reign, and when the king fled to France Sarsfield was one of his companions. He was in the force that crossed to Ireland to fight for the exiled king. Present at the battle of the Boyne, he won renown by conducting the defence of Limerick. Serving in the French army, he was mortally wounded at the battle of Neerwinden, which took place July 29, 1693. James II made him earl of Lucan.

Patrick Sarsfield,
Irish soldier.
Franciscan Library,
Dublin.

SARUM. Latin name for Salisbury, Wilts. Old Sarum is a parish 2 m. N. of Salisbury. It was once a city of importance, and returned two parliamentary members

down to 1832. The Sberborne see was transferred thither in 1075; the office books called the Sarum Use were compiled there about 1085; and its population migrated to Salisbury in 1227. New Sarum is the official name of Salisbury. See Salisbury.

SARWAT PASHA (1873-1928). Egyptian politician. Educated at Cairo, Abdel Khalek Sarwat became a lawyer and held several legal positions before being made governor of Assiut in 1908. In 1909 he became procureur-general of native courts. From 1914 to 1919 he was a minister, and he worked steadily for the independence of his country. In 1921, when he was minister of the interior, the independence of Egypt was recognized, and in March, 1922, he became prime minister, but he resigned in Nov. In 1926 he became minister for foreign affairs, and in 1927 again prime minister. He resigned in March, 1928, and died in Paris, Sept. 22, 1928.

SASKATCHEWAN. Prov. of Canada. Its area is 251,700 sq. m., of which 8,892 sq. m. are water. It stretches from lat. 60° to the U.S. border. Its name is taken from that of its principal river, which runs right across it. Made a province in 1905, it was formerly part of the N.W. Territories. Regina is the capital. The state university is at Saskatoon. The province is part of the prairie region, although there are some hills in the S. In the N. there are a number of lakes, and throughout it is well watered. The chief crops are wheat, oats, and barley; horses, cattle, and sheep are reared. Some coal is mined and fishing is carried on. The N. part is mainly covered with trees. The country is served by the trans-continental lines of rly., which link up with the systems of the U.S.A. Pop. 820,738.

The river Saskatchewan is formed by two streams, the N. and the S. Saskatchewan. The two unite near Prince Albert, and the joint stream discharges into Lake Winnipeg. To the head of Bow the length of the river is 1,205 m., but the united one is only about 300 m. See Canada; Regina.

Saskatoon, Canada. The Court
House, built in 1907

SASKATOON. City of Saskatchewan, Canada. It stands on the S. Saskatchewan river, 466 m. from Winnipeg, on the C.P.R. and C.N. Rlys. Here is the provincial university. Industries include the making of bricks, machinery, and clothing, and factories for wooden goods. Pop. 31,234.

SASSAFRAS (*Sassafras variifolium*). Tree of the order Lauraceae, native of N.E. America. It has yellow-green twigs and oval leaves, greenish-yellow flowers in short sprays, and blue, plum-like fruit. The twigs and leaves are mucilaginous, and the bark has an aromatic odour.

Sassafras. Twig showing fruit
and leaves. Inset, flower spray

The root and bark have stimulant properties, and are used also to make a yellow dye. The leaves make Sassafras tea, whilst a kind of beer is brewed from young shoots, and the oil extracted from the fruit is used in perfumery.

SASSANID. Name of a Persian dynasty which ruled from A.D. 226 to 651. Within a hundred years of the destruction of the Persian Empire by Alexander the Great, a new empire called Parthian, under a dynasty called the Arsacidae, was set up in the regions E. of the river Euphrates. This Parthian dynasty ruled till A.D. 226, when it was overthrown by a chief of the true Persian race, Babegan or Ardashir. The dynasty took its name from Sassan, a more or less mythical ancestor of Ardashir. See Persia.

SASSOON, SIR JACOB ELIAS (1844-1916). British merchant. The grandson of David Sassoon of Bagdad, a Jew who migrated to Bombay in the early part of the 19th century, he was the son of David Sassoon who founded the firm of E. D. Sassoon and Co. Jacob took a leading part in developing the cotton industry of western India and was the recognized head of the Jewish community. He was made a baronet in 1909, and died Oct. 24, 1916. He was succeeded by his younger brother, Edward Elias (1853-1924).

Another branch of the family is represented by Sir Philip Albert Gustave David Sassoon (b. 1888), 3rd baronet, who in 1912 succeeded his father in a title conferred in 1890. He was elected M.P. for the Hythe div. of Kent from 1912. From 1924-29 Sir Philip was under-secretary for air.

SASSOON, SIEGFRIED LOREANNE (b. 1886). British author and soldier. Educated at Marlborough and Clare College, Cambridge, he joined the Sussex Yeomanry in 1914. In 1915 he obtained a commission in the R. Welch Fusiliers, and he served in France and Palestine until nearly the end of the war. In 1919 he was literary editor of *The Daily Herald*. Sassoon's published works include *The Old Huntsman*, 1917; *War Poems*, 1919; *Memoirs of a Foxhunting Man*, 1928, which received the Hawthornden Prize, and *Memoirs of an Infantry Officer*, 1930.

SATAN. One of the many Hebrew names given to the prince of the powers of darkness. The idea of a supreme evil spirit, the Devil or Satan, came into prominence among the Jews about the time of the captivity. Milton, in *Paradise Lost* and *Paradise Regained*, did much to establish modern belief in a personal cause of the Fall and of moral evil.

Satan worship is a ritual reverence of the devil as the personalised ruler of the powers of evil. It differs from animism and also from the devil worship of the Yezidis, who venerate the arch-enemy in the belief that such friendliness will be adequately rewarded when he regains paradise.

Late in the 19th century there were declared to occur in France and elsewhere persons who defied the Supreme Being by offering allegiance to his adversary. This perverted cult, called Satanism, was short-lived.

SATELLITE. In astronomy, a companion body to a planet or star. According to the theory of their formation the planets, before having completely cooled, and while still in the state of rapidly rotating semi-liquid bodies, threw off their satellites, which, however, had not sufficient speed of direct motion to escape from the attraction of the parent body. Venus and Mercury have no satellites; the earth one, the moon; Mars two; Saturn, in addition to its rings, ten; Jupiter nine; Uranus four; and Neptune one. See Planet; Star.

SATI (Hind. virtuous wife). Hindu widow who immolates herself on her husband's funeral pyre, or is separately immolated when he has died at a distance. The older spelling is suttee. In ordinary European usage the word sati denotes the act as well as the victim.

After its abolition by law in British India in 1829 it dwindled rapidly, but lingered longer in the native states, being performed by several widows of Sir Jung Bahadur of

Nepal in 1877. Since that date the practice has become virtually extinct.

Widow-burning is related to a primitive custom, still found in Africa, of providing necessary service in the afterworld by sacrificing women and slaves.

SATIN BIRD (*Ptilonorhynchus violaceus*). Species of bower bird. It is related to the birds of paradise. The feathers of the forehead have a very silky or satin-like lustre. The birds occur in N. and E. Australia, and construct bowers or playing grounds, which they ornament with twigs, pebbles, land shells, etc.

SATINWOOD (*Chloroxylon swietenia*). Tree of the order Meliaceae, a native of India. The leaves are divided into two rows of numerous oval leaflets; and the small, whitish flowers are in large clusters. The wood is close-grained, hard, and of a yellow tint, with a satiny lustre. It is used for veneers, the backs of brushes, turnery, etc.

Satinwood. Divided leaves and inset flower spray

learnt their craft in Korea. This type had green, yellow, black, or parti-coloured (flamé) glaze. A second, Satsuma-Tangen, had a vitrifiable glaze. The third type (end of the 18th century) had a hard paste, and was decorated with diaper patterns, flowers, and Japanese mythological creatures. A fourth type, with hard white paste, was decorated in colours and gold, also with yellow, black olive-green, or mustard-yellow glazes.

SATURN. In classical mythology the god of agriculture. According to a popular legend, Saturn was an ancient king of Latium, whose reign, being a time of great happiness and prosperity, was the so-called Golden Age (q.v.). Saturn was subsequently identified with the Greek Cronos (q.v.).

SATURN. In astronomy, the next outward planet to Jupiter of the superior planets. Its mean distance from the sun is 886,779,000 m., and its equatorial diameter 73,713 m. The time occupied in its yearly path about the sun is 29.46 years. The conspicuous feature of Saturn is the ring, or rings. The ring system is situated in the plane of the planet's equator, and consists in chief of two bright outer rings, one within the other, separated by what is called Cassini's division, from its discoverer, and an inner dark ring called the crape ring. There are other gaps and subdivisions, less conspicuous. All the rings consist of aggregates of tiny moons or particles, each moving independently in its own orbit round the planet. The moons of Saturn, 10 in number, are Phoebe, Themis, Mimas, Enceladus, Tethys, Dione, Rhea, Titan, Hyperion, and Iapetus. See Astronomy: Planet; Satellite

Satin Bird, the delicately shaded species of Australian bower-bird

SATURNALIA. In Rome, the annual festival of Saturn. It was kept under the republic on Dec. 19, extended by Augustus to three days, Dec. 17-19, and later to a week. Schools and law courts were closed, and no public business transacted. Slaves enjoyed freedom of speech and temporary liberty, and were waited on by their masters.

SATYR. In Greek mythology, a minor nature deity. They were chiefly found in attendance upon Bacchus. Of repellent appearance, they had pointed goat's ears, horns, and a tail, and were addicted to over-indulgence in wine and licentiousness. The Roman poets confused them with the fauns.

SAUGOR. Town of the Central Provinces, India. It is a trading centre and the capital of a district. Pop. 39,300.

The name is also that of an island of Bengal. This is at the mouth of the Hooghli and is famous for its bathing festival, which annually attracts thousands of pilgrims.

SAUL (d.c. 1010 B.C.). First king of Israel. The son of Kish, of the tribe of Benjamin, he delivered Jabesh-Gilead from Nahash, king of Ammon, and was made king at Gilgal. He defeated the Philistines at Gibeon or Gaba, and afterwards crushed the Amalekites, but having disobeyed a command to destroy them utterly, received from Samuel (q.v.) the message that Jehovah had rejected him. His insane jealousy drove David (q.v.) into outlawry. He was overthrown by the Philistines at Mt. Gilboa, where his sons were killed, and he fell upon his sword (1 Sam. 8 to 2 Sam. 1). Saul was also the early name of S. Paul the apostle.

Satsuma. Bowl of the famous Japanese faience ware South Kensington Museum

SAULT SAINT MARIE. Town of Ontario, Canada. It stands on St. Mary's river, and on the C.N. Rlys. The town owes its importance to its position on the Sault Ste. Marie, or Soo, Canals. The name is due to the falls (Old Fr. saulter, to leap) in St. Mary's river. Pop. 21,000. Pron. Soo-san-mary.

There is a city of the same name on the American side of the river. This, too, has a station on the C.P.R., and the two are connected by a bridge. Pop. 12,100.

THE SHIP CANALS. There are two of these, one on each side of the river, and both cut to avoid the falls therein. The American canal was opened in 1855 and was used by all shipping between Lakes Superior and Huron until the Canadian canal was opened in 1895.

Both canals are closed by ice for 100 to 120 days each winter. See Ship Canal.

SAUMUR. Town of France. It is on the Loire, 30 m. S.E. of Angers. Near are prehistoric caves, with Celtic remains, including the great dolmen of Bagneux. The castle, founded in 1040, is now an arsenal and powder magazine. Its church of Notre Dame de Nantilly is a pilgrim resort and has splendid tapestries. The town was a famous Huguenot stronghold.

Here is a cavalry school, which was founded in 1768. Pop. 15,956.

Saumur is a white, effervescent wine, grown in the Loire vineyards, and made at and matured in the limestone caves near Saumur. It resembles champagne in general characteristics.

Satyr. Nature deity of ancient Greece British Museum

He specialised in the flora and geology of the Alps, and was one of the first to reach the summit of Mont Blanc. He undertook a large number of other climbs for research purposes and scientific observations, the results of which were published in *Voyages dans les Alpes*, 1778-96. Saussure died Jan. 22, 1799. Consult Life, D. W. Freshfield, 1921.

SAUTERNE. French white wine grown in the Sauterne district, S. of Bordeaux. Of a pale golden tint, it has a clinging taste and distinctive, delicate bouquet. It contains from 9 to 14 p.c. of alcohol, keeps well, and commands high prices. Château Yquem is considered the finest Sauterne.

SAVAGE, RICHARD (d. 1743). British poet. His claim to be the illegitimate son of the countess of Macclesfield and the 4th Earl Rivers was denied, and evoked his poem entitled *The Bastard*, 1728. Savage was the author of two other poems, *The Wanderer* and *The Progress of a Divine*. His poems all have a gloomy tone, reflecting the wretchedness of his own life. The hardships of his early days were often shared with Johnson. Savage died Aug. 1, 1743, in a debtor's prison at Bristol.

Richard Savage. British poet

SAVANNAH. Natural grass land in tropical countries. Savannas are known, also, as llanos in Venezuela, campos in Brazil, downs in Australia, and park lands in Africa. They form one of the natural vegetation regions of the globe and occur in regions of summer rainfall between the hot deserts, which are rainless, and the tropical forests, where rain falls at all seasons.

SAVANNAH. City of Georgia, U.S.A. It stands on the Savannah river, 18 m. from its mouth. From the number and variety of its trees it is known as the Forest City. One of the foremost cotton ports, and an important naval stores port, it ships lumber, cotton seed, turpentine and resin, and has rly. car and repairing shops, foundries, machine shops, cotton-seed oil and lumber mills, and fertiliser factories. Pop. 93,134.

Saturn. The planet and its rings in 1917. from a photograph by Dr. P. Lowell

Savannah was the name of a vessel built at Savannah, Georgia, U.S.A. She was the first ship fitted with steam power to cross the Atlantic, but the greater part of the voyage to Liverpool was done under sail. It took place in 1819 and occupied 25 days.

Savannah. The first vessel to cross the Atlantic using steam as an auxiliary to her sails

SAVERNAKE. Village and forest in Wiltshire, 2 m. from Marlborough. The village is on the G.W. Rly. The forest is 16 m. in circumference and contains a deer park. Once a royal forest, it belongs to the marquess of Ailesbury, whose seat, Tottenham House, is here.

SAVIGNY, FRIEDRICH KARL VON (1779-1861). German jurist. Born at Frankfort-on-Main, Feb. 21, 1779, he became a teacher at Landslut and, later, in Berlin. In 1842 he was appointed to draft the legislative measures of the Prussian government. Savigny was one of the greatest jurists of the 19th century. His Law of Possession, 1803; History of Roman Law in the Middle Ages, 1815-31; and System of Modern Roman Law, 1840-49, have become classics. He died Oct. 25, 1861.

SAVILLE, SIR HENRY (1549-1622). English scholar. Born at Bradley, near Halifax, Nov. 30, 1549, and educated at Brasenose College, Oxford, he became known as a mathematician and a Greek scholar. Having been tutor to Queen Elizabeth, he was made warden of Merton College, Oxford, in 1585, and provost of Eton in 1596. The founder of the Savilian professorships of geometry and astronomy at Oxford, he died at Eton, Feb. 19, 1622.

SAVINGS BANK. Institution for the promotion of thrift. The larger banks, known as trustee savings banks, can only be formed with the approval of the National Debt Commissioners, and are under state inspection. A savings bank may also be conducted on the joint stock system, or by a municipality or by the state, as in the case of the Post Office Savings Bank.

The first savings bank in England was organized at Wendover by the Rev. Joseph Smith in 1799, similar institutions being founded in Scotland, 1807, and in Ireland, 1815. Trustee savings banks became very popular in the first half of the 19th century, the depositors increasing from 429,400 in 1831 to 1,600,000 in 1861, the year of the founding of the P.O. savings bank, in which were incorporated a large number of the trustee banks. Military and naval savings banks were instituted in 1859 and 1866 respectively. In addition there are school and railway savings banks. On Nov. 20, 1928, there were 2,460,089 accounts open in the trustee savings banks, with £120,486,417 to the credit of depositors.

The Post Office acts as a bank for savings, and in every town and in almost every village small savings may be paid in at a post office. Any person over the age of seven may become a depositor. On Dec. 31, 1928, there were 10,000,000 active deposit accounts in the Savings Banks, with £288,619,186 due to depositors. On the same date public funds to the amount of £191,463,519 were held for depositors. See War Savings.

SAVONAROLA, GIROLAMO (1452-98). Italian monk and reformer. Born at Ferrara, Sept. 21, 1452, he was the third son of Michele Savonarola. He entered the Dominican Order, joining the convent of San Marco in Florence. After early failures he attracted attention in 1489 by his fervent preaching. The enthusiasm he aroused as a moral reformer dragged him into the political vortex; assuming almost the character of an inspired prophet warning Florence of the wrath to come, he inevitably discovered the means to her regeneration in political programmes. Charles VIII of France was to be the regenerator, and when he actually came to Florence in 1494, Savonarola's character as a prophet seemed established.

But Savonarola's claims to prophetic powers and divine authority provided Pope Alexander VI with an excuse, first for ordering him to abstain from preaching, and then, when he disobeyed, for excommunicating him.

A challenge to an ordeal by fire, between one of Savonarola's followers and a friar of the antagonistic Franciscan Order, ended in a fiasco which ruined Savonarola's prestige. He was brought to trial as an impostor and a heretic, was condemned, and with two of his followers was put to death by strangling, May 23, 1498. Consult Life and Times of S. P. Villari, Eng. trans. L. Villari, 1899.

Savory. Spray of winter savory

SAVORY OR SAVOURY (Satureia). Genus of labiate plants, used as potherbs. Summer savory (*S. hortensis*) is a downy, aromatic annual, native of S. Europe. It has small, narrow ohlong leaves, and small, pale lilac flowers in whorls. Winter savory (*S. montana*) is a perennial with a shrubby base, native of the same region. It has slender leaves and pale purple flowers. Both plants are gathered when just coming into flower and dried for use when they are required.

SAVOY. Cultivated variety of cabbage, distinguished by its curled and wrinkled leaves. It is particularly hardy and will stand frost well, and hence it is of great value during the winter months. The details of general culture are the same as those for cabbage. See Cabbage.

SAVOY. District of France, once a province of Italy. It lay between the Alps, the Lake of Geneva, and the river Rhône, with its capital at Chambéry. From 1034 until 1792 it was a portion of the duchy of Savoy, and the kingdom of Sardinia. In 1792 the

Savoy. Hardy variety of cabbage

Girolamo Savonarola, Italian reformer
From a painting by Fra Bartolommeo

country was annexed to France, but by the Congress of Vienna it was restored to its former sovereigns. It was ceded to France in 1860.

THE HOUSE OF SAVOY. This family, whose head is the king of Italy, was founded by Umberto Biancamano (Humbert of the White Hand) who, in 1034, was granted Savoy and the adjacent territories on the W. side of the Alps. The lands on the Italian side, the later Piedmont, were added by marriage about 1056. Thenceforward the united estates and titles passed in male succession to Victor Emmanuel III, who came to the throne of Italy in 1900. See Italy; Sardinia.

SAVOY, THE. District of London, S. from the Strand between Wellington Street and Carting Lane, W.C. It is named after Peter of Savoy, earl of Richmond, who was granted the manor in 1236, and gives its name to a chapel royal, an hotel, and a theatre. The palace was destroyed by Wat Tyler and his followers, but was rebuilt in the 16th century and used for a time as a hospital.

The chapel, now known as the chapel royal, was used in 1564-1717 as the parish church of S. Mary-le-Strand. The Savoy Conference, a meeting of 12 bishops and 12 Puritans for discussing changes in the Book of Common Prayer and other matters, was held in the palace in 1661. The conference sat for three months, but without effecting anything.

The theatre, built for Richard D'Oyly Carte, was opened Oct. 10, 1881, with Gilbert and Sullivan's comic opera, *Patience*. In 1929 it was entirely reconsecrated. Adjoining the theatre is the Savoy Hotel, opened Aug., 1889. In the courtyard is a statue of Peter of Savoy.

SAWBRIDGEWORTH. Urban dist. of Hertfordshire. It stands on the Stort, 10 m. from Hertford, on the L.N.E. Rly. There is trade in agricultural produce. Pop. 2,295.

SAW FISH (Pristis). Group of large fishes related to the sharks. The upper jaw is produced to form a long, flattened beak, having a row of sharp teeth set in sockets at either edge. They are found mainly in the tropics, but one species occurs in the Mediterranean and Atlantic. They often exceed 20 ft. in length, with a saw 6 ft. long.

SAW FLY. Large family of hymenopterous (membrane-winged) insects, of which about 2,000 species are recognized. The name is derived from the ovipositor of the female, somewhat resembling a saw, with which she cuts a slit in plant tissues to contain her eggs. The larvae feed upon plants. The pine saw fly wreaks havoc in plantations of young trees, and the rose saw fly kills the leaves of rose trees. The turnip saw fly is another troublesome member of the group.

Saw Fly. *Trichiosoma tibialis*, which attacks hawthorn bushes

SAW WORT (Serratula tinctoria). Perennial herb of the order Compositae. A native of Europe, its long leaves are cut into lobes with toothed edges. The flowers form a head like that of a small thistle, of long, oval shape surmounted by a crown of red-purple rays. From the saw wort a yellow dye is obtained.

SAXE, MAURICE MARSHAL (1696-1750). French soldier. Born at Goslar, Oct. 23, 1696, he was a natural son of Augustus the Strong, elector of Saxony, his mother being Anrora,

Saw Fish. Shark-like tropical fish, showing, on left, the long saw. See above

countess of Königsmark. He took the name of Saxe, and served with the Russo-Polish army against the Swedes and against the Turks in Hungary. In the War of the Austrian Succession he commanded in Bohemia. In 1744, now a marshal, he received the command of the French army in Flanders, and in the following year defeated the Allies at Fontenoy. He died Nov. 30, 1750.

SAXE. German form of the word Saxony. Before 1919 four states of the German Empire were Saxe-Altenburg, Saxe-Coburg-Gotha, Saxe-Meiningen and Saxe-Weimar-Eisenach. All were offshoots of the original duchy of Saxony, which was divided from time to time into separate states to provide for the various members of the ruling family. To the name Saxe was added that of the capital, and the rulers all called themselves dukes. Saxe-Coburg-Gotha was a union of Saxe-Coburg and Saxe-Gotha, and Saxe-Meiningen and Saxe-Weimar-Eisenach were also unions of two or more states. In 1919 all the dukes abdicated, and the four existing duchies, except Coburg, became part of the new republic of Thuringia. Coburg joined Bavaria.

SAXE-COBURG-GOTHA, DUKE OF (1826-1918). Title held by members of the family of Wettin. Ernest I (d. 1844) was the first duke of this united duchy, and his son Ernest II (d. 1893) the second. Ernest's brother was Albert, prince consort, and when Ernest died childless the duchy passed to the family of Albert and Queen Victoria. The prince of Wales, afterwards Edward VII, having renounced the succession, it passed to his brother, the duke of Edinburgh (q.v.). On the duke's death in 1900, the duke of Connaught having renounced, the duchy passed to his nephew, the duke of Albany, who abdicated in 1918.

SAXHORN. Brass musical instrument which was invented by the Belgian, Adolphe Sax (1814-94). When so required for orchestral use, the saxhorn is sometimes pitched a

E flat tenor saxhorn
Hawkes & Son

tone higher than the usual keys. With the exception of the tuba, which is the only member of the family which has found much acceptance in the orchestra owing to the lack of blending with other instruments, the mechanism is based on that of the cornet, having three pistons which respectively lower the pitch one, two, or three semitones. In the tuba another valve is needed, which lowers the pitch a perfect fourth. The saxhorns are useful members of the military band.

SAXIFRAGE or SAXIFRAGA. Genus of mostly perennial herbs, of the order Saxifragaceae. There are 160 known species, distributed throughout most of the regions of the world, and most frequent in the mountainous regions of the N. hemisphere. Many bear their leaves in low-growing rosettes. Twelve species are natives of Britain, including London pride (*S. umbrosa*) and meadow rockfoil (*S. granulata*), common in meadows and on sandy banks. Of the numerous alpine varieties many are favourite plants for the rock garden. See Mother of Thousands.

SAXMUNDHAM. Market town and urban dist. of Suffolk. It is 20 m. from Ipswich, on the L.N.E. Rly. The chief building is S. John the Baptist church. The main industry is trade in corn and cattle. Market day, alternate Wed. Pop. 1,368.

SAXON. Teutonic people, whose territory has greatly varied in historic times. Their name probably signifies swordsmen. Ptolemy states that they inhabited Slesvig and three

islands off its W. coast. In 286 they appear as pirates in the North Sea and English Channel, and by about 350 they had crossed the Elbe and extended their sway almost to the Rhine. In the 5th century they had made settlements at Bayeux and the mouth of the Loire, and according to Bede were associated with the Angles and Jutes in the conquest of Britain. The names Essex, Middlesex, Sussex, and Wessex, which contain their name, support the theory that their settlements were in the south of England. See Anglo-Saxon: England.

SAXONY. Republic of Germany, until 1918 a kingdom. The German name is Sachsen, and the French Saxe. Its area is 5,786 sq. m., and on its borders are Prussia, Bavaria, and Bohemia. Much of the country is hilly, the chief range being the Erzgebirge. The chief river is the Elbe. Dresden is the capital. Saxony is one of the great industrial areas of Germany. In addition to Leipzig and Dresden, it contains a number of important manufacturing centres, such as Chemnitz, Plauen, and Zwickau. Pop. 4,904,281.

Saxony originated in the 8th century in the land inhabited by the Saxons, and hounded roughly by the Rhine, Elbe, and Eider. About 850 a duke of Saxony appeared. In 1180 the great Saxon duchy was broken up. The name was lost by the district now known as Westphalia and by other parts of medieval Saxony, but was retained by two small areas, Lauenburg and Wittenberg. Saxe-Lauenburg became, in 1782, part of Hanover, while from Saxe-Wittenberg developed the modern republic. In 1356 its ruler was declared one of the seven electors. The emperor bestowed the duchy upon Frederick, margrave of Meissen, in 1423, and under him Saxony became one of the most important of the German states. In 1485 the Saxon lands were divided between two brothers, Ernest and Albert. The Albertine princes became electors, and later kings of Saxony. The Ernestine lands were divided into various duchies.

In 1806 the elector joined Prussia against Napoleon, but soon turning to France, he received the title of king and became a member of the confederation of the Rhine. Russia and then Prussia was in possession of the country, and its fate was hotly debated at the congress of Vienna. At length about half the kingdom was given to Prussia. In 1831 a new constitution was granted, embodying the ideas of an elected legislature and a responsible executive. In 1871 the kingdom became one of the states of the German Empire.

Saxony became the Socialist stronghold, but entered the Great War as eagerly as the other German states. At its termination a change of government was quickly effected. On Nov. 8, 1918, the king abdicated and the country was declared a republic. A new constitution was drawn up in Oct., 1920. See Germany.

SAXOPHONE. Brass musical instrument. It was invented by Adolphe Sax, and has a mouthpiece similar to that of the clarinet and fitted with a single reed. It is fingered like the oboe. It is made in various sizes and keys; sopranino in F and E flat; soprano in C and B flat; contralto in F and E flat; tenor in C and B flat; baritone in F and E flat; bass in C and B flat. The first key in each case is for the orchestra, while the second is for the military band.

Saxophone in alto size
Hawkes & Son

SAY, JEAN BAPTISTE (1767-1832). French economist. Born at Lyons, Jan. 5, 1767, of Protestant parents, he passed some years in business in London. He

returned to France, became an editor and took some part in politics, but his main interest was in economics. In 1831 he was chosen professor of political economy at the Collège de France. A follower of Adam Smith, whose views he made known in France, Say's great work is his *Treatise on Political Economy*. He died Nov. 15, 1832.

SAY, JEAN BAPTISTE LÉON (1826-96). French politician. A son of Horace Émile Say and a grandson of J. B. Say, he was born in Paris, June 6, 1826, and adopted first a business career. For a time in the public service, he turned to journalism and then to politics, entering the chamber of deputies in 1871. In 1871-72 he was prefect of the Seine, and in 1872-73, 1875-79, and 1882 was minister of finance, being responsible for paying the indemnity to Germany. In 1880-81 Say was president of the Senate. He died in Paris, April 21, 1896.

SAYCE, ARCHIBALD HENRY (h. 1846). British scholar. He was born Sept. 25, 1846, and educated at Bath and Queen's College, Oxford, becoming a fellow in 1869. He was professor of Assyriology in the university, 1891-1919. Although making a special study of the ancient empires of the East, he has done much to popularise the general results of comparative philology. In 1874-84 Sayce was a member of the commission for the revision of the Old Testament. His books are valuable aids to our knowledge of the ancient empires.

SAYERS, TOM (1826-65). English pugilist. Born at Brighton, May 25, 1826, he became famous in the prize ring in 1849, and secured the championship in 1857. His only defeat was by Nat Langham, Oct., 1853. Sayers fought his famous battle with John Carmel Heenan, the American, at Farnborough, April 17, 1860, the fight ending in a draw. He died Nov. 8, 1863, and was buried at Highgate.

Tom Sayers,
English pugilist

SAZONOFF, SERGIUS DIMITRIEVITCH (1866-1927). Russian diplomatist. He was second secretary at the Russian embassy, London, 1890-94, and then secretary in Rome, 1894-1904. Returning to London as councillor of the embassy, he was acting ambassador in Oct., 1904, when the Dogger Bank incident took place. In 1909 he returned to Russia, becoming assistant to Isvolsky, the foreign minister, whom he succeeded in Nov., 1910. Appointed Russian ambassador in London, Jan., 1917, he retired after the revolution. He died in Paris, Dec. 23, 1927.

SCABIOUS or PIN-CUSHION FLOWER (*Scabiosa*). Genus of annual and perennial herbs of the order Dipsacaceae. Natives of Europe, W. Asia, and Africa, they have opposite leaves, entire or deeply cut into lobes. These are varied in colour, according to species, from blue, purple, and crimson to white. The small scabious, the devil's-bit scabious, and the field scabious are British wild flowers.

A. H. Sayce,
British philologist

Scabious. Flower head of *S. arvensis*; top, right, of *S. succisa*

SCAD OR HORSE MACKEREL (*Caranx trachurus*) Common British fish. It resembles a large mackerel, but belongs to a different family. It occurs in shoals, is often nearly 2 ft. long, has bony plates along the lateral line, and lacks the characteristic stripes of the mackerel. It is of little value for the table.

Scad or Horse Mackerel, a common British fish

SCAFELL. Mountain group of Cumberland. It is 11 m. from Keswick, at the E. end of Wastwater. It consists of two main peaks, of which Scafell Pike is 3,210 ft., the highest mtn. in England, and another 3,102 ft. The two are separated by a narrow ridge called Mickledore. The ascent is best made from Wasdale Head. During the Great War German prisoners improved the road leading to the mountain. In 1919 Lord Leonfield presented the summit to the National Trust. See Lake District; also illus. below.

SCALA, LA. Opera house in Milan. Dating from 1778, and built on the site of the church of Santa Maria della Scala, it seats 3,600 persons. In connexion with it are a dancing school and a singing school. The theatre has been civic property since 1872, and the lessee receives an annual subsidy from the municipality. See Milan.

SCALE (Lat. *scala*, a ladder). In music this consists of the sounds which subdivide the interval of the octave, arranged in progressive order. It has varied, and still varies, in different nationalities and at different times. In the European system the sequence of the steps depends upon the mode, according as the 3rd and the 6th degrees form major or

Scafell, Cumberland. The lower peak of Scafell and part of Mickledore, from the south-east. See above G. P. Abraham, Keswick

minor intervals with the tonic. The major or diatonic scale is composed of two disjunct tetrachords, each consisting of two tones and a semitone; the complete order is therefore tone, tone, semitone, tone, tone, semitone. From these tetrachords is developed the whole system of 15 keys. The minor scale (harmonic form) has the 3rd and 6th degrees lowered a semitone.

SCALE. Flat, hardened structures which occur on or in the skin of many animals. In fishes and reptiles the body is more or less covered with them; birds have them on the legs, and some mammals, as the armadillo and the pangolin, have a protective coating of them. The tails of rats, mice, beavers, and some other mammals are provided with scales. In the fishes the scales are of a bony nature and are secreted by the skin; but in reptiles, birds, and mammals they are of a horny character and grow out from the skin.

SCALES. Weighing machine. In the singular, scale, it refers to the pan of a balance, and the lever or beam of a balance is often known as the scale beam. The balance is one of the earliest instruments for measuring known. Many Egyptian, Greek, and Roman drawings show the balance in much the same form as the single scales now in use.

SCALIGER, JOSEPH JUSTUS (1540-1609). French scholar. Born at Agen, he was the son of Julius Caesar Scaliger (1484-1558), a practitioner of medicine, but more famous as a writer and controversialist. His early education was directed by his father, but later he studied at the university of Paris. In 1563 and succeeding years he spent some time in Italy, England, and elsewhere.

A Protestant, Scaliger left France after the massacre of St. Bartholomew, and in 1573-74 was professor at Geneva, but he again lived in France from 1574 to 1593. In 1593 he accepted an invitation to become professor at Leiden, and he was still there when he died, Jan. 21, 1609.

Inheriting a taste for study and spending a long life among books, he mastered with great rapidity and thoroughness Greek, Latin, and other languages. His work on chronology was of supreme importance in fixing the dates of the leading events of the world, and his editions of Catullus, Manilius, and Eusebius bear further witness to his powers as a critic and commentator.

SCALLOP. Name for marine bivalve molluscs of the genus *Peeten*, of which about 20 species occur around the British coasts.

The valves of the shell, usually brightly coloured, are more or less fan-shaped and are winged at the hinge. One valve is often convex while the other is flat. These molluscs can swim with some speed by rapidly opening and shutting the valves. Two species are eaten in Great Britain, the common scallop (*P. maxima*) and the quink (*P. opercularis*). Pron. Skol-lap. See Mollusc.

Scallop with shell opened

SCALP (Mid. Dutch *schelp*, shell). Structure formed by the soft tissues which cover the vault of the cranium. It consists of three layers: the skin; the superficial fascia, a layer of fibrous tissue; and the occipitofrontalis muscle, with its aponeurosis or fibrous extension. Beneath the scalp is a layer of loose areolar tissue, separating it from the periosteum or fibrous membrane, which is closely adherent to the bone.

The skin of the scalp is thicker than the skin in any other part of the body, and contains numerous sweat and sebaceous glands and hair follicles. The scalp is abundantly supplied with blood vessels, in consequence of which bleeding from wounds of the scalp is apt to be persistent and severe, but such wounds tend to heal readily. See Anatomy; Brain.

Scalping, or the custom of removing part of the skin, with hair attached, from an enemy's head was practised by Seythians, Celts, and Teutons. Developed in N. America in recent centuries, it was infrequent outside the Iroquois and Muskogee regions. See American Indians.

SCAMANDER. Ancient name of the river of Asia Minor now known as the Menderes. It rises in Mount Ida (Kaz Daghi), flows through the plain of Troy, and debouches into the Hellespont (Dardanelles).

SCAMMONY. Dried root of convolvulus scammonia from Syria and Asia Minor. The resin prepared from this

is dark brown in colour. The compound powder of scammony contains 50 p.c. of scammony resin. Scammony is a strong purgative and may be usefully administered in obstinate constipation, for threadworms, etc.

SCANDAL (Lat. *scandalum*, cause of offence). In law, a pleading or affidavit is scandalous which alleges anything unbecoming to the dignity of the court, or indecent, or offensive, or merely abusive—as where an allegation of crime, not material to the issue, is made. On application the court will strike out such a pleading or affidavit and award costs against the party in fault. But however scandalous an allegation may be, if it is relevant to any issue in the case it will not be struck out. See Libel.

SCANDINAVIA. Name of the European peninsula divided between Norway, Sweden, and Denmark. The term grew from Scandia, an ancient name for S. Sweden, to which the term Scania (Swed. *Skåne*) is still applied. See Denmark; Norse; Norway; Sweden.

SCANDIUM. Rare earth metal of the cerium group. Its chemical symbol is Sc, atomic weight 45.1; atomic number 21. Its oxide was discovered by Nilson, in 1879, in euxenite. Scandium is also found in monazite, thorite, and other rare minerals of Scandinavia, Finland, and Greenland; in tin ores and wolframite, generally with thorium which is separated with great difficulty.

SCANNING DISK OR NIKKOW DISK. Disk used in phototelegraphic and television apparatus. It is pierced with a number of holes arranged in a spiral around its periphery. The angular displacement of the holes is equal, but owing to the spiral each successive hole is closer the centre than the last. When, therefore, the disk is rotated in front of a source of light, i.e. the projector of a television transmitter, a given area in focus will be traversed by a light spot in strips, side by side, and with each complete revolution of the disk the whole of the subject area will be thus explored. In the television receiver a scanning disk revolves in front of a neon lamp, and the speed is such that, owing to persistence of vision (see Cinematograph), an image of the whole of the subject area is seen by the eye. See Phototelegraphy; Television.

SCAPA FLOW. Landlocked sea basin in the S. of the Orkney Islands, Scotland. During the earlier part of the Great War it was the principal base of the British Grand Fleet. The German fleet was interned here after its surrender in Nov., 1918, and the greater part of it was scuttled by its officers and crews, June 21, 1919. A number of these warships were afterwards salvaged. See Salvage.

Scales. An ancient Egyptian painting showing Anobis, the jackal-headed guardian of the dead, weighing a human heart, representing the soul, against a feather (right), typifying Truth

SCAPEGOAT. Term in the O.T. (A.V.) for one of the two goats brought to the altar on the Day of Atonement (Lev. 16). While one was sacrificed to the Lord, the other was the scapegoat. The high priest having confessed over the head of the scapegoat all the iniquities of Israel, the animal was sent away into the wilderness to the evil spirit (Azazel). Similar ceremonies, connected with evil spirit exorcism, have been noted among races other than Jews, notably in parts of Borneo.

SCAPHOPODA. Class of the Mollusca. The body is bilaterally symmetrical, and the foot is adapted for burrowing in the sands of the sea. A popular name, tooth-shell, refers to the elongated tubular shell. See Mollusc.

SCAPULA OR **SHOULDER BLADE.** Bone placed at the upper and back part of the thorax. It consists of a flat triangular part or body, with two projecting portions, the coracoid process and the spine, the latter terminating in an expansion known as the acromion, which forms the point of the shoulder, overhangs the shoulder joint, and articulates with the collar-bone. The scapula is attached to the chest, the back, and the arm by powerful muscles. See Shoulder.

SCARAB. Ancient gem in the form of a dung-beetle, especially *Scarabaeus* (Ateuchus) sacer. It originated in predynastic Egypt as an amulet, was made

Scarab. Ancient Egyptian gem

of polished or glazed stone, metal, or glazed faience, and was perforated lengthwise for suspension. About 7,500 in public collections bear, engraved in intaglio upon the flat oval base, names or figures of divine, royal, official, or private persons, mottoes, and magical formulas. By the XIIth dynasty they became used as seals, worn as pendants, or mounted as signet rings. Some commemorated royal hunts.

SCARABAEUS.

Genus of dung-eating beetles, found in Europe, Asia, and Africa. They collect pellets of dung and bury them as food for themselves and their larvae. There are over 60 recognized species of this beetle. See Beetle.

SCARAMOUCHE (It. *scaramuccia*, skirmish). Stock character in old Italian comedy. He was a

braggart and a coward, usually masked, and dressed in black, and received a sound drubbing from Harlequin. An English play, *Scaramouch*, by E. Ravenscroft, was produced in 1677. The term, supposed to be derived from the name of the Italian buffoon *Scaramuccia* (d. 1644), meant a rascal.

SCARBOROUGH. Borough, seaport, market town, and watering place of Yorkshire (N.R.). It stands on a fine bay, divided into North Bay and South Bay by the Scaur, a peninsula 300 ft. high. It is 42 m. from York on the L.N.E.Rly. It consists of an old town and a new town, connected by bridges. The old town rises in terraces from the bay, and behind is Oliver's Mount. The buildings include S. Mary's church, the earliest parts of which date from the 13th century, S. Martin's, and the ruins of the castle. The town has a tidal harbour, and does a coasting trade, while fishing is carried on. Excavations at the castle revealed the fact that Scarborough was once a Roman station. During the Great War Scarborough was shelled by the Germans. Market day, Thurs. Pop. 46,179.

Earl of Scarborough is a British title held by the Lumley family since 1690. The founder of the family was Sir Richard Lumley, an ardent royalist who was made an Irish viscount in 1628. His grandson Richard, 2nd viscount, was a staunch adherent of William III, who created him earl in 1690.

SCARBOROUGH LILY (*Vallota purpurea*). Bulbous herb of the order Amaryllidaceae, native of S. Africa. The strap shaped leaves arise direct from the large bulb, and are two or three feet in length. The flowers are borne in an umbel at the top of a straight, leafless stem, as long as the leaves. They are large, funnel-shaped, and of a rich scarlet colour.

Scarborough Lily. Flowers of the S. African plant

SCARLATTI, ALESSANDRO (1659-1725). Italian composer. Born at Trapani, Sicily, his first known opera, *L'Errore Innocento*, was produced in Rome, 1679. He became master of the court music at Naples, 1684; returned to Rome, 1702, and again to Naples, 1713, where he enjoyed great success, and where he died, Oct. 24, 1725. He was a prolific composer, writing over 100 operas. Notable among them are *La Rosaura*, 1690, *Pirro e Demetrio*, 1694, *Mitridate Eupatore*, 1707, *Tigrane*, 1715, and *Griselda*, 1721. Scarlatti wrote also some 500 chamber cantatas, and some fine church music. See Opera.

SCARLET FEVER. Acute infectious disease. The micro-organism presumably responsible has not yet been identified. The affection occurs in all parts of the globe, 90 p.c. of the cases occurring in children under 10 years of age. The infective agent is probably given off in the secretions of the nose, throat, and air passages. The incubation period is from one to seven days. The onset is generally sudden, with vomiting, rapid rise of temperature, which may reach 104° or 105°, and, not infrequently, convulsions. Usually on the second day a rash, in the form of scattered red spots, appears, and spreads rapidly until it involves the entire skin, giving it a vivid scarlet hue. It disappears as a rule by the seventh or eighth day.

Wherever possible, the patient should be sent to an isolation hospital. The diet should be light. With high fever, sponging with tepid water or a cold pack may be necessary. When desquamation begins, the skin should be well rubbed every day with carbolised vaseline. The child should not be permitted to come in contact with other children for at least eight weeks.

SCARPE. River of France. It rises a few miles E. of St. Pol, in the dept. of Pas-de-Calais, flows E., and is joined by the Deule some miles W. of Arras. Thence canalised, it flows N.E. past Douai, and joins the Schelde near the Belgian frontier just N. of St. Amand.

BATTLE OF THE SCARPE. The British moved along the Arras-Cambrai road on Aug. 17, 1918, and thereafter advanced to the N. and S. of the Scarpe. On Aug. 26 they attacked along both banks of the river, and to the N. reached the outskirts of Roeux, while to the S. Canadian divisions took Orange Hill, Wancourt, and Monecy. By Aug. 28

Scarborough. Beach and harbour of the Yorkshire coast resort

Croisilles and Hardecourt had been taken, and the Germans were in retreat at most points of the front. The battle then died down in local attacks until the great attack of Sept. 2 inaugurated the second phase of the fifth battle of Arras. See Arras.

SCARRON, PAUL (1610-60). French author. Born in Paris, he was ordained priest, spent his youth in dissipation, and about 1637 was attacked by a terrible disease which

left him a helpless cripple. In his last eight years he was carefully tended by his young wife, afterwards Madame de Maintenon. Though his humour found scope in farcical comedy, e.g. *Jodelet*, 1645, it mainly took the form of burlesque, as in his best known work, *Le Roman Comique*, 1651-57, written in reaction against the aristocratic romances of the salons. Scarron died Oct. 7, 1660.

Paul Scarron, French author

SCAUP (*Fuligula marila*). Wild duck, winter migrant to Great Britain. The plumage is glossy black on the head, neck, and back, brown on the wings and tail, and white beneath in the male; the female being more soberly garbed in brown, grey, and white. It is common around the coasts and at the mouths of rivers in winter.

SCENT. In botany, an odour possessed by the essential or volatile oils of plants. The oil is contained in minute sacs, and is to be found in almost any part. The scent of flowers serves as an attraction to insects; hence flowers that attract by their size or brilliant colour possess, as a rule, little or none. In other plants the scent acts as a protection against destructive insects. The oils are extracted and prepared in various ways, to make scents or perfumes.

Scent is also possessed by animals, but only that of the castor, civet, musk-deer, and whale, which yields ambergris, is used industrially. In a dog, the power of following a trail by sense of smell is termed its scent. See Fox Hunting; Smell.

SCEPTRE (Gr. *skeptron*, staff). Staff used as an emblem of authority, especially of sovereignty. It is seen among Egyptian hieroglyphics, tipped by the lotus, the papyrus flower, or other emblem.

In the British regalia there are three sceptres, all used in the coronation ceremonies; S. Edward's staff, a long gold rod, shod with a steel spike and bearing a mound with cross; the sceptre with dove, an elaborately wrought gold staff surmounted by a dove with open wings; and a more slender staff surmounted by a globe and cross. The first two were made for Charles II. See Regalia.

SCHACHT, HORACE GREELY HJALMAR (b. 1877). German financier. Born Jan. 22, 1877, he became a banker. From 1908 to 1915 he was a director of the Deutsche Bank, after which he represented the German government in Brussels during the occupation of Belgium. From 1923-30 he was president of the Reichsbank, and, as such, he took part in the conference that led to the establishment of the Dawes plan and in the later discussions on reparations (q.v.), including those of 1929.

Schaffhausen. Falls of the Rhine, two miles below the city

SCHAFFHAUSEN. City of Switzerland. It stands on the right bank of the Rhine, 25 m. N. of Zürich. The chief edifices are the basilica, once an abbey church, the town hall, and the museum containing the city library. Electric power for the city's needs is obtained from the falls, where the Rhine descends 100 ft. by three cascades over the spurs of the Jura Mts. Pop. 16,000.

SCHARLIEB, DAME MARY ANN DACOMB (b. 1845). British surgeon. She was educated at the Madras Medical College and at the Royal Free Hospital for Women in London, graduating M.B. in 1882. The following year she returned to India and did much valuable work among native women. Later she held the post of lecturer on obstetrics to the school of medicine for women in London, and was consulting gynaecologist to the Royal Free and the South London and New hospitals for women. She was given the D.B.E. in 1926.

Dame Mary Scharlieb,
British surgeon
Elliott & Fry

SCHARNHORST, GERHARD JOHANN DAVID VON (1755-1813). German soldier. Born in Hanover, Nov. 12, 1755, in 1801 he entered the Prussian service and fought with great distinction against the French in the campaign of 1806-7. The disasters of that campaign having revealed grave defects in the military system of Prussia, a commission of reorganization was appointed with Scharnhorst at the head. As a result of the reforms due to this commission, notably the introduction of national military service, Prussia made an effective fight against the French in the next war. Scharnhorst was wounded at Lützen, and died at Prague, June 28, 1813.

Scharnhorst was the name of a German armoured cruiser. She was the flagship of Von Spec at Coronel, Nov. 1, 1914, and was sunk in the battle of the Falkland Islands, Dec. 8, 1914. Her sister ship, the Gneisenau, was also sunk at the Falkland Islands.

SCHAUMBURG-LIPPE, Republic of N.W. Germany. Surrounded by the Prussian prov. of Hanover, its area is 131 sq. m. Bückeburg is the capital. Pop. 48,660.

Before 1918 the state was governed by a prince assisted by a landtag. After the revolution the constitution, dated Feb. 24, 1922, continued the existing landtag of 15 members. Schaumburg-Lippe originated as an offshoot of the principality of Lippe (q.v.).

SHEELITE. Mineral calcium tungstate, CaWO₄. It is white or yellow, red or green in colour, with a glassy lustre, and is also known under the name of tungsten, its chief constituent. The mineral is found in Cumberland, Bohemia, Hungary, N. America, etc., in tin-bearing veins and occasionally associated with gold. It is mined for its metal tungsten (q.v.).

SCHERER, REINHOLD VON (1863-1928). German sailor. He served in the cruiser Bismarck, 1884-86, in 1909-11 was chief of the staff to von Holtzendorf when the latter commanded the High Sea Fleet, and was commanding a battle squadron at Kiel when the Great War broke out. At the end of 1915 he became commander-in-chief of the High Sea Fleet, and commanded the German naval forces at Jutland (q.v.).

R. von Scherer,
German sailor

On Aug. 11, 1918, he was appointed chief of the admiralty staff. He resigned in Jan., 1919. Scherer gave his own account of the battle of Jutland in Germany's High Sea Fleet in the World War, published 1920. He died Nov. 26, 1928.

SCHAEFFER, ARN (1795-1858). French painter. Born at Dordrecht, Feb. 10, 1795, of German extraction, he studied under his father, Johann, and in Paris under Guérin. His subject pictures, historical and religious, obtained an enormous vogue, and he also painted many portraits. He is amply represented at Versailles. Schaeffer died June 15, 1858.

SCHelde or **SCHeldt** (Fr. Eseat). River of W. Europe. It rises in France, and enters Belgium after passing Condé. It runs through the W. part of Hainault, traverses E. Flanders, and, after passing through Antwerp, enters the Netherlands near Doel. It then divides into two main streams: (1) the Hond or W. Schelde, which enters the North Sea by a broad estuary at Flushing; (2) the E. Schelde, which meets the sea about 15 m. N. of the other estuary. The two branches are connected by the passage of Sloec. The chief Belgian tributaries are the Lys, Dendre, and Rupel. Important towns on its banks include Cambrai, Valenciennes, Condé, Tournai, Oudenarde, Ghent, Termonde and Antwerp. In 1929 it was decided to drive a tunnel under the river near Antwerp. Its length is 250 m.

From early times political circumstances have caused difficulties in connexion with the navigation of the Schelde. The treaty of 1839 laid down the principle of free navigation under joint Belgian and Dutch control, but left certain rights in Dutch hands which were abolished in 1863. In 1930 the question seemed likely to be settled by making navigation free to both nations.

SCHevenINGEN. Town of the Netherlands. It lies on the North Sea coast, 3 m. N.W. of The Hague. It is the principal bathing resort of Holland. The herring fishery is important. Off Scheveningen the English defeated the Dutch under Tromp in 1653, and the Dutch under De Ruyter defeated the English and French in 1673. Pop. 27,000. Pron. Skhaven-ingen

SCHIApareLLI, GIOVANNI VIRGINIO (1835-1910). Italian astronomer. Born at Savigliano, in Piedmont, March 14, 1835, he became assistant astronomer at Milan, 1859, and director 1862, a post he held until his retirement in 1900. He was awarded the Lalande prize of the French Academy, 1868, for his work on the connexion between comets and meteor showers. Schiaparelli is best known for his discovery in 1877 of the so-called canals of Mars. He died at Milan, July 4, 1910.

Schiehallion. Scottish mountain, and village of Kinloch Rannoch

SCHIEhallion. Mountain of Perthshire. It is 11 m. W.N.W. of Aberfeldy, and has an alt. of 3,547 ft. Here, in 1774, Nevil Maskelyne conducted his important experiments in determining the earth's mean density. Pron. She-hál-ion.

SCHILLER, JOHANN CHRISTOPH FRIEDRICH VON (1759-1805). German poet and dramatist. He was born at Marbach in Württemberg, Nov. 10, 1759, the son of an army surgeon. He was educated in the first instance as a jurist, but exchanged law for medicine, and in Dec., 1780, began practice as an army surgeon in Stuttgart. In the following year his first play, *Die Räuber* (The Robbers), was published, and shortly afterwards

produced at Mannheim. Its success was extraordinary, and Schiller decided to devote himself to literature. In the following years, amidst disheartening privations, he completed two other plays. In 1787 he completed *Don Carlos*, his first drama in classical form.

Through Goethe's agency he was appointed to an unsalaried professorship in the university of Jena, and for several years he abandoned dramatic poetry in order to study history and subsequently aesthetics. In 1788 he published the first volume of a History of the Revolt of the Netherlands, and in 1791 a popular History of the Thirty Years' War: in 1795 the brilliant Letters on the Aesthetic Education of Man, and in 1796 on Naïve and Sentimental Poetry. In 1799 Schiller again turned to dramatic poetry with *Wallenstein*, a powerful historical tragedy in three parts. This was followed by a series of dramas which included *Maria Stuart*, 1800; *Die Jungfrau von Orléans* (The Maid of Orléans), 1801; *Die Braut von Messina*, 1803, a tragedy in classic form, containing some of Schiller's finest poetry; and his last work, *Wilhelm Tell*, 1804. From 1799 till his death, May 9, 1805, Schiller resided in Weimar.

Schipperke. Esme of Greta, a champion of the Belgian breed

SCHIPPERKE. Small tailless dog. It is bred in Belgium, where it is kept as a watch dog on barges. It is black in colour, with upstanding ears and a small ruff round the neck. The Schipperke was introduced into Great Britain about 1880. Pron. Skhip-per-ky.

SCHIST (Gr. skhistos, split). In geology, name given to metamorphic rocks of a fissile character. Such rocks consist of thin films or plates of certain minerals, as mica, or a fibrous one like tourmaline, tremolite, running through the main structure. Schistose rocks are found in regions where there have been great upheavals, as Scotland, Scandinavia, the Alps, Canada, etc. Pron. shist.

SCHIZOMYCETES. Class of microscopic plants known also as bacteria, fission fungi, and bacilli. They are not really fungi, though the majority possess no chlorophyll, and all of them are either saprophytes or parasites. They are found everywhere, pervading the soil, the air, the water, and the tissues of living animals and plants. See Bacteriology.

SCHLEGEL, AUGUST WILHELM VON (1767-1845). German critic and Orientalist. He was born at Hanover, Sept. 8, 1767, and in 1798 became professor of literature and art at Jena. From 1801-4 he was lecturer at Berlin. As tutor to Madame de Staël's sons, he visited Italy and Scandinavia with her, and was secretary to the crown prince of Sweden, 1813-14. From 1818 until his death, May 12, 1845, he was professor at Bonn. His translations of Shakespeare's plays, completed by Tieck, form Schlegel's chief title to fame.

His brother, Carl Wilhelm Friedrich von Schlegel (1772-1829), was a literary critic and historian of note. His lectures on the history of literature, 1814, and the philosophy of history, 1827, have both appeared in English translations. Pron. Shlay-gel.

SCHLEIERMACHER, FRIEDRICH ERNST DANIEL (1768-1834). German theologian and philosopher. He was born at Breslau, Nov. 21, 1768, and became a professor at Halle in 1804. He took a prominent part with Fichte in founding the university of Berlin, where he was appointed professor of theology in 1810. He died Feb. 12, 1834. The great task of his life was an attempt at a reconstruction of theology.

Friedrich von Schlegel, German poet
after L. Simanovitz

SCHLESWIG-HOLSTEIN. Province of Prussia. It occupies the southern part of the peninsula of Jutland and covers 5,815 sq. m. Its capital is Schleswig, but Kiel is the largest town. The Kiel Canal cuts through the province, which includes Fehmarn in the Baltic and some of the Frisian Islands. Before 1919 the province included the northern part of Schleswig, which, by plebiscite in 1920, voted for inclusion in Denmark. Pop. 1,520,000. See Slesvig-Holstein Question.

SCHLEY, WINFIELD SCOTT (1839-1911). American sailor. Born Oct. 9, 1839, he served in the navy during the Civil War. Commanding the third Greely relief expedition to the Arctic Ocean in 1884, he rescued Greely near Cape Sabine. In 1898 he commanded the flying squadron and played a prominent part in the battle of Santiago. Severe criticism was passed on his tactics there, and immediately after his retirement from the service in 1901 Schley caused the matter to be submitted to a court of inquiry, which decided against him. He died Oct. 2, 1911. Pron. Sly.

SCHNEIDER TROPHY. International seaplane race. The trophy was given by Jacques Schneider with the object of developing marine aircraft. It was an annual affair until 1927, when it was decided to hold it every two years. In 1929 it was won by Flying Officer Waghorn on a Supermarine S6 seaplane. His speed was 328.63 miles per hour. The first race took place in 1913, and Great Britain won it in 1914, 1922, 1927, and 1929.

SCHNITZLER, ARTHUR (b. 1862). Austrian dramatist. Born in Vienna, May 15, 1862, he studied medicine and practised as a doctor there. He then made a success with his witty series of short plays of Viennese life, *Anatol*, 1893, paraphrased for the English stage by H. Granville Barker, 1911. Other plays include *Liebelel*, 1896, Eng. trans. 1914; *Reigen*, 1896-97; *Der Grüne Kakadu*, 1899, Eng. trans. 1913; *Lebendige Stunden*, 1902; *Die Schwestern*, 1919; and *Der Gang zum Weiher*, 1926. His fiction includes short stories, *Die Frau des Weisen*, 1898; *Bertha Garlan*, 1900, Eng. trans. 1913; *Frau Beata und ihr Sohn*, 1913; *Fräulein Else*, 1924, Eng. trans.; and *Spiel im Morgengrauen*, 1927.

SCHOLARSHIP. Term employed in two principal senses: for the qualities of a scholar, and also for an endowment to enable a student to continue his studies. The colleges of the older English universities all have scholarships, some endowed by the founder and others of later date. The scholars, who are chosen after competitive examination, receive an annual grant, usually for three or four years, and discharge certain duties, such as reading the lessons in chapel. Scholarships are also offered by the newer universities, by technical and other colleges, by public schools, and by education authorities to enable pupils to pass from elementary to the secondary schools. All these are awarded after competitive examination. In Scotland a scholarship is called a bursary.

SCHOLASTICISM. The doctrines of the scholastics or schoolmen, the philosophical and religious teachers of the Middle Ages. The history of scholasticism may be divided into two main periods. During the first (9th to 12th century) its activity was at first devoted to the reconciliation of the claims of faith and reason. The close study and analysis of the language of the classical writers and the fathers of the Church led to an inquiry into the nature of the different elements of which language was composed, which resulted in the strife between nominalism and realism.

In the second period, metaphysics took its place as the equal, if not the superior, of religious dogma, and led on the one hand to mysticism, on the other to the study of natural science. The old struggle between nominalism

and realism (Scotists and Thomists), and the progress of science gradually brought about the downfall of scholasticism.

SCHÖNBRUNN. Public building in Vienna, until 1918 a residence of the emperor of Austria. The present building, built on the site of two earlier ones, was begun in 1696, and was henceforward a regular residence of the emperors. The palace contains about 1,500 rooms, and gardens of over 700 acres.

Schooner Racing schooner under full sail

SCHOONER (Scot. *scoon*, to skim). Name for a sailing vessel. There are two-masted, three-masted and four-masted schooners; also schooner yachts. Two-masted schooners have square topsails on the foremast. Three-masted schooners may be either fore and aft rigged on all masts, or "jackass" rigged, when they have square sails on the foremast. Four-masted schooners are fore and aft rigged throughout, and sail very quickly.

SCHOPENHAUER, ARTHUR (1788-1860). German philosopher, the apostle of pessimism. He was born at Danzig, Feb. 22, 1788. After studying at Göttingen and Berlin, he graduated at Jena in 1813. In 1820 he became lecturer at Berlin University, but failure as a teacher and the outbreak of cholera in 1831 caused him to remove to Frankfurt-on-Main, where he lived until his death, Sept. 21, 1860.

Arthur Schopenhauer, German philosopher. After Göbel

Schopenhauer's chief work, *The World as Will and Idea*, 1819, starts with the proposition that the world is only an intellectual phenomenon, objective only in reference to the knowing subject. Life is continual suffering. Art, and a moral life based on sympathy, are palliatives, but will not put an end to suffering. The only hope seems to lie in the destruction of the will to live by extreme asceticism, and, if this fails, retirement from the world into Nirvana.

Schreckhorn. Peak of the Bernese Oberland. It rises to an alt. of 13,385 ft. The Klein Schreckhorn is 1,910 ft. lower.

SCHREINER, OLIVE (Mrs. Cronwright-Schreiner) (1862-1920). Novelist and feminist advocate. She was born in Basutoland, daughter of a Lutheran missionary. The Story of an African Farm, 1883, published under her pseudonym of Ralph Iron, attracted great attention. Her other stories include *Dreams*, 1891; and *Trooper Peter Halket*, 1897. In *An English South African's View of the Situation*, 1899, she upheld the Boer position. *Woman and Labour*, 1911, deals with feminism. She died Dec. 12, 1920.

Olive Schreiner, S. African novelist. Elliott & Fry

Her brother, William Philip Schreiner (1857-1919) entered the Cape House of Assembly in 1893. He was attorney-general in Rhodes's second ministry, but left office on the fall of the Rhodes administration in 1896. Prime minister in 1898, he held office until 1900. In 1914 Schreiner became high commissioner in London for the Union of S. Africa. He died June 28, 1919.

SCHUBERT, FRANZ PETER (1797-1828). Austrian composer. Born at Lichtenthal, near Vienna, Jan. 31, 1797, in 1808 he entered the royal chapel choir at Vienna, and his first known composition was a pianoforte fantasia written in 1810. He studied theory under Antonio Salieri (1750-1825), and his first Mass was sung in 1814. Schubert's life was a struggle against adversity; but his prolific genius was undaunted, and, living chiefly in Vienna, he continued to produce all kinds of work until his death, Nov. 19, 1828.

His work includes eight symphonies, one the famous "unfinished," and over 30 other orchestral works; six Masses; 17 operas, four fragmentary; string quartets, quintets, and trios; sonatas, impromptus, and short solos for piano; many cantatas and part-songs; and, in addition, over 600 lieder or songs.

SCHUMANN, ROBERT ALEXANDER (1810-56). German composer. Born at Zwickau, Saxony, June 8, 1810, he was educated at Leipzig and Heidelberg, studying music, but also reading much philosophy and literature. An accident to his hand prevented him from undertaking a pianist's career, and from 1831 he devoted himself to composition. Up to 1840, Schumann composed only pianoforte music, notable works being *Papillons*, some sonatas, and *Carnival*;

Robert Schumann, German composer

after that year he produced his famous lieder, orchestral music, and chamber music. He became professor of composition at Leipzig conservatoire in 1843. In 1853 insanity showed itself, and an attempt at suicide, 1854, led to his confinement in an asylum at Endenich, near Bonn, where he died July 29, 1856.

His wife, Clara Josephine Schumann (1819-96), was a pianist of wide accomplishment and interests. She first played on the platform in 1823, and appeared successfully in Paris in 1832. She married Robert Schumann in 1840, appearing in London for the first time shortly before his death, 1856, and playing there frequently between 1865-88. From 1878-92 she taught the pianoforte at the Hoch Conservatoire, Frankfurt, and had many distinguished pupils.

SCHWARZ, BERTHOLD (d. c. 1380). German monk, to whom was wrongly attributed the invention of gunpowder. He was probably born at Freiburg-in-Breisgau, early in the 14th century, his name being originally Konstantin Aneklitzen. He is supposed to have disposed of his invention of heavy artillery weapons to the Venetians in 1378, and an old tradition says that, as a punishment for his dangerous ingenuity, he was blown up with gunpowder by order of the emperor Wenceslas.

SCHWEINFURTH, GEORGE AUGUST (1836-1925). German explorer. Born at Riga, Dec. 29, 1836, he went to Egypt in 1868, and the following year undertook a journey to Khartoum. He explored the oases of the Libyan desert in 1874, and his observations then led him to visit many of the oases of Arabia

Franz Schubert, Austrian composer. After C. Jaeger

of whose flora he made a profound study. Other regions explored by him included the White Nile and Barca coast. His principal work is *Im Herzen von Afrika*, 1871, Eng. trans. 1873. He died Sept. 20, 1925.

SCHWERIN. Town of Germany, capital of the republic of Mecklenburg-Schwerin. It is picturesquely situated on the lake of Schwerin, 38 m. S.E. of Lübeck. The cathedral, dating mainly from the 15th century, is in the Baltic Gothic style. The palace of the former grand dukes is on a small island on the site of an old Wendish fortress. Pop. 48,157.

SCIATICA (Gr. *ischiadikos*, from *ischion*, hip joint). Painful affection of the sciatic nerve. It is most frequent in adult males, particularly those who suffer from gout or rheumatism. Exposure to cold and wet is sometimes the cause. The pain is felt at the back of the thigh, and in severe cases may extend down to the foot. In prolonged cases there is wasting of the muscles, and the hip and knee joints may become permanently bent.

SCILLY ISLES. Group of islands off the coast of Cornwall. They lie about 25 m. from Land's End, and have a total area of 6½ sq. m. The group consists of St. Mary's, Treco, St. Martin's, St. Agnes, Bryher, Gugh, and Samson, and about 30 smaller ones, and there are about 100 islets. Hugh Town, the capital, is on St. Mary's, where is also Star Castle, an Elizabethan fortress. The climate is mild and equable. Many sea birds haunt the islands. The inhabitants are largely employed in growing flowers and vegetables for the English market, and in fishing. The islands form part of the county of Cornwall. Steamboats sail regularly from Penzance to Hugh Town.

The islands are supposed by some to have been the *Cassiterides*, or tin islands, of the ancients. Legend associates them with *Lyonesse* (q.v.). Pop. 1,749. See Cornwall.

SCIMITAR (Per. *shimshir*). Short Oriental sword of peculiar shape. Its blade, which broadens from the handle, is one-edged and much curved, the cutting edge coming to a point, while the heavy back is considerably shorter. See *Sword*.

SCIPIO, PUBLIUS CORNELIUS (d. 211 B.C.). Roman general. When Italy was invaded by Hannibal, Scipio endeavoured to check his progress, but was defeated at the battle of Ticinus in 218 B.C. Thereupon he proceeded to Spain, where, with his brother Gnaeus, for the next few years he kept the Carthaginians so busy that they were unable to send reinforcements to Hannibal. The two brothers, however, were defeated in 211 by Hasdrubal.

Scimitar. One-edged sword of Turkish pattern

SCIPIO, PUBLIUS CORNELIUS, known as **SCIPIO AFRICANUS** MAJOR (237-c. 183 B.C.). Roman general. On the outbreak of the second Punic War in 218 B.C. Scipio fought in the Roman armies, and so distinguished himself that in 210 he was chosen by the popular voice to take the command of the Roman army in Spain, and in three years destroyed the Carthaginian power. On his return to Italy, in 206, he urged a direct attack upon Carthage itself. He was made consul in 205, organized his forces, carried them to Africa in 204, destroyed the forces of Syphax, the great ally of the Carthaginians, and on Oct. 19, 202, met

Scipio Africanus Major, Roman general

Hannibal himself and annihilated his army in the decisive battle of Zama. For this Scipio was awarded the title of *Africanus*.

His brother, Lucius Cornelius, also a Roman general, defeated Antiochus at Magnesia in 190 B.C., and gained the surname of *Asiaticus*.

SCIPIO, PUBLIUS CORNELIUS, known as **SCIPIO AFRICANUS MINOR** (c. 185-129 B.C.).

Roman general and statesman. When the third Punic War broke out in 149 B.C. he at first served in a subordinate capacity, but after his consulship in 147 was given the governorship of Africa, and took Carthage in 146. In 134 he was appointed governor of Spain, and ended the war raging there by the taking of Numantia (133). After the death of his brother-in-law, Tiberius Gracchus, the reformer, Scipio was prominent in the opposition to the commissioners appointed to carry out his agrarian reforms. This brought him great unpopularity, and one morning he was found dead. Scipio was a generous patron of letters.

SCONE. Town of Perthshire, Scotland. It is on the left bank of the Tay, 2 m. from Perth. In the 8th century Scone was the

Scone, Scotland. The palace, rebuilt about 1800

Pietish capital, and it was long the coronation place of the Scottish kings. In 1651 Charles II was crowned here. From its ancient abbey, destroyed in 1559, the stone of destiny was carried to Westminster in 1296. The palace passed to the ancestors of the earl of Mansfield (q.v.), and was rebuilt about 1800, the hall in which Charles II was crowned being retained. Pop. 2,936. Pron. Seoon.

SCORE. In music, the simultaneous presentation of the constituent parts of a composition. A full or orchestral score gives the parts for all the instruments, each on its proper staff. The instruments are grouped according to character, and arranged in each group according to pitch. The plan of the average full score is, beginning at the top, (a) wood wind, (b) brass wind, (c) percussion, (d) strings. If vocal parts are included, they are placed in the string group, between the violas and the violoncellos. An organ part would come lowest of all.

SCORESBY, WILLIAM (1789-1857). British explorer. The son of a whaler, he was born Oct. 5, 1789, near Whitby, and at an early age made voyages with his father. He was mate on his father's vessel, the *Resolution*, in 1806. From then until 1822 the two Scoresbys continued their voyages; in the latter year the younger one made an accurate chart of the E. coast of Greenland which completely changed the existing knowledge of those regions. After a voyage to Australia in 1856, to make observations in terrestrial magnetism, he died March 21, 1857.

SCORPION (Lat. *scorpio*). Eighth sign of the Zodiac. The claws of the constellation occupy the space called *Libra* by the Romans.

The chief star of the constellation is Antares, a first magnitude red star. It is a double star, possessing a green companion of the seventh magnitude. The constellation of scorpion has been remarkable for its new stars. See *Constellation*; *Zodiac*.

Scorpion from Central Africa, showing the sting at end of the tail

of the abdomen, bears a venomous sting, and is usually brought forward over the back of the body. The sting can inflict a serious wound. Scorpions lurk during the day under stones, and range at night in search of their prey, small insects and spiders. The young are brought forth alive. See *Arachnida*.

SCORPION FLY (Panorpidae). Family of neuropterous (nerve-winged) insects. They have a slender body that can be turned up at the extremity

somewhat like the tail of a scorpion. The mouth parts are developed into a beak. The common scorpion fly (*P. communis*), which is found in Britain, is black in colour and half an inch long. See *Insect*.

Scorpion Fly. *Panorpa communis*, common British species

SCORZONERA (*S. hispanica*). Perennial edible-rooted plant of the order *Compositae*. It was introduced into Great Britain from S. Europe, where it grows wild, in 1576. The roots are parsnip-shaped, and white fleshed, with a dark skin. *Scorzonera* is cultivated in much the same way as salsify (q.v.). It has a sweet, sugary flavour, and may be cooked in the same way as salsify, or boiled like other root vegetables.

SCOTCH TERRIER. Small breed of rough-haired terrier. One of the hardest of domesticated breeds, the Scotch terrier is a determined hunter, and is one of the best raters. It has exceptionally large teeth for a dog of its size, and was formerly in use for hunting the fox among the rocks in the Highlands. See *Terrier*.

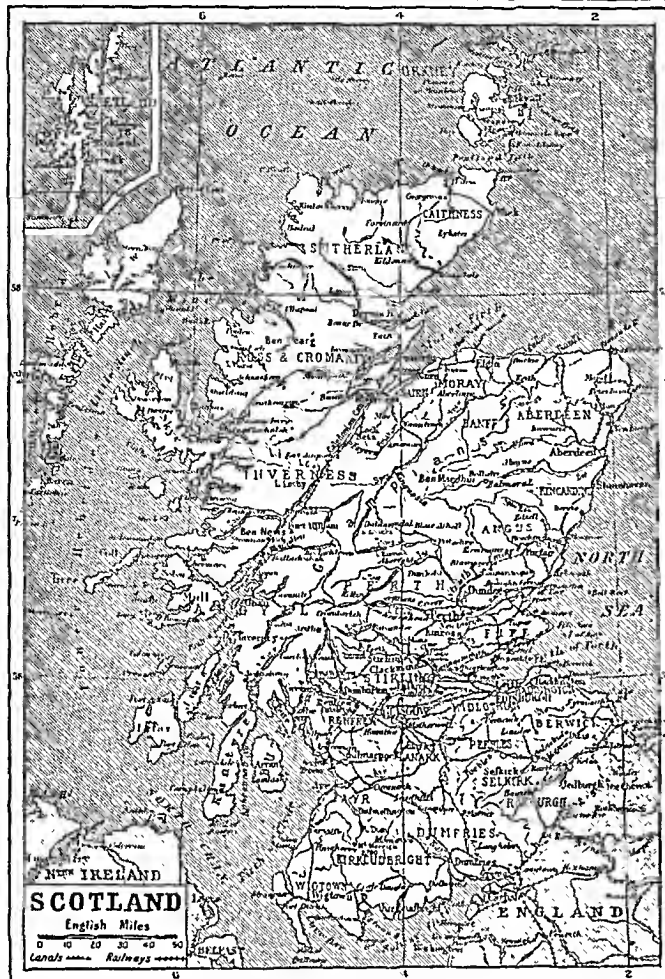

Scotch Terrier. One of the hardest and keenest breeds of terrier

SCOTER (*Oedemia*). Genus of wild ducks, of which three species occur in Great Britain. The plumage is black and glossy, in some species spotted and barred with white. The common scoter (*Oedemia americana*) measures 20 ins. in length, and is very

numerous about the coasts of Great Britain in the winter. Marine in habit, it is an accomplished diver and a deep-sea feeder. The velvet scoter (*Oe. fusca*) has a white patch behind the eye and a white bar across the wing. The surf scoter (*Oe. perspicillata*) is only an irregular visitant to Great Britain.

Scoter. Specimen of British wild duck

Scotland. Large scale maps are also given under the headings of the counties

SCOTLAND. Northern portion of the island of Great Britain. It has an area of 30,405 sq. m., of which 609 sq. m. are water. On the average the land is about 1,500 ft. above sea level, while a number of heights rise above 4,000 ft., the culminating point being Ben Nevis, 4,406 ft. The country includes beautiful lochs and glens and many islands, among them the Hebrides, Orkneys, and Shetlands. Edinburgh is the capital.

Royal arms

Scotland is divided into 33 counties, and in 1929 its population was estimated at 4,897,000. Of these about 10,000 speak Gaelic only and 150,000 speak English and Gaelic. In 1923 the railways were amalgamated with the English companies. The L.M.S. and L.N.E. serve Scotland. The canals include the Caledonian, the Crinan, and the Forth and Clyde. The Bank of Scotland was established by the parliament of Scotland in 1695.

ADMINISTRATION, ETC. The union of the crowns of England and Scotland in 1603, and to a greater extent the union of the parliaments in 1707, brought about changes in the government of Scotland in the direction of bringing it under the authority of England, but in many respects the kingdom retains its own system of government. Under the Act of 1918 it is represented in the Parliament of the United Kingdom by 74 members, of whom 38 represent the counties, 33 the burghs, and 3 the universities; 16 Scottish peers, elected by their fellows, sit in the House of Lords. Although no longer the seat of a parliament.

retains its clan spirit, and the number of clans and septs preserving their historic continuity is about 60. While the kilt is principally known at the present day as the dress of the Highland regiments, it is worn by sportsmen, and kilts and kilts are a prominent feature at the Highland Gatherings held in the autumn at Braemar, Perth, Aboyne, and elsewhere. At these games contests which range from tossing the oar to Highland dances are leading features. In recent times there has been a strong movement in favour of a revival of the Scottish vernacular and a demand for Home Rule has arisen. See Braemar; Clan.

HISTORY. In early days Scotland was inhabited by Celtic tribes, who may be divided into two groups. One lived beyond the Forth of Clyde and the other on the English side of that natural boundary line. Of these tribes the Picts were perhaps the most powerful, but it was the Scots, a Celtic people from Ireland, who gave their name to the land. In 843 Kenneth MacAlpine, a Scot, became king of the two peoples and the kingdom of Scotland was founded.

In 1057 Malcolm Canmore, a descendant of Kenneth, became king. He married an English princess, Margaret, and was killed, after a successful reign, while attacking Alnwick in 1093. Three of his sons succeeded in turn to the throne. Later came Alexander III, who defeated the king of Norway at Largs in 1263.

When Alexander died in 1286 the throne passed to a grand-daughter, Margaret, the maid of Norway. She died in 1290, and a period of unrest began. Many claimants for the crown appeared, and Edward I of England,

Edinburgh is the capital and contains the government offices. For the general control of Scottish affairs by the government there is a secretary, who since 1926 has ranked as a secretary of state.

Scotland retains its own legal system, which is quite different from that of England, although there is an appeal to the House of Lords and the lord chancellor acts for all Great Britain. The chief court is the court of session, which is divided into two houses, inner and outer. Its ecclesiastical system, too, is quite different. Its established church is Presbyterian in doctrine and government.

The local government system of Scotland was remodelled as far as the burghs were concerned in 1835, and for the counties in 1889 and 1895. The burghs, which may be divided into three classes, royal, parliamentary, and police, were placed under elected councils.

Scotland still retains its clan spirit, and the number of clans and septs preserving their historic continuity is about 60. While the kilt is principally known at the present day as the dress of the Highland regiments, it is worn by sportsmen, and kilts and kilts are a prominent feature at the Highland Gatherings held in the autumn at Braemar, Perth, Aboyne, and elsewhere. At these games contests which range from tossing the oar to Highland dances are leading features. In recent times there has been a strong movement in favour of a revival of the Scottish vernacular and a demand for Home Rule has arisen. See Braemar; Clan.

One lived beyond the Forth of Clyde and the other on the English side of that natural boundary line. Of these tribes the Picts were perhaps the most powerful, but it was the Scots, a Celtic people from Ireland, who gave their name to the land. In 843 Kenneth MacAlpine, a Scot, became king of the two peoples and the kingdom of Scotland was founded.

In 1057 Malcolm Canmore, a descendant of Kenneth, became king. He married an English princess, Margaret, and was killed, after a successful reign, while attacking Alnwick in 1093. Three of his sons succeeded in turn to the throne. Later came Alexander III, who defeated the king of Norway at Largs in 1263.

who claimed to be overlord of Scotland, was asked to decide between them. He awarded the crown to John Balliol, but the chief result was to arouse a strong spirit of nationality. The first leader, Sir William Wallace, was defeated and hanged, but under the second, Robert Bruce, the independence of Scotland was definitely secured in 1314, after the defeat of the English at Bannockburn.

Between the death of Robert Bruce in 1329 and the accession of Charles I in 1625 all but two out of the ten monarchs who wore the Scottish crown were children at the date of their accession, unless we except also James IV, who was in his 16th year. The two exceptions were Robert II and Robert III, both of whom were over 50. Therein lies the key to the fact that a strong central government was never established; every minority was a period of strife.

Robert Bruce was succeeded in 1329 by his infant son David II, who, a few years later, was driven out by a rival, Edward Balliol. He returned in 1341, and in 1346, when invading England, was taken prisoner at Neville's Cross. Released on payment of a considerable ransom, he died in 1371, and was succeeded by his nephew Robert, the steward of Scotland. He was the first king of the Stuart line.

The reigns of five kings of the name James occupied the century and a half between the death of Robert III in 1406 and the accession of Mary. This was the time when the alliance between France and Scotland was cemented by a common hostility to England, and when the Douglasses were sometimes as strong, even stronger, than the king himself. Mary's son, James VI, grew up in an atmosphere of turmoil, which lasted until he left the country to become king of England in 1603.

The crowns of England and Scotland were now worn by the same individual, but for a century more the two countries remained in every way independent. The religious policy of Charles I incensed his Scottish subjects, and in 1643 an army marched into England to join the parliamentarians. While it was fighting there other Scots under Montrose took up arms for the king, but the covenanting party became supreme. They soon broke away from their English allies and had no part in the execution of Charles I, after which event they accepted Charles II as their king. Cromwell, however, by his victories at Dunbar and Worcester, made him a fugitive.

The restoration of Charles II in 1660 was followed by the ascendancy of the episcopal church and the persecution of the Covenanters, a policy continued during the reign of James II. Anne's reign was notable for the union of the parliaments, accomplished with difficulty in 1707. The rising of the Jacobites in 1715 revealed in Scotland the existence of a strong feeling of loyalty to the exiled Stuarts and hostility to England. In 1745 there was another rising, which failed, and after it the Highland clans were deprived of their special position and gradually settled down to share in the normal life of the country. See Edinburgh; Glasgow; James VI; Mary.

SCOTLAND, CHURCH OF. Established Church of Scotland. A Presbyterian body, it dates from the Reformation. In 1560 the Scottish parliament made Protestantism the official religion of the country. Under the influence of John Knox the beliefs of the new Church were laid down in a confession of faith, and during the next few years its organization on the Presbyterian model was established. The General Assembly, its governing body, dates from this time.

The movement for a union between the Church of Scotland and the U.F.C. was accelerated by the passing in 1925 of an Act dealing with the endowments of the established Church. In March, 1928, the general assemblies

of the two Churches approved the proposed union. The first general assembly of the re-united Church met on Oct. 2, 1929. See Free Church of Scotland; Knax; Presbyterianism.

SCOTLAND YARD. Familiar name for the headquarters on the Thames Embankment of the Metropolitan Police in London, more correctly described as New Scotland Yard.

Scotland Yard, London. Headquarters of the Metropolitan Police

SCOTS FUSILIERS, ROYAL. British regiment. It was raised in Scotland in 1678, and took its place in the line as the 21st Foot. It fought at the battles of Steenkirk and Landen, and through Marlborough's campaigns of 1702-12. Having served in America and against Napoleon in several war areas, the Fusiliers took part in the Crimean War, and shared in the Zulu, Boer, and Burmese Wars.

In the Great War it had five territorial, one service, one garrison, in addition to its three regular and special reserve battalions. The regimental depot is at Ayr.

Scots Fusiliers badge

SCOTS GREYS, ROYAL. Also known as the 2nd Dragoons, this regiment was raised in 1678. They fought under William of Orange in Flanders, and under Marlborough won their great fame: since then they have been known, on account of the grey horses which they rode, as the Scots Greys. The Greys were at Waterloo, rode with the Heavy Brigade at Balaklava, and went right through the South African War. In the Great War the regiment fought both as cavalry and dismounted. See Dragoon.

Scots Greys. Trooper in review order

and at the Union of 1707 were added to the British Army. They were known for a time as the Third Guards, and from 1831-77 as the Scots Fusilier Guards; since the latter date they have had their present name. Their fighting record includes service in Flanders under William III and Marlborough; at Dettingen and Fontenoy; and in the Peninsular War. The guards were at Quatre Bras and Waterloo and later in the Crimea. The regiment

Scots Guards badge

has a fine record of service on the western front in the Great War.

SCOTT, CHARLES PRESTWICH (b. 1846). British journalist. Born at Bath, Oct. 26, 1846, and educated privately and at Corpus Christi College, Oxford, he was editor of The Manchester Guardian from 1872 to 1929, and more than anyone else gave that journal its distinctive character. In 1929 he resigned his editorship, but remained governing director of the paper. He was Liberal M.P. for the Leigh division of Lancashire, 1895-1906.

SCOTT, CLEMENT WILLIAM (1841-1904). British dramatic critic. Born in Hoxton, Oct. 6, 1841, and educated at Marlborough, he began life as a clerk in the war office. Soon, however, he drifted towards journalism and dramatic criticism, and eventually became dramatic critic to The Daily Telegraph. He died June 25, 1904. Scott was the originator of a more picturesque style of criticism than former generations had known; but though his opinions carried weight, his work was often marred by personal prejudice.

SCOTT, SIR GEORGE GILBERT (1811-78). British architect. The son of a clergyman, he was articled to an architect in London. His buildings include the Martyrs' Memorial at Oxford, the station and hotel at St. Pancras, the buildings of Glasgow University, and the Albert Memorial. He did an immense amount of restoration work on English cathedrals and churches. He was elected A.R.A. in 1855 and R.A. in 1861. Scott, who was knighted in 1872, died March 27, 1878.

SCOTT, SIR GILES GILBERT (b. 1880). British architect. A grandson of Sir G. G. Scott, he was born Nov. 9, 1880, and educated at Beaumont. Trained as an architect, he specialised in ecclesiastical art, and in 1902 was the successful competitor with his designs for the new cathedral at Liverpool. In association with G. F. Bodley (q.v.) he supervised the work, and in 1924 he was knighted. In 1918 Scott was made A.R.A. and in 1922 R.A. His other work includes several churches and college buildings at Cambridge.

SCOTT OR SCOT, MICHAEL (c. 1200). Scottish wizard. The facts of his life are obscure, but it is believed that he was of a Fifeshire family and studied at Oxford and in Paris. At Toledo he apparently gained sufficient knowledge of Arabic to translate a portion of Aristotle into Latin from an Arabic version. According to Italian traditions he died in Italy, but according to other accounts, which Scott follows in The Lay of the Last Minstrel, he returned to Scotland and was buried in Melrose Abbey.

SCOTT, SIR PERCY MORETON (1853-1924). British sailor. He was born July 10, 1853, and entered the navy in 1866. He became captain in 1893, and rear-admiral in 1905. He served in the Ashanti and Egyptian wars, and in 1899 he landed with the Naval Brigade in South Africa, and improvised the mountings for the heavy guns for Ladysmith. He was captain of the gunnery school Excellent, 1903-5, inspector of target practice, 1905-7, and commanded cruiser squadrons, 1907-9. In 1910 he was knighted and given £2,000 in recognition of his numerous inventions. In 1913 he was created a baronet, and retired with admiral's rank. He died on Oct. 18, 1924.

Sir Percy Scott, British sailor
Russell

SCOTT, ROBERT FALCON (1868-1912). British explorer. Born at Devonport, June 6, 1868, a son of John E. Scott, he entered the navy. In 1900, having just reached the rank

of commander, he was selected to lead the National Antarctic Expedition and to command the Discovery (q.v.), the exploring vessel specially built for this expedition. The expedition sailed from London in Aug., 1901, and returned to England in Sept., 1904. After his return he was also assistant-director of naval intelligence, and his final admiralty service was as naval assistant to the second sea lord.

Robert F. Scott, British explorer

Scott left England on a second polar expedition in 1910, finally sailing from New Zealand on Nov. 29 in the whaler Terra Nova. The southern journey to the Pole itself was started by a pioneer party under Lieut. Evans in Oct., 1911. Scott himself followed in Nov. with ponies and dogs. The final march was made by Scott, Wilson, Oates, Bowers, and petty-officer Evans, who continued over the great polar plateau until they reached the S. Pole, Jan. 17, 1912, only to find that they had been forestalled by Roald Amundsen, who had reached the pole barely a month before. After this bitter disappointment Scott's party was overwhelmed in a blizzard on the return journey, when he and his party perished. See Antarctic Exploration.

SCOTT, SIR WALTER (1771-1832). Scottish novelist. Born in Edinburgh, Aug. 15, 1771, son of a lawyer, he was educated at the high school and university of his native city. In 1792 he became an advocate, and in 1797 he married Charlotte Margaret Chappentier and settled in Edinburgh.

In the same year in which his Minstrelsy of the Scottish Border appeared, Scott began to write his first great poem, The Lay of the Last Minstrel. Between 1805 and 1815 he produced, besides the poem mentioned, Marmion, The Lady of the Lake, and Rokeby, with editions of classic English poets and Lives of Dryden and Swift. The poems had an enormous vogue, and there was a large income to Scott from his literary enterprises. He bought a small property on Tweedside, and began to build Abbotsford (q.v.). In 1814 he finished in three weeks two-thirds of a story, Waverley, which he had started years before and set aside. It took the public by storm, and, though The Lord of the Isles was to appear next year, it was to be his last great poetical effort. Already his supremacy as a popular poet was being usurped by Byron, and his reputation thenceforth was to depend on romantic fiction.

Novels began to pour from his pen, his industry quickened by financial embarrassments arising from the printing connexion with Ballantyne. Not for ten years was the public informed that Scott was the author of these works; the secret was known only to a very few. In the same year which brought forth The Lord of the Isles appeared Guy Mannering, written in six weeks. In 1816 he published The Antiquary, his favourite among all his novels, The Black Dwarf, and Old Mortality, and in 1817, despite a serious illness, he produced Rob Roy. The Heart of Midlothian appeared in 1818. The greater parts of The Bride of Lammermoor,

Sir Walter Scott, Scottish poet and novelist
From the portrait by Raeburn

and Ivanhoe, and the whole of *The Legend of Montrose* were dictated by the author in 1819. In 1820, in which year appeared *The Abbot* and *The Monastery*, Scott was made a baronet. There was more need than ever for unflagging industry; and in the next few years appeared *Kenilworth*, *The Pirate*, *The Fortunes of Nigel*, *Quentin Durward*, and *Redgauntlet*.

In 1826, ruined financially by his printing business engagements, he performed miracles of industry, drugged toilsomely through a long life of Napoleon, the historical Tales of a Grandfather, *The Fair Maid of Perth*, and the novel *Woodstock*. A voyage to Rome aggravated his malady; he came back a physical wreck, to die at Abbotsford, Sept. 21, 1832. He was buried in Dryburgh Abbey (q.v.). Consult *Lives*, J. G. Lockhart, new ed. 1896; G. E. B. Saintsbury, 1897; R. H. Hutton, 1896; W. H. Hudson, 1901; A. Lang, 1906; G. le G. Norgate, 1906; A. Stalker, 1921.

Scottish Rifles. Alternative name for the regiment known as the Camerounians (q.v.).

SCOUTING. The practice of the North American Indians and the Zulus of S. Africa in following trails, tracking down their foes by observing signs and using their logical faculties. Their methods have been copied by soldiers and others and used in modern warfare.

Scouting as a boys' organization was introduced into Britain by Lord Baden-Powell in 1908. It had existed in various forms in America. As part of the boys' organization scouting includes the practice of woodcraft and nature lore. The training embraces the knowledge of signs, how to track and follow, signalling, pioneering, and camp-life generally. Scouting teaches the reading and making of maps, first aid, various exercises, etc. See *Baden-Powell*, Baron; *Boy Scouts*; *Girl Guides*.

SCRANTON. City of Pennsylvania, U.S.A. It stands on the Lackawanna river, 135 m. N.W. of New York. Anthracite coal mining is the staple industry, others being the manufacture of knitted goods, lace curtains, silks, buttons, and mining and hydraulic machinery. Pop. 142,266.

SCREAMER (Chauna).

Small group of birds, including about three species, restricted to S. America. The horned screamer has a hornlike growth, about 5 ins. long, upon the forehead, and the plumage is grey and black with a greenish reflection. The other members of the order are without the horn. The birds are found in flocks about the borders of lagoons, where they make the night unmelodious with their harsh cries. Though not web-footed, they swim readily.

SCREEN. In ecclesiastical architecture, a wall of wood, metal, or stone, designed to partition off one part of a church from another. The choir, or the choir and sanctuary, being the most important part of the church, artistic ornament was lavished more freely on the screens protecting it than on any other part. This was particularly true of the rood screen shutting off the choir from the nave or transept. This was often a beautiful example of open or close Gothic workmanship, with a gateway in the centre. The rood loft was at the top of this screen, with a staircase leading to it, and the rood (cross or crucifix) conspicuously displayed over the entrance.

SCREEN. In printing, a ruled glass grating that is placed between the photographic plate and lens in a camera to break up the negative of the copied picture into dots of various sizes for carrying the ink on the printing surface of the resultant half-tone block,

corresponding to the light and shade in the drawing or photograph which is to be reproduced. See *Half Tone*.

SCREW. This may be defined as a solid cylinder having a helicoidal rib or thread on its surface. The invention of the screw is attributed to Archimedes, 287-212 B.C., and it was certainly in use by the Romans, notably in wine presses. Until their manufacture by machinery, however, screws were not used on

A two-bladed propeller of the older type

Sir Francis Pettit Smith's first screw propeller

Screw propeller with single revolution as first fitted to the Archimedes

Double-threaded screw propeller as subsequently fitted to the Archimedes

A modern propeller

Screw. Development of marine propeller

a large scale. It was not until 1854 that the adaptation of an American invention of 1836 made the production of cheap screws possible.

The threads of screws are rectangular, V-shaped, trapezoidal, etc. The wood screws used in carpentry, etc., are made from wire of suitable gauge. They are provided with a point to enable the wood to be entered easily, and are usually made of mild steel or iron, and from brass, copper, and zinc. Metal or machine screws are pointless, and have to be made with greater precision than wood screws.

Screamer. The horned screamer, a bird of S. America
W. S. Herridge, F.Z.S.

SCREW PROPELLER. Contrivance for propelling vessels. In 1801 a screw steamer was built and tried by an American, but it was not until the Archimedes was built, in 1838, that the advantages of the screw were established. Three-bladed screws are preferred for fast ships, four-bladed for cargo boats. Screws are usually made of cast iron or steel, or manganese or phosphor bronze.

AERIAL PROPELLERS. These are two or four-bladed, more usually two. Most propellers are shaped from a wooden block, built up out of layers of carefully selected mahogany, walnut, and spruce, glued together. A propeller is mounted on the engine-shaft direct,

Screen. East side of the altar screen in Durham Cathedral, dating from 1372-80

or on a shaft driven at less than engine speed by tooth gearing or chains. Air screws are also made of metal. See *Aeroplane*; *Ship*.

SCRIABIN, ALEXANDER NICOLAS (1871-1915). Russian composer. Born at Moscow, Dec. 25, 1871, he studied music there and taught the piano there from 1898-1903. Thereafter he lived in Paris, Switzerland, and Brussels, devoting himself chiefly to composition. He used a revolutionary system of harmony, involving the absence of the major and minor modes and the key-signature, which at first met with fierce opposition. But his orchestral work, richly orchestrated but difficult of execution, is now widely played. He exercised great influence on contemporary music, visited London in 1914, and died at Petrograd, April 14, 1915.

SCRIBE (Lat. scriba, clerk or secretary). Term used in the Bible for a writer or secretary, but more especially for the official copyists and expounders of the law of Moses. Their most important function was to give counsel and advice in all points of difficulty or doubt about the observance of the law; and they might be described as ecclesiastical lawyers. They were closely connected with the Pharisees (q.v.), the religious teachers of the nation; and their influence in N.T. days was very great. Leading scribes conducted schools or colleges, in which they taught their principles and methods to their disciples.

SCROFULA or **STRUMA.** In human beings, a complaint associated with the enlargement of the lymphatic glands in the neck. Known to be a form of tuberculosis, it is most usual in children, but is sometimes seen in adults. The treatment consists in invigorating the system with tonics and maintaining the patient's strength, while incisions to relieve suppuration are frequently desirable.

SCROOBY. Village of Nottinghamshire. It is 2 m. from Bawtry, on the L.N.E. Rly. William Brewster, one of the Pilgrim Fathers lived at the manor house.

SCRUB. Term applied to land adjacent to woodland, covered with bushy shrubs and small trees. In Britain the shrubs are mainly those of a thorny character, such as furze, blackthorn, whitethorn, wild rose, and bramble. In the S. of Europe and Asia acacias are dominant. Along the Mediterranean the scrub is known as maquis. In E. Africa, euphorbias and cacti are mixed with acacias. Australia has several sorts of scrub; the brigalow and the mallee, the cane and the nettle. The brigalow scrub consists chiefly of *Acacia excoelsa*; the mallee of *Eucalyptus dumosa*. See *Furze*.

SCRUPLE (Lat. scrupulus, a small stone). Unit of weight used by apothecaries. It is 20 grains or minims, and the twenty-fourth part of an ounce.

SCRUTINY (Lat. scrutari, to search out). In general, a close examination. In elections, a scrutiny is the examination by some recognized authority of the votes cast, so that those wrongly given may be rejected.

The French term for voting by papers or balls is scrutin. In French electoral procedure since the Revolution two alternative methods of voting have been employed with almost equal frequency. They are scrutin-d'arrondissement, or election by single member constituencies; and scrutin-do-liste, or election en bloc of all the deputies allotted to a department, which is thus the electoral unit.

SCUDERY, MADELINE DE (1607-1701). French writer. Born at Havre, Nov. 15, 1607, she became an orphan, and after a good education joined the literary circle of the Hôtel Ramhoullet in Paris. Her prolific romances, *Ibrahim*, *Artamène*, ou *le Grand Cyrus*, *Clélie*, etc., were written with the help of and in the name of her eccentric brother Georges

(1601-67). With their chivalrous adventures, high-flown sentiment, and thinly veiled allusions to personages of the day, they enjoyed immense popularity. She died in Paris, June 2, 1701.

SCULLIN, JAMES HENRY (h. 1876). Australian statesman. Born in Australia, Sept. 18, 1876, of Irish parents, he spent his early years in Bendigo, and worked in a grocery shop at Ballarat. Joining the Labour movement, he became a journalist, and started a weekly paper which later became a daily. In 1910 he was elected to the Federal Parliament, but lost his seat at the next election, and did not re-enter Federal politics until Feb. 1922. He quickly established a reputation as an effective debater, and in 1928 became leader of the Federal Labour Party. His party won the election in Oct., 1929, and Scullin became premier. In addition, he assumed the ministries for external affairs and industry. His period of office was marked by a crisis in the financial affairs of the Commonwealth, and in Oct., 1930, he attended the Imperial Conference in London. See Australia.

J. H. Scullin, Australian statesman

SCULLING. Propelling of a boat by one man, or occasionally two men, each with a pair of sculls, the blades of which are more concave than an ordinary racing oar and have shorter looms. The art of sculling differs in some degree from ordinary rowing, in which one oar only is handled by each rower and there is a cox to steer the boat. Therefore, a good oarsman is not necessarily a good sculler. Sculling demands a greater knowledge of oarsmanship and more practice.

The world's professional sculling championships have been held in various countries, a goodly number on the Paramatta river, N.S.W., over a course of 3 m. 330 yds. The championship course on the Thames is from Putney to Mortlake, and measures 4½ m. In 1930 Ted Phelps, by beating Bert Barry, retained the world championship. The amateur championship of the Thames is also sculled over this course, the event being known as the Wingfield Sculls. See Boat; Rowing.

SCULPTURE. Art of carving figures from stone, metal, etc. The palaeolithic cave dwellers, about 10,000 B.C., first carved in the round, then in relief, the animals they hunted; later they carved the forms of men, their only implements being chipped flints. The neolithic peoples for several thousand years developed no sculpture, until the Egyptians wrought figures in terra-cotta, ivory, and stone.

The wide distribution of marble in Greece gave a superb stone for carving. The invasion of Greece by the Persian armies involved great destruction, and the Greeks had to rebuild their temples. The land blossomed with art. Myron wrought his famous athletes, of which the Discobolus is famous. Polyclitus moulded his great bronzes, of which the Doryphorus was held by the ancients to give the right proportions of the male figure, hence called the canon; the weight is supported on one foot, as also in his other favourite subject, the Amazon. Pericles gave to Phidias the direction of the many sculptors who were called to build the Parthenon.

The keynote of the 5th century B.C. was serenity and calm, free from emotion. Later, sculpture developed a meditative vision. Of this age the most famous sculpture is the Winged Nikē (Victory) of Samothrace, in which the triumphant swing of the body is revealed through the flutter of wind-swept draperies. Like the Apollo Belvedere (c. 320 B.C.), which we only know in a bronze

copy, it is of the school of Scopas. Alexander conquered Athens; Greek art passed from Athens to Alexandria and Rhodes and Pergamum; and Greek sculpture thenceforth developed towards expressing tragedy and pathos and pity. The Dying Gaul (called Gladiator) of the Pergamene school was of 240-238 B.C.; the Laocoon group about 150 B.C.

Gothic and Classic meet in Italy in the feverish, restless age of the Renaissance. The realism of the great sculptor Donatello saved the art of Italy and brought virility where Giotto's pietistic insipidity had been. Verrocchio created the great equestrian statue of the age, the Colleone. Michelangelo and his art give a sense of contortion in spite of its overwhelming sublimity. Benvenuto Cellini almost frees himself from his usually restless, fussy design in his Perseus.

The 17th century saw Bernini create a new style of sculpture in Naples, one tending to sentimentality and superfluous ornament, but distinctly gracious in line. In the 18th century French sculpture rendered the grace and charm of the age, through the great masters, Pigalle and Houdon, and the exquisite modeller of feminine grace, Clodion. By 1800, Canova, followed by Dannecker, Flaxman, and Thorwaldsen, gained a wide vogue of insipidity and commonplace—a tide stemmed by the vigorous Rude. Dalou and others kept the lamp burning. Then two great masters came forth in Rodin and Mennier.

SCUNTHORPE. Urban dist. and market town of Lincolnshire, in full, Scunthorpe and Frodingham. It is 25 m. from Grimsby, on the L.N.E. Rly., with iron and steel works, etc. Market day, Mon. Pop. 27,354.

SCURVY. Disease due to a disturbance of metabolism. Scurvy was formerly very prevalent among armies in the field and sailors on long voyages unable to obtain fresh food. The gums become swollen and spongy and bleed easily. The teeth may fall out and necrosis of the jaw occur. The skin becomes dry and rough and subcutaneous haemorrhages occur, and, in addition, the spleen is enlarged and the urine contains albumen.

The essential cause of scurvy is absence or insufficiency of vitamins, which are present in minute quantities in fresh food. Treat-

Scurvy Grass. Flower-head and leaves

ment, accordingly, consists in adding to the diet articles which will supply the deficiency. Most cases are cured by giving the juice of two or three lemons daily, and plenty of meat and fresh vegetables.

SCURVY GRASS (*Cochlearia officinalis*).

Perennial herb of the order Cruciferae, a native of N.W. Europe and the Polar regions, growing near the sea and on mountains. From the root-stock many fleshy stems arise, also spoon-shaped leaves. The stem-leaves are stalkless, angled, and their bases clasp the stem. The four-petalled flowers are white. Eaten raw or as a salad, it is a valuable anti-scorbutic medicine.

SCURVY PEA (*Psoralea*). Large genus of shrubs and herbs of the order Leguminosae, natives of tropical and temperate regions. Most of the species are rough with wart-like glands. The leaves are in most cases broken up into three or five leaflets. The pea-like flowers are blue, purple, pink, or white, clustered in heads, spikes, sprays, or bundles. P. esculenta, a N.W. American species, has a turnip-shaped farinaceous root, which the French voyageurs called Pomme blanche. They are boiled for eating. P. glandulosa

(Jesuit's Tea), a native of Chile, is applied as a poultice to wounds, and an infusion of the root is emetic.

SCUTAGE. Term used to describe the money payment made by a knight in place of following his lord on military service. It comes from the Latin word scutum, a shield, and is literally shield money. As conditions of warfare changed it was often irksome for owners of land to render their customary military service; they were glad to commute it for money, and the kings often equally glad to receive this money. In England it was first paid in the time of Henry II.

SCUTARI or SKODRA. Town of Albania. Situated S.E. of Lake Scutari, it lies 12 m. from the Adriatic. It has woollen manufactures, and exports maize, tobacco, hides, and sumach. Pop. 23,800.

In the first Balkan War the town was besieged by the Montenegrins, and afterwards by the Serbians; but the place held out until April, 1913. During the Great War it was occupied at first by Montenegro, but after Serbia and Montenegro were overrun in 1915-16, it was seized by the Austrians, who held it until Oct.-Nov., 1918.

Lake Scutari, partly in Albania and partly in Montenegro, is 27 m. long. See Albania.

SCUTARI or USKUDUR. Town of Asia Minor, the ancient Chrysopolis. It lies on the Asia Minor side of the Bosphorus, opposite Istanbul, of which it is a suburb. It manufactures silks, cottons, and muslins. During the Crimean War the Turkish barracks were occupied by English troops, to whose sufferings Florence Nightingale ministered. In 1921 great damage was caused by fire. Pop. 124,555.

Scylla. Rock on the Calabrian coast where the monster of classic fable was supposed to dwell

SCYLLA. In Greek mythology, a sea monster on the Straits of Messina at the narrowest part. Opposite was the whirlpool Charybdis. Scylla had twelve feet and six heads, and snatched sailors from the decks of the ships that passed too near. Ships that tried to avoid Scylla ran the risk of being swallowed in the whirlpool of Charybdis on the other side. The town on the rock, now known as Scilla, was destroyed by earthquake in 1908. Pron. Silla.

SCYROS or SKYROS. Greek island in the Aegean Sea, one of the N. Sporades. It is 24 m. N.E. of Euboea, and has an area of 80 sq. m. It comprises two mountainous peninsulas. Goats and sheep are reared, and wine, wheat, and oranges are produced. Pop. 4,200.

SCYTHIA. Name given in ancient times to a region N. and N.E. of the Black Sea. Its

confines differed from age to age, according to Herodotus and other writers, and the term came to be applied to any barbarian, that is, non-Hellenic, inhabitants of this region. The Scythians, who appeared in the 7th century B.C., gave their name to the country, but were absorbed among the

Scurvy Pea. Leaves and flowers of Jesuit's Tea

Cimmorians. From the middle of the 4th century B.C. the power of the Scythians declined before that of the Sarmatians, new invaders from the east, and by the 1st century B.C. the name Scythia had ceased to have any political significance. The Scythians of early times were a nomadic people, but gradually agriculture was developed and a smattering of Greek culture introduced.

As a people the Scythians were inclined to squattiness and corpulence. They wore tall caps, loose breeches tucked into soft boots, and skin cloaks. Their daggers, celts, bows, arrow-heads, and bowcases were such as an Altaian mounted nomad would naturally adopt. Their religion was interpenetrated by central Asian shamanism, and many social institutions and customs, hemp vapour-baths, blood brotherhood, were of nomad origin.

SEA ANEMONE. Name given to a section of the coelenterate order Anthozoa. They are abundant in rock pools on the coast.

Sea Anemone. Left, *Actinia equina*; right, *actinia dianthus*

Around the mouth they have rings of tentacles, usually forming a multiple of six. These are of the most varied and beautiful of hues, and when expanded give the animal the appearance of

a flower. Anemones feed on minute organisms, such as crustaceans, which come within reach of the tentacles, while some of the larger species can take in mussels and other molluscs, as well as pieces of dead fish.

SEA BASS (*Morone labrax*). Fish of the family Serranidae, native of S.W. Europe and the Mediterranean, extending to S. Britain and Ireland, and occasionally found farther N. It is a fine fish, 2 ft. or more in length, and weighing 15 lb. The back is bluish grey, paling to silver on the sides and white beneath. The body is compressed. The first dorsal fin has eight strong spiny rays. Young bass frequent harbours and ascend rivers, feeding upon the smaller fishes and crustaceans. The flesh is esteemed for food by some; others consider it coarse. The stone bass (*Polyprion cernaum*) is a shorter, deeper-bodied fish with the first dorsal fin long and low. See illus. p. 204.

SEA BREAM (*Pagellus centrodontus*). Marine fish of the family Sparidae. A native of the Mediterranean and the N. Sea, it occurs in coastal waters all around the British Isles, especially on the S.W. It feeds principally on sand-stars, brittle-stars, and small crabs. The young are known as chads. It is an admirable food fish; but will not bear transport to inland towns.

Sea Bream. Edible fish found round the coasts of the British Isles
W. S. Berridge, F.Z.S.

SEA BUCKTHORN or **SALLOWTHORN** (*Hippophaë rhamnoides*). Small tree of the order Elacagnaceae. A native of Europe and Asia, it has alternate, lance-shaped leaves, silvery on the underside, and dull green above. The male and female flowers are on separate plants, the males clustered, the females solitary. The latter are succeeded by small orange-coloured berries, sometimes made into preserves. Many of the branches harden into a long thorn.

SEACOMBE. Dist. of Wallasey, Cheshire. It stands on the Mersey, opposite Liverpool, on the L.M.S. and L.N.E. Rlys. Seacombe owes its growth to its proximity to Liverpool, and on the formation of the borough of Wallasey it was included therein. A ferry connects it with Liverpool. See Wallasey.

SEA CUCUMBER, BÊCHE DE MER, or TREPANG. Echinoderm resembling in appearance a large slug. The species vary in length from a few inches to 8 ft. or 9 ft., and most have the power of shrinking into a comparatively small compass. Certain species caught around the shores of North Australia are a favourite article of food with the Chinese. Several species are found on the British coast.

SEAFORD. Urban dist. and watering place of Sussex. It stands on the S. coast, 3 m. from Newhaven, on the Southern Rly. Beautifully situated on a bay sheltered by cliffs, it has good bathing and other attractions. The church of S. Leonard is mainly Perpendicular. The Ouse formerly entered the sea here. In 1928 Seaford Head was bought for the public by the urban council. Pop. 6,991.

SEAFORTH. Sea loch of Scotland. It is on the east side of the island of Lewis-Harris and forms part of the boundary between these two districts. Its length is 14 m.

The district around, also known as Seaforth, gave the title of earl to the family of Mackenzie. The title and estates were lost when the 5th earl took the side of the exiled Stuarts. In 1771 the title was revived for his son Kenneth, who raised the Seaforth Highlanders, but it became extinct on his death in 1781.

A district of Lancashire, part of the urban district of Waterloo and Seaforth, is called by this name. It stands on the Mersey, 4 m. from Liverpool, and is a seaside resort.

SEAFORTH HIGHLANDERS. Known also as the Ross-shire Buffs and the Duke of Albany's, this Highland regiment was originally the 72nd and 78th Foot. The 72nd, raised by the earl of Seaforth in 1778, served with great distinction in the Carnatic and Mysore campaigns in 1780, and with the 78th in the Maratha War, 1803-4. For special gallantry at Assaye the regiment was given a third colour. It added to its fine record in the Crimean War, and saw service in the Persian War, 1856-57, and in the Indian Mutiny. It next served in the Afghan War, 1878-80, and accompanied Lord Roberts in his march to Kandahar. Further battle honours were gained in Egypt, 1882, the Chitral War, 1895, and in the Sudan, 1897-98. In the South African War the regiment incurred heavy losses. During the Great War, 1914-18, about 50,000 Seaforth Highlanders were engaged, gaining many distinctions. The regimental depot is at Fort George.

Seaforth Highlanders badge

SEAHAM HARBOUR. Seaport and urban dist. of Durham. It is 5 m. from Sunderland, on the L.N.E. Rly. There is a modern harbour, from which coal is shipped, and here are blast furnaces, iron foundries, chemical and bottle factories, and motor lorry works. Seaham was a village until the opening of the coal mines. About 1823 the marquess of Londonderry began work on a harbour here, and the place grew rapidly. Seaham Hall was one of Lord Londonderry's seats. Pop. 16,957.

SEA HARE. Popular name for marine gastropod molluscs of the genus *Aplysia*. They have the general appearance of broad slugs—with upstanding tentacles supposed to resemble the ears of a hare. The shell is small, flattened, and concealed by the mantle. One species (*A. punctata*) is common in shallow water around the British shores, and has the power of ejecting a purple fluid when disturbed.

SEA HEATH (*Frankenia laevis*). Perennial herb of the order Frankeniaceae. A native of W. Europe, Africa, and Asia, it is found in salt marshes and plains. The downy stem leans upon the ground and sends up wiry jointed branches. The tiny, opposite leaves are oblong in shape, but do not appear so owing to the margins being rolled back from the sides. The small rosy flowers are produced singly in the forks of the branches. They are succeeded by a three-sided capsule.

SEA HOLLY or **ERYNGO** (*Eryngium maritimum*). Perennial herb of the order Umbelliferae. A native of sandy seashores on the

Sea Holly. Spiny leaves and flower-heads of the shore plant

Atlantic, Mediterranean, and Black Sea coasts, it has a stout, creeping and branching root-stock, and large roundish root leaves, cut into three lobes, with spiny teeth. The leaves are all stiff and leathery and of a glaucous tint. The bluish-white flowers are stalkless, so that instead of producing the umbels characteristic of the order Umbelliferae, these are massed in a dense head, with spiny bracts at the base. Under the name of eryngoes the roots were formerly candied.

SEA HORSE (*Hippocampus antiquorum*). Small fish (about 7 ins. long) related to the Pipe-fishes (q.v.). It is a native of the Atlantic

and Mediterranean, occasionally appearing on the S.W. coasts of Britain and Ireland, and rarely in the N. Sea. Like the pipe-fishes it has a bony exterior, and the body is quadrangular, flattened from the sides. The large head ends in a long snout with the small mouth at its extremity. The fish swims with the body vertical, motive power being provided by its solitary fin—the dorsal, which is small. There is no tail fin, but this end of the body is narrowed and coils around the seaweeds among which the fish lives.

Sea Horse. The small bony fish
W. S. Berridge, F.Z.S.

SEA KALE (*Crabba maritima*). Perennial herb of the order Cruciferae, native of European sea coasts. It has a creeping root-stock, spreading branches, and

Sea Kale. Wild form of the edible seashore plant

large, wavy-edged leaves. The white flowers are produced in corymbs, succeeded by roundish one-seeded pods. Originally the plant was eaten in its wild state, but for more than 200 years it has been cultivated in Britain

as a food plant; the numerous young shoots in spring being forced and blanched. These are boiled and served up for the table after the manner of asparagus.

SEAL (A.S. seol). Popular name for a group of marine carnivorous mammals. The body is elongated, tapering from the shoulders to the tail, and covered with long, coarse hair. The limbs are converted into paddles, the greater part of their length hidden

Seal. Common Seal, found on the British coasts
Gambler Bolton, F.Z.S.

beneath the skin of the body, and the hands and feet fully webbed. In the true seals the hind limbs are united to the short tail, and are useless for locomotion on land. The young are born on land, and are at first white. They are found in all seas except those of the tropics, but abound chiefly in the Arctic and Antarctic regions. Seals feed upon fishes, crustacea, and molluscs; occasionally upon birds. The thick blubber with which they are coated can be hoiled down into oil, and for the sake of this product and their skins seals are persistently hunted. See Sea Lion.

SEAL (Lat. sigillum, little sign or mark) Mass of wax, lead, or other substance, bearing a device or words impressed upon it by a die; also the die itself, often called a matrix. The latter is retained for exclusive use by one person or corporation for the purpose of authenticating documents and preventing the unauthorised opening of envelopes, boxes, doors, etc. The die, usually of a hard stone or metal, is generally incised, and is often fitted to a finger ring known as a signet.

The material used for the impression is made of shellac and turpentine, and is called sealing wax. It is usually coloured red, though it may be ivory-black. See Anselm, S.; Chancellor; Great Seal; Privy Seal.

SEA LAVENDER (Limonium). Genus of mostly perennial herbs of the order Plumbaginaceae, natives of seashores and salt districts of temperate regions. The leaves spring directly from the stout root-stock, and the small, abundant flowers are borne on tall, branching stems. The calyx is of a tough, parchmenty character, which retains its form long after the seeds have been shed. This character causes many of the species to be grown for the purpose of drying the flowers for winter decoration. The name sea lavender is derived from the blue-purple colour of the common European species (*L. vulgare*).

Sea Lavender. Flower spikes of shore plant

Sea Lily. Alternative name for the echinoderm known as the feather star (q.v.).

SEA LION OR FUR SEAL (Otariidae). Family of seals, natives of the temperate and Arctic regions of both hemispheres. They are distinguished from the true seals by having a more

Sea Lion. Large mammae of the Arctic and Antarctic. From it the best sealskin of commerce is obtained
Gambler Bolton, F.Z.S.

distinct neck, by the muzzle being more pointed, with the nostrils at its extremity instead of on the upper surface, and by having small external ears and a close, woolly fur under the long, coarse hairs. In addition, the hind limbs are free from the tail and can be turned forward so as to be used on land, enabling them to get over the ground speedily, though awkwardly. They are less exclusively aquatic than the true seals, spending more time on land, where they associate often in great numbers, especially in the breeding season, when every old male herds from 15 to 20 females in his harem. The younger males and females congregate in thousands on separate "bawling grounds."

SEALYHAM. Breed of terrier. Founded upon a hybrid between the Jack Russell and Welsh terriers by later crossings with the

Sealyham. A fine specimen of the popular breed of terrier

Dandie Dinmont and the Cheshire terrier, its characteristics have become fixed and it breeds true to type. It is affectionate and faithful, playful, and of quick intelligence, a good dog for the home, and a splendid ratter. The name is derived from the place in Pembrokeshire where the breed originated.

SEA LYME GRASS (*Elymus arenarius*). Tall, coarse, perennial grass of the order Gramineae, a native of Europe, N. Asia, and N. America. It has a stout, creeping root-stock which sends out runners and helps to bind the loose sand among which it grows. The stout stems are from 3 to 6 ft. high.

SEAMAN. Term for a sailor. More strictly it is used for one who is employed to navigate a ship at sea, but is below the rank of an officer. In the United Kingdom the law relating to the employment of British seamen is contained in the Merchant Shipping Acts, which were enforced from 1894 to 1920.

Speaking generally, the seaman is now, as far as legislation can accomplish it, saved from being flogged or ill-treated. On the other hand, a seaman who does not obey proper orders, or who refuses to return to his ship, is liable to punishment, and even to be sent back to the ship and compelled to complete the voyage. See Navigation.

SEAMAN, SIR OWEN (b. 1861). British journalist. Born Sept. 18, 1861, he was educated at Shrewsbury and Clare College, Cambridge. Appointed a master of Rossall School in 1884, he was made professor of literature at Durham College of Science, Newcastle-upon-Tyne, in 1890. In 1897 Seaman joined the staff of Punch, of which he became assistant editor in 1902 and editor in Feb., 1906. He was knighted in 1914, and his writings include *Oedipus the Wreck*, 1888; *The Battle of the Bays*, 1896; *In Cap and Bells*, 1899; *Borrowed Plumes*, 1902; *A Harvest of Chaff*, 1904; *Made in England*, 1910, and *Interludes of an Editor*, 1929.

SEA MAT (Flustra). Genus of Polyzoa of which many species are found round our coasts. The colonies resemble seaweed in appearance, the leaf-like, horny growth being covered with the cells of tiny polyps. They are attached to rocks, shells, or seaweed, whence those found along the shore have been stripped by the waves.

SEA MILKWORT OR BLACK SALTWORT (*Glaux maritima*) Perennial herb of the order Primulaceae. It is a native of Europe, Asia, and N. America, on seashores and estuaries and in inland salt districts. It has a fleshy, creeping root-stock, from which a number of short stems arise, clothed with oval-oblong, stalkless, fleshy leaves in pairs. The flowers are produced in the axils of the upper leaves, and consist of a bell-shaped pink calyx, the five petals being minutely dotted with crimson.

Sea Milkwort, or Black Saltwort. Leaves and flowers

SEA OTTER (*Lutra* or *Enhydra lutra*). Carnivorous mammal related to the true otters, but placed in a separate genus. It is a much bulkier and heavier animal, with a body about 3 ft. long, flipper-like hind feet, and a rather short tail. Its dark brown fur is very valuable. The sea otter ranges the coasts on both sides of the N. Pacific, being chiefly found about Alaska and the Aleutian Islands. Its food consists of molluscs, sea urchins, and crabs. It is not gregarious.

SEA PERCH OR COMBER (*Serranus cabrilla*). Food fish related to the sea bass (q.v.). A native of the E. Atlantic, Mediterranean, and Red Sea, migrating to S. England, it is about 10 ins. in length, the body compressed and deep, of a pale red colour with two or three blue or whitish wavy lines running from head to tail along the sides. The jaws, of which the lower is the longer, are well furnished with irregular, incurved teeth. It is constantly captured in crab pots, which it enters in quest of the bait.

Sea Perch. A species of bass
Cambridge Natural History (Macmillan)

SEAPLANE. Aeroplane fitted with floats to enable it to rise from, and alight on, the sea. In general the term is confined to the type which differs from the land machine only in the form of under-carriage employed. It is, however, frequently used generally to cover all types of water-going aircraft, including the float type, and the flying boat, in which the body, or fuselage, of the aeroplane is built in the form of a boat which serves to support the machine on the water. See Aeroplane; Aircraft Carrier; Schneider Trophy.

SEA POWER. Phrase meaning "the command of the sea" that was popularised by A. T. Mahan. He pointed out the decisive influence which sea power has exercised on the course of wars and the events of history. The defeat of the Persians by the Greeks (490-479 B.C.), and of the Athenians by the Spartans (431-405 B.C.), were known to have been achieved by sea power, which very term, in its Greek form, is used by Thucydides.

In a later age the command of the Mediterranean by the Venetians was the source of their power and wealth. The importance of sea power was present to the minds of the Elizabethans, who had a signal example of it in the defeat of the Armada. It was illustrated in the wars with Holland under the Commonwealth and Charles II. The British command of the sea was mainly responsible for the defeat of the Bourbon states, France and Spain, in the wars of the 17th and 18th centuries. A disputed command of the sea, through the intervention of the French and Spanish navies during the British struggle with the colonies in America, brought about the

British defeat and the independence of the United States. In the wars of the French Revolution, 1793-1815, British sea power was once more the decisive factor. The Great War saw the use of sea power on a vast scale; and to the British blockade the Germans mainly attributed their defeat.

SEARCH. In general, the act of examining to find some person or object. In English law, a constable has the right to search the person of one whom he arrests on a reasonable suspicion of felony. No one has any right to search a man's house or premises without a search warrant.

A search warrant is an order or authority given in writing by a magistrate to enter private premises and search them. The most common case is the search warrant for stolen property, which may be granted upon the sworn testimony of a credible witness. They may also be granted for other purposes.

SEARCHLIGHT. Apparatus for projecting a powerful beam of light in any direction. They are used in lighthouses, ships, fortresses, and for military operations in the field to project the light of an electric arc. The body of a searchlight consists of a short metal cylinder strengthened at both ends by angle-iron rings. A silvered mirror of parabolic shape is attached to the back ring and protected

Searchlight. Type used in anti-aircraft defence

by a removable cover. The front ring carries a door glazed with narrow vertical strips of plain glass, which are free to expand independently in all directions. At the top is an opening to permit hot air to escape, and similar openings at the bottom admit cold air. The lamp mechanism, fastened to the bottom of the body, has two long arms projecting through a horizontal slit to hold the carbon rods in the axial line of the cylinder.

Body and lamp are balanced on horizontal trunnions at the sides bearing on arms attached to a circular table, which is revolved very easily by hand or gearing. Current is conveyed to the lamp through insulated slip-rings in the base with which brushes on the table make contact. See Lighthouse.

SEA ROCKET (*Cakile maritima*). Annual herb of the order Cruciferae, found on sandy shores. The fleshy leaves are deeply cleft, the flowers lilac, half an inch across. The fruit is a pod an inch long. The branches grow zig-zag fashion, 1 to 2 ft. high.

SEA SERPENT. Supposed marine animal. Of snake-like form and immense size, it is alleged to have been seen by travellers on many occasions and in widely separated localities. Apart from mythological tales of early date, the first accounts of it appear to belong to the 16th century; and stories of its appearance have been told from time to time until the beginning of the 20th century.

SEA SICKNESS. Form of illness due to the motion of a

ship. The symptoms are vertigo, nausea, usually followed by vomiting, and physical prostration. Sufferers about to undertake short voyages should partake only of easily digested food.

Effervescing fluids, such as soda water, milk and soda, are soothing to many persons. Unless a person is rendered seriously ill by seasickness, it is better to avoid drugs. In severe cases, however, bromide of potassium or ammonium bromide in doses of 15 grains may be taken every four hours, commencing some hours before starting the voyage, or 10 grains of trional may be taken two hours before sailing. A firm bandage round the abdomen may give some relief.

SEASIDE GRAPE (*Coccoloba uvifera*). Small evergreen tree of the order Polygonaceae, native of the West Indies. It attains a height of about 20 ft., and has roundish heart-shaped leathery leaves and fragrant white flowers. The floral envelope, or perianth, becomes pulpy, of a violet colour, and acid flavour. The whole plant is astringent, and an extract is used as a substitute for kino (q.v.).

SEA SLUG. Name popularly applied to various marine gastropod molluscs in which the shell is either absent or is concealed under the mantle. For these the term is not inappropriate, but it is erroneous when applied to the holothurian echinoderms, e.g. the bêche de mer or sea cucumber, which belong to a different phylum of the animal kingdom from the molluscs. See Mollusc.

SEA SNAKE (*Hydrophiinae*). Family of aquatic reptiles. It includes 10 genera and about 50 species, natives of the tropical portions of the Indian and Pacific Oceans. A Philippine species is found in a fresh-water lake. They vary in length between 3 ft. and 8 ft., and are mostly brightly coloured, often in contrasting rings of black and white, olive and yellow, green, etc. The belly is keeled, and the tail compressed to serve as a paddle. The small head is pointed; the eyes, small with round pupils, are almost useless when the snake is on land. The poison from their permanently erected short fangs is so virulent that the muscles of a bitten fish are relaxed instantly, so that it can be swallowed without danger from erected spines.

SEATON. Urban dist. and watering place of Devonshire. It is on the Axe, 7 m. from Axminster, on the Southern Rly. There are good bathing and golf links. Pop. 2,800.

Seaton gave the title of baron to John Colborne (1778-1863), who, having served through the Peninsular War and at Waterloo, was made governor of Upper Canada in 1838. There he crushed the rebellion, and for this service Colborne was made a baron. He died April 17, 1863.

Sea Serpent. Marine creature sighted from the Earl of Crawford's yacht Valhalla, in the south Atlantic Ocean, off Para, Dec. 7, 1905. From a drawing by M. J. Nicoll, a naturalist on board.

SEATON DELAVAL. Urban dist. of Northumberland. It is 6 m. from N. Shields, on the L.N.E. Rly. Seaton Delaval Hall is the seat of Lord Hastings. Pop. 8,016.

Seaton Carew is a watering place within the borough of West Hartlepool.

SEA TROUT or **SALMON TROUT.** British fish. Formerly considered a distinct species under the name of *Salmo trutta*, it is now regarded as an anadromous or migratory

Sea Trout. Silvery fish now regarded as a migratory form of the brown trout (*Salmo fario*) W. S. Berridge, F.Z.S.

form of the brown trout (*S. fario*). In habits it is much like the salmon (q.v.), going to the sea to feed, returning to fresh water for the purpose of breeding, spawning from Sept. to Nov., and going back to the sea as a kelt. The sea trout is found in the north-east Atlantic, Mediterranean, and Caspian seas. See Trout.

SEATTLE. City of Washington state, U.S.A. It lies between Elliot Bay, a branch of Puget Sound, and the fresh-water Lake Washington, and is served by the Great Northern and other rlys., and by ocean-going steamers. It is the seat of Washington University. Seattle is one of the chief American Pacific seaports, and specialises in the trade with Alaska. It has important lumber interests, and also trades in fish, agricultural produce, and minerals, chiefly gold. Manufactures include flour, furniture, foundry and machine-shop products, lumber products, and various leather goods. Pop. 355,000. Pron. Seattle.

Seattle. Business centre of the city, looking across Puget Sound

SEA URCHIN. Popular name for several genera of Echinoderms. The principal organs are enclosed in a stony casket armed with long spines not unlike those of the hedgehog.

SEAWEED (Algae). General term embracing several classes of the great group *Thallophyta* (q.v.), plants of simple structure without true leaves, stems, or roots, wood, or vessels. They are reproduced by spores, which are in some cases the result of the fusion of two sexual cells. The entire surface of the plant is capable of absorbing nutriment from the medium in which it lives. What appear to be roots in many species are merely grapples or suckers which attach the plant to rocks or other support, but do not feed it.

In the Rhodophyceae the chlorophyll is in most species masked by a red pigment. In some genera (*Corallina*, *Jania*, and *Lithothamnium*) an external layer of carbonate of lime is secreted, which conceals their vegetable nature and caused them formerly to be classed among corals. See Algae; Botany; Corallineae, etc.; also illus. p. 53.

SEBASTIAN (255-288). Christian saint and martyr. Born at Narbonne, he went to Rome and entered the army. Not long afterwards he was charged with being a Christian, and the emperor ordered him to be shot to death by archers. He was left for dead, but recovered under the care of a Christian lady named Irene, and afterwards remonstrated with the emperor, who then had him

beaten to death with cudgels. His body was found by another Christian lady named Faustina and buried in the catacombs, the basilica of S. Sebastian being afterwards built upon the spot. His martyrdom by archers has been a frequent subject for artists.

SECOND ADVENT. Theological term for the expected reappearance of Jesus Christ on earth. In theory the Christian life is lived in expectation of this. The early Church believed the event was imminent; modern teaching goes no further than emphasise the belief that the Second Advent will come suddenly. Matt. 24-26; 2 Thess. 2, 2; Zech. 14, 4, have a special bearing on the question. Some present-day sects regard the Second Advent as imminent. See Adventists; Antichrist.

SECOND BALLOT. In proportional representation, a device for securing an absolute majority. A second ballot is held if the first ballot results in failure to elect the candidate or candidates by an absolute majority. At this stage the candidates are the leaders in the first ballot, the remainder falling out. It is used in some Parliamentary elections, e.g., for the Scottish Universities. See Proportional Representation.

SECOND CHAMBER. Term used for the non-elected or indirectly elected house in a legislature of two houses, the elected one being the first chamber. Most legislatures consist of two houses, examples of their second chambers being the House of Lords and the Senates of the U.S.A. and France. In some parts of the British Empire, however, e.g. Manitoba, and in some foreign countries, there is no second chamber. The nature of second chambers varies. Some consist of members nominated by the crown or other ruling authority. In federal governments, e.g. Canada, Australia, S. Africa, U.S.A., and Germany, it is usual for the second chamber to consist of representatives of the states, while the first represents the people. See Lords, House of; Senate.

SECOND EMPIRE. Name given to the period of French history between Dec. 2, 1852, when Louis Napoleon, having destroyed the Second Republic by a coup d'état, was proclaimed emperor, and Sept. 4, 1871, when the Third Republic was proclaimed after his surrender to the Prussians at Sedan. See France; Napoleon III.

The Second Republic was the period between Feb. 24, 1848, and Dec. 2, 1852, when Louis Napoleon made himself emperor.

Second Lieutenant. Lowest rank of commissioned officer in the British army. See Lieutenant.

SECOND SIGHT. Popular name for several kinds of spontaneous psychical phenomena, including clairvoyance and premonitory and symbolic visions or hallucinations. It is especially applied to a gift alleged to be possessed by many persons in the Scottish Highlands. Natives of Skye and seventh sons of seventh sons are popularly credited with this power. The best known kind of second sight is the death-warning, which takes various forms, including "corpse candles" or spectral lights, or an apparition of the doomed person, known as the wraith or fetch. Also, when the object of the warning is present, a symbolic shroud is seen wrapping the lower part of the figure, the height to which

it extends being believed to indicate the nearness of death. A fatal accident may be seen on the spot before it happens, or at a distance at the time of its occurrence.

SECRETARY (Late Lat. *secretarius*, confidential officer). Term used in several cognate senses. A secretary of state is a high officer of the British crown, in charge of one of the chief departments of government. There are eight secretaries of state—home, foreign, colonial, war, air, Scotland, India, and Dominions; all are members of the Cabinet. The home secretary ranks as the senior secretary.

The early English kings had clerks or secretaries to assist them with their business, and soon one of these became a principal secretary. In the 16th century there were two of them, and after a time one took charge of foreign and the other of home affairs. In 1794 a third secretary of state was appointed to manage certain military affairs, and in 1801 he took over the charge of colonial business. In 1854 these two functions were separated and a fourth secretary was appointed. The fifth secretary of state was appointed to manage the affairs of India after the dissolution of the East India Co. in 1858. After the Great War the air minister was made a secretary of state, and in 1926 the secretary for Scotland was given the same dignity. The eighth secretary was created in 1930, when the offices of secretary for the Colonies and the Dominions, hitherto held by the same person, were separated. See Colonial Office; Foreign Office; Home Office; etc.

Secretary Bird. Long-legged species of vulture inhabiting S. and E. Africa

SECRETARY BIRD (*Serpentarius secretarius*). African bird of prey, allied to the vultures, but differing greatly from them in appearance. The name is derived from the pendent crest of long feathers upon the head, which suggests quill pens thrust behind the ears. The bird has long legs, and stands over four feet high; and the tail is nearly two feet long. The plumage is grey and white, with black rump and black and white bars on the tail feathers. It is found throughout S. and E. Africa and in a few of the W. districts. The birds feed mainly on small snakes, lizards, and insects. Secretary birds can fly strongly, but they spend most of their time on the ground.

SECRET SERVICE. Department of many governments, whose business it is to make confidential inquiries into political, criminal, or other matters. From their nature little can be known of such departments. The British Secret Service is paid out of funds of which no details are given to the public.

SECRET SOCIETY. Body of persons concealing from outsiders its membership, tenets, aims, or activities. Such societies are of the most varied nature, the motive of secrecy being to safeguard members against persecution, to pursue a common object respecting which publicity is undesirable, to maintain caste privilege, or merely to surround members with an air of mystery.

The societies connected with the mysteries of ancient Greece, Asia Minor, and Egypt, link primitive secret societies with later religious organizations. In medieval Europe, as in the East to-day, an element of secrecy belonged to most religious and political societies. Chinese secret societies appear to lack the religious and magical elements, and pursue revolution-

ary or anti-European aims. See Carbonari; Mystery; Freemason; Ku-Klux Klan; Mafia; Rosicrucians.

SECULARISM (Lat. *saeculum*, age, generation; late Latin, world). Philosophical system which limits the destiny of man to the present life. It was founded in England by George Jacob Holyoake (q.v.). The avowed object of its members was to live and die for the world and to work for the welfare of man. Dogmatically, its position was negative; it denied the arguments for the existence of a God, a divine government of the world, or a future life. If there were a future life, those who had done their best to assist their fellows in this world would obtain their reward; if there were not, it would be foolish not to enjoy oneself while one can. See Agnosticism; Freethought; Positivism.

SECURITY. In European politics this term means security from unprovoked attack, and since 1919 statesmen and others have been working on plans to secure it. In 1927 the League of Nations appointed a security committee, and this produced some model treaties. The pact of Locarno, 1925, the Peace Pact of 1928, and other post-war arrangements are also steps in the direction of security.

SEDAN. Town of France. It is on the right bank of the Meuse, 164 m. N.E. of Paris, best known as the scene of the crushing defeat of France by Germany in 1870. It has woollen and cloth factories, and owed its prosperity to the Huguenots. Occupied by the Germans throughout the Great War, it was captured by French and American troops just before the armistice. Pop. 18,235.

CAMPAIGN OF SEDAN. In 1870 MacMahon, with a French army at Châlons, wished to move it on Paris, but was ordered to join up with Bazaine, still at Metz. The German plans were to prevent Bazaine breaking out of Metz, while continuing the march on Paris in sufficient force to meet the Châlons army. The 3rd German army moved directly on Sedan from the S. On Sept. 1 Moltke gave orders for the attack to be pressed at day-break, while the left wing of the 3rd army pushed N. to prevent a retreat on Belgium. The retreat began, and was then stopped on the receipt of an order from Paris.

Meanwhile the German right was closing round the Châlons army. The Guard, now in touch with the 3rd army, carried the Bois de la Garenne, and the battle was practically over. Fugitives from all sides were crowding into Sedan, German guns were starting conflagrations there, and the Bavarians were starting an assault on the Toney gate, when the flag of surrender was hoisted by order of Napoleon III. The victory cost the Germans 9,000 casualties and the French 17,000, but Napoleon and 104,000 officers and men became prisoners of war. See Franco-Prussian War.

Sedan Chair. Type used in the period of Louis XVI

SEDAN CHAIR. Enclosed armchair carried by bearers by means of poles passed through rings or supports in the side of the vehicle. So called from Sedan, in France, where it was said to have been invented, it

was introduced into England by the duke of Buckingham in the reign of James I. A patent was granted in 1634 for the right to hire out covered chairs in London, and they soon became generally popular, and their use lingered on till early in the 19th century. Usually the door was in front, between the poles; often the roof lifted to enable ladies with high head-dresses to enter.

SEDBERGH. Market town of Yorkshire (W.R.). It is 28 m. from Penrith, on the L.M.S. Rly. The chief building is the Norman church of S. Andrew. The public school was founded in 1525 by Roger Lupton, provost of Eton, and was re-established in 1552. It existed for many years as a country grammar school, but in 1874 was remodelled on public school lines. It has accommodation for 425 boys. Market day, Wed. Pop. 2,586.

SEDDON, RICHARD JOHN (1845-1906). New Zealand statesman. Born at St. Helens, Lancashire. June 22, 1845, the son of a schoolmaster, he went out to the Australian goldfields in 1863. Prosperity came to Seddon when he opened a store in New Zealand, and he soon became prominent in local affairs. In 1881 he was elected to the New Zealand legislature, and was for nine years an active private member. In 1890 he was made a minister, and in 1893 he succeeded John Ballance

Richard Seddon,
New Zealand
statesman

as premier. He held that position until his death, June 10, 1906.

Seddon introduced old-age pensions, women's suffrage, local option, and land taxes, and nationalised the mines.

SEDGE (Carex). Extensive genus of perennial tufted herbs of the order Cyperaceae, natives of all, but chiefly cold, climates, being rare in the tropics. They have long, narrow, grass-like leaves, often rolled and thread-like, frequently with minutely toothed edges. The male and female flowers are separate, but both kinds are usually included in the same spikelet. The tissues are used in paper-making, and the underground stems are sometimes used for food.

Sedge. Grass-like
leaves and flower
spikelets

SEDGEFIELD. Parish of Durham. It is 9 m. from Stockton-on-Tees, on the L.N.E. Rly. The parish church is an Early English building of the 13th century. Pop. 3,111.

SEDGEMOOR. Tract of marshy land in Somerset. It is about 5 m. from Bridgwater, and is famous for the battle fought here, July 6, 1685, between the forces of James II and those of the duke of Monmouth. Each side was about 4,000 or 5,000 strong. The royalists were better armed and trained, and the attack of Monmouth's men, mostly peasants, was beaten back with heavy loss, and a terrible revenge was taken on them as they fled. See Monmouth, Duke of.

SEDGLEY. Urban dist. of Staffordshire. It is 3 m. from Wolverhampton, on the L.M.S. Rly. The industries are those of the Black Country. Pop. 17,301.

SEDGWICK, ADAM (1785-1873). British geologist. Born March 23, 1785, at Deut, Yorkshire, he was educated at Sedbergh and Trinity College, Cambridge. He was elected to the Woodwardian professorship of geology in 1818. Sedgwick travelled extensively in

making geological studies, wrote many papers on geology, some with Sir R. Murchison, and was a leading authority on Palaeozoic rocks. He died Jan. 27, 1873.

SEDLEY, SIR CHARLES (c. 1639-1701). English dramatist and wit. Born at Aylesford, Kent, and educated at Wadham College, Oxford, he earned a great reputation as a wit when he entered London society, and one equally great for profligacy. He wrote two tragedies and three comedies, of which *Bellamira*, 1687, founded on the *Eunuchus* of Terence, is the best. His poetry has little merit, though his lyric *Phyllis is My Only Joy* is remembered. Sedley died Aug. 20, 1701.

SEDUCTION (Lat. seducere, to lead astray). Act of inducing a girl or woman to part with her virtue for the first time. In English law an action will be against the seducer of a woman by the woman's master. Nominally, the action is for loss of services, though the damages to be awarded are not limited to the value of the services lost. In Scotland the woman seduced can bring an action direct, and there is no need to prove any service. See *Adultery*.

SEDUM or **STONECROP**. Genus of succulent herbs of the order Crassulaceae. There are 120 known species, chiefly of the Old World. Eleven are natives of Great Britain, including rosewort (*S. rhodiola*), orpine (*S. villosum*), and the common stonecrop (*S. acre*). The flowers of the last are starlike and brilliant yellow; it grows on roofs and walls, or by the seashore.

SEECKT, HANS VON (b. 1866). German soldier. Born April 22, 1866, the son of a soldier, he entered the army in 1887. In

1898 he joined the general staff, and in 1914 was chief of the staff of the 11th army. He planned the German offensive at Soissons in Jan., 1915, and then became chief of the staff of the group of armies that, under Mackensen, broke into Galicia and overran Serbia. In 1917 he took command of the Turkish army. In 1919 Seeckt was Germany's military representative at Spa, and from 1920 to 1926 he was commander-in-chief of the army of the republic and was responsible for its military organization under the peace treaty. In 1928 he published *Thoughts of a Soldier*, and in 1929 *The Future of the Reich*.

SEED. In botany, a fertilised and ripened ovule containing an embryo plant. Seeds develop in many different forms. Some, as nuts, are contained in a case of almost stony hardness; others, as the milkweeds, are covered with silky hair; others again, e.g. those of the date, apple, or yew tree, are enclosed in fruity pulp. In all the covering is such as will best tend towards the dispersion or survival of its contents.

In the leguminous plants the pods, when dry, twist and scatter the seeds. The fleshy fruits, as the strawberry, are eaten by birds or mammals, and the seeds, passing unharmed through the digestive organs, are widely distributed. The so-called "burr" seeds are provided with hooked spines, which catch in the coats of passing animals, and in this way are carried to a distance. Some trees, as the elm and ash, have winged seeds which will fly a long way from the parent tree. See *Botany*; *Flower*; *Fruit*.

SEED TESTING. An Act of Parliament passed in 1920 made it obligatory for a seller of seeds to give to the buyer a written statement of the variety, purity, and germination of the seeds in question. Seeds must not contain more than a certain minimum per-

centage of injurious weeds. There is an official seed testing station at Cambridge.

SEELEY, SIR JOHN ROBERT (1834-95). British historian. Born in London, Sept. 10, 1834, the son of Robert Burton Seeley, publisher and author, he was educated at the City of London School and at Christ's College, Cambridge, where he became fellow and lecturer. He was appointed professor of Latin at University College, London, 1863, and was regius professor of modern history at Cambridge from 1869 until his death, Jan. 13, 1895. He was knighted in 1894.

Sir J. R. Seeley,
British historian

In 1865 Seeley wrote anonymously *Ecce Homo*, a study of Jesus Christ as a man of astonishing influence but not a divine being; this created quite a sensation at the time. He also wrote on the same lines *Natural Religion*, and as an historian *The Life and Times of Stein*, 1879, and a short life of Napoleon, 1886. More popular perhaps are his *Expansion of England and the Growth of British Policy*. His suggestive lectures, entitled *Introduction to Political Science*, did not appear until after his death.

SEELY, JOHN EDWARD BERNARD (b. 1868). British politician. Born May 31, 1868, he was the third son of Sir Charles Seely, Bart., He served with the Imperial Yeomanry through the South African War, winning the D.S.O. While in South Africa he was returned to Parliament as Unionist M.P. for the Isle of Wight, but soon after his return home his free trade views led him to join the Liberals. He represented various constituencies until he retired from parliament in 1924.

J. E. B. Seely,
British politician

Seed. Types of receptacle. 1. Achene—buttercup. 2. Achene—dandelion. 3. Nut—oak. 4. Silique—wallflower. 5. Capsule—pimpernel. 6. Capsule—iris. 7. Samara—sycamore. 8. Compound drupe—blackberry. 9. Follicle—stinking hellebore. 10. Capsule—poppy head. 11. Legume—pea. 12. Berry—gooseberry (section). 13. Schizocarp—mallow. 14. Drupe—cherry (section). 15. False fruit—strawberry. 16. Pome—apple (section). 17. Hypanthodium—fig (section).

In 1908 Seely was made under-secretary for the colonies, and in 1911 under-secretary for war. He succeeded Haldane as secretary for war in 1912, but resigned in 1914 because he had initialled a demand that certain army officers should not be called upon to serve against Ulster. Soon after the Great War broke out Seely was appointed to command a brigade of Canadian cavalry. He returned in 1916 to become parliamentary secretary to the ministry of munitions, and for a time in 1919 was under-secretary for air.

SEFTON, EARL OF. Irish title held by the Molyneux family since 1771. Representative of an ancient family of Lancashire, Sir Richard Molyneux was made Viscount Molyneux in 1628. The succession passed in due course to William, 9th Viscount, who was created earl of Sefton in 1771. The earl's eldest son is called Viscount Molyneux, and his chief seat is Croxteth Hall, Liverpool.

A suburb of Liverpool where the earl has some land is called Sefton Park. See Liverpool.

SEGESTA or **EGESTA**. Ancient Greek city in Sicily. It was situated on Mt. Varvaro, 2 m. N. of the modern Calatafimi. There are remains of city walls, an incomplete Doric temple, and a rock-cut theatre.

SEGOVIA. City of Spain. It is 63 m. by rly. N.N.W. of Madrid. The old town is surrounded by a wall with 96 towers and is set upon a hill crowned with a castle, the Alcázar, and a 16th century Gothic cathedral. Water is obtained from a Roman aqueduct. Ancient churches, palaces, and houses give a venerable aspect to the place, which has picture galleries and museums. Pop. 14,000.

SEGRAVE, SIR HENRY O'NEAL DERANE (1896-1930). British engineer. Educated at Eton and Sandhurst, he served in the Great War, in the R.A.F., and accompanied the British aviation mission to the U.S.A. in 1918. He then devoted himself to motor engineering and became noted as a racing motorist. In Mar., 1929, at Daytona, Florida, he captured the world's land speed record in his car Golden Arrow, covering a mile in 15.56 seconds, his speed being 231.36 m.p.h. At the international motor boat races at Venice in Sept., 1929, his boat, Miss England, averaged 92.8 m.p.h. On June 13, 1930, his motor boat capsized on Lake Windermere and he received fatal injuries. His last attained speed at the trials (average, 98.76 m.p.h.) was accepted as a world's record. He was knighted in 1929. See Motor Boat.

Sir Henry Segrave,
British engineer
Rita Martin

SEINE. River of France. It rises in the dept. of Côte d'Or, N.W. of Dijon, and flows generally N.N.W. for 482 m. to the English Channel. Its chief tributaries are the Marne, Oise, and Yonne. It is connected by canal and river with Belgium and the industrial towns of N.E. France, with the Rhine and Rhône, and with the Mediterranean.

The Seine gives its name to four departments of France. Seine covers 135 sq. m., chiefly suburbs of Paris. Seine-et-Marne, with Melun as its capital, covers 2,275 sq. m. Seine-et-Oise, its capital being Versailles, is a little smaller. Seine-Inférieure contains Rouen, its capital, and Havre; area, 2,448 sq. m.

SEINE NET. Fishing net kept outstretched by means of corks at the top and leads at the bottom edge, and used to encircle fish and draw them to the shore or into a boat. In sea fishing the seine net is used principally for the capture of herring, pilchards, sprats, mackerel, bass, or grey mullet. If caught in shallow water the fish are drawn on to the beach. Numerous legal restrictions govern the use of the seine net for salmon fishing.

SEISMOGRAPH. Automatic record obtained of the earth vibrations due to earthquakes. In principle the operation is simple. A steady point unaffected by the earth's tremblings (e.g. a pendulum suitably adjusted) is caused to mark a straight line on a moving surface attached to the earth. When the

earth trembles the surface vibrates and the line becomes sinuous. The elaborate and delicate instruments embodying this principle are known as seismometers. Usually the earthquake shock reaches the observatories from a distance, and the vibrations are so small that in some mechanical way the earth motion must be magnified. See Earthquake.

Seismograph. Top, revolving drum with the pens which record the earth tremors. Below, earthquake record, showing the amplitude of movement along two directions at right angles to each other

SEKONDI or **SECONDEE**. Port of the Gold Coast Colony, Africa. Between Dixcove and Cape Coast Castle, it is the principal port of the colony. Pop. 7,700.

SELAGINELLA. Extensive genus of moss-like evergreen flowerless plants of the order Selaginellaceae, natives of all warm and temperate regions. The plants much resemble the club-mosses (Lycopodium), differing chiefly in the production of two forms of spores (macrospores and microspores) and spore capsules. Selaginella kraussiana, a S. African species, commonly grown in greenhouses, has trailing and rooting stems.

SELANGOR. One of the Federated Malay States. It is bounded N. by Perak, S. by Negri Sembilan, E. by Pahang and W. by the Strait of Malacca. The state is drained chiefly by the Klang river, on which is Kuala Lumpur, the capital of the F.M.S., and Selangor. Port Swettenham is an important rubber port. Klang is the seat of the native sultan. Good roads serve the developed areas. The area is 3,150 sq. m. Pop. 401,009. See Malaya.

SELBORNE. Village of Hampshire, 5 m. from Alton on the Southern Rly. It is known as the birthplace of Gilbert White, author of The Natural History of Selborne. His house is shown, and he is buried in the churchyard.

The Selborne Society was formed in 1885 as the Selborne League for the preservation of birds, plants, and pleasant places. In 1886 it was joined by the Plumage League, and carried on propaganda work against the destruction of wild birds for their plumage.

The society also supports efforts to secure safe nesting-places for birds, especially near large towns, and generally to promote nature study. See White, Gilbert.

SELBORNE, ROUNDELL PALMER, 1ST EARL OF (1812-95). British lawyer. Born at Mixbury, Oxfordshire, Nov. 27, 1812, he became a barrister after a brilliant career at Winchester and Oxford. In 1847 he entered the House of Commons, and he remained, with short intervals, a Liberal M.P. until 1872, being solicitor-general, then attorney-general, in the Whig ministry of 1859-66. In 1872 he was appointed lord chancellor and created a baron. He was responsible for the important Judicature Act of 1873. Created an earl in 1882, he left office in 1885, and broke away from Gladstone in 1886 over the Home Rule question. He died May 4, 1895.

His son, William Waldegrave Palmer, the 2nd earl (b. 1859) entered Parliament as Liberal M.P. for E. Hampshire in 1885, retaining the seat after he had become a Liberal Unionist. M.P. for W. Edinburgh, 1892-95, he succeeded to the earldom in that year, in which also he was made under-secretary for the colonies. Having been first lord of the admiralty, 1900-3, Selborne succeeded Lord Milner as high commissioner for S. Africa in 1905. In 1915 he joined the Coalition Government as president of the board of agriculture, but resigned in 1916. His eldest son, Viscount Wolmer (b. 1887), was from 1910 a prominent Unionist in the House of Commons.

SELBY. Urban dist. and market town of Yorkshire (W.R.). It stands on the Ouse, 14 m. from York, on the L.N.E. Rly. A canal connects it with the Aire and Calder navigation. The town is famous for its magnificent abbey church, restored after a fire in 1906. It belonged to a Benedictine abbey founded by William the Conqueror in 1069. Features include some beautiful Norman and Decorated work. Market day, Mon. Pop. 10,250.

SELDEN, JOHN (1584-1654). English antiquary. Born at Salvington, near Worthing, Dec. 16, 1584, in 1612 he became a barrister, formed friendships with some of the most learned men of the time, and appears to have been one of the company frequenting the Mermaid Tavern. He sat in the Long Parliament for Oxford University, was a lay member of the Westminster Assembly, and was several times in prison for his opinions. Among the offices he held was that of keeper of records at the Tower of London.

A great scholar, whose legal writings are still quoted with authority, his works include Titles of Honour, 1614; History of Tythes, 1617; and Privileges of Baronage, 1642; but he is best remembered for the volume called Table Talk, 1689. He died Nov. 30, 1654.

SELECTION. Biological term used in several different senses, all having reference to the process of evolution or the production of types of individuals. Natural selection is a term often used to express the central idea of the Darwinian theory of evolution, according to which the individuals of a species least fit to survive are eliminated. Artificial selection is

Selby, Yorkshire. The famous abbey church from the south-west

John Selden,
English antiquary
After Lely

the process which is used by breeders of animals in the endeavour to produce certain special types or qualities. Germinal selection denotes the theoretical selection which possibly occurs amongst germ-cells in a vertebrate body. Reversed selection takes place when the selection affects not the increase of an organ, but its decrease. Sexual selection is that part of the process of natural selection where sex comes into operation. See Biology; Darwin, C. R.: Evolution; Sex.

SELÈNÈ. In Greek mythology, goddess of the moon. She was the daughter of Hyperion, and a sister of Helios, the sun god, and Eos, goddess of the dawn. She made her journey across the heavens in a chariot drawn by two white horses. Just as in later times Helios, the sun god, became identified with Apollo so Selènè became identified with Apollo's sister Artemis. Pron. Selcenec.

SELENITE. Variety of gypsum or calcium sulphate. It is usually transparent, white or light grey, yellow or green in colour, and occurs in large twinned crystals which are capable of fine cleavage, like mica. In Great Britain the crystals are a feature of the Kinmeridge clay near Oxford. See Gypsum.

SELENIUM. A chemical element. Its symbol is Se, atomic weight 79.2; atomic number 34; specific gravity 4.26 to 4.82. It is similar in crystalline structure to sulphur, and like that element exists in various allotropic forms, the most important being the amorphous and the metallic. Selenium was discovered in 1817 by Berzelius, in deposits formed in the manufacture of sulphuric acid at Gripsholm, Sweden. It is used for colouring glass a delicate rose tint.

Crystalline selenium increases in electrical conductivity when subjected to light, and it has hence been made use of in forms of apparatus for the electrical transmission of photographs, and in the optophone (q.v.).

SELEUCIA. Ancient city of Asia. It was situated on the Tigris, on the frontiers of Assyria and Babylonia. Built by Seleucus I, king of Syria, between 312-302 B.C., it became a great and splendid city, but eventually was eclipsed by Ctesiphon as the chief city of W. Asia. After its capture by Severus, A.D. 198, it gradually fell into decay.

SELEUCID. Name of the Macedonian dynasty which ruled in Syria and other parts of W. Asia from 312 B.C. until the Roman annexation in 65 B.C. It was founded by Seleucus, called Nicator, or the conqueror, one of Alexander's generals, who in the partition of his empire following his death acquired possession of Syria, Mesopotamia, and the regions east of the Euphrates.

Seleucus was succeeded by his son Antiochus I (280-262), called Soter, or the saviour, from his victory over the Gauls who invaded Asia Minor in 278. Seleucus II (246-226) lost much territory to Ptolemy III of Egypt, to Arsaces of Parthia, and to the king of Pergamum, but these were largely recovered by Antiochus III the Great (223-187). The ablest of his successors was his son Antiochus IV, called Epiphanes. The dynasty came to an end with Antiochus XIII, who was deposed by Pompey in 65 B.C., when Syria became a province of the Roman Republic.

SELF HEAL (*Prunella vulgaris*). Perennial herb of the order Labiatae. A native of Europe, N. Africa, Asia, America, and Australia, it has a creeping root-stock and short branching stems, with ohlong or lance-shaped leaves. The purple, two-lipped flowers are produced in whorls, which are but slightly apart, the intervening bracts having purple margins. It was formerly used for wounds.

SELF-INDUCTION. In electricity, electric inertia. The starting and stopping of an electric current occupies a small fraction of time. This is of little consequence with a direct current, which flows continuously in one direction, but in the case of an alternating current, where the direction is rapidly and constantly reversed, the effort of rapidly changing direction produces a counter electromotive force, which has the effect of reducing the electro-motive force generated. See Current; Electricity; Induction.

SELFRIDGE, HENRY GORDON (b. 1864). Anglo-American business man. Born at Ripon, Wisconsin, Jan. 11, 1864, he entered business life, and in 1890 became a partner in the Chicago firm of Marshall, Field and Co. In 1909 he founded the firm of Selfridge and Co., London, and took over Whiteley's in 1926.

SELJUK. Turkish family which ruled Western Asia in the 11th and 12th centuries. Its founder was Seljuk, who about A.D. 1000 led a band of Ghuz Turks from the N. to the region of Bokhara. His grandsons gradually extended their sway over Persia, and during the 11th century Syria and Asia Minor were conquered. The Seljuk empire then extended from Kashgar to the Dardanelles, and from the Caucasus to S. Arabia. On Malik Shah's death the W. part broke up into independent states, of which the most illustrious was the Seljuk sultanate of Rum, the capital Iconium being the seat of a brilliant civilization, which lasted until the rise of the Ottoman Turks, about 1300. The main line reigned at Hamadan until 1194. See Persia; Turkey.

SELKIRK. Burgh of Selkirkshire, also the county town. It stands on Ettrick Water, 40 m. by rly. from Edinburgh, on the L.N.E. Rly. The place was long famous for its manufacture of shoes, an industry now superseded by that of woollen goods. Pop. 5,775.

The Selkirk Mts. are a range in the S.E. of British Columbia. They extend N. from the U.S.A. boundary to the great loop of the Columbia river.

SELKIRK, ALEXANDER (1676-1721). British sailor. The son of a shoemaker of Largo, Fife-shire, in 1703 he joined Damper's expedition to the South Seas as navigator of the vessel Cinque Ports. In 1704, when off Juan Fernandez, he asked to be set ashore in consequence of a quarrel with his captain. He remained on the island 52 months, was then picked up by Captain Woodes Rogers, and eventually became mate of H.M.S. Weymouth, on which vessel he died. Rogers's Cruising Voyage Round the World, 1712, is supposed to have given Defoe the idea of Robinson Crusoe.

SELKIRKSHIRE. Inland county of Scotland. In the S.E. of the country, its area is 267 sq. m. The surface generally presents a succession of hills, the whole forming part of the forest of Ettrick. The highest points are Broad Law (2,754 ft.) and Lochernig Head (2,625 ft.). The Tweed crosses the county; other rivers are its tributaries, the Ettrick and the Yarrow. Ettrickdale and the vales of the Tweed and Yarrow are noted for their beauty. The chief industry is sheep rearing. The L.N.E. Rly. serves the county. Selkirk is the county town, but Galashiels is the most populous. Pop. 20,100.

Self Heal. Flowering heads and leaves

SELLE. River of France. Rising S. of Le Cateau, it flows in a N. direction, and joins the Schelde at Denain.

BATTLE OF THE SELLE. This was a British-American operation in the Great War, Oct. 17-25, 1918. After the second battle of Le Cateau the German 2nd and 18th armies took up a strong position along the Selle river. In conformity with the general plan of pressing the Germans to the utmost, Haig directed the British 4th army (Rawlinson) to attack this position on a front from Le Cateau, S. for 10 m., while the 1st French army attacked still farther to the S. On Oct. 17 the attack was delivered in thick mist, and most of the tanks crossed the river successfully. Le Cateau itself was taken by an enveloping movement, and the Selle line, as far as a point a little N. of Le Cateau, was in British hands.

The last phase of the battle began on Oct. 23. From the Schelde S. for 5 m., the 1st army engaged the Germans with three divisions; in the centre, the 3rd army attacked with nine divisions; and on the right the 4th army assaulted with four divisions. With the fall of Vendegies au Bois in the afternoon of Oct. 24, the battle closed. The Allies captured 475 German guns and, in addition, 20,000 prisoners. See Le Cateau.

SELOUS, FREDERICK COURTENAY (1851-1917). British traveller. Born in London, Dec. 31, 1851, from 1872 to 1890 he explored

F. C. Selous, British traveller
Sutane

and hunted in Matabeleland and the country between the Transvaal and the Congo, becoming friendly with Lobengula, who granted him many privileges. He fought in the Matabele war of 1893, and took part in quelling the Matabele rising in 1896. On the outbreak of the Great War Selous joined the forces in East Africa. He received his captaincy the following August, and was awarded the D.S.O. in Sept., 1916. He was killed in E. Africa, Jan. 4, 1917. Selous was the original of Rider Haggard's hero Allan Quatermain. Pron. Seloo.

SELSDON. Nature reserve at Sandstead, Surrey. It covers 168 acres, and in it some of the rarer English birds breed, as its woodland character has been preserved.

SELSEY or SELSEA. Watering place of Sussex. It is 8 m. from Chichester, with which it is connected by a light rly. Here, in the 7th century, S. Wilfrid founded a monastery and Selsey became the seat of the bishop of the South Saxons. In 1075 the see was removed to Chichester. At the end of the peninsula is the headland known as Selsey Bill. Pop. 2,307.

SELSTON. Village of Nottinghamshire. It is 9 m. from Mansfield, on the L.M.S. Rly. In the neighbourhood are coal mines and ironworks. S. Helen's church is early English. Pop. 9,000.

Selkirkshire. Map of the lowland county of Scotland

SELVAGEE. Coil formed by winding rope yarn. After winding, the coil is tightly bound together continuously by another length of yarn. Selvagees are used as temporary or improvised slings, and for other purposes in connexion with hoisting apparatus, especially in military engineering.

Selvagee. Diagram illustrating how a selvagee is made

SELVAS (Sp. forests). Almost impenetrable equatorial forests in the basin of the river Amazon. They contain giant trees, below which is an undergrowth of trees of ordinary forest dimensions, the whole interlaced with creepers. The name has been extended to other regions where similar climatic conditions produce similar forests.

SELWYN, GEORGE AUGUSTUS (1719-91). British wit. He was born Aug. 11, 1719, his father being John Selwyn, a Gloucestershire landowner and his mother a witty beauty of the court. He became M.P. for Ludgershall in 1747, succeeded his father in the family estate of Matson in 1751, and was member for Gloucester, 1754-80. Selwyn was chiefly known as a convivial man about town, possessed of a lively wit, and as the hero of numerous anecdotes. He died in London, Jan. 25, 1791.

SELWYN, GEORGE AUGUSTUS (1809-78). British divine. Born at Hampstead, April 5, 1809, he was ordained in 1833, and in 1841 went out to New Zealand as a missionary bishop, doing good work in developing the church in the young colony, where he was during the Maori War. Returning to England in 1867, he was consecrated bishop of Lichfield in 1868, and he was there when he died, April 11, 1878.

G. A. Selwyn, British divine After Richmond

Selwyn College, Cambridge, perpetuates his memory. It dates from 1882. The chapel was consecrated in 1895, and the hall was built in 1903-9.

SEMANTICS (Gr. *semainein*, to signify). Term invented by Michel Bréal, French philologist. It denotes the study of words of a language in reference to their meaning or meanings, as contrasted with phonetics, the study of the sounds of a language.

SEMAPHORE. Instrument used for signalling between ships, mostly between warships. It consists of an upright post, at the head of which two arms are fixed. By means of handles these arms are swung into different positions, each of which represents a letter of the alphabet, and messages are thus transmitted. A similar form of signalling was formerly employed for sending messages overland, and was superseded by the electric telegraph. See Signalling; Telegraph.

Semaphore on British warship Cribb, Southsea

SEMELE. In Greek mythology, daughter of Cadmus, king of Thebes, beloved by Zeus. Hera persuaded her to ask of Zeus that he should appear before her in all his glory. In the lightning which was the symbol of his majesty, Semele was consumed, after giving birth to a son by him, the god Bacchus or Dionysus. Pron. Semmilce.

SEMRAMIS. Mythical Assyrian queen. Daughter of a Syrian youth and the Syrian fish-goddess, Dereto, she married Onnes, one of the generals of Ninus, and, having heroically taken part in the siege of Bactra, won the king's attention. Her husband then destroyed himself, and Semiramis married Ninus, whom she succeeded. She ruled for forty-two years, conquering many nations and founding Babylon, and then resigned the crown to her son. She is probably identical with the Syrian Venus Astarte. See Assyria. Pron. Se-mirramis.

SEMITES. Name denoting a group of peoples, past and present, mostly in W. Asia and E. Africa. Based on the fact that some of them are described in Gen. 10 as descendants of Shem, the name is applied primarily to peoples speaking closely related languages of the Semitic family. The typical Semite is essentially long-headed, tawny white, of medium stature, with black curly hair, strong beard, fine oval face, and straight or aquiline nose.

The classification of these peoples, linguistic rather than racial, is broadly into N. and S. The S. Semites include the Arabians, both the pastoral nomads or Beduins of N. Arabia and the settled communities in the S., with their migrant offshoots in Abyssinia. The N. Semites penetrated to outlying regions in successive waves of migration. They appeared early in Iraq and Mesopotamia, where they mingled with the riverside dwellers and founded Semitic dynasties in Babylonia and Assyria. Another wave accounts for the Aramaeans of the upper rivers, who may have given rise to the Canaanite peoples. These in their turn absorbed the Hebrew influx after its long contact with Egyptian civilization.

Semitic languages differ profoundly from Indo-European in vocabulary and grammatical structure. A dominant feature is the formation of roots containing three consonants, words being derived from them by vowel-changes, prefixes and suffixes. The only Semitic dialect spoken exclusively by Christians is Maltese. The service rendered by the Semite to the intellectual life of mankind by sharing in the formation and dissemination of alphabetic writing was very great. Apart from religious poetry and idealism, where it reigns supreme, Semitic literature is of secondary rank. See Alphabet table, page 62.

SEMITONE. Smallest interval recognized in European music. It may be described as the distance on the pianoforte from any given note to its immediate neighbour. Semitones are of two kinds: diatonic, having different letter names, and chromatic, having the same letter names for the two notes.

SEMNEH. Ruined fortress in the Anglo-Egyptian Sudan. On the left bank of the Nile, 37 m. S. of Halfa, it was founded, with Kummeh, on the right bank, to guard the new S. frontier of Egypt, by Senusert III, who set up an inscription there urging resistance to Nubian attacks, and built a temple in the fortress, rededicated by Thothmes III to Khnum and the Nubian god Didun (Tithonus). It is the ancient Samnin or Sammina.

SEMOLINA. Middling or coarse particles of the grain produced during the process of grinding wheat. Semolina is largely used in the manufacture of macaroni and is a principal ingredient of many well-known cereal foods, in addition to forming the base of nutritious puddings for domestic use.

SEMPACH. Town of Switzerland, on the E. shore of Lake Lucerne, 9 m. N.W. of Lucerne. It is famous for a battle fought

July 9, 1386, between Leopold, duke of Austria, and the Swiss. The nature of the country compelled the Austrian knights to dismount, and a stubborn fight ensued, in which the Swiss proved the victors. It was in this battle that Arnold von Winkelried is said to have broken the hostile line by drawing to his breast a group of spears.

SEN. Japanese bronze coin, the one-hundredth part of a yen. Its nominal value is one farthing. It is coined in silver pieces of 50, 20, and 10 sen; in nickel 5-sen bits, and also in bronze half-sen or 5 rin.

SENATE (Lat. *senatus*, council of elders). In Rome, originally a council of patres or heads of clans or families, chosen by the king, and meeting to advise upon public matters. With the establishment of a republic the senate became the most powerful factor in the new constitution under which Rome was developed from a city state into a world empire. The number of senators varied from 300 in the early times to 1,000 in the time of Julius Caesar. Augustus fixed the number at 600. Under the empire the senate became definitely a law-making body, and was also the supreme judicial authority. With the growth of absolutism the power and importance of the senate gradually diminished.

The word senate has passed into the constitutions of modern states, being sometimes applied to the second chamber of a legislature of two houses. Canada, Australia, S. Africa, France, Italy, and the United States call their second chamber by this name. There are senates in both the parliaments of Northern Ireland and the Irish Free State.

SENECA, LUCIUS ANNAEUS (c. 4 B.C.-A.D. 65). Roman philosopher, dramatist, and statesman, known as Seneca the Younger. Son of the Elder Seneca, he was born at Corduba, in Spain. He became tutor to the young Nero, and after his accession continued in the closest association with him. Later, he fell into disfavour, and in A.D. 65 was accused of conspiracy and was compelled to commit suicide. Many of Seneca's works have been lost, but many have come down to us, including works on philosophy, morals, and science, the latter being of no scientific value. Nine tragedies have also been preserved, which, though quite lacking in dramatic instinct, had great influence upon the drama of the 16th century, being the only extant Latin models of this class of literature. Seneca is at his best in his writings on morals.

His father, known as Seneca the Elder, was a rhetorician of note. Most of his writings have been lost, but ten books of *Controversiae*, disputations on imaginary issues, are extant.

SENEGA (*Polygala senega*). Perennial herb of the order Polygalaceae. A native of N. America, it has a hard creeping root-stock with a ridge along one side, from which several stems arise. The lance-shaped leaves have rough edges, and the white flowers form a single spike. The root-stock, powdered or infused, or a tincture prepared from it, affords an expectorant and diuretic medicine. In large doses it acts as an emetic and cathartic.

SENEGAL. French colony and protectorate of W. Africa. It lies to the S. of the Senegal river. There are three municipal communes, St. Louis (the capital), Dakar (the chief port), and Rufisque. The island of

Sen. Both faces of the Japanese bronze coin. The actual diameter is 1 1/2 in.

Seneca the Elder, Roman rhetorician From a bust

Goree was amalgamated with Dakar in 1929. The colony is administered by a lieutenant-governor. The agricultural products include ground nuts, gum, millet, unize, and castor beans. Ground nuts are the chief export. The colony is traversed by two rlys. from St. Louis to Dakar, and from Thiés, a station on the first rly., to Kayes, in French Suddn. Its area is 74,112 sq. m. Pop. 1,318,287.

The river which gives its name to the colony is formed by a union of the Bakoy and the Bafing. It is 700 m. long and falls into the Atlantic near St. Louis. It is navigable in the wet season as far as Kayes.

SENEGAMBIA. Name formerly applied to the regions between the Senegal and Gambia rivers, W. Africa. In a restricted sense it was applied to the French territories generally N. of Sierra Leone, but in the wider application it comprised roughly the present colonies of Senegal, Gambia, Portuguese Guinea, and French Guinea. Subsequently the name was restricted to the interior districts beyond Senegal which were formed into the Senegambia and Niger territories. See Africa; Senegal; Sudan.

Senlac. Ancient name of the place in Sussex where the battle of Hastings was fought in 1066. See Hastings, Battle of.

SENLEIS. Town of France. It stands on the Nonette, 32 m. from Paris. The chief building is the cathedral dating from the 12th to the 16th centuries, with a finely sculptured portal. There are remains of the castle. The town was occupied for a short time in Sept., 1914, by the Germans. Toeh had his headquarters here Nov. 8, 1918, when the Germans applied for an armistice. Pop. 6,653.

SENNA (Cassia). Large genus of shrubs and herbs of the order Leguminosae. Mostly natives of tropical and warm climates, they have leaves broken up into two rows of leaflets and the flowers are yellow. The dried leaflets of several species constitute the purgative drug senna, of which the best kind (Alexandrian senna) is afforded by *C. acutifolia*, a native of the Nile region. See Cassia.

Sennacherib, King of Assyria. From a bas-relief. British Museum.

SENNACHERIB. King of Assyria, 705-680 B.C. Son of Sargon II, he undertook campaigns against Elam, Cilicia, Phoenicia, and Palestine. Although his siege of Hezekiah in Jerusalem was raised (2 Chron. 32), he despoiled and depopulated Judah, rebuilt Cilician Tarsus, 698, and destroyed Babylon, 689. To his improvements

Nineveh owed its renown. His son Esarhaddon succeeded him. See Assyria; Nineveh.

SENNAR. Prov. of the Anglo Egyptian Sudan. It extends from the frontier of Abyssinia almost to the White Nile, and comprises a considerable portion of the valley of the Blue Nile. The capital is Singa. This town of Sennar, situated on the Blue Nile, is connected by rly. with Khartoum and El Obeid.

The Sennar or Makwar dam on the Blue Nile is about 200 m. S.E. of Khartoum, and was opened in 1926. It is 9,925 feet long. The flood waters of the Blue Nile have been impounded in sufficient quantity to irrigate 3,000,000 acres of soil.

Sennar Dam. The great Sennar or Makwar dam on the Blue Nile, opened in 1926.

SENSITIVE PLANT (*Mimosa pudica*). Prickly perennial herb of the natural order Leguminosae. A native of tropical America,

Sensitive Plant. The Brazilian *Mimosa pudica*. Below, with leaves expanded; top, closed.

one which is touched then successively pass through the same movements

SENUSSI. Mahomedan order. Founded in 1835 by an Algerian, Sidi Mahomed ben Ali es Senussi, its headquarters were originally at Alexandria. Later these were moved into the desert, and the Senussi exercised sovereignty over much of the central Sudan, and were powerful throughout the whole of N. Africa. Influenced by Wahhabite puritanism, Senusism sought to recapture the simplicity of early Islam as taught by the Koran.

During the Great War the Senussi, urged on by the Turks and Germans, invaded Egypt in Nov., 1915, their total force, which included Arabs, Berbers, and Turks, numbering 30,000 men. Thereupon the Anglo-Egyptian posts were withdrawn from Sollum and Sidi Barani, and concentrated at Mersa Matruh, where Gen. Waller drove back the Senussi S. and W. of the town in Dec. Sollum, following a British victory near Agagia in Feb., 1916, was reoccupied. Elsewhere the Senussi seized oases and approached close to the Nile. By May, 1916, the British, aided by Italians, had driven the Senussi from Baharia and the S. oases, and the rising was finally crushed.

SEOUL or **KEJO.** Capital of Korea (Chosen). It stands on the river Kan, about 25 m. E.N.E. of Chemulpho (Jinsen), its port. Walls enclose the city, which is an important rly. centre. Pop. 315,000. See Korea.

SEPAL. In botany, one of the outer protecting floral leaves. The sepals collectively are known as the calyx, and if united by their edges the calyx is said to be gamosepalous. As a rule sepals are green, but in the absence of petals they are brightly coloured. See Flower.

SEPARATION. In English law, term generally used in the matrimonial sense. It describes (1) the state of things that exists when a husband and wife cannot agree to live together, and enter into an arrangement for living apart; (2) a separation order by a magistrate; or (3) judicial separation.

Separation orders are granted by police court magistrates. A wife whose husband is convicted of an aggravated assault on her, or of any assault on her for which he has been convicted on indictment (i.e. not at a police court) and fined over £5 or imprisoned for more than two months, or is guilty of persistent cruelty to her or her children, can complain to the magistrates, obtain an order for

separation, and an order for the husband to pay a weekly sum to her for her maintenance and for that of the children. She may also obtain an order if he deserts her or fails to maintain her or the children. If either the husband or wife is an habitual drunkard the other may obtain a separation order. In fixing a separation allowance the court has regard to the means of both husband and wife. The maximum is £2 a week for the wife and 10s. a week for each child under 16.

A judicial separation is granted by the Divorce Division of the High Court for cruelty, adultery, or desertion for not less than two years.

SEPIA (Gr. cuttle-fish). Name of a genus of the order Cephalopoda of the phylum Mollusca. (See Cephalopoda; Cuttle).

The name sepia is given to a transparent brown pigment originally derived from the cuttle-fish, but now generally made from the juice of walnuts. It is much used in artists' drawings when it is desired to show the gradation of tones of one colour, and is often combined with pen-and-ink work and other means of heightening an effect.

SEPOY (Persian sipahi, army). Anglo-Indian term for the Indian soldier in European service. The word is now commonly applied to the infantry soldier as distinguished from the sowar or trooper. Sepoys were first raised in trained bands as factory guards by the East India Company in the middle of the 18th century, and formed the nucleus of the company's army in their struggle with the French. During the next 150 years they were employed in various campaigns in Asia and Africa, but it was not until 1914 that they fought in Europe.

SEPT (Old Fr. septe, variant of secte, sect). Term applied to an Irish clan. The old Irish sept was a division of the tribe of which it was an offshoot. The freemen of the sept were theoretically related by blood, and bore the clan name with the prefix Ua, grandson, written O' in English. See Clan.

Seoul, Korea. One of the new business thoroughfares, showing the Y.M.C.A. building on the left.

SEPTENNIAL ACT. Act passed in 1716 fixing seven years as the extreme limit for the duration of a Parliament. In early times there was no such limit, parliaments being dissolved when the king wished or when he died. In 1694 the Triennial Act declared that no parliament should sit longer than three years. In 1716, however, the Jacobite rising had caused great unrest in the country, and to avoid the danger of a general election at such a time the Septennial Act was passed. It remained in force until 1911, when the Parliament Act (q.v.) limited the duration of a parliament to five years. See Parliament.

Septuagesima (Lat. septuaginta). In the ecclesiastical calendar, the third Sunday before Lent, being about the 70th day before Easter.

SEPTUAGINT, THE. Greek version, commonly designated LXX, of the O.T. It is so called from the Lat. word septuaginta, seventy, because, according to a tradition, preserved by Philo, Josephus, and in the so-called letter of Aristas to Philocrates, the translation of the Law (Pentateuch) was made

by seventy or seventy-two translators. On the whole the work of Alexandrian Jews, the version was made gradually and was not completed until nearly the beginning of the Christian era. The Septuagint included the O.T. Apocrypha, and these are interspersed among our canonical books. See Bible.

SEPULCHRE (Lat. sepelire, to bury). Tomb or other place of burial. The Holy Sepulchre is the name given to the tomb of Jesus Christ in Jerusalem. The site was identified by Constantine, who built a church there, the successor to which now covers the supposed site of Calvary, as well as that of the tomb. The Holy Sepulchro, in the middle of the church, is now converted into a chapel. Around it are a series of chapels devoted to the purposes of the Latin, Greek, Armenian, and other churches. See Jerusalem.

SERAGLIO (Turk. serai, palace). Former residence of the sultan in Istanbul (q.v.). It crowns the most easterly of the city's seven hills, and is surrounded by a wall, 2 m. round. Mohammed II commenced the building in 1468, and Suleiman II made considerable additions 1520-66: since 1839 it has not been in use and has fallen into decay. It contained the sultan's harem.

SERAING. Town of Belgium. It lies on the right bank of the Meuse, $\frac{1}{2}$ m. by rly. W.S.W. of Liège, and is the centre of a busy industrial area. It is the seat of the famous iron-working and engineering firm known as Cockscill's. Pop. 43,851.

SERAJEVO or **SARAJEVO**. City of Yugoslavia. It stands on the Miljacka, 122 m. S.W. of Belgrade, with which it has rly. connexion.

Several fine stone bridges span the river. Notable buildings are the R.C. cathedral, the 16th-century mosque of Husref Bey, the Konak, or governor's residence, and the town hall. Brewing, silk-weaving, dyeing, and the making of pottery are among the industries. The assassination of the archduke Francis Ferdinand here on June 28, 1914, precipitated the Great War. Pop. 64,500. Pron. Ser-ra-ye-vo.

Sarajevo, Yugoslavia. The 16th-century mosque of Husref Bey

SERAPEUM. Temple of Serapis. The most famous was at Alexandria, founded about 300 B.C., and converted into a Christian church A.D. 389. See Sakkara.

SERAPHIM (Heb. Seraphs). Supernatural beings attendant upon Jehovah and guardians of His sanctuary. In the O.T. they are mentioned only in one passage (Isa. 6, 2). Elsewhere the same word, *sārāph*, means serpent (Num. 21, 6).

The order of the seraphim is the premier Swedish order of knighthood. It was instituted in 1334, revised in 1748, and modified by later statutes.

SERAPIS or **SARAPIS**. Greco-Egyptian deity. Ptolemy I Soter introduced to Alexandria a Greek Hades-image; this was Serapis, and for its worship he erected the Serapeum. Deemed to represent an Egyptian Osiris-Apis, the new cult, in association with Isis, gained prompt recognition in Egypt, and spread

thence through the Greco-Roman world. The most famous temple for the worship of Serapis was at Alexandria.

SERBIA. Former kingdom of S.E. Europe, now the E. part of Yugoslavia. It lies S. of the Danube, between Bosnia, Montenegro, and Albania on the W. and Bulgaria on the E., and adjoins Greece on the S. The region is largely mountainous. Among the rivers are the Morava, Ibar, Vardar, and Timok. As part of Yugoslavia it now controls a long stretch of the Danube navigation between Rumania and Austria, as well as much of the river traffic on the Theiss (Tisza, Tisa), Save, and Drave. It further has access to the Adriatic along the Dalmatian and Croatian coasts. The area is 36,937 sq. m. Pop. 4,129,638.

In 1804 Kara George, the national hero of Serbia and the ancestor of the ruling house of Yugoslavia, led the first Serbian revolt against Turkish rule. It was not, however, until 1867 that Turkish garrisons were finally expelled from Serbia, and not until 1878 that Serbia's complete independence was acknowledged by Turkey. Alexander, the last of the Obrenovitch dynasty, was succeeded on the throne by Kara George's grandson, Peter, in 1903. Austria declared war on Serbia in 1914. In Nov., 1918, King Nicholas of Montenegro was deposed and his kingdom united with Serbia, and in the following month Serbia became the predominant part of the new Serb-Croat-Slovene kingdom called Yugoslavia. See Yugoslavia.

THE CONQUEST OF SERBIA. The Great War began with Austria's declaration of war on Serbia, July 28, 1914. On July 29 the Austrians began to bombard Belgrade, and on Aug. 12 crossed the Drina and occupied Shabatz, and advanced on Valjevo. The Serbians attacked on Aug. 17 and compelled the enemy to evacuate Serbia. The second Austrian invasion (Sept. 8) also met with defeat. A third opened in Nov. and issued in a fresh defeat at Mt. Rudnik (Dec. 12).

In Oct., 1915, a powerful Austro-German invasion was launched. The rapid advance of the enemy separated the N. from the S. Serbian forces. Nisb, the war capital, fell to the Bulgarians on Nov. 5, and by that date the larger part of Serbia, with most of the important rly. to Constantinople, was in the hands of the invaders. The Serbians retreated, and by Dec. 7 the country had been completely overrun and conquered.

Despite dreadful sufferings in the retreat to the coast, more than 100,000 men ultimately reached Corfu, where they were rested and refitted by the Allies. In 1916 the reconstituted Serbian army was transported from Corfu to Salonica, and thence to the Macedonian front. There they participated in all the battles which resulted in the reconquest of Serbia. On Oct. 30, 1918, they were again in possession of their capital, Belgrade.

SERES. Town of Greece. The ancient Seris or Sirae, it is 45 m. N.E. of Salonica, and is the capital of the dept. of the same name. It has a cotton industry, and trades in grain, rice, tobacco, wool, hides, and silk cocoons. It is the seat of a Greek archbishop. Seres was occupied by the Bulgarians in 1916 by collusion with the Greek government, and evacuated by them in Oct., 1918, after the armistice granted to Bulgaria by the Allies. Pop., town, 29,640; dept., 186,710.

SERETH or **SIRETUL**. River of Rumania. It rises in the Bukovina, and flows S. across Moldavia to join the Danube 5 m. above Galatz. The little Sereth, Suczawa, Moldava, and Bistritz are its chief affluents. Its length is 291 m. It was the scene of fighting between the Russians and Austro-Germans, Sept., 1915.

Serbia. Peasants from a remote village in their gala dress

SERF (Lat. servus, slave). In feudal usage, a member of the class of peasants who were bound to the land of their master, which they cultivated.

Historically, serfdom may be regarded as a modified form of the earlier slavery. In England the custom was extinct by the end of the 16th century. In Scotland, however, colliers and salters remained serfs until late in the 18th century. In France the institution was abolished at the time of the Revolution; in Austria and Prussia it survived until the middle of the 19th century. As a result of the Crimean War, the tsar Alexander II began the emancipation of the Russian serfs by liberating those on the imperial domains in 1858, and completed it by the Act of Feb. 19, 1861, which came into full effect in 1863. In all about 23,000,000 serfs were set free. See Feudalism; Manor; Slavery; Villeinage.

Sergeant. Variant spelling of the non-commissioned rank, serjeant (q.v.).

SERINGAPATAM. Town of Mysore, India. On an island in the Cauvery river, 9 m. N.E. of Mysore, it was the capital in the days of Tippoo and Haider Ali, and contains their tombs, Tippoo's mosque, and the ruins of his palace. Pop. 7,217.

On the entry of the British into Mysore in 1790, Tippoo established himself in Seringapatam, which he fortified strongly. The British arrived before it in April and made a breach in the S. wall, May 4, 1790. The city was bravely defended, and Tippoo Sahib lost his life fighting in the breach. See Cornwallis, Earl; Tippoo Sahib.

Seringapatam, India. Mausoleum of Tippoo and Haider Ali, from the palace gardens

SERJEANT or **SERGEANT** (Lat. serviens, serving). Non-commissioned rank in the British army and in the Royal Marines, below that of company, battery, or squadron serjeant-major, and above that of corporal. The chief duties of a serjeant are to maintain discipline in barracks, to teach drill, and in the field to transmit officers' commands. He is distinguished by three inverted chevrons on his sleeves. Serjeant-major is the highest non-commissioned rank in the British army. Regimental serjeant-majors wear the royal arms on the right cuff; other serjeant-majors have a crown.

Serjeant-at-arms is the title of certain officers of the British royal household. One is the lord chancellor's mace-bearer and

attendant in the House of Lords, and another officer performs similar functions for the Speaker in the House of Commons

Serjeant-at-Arms.
The Speaker's
mace-bearer

Serjeant-at-law is the term for an English legal order, now extinct. Until 1845 serjeants-at-law had a monopoly in the court of common pleas in term time, but not in vacation. Their mark of office was a coif or skull cap (see illus. p. 430). They had their own inn, Serjeants' Inn, in Fleet Street until 1877.

SERPENS. In astronomy, one of the ancient constellations. The head of the serpent is marked out by five stars in the shape of an X immediately below the semicircle of the Northern Crown. The tail comes to an end in a channel of the Milky Way. The chief star is Cor Serpentis.

SERPENT. Alternative name for the legless reptiles or snakes. To-day serpent is applied to the larger species. See Reptile; Snake.

SERPENT WORSHIP. In olden days serpent worship was prominent in religious cults. In Genesis, as to the Babylonians and Aztecs, the serpent is a spirit of wisdom, and was worshipped as such by the semi-Christian sect of Ophites. A widespread connexion with healing is found in the brazen serpent of Israel, worshipped in Hezekiah's time, in the Greek cult of Aesculapius, and in W. African belief.

SERPENT. Obsolete wind instrument of the cornet (q.v.) type. It was generally made of wood in several pieces joined together and covered with leather, but having a metal crook terminating in the mouth-piece. The conical tube was about 8 ft. in length, bent for convenience in handling into snake-like convolutions, thus giving rise to the name. The normal compass was three octaves. Its soft, woody quality made it a favourite for church use. In France it sustained the Plainsong, and in England it was for long a common member of village church orchestras.

Serpent, an obsolete musical instrument of the cornet type

SERPENTINE. Hydrated magnesium silicate, crystallising in a monoclinic system. It is a soft rock with a glassy or resinous lustre, and varies in colour from yellow to red, green and brown. The chief colour is some shade of green. Though soft, serpentine is durable, and is in great demand as an ornamental building stone. That found in Cornwall is known as serpentine marble. Serpentine rocks are also one of the chief sources of chlorite. See Chromite.

SERPENTINE, THE. Artificial lake in Hyde Park and Kensington Gardens, London. Caroline, queen of George II, in 1730-33 threw several ponds into one, and the sheet of water thus formed was fed by the Westbourne until 1834, when water was supplied from the Thames. The part in Kensington Gardens is called the Long Water. After leaving the park at Albert Gate the Serpentine becomes part of the London main drainage system. In 1930 the Serpentine began to be used for mixed bathing. See Hyde Park; Kensington.

SERPULA. Genus of polychaete (many-bristled) marine worms, belonging to the

phylum Annelida. They construct the chalky tubes so often seen on the shells of scallops and other molluscs. The head bears beautifully coloured plumes—the gill filaments—and an opereulum which closes the mouth of the shell. They are found from shallow water to great depths, specimens having been dredged from 3,000 fathoms.

SERUM THERAPY. Prevention or treatment of disease by an anti-toxic serum. When a dose of bacteria or the toxins produced by bacteria is injected into an animal, the serum of the blood of that animal develops certain substances known as anti-toxins, which neutralise the effect of the poisonous injection. After a succession of gradually increasing doses has been injected the animal is killed, and the serum prepared from its blood may be used for injection into a human being suffering from the disease, or may be given as a preventive. This method has been of value in the treatment of diphtheria and tetanus. See Antitoxin

Serval. Wild cat found in the forests and undergrowth throughout Africa

SERVAL (*Felis serval*). Species of wild cat. Occurring throughout Africa, it is about 4 ft. 6 ins. in total length, and the fur is a rich brownish yellow with black spots. The tail is banded and is a little over a foot long.

SERVICE, ROBERT WILLIAM (b. 1874). Canadian poet. Born at Preston, Jan. 16, 1874, he led a varied life in Canada, and his poems reflect the sterner aspects of life in the wild north-west. His *Songs of a Sourdough* and *Ballads of a Cheechako* have enjoyed great vogue; also his *Rhymes of a Red Cross Man*, prompted by his experiences in the Canadian Medical Corps. The *Trail of '98* is a novel containing vivid pictures of life at Klondike. Later works are *Ballads of a Bohemian* and *The Rough-Neck*.

SERVICE TREE (*Pyrus sorbus*). Tree of the order Rosaceae. A native of Europe and temperate Asia, it resembles the rowan, or mountain ash, but the bark is rough, the leaflets broader and downy on both surfaces, the flowers larger, and the oval fruits four times the size of mountain-ash berries. The colour of the fruits also is different, being greenish brown with dots of rusty red. They are harsh to the taste until touched by frost.

SERVITES. Popular name of the Roman Catholic mendicant order of the Religious Servants of the Holy Virgin. It was founded in 1233. The dress includes a black habit, leather girdle, scapular, and cape. In 1487 Innocent VIII conferred upon the order privileges akin to those bestowed upon the Franciscans, Dominicans and Carmelites.

Serpula. Plumed worm, withdrawn from tube

SERVUS TULLIUS. Sixth legendary king of ancient Rome, 578-534 B.C.

He is the reputed founder of the so-called Servian constitution. Essentially military in character, this formed the basis of a new assembly, *comitia centuriata*, in which the power of wealth predominated. Servius also made an alliance with the Latins, brought the seven hills within the city limits, and surrounded the whole with a ditch and rampart.

SESAME, GINGELLY, OILY GRAIN, OR GINGILI OIL-PLANT (*Sesamum indicum*). Annual herb of the order Pedaliaceae. A native of India, it has opposite, oval leaves and white two-lipped flowers spotted with yellow, red, or purple. The small oily seeds are contained in oblong two-celled capsules. On pressure they yield a tasteless oil, which is used for the adulteration of oil of almonds. Pron. scssa-me.

Sesame. Leaves and flowers of the Indian plant

SESSION (Lat. *sedere*, to sit.) Word meaning a sitting and used in two main senses, political and legal. In the British Parliament, a session is a continuous sitting of Parliament, and usually takes up the greater part of a year. Each parliament consists of a certain number of sessions. A session is ended by a prorogation, but a parliament by a dissolution. In law, the word is used for quarter and petty sessions. In the Presbyterian Church session is the name given to the meeting of the minister and elders.

COURT OF SESSION. The chief law court in Scotland is called the court of session, or college of justice. It consists of two houses, outer and inner, the inner being the court of appeal from the outer. Its judges are called senators. Its headquarters are in Parliament Square, Edinburgh, and from it there is an appeal to the House of Lords. See Parliament.

Robert W. Service
Canadian poet
By courtesy of T. Fisher
Unwin, Ltd.

SESSIONS. In law, term used for the sittings of justices in court upon commission. In England, sessions of the peace is the general term for those sessions held by justices of the peace, which comprise petty sessions, where two or more justices sit to give summary trial for certain minor offences; special sessions, where justices transact such business as granting of licences, etc., for the county division or borough which they represent; quarter sessions or county sessions; and general sessions, where the justices meet to act judicially for the whole region.

SESTERCE (Lat. *sestertius*, for *semitis tertius*, two and a half). Ancient Roman coin at first equal to 2½ asses and subsequently to 4 asses, or something over 2d. in English money. Originally a small silver coin, it became a copper one under the Empire. Its symbol was *IIS* or *HS*.

SET OR SETH. Egyptian deity. Originally a predatory tribal god at Kom Ombo, he came to represent the powers of darkness, and was portrayed as a grotesque

Sesterce. Coin of Vespasian, commemorating, on the reverse, the Conquest of Judaea. Diameter 1½ in.

animal. He was rehabilitated in the XIXth dynasty, whose two monarchs Seti bore his name, and was identified with the Greek Tryphon.

SETI. Name of two Egyptian kings of the XIXth dynasty. Seti I (c. 1300 B.C.) recorded at Karnak his Syrian, Hittite, and Libyan campaigns. His great Abydos temple (see illus. pp. 548 and 1204) and Theban tomb are supreme examples of Egyptian art. His mummy is at Cairo.

SETTER. Large breed of dogs of the spaniel group. They are game dogs, and are trained to crouch down when marking game, instead of standing like the pointer.

Five breeds of setter are recognized, though only three of them are generally met with. The English breed has a wavy, silky coat, while the tail carries a fringe of long, straight hair,

Setter. Compton Daisy, a champion of the English breed

and the toes have hair on the inner sides. The Scottish or Gordon setter, the heaviest breed, has been crossed with a bloodhound. It is black and tan in colour, has coarse hair and a rather short tail. The Irish setter, a smaller and lighter breed, has red hair. The Welsh setter is known by its curly coat.

SETTERWORT or **STINKING HELLEBORE** (*Helleborus foetidus*). Perennial herb of the order Ranunculaceae, a native of W. Europe, and, as a rare wild plant, of the S. and E. of England in chalky soil. It varies in height from a foot to 2 ft., with large, leathery leaves 6 ins. across. The large flowers, which open about February, have conspicuous pale greenish-yellow sepals, the petals being converted into little green tubes containing nectar. After the flower has been slightly open for a few days, a line of dull crimson develops on the margins of the sepals. The seed vessels are large follicles which contain about twelve large black wrinkled seeds. It has a strong fetid odour, and was formerly used in domestic medicine as a vermifuge. See *Hellebore*.

SETTLE. Market town of Yorkshire (W.R.). It stands on the Ribble, 11 m. from Skipton, on the L.M.S. Rly. Folly Hall dates from the 17th century. The industries include cotton mills and tan yards. The town is a good centre for excursions to the Pennine Hills, with their caves. Market day, Tues. Pop. 2,389.

SETTLEMENT. In English law, a transfer of any kind of property to trustees to hold for persons in succession. A settlement can be made by deed or by will. The most usual provisions in a settlement are (1) a trust in favour of the first taker (the tenant for life); (2) trusts in favour of widow (or widower) of the first taker; (3) trusts in favour of the child or children or other offspring of the first taker. It is not lawful to create an unlimited series of life estates. Every settlement must, by its terms, cause the capital (if personalty) or the fee (if realty) to vest absolutely in somebody within the compass of a life or lives in being and 21 years after.

Act of Settlement is the term given to a measure passed by the Parliament of England in June, 1701. It settled the crown of the country, and with it those of Scotland and Ireland, on the electress Sophia of Hanover and her heirs. It is to this Act that George V, as a descendant of Sophia, owes his crown.

SETTLEMENT. In English poor law, the legal right, acquired by residence or otherwise, of a pauper to maintenance in a par-

ticular union or parish. If any person should become chargeable to the poor rate while not residing in his place of settlement, the parish in which he happens to be may hand him over to his place of settlement and charge that place for expense incurred on behalf of the pauper. Settlement can be acquired by birth, by residence as a ratepayer, and by various other means. See *Pauperism*; *Poor Law*.

Settler's Clock. Name for the laughing jackass, a kingfisher of Australasia and New Guinea. See *Laughing Jackass*.

SEVASTOPOL. Port of Russia, in the autonomous republic of the Crimea. It stands on the S.W. coast, and its harbour is capable of accommodating ships of very large tonnage. The port is now closed to trade, being used entirely as a naval station. Pop. 74,703.

The siege of Sevastopol was the principal incident in the Crimean War, 1854-55. After the battle of the Alma, Sept. 20, 1854, the allied armies were able to entrench themselves within a mile of Sevastopol, and on Oct. 17 began to bombard it.

On June 7, 1855, the French carried the Mamelon fortress, which protected the Malakoff works, Sevastopol's chief defence. A furious bombardment was opened by the Allies early in Aug., and the French victory of the Tschernaya, Aug. 16, was the finishing stroke. After a final assault, Sept. 5, Sevastopol was evacuated. See *Alma*; *Crimean War*; *Redan*.

SEVEN BISHOPS. Those who in 1688 petitioned James II against his order commanding the clergy to read on two successive Sundays his second Declaration of Indulgence. The seven were William Sancroft, archbishop of Canterbury; Thomas Ken, bishop of Bath and Wells; Sir Jonathan Trelawny, Bart., bishop of Bristol; Lloyd of St. Asaph, Lake of Chichester, White of Peterborough, and Turner of Ely. In temperate language they declared that the Declaration was illegal, and asked to be excused from reading it. The petition was printed, and the king had the bishops arrested for seditious libel. Tried before three judges, they were found not guilty by the jury.

SEVEN CHAMPIONS OF CHRISTENDOM. Name given in medieval legend to the patron saints of seven countries. Their deeds were celebrated in prose and verse. The champions were: S. George of England, S. Denis of France, S. Anthony of Italy, S. James of Spain, S. Andrew of Scotland, S. Patrick of Ireland, and S. David of Wales.

SEVEN CHURCHES OF ASIA. Name given to the seven principal churches in Asia Minor which were presided over by bishops in apostolic days. They are enumerated in the opening chapters of the Book of Revelation. They were Ephesus, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia, and Laodicea. See *Revelation*, Book of.

SEVEN DIALS. Area in London where seven narrow streets meet. It is between St. Martin's Lane and New Oxford Street, W.C. Once noted for broadsheet hallad printers and ballad-mongers, Seven Dials became a centre for dealers in domestic pets. It contains the Cambridge Theatre, opened in 1930.

SEVENOAKS. Urban dist. and market town of Kent. It is 22 m. from London on the Southern Rly., standing above the Darent, amid picturesque scenery. The church of S. Nicholas dates in part from the 13th century, and the grammar school was founded in the 15th. There is a cricket ground reputed to be one of the oldest in England. In the neighbourhood are some fine country residences, notably Chevening and Knole. Market day, Mon. Pop. 8,830. See *Knole*.

SEVEN WEEKS' WAR. Name given to the war between Prussia and the allied powers of Austria and certain German states, 1866.

The long-standing enmity between Austria and Prussia had caused the latter power to reorganize her army, and Bismarck deliberately sought a quarrel with Austria, with whom stood Bavaria, Württemberg, Baden, Saxony, Hesse-Cassel, Hanover, and Nassau. Strengthened by the secret alliance of Italy, April 8, Prussia declared war, June 14. After several minor successes the Prussians, under William I, encountered the main Austrian army at Sadowa (q.v.) and inflicted a crushing defeat upon it, July 3, 1866. This battle was

Sevastopol, Russia. Southern bay and principal harbour

decisive and the Austrians asked for a truce. The war was ended by the peace of Prague, signed Aug. 23, 1866. By this settlement Austria withdrew from the Bund, ceded Venetia to Italy, and renounced her claims in Schleswig-Holstein, which, with Hanover, Hesse-Cassel, Nassau, and Frankfurt-on-Main, were soon after annexed by Prussia.

SEVEN WONDERS OF THE WORLD. In ancient times, the Hanging Gardens of Babylon, the Pyramids of Egypt, the temple of Diana at Ephesus, the statue of Jupiter by Pheidias at Athens, the Colossus of Rhodes, the mausoleum erected by Artemisia at Halicarnassus, and the Pharos or lighthouse of Alexandria. An extant description of these wonders is attributed to the mechanician Philo of Byzantium (c. 145 B.C.).

SEVEN YEARS' WAR, THE (1756-63). Struggle between, on one side, Great Britain, Prussia, and Hanover, and on the other, France, Austria, Russia, Sweden, Saxony, and finally Spain. It had two main aspects. In one it was a duel between France and Great Britain for supremacy in America and in India; in the other it was the struggle of Prussia against foes encircling her on every side.

The war in India had two phases, the conquest of Bengal, which was only indirectly connected with the French quarrel, and the destruction of the French power in the S. of India. In America partially successful campaigns in 1758 were followed by the siege and capture of Quebec in 1759, whereby the complete conquest of Canada in the next year was ensured. The British fleet won overwhelming supremacy by the virtual annihilation of the French fighting fleet in Hawke's great victory at Quiberon in 1759.

In the actual war on the Continent Great Britain, under the guidance of the elder Pitt, played only a secondary part, i.e. she supplied Frederick with troops and money, and by engaging France in the colonial war, diverted French energies from concentrating against him. Thus the Prussian kingdom had to fight for its life almost single-handed. In 1757 Frederick invaded Bohemia, won the battle of Prague, and was driven out again by his defeat at Kolin. After that he was always on the defensive, threatened by the French on the S.W., the Austrians on the S., and the Russians on the E.

In 1761 the French were practically out of action, and Russia withdrew; so that Frederick was still just able to hold his own against Austria. The war was brought to an end at the beginning of 1763 by the treaties of Paris and Hubertsburg, which gave Canada to Great Britain, left the French without an effective foothold in India, and preserved to Frederick his territories intact as they were before the war. See *Frederick II*.

SEVERN. River of England and Wales. It rises in Wales, in the S.W. of Montgomeryshire, and flows in a great curve to its estuary, a continuation of the Bristol Channel. The chief left-bank tributary is the Warwickshire Avon. The Taff, Usk, Wye, and Leadon are right-bank affluents. On its banks are Gloucester, Shrewsbury, Welshpool, Newtown, and Llaidloes. Its length is about 220 m.

The Severn is a rapid river, and of little use for navigation except in the deeper reaches. At Stowport it connects with the Staffordshire and Worcestershire canals, and at Worcester with the Worcester and Birmingham Canal. At Sharpness the Severn bridge carries the rly. across the estuary. The Severn tunnel, 4 m. 624 yds. long, shortens the rly. journey from Bristol to Cardiff. In the estuary embankments are required against the boro, which sometimes attains a height of 9 ft. It is proposed to utilise the waters of the Severn for generating electricity.

SEVERN. British monitor. Completed in 1913 for the Brazilian government, she was purchased by the British government at the outbreak of the Great War and renamed the Severn. She was used in Oct., 1914, to bombard the Belgian coast, and in 1915 was engaged in the operations against the German light cruiser *Königsberg* (q.v.).

SEVERUS, LUCIUS SEPTIMIUS (A.D. 146-211). Roman emperor, 193-211. Born near Leptis Magna, Africa, he was in command of the legions in Pannonia when the emperor Pertinax was murdered, and was by them proclaimed emperor. After disposing of several rival claimants, Severus turned his attention to the Parthians, and in the course of an expedition against them he took Babylon, Seleucia, and Ctesiphon, the Parthian capital. His eastern victories are celebrated on the arch at Rome which bears his name. The closing years of his reign were occupied with campaigns in Britain from 208. He is said to have rebuilt the wall between the Forth and the Clyde which bears his name. Severus died at York, Feb. 4, 211. See Rome plan, p. 1136.

Septimius Severus,
Roman emperor
From a bust

SÉVIGNÉ, MARIE, MARQUISE DE (1626-96). French writer. Born in Paris, Feb. 6, 1626, as Marie de Rabutin-Chantal. She married in 1644 the marquis Henri de Sévigné, who was killed in a duel in 1651. She then settled in Paris, where she educated her children. A woman of great charm and brilliant gifts, she retained her goodness of heart and character unsullied by the corrupt society in which she was a conspicuous figure. The letters which for some 25 years she wrote to her daughter, the comtesse de Grignan, and her many friends, are an enduring monument of her genius. She died April 18, 1696.

Marie de Sévigné,
French writer
After Nanteuil

SEVILLE. City of Spain. It stands on the left bank of the Guadalquivir, 54 m. from the Atlantic. Much of the city lies below high-water level, and is liable to floods. Bridges connect with the suburb of Triana on the right bank. The cathedral, 1403-1519, is one of the finest Gothic buildings in the world; it occupies part of the site of a Moorish mosque, the Court of Oranges being another portion. The Giralda, or bell tower, part of the old mosque, is surmounted by a bronze figure of Faith which is a weather-vane (giralda). The Alcázar has been in turn the palace of Moorish and Spanish kings.

Pilate's House, the Torre del Oro, the palace of the duke of Medinaceli, and the bull-ring are of interest. The museum houses a rich collection of the works of Murillo and Velazquez, both natives of Seville. The exchange contains documents relating to the discoveries on the Spanish Main; and the Columbian library collected by Fernando Colon, the son of Christopher Columbus, is in the cathedral. The university dates from 1256. Pop. 216,511. See Alcázar, illus. p. 46.

Seville. Cathedral from the south-east, showing the Giralda tower

SÈVRES. Town of France. It stands on the Seine, between Paris and Versailles, and is famous for its porcelain factory. In 1756 a factory for making the ware, hitherto associated with St. Cloud, was established here, and in 1759 it became state property. The first porcelain produced was of the soft paste type, but in 1768 hard paste, a mixture of kaolin and felspar, began to be used. Sèvres has always been celebrated for its handsome vases and large decorative pieces, dinner services and biscuit figures and groups. Pop. 14,505. See Chinaware; Pottery.

SÈVRES, TREATY OF. Peace treaty signed August 10, 1920, between the Allies and Turkey. Turkey's sovereignty in Europe was to be restricted to Constantinople. Thrace as far as the Chatalja lines was ceded to Greece, that adjoining this line being managed by an international commission. The straits of Dardanelles, sea of Marmara, and the Bosphorus, with adjacent islands, were put under a commission. Smyrna was put under international control, Armenia was created an independent state. Arab and Syrian territories were separated from Turkish rule. The treaty was never ratified by Turkey, and the treaty of Lausanne (1923) superseded it. See Syria; Turkey.

SEWAGE. Refuse which is carried off by sewers. Sewerage denotes the whole system of sewers in a city or town. A sewerage system is designed to deal with surface water (i.e. non-absorbed rain-water), house sewage, and discharge from factories of the area it serves. Only where sewage can be emptied into the sea without proving offensive or injurious is it allowed to escape untreated. The great majority of sewerage systems terminate in a sewage works, wherein the flow undergoes purification. The "combined" system employs a single set of sewers, into which all sewage and surface water falls. The "separate" system catches the sewage proper in one set of sewers and the surface water in another. Most large cities use the "combined" system of sewage.

Most sewage works purify sewage in two stages of treatment. The first aims at separating the solids from the liquid, or breaking it down into a form suitable for the processes of the second stage. In some processes the heavier solids are allowed to settle by gravitation in large tanks, or the solid contents are precipitated by the action of chemicals. In other

alternative methods the sewage is allowed to stand in beds where aerobic bacteria attack the organic matter and, by combining it with oxygen, render it far less harmful; or the sewage is decomposed in septic tanks by bacteria which liberate hydrogen and cause the formation of nitrogenous compounds.

After some such form of primary treatment the effluent, if not discharged into the sea or tidal water, is either distributed systematically over suitable land, for fertilisation, or passed through artificial filters. In both cases aerobic bacteria complete the oxygenation of organic matter, and in consequence the effluent from a well-designed sewage works is remarkably pure.

SEWARD, ANNA (1747-1899). British poet, called the Swan of Lichfield. Born at Eyam, Derbyshire, she was brought up in Lichfield, where her father became a canon. She is best remembered to-day by her friendship and correspondence with Hayley, Mrs. Piozzi, and Sir Walter Scott. She died March 25, 1809. Of her own works, *Louisa*, 1782, and her *Sonnets*, 1799, are the best known. She also left six volumes of letters. Consult *A Swan and her Friends*, E. V. Lucas, 1907.

SEWARD, WILLIAM HENRY (1801-72). American politician. Born May 26, 1801, he became a lawyer and practised at Auburn, New York. He entered the state legislature, and from 1838-42 was governor of New York. In 1849 he was elected to the Senate at Washington, and there he became one of the leaders of the Republican party. In 1860 Lincoln made him the secretary of state, and he retained that position under the next president, Andrew Johnson, being responsible for the negotiations with Great Britain about the Trent and Alabama difficulties. He resigned in 1869, and died Oct. 10, 1872.

W. H. Seward,
American statesman

SEWING MACHINE. Machine for performing the operation of stitching by mechanical means. The first lock-stitch machine was patented by Elias Howe in 1846, though its essential features had been anticipated by another American inventor, Hunt. Howe's machine was the basis of most modern sewing machines. It was followed by that of A. B. Wilson, of a four-motion feed, and the fixed overhanging arm of I. M. Singer.

The majority of household sewing machines are of the lock-stitch variety. There is a reciprocating eye-pointed needle, which moves through the material being stitched. The material rests on a steel plate, and is automatically moved forward with each stitch by a small toothed bar. A loop is formed when the needle passes through the fabric.

SEX. Quality of maleness or of femaleness which distinguishes most living creatures. Maleness means, in the first instance, the capacity of producing sperm-cells, called spermatozoa in animals, antherozoids in flowerless plants, and generative pollen-cells in most flowering plants. But along with this there generally goes a kind of constitution chemically different from that of the corresponding female. Similarly, female means, in the first instance, the capacity of producing egg-cells or ova; but there is also a

constitutional distinctiveness, demonstrated in some instances and probable in others. A species is typically represented by two contrasted kinds of individual, which are complementary in reproduction.

Sex implies the production of two different kinds of reproductive cells, and it typically implies their production by distinct kinds of individual—the female and the male. In many lower animals, however, the same individual produces both ova and spermatozoa, and is known as a hermaphrodite. Generally these animals do not fertilise their own ova, cross-fertilisation being almost invariable. In very rare cases, such as some flukes and tape-worms, self-fertilisation does occur. Another peculiar condition, parthenogenesis, where the egg-cells develop without being fertilised, is illustrated by the summer generations of green-flies, or Aphides. Fertilisation, in the strict sense, is the intimate and orderly union of two sex-cells. See Animal; Biology; Cell; Evolution, etc.

Sexagesima (Lat. sixtieth). In the ecclesiastical calendar, the second Sunday before Lent. See Calendar.

SEXTANT. Instrument used for measuring angles between distant objects. It forms part of the equipment of the navigator who uses it daily to measure the sun's altitude at noon, in order to determine the latitude of the ship. It consists essentially of a segment of a circle, on which is a scale, D, a telescopic eyepiece, T, a mirror, B, placed at the centre of the circle, but fixed to a movable arm, C, at the end of which is an index to record the angle, and of a fixed half-silvered, half-transparent mirror, A.

The observer sights one distant object through the telescope and through the unsilvered half of the mirror, moves the index arm until he can see the second object in the silvered half of the mirror immediately below the first object. The angle between first and second objects can now be read on the graduated scale. See Navigation.

SEXTET or **SESTER.** Composition for six solo voices or instruments. Specimens are comparatively rare, but Spohr, Raff, Dvorak, and Brahms have essayed this form of composition for strings only. Beethoven wrote two; one for wind instruments, and one for two horns in addition to strings.

SEXTON (contracted from *saecristan*). In the Church of England, a parish official appointed as keeper of the various things used in divine worship. Among his duties are the cleansing, lighting, and heating of the church, the filling-up, and sometimes the digging, of graves, tolling the bell, etc. He is also the assistant to the incumbent in many minor matters connected with the church.

SEYCHELLES. British possession in the Indian Ocean. With its dependencies, the Seychelles group of islands comprises some 100 islands and islets with a total area of 156 sq. m. Mahé, the chief island, accounts for a third of the area. Islets in the main group are Praslin, Silhouette, and La Digue; the dependent islands include the Amirante islands, Cosmoledo group, Assumption, and the Aldabra islands. Formerly administered from Mauritius, the Seychelles was made into a separate colony in 1897. The exports include copra, guano, and cinnamon oil. Victoria, the capital, which is situated on Mahé island, has a good harbour and is an admiralty coaling station. Pop. 27,238.

SEYMOUR. Name of a famous English family, now represented by the duke of Somerset and the marquess of Hertford. It is a variant of St. Maur. John St. Maur, member of a family long settled in Monmouthshire, married, about 1360, an heiress of the family of Beauchamp. His descendant, Sir John St. Maur, who called himself Seymour, was the father of Edward Seymour, who was made duke of Somerset and lord protector. Edward's sister was Jane Seymour, the wife of Henry VIII. A brother was Thomas Seymour (c. 1508–49), who was lord high admiral and married the king's widow, Catherine Parr. He was beheaded March 20, 1549.

Many later Seymours served the state in various ways, and one, Francis Seymour Conway (1718–94), was made marquess of Hertford in 1793. See Hertford, Marquess of; Somerset, Duke of.

SFORZA. Name of Italian family that succeeded the Visconti as dukes of Milan, holding the throne from 1450–1535. The name Sforza (strong) was first given to Muzio Attendolo (1369–1424), the founder of the line. His son made himself duke of Milan about 1450.

The duke's son, Ludovico, called Il Moro (1451–1508), was the patron of Leonardo da Vinci, opposed Charles VIII, and lost Milan to Louis XII in 1499. The last duke of the line was Francesco Maria (1492–1535) who died without heir.

SGRAFFITO (Ital. *sgraffiare*, to scratch). Term applied to certain methods of mural decoration and of pottery work.

In the former, a layer of white plaster is laid over one of black, and the top layer is excised so as to expose the black underneath in the required pattern. In pottery, the term is applied to the process by which a clay of one colour is superimposed upon one of a different, and a design produced by cutting away the outer coating. Examples of 15–17th century sgraffiti are to be seen in the British and Victoria and Albert Museums.

SHABATZ or **SABAC.** Town of Yugoslavia. It is situated on the Save, 38 m. W. of Belgrade. During the Great War it was occupied by the Austrians, Aug. 12, 1914, and evacuated by them twelve days later. It was occupied by them for a short time again in 1914, but they lost it in Dec., after the battle of the Kolubara. It passed to them once more in Sept., 1915, and remained in their hands till Nov., 1918. Pop. 11,969.

SHACKLETON, SIR ERNEST HENRY (1874–1922). British explorer. Born at Killybegs, Ireland, Feb. 15, 1874, he entered the mercantile marine. In 1901 he was in the Antarctic Expedition under R. F. Scott (q.v.), and was secretary to the Royal Scottish Geographical Society from 1903–6. He commanded the British Antarctic Expedition of 1907–9, which ascended Mt. Erebus, reached the south magnetic pole for the first time, and attained a point 97 m. from the South Pole itself. He also commanded the Antarctic Expedition of

1914–17, and in Sept., 1921, sailed from London at the head of the Shackleton-Rowett Antarctic Expedition. He died on board the Quest, Jan. 5, 1922, while his ship was at South Georgia.

Shackleton was knighted in 1909. He wrote *The Heart of the Antarctic*, 1909, and *South*, 1919. See Antarctic.

SHAD. Species of fish of the herring family. It is common about the coasts of Europe and often found in the lower reaches of rivers. It varies in length from one to two feet, and in appearance much resembles a large herring with a few black spots on the sides. See Herring.

Shaddock. Alternative name for the grape fruit (*Citrus decumana*). See Grape Fruit.

SHADWELL. Dist. of E. London. It is in the bor. of Stepney (q.v.), between St. George's-in-the-East and Ratcliff. Shadwell contains the East London Hospital for Children. The Shadwell-Rotherhithe tunnel was opened in 1908. Shadwell Basin forms part of the London docks.

SHADWELL, THOMAS (c. 1642–92). English dramatist. Born of a good Norfolk family, he wrote about 17 plays, which show an intimate knowledge of the London underworld of his day. Dryden, whom he had attacked, and whom he later succeeded as poet laureate, satirised him in *Mac-Flecknoe*, and as *Ogin Absalom* and *Achitophel*. He died Nov. 19, 1692.

SHAFT. Word used in several connexions. In mining a shaft is the opening excavated in the crust of the earth leading down to the workings of a mine. In mechanics, a shaft is a unit of a power transmission system, and usually consists of a round bar of iron or steel, revolving in bearings.

SHAFTESBURY or **SHASTON.** Mun. bor. and market town of Dorset. It is 28 m. from Dorchester, its station being Semley, on the S.R. Shaftesbury is said to have been founded by King Alfred, and at a Benedictine abbey here Canute died in 1035. From 1294 to 1885 it was separately represented in Parliament. The town became the property of the Grosvenor family, but in 1918 Lord Stalbridge sold it. It is an agricultural centre. Market day, Sat. (alternate). Pop. 2,355.

SHAFTESBURY, ANTHONY ASHLEY COOPER, 1ST EARL OF (1621–83). English statesman. He was born July 22, 1621, at Wimborne St. Giles, Dorset, and educated at Oxford. In the Civil War he was first on the king's side, but went over to the Parliament, then quarrelled with Cromwell. At the Restoration he was placed on the privy council, made Baron Ashley and chancellor of the exchequer, 1661. In 1672 he was made earl of Shaftesbury and lord chancellor. As lord president, 1679, he carried the Habeas Corpus Act, and he is notorious for the use he made of the so-called Popish Plot. After at least two attempts at rebellion he fled to Holland in 1682, and died at Amsterdam, Jan. 22, 1683.

SHAFTESBURY, ANTHONY ASHLEY COOPER, 3RD EARL OF (1671–1713). English philosopher. Born in London, Feb. 28, 1671, son of the second earl, he was educated, privately under the earl on John Locke, at Winchester, and abroad. From 1695–98 he was M.P. for Poole. In 1699 he succeeded to the earldom, and died Feb. 15, 1713. Shaftesbury's ideas were set forward in his *Characteristics of Men, Manners, Opinions, Times*, 1711.

Shad. Common European variety
Clupea alosa or *Allos shad*

Sextant used in navigation. See text

Thomas Shadwell,
English dramatist
After W. Pothorne

Sir Ernest Shackleton,
British explorer
Claude Harris

SHAFTESBURY, ANTHONY COOPER, 7TH EARL OF (1801-85). English philanthropist. Son of the 6th earl, he was born April 28, 1801, and educated at Harrow and Oxford. M.P. for

7th Earl of Shaftesbury. English philanthropist

Woodstock, 1826, Dorchester, 1830-31, and Dorset, 1831-46, he succeeded to the earldom in 1851. He is remembered for his work on behalf of the better treatment of lunatics and for the improvement of working hours and conditions in factories, especially in regard to women and children. Ragged Schools and many kindred institutions likewise owe their existence to him. He died Oct. 1, 1885.

In 1914 the Ragged School Union, of which he was the first president, became the Shaftesbury Society and Ragged School Union.

SHAG OR **GREEN CORMORANT** (*Phalacrocorax graculus*). British bird, common about the coasts. It is distinguished from the common cormorant by its smaller size and greenish plumage. It preys upon fish, which it catches by diving.

SHAGREEN (Turkish and Persian, horse's back). Untanned leather with a granular surface. It is made from the skin of the horse, ass, camel, shark, and ray. The characteristic surface is produced by pressing into the wet skin small seeds, which are removed when the skin is dry. It is usually dyed green. That made from shark's skin is used for polishing wood. Other kinds are used for sword handles, horse trappings, cases and boxes, etc.

Shah. Title of the ruler of Persia. It is an abbr. of padshah, lord king. The Turkish form is padishah.

SHAH JEHAN (fl. 1614-66). Mogul emperor. Son of Jehangir, he ascended the throne in 1627. His reign was one of constant warfare, but the famous Taj Mahal and Pearl Mosque were built and Delhi was founded by him. He made the Peacock throne, valued at £6,000,000, and captured by Nadir Shah, 1759. In 1658 Shah Jehan was imprisoned by his son Aurangzobe, and died at Agra eight years later.

SHAIBA, BATTLE OF. Fought between the British and the Turks, April 12-13, 1915. On April 12, Turks and Arabs attacked the British at Shaiba, 9 m. S.W. of Basra. General Melliss arrived from Basra with reinforcements, took command, and on April 13 cleared the neighbourhood. Next day Melliss attacked the Turks at Barjasiya, S. of Shaiba, and after severe fighting the Turks were defeated. The losses of the British amounted to 700.

SHAKESPEARE, WILLIAM (1564-1616). English poet and dramatist. He was baptized in the parish church of Stratford-on-Avon, April 26, 1564. His father, John Shakespeare, was the son of a farmer of Snitterfield;

Shakespeare. Supposed death mask, discovered at Mainz, 1849, now at Darmstadt

his mother, Mary Arden, daughter of a farmer of Wilmeote. In 1582 he married Ann, daughter of Richard Hathaway, a farmer of Shottery. A daughter, Susanna, was born within six months of the marriage, and twins—a son, Hamnet, and a daughter, Judith—early in 1585. The son died in his 12th year; the two daughters survived their father. Coming to London in 1587, Shakespeare found

employment at The Theatre, Shoreditch, and was quickly admitted a member of a company of actors, The King's Servants, to which he remained faithful during the rest of his career at The Globe and Blackfriars Theatres, in which he had a share. He first attracted the reading public as a writer of narrative poems (Venus and Adonis, 1593; Lucrece, 1594), but he early turned playwright.

Of the 37 plays assigned to him in his lifetime, Henry VI, Titus Andronicus, Taming of the Shrew, Timon of Athens, Pericles, and Henry VIII he wrote in collaboration with others. The most important of his non-dramatic compositions are his Sonnets, first published in 1609, though earlier circulated in MS. In 1596 an application to the Herald's College was made in his father's name, but in his own behalf, for a coat-of-arms, granted in 1599. As soon as his financial position in London was secure, he acquired much property in his native place; and after 1611 he made Stratford his main home. He died at New

Shakespeare. Monument above the grave in Holy Trinity Church, Stratford-on-Avon, erected before 1623. Below, signature from his will

Place, Tuesday, April 23, 1616, when he had just completed his 52nd year. Two days later he was buried in the chancel of Stratford church, in front of the altar.

His will was proved in London, by his elder daughter Susanna and her husband John Hall, on June 23, 1616. The main part of the poet's estate was left to Mrs. Hall. To his wife he left only "his second best bed, with the furniture" (i.e. the bedding). The First Folio edition of his plays was issued by his fellow actors Heminges and Condell in 1623; the Second Folio in 1632; the Third Folio in 1663; the Fourth Folio in 1685. The first attempt to edit Shakespeare's plays was made by Nicholas Rowe, in 1709, and his successors have been legion, as have been the attempts to assign the works to Bacon and others.

SHAKESPEARE'S WORKS (with approximate date of composition). Henry VI, 1592-93; Titus Andronicus, 1589-90; Love's Labour's Lost, 1591; Two Gentlemen of Verona, 1591; Comedy of Errors, 1591-92; Romeo and Juliet, 1592; Richard II and III, 1593; Venus and Adonis, 1593; Lucrece, 1594; King John, 1594; A Midsummer Night's Dream, 1594; Merchant of Venice, 1594-95; Sonnets,

1594-1604; All's Well That Ends Well, 1596-1601; Taming of the Shrew, 1595-96; Henry IV, 1596-98; Merry Wives of Windsor, 1598; Henry V, 1599; Much Ado About Nothing, 1599; As You Like It, 1599; Twelfth Night, 1600; Julius Caesar, 1600-1; Hamlet, 1602; Troilus and Cressida, 1603; Othello, 1604; Measure For Measure, 1604; Macbeth, 1605-6; King Lear, 1606; Timon of Athens, 1607; Pericles, 1607-8; Antony and Cleopatra, 1608; Coriolanus, 1609; Cymbeline, 1610; The Winter's Tale, 1610-11; The Tempest, 1611; Henry VIII, 1611-12.

SHAKESPEARE'S CLIFF. Precipitous cliff S.W. of Dover. It is supposed to be the "steep" from which, in Shakespeare's King Lear (Act 4, sc. 6), Gloucester seeks to destroy himself. See illus. p. 521.

SHALE. Laminated deposit of clay. Shales vary considerably and grade into slates, sandstones, or limestones. The strongly clayey shales are used in the manufacture of firebricks; limestone shales in the making of Portland cement; iron oxide shales in the manufacture of mineral paint; alum shales in the manufacture of alum.

Bituminous shales or oil shales are valuable sources of petroleum. The crude oil is refined and yields naphtha, paraffin, and kerosene. One ton of shale yields about 40 gallons of oil.

SHALLOT (*Allium ascalonicum*). Small bulbous-rooted member of the onion family. A native of Palestine, the bulbs are edible, and are usually pickled.

SHAMANISM. Form of spirit worship developed in N. Asia. The Tungus name shaman denotes a medicine-man. The cult, reminiscent of early Sumerian demonology, still prevails with the E. Siberian palaeosians and some lamiist Tibetans. The term is often applied loosely to N. American Indian spirit worship.

Shamrock. Species of clover adopted as the Irish national emblem

SHAMROCK, WHITE CLOVER, OR DUTCH CLOVER (*Trifolium repens*). Perennial herb of the order Leguminosae. A native of Europe, N. Africa, Asia, and N. America, it has creeping stems, and the leaves are divided into three small heart-shaped leaflets, often with a curved whitish band near the base.

In heraldry, the shamrock is the badge of Ireland. It is supposed to have been adopted by S. Patrick.

SHAMROCK. Name given by Sir Thomas Lipton to the five yachts built by him to compete for the America Cup. Shamrock V competed for the cup in Sept., 1930, but without success. See America Cup; Lipton, T.

SHAN. Burmese name for a people of Tai stock in the Burmese Shan states and S. China. The states are territories of Burma, specially administered. The Northern states have an area of 14,294 sq. m. and a pop. of 459,000. The Southern states have an area of 40,434 sq. m. and a pop. of 900,000. They are traversed by the Salween.

SHANGANI. River of Rhodesia. It flows N.W. to the Gwai river, a S. tributary of the Zambezi. Shangani station is 69 m. by rail from Bulawayo. Alt. 4,507 ft.

SHANGHAI. Seaport of China, in the prov. of Kiangsu. It stands 12 m. from the Yang-tse estuary on the tidal Hwangpu. Soochow creek or Wosung river crosses the city. The native quarter, taken by the nationalists in 1927, is surrounded by walls 3½ m. in circuit with six gates. The European quarter lies N. of the native city and occupies over 9 sq. m. The harbour extends along the river for 6 m. There is railway connexion with Hangchow, Nanking, and Peking. Pop. 2,677,000. See China; also illus. p. 1233

Shaughan, the Bund, the fine waterside thoroughfare of the foreign concessions. See p. 1232

SHANKLIN. Urban dist. and watering place of the Isle of Wight. It is on the S.E. coast, 9 m. from Ryde, is served by the Southern Rly., and has good bathing, a pier, and an esplanade; also chalybeate springs and baths. Behind are the downs. Pop. 7,500.

SHANNON. Longest river of Ireland. It rises in Shannonpot, and flows between the mts. of Cuilcagh and Benbrack to Lough Allen. From the lake it flows S. to the head of the Shannon estuary at Limerick, about 160 m. from the source. The river falls 97 ft. in the 17 m. between Killaloe and Limerick, whence the estuary leads for about 70 m. almost due W. to the Atlantic Ocean. Its width varies between 2 and 10 m. Vessels of 1,000 tons reach Limerick, and small steamers can reach Athlone. The scheme for generating electricity from the waters of the Shannon has been carried out by the firm of Siemens-Schuckert. See Hydro-electric Machinery

Shannon was the name of a 38-gun frigate, commanded by Sir Philip Broke, which on June 1, 1813, during the American War, gave battle to the Chesapeake in Massachusetts Bay, and took her prisoner to Halifax.

SHANNON, CHARLES HAZLEWOOD (b. 1865). British artist and lithographer. Born at Sleaford, Lincolnshire, he was trained at the Slade School, London. His painting is romantic in feeling and marked by graceful and flowing design and rich and harmonious colour. He was elected A.R.A. in 1911 and R.A. in 1921.

SHANNON, SIR JAMES JEBUSA (1862-1923). British-American artist. Born at Auburn, New York, he came to England in 1878, exhibited at the Royal Academy in 1881, and in 1887 showed his full powers as a portraitist with his paintings of Henry Vigne. He was specially successful as a painter of women's and children's portraits. He became A.R.A. in 1907 and R.A. in 1909. He died Mar. 6, 1923.

SHANTUNG. Coast prov. of China. It is situated S. of the gulf of Chihli. Its area is 55,984 sq. m.; estimated pop. 29,600,000. The E. portion, which is mountainous, juts out into the sea for 150 m.; the W. part is a broad plain. Shantung is intersected by the Grand Canal and the Yellow river. The chief products are silk, cotton, beans, ground nuts, and cereals: vermicelli and straw braid are made. Minerals include coal, iron, copper, and gold. By the treaty of Versailles the rights of Germany in this province were transferred to Japan. China asked repeatedly for the withdrawal of the Japanese, but in 1930, although discussions had taken place, they were still in possession.

SHAP. Market town and urban dist. of Westmorland. It is 12 m. from Penrith on the L.M.S. Rly. Granite is quarried, and cattle and horse fairs are held. Shap Fells is a neck of land over which the L.M.S. Rly. and the main road pass. Market day, Mon. Pop. 1,000.

SHARK. Group of primitive fishes with cartilaginous skeletons, of almost world-wide

distribution, but most abundant in tropical and sub-tropical waters. The gills are in from 5 to 7 (usually 5) separate pouches, each with a distinct passage from the back part of the mouth, and a separate exit in the form of a vertical slit on the neck. There are abundant teeth in several rows in each jaw. Among the sixteen species found in the British seas are the hammer-head (*Sphyrna zygaena*); the blue shark (*Carcharias glaucus*); the tope (*Galeorhinus canis*); the smooth hound (*Mustelus canis*); the porbeagle (*Lamna cornubica*), and the thrasher (*Alopias vulpes*).

The Greenland shark (*Laemargus borealis*), feeds on whales. Other notable sharks include the enormous but harmless whale shark of the Indian and Pacific Oceans, and the great white shark of the tropics, feared as a man-eater. See Dog Fish.

SHARON, PLAIN OF. Region of Palestine. Noted of old for its beauty and fertility, it lies between Jaffa (Joppa) and Kaisariyeh (Caesarea). It is some 25 m. in length and 8 m. in width. The rose of Sharon was probably the narcissus.

SHARP. Sign used in music to denote the raising of a natural note by one semitone, thus: ♯. In early days the sign for a natural was used for the same purpose. The confusion thus occasioned was remedied towards the close of the 17th century by using a double, X, or a single, X, cross. The former was superseded by the present sign, and the latter (double sharp) now indicates that a natural is to be raised a whole tone.

SHARP, JAMES (1618-79). Scottish p.clate. Born May 4, 1618, he was educated at St. Andrews and Oxford. In 1648 he became a presbyterian minister at Crail, Fifeshire, and during the period of the Commonwealth was one of the leaders of this party. In 1660 he became an episcopalian, and in 1661 was made archbishop of St. Andrews. As primate of Scotland he acted very harshly towards the Presbyterians, and on May 3, 1679, he was murdered by a body of Covenanters on Magus Moor, Fifeshire.

SHARP, WILLIAM (1856-1905). Scottish novelist. Born at Paisley, Sept. 12, 1856, he was educated in Glasgow. Having settled in London, he began to write, and his work

Shark. Principal species of the primitive fish found in most parts of the world. 1. Smooth Hound, 4-5 ft. 2. Greenland shark, 12-14 ft. 3. Tope, 5 ft. 4. White shark, 20 ft. 5. Porbeagle, 10 ft. 6. Nurse Hound, 4-5 ft.

included novels, biographies, and miscellaneous writings. As Fiona Macleod he produced a number of romances of Celtic life, these including *The Mountain Lovers*, *Green Fire*, and *The Winged Destiny*, as well as two plays, *The House of Usna* and *The Immortal Hour*. He died in Sicily, Dec. 14, 1905, and it was only then that it was learned that William Sharp and Fiona Macleod were the same person. A Memoir by his wife appeared in 1910.

SHAT-EL-ARAB or **SHATT-AL-ARAB.** River of Arabia. Formed by the junction of the Euphrates and the Tigris, near Kurna, it flows from the N. past Basra into the Persian Gulf, after receiving the waters of the Karun from the N.E. It is about 100 m. long, with an average width of about 600 yds.

SHAW. District of Lancashire, 3 m. from Oldham, on the L.M.S. Rly., now incorporated in the urban district of Crompton. Its chief industry is the manufacture of cotton.

Shaw House, near Newbury, is a fine Elizabethan building with Civil War associations.

SHAW, ALFRED (1842-1907). English cricketer. Born Aug. 29, 1842, at Burton Joyce, near Nottingham, he proved himself a skilful cricketer. In 1864 he joined the ground staff at Lord's and began to play regularly for Nottinghamshire. For about 20 years, from 1867-87, Shaw was at the top of his powers, and was perhaps the greatest bowler in England, certainly the greatest slow bowler. He played for England against Australia, and went five times to that country and twice to America. He died Jan. 16, 1907.

SHAW, GEORGE BERNARD (b. 1856). Irish dramatist and critic. Born in Dublin, July 26, 1856, he was the only son of a civil servant and millowner belonging to a Protestant family of Yorkshire descent. His mother was a talented musician. He left school in Dublin at 14, and was employed by a land agent until 1876, when he came to London. In 1879 he abandoned office work for literature, and became an early member of the Fabian Society.

Shaw has written much sound musical and dramatic criticism and been a champion of anti-vaccination and vegetarianism. His plays include *Widowers' Houses*, *The Philanderer*, *Mrs. Warren's Profession*, *Arms and the Man*, *Candida*, *The Man of Destiny*, *You Never Can Tell*, *The Devil's Disciple*, *Caesar and Cleopatra*, *Man and Superman*, *John Bull's Other Island*, *Major Barbara*, *The Doctor's Dilemma*, *Getting Married*, *The Shewing Up of Blanco Posnet*, *Misalliance*, *The Dark Lady of the Sonnets*, *Fanny's First Play*, *Androcles and the Lion*, *Overruled*, *Pygmalion*, *Heartbreak House*, *Great Catherine*, *Back to Methuselah*, 1921, *Saint Joan of Arc*, 1923, and *The Apple Cart*, 1929. In 1926 he was awarded a Nobel prize. *The Intelligent Woman's Guide to Socialism* appeared in 1928.

SHAW, JOHN BYAM LISTON (1872-1919). British artist. Born at Madras, India, Nov. 13, 1872, he was taken to England in 1878 and studied art at the St. John's Wood and the R.A. schools. As a painter with a taste for brilliant decorative colour he achieved success, but his reputation depends equally on his black-and-white work, particularly his illustrations to the *Chiswick Shakespeare*. He died Jan. 26, 1919.

SHAW, RICHARD NORMAN (1831-1912). British architect. Born in Edinburgh, May 7, 1831, he studied at the R.A. schools, and beginning practice in 1863 soon made a reputation by his country houses. He was also the architect of Scotland Yard. He died Nov. 17, 1912, having been R.A. since 1877.

G. BERNARD SHAW, Irish dramatist Russell

SHAW, THOMAS (b. 1872). British politician. Born at Colne, April 9, 1872, he began life in a cotton mill. He was made secretary of the international congress of textile workers in 1911. In 1918 he entered Parliament as Labour M.P. for Preston, and he kept his seat at subsequent elections, including 1929. In Jan.-Nov., 1924, minister for labour, he was appointed secretary for war in June, 1929.

Thomas Shaw,
British politician

SHAWINIGAN FALLS. City of Quebec, Canada. It stands on the St. Maurice river, and the falls, 150 ft. high, here generate an enormous amount of electric power. The manufactures are connected with the pulp, aluminium, and lumber industries. Pop. 10,625.

SHAWM (Fr. chalumeau, from Lat. calamus, a reed). Double reed instrument like the oboe, which superseded it, but having a larger conical bore and a wider bell. It is of very ancient origin, and numerous allusions to it may be found in medieval literature. It was made in various sizes from treble to contrabass. Each had a compass of about an octave and a half.

Sheaf. River of Derbyshire and Yorkshire. It rises in the Penk district and falls into the Don at Sheffield. See Sheffield.

SHEARWATER. Name given to a genus of bird related to the petrels. The Manx shearwater (*Puffinus anglorum*) occurs round the S. and W. coasts of Great Britain and Ireland, especially in Orkney and Shetland. The sooty shearwater, greater shearwater, and dusky shearwater are occasionally met with during the winter months.

SHEAT. Large family of fishes, known as the Siluridae. Numbering about a thousand species, they have conspicuous barbels round the mouth and no scales. The skin is smooth, or covered with small bony plates or knobs. Only one species, the Wels (*Silurus glanis*), is known in Europe. It inhabits muddy rivers and feeds on frogs and fish, sometimes seizing water-fowl by the feet and pulling them under.

SHEATHBILL (Chionis). Small group of birds, placed between the snipes and the gulls. Found in S. America and the Falkland Islands, they are about the size of pigeons, have white plumage, and feed on small molluscs and refuse.

SHEBA. Ancient kingdom in the S. part of Arabia Felix. It is celebrated for its gold, frankincense, spices, and precious stones, and its people were known as Sabaeans. Abyssinian tradition dates its royal house from Solomon and the queen of Sheba, but it is doubtful whether Solomon's visitor (1 Kings 10; Matt. 12) came from the Arabian Sheba or from the Ethiopian Seba.

Shebeen. Term applied in Ireland and Scotland to a house where excisable liquor is retailed without a licence, or to a mean inn.

SHECHEM. Ancient name for Nablus, a town of Ephraim. It is near Mount Gerizim and on the road from Jerusalem to the North.

A victory was gained here, Sept. 16-24, 1918, by the British over the Turks. It resulted in the conquest of Palestine and finally crushed the Turkish authority there. Under Sir Edmund (later Lord) Allenby, the British army consisted of 12,000 sabres, 57,000 rifles, and 540 guns. The great majority of the men were Indians. The strength of the Turks and Germans was 36,000 effectives. Opposed to the Turks were also the Hejaz Arab army, with an estimated strength of 40,000. Upwards of 25,000 prisoners were taken, and more than 250 guns. See Palestine.

SHECHINAH (Heb. dwelling). Term used in extra-Biblical Jewish literature. Its use seems to have been suggested by Exod. 40, 35, where a cloud, symbolising God's presence, is said to have dwelt above the tent of meeting. Thus the expression is employed either as a periphrasis for the divine name, to render the language less anthropomorphic, or as a designation of the divine presence and glory (a word associated with it).

SHEE, SIR MARTIN ARCHER (1769-1850). British artist. Born in Dublin, Dec. 20, 1769, he first exhibited at the R.A. in 1791, and took the place of Lawrence as the portraitist of the day. Elected A.R.A. in 1798, he became R.A. in 1800, assisted in the foundation of the British Institution in 1807, and was elected P.R.A. in 1830 and knighted. Shee was a friend of Burke and Byron, and wrote poems, novels, and a tragedy. He died at Brighton, Aug. 19, 1850. See illustration p. 7.

SHEEN, East. District of Mortlake, Surrey. Notable for its handsome villas, it lies between Richmond Park, S., and Mortlake, N.; Sheen Common being on its S.W. border and Palewell Common S.E.

SHEEP. Name applied to ungulate mammals of the genus *Ovis*. In the wild state sheep are usually horned, but the horns of the male are larger than those of the female; there is a characteristic gland between the hoofs; the udder has only two teats; and with one exception, all have short tails. Most are natives of Europe and Asia; but one species occurs in Africa, and another, the Big Horn, in N. America. Structurally domestic sheep are related to the urial and the mouflon but, unlike most wild species of sheep, save one, they have long tails, and wool instead of coarse hair, like the latter.

Of British domesticated sheep the chief long-wool breeds are the Cotswold, Leicester, Lincoln, Kentish, Devonshire, Roscommon, and Wensleydale; short-wool breeds include the Southdown and other "down" sheep, Shropshire, Clun Forest, Suffolk, and Dorset Horn; the chief mountain breeds being the

Cheviot, Blackface, Lonk, Exmoor, and Welsh. Scottish breeds include the Cheviot and Blackface; Wales claims the Kerry Hill and Welsh mountain breeds; and the Roscommon breed is Irish. All the others are of English origin. The horned sheep are the mountain and Dorset breeds. The Cotswold is one of the oldest and the Leicester the champion long-wool breed. See Argali; Big Horn; Mouflon.

Sheep dip is a preparation for curing sheep of a parasitic disease known as sheep scab, due to a mite that burrows in the skin.

SHEEPDOG. Breed of rough-coated, tailless dogs much used by shepherds, drovers, and farmers. If not born tailless, the puppy

Sheepdog. Brentwood Bob, a champion of the old English breed never be kept chained up or confined in a yard.

SHEEPSHEAD (*Sargus ovis*). American food fish of the family Sparidae. Found along the Atlantic coast of the U.S.A., it grows to a length of 30 ins. and an average weight of about 7 lb. It is deep in the body, marked by seven or eight dark transverse bands. The name is derived from the shape of the head and the prominent incisor teeth. It feeds on small crustaceans and shellfish.

SHEEPSTOR. Village of Devonshire. It stands on Dartmoor, 7 m. from Tavistock. Features of interest are an old bull-ring and a priest's house of the 15th century.

SHEERNESS. Seaport and urban district of Kent. It stands at the mouth of the Medway, on the Isle of Sheppey, on the S.E. The town is divided into Blue Town, Banks Town, Mile Town, and Marine Town. Blue Town is the dockyard quarter. Connected with it are barracks and a coastguard station. The industries of Sheerness centre round the royal dockyard, which is strongly fortified and includes wet and dry docks, storehouses, etc. The modern portion of the town, Sheerness-on-Sea, is a watering place, with good beach, esplanade, and bathing facilities. Market day, Sat. Pop. 18,700.

SHEFFIELD. City of Yorkshire (W.R.). It is situated at the junction of the Don and the Sheaf, on the L.M.S. and L.N.E. Ryss., and has an area of about 53 sq. m. The chief buildings include the town hall, the cathedral church of SS. Peter and Paul, central library, Cutlers' Hall, the city museum, art gallery, Mappin Art Gallery, and Ruskin Museum. Apart from the university, the chief educational centre is the grammar school (King Edward VII). The royal infirmary is the chief of several hospitals. Albert Hall, noted for its organ, is one of several public halls. The Roman Catholic cathedral is a noteworthy. Victoria Hall is a Wesleyan centre. The city

Sheep. Prize rams of the principal British breeds. 1. Southdown. 2. Welsh Mountain. 3. Cheviot. 4. Scotch Blackface
Courtesy of "The Farmer & Stockbreeder"

possesses extensive markets, hotanial gardens, and parks, and there are golf courses and grounds for other sports. A few miles from the heart of the city are the fine ruins of Beauchief Abbey, bought by the corporation in 1930.

In addition to cutlery the manufactures include files, saws, and other tools, armour plate, guns of all kinds, turbines, boilers, projectiles, rly. material, and all kinds of heavy forgings. Silver-plating is an important industry, and attention has been given of late years to the manufacture of glass. Sheffield has a lord mayor. It has been the seat of a bishop since 1915, and returns seven members to Parliament. The Cutlers' Company dates from 1565. Market days, Tues. and Sat. Pop. 519,200.

Sheffield is noted for its Association football clubs. Sheffield Wednesday, now called the Wednesday, was founded in 1866. It won the Association Cup in 1896 and 1907, and was champion of the Football League in 1903 and 1904. The ground is at Hillsborough, Sheffield. Sheffield United won the Cup in 1899, 1902, 1915, and 1925, and was League champion in 1898. The ground is at Bramall Lane.

The university of Sheffield was founded in 1905, being an extension of Firth College, dating from 1879, and including also the Sheffield school of medicine, established in 1828, and the technical school, dating from 1884. The faculties include arts, science, medicine, engineering, metallurgy, and glass technology. There are laboratories of all kinds. The Sheffield Daily Independent was founded Dec. 11, 1819. The Sheffield Daily Telegraph was founded June 8, 1855.

SHEFFIELD PLATE. Name given to articles made of copper and plated with silver by a process of fusion or soldering. In 1742-43 Thomas Boulsover (1704-88), a Sheffield mechanic, discovered a method of fusing copper and silver, which he turned to account in the manufacture of plated articles.

SHEFFORD. Market town of Bedfordshire. It stands on the Ivel, 9 m. from Bedford, on the L.M.S. Rly. Near is the village of Warden, with ruins of an abbey. Pop. 900.

SHEIK OR **SHEIKH** (Arab. old man). Arab title of respect. It is applied to Arab chiefs, headmen of villages, preachers, heads of religious orders or communities, and to local saints. Pron. Sheekh or Shaykh.

SHELL, RICHARD LALOR (1791-1851). Irish dramatist and politician. Born at Drumdowney, co. Kilkenny, he was called to the Irish bar in 1814, adapted several dramas which achieved considerable success, and from 1823-29 supported the agitation for Catholic Emancipation. He sat in Parliament for several Irish constituencies, and was the first Roman Catholic to be made a privy councillor, 1839. Later he became British minister to Tuscany, and he died in Florence, May 23, 1851.

SHEKEL (Heb. weight). Name of a Jewish weight or coin. In the former sense it weighed about 225-253 grs. or 10 dwts. Troy. Fifty shekels went to the maneh, of which sixty went to a talent. As coined, the silver shekel was worth about 2s. 8d., and the gold shekel about £2. No gold shekels are extant.

SHELBURNE, EARL OF. English title borne by the family of Petty. In 1719 Henry

Petty was created earl of Shelburne. In 1751 his estates passed to his nephew John Fitzmaurice, a son of the earl of Kerry. John took the name of Petty, and in 1760 was created earl of Shelburne. His son William was prime minister in 1782-83, and was made marquess of Lansdowne in 1784. See Lansdowne.

Sheffield. 1. Mappin Art Gallery. 2. Cathedral church of St. Peter and Paul

SHELDON, GILBERT (1598-1677). English prelate. Born July 19, 1598, he was educated at Trinity College, Oxford, and ordained in 1622. Imprisoned under the Commonwealth, he was made bishop of London, 1660, and archbishop of Canterbury in 1663, becoming one of Charles II's advisers. He built the Sheldonian Theatre at Oxford. He died Nov. 9, 1677.

SHELDRAKE (Tadorna). Genus of wild ducks, of which two species occur in Great Britain. The common sheldrake (*T. cornuta*) is about 26 ins. long, and the plumage is dark

Sheldrake. Variegated species, or Paradise duck
W. S. Derridge, F.Z.S.

green on the head; green, white, and brown in bands on the neck; black and white on the wings, and dark brown and white beneath. The beak is bright red. The bird holds an intermediate place between the ducks and the

geese, and is found on sandy shores, where it feeds on molluscs and marine worms. The ruddy sheldrake (*T. rutilla*) is an occasional visitant to British shores.

SHELL. Name given to the hard natural outer case of various organisms, e.g. fruits and seeds and birds' eggs, and especially to the external limy or flinty covering or skeleton of certain animals. Strictly speaking, it occurs only in the protozoa, the mollusca, and the brachiopoda. The so-called shell of the crustacea, as the lobster and crab, is a modification of the chitinous skin seen in the insects and other arthropoda. The carapace of the tortoises is a specialised development of the bony skeleton of the animal.

About three-quarters of the molluscs have univalve shells, as in the whelk and snail; and about one-fifth have bivalve shells, as in the oyster and mussel. The small remaining fraction includes the Chitons and a few shell-less species, as the nudibranch sea slugs.

See Bivalves; Egg; Mollusc; Nummulite, etc.

SHELL MONEY. Medium of exchange used from prehistoric times by native tribes of Africa, Asia, America, and Australasia. The

cowry shell is the one most common, but the tusk shell, clam shells, and others, or parts cut and ground from them, have been used.

SHELL. Hollow projectile discharged from guns, mortars, or howitzers. It contains a charge of explosive, incendiary, or illuminating composition, bullets, or chemicals, and is provided with suitable arrangements for discharging its contents at a prearranged point or on impact.

Spherical cast-iron shell made their appearance about 1600 and were general up to 1871. The percussion cap was introduced in 1840-45. Pointed cylindrical shell became general soon after 1880. As an explosive gunpowder was to a certain extent replaced by picric acid after 1886, and by trinitrotoluene after 1902. Since that date a variety of high explosives have been used in common shell.

The Great War saw the introduction of gas shell, which incapacitate troops by the toxic or irritant nature of their contents, and incendiary shells, designed to set fire to buildings and aircraft. See Ammunition; Gun; Howitzer; Shrapnel.

Shellac. Resinous preparation from the Ficus religiosa and other trees. See Lac.

SHELLEY, PERCY BYSSHE (1792-1822). English poet. He was born, August 4, 1792, at Field Place, Warnham, Sussex, the eldest son of Timothy Shelley. Edu-

ated at Eton, and expelled from University College, Oxford, for circulating his pamphlet on The Necessity of Atheism, he made the acquaintance in London of Harriet Westbrook, with whom in 1811 he eloped to Edinburgh, where they were married. By the spring of 1814 Harriet left her husband for a prolonged visit to Bath. During her absence he was frequently at the house of William Godwin, of whose extreme republican writings he was an enthusiastic admirer. Here he met Godwin's daughter, Mary, with whom he eloped to Switzerland in July, 1814, and to whom he was married in Dec., 1816, after his wife's suicide.

Shelley visited Geneva in 1816, and on his return to England issued Alastor and other Poems, in which his wonderful gifts were first seen in their maturity. In March, 1818, he left England, in search of health, for Italy, where his genius developed to its full. The noble tragedy of The Cenci, 1819, was followed by Prometheus Unbound, 1820. The "choral song of the regenerated universe," it is his most characteristic work, great alike in conception and performance. In 1821 he settled at Pisa, where he wrote Epipsychidion, and Adonais, his tribute to Keats. On July 8, 1822, he met his death returning to Lerici by sea from Leghorn. His body was

Mary Wollstonecraft Shelley, British author
After R. Rothwell

burnt some days later, and his ashes buried in the Protestant cemetery at Rome.

His widow, Mary Wollstonecraft Shelley, who lived until Feb. 21, 1851, was the authoress of Frankenstein, the story of a man who created a monster and gave it life.

SHELL FISH. Name given loosely to certain types of edible crustaceans and molluscs, including the lobster, crab, prawn, shrimp, oyster, cockle, mussel, whelk, winkie, etc.

SHELL SHOCK OR **SNISTROSIS.** Term employed during the early years of the Great War to designate the symptoms displayed by a certain number of soldiers after exposure to

Percy Bysshe Shelley, English poet
After A. Curran
Nat. Port. Gall.

Shekel. Both sides of the Jewish silver coin. Actual diameter, 1 1/2 in.

hombardment or shock from an explosion. At first it was believed that the symptoms were actually due to these causes. Later, however, it was found that the condition was really a neurosis such as was already familiar in peace time following the shock of a sudden accident, for example, a railway collision.

SHENSTONE, WILLIAM (1714-63). English poet. The son of a Worcestershire farmer, he went to Pembroke College, Oxford. He was the author of *The Schoolmistress*, a pretty poem written in the Spenserian stanza, and in his *Pastoral Ballads* are to be found faint foreshadowings of the return to nature which was to begin in earnest later on in the century. He died Feb. 11, 1763.

SHEPHERD'S BUSH. Dist. of London. In the hor. of Hammersmith, it has a common, and contains a station on the Central London (tube) Rly. It is also served by the London United Tramways Co. Here are the Hammersmith School of Arts and Crafts and the White City, with its stadium.

SHEPHERD'S PURSE or **PICKPOCKET** (*Capsella bursa pastoris*). Annual weed of the order Cruciferae, a native of Europe, N. Africa, and temperate Asia. It has a rosette of variable, lobed leaves, and a branched stem bearing minute white flowers. The pods are heart-shaped, two-valved, like an ancient purse, containing numerous seeds.

SHEPPARD, JOHN (1702-24). English highwayman. Commonly known as Jack Sheppard, he was born at Stepney, London, took to crime as a lad, and became a daring highwayman and expert thief. He was at the summit of his career in the summer of 1724, when he fell foul of Jonathan Wild. Wild gave him up to justice. After twice escaping from Newgate he was hanged at Tyburn, Nov. 16, 1724. Jack Sheppard furnished the theme for several plays and books, notably Ainsworth's *Jack Sheppard*, 1840. His portrait was painted in Newgate by Sir J. Thornhill.

SHEPPARTON. Township of Victoria, Australia. On Goulburn river, 113 miles by rail from Melbourne, it has extensive irrigation works and cattle yards. Pop. 3,800.

SHEPPERSON, CLAUDE ALLIN (1867-1921). British artist. Born at Beckenham, Kent, Oct. 25, 1867, he was a popular illustrator in black and white and for long a regular contributor to *Punch*. Graceful line and a freshness of colour are seen in his painting. He was elected A.R.A. in 1919, and he died Dec. 30, 1921.

SHEPPERTON. Village of Middlesex. A popular angling resort, it is on the N. bank of the Thames, between Sunbury and Chertsey, on the S.R., 19 m. from London.

SHEPPEY (SHEEP ISLAND). Island of Kent. It is separated from the mainland by the Swale and has an area of about 30 sq. m. Cereals are cultivated in the N. The chief industry is the rearing of sheep. Sheerness and Queenborough are on the W. side.

SHEPSHED. Urban dist. of Leicestershire. It is 3½ m. from Loughborough, on the L.M.S. Rly. Hosiery and gloves are made and quarrying is carried on. Pop. 5,600.

SHEPSTONE, SIR THEOPHILUS (1817-93). South African statesman. Born Jan. 8, 1817, he was taken to Cape Colony as a child, became proficient in the Kafir language, and was secretary for native affairs in the Natal government, 1856-77. Trusted and loved by the natives, his influence was unbounded. Knighted in 1876, he was entrusted with the settlement of the South African states, and in 1877 annexed the Transvaal to Great Britain. He retired in 1880, and died at Pietermaritzburg, June 23, 1893.

SHEPTON MALLET. Market town and urban district of Somerset. Known locally as Shepton, it is 22 m. from Bath, on the G.W.R. The church of SS. Peter and Paul is famous for its oak roof and various memorials. The town has a beautiful hexagonal market cross built in 1500 and a grammar school of the 17th century. The chief industries are brewing and the manufacture of silk, velvet, rope, and pottery. There are stone quarries, plaster works, and an agricultural trade. Market day, Fri. Pop. 4,300.

SHERATON, THOMAS (1751-1806). British furniture designer and cabinet maker. Born at Stockton-on-Tees and self-educated, he settled in London about 1790. He published *Designs for Furniture*; *The Cabinet-maker and Upholsterer's Drawing-Book*, 1791, and *The Cabinet Dictionary*, 1803. Although highly appreciated, he remained very poor, and eked out his livelihood by teaching drawing. He died in London, Oct. 22, 1806.

The Sheraton style, which he introduced, marks a reaction against Chippendale (q.v.), and is influenced by R. Adam and Hepplewhite. It is in the main an English version of the Directoire style. Sheraton was a clever mechanic, and devised folding bedsteads, cabinet-washstands, cellaret sideboards with urns for hot and cold water, knives and spoons, writing tables, and other contrivances.

SHERBET (Arab. sharbat). Oriental beverage made of fruit juices, water, and sugar, and cooled. In Britain the name is given to a powder composed of sodium bicarbonate, tartaric acid or oil of lemon, and sugar; when dissolved in cold water the powder makes a refreshing, effervescent beverage.

SHERBORNE. Market town and urban dist. of Dorsetshire. It is 13 m. from Dorchester on the S.R. The chief building is the church of S. Mary the Virgin. There is a 15th century hospital. Sherborne Castle was built by Sir Walter Raleigh about 1600. Market days, Thurs. and Sat. Pop. 6,400.

The title of Baron Sherborne has been held by the family of Dutton since 1784.

SHERBORNE SCHOOL. This public school was founded as a grammar school in 1550, but it was in a sense the successor of the school of the abbey, as it took over some of the buildings. In 1870 it was refounded, and has now accommodation for 350 boys.

Sherborne, Dorsetshire. The Perpendicular Abbey Church, from the south-west

Frith

SHERBROOKE. City of Quebec, Canada. It stands at the junction of the rivers St. Francis and Magog, 100 m. from Montreal. The industries include the making of clothing, machinery, tools, etc. Mining is carried on in the vicinity. Pop. 26,300.

SHERBROOKE, ROBERT LOWE, VISCOUNT (1811-92). British statesman. Born at Bingham, Notts, Dec. 4, 1811, he was educated at Winchester and University College, Oxford, and became a harrister. From 1842-50 he lived in Sydney. In 1852 he was chosen M.P. for Kidderminster, and from 1853-58 was secretary of the board of control, and then vice-president of the board of trade. From 1859-64 he was vice-president of the council, being responsible for the affairs of the education department. Elected M.P. for the university of London, he became in 1868 chancellor of the exchequer under Gladstone. In 1873 he was transferred to the home office. Created a viscount in 1880 he died at Warrington, Jan. 27, 1892.

Viscount Sherbrooke. British statesman

SHERBURN. Market town of Yorkshire (W.R.). It is 13 m. from York on the L.N.E.R. Its church, mainly Norman, has a noble tower, and there is an old grammar school. Pop. 2,094.

P. H. Sheridan. American soldier

SHERIDAN, PHILIP HENRY (1831-88). American soldier. During the Civil War he came into prominence as a skillful and daring cavalry leader, playing a conspicuous part in the battle of Chickamauga. He commanded the cavalry in the army of the Potomac and the army of Shenandoah, and fought under Grant in Virginia. He conducted the Indian campaigns, 1868-69, and from 1883-88 was commander-in-chief of the U.S. army. He died Aug. 5, 1888.

SHERIDAN, RICHARD BRINSLEY BUTLER (1751-1816). British dramatist and politician. Born in Dublin, Oct. 30, 1751, and educated at Harrow, in 1773 he married Elizabeth, daughter of Thomas Linley, the composer, and settled in London. In 1775 his play *The Rivals* was produced.

On the death of Garrick, Sheridan purchased a share in Drury Lane Theatre, and produced *The School for Scandal* there on May 8, 1777. His next piece was the clever farce *The Critic*, 1779. Elected M.P. for Stafford in 1780, he made his mark as one of the finest orators of his time, his greatest speech being that on the impeachment of Warren Hastings. Later he was an under-secretary in Rockingham's ministry (1782) and a secretary of the treasury in the coalition ministry (1783). He died July 7, 1816, with bailiffs in his house, and was buried in Westminster Abbey. In addition to his gifts as an orator and a dramatist, Sheridan was one of the wittiest men of his own or any age. His three daughters were Lady Dufferin, Mrs. Norton, and the duchess of Somerset.

R. B. Sheridan. British dramatist
After Reynolds

SHERIFF. Public official in Great Britain. The word means shire reeve, and the first sheriffs were officials who looked after the king's property in the various shires or counties. Some of them became hated for their extortions, and Henry II found it

necessary to curb their power and to prevent them from making the office hereditary.

In England and Wales each county has its sheriff called the high sheriff. He is chosen for one year, three names being submitted to the king for the purpose from among the landowners in the county. The chancellor of the exchequer selects one of the three, usually the first on the list, on Nov. 12. In the counties of Lancaster and Cornwall the sheriffs are chosen by the king and the prince of Wales as dukes of Lancaster and Cornwall. There are sheriffs in certain English cities, e.g. Bristol, Norwich, and Nottingham, and the city of London has two.

In Scotland, a sheriff court is a court held nominally by the sheriff of a county, but in practice by the sheriff-deputy, or substitute. The sheriff, who is a lawyer, has also summary jurisdiction in small debt cases and criminal jurisdiction in minor offences.

SHERIFFMUIR, BATTLE OF. Engagement between the Jacobites and Hanoverian forces, Nov. 13, 1715. The Old Pretender ordered the earl of Mar to raise an army in the north, and 9,000 Highlanders flocked to his standard. Mar waited until the royalist army of some 3,500 regulars advanced upon him at Sheriffmuir, 3 m. from Dunblane. The battle was stubbornly fought until, unable to gain a decision, the royalists withdrew.

SHERINGHAM. Urban dist. and watering place of Norfolk. It is 4 m. from Cromer on the L.N.E.R. There are golf links and other attractions. Near are the remains of Beeston Priory. Pop. 4,800.

SHERMAN, JOHN (1823-1900). American politician. Born at Lancaster, Ohio, May 10, 1823, brother of W. T. Sherman, he became a lawyer in 1844. In 1855 he entered the House of Representatives, and in 1861 became a member of the Senate, wherein he remained until 1897 with the exception of four years, 1877-81. Secretary to the treasury, 1877-81, Sherman, who was secretary of state under McKinley, 1897-98, is chiefly known for the silver law of 1890 and for a measure against trusts. He died at Washington, Oct. 22, 1900.

SHERMAN, WILLIAM TECUMSEH (1820-91). American soldier. Born at Lancaster, Ohio, Feb. 8, 1820, he was educated at West Point. During the Civil War he was given the command of the army of Tennessee, and contributed largely to the victory of Shiloh. He assisted Grant in the campaign against Vicksburg and in the battles around Chattanooga, and did brilliant work in Mississippi. In May, 1864, he began the invasion of Georgia, and after defeating General Joseph E. Johnston, undertook his famous march to the sea in Nov. He died Feb. 14, 1891. His Memoirs appeared in 1875.

W. T. Sherman, American soldier

SHERRY. White Spanish wine. Grown between the mouths of the Guadalquivir and Guadalete, it is named from Jerez. The chief varieties are the pale, or dry, and the brown, or sweet. Typical of the former is Manzanilla; of the latter, Amontillado. Other brands are called Fino, Oloroso, and Vino de Pasto, other trade names being palma, raya, and palo.

SHERWOOD FOREST. Former royal forest in Nottinghamshire. It stretched W. from Nottingham as far as Worksop and covered about 200 sq. m. Most of it has been disafforested. King John had a hunting residence here and the forest is associated with the exploits of Robin Hood. The name Sherwood is now that of one of the suburbs of Nottingham. The part of the forest which remains is part of the Dukeries (q.v.).

SHERWOOD FORESTERS. Regiment of the British army. Known also as the Nottinghamshire and Derbyshire Regiment, it was formerly the 45th and 95th Regiments of Foot, the former dating from 1741.

Sherwood Foresters Regimental badge

In the Peninsular War the Foresters were attached to Picton's Fighting Division, and gained the nickname of "The Old Stubborns." They served in the Crimean War, the Indian Mutiny, Egyptian War, 1882, the Tirah campaign, 1897-98, in S. Africa, and had a large number of battalions serving in the Great War. The depot is at Derby.

SJETLAND OR ZETLAND. Group of about 30 inhabited and 70 uninhabited islands off the N. coast of Scotland. They form a co., and with the Orkneys send a member to Parliament. The area is 551 sq. m. The chief industries are the breeding of cattle, sheep, and ponies, and fishing. Lerwick is the capital. They were part of Norway from 875 to 1468, when they were ceded to Scotland. In 1764 they became the property of the Dundas family, who take from them, in the form of Zetland, the title of marquess. Pop. 22,600. See Scotland, map, p. 1214.

SJETLAND PONY OR SHELTY. Smallest British breed of horses. It is produced in the Shetland Isles, and thought to have descended from the British horse of prehistoric times. It stands from 9 to 11 hands high, and has a rough shaggy mane and forelock. See illus. p. 1096.

SHIBBOLETH (Heb. ear of corn, flood). Password of the Gileadites under Jephthah during their war with the Ephraimites (Judges 12, 6). The Ephraimites pronounced the word shibboleth, thus betraying their identity. The word is applied to the watchword or pet phrase of a political or other party.

SHIEL. Loch or lake of Scotland. Forming part of the boundary between Invernesshire and Argyllshire, it extends from Glenfinnan in a S.W. direction for 17 m., and has a breadth of 1 m. and a greatest depth of 420 ft. Its surplus waters are discharged by the river Shiel through Loch Moidart to the sea. At Glenfinnan a monument marks the spot where the Young Pretender unfurled his banner, August 19, 1745.

SHIELD (A.S. scild). Article of defensive armour, carried on the left arm. Its use was widespread until the introduction of firearms. The materials were chiefly wood, hide stretched over a wooden or wicker frame, and metal. In classical times the Greek shield was often round, with a leather apron. Roman legionaries carried an oblong convex shield (scutum) of wood and leather with metal rim. The Normans of the 11th century used the kite-shaped shield, from which was developed the form familiar in heraldry.

In engineering an elaborate mechanical device called a shield is used in tunnelling operations. It consists of a steel-plate cylinder, with a powerful cutting edge at the forward end. The rear end of the shield overlaps the completed tunnel lining. By hydraulic rams the shield is forced slowly forward, and the earth excavated through openings in the end of the cylinder. See Tunnel.

SHIELD OR ESCUTCHEON. In heraldry, the motif, derived from the ancient military protective shield, on which armorial bearings are blazoned. Its shape has varied with fashion, that best adapted for most purposes being the heater, used in this Encyclopedia. Crests should not be displayed on shields; while, strictly speaking, merchants' marks and other devices of a non-heraldic character are also expected. See Heraldry.

SHIELD FERN. Name given to several species of Polystichum. P. aculeatum, the prickly shield fern, has bright green bipinnate fronds which grow to two or three feet. It is an evergreen, common in hedgerows and at the margins of thickets and woods.

Shield Fern, a species common in the English countryside

SHIELDS. NORTH. Seaport of Northumberland, part of the county borough of Tyne-mouth. It stands on the N. bank of the Tyne, 8 m. from Newcastle, on the L.N.E.R., and a steam ferry connects it with S. Shields. There are docks from which coal is exported. Other industries are shipbuilding and the manufacture of cables, anchors, chemicals, rope, etc. It is also a port for fish. The name Shields is derived from a word, akin to the Gaelic shieling, meaning a hut, Tyne fishermen having once built a number of huts here. See Tynemouth.

South Shields, Durham. Portion of the municipal buildings

SHIELDS. SOUTH. Co. bor. seaport, and market town of Durham. It stands on the S. bank of the Tyne, opposite N. Shields. The harbour is accessible to the largest vessels, and there are extensive docks and wharves. The industries include the shipping of coal, the manufacture of glass, chemicals, boilers, cables, etc., and shipbuilding yards. The Lawe was the site of a Roman station. In 1922 it adopted the French town of Catillon-sur-Sambre. One member is returned to Parliament. Market day, Sat. Pop. 123,000.

Shiel. The Scottish loch, with monument showing where the Young Pretender unfurled his flag in 1745

SHIFNAL. Market town of Shropshire. It is 17 m. from Shrewsbury on the G.W.R. St. Andrew's church is a fine cruciform edifice with Norman work. The industries include blast furnaces and iron foundries, and around are coal and ironstone mines. Near by are Tong Castle, Boscobel, and White Ladies. Market day, Tues. Pop. 3,400.

SHITES OR SHIAHS (Arab. shi'ah, party). One of the two chief divisions of Mahomedans, the other being the Sunnis or Sunnites. They regard Ali, cousin of Mahomet, as the Prophet's first true successor.

SHILDON. Market town of Durham. It is 9 m. from Darlington on the L.N.E.R., and is part of the urban dist. of Shildon and E. Thickley. The industries include iron-founding, coal-mining and quarrying. Market day, Fri. Pop. (urban dist.) 14,165.

SHILLING. British silver coin, nominally the 20th part of a pound sterling. Formerly consisting of 925 parts of silver and 75 of other metals, its fineness was reduced to 500 in 1920. First coined by Henry VII in 1504, it received milled edges, to prevent sweating, in Charles II's reign. The Anglo-Saxon "scyilling," value about 5d., was indented with a cross and could be broken into four pieces.

SHILOH. Town in Ephraim, now known as Seilun. Between Bethel and Shechem, and about 19 m. from Jerusalem, it was a resting place of the Ark of the Covenant.

Shin. Loch or lake of Sutherland, Scotland. It is 17 m. long, from $\frac{1}{2}$ to $1\frac{1}{2}$ m. broad, and its depth is 161 ft.

SHINGLE. Rounded alluvial material found on the seashore. The word is employed also for the thin pieces of wood used in roofing.

A shingle, so named from its resemblance to a shingled roof, is one of the ways in which women, since the Great War, have had their hair dressed. The hair is cut and waved to fit closely to the back of the head and neck.

The Shingles is a sandbank between the Isle of Wight and Hurst Castle, $2\frac{1}{4}$ m. long.

Shingles. Acute eruption on the skin characterised by the appearance of groups of small vesicles.

SHINTOISM (Chin. shin-tao, way of the gods). National religion of Japan. Though apparently of native origin, it has affinities with N. Asiatic Shamanism, and has been overlaid with Buddhistic and Confucian ideas. The chief of numerous divinities is Amaterasu, the sun goddess. From her the emperors claim descent. There are no idols, but the souls of the gods are held to inhabit chests in the temples. The ritual is simple and austere. Worship takes the form of offerings, prayers for temporal blessings, litanies read by the priests, and dances. Pilgrimages are frequent, and there are annual festivals. Twice a year there is a day of purification of the people. Reverence for ancestors and loyalty to the state are enjoined. The human heart is held to be essentially good. The spirit passes at death into the shadowy world of Yomi, from which it exerts an influence over posterity. Shintoism contributed to the restoration of the temporal power of the emperor.

SHINTY OR CAMANACHD. Ancient game of the Scottish Highlands. The field varies from 250 yds. to 140 yds. in length and 100 to 70 yds. in width. The goals (hails) are 12 ft. wide and 10 ft. high, backed by a netting. A goal is scored by the ball being hit between the hails into the netting. There are 12 players on a side. The ball, a cork core bound with worsted and covered in leather, is about 2 ins. in diameter and weighs between three and four ounces. The caman or club is a stick with a triangular head. The controlling body of the game is the Camanachd Association.

SHIP. Any vessel intended for navigation, and in particular a sea-going vessel. The earliest ships were built more than 6,000 years ago, when the Egyptians had vessels large enough to carry 50 persons. Other early shipbuilders were the Chaldeans, Hindus, and Chinese. Until the time of Columbus there was but little progress in design. The length was usually less than 100 ft., and the vessels were high at the bows and stern. Such development as occurred took place chiefly in the Mediterranean. Columbus's flagship was 128 ft.

long and had three masts. In the three succeeding centuries ships rarely exceeded 200 ft. in length, and were characterised by full lines and breadth of beam. The Great Harry (q.v.), the first double-decked English warship, was built in 1514. The Ark, the English flagship against the Armada in 1588, was only 800 tons burthen. Nelson's Victory, 1765, was 226 $\frac{1}{2}$ ft. in over-all length, with a tonnage of 2,162.

In 1775 Jouffroy built a paddle steamer which was used on the Saône for 16 months. Fitch's boats on the Delaware (c. 1790), Symington's Charlotte Dundas on the Forth and Clyde canal (1801), Stevens's Phoenix on the Delaware (1809), and Fulton's Clermont on the Hudson (1807) were the earliest successful vessels driven by steam.

Transatlantic voyages under steam began with the Sirius and Great Western in 1838. The early steamers depended on paddles, but screw propellers came into use after 1860. Concurrently sailing vessels were improved. They were built with finer lines, and the spread of sail was increased. The famous clipper ships, designed for rapid travel over long voyages, were used in the tea trade with China, and made the transatlantic passage in 13 $\frac{1}{2}$ days. The fastest of the early clippers were about 215 ft. long, and capable of 330 nautical miles per day. Modern sailing tramps belong to the clipper type or to the

SOME OF THE WORLD'S LARGEST SHIPS

* Motor Ship.

schooner type, carrying two to seven masts. Representative types of sailing vessels are illustrated in the articles which deal with barque, brig, clipper, cutter, lugger, ketch, sloop, and schooner.

From 1840 to the present time transatlantic steamers have increased in length from 200 to over 900 ft., and reduced the journey, England to U.S.A., to less than five days.

Shipbuilding has been one of the most important industries in the British Isles since very early times. The chief shipbuilding districts are the Clyde, Tyne, Wear, Tees, Humber, Mersey, Barrow-in-Furness, and Belfast. Iron was first used for hulls in 1818, and gave way in the late seventies to mild steel, now universally employed. The great increase in the size of individual ships has been brought about by the demand for greater speeds and more economical working. See Savannah.

SHIP CANAL. Artificial waterway for the passage of sea-going vessels. It may be a link between two seas, or provide access from the sea to an inland town or district, or a navigable river or lake. The Suez Canal is an early example of a ship canal without locks; the Panama Canal is the most notable example of a ship canal with locks. Other important ship canals are the Kaiser Wilhelm or Kiel Canal, connecting the Baltic and North seas; the Corinth Canal, connecting the Adriatic and

Aegean seas; the Manchester Ship Canal; and the Kronstadt to Leningrad canal. Two short but important ship canals at Sault Ste. Marie connect Lakes Superior and Huron; one is in the United States, and the other in Canada. In Canada also is the Welland Canal, uniting Lakes Ontario and Erie.

SHIPKA PASS (Wild Rose Pass) Pass in the Balkan Mts., Bulgaria. It leads from Plevna to Philippopolis (Plovdiv). The summit is 4,370 ft. alt. Some of the distilleries of attar of roses are at Karlovo and Kazanlik at the S. end of the pass.

SHIPLEY. Market town and urban dist. of Yorkshire (W.R.). It stands on the Aire, 3 m. from Bradford, and is served by the L.M.S. and L.N.E. Rlys. The industries include the manufacture of woollens and worsteds. Market day, Fri. Pop. 28,300.

Another Shipley is a mining village in Derbyshire, 7 m. from Derby, on the L.M.S. Rly.

SHIP MONEY. Tax levied by Charles I in 1634. In previous reigns it had been usual for seaport towns to fit out ships to defend the coasts, but only in time of war. Charles, in 1634, demanded ship money from the seaport towns. In 1635 the writs were repeated and sent to inland towns. When the tax was levied for a third time John Hampden (q.v.) refused to pay. The case came before the court of exchequer in 1637. Of twelve judges, seven decided for the king.

SHIPPING. Industry of conveying passengers and goods in ships. In England the first shipping code dates back to the reign of Richard I, and restrictive legislation against foreign shipping was soon initiated; but since 1854, when the coasting trade was thrown open to the ships of every nation, shipping legislation has been designed more with a view to safeguarding life and property at sea than to favour shipowners by excluding their rivals on certain sea routes.

According to Lloyd's Register the gross tonnage of the world's steamers and motor ships at June, 1914, was 45,404,000. At June, 1930, the total was 68,023,804 tons, and the tonnage of sailing vessels was 1,583,840, making the world's mercantile tonnage at that date 69,607,644. The gross tonnage of sea-going mercantile marine vessels belonging to Gt. Britain and Ireland at June 30, 1930, was 20,438,444.

The first six months of 1930 saw a great depression in shipping. Although rates were reduced to an uneconomic level, lower than the pre-war figure, some hundreds of vessels were unable to obtain freights, and were consequently laid up. At the worst period ships totalling over 4,000,000 tons gross were rendered idle. At July 1, 1930, 373 vessels were laid up in British ports as compared with 145 a year previous.

The Ministry of Shipping was a department of the British Government set up during the Great War. It ended March, 1921.

SHIPTON, MOTHER. Legendary English soothsayer. The earliest known reference to her is in an anonymous pamphlet published in London in 1641. W. Lilly, the astrologer, quoted 18 of her predictions in his Collection

of Prophecies, 1645, declaring that 16 of them had been fulfilled.

SHIRAZ. City of Persia. Situated in a fertile valley, on the caravan route between Bushire and Isfahan, it is the capital of the prov. of Fars or Farsistan, and has considerable

SHIP. DETAILS OF HULL, RIGGING (STANDING AND RUNNING) AND SAILS OF A THREE-MASTED SAILING SHIP

SHIP. Longitudinal section of a Canadian Pacific Rty. liner, of 14,000 tons burthen and 18,000 h.p.; showing disposition of cargo, passenger accommodation, coal bunkers, boilers, and engines. Measurements: length, 548 ft.; breadth, 65 ft.; depth, 36 ft. Internal arrangements vary in detail according to the class and size of vessel, but the above diagram may be considered typical of ocean-going passenger boats

trade in normal times in wine, cottons, gums, opium, and attar of roses. Famous as the birthplace of the poets Hafiz and Sa'di, its inhabitants are credited with speaking the purest Persian in the country. Founded in 697, it was formerly one of the chief centres of the Zoroastrians. Pop. 35,000. See Persia.

Shiraz, Persia. Bagh-i-Takht-i-Kajar, the splendid throne garden and palace to the north of the city

SHIRE (A.S. *sciran*, to divide; cf. *share* and *shear*). In England, term applied from about the 8th century onwards to the districts into which the country was divided. They were ruled by earls or aldermen, whose authority was frequently delegated to a sheriff. In a general way the shire is the same as the modern county, but several counties, e.g. Durham, Norfolk, Surrey, Cornwall, were never called shires. In Ireland county is the usual prefix, e.g. co. Down, co. Kerry. See County; Sheriff.

SHIRE. River of the Nyasaland Protectorate and Portuguese East Africa. It is 295 m. long and forms the S. outlet of Lake Nyasa, passing through the reedy swamp of Lake Malombe. Navigation is obstructed by cataracts. The only important tributary is the Ruo. The chief settlements are Fort Johnston, Liwonde, Chiromo, Port Herald, and Chindio.

SHIREBROOK. Village of Derbyshire. It is 5 m. from Mansfield on the borders of Nottinghamshire, a small stream called the Shirebrook here separating the two counties. Served by the L.N.E. and L.M.S. Rlys., it is a coal-mining centre. Pop. 11,309.

SHIREHAMPTON. District of Gloucestershire. It stands on the Avon, about 4 m. to the N.W. of Bristol, on the G.W. and L.M.S. Joint Rly., and has a public park. During the Great War the place had a large remount depot.

SHIRE HORSE. Breed of horses, believed to be descended directly from the old English war horse. It is large limbed, with full, flowing mane and tail, and the fetlocks are clothed with long, silky hair. The maintenance and improvement of the breed is looked after by the Shire Horse Society. See Horse.

SHIRLEY, JAMES (1596-1666). English dramatic poet. Born in London, Sept. 18, 1596, and educated at Merchant Taylors' School and at Oxford and Cambridge, he was by turns clergyman, schoolmaster, playwright, soldier, and again schoolmaster. Of his plays the best are the comedy *The Lady of Pleasure* and the tragedy *The Traitor*. He wrote some exquisite lyrics, notably "The glories of our blood and state," and excellent dialogue, and dramatised Sidney's *Arcadia*.

James Shirley, English dramatist
After J. Thurston

SHITTIM. Wood of an acacia tree (A.

seyal), found in the valleys around and S. of the Dead Sea, Palestine. Hard and close-grained, the wood was largely used in the construction of the Tabernacle.

SHOAL (akin to shallow). Place where the water of a river, lake, or sea shallows. Shoals occur over sandbanks, bars, or reefs, and rise sufficiently close to the water surface to interfere with navigation. Shoals run for hundreds of miles along the West African coast, between Lagos and Freetown.

SHOCK. Condition of general depression of the system associated with a marked fall in the blood pressure, feebleness and irregularity of the pulse, and shallow breathing. Shock results from an injury or surgical operation affecting peripheral sensory or sympathetic nerves, the stimulus being transmitted to the brain and depressing the vital centres. The tendency to shock is increased by any factors which lower the general tone of the body, such as haemorrhage, exposure to cold, or want of food. Psychic factors, such as the nervous expectation of a patient awaiting operation, also play a part.

SHOCK ABSORBER. In engineering this is any arrangement for taking up sudden shocks. The spring fork of a motor cycle or the bumpers of a motor car are examples. The hydraulic shock absorber for motor cars comprises an oil-filled casing with compartments in which vanes are forced round by the action of a lever connected to the car springs, the casing itself being fixed to the chassis. A small hole enables oil to pass easily from one compartment to another when movement of the springs is slow, but rapid oscillations are checked by the damping effect of the oil. See Motor Car.

Shock Absorber. Houdaille type as used on motor cars

SHODDY (A.S. *seeádan*, to shod). Word loosely used to denote any twice-used wool. Shoddy is the long fibre obtained from shredding stockings, worsted, carpets, and the like. Large quantities of clippings of cloth are converted into shoddy. The chief centre of the industry is Dewsbury. The materials are thoroughly cleansed before unpieking, all cotton threads removed, and sorted into various colours and qualities. They are then oiled to facilitate the separation of the threads and "teased" into a fibrous mass, from which the material can be freshly spun.

SHOE-BILL or WHALE-HEAD (*Balaeniceps rex*). Species of heron, found in N. Equatorial Africa. It has an enormous beak, somewhat like a shoe, very long legs, and grey plumage. It feeds on fish and carrion.

SHOEBURYNESS.

Urban dist. of Essex. It stands on the Thames estuary, 3 m. from Southend-on-Sea, on the L.M.S. Rly., and is noted for its school of gunnery. There are barracks and other military buildings. Pop. (1921) 6,400. Shoebury Ness is a cape near the town where the coast turns to the N.E.

SHOFAR. Hebrew trumpet still used in the modern synagogue. It is the horn of a ram or any clean animal, and produces only the natural series of harmonies from its fundamental note, these being obtained by the increasing pressure of the air from the lips.

Shofar. Hebrew trumpet used on New Year's Day

SHOGUN (Jap. general). Originally, the title of a military commander in Japan. The shoguns became so powerful that they came to be regarded as the temporal rulers of Japan. The shogunate was abolished in 1868. The shogun was also called the tycoon, the Chinese term for "great lord."

SHOOTER'S HILL. London dist. It is part of the bor. of Woolwich, between Woolwich and Eltham. The Castlewood estate, with the tower known as Severndroog Castle, is now public property. On Shooter's Hill are the kennels of the Blue Cross Society and golf links. See Blue Cross.

SHOOTING. Art of using firearms in war and in sport. In war it is more usually known as gunnery or marksmanship, leaving the word shooting in common speech to sport.

In the British Isles the chief objects of shooting as a sport are pheasants, partridges, grouse, rabbits, snipe, etc. The shooting of stags is generally known as deer stalking. Another form, now only possible in a few parts of the world, is big game shooting.

The safest position in which to carry a gun is poised over the shoulder with the trigger guard uppermost. Another safe position is under the arm with the barrel in front pointing towards the ground; and if, in addition, the gun is open at the breech, it will add to the security of the rest of the shooters. Before climbing a gate or getting through a hedge, the cartridges should always be extracted. Extra precaution should be taken when various members of the party are shooting in line. See Close Time; Gunnery.

SHOP (A.S. *seoppa*, stall or booth). Room or building in which goods are sold. The term is also used for a building in which engineering and other manual work is done.

In Great Britain the law about shops is contained in the Shops Act of 1912, and the Shops (Hours of Closing) Act of 1928. Every shop assistant shall have a half-holiday once a week, beginning not later than 1.30 p.m. Shops are to be closed on one afternoon in each week, the day to be fixed by the local authority, but certain classes of shops, e.g. those selling refreshments, are exempt. With some exceptions, shops must be closed at 8 p.m. on every evening in the week but one, when they may stay open till 9 p.m.

No person under the age of 18 may be employed in or about a shop for a longer period than 74 hours, including meal times, in a week. Female assistants must be provided with seats behind the counter, in the proportion of one seat to three assistants. Intervals for meals are also the subject of regulations. See Early Closing; Factory Acts.

SHOP STEWARD. Official of a trade union. Appointed by his fellow-members employed by the same firm, his duties are to collect subscriptions and forward them to the branch secretary, to be cognizant of all matters in dispute, and to report on them to the general or branch secretary; to report promptly any accident to members, and generally to see that the union rules are strictly observed. See Trade Union.

Shoe-bill. Head, showing the broad, heavy beak
W. S. Burridge, F.Z.S.

2 A**

Africa, and N America, it occurs in Britain as a winter visitant, but breeds in a few places in England, Ireland, and the Hebrides.

SHRAPNEL. Type of shell containing a large number of bullets, which are released and travel forward at high velocity when the shell is opened by the bursting charge. Shrapnel was invented in 1784 by Col. Henry Shrapnel (1761-1842), and was adopted in 1803 by the British army. On firing the time fuse is started by percussion mechanism and after a certain length of time, previously set by the gunner, fires the magazine of the fuse, the flash exploding the charge, which blows the fuse out and ejects the bullets. See Ammunition; Artillery; Explosive; Gun; Shell.

SHREW. Family of small insectivorous mammals (Soricidae). There are many species, distributed over most tropical and temperate regions. In general appearance most of them resemble mice, but they usually have long and conspicuous snouts. The common shrew (Sorex araneus), about 3 ins. long in body, has a tail about 1 1/2 ins. in length. It is brownish grey on the back and grey or pale buff below. The ear is very small and is rounded in outline. It lives in burrows in banks, the food consisting of insects, snails, and worms.

Shrew. Common shrew, the mouse-like insectivorous mammal

The pygmy shrew (S. minutus), smallest of the British mammals, is little more than 2 ins. long in body. The fur is brighter and more silky than that of the common shrew. The water shrew (Neomys fodiens) has a total length of slightly over 6 ins., of which more than 3 ins. is taken up by the tail. It lives in burrows beside streams and ponds, and the entrance is under the water. See Jumping Shrew.

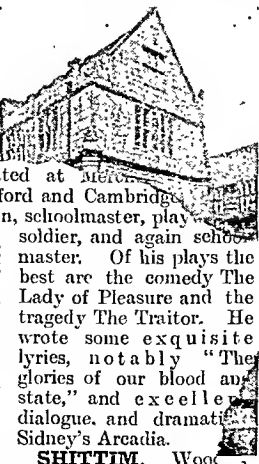

The shrew mole is a genus of insectivorous mammals related to the true moles and found in N. America and Japan. It resembles the common mole, but is much smaller.

SHREWSBURY. Borough, market town and county town of Shropshire. It stands on the Severn, 43 m. from Birmingham, on the G.W. and L.M.S. Rlys. The abbey church has a Norman nave, and S. Mary's a Jesse window. S. Julian's and S. Alkmund's were rebuilt in the 18th century, excepting the altars. There

SHIRLEY a dramatic poet. 1596, and educated at Merchant Taylors' School and at Oxford and Cambridge, by turns clergyman, schoolmaster, play soldier, and again schoolmaster. Of his plays the best are the comedy The Lady of Pleasure and the tragedy The Traitor. He wrote some exquisite lyrics, notably "The glories of our blood and state," and excellent dialogue, and dramatic Sidney's Arcadia.

James Shirley, English dramatist
After J. Thurston

SHITTIM. Wood and an acacia tree

house, the council house (1620) and the drapers' hall. The museum and library occupy the old grammar school building. The castle

Shoveller. Broad-billed species of duck, with matured plumage

has been much modernised, but some parts of the Norman building still stand. Shrewsbury is noted for cakes, brawn, and ale; other industries include glass staining, malting, iron founding, and the making of agricultural implements. Having been reconstructed, the English bridge over the Severn was opened by Queen Mary in 1927. The public school, founded in 1552 by Edward VI, has accommodation for about 500 boys. It was in the town until 1882, when it was removed to Kingsland, just outside. Market days, Tues. and Sat. Pop. 31,030.

The battle of Shrewsbury was fought July 21, 1403, between Henry IV of England and a combination of his enemies, led by Hotspur. Hotspur was killed, and his followers fled.

SHREWSBURY, EARL OF. English title borne since 1442 by the family of Talbot. Its holder ranks as the premier earl in the English peerage. John Talbot, the first earl, won fame as a soldier in France during the reign of Henry VI. His descendant George, the 6th earl, was a husband of Bess of Hardwicke, the builder of Hardwicke Hall and other houses and the ancestress of the dukes of Devonshire and Newcastle. Charles, 12th earl, was secretary of state and then lord high treasurer under William III and Anne. In 1694 he was made a duke, but this title became extinct when he died in 1718. The earldom passed then to a cousin, whose direct line died out in 1856, when the title came to H. J. Chetwynd-Talbot, Earl Talbot. Since then the two earldoms have been united. The earl's seat is Ingestre Hall, Stafford, and his eldest son is called Viscount Ingestre.

SHRIKE. Book name for the butcher bird. The genus Lanius includes about 50 species of world-wide distribution, with the exception of S. America. Only one, the red-backed shrike, breeds in Britain; but others are winter visitors. See Bush Shrike; Butcher Bird.

SHRIMP. Popular name for a number of small decapod crustaceans, but applied particularly to the edible brown shrimp (Crangon vulgaris). The brown colour is due to cooking. The natural tint is greenish grey speckled with brown. It differs from the prawn (q.v.) in several respects; the carapace is not extended forward into a long rostrum; only one pair of antennae are at all long; and there are no nippers to the walking feet. It forms a considerable part of the food of flat-fish and stoner shallow water species. It feeds on minute marine organisms and debris, swimming over the sand (to which its coloration assimilates) by incessant motion of its swimmerets. Shrimps are

caught in a large net attached to a T-shaped handle which is pushed over the submerged sands by the wading shrimp.

SHROPSHIRE or SALOP. County of England. With an area of 1,346 sq. m., it is bounded W. by Wales and is crossed by the Severn. Except for the Wrekin, the N. portion is level, but the rest is generally hilly. Ranges are the Clec Hills, Wenlock Edge, and the Breidden Hills. Brown Clec is 1,800 ft. The Severn and its tributaries, Rea, Roden, and others, water the county, which contains Ellesmere and other meres or lakes. Clun Forest and the Wyre Forest are rough, unfertile regions in the south. Shropshire is in the main agricultural, although there is a coal-field around Coalbrookdale. Barley, oats, wheat, and other crops are produced. Shropshire sheep are noted. The G.W. and L.M.S. Rlys. serve the county. Shrewsbury is the county town. Ludlow, Wenlock, Oswestry, Wellington, Bridgnorth, and Newport are other towns. Church Stretton is an inland watering place. It is in the dioceses of Lichfield and Worcester. Pop. 243,062. See map below.

Shrimp. Common edible species found in the shallow waters around the British coasts

SHROPSHIRE LIGHT INFANTRY. THE KING'S. Regiment of the British army. It was formerly the 53rd and 85th of the line, raised in 1755 and 1793 respectively. It won fame in the campaign in Flanders in 1793-95. It went through the Peninsular War, and includes among its battle honours Talavera, Fuentes d'Onoro, Salamanca, and Vittoria. It fought in the Maratha and Sikh Wars, and in the India Mutiny, and later campaigns included the South African War.

Shropshire Light Infantry badge

The regiment had a number of territorial and service, in addition to its regular and

Shropshire. Map of the agricultural county on the border of Wales

reserve, battalions in the Great War. Units of the regiment fought in most of the leading battles of the war. The 1st battalion Herefordshire Regt. is now included in it. The regimental depot is at Shrewsbury.

SHROVE TUESDAY. Popular name for the day preceding Ash Wednesday. As the last day before Lent, in medieval times it was largely a day of preparation for the Lenten fast, penitents being then shriven, whence the name. The day was also characterised by merry making and feasting, a relic of which is the eating of pancakes.

SHRUB. Horticultural term for any perennial, hard-wooded plant which has branches springing immediately from the roots or ground level. Its application appears merely to rest upon convention and custom, in order to distinguish a shrub from a tree, which has a solitary trunk rising from the ground before the branches are produced.

SHRUBB, ALFRED (b. 1878). English long-distance runner. Born at Slinfold, Sussex, Dec. 12, 1878, he won in 1898 his first race, a mile handicap, in 4 min. 38 secs. His later successes include the One Mile championship in 1903 and 1904; the Four Miles, 1902-4; and the Ten Miles in 1901-1904. Shrub held many records, both amateur and professional, for distances from 2-25 m., including the world's amateur records from 6 to 7 m.; and professional and amateur records from 8 to 11 m. He wrote *Long Distance Running and Training*, 1909. See *Running*.

SHUTTLE. In weaving, the weft carrier. It is a wooden piece, pointed and metal-capped at the ends, hollowed in the middle to receive the yarn, and with an eye in the side from which the thread is trailed. The shuttle shoots back and forth across the loom in course of weaving. See *Loom*; *Weaving*.

SIALKOT. District of the Punjab, India. It occupies part of the Rechna doab, between the Ravi and the Chenab, and is irrigated by the Upper Chenab Canal. Wheat is the main crop, and the Jats are the chief tribesmen. The area is 1,991 sq. m. Pop. 937,823.

The town of Sialkot is an important centre of trade. Pop. 70,600.

SIAM. Kingdom of S.E. Asia. It lies between Burma on the W. and French Indo-China on the E., where a considerable portion of the boundary is the Mekong river. To the S.W. a narrow strip of territory, between Burma and the gulf of Siam, connects with the Siamese portion of the Malay peninsula. The area is 200,148 sq. m. Pop. 10,284,000.

Forced labour is still levied on the peasantry, but a poll tax is gradually being substituted. The forests yield large quantities of teak. Tin is obtained in the island of Puket and on the neighbouring mainland. Other minerals include wolfram, coal, iron, zinc, manganese, and antimony. Rice is the staple crop and the main export. Among other exports are tin and teak. Bangkok is the capital and the seat of a university, and is also the centre for rlys., of which there are 1,749 m. of state lines and over 60 m. in private hands. Siam joined the Allies in the Great War, July, 1917, and sent troops and other units to France. The kingdom is a member of the League of Nations. See *Bangkok*.

Siam. A Siamese dancer, in typically gorgeous and elaborate costume

Siam. Map of the progressive native kingdom of south-east Asia

In 1925 the metric system was introduced.

SIAMANG (*Hylobates syndactyla*). Gibbon or long-armed ape, native of Sumatra and the Malay Archipelago. The largest species in the genus, it is distinguished from its congeners by the middle and index toes being united by the skin for half their length. It stands about 3 ft. high, and is of a uniformly black colour, save for a few scattered grey hairs on cheek and chin. The ears are almost hidden by long fur. See *Gibbon*.

SIAMESE TWINS. Name given to Chang and Eng (1811-74), twins joined at birth. They were born of Chinese parents in Siam, and, their breastbones being united by a band of flesh, were sold by their parents for exhibition. They died Jan. 17, 1874, one surviving the other by 2½ hours.

The original twins were succeeded by Rosa and Josepha Blazek, born in 1878 in Bohemia. They toured Europe in 1921, visited the U.S.A., where they contracted jaundice, and died in Chicago on March 30, 1922.

SIBELIUS, JEAN JULIUS CHRISTIAN (b. 1865). Finnish composer. Born at Tavastehus, Finland, Dec. 8, 1865, he became a teacher at Helsingfors conservatoire in 1893. Sibelius is generally regarded as leader of the Finnish school of musicians. The popular *Valse Triste* is from the music for a tragedy, *Knolema*; the stirring *Finlandia*, a symphonic poem, five symphonies, and many songs are among his best-known works.

Jean Sibelius, Finnish composer

SIBERIA. General term applied to the Asiatic territory of the Union of Socialist Soviet Republics, with the exception of Soviet Central Asia. It comprises the whole of N. Asia between the Urals and the Pacific, and includes the autonomous Yakutsk and Mongol-Buriat republics. The area of the territory is some 5,000,000 sq. m.

For several hundreds of miles inland from the Arctic Ocean stretches a region of marshy tundras, which are frozen for the greater part of the year. Next comes a belt of forest, which is succeeded by a horder ridge fringing the N. slope of the Central Asian plateau. In 1926 a great range of mountains was discovered E. of the Lena called the Cherski range. There are long rivers, such as the Yenisei, Ob, and Lena, and immense lakes, of which Baikal is the chief. The climate is one of extraordinary contrasts. The Trans-Siberian Rly is the main artery of the whole territory. The Trans-Manchurian Rly connects with the Siberian system near Chita.

The part known as the Siberian area, between the Ural area and the Yakutsk republic, is rich in coal, iron, and non-ferrous metal ores, and grows much wheat. Its capital is Novo Sibirsk, other towns being Omsk, Tomsk, and Irkutsk. See *Russia*, map.

SIBYL (Gr. Sibylla). In classical legend, the designation of a number of prophetesses, inspired by Apollo. Ten were enumerated by late writers. The Cumæan Sibyl offered to sell Tarquin the Proud nine prophetic books, and on his refusal burnt three, and again three, finally selling him the remaining three. The extant Sibylline Oracles, some 4,000 Greek hexameters mostly written 200 B.C.-A.D. 300, are Jewish and Christian predictions, partly Messianic. As pagan witnesses to Christ, the Sibyls were represented in art, notably by Michelangelo in the Sistine Chapel, in the Vatican.

SICILY. Island in the Mediterranean, forming part of the kingdom of Italy. It is triangular in shape and lies just off the toe of Italy, from which it is separated by the strait of

Siamaug. Ape notable for the length of its hind limbs
W. S. Berridge, F.Z.S.

Messina. The mountains are a S.W. continuation of the Apennines and lie close to the N. coast. Etna (10,755 ft.) is the highest point.

The island is an important world source of sulphur, while rock salt and asphalt are also mined. Fruit-growing is the main occupation. Tunny, sardines, coral, and sponges are the chief yield of the fisheries. Palermo, the capital, Catania, and Messina are the chief ports. With the neighbouring Lipari, Aegades, and other islands, Sicily forms a compartment of Italy, having an area of 9,935 sq. m. Pop. 4,426,113.

When the Phoenicians began to colonise the island, c. 1000 B.C., they found the E. portion inhabited by the Siceli and parts of the N.W. by the Elymi. The Greeks founded their first colony in 735 B.C., but after a long series of wars with Carthage Sicily became a Roman province in 210 B.C. The island was ruled by the Goths until Belisarius conquered it in 535, when it became part of the Eastern Empire. Later it fell to the Saracens and became a seat of Arab culture.

During the late 11th and the 12th centuries Sicily was under Norman kings. Then the throne was seized by Henry VI of Germany, son of Frederick Barbarossa, who was succeeded by his son the Emperor Frederick II, but after the defeat of Frederick's grandson Conradin in 1268 the Sicilian throne passed to Charles of Anjou. The Angevin rule was

ended by the massacre called the Sicilian Vespers, 1282, in which every foreigner was either slain or driven out of Sicily. The island then appealed to Spain. Peter of Aragon was crowned king, and Sicily became little more than a Spanish possession.

In 1713 Sicily was given to the duke of Savoy, but in 1718 he exchanged it with Austria for Sardinia. It then formed with Naples the kingdom of the Two Sicilies, which in 1738 passed under the rule of a Bourbon prince. This dynasty ruled, with a brief interval, until 1860, when the island was invaded by Garibaldi and the last Bourbon, Francis II, was driven out. Sicily then joined the kingdom of Italy. See *Agrigentum*; Italy; Naples.

SICKERT, WALTER RICHARD (b. 1860). British artist. A son of Oswald Sickert, a painter, he was trained at the Slade School. He is one of the most fearless experimenters with the problem of light, especially as regards the painting of interiors. He is represented at the British Museum, the Luxembourg, and other art collections. In 1924 he was made A.R.A. In 1928 he was made President of the Society of British Artists.

SICYON. City of Greece. It was in the N.E. Peloponnese, between Corinthia and Achaia on the river Asopus, about 2 m. from the sea. It first came into prominence in the 7th and 6th centuries B.C., when it became famous for its pottery, wood carving, and bronze work. Classical Greek painting originated here.

SIDCUP. Urban district of Kent. It is 12 m. from London on the Southern Rly. The buildings include S. John's church, with a fine oak pulpit. Pop. 9,294.

SIDDONS, SARAH (1755-1831). British actress. Born at Brecon, July 5, 1755, daughter of Roger Kemble, an actor-manager, in 1773 she married William Siddons, a member of her father's company. She made her debut at Drury Lane, Dec. 29, 1775, but achieved her first success at Manchester, 1776-77. After achieving further triumphs at Bath and Bristol, she returned to Drury Lane, Oct. 10, 1782, as Isabella in Southerne's *The Fatal Marriage*. For 30 years thereafter she remained the unrivalled tragedy queen of the British stage. She died June 8, 1831. Sir Joshua Reynolds painted her portrait as *The Tragic Muse*.

SIDEBEARD. Originally, a board resting on trestles against the wall for the disposal of plate and dishes required for the dining-table. This primitive arrangement was succeeded by tall buffets, shelves being added for the display

Sideboard. Fine Georgian sideboard, c. 1750-60. By courtesy of Country Life, Ltd.

of dishes and drinking cups. They assumed monumental proportions and were elaborately decorated under the Tudors. The lower part was next enclosed by doors, providing cupboards, which later became cellarets. Sheraton employed inlay and brasswork, and the Adams perfected the design and decoration.

SIDERITE. In mineralogy, an iron carbonate. Grey yellow to dark brown (almost black) in colour, with glassy lustre, it crystallises in the hexagonal system and is found in gneiss, mica, clay, slates, etc. The name is also applied to sapphirine, the blue translucent variety of vitreous quartz.

SIDGWICK, HENRY (1838-1900). British philosopher. Born at Skipton, May 31, 1838, he went from Rugby to Trinity College, Cambridge, where he was senior classic in 1859. He became a fellow and lecturer at Trinity, and in 1883 was chosen professor of moral philosophy at Cambridge. He died Aug. 30, 1900. In 1876 he married Ethel M. Balfour (sister of A. J. Balfour), who, 1892-1910, was principal of Newnham College. As a philosopher Sidgwick endeavoured to combine intuitionism with utilitarianism. His chief work is *Methods of Ethics*, and he also wrote *Elements of Politics*, 1891.

SIDLAW HILLS. Range of hills in Scotland. It forms the S. boundary of Strathmore and extends N.E. from Kinnoull Hill in Perthshire to Stonehaven in Kincardineshire. The chief summits are Craigowl (1,493 ft.), Auchterhouse Hill (1,399 ft.), and Dunsinane (1,012 ft.), with traces of a fort popularly called Macbeth's Castle.

SIDMOUTH. Watery place and urban dist. of Devon. It stands at the mouth of the Sid, 13 m. from Exeter, on the Southern Rly. The church of S. Nicholas has a window presented by Queen Victoria, in memory of her father, the duke of Kent, who died here in 1820. Pop. 5,569.

SIDMOUTH, HENRY ADDINGTON, VISCOUNT (1757-1844). British politician. Born May 30, 1757, in London, he entered Parliament in 1784. He was elected Speaker in 1789, and on Pitt's resignation in 1801 he resigned the Speakership and formed a ministry, which lasted until 1804. He was created Viscount Sidmouth in 1805, and was home secretary, 1812-21, achieving great unpopularity owing to his coercive measures in the Luddite riots and other labour troubles. Sidmouth died Feb. 15, 1844.

SIDNEY, ALGERNON (1622-83). English patriot. He was the second son of the 2nd earl of Leicester. Joining the Parliamentary

army, he was severely wounded at Marston Moor in 1644. In 1652 he was appointed member of the council of state, but in the following year, resenting Cromwell's assumption of power, he retired to Penshurst until 1659, when he again became a member of the council. In 1680 he began the writing of his chief work, *Discourses Concerning Government*, published in 1698. A strong republican and an opponent of the Roman Catholics, he was executed on Tower Hill, Dec. 7, 1683, for alleged complicity in the Rye House Plot (q.v.).

SIDNEY, SIR PHILIP (1554-86). English soldier and poet. Born at Penshurst, Kent, Nov. 30, 1554, eldest son of Sir Henry Sidney and Mary Dudley, daughter of the duke of Northumberland, he was educated at Shrewsbury, Oxford, and Cambridge. He was in Paris during the night of S. Bartholomew. He travelled much in Poland, Germany, Austria, and Italy, and in 1577 was ambassador in Germany. In 1581 he was elected M.P. for

Kent; in 1583 he was knighted, made master of the horse, and married Frances Walsingham. In 1585 he was appointed governor of Flushing. He was mortally wounded on Sept. 22, 1586, at Zutphen, and died at Arnheim, Oct. 17.

Sir Philip Sidney, English poet. Nat. Port. Gall.

Sidney's *Apologie for Poetrie* is the first example of English literary criticism; his pastoral romance, *The Arcadia*, is a foundation book in English prose romance and an example of mental self-portraiture; while his *Astrophel and Stella* Sonnets gave the sonnet sequence its vogue in England. See *Arcadia*; *Penshurst*.

SIDON. City of Phoenicia. It is 25 m. S. of Beirut and was celebrated for its purple dyes and glass manufactures. It was conquered by Sennacherib, 701 B.C., and, as the headquarters of the Phoenician navy, contributed the best ships to the expedition of Xerxes against Greece. It was destroyed in 351 B.C. Under the Romans it was a free city. It became Mahomedan in 637, and later was the port of Damascus. The W. part of the old site is occupied by the modern town of Saïda. Pop. 12,000. See *Phoenicia*.

SIEGFRIED OR SIGURD. Hero of the most famous of Teutonic legends. In the *Völsunga Saga*, Sigurd is son of Sigmund the Völsung. He slays the dragon Fafnir, and his treacherous master; the smith Regin, plights his troth with the Valkyrie Brunhild, but afterwards wins her for Gunnar, whose sister, Gudrun, he marries. Brunhild avenges herself by inciting Gunnar's henchman Hagen to murder Sigurd, but slays herself on his funeral pyre.

In the *Nibelungenlied* Siegfried makes himself invulnerable, save for one spot, by bathing in the dragon's blood, and wins the hoard of the Nibelungs and the hood of invisibility, by which he helps Gunther (Gunnar) to win Brunhild in Iceland. See *Brunhild*; *Nibelungenlied*.

SIEMENS, ERNST WERNER VON (1816-92). German electrical engineer. Born at Lenthe, Hanover, he invented in 1841, with his brother, a process of electro-plating, but afterwards he specialised in the construction of telegraph lines, laying many of the earlier lines in Europe, and inventing many improvements in transmission, etc. He was the first to use gutta-percha as an insulating material, and he suggested the unit of electrical resistance known by his name.

His brother, Sir William Siemens (1823-83), settled in England and turned his attention to the regenerative steam engine, a new type of water meter which was superior to any then in use, and finally the regenerative furnace. In 1866 he established, with his brothers, electric works in England, and many important telegraph lines were laid under their direction, including the Atlantic cable in 1874. Siemens died Nov. 18, 1883.

SIENA

(Anc. Sena Julia). City of Italy. It is 30 m. direct, but 60 by rly., S. of Florence, and is picturesquely situated on three undulating hills. The Palazzo Pubblico (1259-

Siena. The 13th century cathedral, showing fine triple portal.

1305) has a slender tower, the Torre del Mangia, and frescoes of the Sienese school, and the Palazzo del Governo (1469-1500) houses the city archives and a library. The Gothic cathedral dates from 1243. It contains Donatello's bronze statue of John the Baptist. Under the choir is the early 14th century church of San Giovanni; adjacent is the 15th century cathedral library. The university was founded in 1203. Pop. 47,815

SIENKIEWICZ, HENRYK (1846-1916). Polish novelist. He made his name by some letters to the Polish Gazette, describing his experiences in California in 1876. In 1880 he brought out the historical novel, *The Tatar Bondage*, and later wrote a remarkable trilogy of tales—*Fire and Sword*, 1884; *The Deluge*, 1886; *Pan Michael*, 1887—describing 17th century society in Poland. In 1895 he published *Quo Vadis*, a romance of Nero's times, which, translated into some 30 languages, and, dramatized, made him world-famous. Sienkiewicz received the Nobel prize for literature in 1905. He died Nov. 14, 1916. Pron. Syenk-yayvitch

SIERRA. Name used in Spain and Spanish America for a mountain range. In Spain there are the Sierra Morena and the Sierra Nevada, both in the south of the country. The Sierra Nevada has many peaks over 10,000 ft. high, the highest being 11,420 ft. The Sierra Morena only reaches a height of 5,920 ft. In California there is another Sierra Nevada, in which several peaks rise to over 13,000 ft.

SIERRA LEONE (Span. lion range). British territory in W. Africa. It consists of the colony of Sierra Leone proper, including the Sherbro dist., a strip of land along the sea and river shores, and the Banana, Turtle, and other small islands; and a protectorate. The areas of the colony and protectorate are 4,000 sq. m. and 27,000 sq. m. respectively, and the pops. 85,163 and 1,456,148.

Sierra Leone is bounded N. and E. by French Guinea, S.E. by the republic of Liberia, and W. by the Atlantic. The capital is Freetown (q.v.). There is a main line of rly. from Freetown to Pendembu, 227 m., with a branch line from Boia Junction to Kamahai (104 m.). A mountain section connects Freetown with the hills, about 5 m. away. The colony of Sierra Leone began with the cession of a strip of land in 1788, to provide a home for liberated slaves.

SIÈYÈS, EMMANUEL JOSEPH (1748-1836). French statesman and political philosopher. Born at Fréjus, May 3, 1748, he entered the Church, and became vicar-general of Chartres, 1784. A member of the states-general and of the national assembly, he produced in 1789 his plan for a new constitution. He sat in the convention, 1792, voted for the king's execution, entered the committee of public safety, 1795, and went as ambassador to Berlin, 1798. Having opposed the return of Napoleon, 1814-15, he lived in exile in Holland, 1815-30, and died in Paris, June 20, 1836. Pron. Syay-ayz.

SIGHT. One of the special senses. It involves perception of three things, viz. light, colour, and form. The light sense enables differences in the degree of illumination to be appreciated. The colour sense is the power of distinguishing light of different wavelengths and consequently of different colours. Persons in whom this sense is seriously defective are said to be "colour blind." The form sense is the power of distinguishing form, and is equivalent to acuteness of vision. See Eye.

SIGHT TESTING. A person's sight is tested by placing him with his back to the light and displaying in a good light a board containing a series of rows of letters known as test types.

Each row is intended to be read at a definite distance, and the letters of each row are smaller than those of the preceding row

SIGISMUND (1368-1437). German king and Roman emperor, 1411-37. Born Feb. 15 1368, he succeeded his father, the emperor Charles IV, as margrave of Brandenburg, 1378, and nine years later became king of Hungary by right of his wife Maria, daughter of Louis I. In 1411 he was elected German king, and made an attempt at settling the scandal of the three rival popes. His responsibility for the death of John Hus (q.v.) angered the Bohemians, and it was only after 17 years of bitter warfare that Sigismund became king of Bohemia. He died Dec. 9, 1437.

SIGNALLING. Transmission of signals other than vocal or written. Army signalling covers communication by means of flags, heliographs, lamps, telephony, and telegraphy. Marine sight-signals include flags fixed or movable shapes, smoke or steam, and light devices. Sound-signals comprise bells, horns, guns, whistles, and sirens. Wireless telegraphy and telephony are widely used. Flag signalling became systematized in the British navy in 1665. A system was introduced into the merchant navy in 1857, and was adopted by all maritime nations. Naval night-signalling was revolutionized in 1867 by the introduction of the Colnmb flashing system. It utilised the European Morse dot-and-dash code by short and long light-exposures. Searchlights (q.v.) are used for the longest distances. See Morse: Nelson

RAILWAY SIGNALLING. Before the introduction of telegraphy trains were controlled by time-limits; and a train was not allowed to leave a station till a certain number of minutes had elapsed after the departure of the preceding train. With the advent of telegraphy railway lines were divided into "blocks" or sections, each guarded by signals, and two trains were not allowed to be in any one block at the same time. In 1841 semaphore signals, now used generally, were first applied to railway working. Semaphore arms are pivoted at one end to the post; or balanced at the centre on a bracket projecting from the post. When horizontal, the arm is "on," i.e. at "danger"; when inclined, it is "off," and indicates "all right." At night a red light is shown on the approach side when a signal is "on," and a green light when it is "off." In a type of three-position signalling the horizontal position of the semaphore and the red light stand for danger; the signal moves upward to starting position, showing a white light to indicate "clear to the next signal," and the arm moves into a vertical position, showing a green light for the all clear. Signal arms are counter-weighted in such a manner that they must be pulled off, and will return automatically to the danger position if the connexion with the signal-box be broken. In colour light signalling the semaphore arm is eliminated and the lights are kept burning for the 24 hours. See Semaphore.

Automatic signalling implies the operation of signals by the trains themselves through the agency of electricity.

for smaller craft another 100 m. At Samshui the Si-kiang divides into several branches, forming the Canton delta.

SIKKIM. Indian state in the Himalaya Mts. A British protectorate since 1890, it lies between Nepal on the W. and Bhutan and Tibet on the E. There are extensive forests and state fruit gardens, and the chief products are tea, cotton, oranges, and cereals. The people are mainly Nepalese. Gangtok is the capital. The ruler is a maharaja with a salute of 15 guns. Area, stato, 2,818 sq. m. Pop. 81,721.

SILCHESTER. Village of Hampshire, about 10 m. S. of Reading, the site of the Romano-British town of Calleva Atrebatum. Excavation from 1890 onwards revealed walls, streets, and house foundations, a Christian church, probably 4th century, besides an assemblage of objects, now in the Reading Museum. Within an area 820 yds. by 803 yds. were a basilica, forum, a number of residences, and other establishments.

SILENCER. Device for muffling the sound of exhaust gases from a motor. They are used more particularly on internal combustion engines using liquid or gaseous fuel. In its simplest form a silencer comprises a hollow cylinder connected at one end to the

Silenus. An ancient statuette at Naples

SILESIA. District divided between Prussia, Czechoslovakia and Poland. Prussian Silesia consists of Upper Silesia with an area of 3,746 sq. m. and a pop. of 1,379,278, and Lower Silesia with an area of 10,277 sq. m. and a pop. of 3,132,328. The two Silesias are in the S.E. of the country, between Czechoslovakia and Poland. Upper Silesia possesses a rich coalfield and also iron and zinc mines. Lower Silesia is mainly agricultural, though there are some manufactures in Breslau, the capital, and Leignitz.

The Czechoslovakian prov. of Silesia has an area of 1,708 sq. m. and a pop. of 735,532, and the Polish county of Silesia an area of 1,632 sq. m. and a pop. of 1,124,967. The latter includes Teschen, before 1919 part of Austria.

In the 14th century Silesia came under the rule of the king of Bohemia, and later, as part of Bohemia, passed under the sway of the house of Austria. When Maria Theresa succeeded her father, Charles VI, Frederick the Great of Prussia, relying on an old treaty, claimed part of Silesia. The result was a European war, at the end of which, in 1745, Frederick, who had conquered Silesia, was allowed to keep it, except three districts in the south. It became a province of Prussia, and was so when the Great War began in 1914. In 1815 it had been enlarged by

the addition of Upper Lusatia. The existing division is the result of the deliberations of the peace conference, 1919.

SILHOUETTE, ÉTIENNE DE (1709-67). French financier. Born at Limoges, July 5, 1709, he studied finance, and held several civil appointments before being appointed, in 1759, controller-general of France, through the influence of Madame de Pompadour. He at once attacked the privileges of the nobles, and his crude plans of spoliation raised a storm of protest and ridicule, his name becoming a synonym for any figure reduced to its simplest form. In this sense it was later applied to a shadow portrait in profile. Silhouette died Jan. 20, 1767.

Silhouette, depicting Garrick, the actor (right), conversing with Tobias Smollett, the novelist

SILICON. One of the non-metallic chemical elements. Its symbol is Si, atomic weight 28.06; atomic number 14. It does not occur in the free state in nature, although as the oxide silica the element is, next to oxygen, the most abundant, being the chief constituent of the earth's crust. Silicon exists in two forms, amorphous and crystalline. Like carbon, the element forms with metals compounds resembling alloys, and one atom of both carbon and silicon combines with four atoms of hydrogen.

Silica is the principal constituent of sandstone, felspar, and many other rocks. The purest form occurring naturally is rock crystal, a transparent and colourless variety of quartz; coloured varieties are amethysts and cairngorm stones, amorphous kinds being chalcedony, agate, flint, and opal. Silica is found in the vegetable kingdom; it gives hardness to the stems of grasses, cereals, and rushes, the strength of the joints of the bamboo being due to deposits of silica. Silicon carbide is known as carborundum. With hydrogen and oxygen silicon forms four acids, the chief being metasilicic acid or silica monohydrate and orthosilicic acid or silica dihydrate. The salts of silicic acid are known as silicates

SILICOSIS. Disease of the lungs due to the inhalation of mineral dust. Stonemasons and potters are particularly susceptible to it. The functional activity of the lungs is impaired and a liability to contract tuberculosis created. Inhalation of coal dust does not predispose to tuberculosis. The risk of silicosis is lessened by good ventilation, the use of exhaust fans, by spraying the air and the substance creating the dust, and by the use of respirators.

SILK. Fibre derived from the cocoon of several insects or spiders, notably the silkworm. The latter, in its larval stage, discharges from an opening in its under lip a fluid secretion which solidifies on contact with air and forms the silk of its cocoon. In silk culture the eggs of the moth are hatched out by warmth on paper-covered trays, and the larvae are fed with young mulberry leaves, and after three or four weeks the spinning of the cocoon begins. The intermediate layers of the cocoon are those which are reeled to form raw silk. The cocoons are softened in a basin of heated water, and the ends from several cocoons are wound into a hank around a hexagonal frame.

Raw silk is woven in Japan into the cheap goods (habutae) for which the country is

famous, but in Europe the raws are further treated in the process of throwing. The silk is carefully sorted and reeled, and different ends of raw silk are combined and twisted together. Japan provides nearly half the commercial crop of raw silk, and China, Italy, and the Levant are the next most productive regions. Silk is grown in France under the aid of bounties, and in several European countries, but cannot profitably be raised in Britain. The high tensile strength of silk and the permanence of colours dyed upon it are strong points in favour of its use for wear and ornament. Its non-inflammable character lends silk a special value for making containers for the propulsive explosives for artillery. Artificial silk (q.v.) is a fibre mechanically produced from cellulose.

SILKWORM. Caterpillar of a moth, the chrysalis of which is enclosed in a cocoon of silk. A native of N China, the caterpillar is yellowish grey and about 3 ins. long; the silky cocoon, about the size of a pigeon's egg, is either yellow or white. Most species feed on the leaves of the mulberry.

SILLIMANITE. In mineralogy, the name of a silicate of aluminium. Named after Benjamin Silliman, the American scientist, the mineral is grey or brown, and is found in crystalline rocks, notably gneiss and mica schist, in the form of long slender crystals

SILLOTH. Seaport and watering place of Cumberland. It stands on Solway Firth, 224 m. from Carlisle, on the L.N.E.R. Formerly a fishing village, Silloth was made, in 1855 the port of Carlisle. The port carries on a trade with the Isle of Man and Liverpool. There are good bathing and golf links. Pop 2,630.

SILOAM. Rock-hewn reservoir outside the wall of Jerusalem (John 9, 7, 11). A conduit, 1,700 ft. long, hewn by Hezekiah, c. 700 B.C. (2 Kings 20; Neh 3), conveyed the Gihon waters from their source in what is now the Virgin's fountain to the Siloam pool.

SILT. In geology, a deposit of sand and mud. Such deposit is usually carried down towards the sea by the great rivers and deposited at or near their mouths, so causing silting up. Silt is of great economic importance, often being the depositary of precious metals, and forming great fertile plains. Thus the silt deposited annually by the Nile does away with the necessity for manure. The amount carried down by rivers, as the Hwang-ho of China, the Mississippi, etc., is between 300 and 600 million tons annually. See Alluvium: Delta; Dredging; River.

Caerwent, not far from Chepstow, was made a centre of Roman civilization, with walls, baths, etc. See Britain.

SILURES. Celtic tribe once inhabiting a large part of S. Wales. They offered a stubborn resistance to the Roman occupation of Britain, and were only subdued by the Romans about A.D. 80. Their chief town, Venta Silurum, the modern Caerwent, was made a centre of Roman civilization, with walls, baths, etc. See Britain.

SILURIAN. In geology, a term used for those rocks which lie above the Ordovician and below the Devonian, though Upper Silurian and Lower Silurian are terms also

used by geologists for the Silurian and Ordovician periods respectively. Silurian rocks are marine in origin, and consist chiefly of grits, sandstones, shales, and limestone. They are widely distributed. The rocks are chiefly used as building stones and are also sources of gypsum and rock salt. Seaweeds and ferns were common plants of the Silurian period. See *Geology*.

SILVER. One of the metallic elements. Its chemical symbol is Ag, atomic weight 107.88, atomic number 47; specific gravity 10.57, and melting-point 961° C. It occurs native in cubic crystals, in masses often weighing several hundred pounds; combined in silver ores as argentite, proustite, stephanite, hessite, pyrrargyrite, cerargyrite, etc.; and alloyed with other metals, as lead, copper, mercury, etc. Lead ores are an important source of production of the metal. Silver when pure is white and lustrous, ductile, malleable, capable of taking a brilliant polish; and is the best known conductor of heat and electricity. The metal is extracted in three ways: amalgamation, solution, and smelting.

The three great areas where silver and its compounds are produced are Mexico, the U.S.A., and Canada, followed by S. America, Japan, Australia, and Central America. Small quantities are also found in Austria, Germany, Czechoslovakia, and Spain.

Silver forms a number of important compounds. The oxide Ag₂O is used to give a yellow colour to glass. Silver nitrate or lunar caustic is prepared by dissolving the metal in nitric acid. When fused and cast into sticks it is used as a caustic in medicine. It is mixed with gum arabic in the manufacture of indelible inks and certain dyes. Silver chloride, bromide, and iodide are all widely used in photography, being all extremely sensitive to the action of light. Silver sulphide is the mineral argentite.

THE ECONOMIC ASPECT. In recent years the world's annual production of silver has varied from 245,000,000 to 254,000,000 oz. fine, Mexico contributing about two-fifths of this total. In 1868 the average price of silver was 5s. 0½d. per oz., an average not reached again until 1920. In 1930 the price per troy ounce fell to 1s. 5d., as compared with an average of 2s. 2d. in 1929.

SILVER END. Model town of Essex. It is 2½ m. from Witham. Here the Crittall Manufacturing Co. has erected large works for the production of articles used in house building and furnishing. The estate has been laid out on garden city lines and houses built for the employees. There is a large store in the town and facilities for social life.

SILVER FIR (*Abies pectinata*). Tall evergreen tree of the order Pinaceae. A native of Central and S. Europe, it attains a height of 150 ft. or more, and a trunk diameter of upwards of six feet. The needles are not in pairs as in the pines, but solitary, arranged in spirals. They are bright green and polished on the upper side, but beneath there is a stripe of white wax on each side of the mid-rib, which gives the tree its popular name. Each leaf endures for eight or more years. The cones are cylindrical, erect, and about 6 ins. long. The timber, though soft, is strong. It yields Strasbourg turpentine.

SILVERTOWN. Dist. of E. London. It lies to the W. of N. Woolwich, S. of the Royal Albert Dock, and is 8 m. from Liverpool Street on the L.N.E. Rly.

SILVER TREE OR WITTEBOOM (*Leucadendron argenteum*). Small tree of the order Proteaceae, a native of the Cape of Good Hope. The long, slender, lance-shaped, leathery leaves are covered with silvery white hairs and are exported in quantity for wreath-

making with "everlasting" flowers, for which their durability makes them suitable. The flowers of the tree are yellow and clustered.

Silver Tree. Silvery-leaved tree, native of the Cape of Good Hope

Lakes Erie and Huron, the Severn taking its waters into Georgian Bay. Its area is 271 sq. m. The surrounding dist. was the scene of an Indian war, during which the Iroquois almost exterminated the Hurons. The town is 24 m. from Brantford, is the capital of Norfolk co., and is served by the Canadian National Rlys. Pop. 3,953.

SIMEON. Name of one of the tribes of Israel, and of its traditional ancestor, the second son of Jacob and Leah. He was born at Haran in Mesopotamia, and with Levi took part in a feud with Shechem, resulting in the dispersion of the two tribes. The remnant of Simeon settled in the S. part of Judah, and seems to have been a pastoral people which was soon absorbed by Judah.

SIMEON, CHARLES (1759-1836). British divine. Born at Reading, Sept. 24, 1759, he was elected fellow of King's College, Cambridge, was ordained, and in 1783 became perpetual curate of Holy Trinity, Cambridge, where he remained until his death. Simeon exercised an enormous influence in the university, and was one of the leaders of the evangelical party in the Church of England. He helped to found the Church Missionary Society and established the Simeon Trust to secure livings for men holding evangelical opinions. He died Nov. 13, 1836.

SIMEON STYLITES (350-459). Pillar-saint. Son of a shepherd in Cilicia, he early started a monastic life. Later he lived as a hermit on Mt. Thelaniassa, near Antioch, where in 423 he built a series of pillars, on which he spent over 30 years of his life. He was visited by great crowds, to whom he preached. Pron. Sty-li-teez.

SIMLA. Town of India, in the Punjab. It stands 7,000 ft. above sea level on a spur of the Himalayas, 170 m. N. of Delhi, with which it is connected by rly. Simla is a great sanatorium for Europeans, and the summer residence of the viceroy. Pop. 27,494.

The dist. of Simla is in the Ambala division of the Punjab. Its area is 101 sq. m. Pop. 45,327. The deputy commissioner is also political officer for the Simla Hill States, which have an area of 5,937 sq. m. and a population of 306,718.

SIMNEL, LAMBERT (c. 1475-1535). English impostor. Said to be the son of an Oxford joiner, he was trained by an ambitious priest,

Richard Simon, to play his part as the figure-head in a Yorkist plot against Henry VII (q.v.). In 1486, following a report that the earl of Warwick, son of the deceased duke of Clarence and Yorkist claimant to the throne, had escaped from the Tower, Simnel was taken to Ireland and crowned as Edward VI in Dublin Cathedral. With the support of Margaret of Burgundy, the earl of Lincoln and other powerful Yorkist nobles, the rebellion was carried over to England. Simnel landed near Furness, and marched through Yorkshire, but was overthrown by Henry VII at Stoke, near Newark, June 16, 1487. He was relegated to service in the royal kitchens.

SIMNEL CAKE (Lat. simila, wheat flour). Rich cake, formerly made to celebrate Mothering Sunday, the 4th Sunday in Lent. The making of simnel cakes, formerly common in W. England, is still observed in a few localities of Gloucestershire and Monmouthshire, and in Lancashire. The ingredients are those of a rich plum pudding, enclosed in a crust coloured with saffron.

SIMOIS. Small river of the Troad, Asia Minor, a tributary of the Scamander. It has been identified with the Dumbrek Chai. Simois was also personified as a river god, the son of Oceanus and Tethys.

SIMON, SIR JOHN ALLSEBROOK (b. 1873). British politician and lawyer. Born Feb. 28, 1873, he was called to the bar in 1899. He represented the British Government on the arbitration over the boundary of Alaska in 1903, and became a K.C. in 1908. Simon was Liberal M.P. for Walthamstow, 1906-18, and in 1910 he was made solicitor-general and knighted. Promotion to attorney-general and a seat in the Cabinet followed in 1913; and in 1915 he was made home secretary in the Coalition Ministry, but resigned office early in 1916 because he would not agree to accept the principle of compulsory military service. From 1922 he represented the Spen Valley division of Yorkshire. In 1927 he visited India as chairman of the royal commission on the Indian constitution, and in 1930 the report of this commission appeared. In Oct., 1930, he conducted the official inquiry into the R 101 disaster. In 1930 he published *Comments and Criticisms*, a volume of speeches, addresses, and several papers on Indian topics. See *India*.

Sir John Simon, British politician
Russell

SIMONIDES (c. 556-468 B.C.). Greek lyric poet. He was born in the Ionian island of Ceos, but spent most of his life at Athens, in Thessaly, and at the court of the tyrant Hiero in Sicily, where he died. He wrote both in the

Doric and Ionic dialects and was the author of hymns to the gods, odes, elegies, dirges, epitaphs, and epigrams. His poetry survives only in fragments. Simonides shares with Pindar the distinction of being the greatest lyric poet of Greece. He was the first Greek poet to write for money. Pron. Si-monny-deez.

Simla, India. Government House, summer residence of the viceroy

SIMON MAGUS (fl. c. A.D. 37) Samaritan magician (Gr. magos) and religious leader. Acts 8, 9-24 relates that his followers regarded him as "that Power of God which is called Great." Baptized by the deacon Philip, he desired to acquire the miraculous gifts of the Holy Spirit possessed by SS. Peter and John, and offered them money, but was sternly rebuked by S. Peter (see Simony). The Simonite sect blended pagan and Christian doctrines with a form of Gnosticism.

SIMONSBATH. Village of Devonshire. It is on the Barle, 9 m. from South Molton, and is the chief place on Exmoor. It is visited for the fishing in the river.

SIMON'S TOWN. Naval port of S. Africa. It is situated in Simon's Bay, on the E. side of the Cape peninsula, 22 m. by-rail from Cape Town. It has an excellent harbour, and the docks can accommodate the largest vessels. European pop. 5,409.

SIMONY. Term of ecclesiastical law. It takes its name from Simon Magus (q.v.). By ecclesiastical law it was simony to agree corruptly to present anyone to any ecclesiastical preferment for reward. By the law of England a simoniacal contract is void; but a patron may present a clerk to a living and make a stipulation that he resigns in favour of one of the patron's relations if requested to do so. See Benefice.

SIMOOM (Arab. samum, from sammā, be poisoned). Desert sandstorm of Arabia and N. Africa. It is caused by rising currents of hot air setting up an inward swirl of air comparable to a cyclone. This advances and raises great volumes of sand.

SIMPLON. Pass over the Alps. It leads from Brieg in canton Valais to Domodossola

Simplon. Pass leading through the Alps to Italy, and village of Brieg

in Piedmont, Italy, at an alt. of 6,582 ft. The Simplon Road was begun under Napoleon in 1800. It is 42 m. long. Below the pass is the 121 m. rly. tunnel on the route to Milan. This was opened in 1906. A second tunnel was completed in 1921.

SIMPSON, SIR JAMES YOUNG (1811-70). Scottish physician. Born in Linlithgow, June 7, 1811, he studied medicine at Edinburgh University, and in 1840 was chosen professor of medicine there. Simpson's chief title to fame is the work he did in forwarding the use of anaesthetics, of which he may be regarded as the founder. He was made a baronet in 1866, and died May 6, 1870. See Anaesthesia.

SIMS, GEORGE ROBERT (1847-1922). British journalist. Born Sept. 2, 1847, he became widely known by his pen-name which he contributed the columns to The Referee. In addition to an anonymous translation of Balzac's Contes and was a volume of reminiscences, in 1914. In 1815 it was author of How the

Poor Live, The Dagonet Ballads, Ballads of Babylon, Three Brass Balls, Among My Autographs, Without the Limelight, Watches of the Night; and author or part author of innumerable melodramas, farces, comedies, burlesques, and other stage productions. He died Sept. 4, 1922.

SIMS, WILLIAM SOWDEN (b. 1858). American sailor. Born at Port Hope, Canada, Oct. 15, 1858, he entered the American navy as a lieutenant in 1879, and by 1909 had become commander of the battleship Minnesota, U.S. Atlantic Fleet. In 1913 he was made commander of the torpedo flotilla of the Atlantic Fleet, and in 1915 was given command of the dreadnought Nevada. In 1917 he was made president of the U.S. Naval War College, a post he resumed in 1919. He retired in 1922. On the entry of the U.S.A. into the Great War he was put in charge of the American vessels in European waters. He published The Victory at Sea, 1920.

William S. Sims, American sailor

SIN. Theological term signifying an offence against God, or a breach of divine law. What is known as vice in the realm of ethics and as crime in the social organism becomes sin when it is viewed in relationship to God. Some conception of sin is found in every type of religion. In its lower phases, where religion is mainly non-ethical, sin consists of some breach of ritual, or the doing of some action that is taboo. When religion becomes ethicised, sin is identified with transgression of the moral law which is held to embody the will of God.

SIN EATING. Primitive custom formerly prevalent in Wales and adjacent English shires. Some villages had an appointed sin eater, who repaired to the house of death, receiving over the dead body a loaf, bowl of ale or milk, and a small coin, thereby taking over its sins (Hosea 4, 8).

SINAI. Peninsula at the head of the Red Sea, between the gulfs of Suez and Akaba. It is about 230 m. long, and gradually tapers to a point at the S. It is largely a treeless region of wild and barren mountains, shut in on the N. by desert country. The Mount Sinai of the Old Testament is generally regarded as identical with Gebel Catherina, which has two separate peaks, Mount Horeb and Gebel Musa, or the Mountain of Moses, the latter usually regarded as the scene of the Hebrew law-giving. Politically, Sinai forms part of the kingdom of Egypt.

In the Great War, following the evacuation of Gallipoli, the British concentrated considerable forces in Egypt to safeguard the canal. The Turkish advance on Egypt was across the Sinai peninsula. Two attacks in 1915 had already been repulsed. At the beginning of 1916 the Turks were in occupation of virtually the whole peninsula. Sir A. Murray, early in 1916, made plans to conquer it, his objective being the invasion of Palestine.

After a check at Katia, Sir A. Murray, in Aug. 1916, won the battle of Romani (q.v.), and in Nov., 1916, commenced the systematic bombing from the air of the Turkish lines. On Dec. 23 he won the battle of Magdhaba. By the victory at Rafa, Jan. 9, 1917, he drove the enemy out of the N. part of Sinai. See Palestine; Turkey.

SIMPSON, SIR JAMES YOUNG (1811-70). Scottish physician. Born in Linlithgow, June 7, 1811, he studied medicine at Edinburgh University, and in 1840 was chosen professor of medicine there. Simpson's chief title to fame is the work he did in forwarding the use of anaesthetics, of which he may be regarded as the founder. He was made a baronet in 1866, and died May 6, 1870. See Anaesthesia.

Sir James Simpson, Scottish physician

of Dagonet, over the Mustard and Cress columns to The Referee. In addition to an anonymous translation of Balzac's Contes and was a volume of reminiscences, in 1914. In 1815 it was author of How the

SINANTHROPUS. Term distinguishing a type of fossil human remains discovered in 1928-9, near Peking. Named in full Sinanthropus Pekinensis, these are referred to the early or mid-Pleistocene period. See Man.

Sinanthropus. Skull of Peking man, showing anthropoid characteristics. Courtesy of Sir Arthur Smith Woodward

SINCLAIR, MAY. British novelist. She was born at Rock Ferry, Cheshire, and was educated at Cheltenham. She published her first novel, Audrey Craven, in 1897.

The Divine Fire, 1904, showed her distinctive gifts, and among her other works of fiction have been The Creators, 1910; The Judgement of Eve, and other stories, 1913; The Combined Maze, 1913; Tasker Jevons, 1916; The Tree of Heaven, 1917; Mary Olivier, 1919; The Romantic, 1920; Mr Waddington of Wyck, 1921, and The Allingham, 1927.

SINCLAIR, UPTON BEALL (b. 1878). American novelist. Born at Baltimore. Sept. 20, 1878, he is best known as the author of The Jungle, 1906, a novel which made so seething an attack on the American canning trade that President Roosevelt appointed a committee to investigate the conditions of the Chicago stockyards. The report they issued revealed serious abuses. Other novels are King Midas, 1901; The Overman, 1907; Simon the Seeker, 1909; Sylvia, 1914; Sylvia's Marriage, 1915; King Coal, 1917; Jimmie Higgins, 1919; Bill Porter, 1925; and Money Writs! 1927.

SIND, SINDH, OR SCINDE. Prov. of India, in Bombay presidency. It was formerly an independent prov. It comprises mainly an alluvial plain, of which a large portion is occupied by the delta of the Indus, is mountainous on the W., on the Baluchistan border, has the Runn of Cutch on the S., and the Thar desert on the E. Karachi is the capital. Its area is 46,506 sq. m. Pop. 3,279,377. See Bombay.

SINDING, CHRISTIAN (b. 1856). Norwegian composer. Born at Kongsberg, Norway, Jan. 11, 1856, he came to be regarded as Grieg's natural successor as leader of Norwegian music. Among his works are orchestral symphonies, violin concerto in A, the Legend and Romance for violin and orchestra, chamber music, many pianoforte pieces, and, in addition, about 200 songs.

His brother Stephen Sinding (1846-1922) was a distinguished sculptor.

SINGAPORE. British possession, the chief of the Straits Settlements. The island of Singapore is 27 m. by 14 m. and lies off the S. end of the Malay Peninsula, separated from Johore by Johore Strait. Its area is 217 sq. m. The colony includes this island, some adjacent islets, Christmas Island, and the Cocos Islands, as well as the island of Labuan, off Borneo. The port is a free harbour; liners regularly call, and smaller vessels collect the products of the E. Indies. Among notable buildings are the Anglican and R.C. cathedrals, the Raffles

Singapore. A view from the sea, showing Collyer Quay and the shipping quarter

museum and library, and the government buildings. Since 1923 a causeway connects the island with the mainland. Pop. 574,665.

In 1923, as a result of the treaty of Washington, which forbade any extension of naval bases in the Pacific, it was decided to make one at Singapore. A plan was prepared, and in 1925, after it had been given up, was again put forward. In June, 1928, a floating dock was sent to Singapore. See Straits Settlements.

SINGER, ISAAC MERRITT (1811-75). American inventor. Born in Oswego, New York, Oct. 27, 1811, he became a mechanical engineer, and set himself to the improvement of the early forms of the sewing machine. He patented a single-thread and chain-stitch machine, and exploited his invention with much success. Singer died at Torquay, July 23, 1875.

SINGLESTICK.

Weapon consisting of a thin, round ash stick, about 34 ins. in length, with a basketwork hilt for the protection of the hand. The old style of cudgel-play is now obsolete, the singlestick being employed in modern times as a medium for acquiring skill in the use of the light sabre. See Fencing.

Singlesticks with basketwork hilts

SINGLE TAX. Phrase popularised, if not actually introduced, by the American economist, Henry George. It means that all revenue should be raised by a tax on land. The doctrine starts from the assumption that there is no right of private property in land. It belongs to the state, but as its equal division among all citizens is impossible, it should be let out to the highest bidder. The rent or tax which the tenants would pay would, it is urged, be sufficient for the expenses of the state.

Singleton. Mining town of New South Wales. It is on the Hunter river, 60 m. N.W. of Newcastle. Pop. 3,700.

SING SING. State prison of the U.S.A. Situated at Ossining, a village 30 m. N. of New York City, it dates from 1825. It took its name from the Sin Sinek Indians. In 1929 it was decided to build a new prison.

SINHA, SATYENDRA PRASANNA, 1ST BARON (1864-1928). Indian statesman. Educated in Calcutta and called to the bar in London,

1st Baron Sinha, Indian statesman
Lafayette

he was advocate-general of Bengal, 1907-17. In 1915 he was knighted and became the first Indian member of the viceroy's executive council. He represented India at the Peace Conference, 1919. He was created Baron Sinha of Raipur in 1919, being the first Indian to sit in the House of Lords, and in 1919-20 was under-secretary for India.

In 1920-21 he was governor of Bihar and Orissa. He died March 6, 1928.

SINHALESE or **CINGALESE.** Dominant native stock in Ceylon. Numbering some 3,015,970, about two-thirds of them occupy the low country, one-third the Kandyan highlands. The aboriginal Vedda population was dominated by a Dravidian stock and culture, and these were overlaid by an Aryo-Indian immigration which introduced Buddhism. The modern Sinhalese speak an Indo-Aryan language enshrined in a rich literature of high antiquity. The traditional Buddhism is allied with much spirit-worship. See Ceylon.

SINISTER (Lat. left). In heraldry, the left side of the shield, as carried by its bearer. It is therefore the right side to those in front of him. The word is used for anything unlucky and therefore evil, this being due to the fact

that left-handed persons were formerly regarded with suspicion. See Heraldry.

SINKING FUND. Financial term for funds regularly set aside to provide for the repayment by instalments of a definite liability, such as a national debt, municipal and other loans, debentures, etc.

The principle was introduced in the United Kingdom by Pitt, who in 1786 arranged that £1,000,000 a year should be paid over to commissioners for the reduction of the National Debt. The amount allocated in the year 1930-31 was £55,400,000. See National Debt.

SINN FEIN (Irish for ourselves alone). Irish nationalist movement. It originally had two aims. One, reflected in the Gaelic League and the Irish literary renaissance, was the preservation of the dying language of the country and of the old national culture; the other was political, namely, the re-establishment of an Irish constitution. In Nov., 1905, the Sinn Fein political organization was set up, the paper of that name, edited by Arthur Griffith, being its chief organ.

On the outbreak of war in 1914 J. E. Redmond, whose supporters had founded the National Volunteers, further alienated the Sinn Fein party, now bitterly anti-British, by his efforts to obtain army recruits. The hostile attitude of the party eventuated in the rebellion of Easter week, 1916, when a number of Sinn Fein leaders were shot and others imprisoned. In 1917

Eamonn de Valera was elected president of the movement in succession to Arthur Griffith, and the new republican policy was inaugurated. In Dec., 1918, Sinn Fein candidates were elected for 73 out of 105 Irish seats, and these constituted themselves as Dail Eireann. In 1920 the party secured control of all local authorities outside N.E. Ulster. The Irish republican army was organized, and maintained an active guerilla warfare against crown forces, military and police, the resultant era of murders and reprisals, 1920-21, being unparalleled in Irish history.

In 1921 prolonged negotiations took place between the Sinn Fein leaders and the British Government, culminating in the treaty by which the Irish Free State came into being. See Ireland; Irish Free State; Northern Ireland; consult also The Evolution of Sinn Fein, R. M. Henry, 1920. Pron. Shin Fane.

SINON. In Greek mythology, a relative of Odysseus. Distinguished for his cunning, he allowed himself to be taken prisoner by the Trojans at the siege of Troy. He persuaded the Trojans to drag the wooden horse into the city, and in the dead of night he opened the side of the horse and let out the band of armed men concealed within.

SIoux. North American Indian tribe who call themselves Dakotas. Sioux is the termination of the French form of their Ojibwa name (enemies). It is used for the Siouan family, comprising many tribes in the Mississippi and Missouri basins. See American Indians; Dakota; also illus. p. 73. Pron. Soo.

SIoux CITY. City of Iowa, U.S.A. On the Missouri, near its junction with the Big Sioux and Floyd rivers, and served by several rlys., it manufactures bricks and tiles and flour and has packing warehouses and rly. shops. Pop. 71,227.

Sioux Falls is a city of South Dakota. It stands on the Big Sioux river, in the S.E. corner of the state. Served by several rlys., it is a great wheat centre. Pop. 30,127.

SIPPARA. Akkadian city at Abu Habba. On the left bank of the Euphrates, it is 40 m. N. of Babylon. Commonly identified with the

biblical Sepharvaim, the two Sippars dedicated to the sun-god Shamash and the goddess Anunit (Ishtar). Its capture by Assyria resulted in Sepharvite colonists being settled in Samaria (2 Kings 17).

SIRDAR (Hind sar-dar). Title used in the East for military chiefs. It was the official title of the commander-in-chief of the Egyptian army when Egypt was under British rule.

SIREN (Gr. Seiren). In classical mythology, a sea nymph who, by the power of song, lured to their ruin those who listened to her. According to the Odyssey the sirens lived on an island near the strait of Messina. As Odysseus's ship approached the island he had the ears of his sailors filled with wax and himself bound to the mast, and in this way the island and its dangers were passed. When encountered by the Argonauts (q.v.), the Sirens were surpassed in singing by Orpheus; thereupon they threw themselves into the sea and were changed into rocks. In art they are portrayed as birds with women's faces.

SIREN (*Siren lacertina*). Species of amphibian, known as the mud eel. It is found

in swamps of the S. dists. of the U.S.A. In colour black, sometimes spotted with white, it is about two feet long, and resembles an eel with two very small fore-limbs and external gills

Siren. Two-legged amphibian, showing the external gills, that persist throughout its life

SIREN. Instrument used on ships,

lighthouses, lightships, etc., for giving sound signals to warn shipping during foggy weather. The sound-making apparatus consists of a revolving disk or cylinder arranged to move almost in contact with another disk or plate. Both fixed and moving parts are pierced with a number of holes which periodically come opposite one another and allow the steam or compressed air used to pass through in a very rapid and regular series of puffs, and, by setting the air in vibration, create a loud and musical note. The sound is concentrated by a large horn. See Foghorn.

SIREHOWY. Mining town of Monmouthshire. It stands on the river of the same name, N. of Tredegar, on the L.M.S. Rly. The river rises in Brecknockshire, and joins the Ebbw after a course of 18 m. Pop. 6,842.

SIRIUS. Brightest star in the sky, with a magnitude of 1.4. Also known as Alpha Canis Majoris or Dog Star, it is a double star with a much fainter companion, discovered in 1802, and of about half its mass. Sirius is itself about two and a half times the mass of the sun, and the great intensity of its light, which, allowing for its great distance, must be 30 times that of the sun, is thereby the more remarkable.

SIROCCO. Term applied to any warm southerly wind by inhabitants of the N. shores of the Mediterranean. Such winds may be dry or moist, dust-laden or clear. The typical wind is hot and very dry, is probably frequently due to Föhn conditions, and is harmful to vegetation, especially fruit trees in bloom. The term has been extended to similar warm southerly winds in the E. of the U.S.A. See Föhn; Wind.

SISAL HEMP. Rope fibre obtained from the large leaves of *Agave rigida*, of the variety sisalana, a perennial plant of the order Amaryllidaceae. It is a native of S. America. Several other species of agave yield valuable fibres.

SISKIN (*Chrysomitris spinus*). Species of finch. Distributed over Europe and parts of Asia, it nests in a few localities in the

British Isles, but is better known as a winter visitant. The plumage is variegated with brown and grey with a greenish yellow bar across the wings.

The nest is made of grass, roots and moss, and is usually built high up in a pine or fir tree.

SISTERHOOD. Communities of women living together under religious rule, but not enclosed in convents, and devoting themselves to active work for the good of the poor. Sisterhoods were first established by

S. Vincent de Paul in Paris, in 1633, under the name of Daughters of Charity. In the 19th century arose a vast multiplication of active sisterhoods. Dr. Pusey, in 1845, established a community at Regent's Park, London. In 1851 the All Saints Sisters of the Poor were founded, and about the same date the Sisters of S. John the Baptist, at Clewer, were established. The sisters take the vow of poverty, chastity, and obedience. See Deacon.

SISTINE CHAPEL. Private chapel of the popes in the Vatican. It was built by Pope Sixtus IV in 1480. The chief glory is the magnificent series of frescoes by Michelangelo, illustrating the Creation and other O.T. themes, on the vault, and that of the Last Judgement on the altar wall, there are also wall frescoes by Botticelli, Ghirlandaio, Roselli, Pinturicchio, and others. See Isaiah; Michelangelo. Rome; Vatican.

Sistine Chapel, Rome. Papal private chapel in the Vatican, adorned with frescoes by Michelangelo

SISTRUM (Gr. seistrion, rattle). Ancient Egyptian metal rattle. Usually a bronze horse-shoe-shaped frame, it is pierced for three or four loose rods, sometimes bearing jingling rings. The handle was often Hathor-headed. It was held by women worshippers, especially in the later Isis ritual. It is also used in Africa, for instance, among the people of Benin.

SISYPHUS. In Greek legend, a king of Corinth who was an able ruler, but noted for his deceitfulness and rapacity. Sisyphus was condemned after death perpetually to push up a hill an immense stone, which as soon as it reached the top rolled to the bottom.

SITTINGBOURNE. Market town, urban dist., and seaport of Kent. It stands on Milton Creek, an arm of the Swale, 10 m. from Chatham, on the Southern Rly. The chief building is S. Michael's church. There are manufactures of bricks, beer, cement, and paper, and the town is the centre of a district growing fruit and hops. It has some shipping. Near are the remains of Tong Castle. In 1921 a leaden font was discovered in S. Margaret's church, Lower Halstow, near Sittingbourne. Market day, Mon. (alternate). Pop. 9,339.

SITWELL. Family of writers. They are Edith Osbert, and Sacheverell, the three children of Sir George Sitwell, a Yorkshire baronet. Edith has written poems and volumes of criticism, including one on Pope. Osbert has written some fiction, including volumes of short stories, as well as essays on various subjects. Sacheverell is known as a poet and a writer on art.

SIVA or SHIVA (Skt. śiva, propitious). In Hindu religion, one of the chief triad of gods. By his worshippers, the Saivas, who form numerous sects, especially in S. India, he is regarded as the supreme, all-embracing deity, and is called Mahādeva, the great god. He is represented with four hands and three eyes, with a garland of skulls worn round his neck, generally seated and absorbed in thought. As symbols his weapons are the trident, bow, thunderbolt, and axe. His wife is Durgā. Kālī, or Devī. See Hinduism.

SIXTUS. Name of five popes. Sixtus I (or Xystus) was the 7th bishop of Rome from about 115-25. Sixtus III was pope from 432-40. Sixtus IV (1414-84) was pope from 1471-84. Born near Albissola, July 21, 1414, he entered the Franciscan order in early youth, in 1467 was created cardinal, and in 1471 was elected pope. Plunging into Italian politics, and placing a large number of his relatives in high office, he made war against Florence, 1478. He built the Sistine chapel (q.v.) and the Sistine bridge in Rome. Sixtus V (1521-90) was pope from 1585-90.

SKAGERRAK. Strait between Norway and Jutland, connecting the North Sea by the Kattegat and Sound with the Baltic Sea. With a mean breadth of 80 m., its length is about 150 m. Near Jutland are dangerous shoals and sandbanks.

SKAGWAY. Seaport of Alaska. On Chilkoot Inlet, Lynn Canal, it is the terminus of the rly. to the Yukon and the steamer service to Seattle. It is the distributing centre for supplies to the Klondike. Pop. 1,000.

SKATE. British food fish, belonging to the Elasmobranch (plate-gilled) order. The skeleton is cartilaginous and the body greatly flattened, with broad pectoral fins and a whip-like tail. The common skate (*Raja batis*) varies from two to four feet in length, and is greyish in colour on the upper parts, with small black spots. It belongs to the ray family. There are nine British species, all edible. See illus. above.

Sistrum used in Benin

SKATING. Locomotion on ice by the aid of mechanical attachments to the feet. Skates were originally made of metacarpal bones of animals and bound on to the foot. Later, runners were shod with iron, and so came the iron blade fitted into a wooden holder attachable to the sole of the boot by screws and straps. To these succeeded steel skates which can be clamped to the sole of an ordinary walking boot.

When speed or figure skating is contemplated, the Norwegian type, skate and boot combined, should be used. Roller skating (q.v.) is a pastime which consists in skating on wheels in a covered-in rink.

The most noteworthy names among English amateur speed skaters are the Tebbutts, A. E. Tebbitt, and F. W. Dix, and among professionals, the Smarts, the Wards, and S. Greenhall. The world's amateur championship races, held annually under the auspices of the International Skating Union, are competed for over four distances, viz. 500, 1,500, 5,000, and 10,000 metres. Figure skating has been developed into a fine art.

SKEAT, WALTER WILLIAM (1835-1912). British philologist. He was born Nov. 21, 1835, educated at Highgate and Christ's College, Cambridge, and appointed professor of Anglo-Saxon in that university in 1878. Among his numerous works are Etymological Dictionary of the English Language; Early English Proverbs; The Science of Etymology. A Student's Pastime is a collection of 30 years' contributions to Notes and Queries, with an autobiographical introduction. He died Oct. 7th, 1912.

Skegby. Colliery centre of Nottinghamshire. It is 18 m. from Nottingham, on the L.N.E. Rly. Pop. 6,230.

SKEGNESS. Watery place and urban dist. of Lincolnshire. It is on the E. coast, 24 m. from Boston, on the L.N.E. Rly. There are good sands, golf links, and other attractions for the numerous visitors. It has a beam wireless station. An earlier Skegness was an important seaport, destroyed by the sea in the 15th century. Pop. 9,246.

SKELETON (Gr. dried up). In anatomy, the hard framework of a body, formed mainly of bones, but completed in places by cartilage. In man the cartilaginous parts of the skeleton are the disks between the vertebrae of the spinal column or backbone and the costal cartilages which connect the ends of the ribs with the breast-bone. The ends of the long bones and the sockets or surfaces with which they articulate are also covered with cartilage to facilitate movement and provide some degree of elasticity. The human skeleton consists of some 200 bones. See Anatomy.

SKELLIGS. Three small rocks off the S.W. coast of co. Kerry, Irish Free State. They are known as Great and Little Skellig and Lemon Rock, and abound in sea-fowl. On one are the remains of a monastery, formerly resorted to by pilgrims.

SKELMERSDALE. Urban dist. of Lancashire. It is 8 m. from St. Helens, on the L.M.S. Rly. The chief industries are coal mining and brickmaking, and the chief building is S. Paul's church. Pop. 6,687.

SKELTON. District of Yorkshire (N.R.). It is 17 m. from Middlesbrough, and forms part of the urban dist. of Skelton and Brotton, on the L.N.E. Rly. The chief occupation is in the extensive ironstone mines. Pop. urb. dist. 15,788.

SKELTON, JOHN (d. 1529). English poet. Born probably about 1440, he took orders, became tutor to Prince Henry, afterwards Henry VIII, and for a time was rector of Diss in Norfolk. His earlier poems, such as the interlude, Magnificence, were of a scholarly character, but latterly he developed a humorous and satiric vein, attacking the clergy in Colin Clout, and Wolsey in Why Come Ye not to Court? His other poems include The Tunning of Elinor Rummung, full of Rabelaisian humour, The Death of Philip Sparrow, and The Bowge of Court, an allegorical satire. To escape arrest Skelton took sanctuary in Westminster Abbey. He died June 21, 1529.

Skate. Edible fish with flattened body and whip-like tail
W. S. Berridge, F.Z.S.

SKERRIES. Watering place and seaport of co. Dublin, Irish Free State. It is 18 m. from Dublin on the G.N. of I. Rly. The chief industries are fishing and quarrying. Pop. 1,973. The Skerries are four small islands off the coast of co. Dublin. The name is also that of a reef about 3 m. off the S. coast of Devon.

SKERRYVORE. Rock extremity of a dangerous reef of the Inner Hebrides. The reef is about 10 m. S.W. of Tyree Island. It was the cause of numerous wrecks until 1844, in which year a lighthouse was completed, designed by Alan Stevenson. After it R. L. Stevenson named his house at Bournemouth.

SKEWEN. District of Glamorganshire. It stands on Swansea Bay, 2 m. from Neath, on the G.W. Rly. The industries are coal mining, copper smelting, and oil refining. Pop. 5,600.

SKIBBEREEN. Urban dist. and seaport of co. Cork, Irish Free State. It stands on the Ilen, 54 m. from Cork, on the G.S. Rlys. In addition to the shipping, there is some fishing and a trade in corn, cattle, etc. Pop. 2,627.

SKIDDAW. Mountain of Cumberland. It is 3 m. from Keswick and rises to 3,054 ft. On the E. is an extensive tract of moorland which is known as Skiddaw Forest.

SKI-ING (Norw. ski, snow-shoe). Art of walking on ski. The ski are a form of snow-shoe, consisting of boards strapped to the feet; some 90 ins. long, 5 ins. broad in the widest part, and 1½ ins. thick just under the foot.

Ski as a means of progression over snow are of ancient origin. They were first adopted solely for sport in 1860 in Norway, since when they have become popular in many parts of the world. In order to enjoy ski-ing at its best the snow should be at least 6 ins. in depth and be well frozen. The pole has a disk of metal about 6 ins. from the foot to prevent it from penetrating the snow too far. In descending steep slopes the ski act as runners, the poles serving as a break.

The sport is now carried on at many Swiss centres. In 1901 the Davos Club was founded, and in 1903 the Ski Club of Great Britain. The Alpine Ski Club, reserved for experts, dates from 1908. The world's record jump of 147 ft. 8 ins. was made at Davos by Harald Smith, a Norwegian, in 1909.

Skin. Sectional diagram of the human skin, showing the epidermis and the corium (dermis) or true skin, indicating the arrangement of the sweat glands and the position of a hair follicle

SKIN. Tissue covering the surface of the body. It consists of two layers, the epidermis or cuticle and the dermis or true skin. The latter contains the blood vessels of the skin. The nails are thickenings of one of the layers of the epidermis. The deeper layers of the skin contain the hair follicles. Sebaceous glands are small sacs in the dermis, the ducts of which secrete a fatty substance called sebum, which acts as a lubricant to the hairs. Sweat glands are abundant over the whole skin, but are most numerous on the palms and soles. The dermis also contains the minute end-organs of nerves, by means of which sensations of touch, pain, heat, and cold are excited. See Dermatitis.

SKINNER. Dealer in skins, the predecessor of the modern furrier. See Fur.

The Skinners' Company is one of the great London city livery companies. In its charge are Tonbridge School, founded in 1553; a middle school for boys at Tunbridge Wells, 1887; commercial school for day scholars, Tonbridge, 1885; and almshouses at Palmer's Green, 1894. The hall, in Dowgate Hill, contains some valuable 16th century plate, and paintings by Frank Brangwyn.

Skinner's Company arms

SKIPPER (Du. schipper, a sailor). Warrant rank in the Royal Naval Reserve. It was instituted in Feb., 1911, concurrently with the establishment of the trawler, or minesweeping, section of the R.N.R., the warrants being granted to masters of fishing trawlers and drifters who volunteered to do annual training in peace and put themselves at the disposal of the admiralty in war. In the Great War more than 2,000 skippers were enrolled.

SKIPPER (Hesperiidae). Family of butterflies, represented in Britain by eight small brown and yellow species. The caterpillars feed on grasses and low herbs, usually spinning a few leaves together as a shelter, and most of them construct a slight kind of cocoon in which to pass the pupal stage. See Butterfly.

SKIPTON. Market town and urban dist. of Yorkshire (W.R.). It stands in the valley of the Aire, 26 m. from Leeds, on the L.M.S. Rly. It is also served by the Leeds and Liverpool Canal. The parish church, a Perpendicular building restored, has memorials to the Clifford family. The town grew up round a castle, built in Norman times and long the property of the Cliffords. Market days, Mon. and Wed. Pop. 12,400.

SKITTLES. Game of great antiquity and wide distribution. Four large pins or skittles are set up in the form of a diamond at one end of a green or alley; a bowl in the shape of a cheese and about 10 lb. in weight being thrown at them from a distance of 21 ft. The object is to strike the skittles so that all of them shall be knocked over in one or two throws. In another form of the game a ball is bowled at nine pins set up in the same manner, with the object of knocking them down in the fewest attempts. See Nine Pins.

SKODA WORKS. Manufacturing concern situated at Pilsen, Bohemia, in Czechoslovakia. Up to the end of 1918 it was one of the world's greatest arsenals and the largest steel works in Central Europe. It was in Austrian territory, and bore the same relation to the Austro-Hungarian govt. as Krupps (q.v.) to the German. In 1919 the works passed under the control of Czechoslovakia.

SKUA (Stereorarius) Genus of gulls, of which four species occur in Great Britain. They may be recognized by their brownish plumage. The common or great skua (S. catarrhactes) is 25 ins long and has mottled brown plumage. It breeds in the Shetlands, but is rather rare. Richardson's skua is smaller and has dusky plumage, except on the neck and under parts, which are yellowish white. More numerous than the common skua, it breeds in the Orkneys, Shetlands, and Hebrides. Buffon's skua and the pomarine skua are only rare visitors to the shores of Great Britain.

SKULL. Part of the skeleton. It consists of a cavity, the cranium, which contains the brain, and a bony structure for the organs of special sense, forming the face. The bones

1. Frontal bone. 2. Parietal bone. 3. Occipital bone. 4. Temporal bone. 5. Sphenoid bone. 6. Ethmoid bone. 7. Nasal bone. 8. Lacrymal bone. 9. Maxillary bone. 10. Zygomatic bone. 11. Mandible. 12. Palate bone. 13. Nasal septum. 14. Palatine process of maxilla bone. 15. Greater foramen. 16. Left choana (nares). 17. Foramen lacorum. 18. Occipital condyle. 19. Occipital protuberance. 20. Superior nuchal line of occipital bone. 21. External occipital crest. 22. Mastoid notch. 23. Styloid process. 24. Orbital fissure. 25. Mental foramen. 26. Infra-orbital foramen

Skull. Front, side, and view from below, of the human skull

composing the cranium are the occipital, the frontal, the sphenoid, the ethmoid two temporal, and two parietal bones. The external surface is smooth, but shows lines formed of small irregular bony processes or sutures

Skipper. The grizzled skipper, *Hesperia malvae*, a British butterfly

where the component bones are united. Internally, the cranium exhibits depressions corresponding to the large convolutions of the brain, and grooves marking the sites of the arteries and veins. At the base of the skull is the foramen magnum. The form of the skull varies widely in different races, skulls relatively wide being termed brachycephalic, whilst the long, narrow type is termed dolichocephalic. See Anthropology: Bone; Brain; Face; Man; Phrenology.

SKULL CAP (*Scutellaria galericulata*). Perennial herb of the order Labiales, a native of Europe, N. Africa, Asia, and N. America. It has lance-shaped, opposite leaves with toothed edges. The blue, bell-shaped, two-lipped flowers are in pairs at the base of the leaves. A smaller species, the lesser skull cap (S. minor), has pale purple flowers and the lip dotted with crimson.

SKUNK (*Mephitis*). Carnivorous mammal belonging to the weasel tribe found in N. and Central America. Rather smaller than a domestic cat it has a handsome black coat with two white stripes running along the back. The tail is long and bushy, measuring 18 ins. when the body is about 24 ins. long. Skunks are commonly met with in the open country

Skunk of Canada, *M. mephitis*
W. S. Berridge, F.Z.S.

and often near farms, where the hen-roost is a great attraction. They feed mainly on mice, frogs, and birds' eggs, and to a certain extent on insects. Their fur is of considerable value. The animal can emit an offensive odour from the secretion of a pair of glands situated near the tail.

SKYE. Island of the Inner Hebrides part of the county of Inverness. Its area is about 600 sq. m. The coast is deeply indented and the surface mountainous. The highest hills are the Cuillin range. The scenery is magnificent. The chief industries are fishing the rearing of cattle and sheep, and distilling. Portree is the chief place. Skye was the stronghold of the Macleods and Macdonalds. Dunvegan Castle being the headquarters of the former. The inhabitants are mainly crofters. A Highland gathering for Skye is held every year near Portree. Pop. 11,600. See Hebrides; Portree.

SKYE TERRIER. Bred of small dog. Formerly kept in the Isle of Skye for destroying vermin, it is now regarded merely as a pet. It has a long, low body with short legs, and the hair almost touching the ground. Its height is usually 10 ins. and the length of the body should be rather more than 30 ins. Two types are recognized by fanciers, the drooped breed and the prick-eared type. The Skye terrier is alert and intelligent and makes a capital house dog.

SKYLARK (*Alauda arvensis*). Bird of the order Passeridae, a native of Europe (including Britain) and Central and N. Asia. Its general colour is brown, streaked with black on the upper parts, and buffy white beneath. It measures about 7 ins. in total length. The first primary quill of the wing is exceedingly small, and the hind claw is very long and straight: two points which distinguish the skylarks from other larks. The open nest, found in fields and downs, is constructed of dry grass and is placed in a slight depression scratched in the ground. The food consists chiefly of seeds and insects.

SKY SCRAPER. Building of many storeys. These were first raised in New York, and are now found in many American cities and towns. In 1930 the highest of these sky scrapers was the Bank of Manhattan, New York. It is 838 ft. high and has 65 storeys. See New York.

SLADE, FELIX (1790-1868). British art-collector. Born in Lambeth, London, he became a collector of ancient and modern glass, pottery, old MSS., and engravings. He bequeathed a great part of these to the British Museum, and left £35,000 for the endowment of the Slade School of fine arts at Oxford, Cambridge, and London universities. The Oxford professorship, together with that of poetry, was discontinued from 1914. He died March 29, 1868.

The Slade School in London is a branch of University College. It was opened in 1871, with Sir E. Poynter as its first professor, and has professors of painting and sculpture, and lecturers in the history of art, anatomy, ornamental design, and perspective.

SLAG. Substance produced during the smelting of ores. By the formation of slag the impurities in the ore are removed. Some slags, consisting mainly of metallic oxides, are resmelted, and such slags are termed cinder or scoria. Slags are used for various purposes,

as ballast for rlys., macadamising roads, making into bricks, etc. Some slags may be burnt with lime, thus making an efficient hydraulic cement and slag from the basic Bessemer process forms a valuable fertiliser. See Metallurgy: Ore.

SLAITHWAITE. Urban dist. of York shire (W.R.). It stands on the Colne, and is served by the L.M.S. Rly. and the Huddersfield Canal, Huddersfield being four miles away. There are manufactures of woollen and cotton goods, and the place has baths whose waters are efficacious for skin diseases. At Moorside Edge near the town a site has been acquired by the B.B.C. for the erection of a regional transmitter station. Pop. 5,444.

SLANDER (Lat. scandalum, scandal). Malicious defamation of a person in his character business or profession by spoken words as distinct from written words, which is libel (q.v.). It is a less serious offence than libel as being less permanent and far-reaching, and exposes the offender

only to civil proceedings. Action will lie if the words impute a criminal offence, if they allege misconduct in a public office, if they reflect upon another's trade or profession, or if they cause special damage.

SLANEY. River of the Irish Free State. It rises in the S.W. of co. Wicklow and flows 60 m. S.W. and S. through counties Carlow and Wexford to Wexford Harbour. It receives the waters of the Bann, Derry, and other rivers, and has the town of Wexford at its mouth.

SLATE. In geology, fine-grained, hard fissile rocks which have been produced from clay or shale by metamorphism. Most slates are clays which, through heat and pressure, have become consolidated into cleavage planes, along which the slate splits readily. Good slates are hard and durable, compact, and do not split easily from exposure to changes of temperature

or to moisture. Its lightness, the ease with which it is split into thin sheets, and its weathering properties make slate an excellent roofing material.

SLATER, OSCAR German Jew convicted at Edinburgh, May, 1909, of the murder of Miss Gilchrist, an octogenarian living in Glasgow, who kept £3,000 worth of jewels in her bedroom. Sir A. Conan Doyle maintained his innocence, but in June, 1914, an inquiry reported that there was no evidence of a miscarriage of justice. Meanwhile, in 1909, sentence of death had been commuted to penal servitude for life. In 1927 he was released, and in 1928 the court of criminal appeal set aside his conviction.

SLAV. Name denoting a group of peoples, mostly in E. Europe. It is applied primarily to people speaking dialects of the Slavonic sub-family of Indo-European languages. From the standpoint of ethnology there is no homogeneous Slav race.

The Slav populations, political rather than ethnic communities, number: Poles, including Kashubs, 20,000,000; Czechs, Slovaks, and Wends, 10,000,000; S. or Yugoslavs, 20,000,000. There are about 8,000,000 in America. The S. Slavs include the Bulgars. Slavonic languages pertain to the E. or Aryan branch of the Indo-European family. As such they use sibilants where gutturals occur in the languages of the W. branch.

SLAVE. River of Canada. It forms part of the Mackenzie river system and is the connecting link between Lake Athabasca and the Great Slave Lake, receiving the Peace river 20 m. N. of Lake Athabasca. At Grahame Landing the river drops over a series of rapids to Fort Smith, the head of navigation from the Arctic Ocean. Below this the river flows 190 m. over a lowland to reach the Great Slave Lake. Its length is 265 m.

Slave Coast. Name applied to a portion of the coast of W. Africa between the Gold Coast and the river Benin.

SLAVERY (Med. Latin, slavus, a Slavonic captive). Economic institution consisting in the utilisation of forced labour without pay.

The civilization of the ancient world was based on the institution of slavery, and without this economic foundation neither Athenian culture nor the Roman imperial system could have existed. Christianity did not forbid slavery, but commended manumission, a practice which profoundly modified the population of S. Europe. By the 12th century the enslavement of Europeans in Europe had almost disappeared, becoming only a legal penalty for particular offences. After the discovery of the New World, negro slavery was firmly established in all the tropical and semi-tropical colonies. English criminals and political prisoners were sent as slaves to the plantations in the 17th century.

From about 1650 the European conscience was gradually roused to a sense of the injustice and moral evils of slavery, the Quakers being among the first to protest. The Emancipation Act passed in 1833 was a measure that came gradually into operation so as to release all slaves in the British Empire by 1840. In 1839 the British and Foreign Anti-Slavery Society was founded, its objects being the universal extinction of slavery and the slave trade, and the protection of freed slaves in British possessions. Slavery was extinguished in the French colonies in 1848, by Holland in 1863 and in the U.S.A. in 1865, during the Civil War. It is now, nominally at least, extinct in all civilized countries.

SLAVE TRADE. The modern European traffic in negroes was begun by the Portuguese in 1442, but was only developed after the discovery of America. As Spain had no tropical African possessions, the trade was in the hands of the English, French, and Dutch. By the treaty of Utrecht, 1713, Spain concluded an exclusive contract, called the Asiento, with the English traders to supply her colonies with slaves. During the 18th century the trade attained great dimensions. In Britain, after a long struggle, Lord Grenville's Act for the abolition of the slave trade was passed in 1807.

SLEAFORD. Market town and urban dist. of Lincolnshire. It stands on the Lea, 21 m. from Lincoln, on the L.N.E. Rly. The church of S. Denis has a 15th century rood-screen. The chief industry is malting. The town is the capital of the Kesteven district. Market day, Monday. Pop. 6,680.

SLEEPING SICKNESS. Disease due to infection by an organism of the genus Trypanosoma, prevalent along the W. coast of Africa, the Congo, Uganda, Rhodesia, and other parts of Africa. The parasite occurs in antelopes and other animals, and in domestic dogs. From these it is conveyed to man, and from man to man by the bite of certain tsetse flies.

The symptoms begin usually within two or three weeks with an attack of fever and rash on the skin. The lymphatic glands become enlarged. After some weeks or months the patient becomes slovenly, dull and apathetic. Preventive measures include segregating the sick; avoidance of bites by wearing appropriate clothing, and immediate disinfection of a bite with tincture of iodine.

Skye Terrier. Wolvesley Chumma, a champion of the breed

Skylark, British song-bird which nests in the fields and downs W. S. Berridge, F.Z.S.

African sleeping sickness must not be confused with encephalitis lethargica, the so-called sleepy sickness, outbreaks of which have been noted in England since 1918.

SLEIGH or **SLEDGE**. Wheelless vehicle used on ice or snow. Built on runners, sleighs vary very much in size and shape according to their use. In countries which are snowbound during the winter sleighs drawn by man-power, horses, reindeer, or dogs are the only means of transport, and are adapted for heavy draught purposes or built lightly as conveyances. See Reindeer; Tobogganing.

SLESVIG - HOLSTEIN QUESTION. European difficulty that caused the war of 1866 between Austria and Prussia. Both Slesvig and Holstein were ruled by the king of Denmark, but in each there was a numerous German population, and Holstein was a member of the German Confederation.

Frederick VII, who became king in 1847, was without sons, and in the duchies, unlike Denmark, the Salic law was recognized. Frederick claimed that the whole of his domains should pass together on his death, whereupon the Holsteiners revolted and a Prussian army entered the duchies in their support. The Powers interfered, and the Prussians withdrew.

When, in 1863, Frederick died and a kinsman, Christian, became king, he was opposed by Frederick, duke of Augustenburg, who was supported by the people of Holstein. Prussia again interfered, declaring for the right of the duchies to self-government under Christian. A conference was called in London, but it failed to prevent war. With Prussian and Austrian armies against them, the Danes were quickly beaten and the duchies ceded to the two powers, but they were annexed by Prussia after her victory over Austria. See Denmark; Holstein; Schleswig.

SLIEVE BLOOM. Mt. range of Ireland. It forms part of the boundary between King's co. (Offaly) and Queen's co. (Leix) and attains an alt. of 1,733 ft.

SLIGO. Co. of Connaught, Irish Free State. Its area is 707 sq. m. It has a low coastline on the Atlantic, broken by Sligo and other bays. There are mts. in the N.E., and elsewhere are the Ox and Curlew Mts. The rivers include the Moy, Esky, Owenmore, and Owen-

boy, and among the loughs are Arrow, Gara, and Gill. Industries are the grazing of cattle, fishing, and the growing of potatoes and oats. The co. is served by the G.S. Rlys. Sligo is the co. town; other places are Tobercurry, Ballymote, and Collooney. Inishmurray and other islands belong to the co. Pop. 71,388.

Sleigh. A Russian horse-drawn sleigh, as used for draught purposes

Sligo Bay, 134 m. from Dublin by rail, and is served by the G.S. Rlys. There is a good hard-bour. It exports dustries are flour milling, saw milling, and fishing. The chief building is the modern Roman Catholic cathedral. Pop 11,437.

SLING. Primitive projectile weapon. The sling is a short piece of leather, to each end of which cords are attached; a stone is placed in the pocket formed by the leather, and gripping both cords, the slinger whirls it; when he lets one cord free the stone is shot out by the momentum. In nautical usage, a sling is a rope supporting a mast, or the hooked and thimble ropes used in hoisting a ship's boats.

SLOAN, JOHN TONHUNTER. American jockey. He first visited England in 1897 and attracted much attention by the peculiar seat he adopted, perched in a crouched fashion on the horse's withers. At Newmarket on Sept. 30, 1898, he rode five consecutive winners, and again on April 18, 1899, won on four successive mounts. See Jockey.

SLOANE, SIR HANS (1660-1753) British physician, naturalist, and collector. Of Scottish descent, he was born at Killyleagh, co. Down, Ireland, April 16, 1660, studied in Paris and Montpellier, was physician to the governor of Jamaica. 1687-89; secretary of the Royal Society, 1693-1712; president, 1727-41; and president of the Royal College of Physicians, 1719-35. Made a baronet, 1716, he died Jan. 11, 1753.

After purchasing the manor of Chelsea, 1712, he presented the freehold of the Chelsea Physic Garden to the Society of Apothecaries, 1721, and his collection of natural history specimens, books, MSS., pictures, coins, prints, etc., formed the nucleus of the British Museum.

SLOE. Name given to the fruit of the blackthorn, or the tree itself. The fruit is about the size of a small damson, and black or very dark purple in colour, with a white bloom. Very sour to the taste, it is used in the making of sloe gin and a few preserves. See Blackthorn.

SLOOP (Duteh, sloop). Vessel with a single mast, a fixed bowsprit, and a jib stay, i.e. a stay running from the masthead to the bowsprit head. Ships of war of various rigs below the grade of frigate were formerly called sloops. The term is now applied to a number of vessels built during the Great War for service in sweeping mines and for escorting merchant ships, and named after different flowers.

Sloop. Vessel used in the British navy in the 18th century. From Falconer's Universal Marine Dictionary

SLOTH. Family of edentate mammals, found only in S. America. They include two genera, the three-toed (Bradypus) and the two-toed (Choloepus) sloths. The body is bulky and heavy, and the head comparatively small and rounded, while the limbs end in hook-like feet armed with long curved claws by which the animal clings back downwards to the trees. Sloths feed upon leaves, shoots, and fruit. Among the trees they can proceed with considerable speed; but on the ground they crawl slowly and with difficulty.

Sloth. Two-toed species, Choloepus, of the S. American mammal. W. S. Berridge, F.Z.S.

SLOUGH. Market town and urban dist. of Buckinghamshire. It is 18 m. from London and 2 m. from Windsor, on the G.W. Rly. The town has engineering works and other industries. During the Great War the Government established a mechanical transport depot here. In 1928 a scheme for extending the area of the urban district, now a huge industrial centre, was put forward. Market day, Tues. Pop. 16,397.

SLOVAK. Slav people in the Czechoslovakia (q.v.) republic. Numbering about 2,500,000, mainly on the N. uplands of the old Hungarian kingdom, they occur also in Moravia. They are mostly hard-working peasants, practising a somewhat backward husbandry, or itinerant artisans. Lutheran or Roman Catholic, they have preserved in isolation many primitive Slavic customs. Their dialects, like Polish and Czech, pertain to the W. group of Slavonic languages. See Czechoslovakia; Slav.

SLOVENE. Slav people in Yugoslavia. They number 1,024,760, mainly in the old Austro-Hungarian lands of Carniola, Gorizia, Styria, S. Carinthia, and the Istrian coastland. Established there since the 7th century, when the Slav immigration into the Balkan peninsula was pressed back by the Avars, they have acted as a barrier to the Germanic movement towards the Adriatic. They are mainly Roman Catholics. Their dialects, like Serbian and Croat, pertain to the S. group of Slavonic languages. Since the Great War they have become politically united with their fellow South Slavs to form Yugoslavia or the kingdom of the Serbs-Croats-Slovenes. See Yugoslavia.

SLUG. Name given to those land molluscs in which the shell is either internal or absent. In other respects they do not differ essentially from snails. All British slugs have small flattened shells concealed within the mantle cavity, but in one group the shell is reduced to a mere chalky granule. The field slug (Agriolimax agrestis) and the keeled slug

Sligo. Map of the seaboard county of north-west Ireland

(*Limax Sowerbyi*), both very abundant, are destructive in gardens. Most of the other slugs feed upon fungi, lichens, and decaying animal and vegetable matter, and are harmless to garden plants. See Mollusc; Snail.

SLUYS. River of the Netherlands. Here was fought a naval engagement between the English and the French, June 24, 1340.

Edward III assembled a fleet comprising about 200 ships, and on June 20, 1340, was joined off Blankenberghe by the northern fleet, of 50 sail. They lay at anchor in the river Sluys, and attacked on the morning of June 24. The battle ended with the almost total destruction of the French fleet. Pron. Slois.

SMALL HOLDING. Portion of land of limited area or rental let to agricultural workers for cultivation. In 1892 the Small Holdings Act was passed; it was designed to help agricultural labourers to acquire a holding by a system of instalment purchase, and fixed the limits of such holdings, which were to be allotted by county councils. The Act was a failure, however, and was superseded by the Small Holdings and Allotments Act of 1907. This was followed by other Acts. See Allotment; Enclosure.

SMALL POX or **VARIOLA.** Acute infectious disease, the micro-organism responsible for which has not yet been identified. The disease is very contagious, and it is probable that the infection is conveyed by small scales shed from the skin during convalescence. The incubation period is from 10 to 14 days, and the disease is particularly fatal to children.

The symptoms begin with a chill, and a rise of temperature to 103° or 104° F. Severe headache, pains in the back, and vomiting occur, and sometimes delirium. Usually on the fourth day papules appear on the forehead, face, and scalp, and extend over the whole body. These suppurate about the ninth day, begin to dry up about the eleventh day, and later scars are formed, producing pitting. Haemorrhagic small pox or black small pox is a form in which haemorrhage occurs into the pustules, and there may be haemorrhage from the mucous membranes. See Vaccination.

SMART, SIR GEORGE THOMAS (1776-1867). British musician. Born in London, May 10, 1776, he became a member of the Chapel Royal choir, played in various orchestras, and in 1811 conducted a successful series of concerts in Dublin, where he was knighted by the lord-lieutenant. An original member of the Philharmonic Society, he conducted many of its concerts, 1813-44. He also taught, Jenny Lind being a pupil. He died Feb. 23, 1867.

SMARTWEED or **WATER PEPPER** (*Polygonum hydropiper*). Annual herb of the order Polygonaceae. A native of the N. temperate hemisphere, it has a creeping, much-branched stem with swollen joints and lance-shaped leaves. The small greenish-rosy flowers are in short terminal sprays. The juices are very acrid, hence its popular names. The plant has been used as a diuretic medicine.

SMEATON, JOHN (1724-92). British engineer. Born at Austhorpe, near Leeds, England, June 8, 1724, he turned his attention to the manufacture of scientific instruments and wrote many engineering papers for the Royal Society, the gold medal of which he received in 1759 for his paper on wind and water mills. He made a special study of canal and harbour construction, and in 1755 was called upon to replace

Slug. The black slug, *Arion ater*, with tentacles partly retracted. Reduced

the second Eddystone lighthouse. a work he completed in 1759. He built a number of bridges, and constructed the Forth and Clyde canal. Smeaton died at Austhorpe, Oct. 28, 1792.

SMELL. Property of many substances which affect certain nerves of animals. The organs of smell consist of the olfactory region in the nose, which is a part of the mucous membrane covering the upper turbinal bone and the adjacent part of the nasal septum, and containing special olfactory nerve cells. The olfactory nerves pass up through minute holes in the cribiform plate of the ethmoid bone, and enter a complicated structure, the olfactory bulb, which is a continuation of the olfactory tract in the brain. See Nose.

SMELT (*Osmerus*). Genus of small marine fishes of the salmon family. Of the three species the common smelt (*O. eperlanus*) is the only one occurring in European waters. It is found of brackish waters, and is often found in the Thames above London. It grows to a length of seven or eight inches, though it is usually less. It is distinguished by its silvery grey hue, with greenish back.

SMETHWICK. County borough of Staffordshire. It is 3½ m. from Birmingham, on the G.W. and L.M.S. Rlys. The industries include engineering works and the making of glass, chemicals, hardware, and scales for weighing. Pop. 76,940.

Smilax. Genus of shrubby plants belonging to the order Liliaceae. See China-root.

SMILES, SAMUEL (1812-1904). British author. Born at Haddington, Dec. 23, 1812, he graduated M.D. at Edinburgh University. Dissatisfied, however, with medical practice, he became editor of *The Leeds Times*. Subsequently he became identified with railway management in Leeds and London. His first considerable literary success was his biography of George Stephenson, 1857. In 1859 appeared the book on which his fame mainly rests, *Self Help*. Other works are *Lives of the Engineers*, 1861; *Industrial Biography*, 1863; *James Nasmyth*, 1883; and *Josiah Wedgwood*, 1894. Smiles died April 16, 1904.

Samuel Smiles, British author. Chief and Fry

SMILLIE, ROBERT (b. 1857). British labour leader. Born in Lanarkshire, Scotland, his early years were spent as a miner in the Lanarkshire collieries. He became president of the Scottish Miners' Federation in 1894, and from 1912-21 was president of the Miners' Federation of Great Britain. In 1919 he was the chief representative of the Federation on the Sankey Coal Industry Commission at the House of Lords, and leader of the miners in the strike of 1920. He became president of the Scottish Miners' Union in 1921, and was Labour M.P. for Morpeth 1923-29. Consult his *My Life for Labour*, 1924.

SMIRKE, SIR ROBERT (1781-1867). British architect. Born in London, Oct. 1, 1781, he studied at the R.A. schools, and was articled to Sir John Soane. He was appointed architect to the board of trade, was elected A.R.A. in 1808, R.A. in 1811, and was treasurer of the Academy 1820-50. His best-known work is the British Museum, completed 1847; he also designed the old General Post Office, demolished 1913, and the College of Physicians in Trafalgar Square. He died April 18, 1867.

SMITH, ADAM (1723-90). British economist. Born at Kirkcaldy, June 5, 1723, he went from the university of Glasgow in 1740 to Balliol College, Oxford. In 1748 Smith began to lecture in Edinburgh, and in 1751 was chosen professor of logic at Glasgow, where, from 1752-63, he was professor of moral philosophy.

In 1776 the result of ten years' labour appeared in *The Wealth of Nations*, the most influential and exhaustive work of its kind. Its influence on the study of political economy was enormous, and it was perhaps equally great on practical politics. Smith became a commissioner of customs, 1778, and died July 17, 1790. See Political Economy.

SMITH, SIR GEORGE ADAM (b. 1856). British scholar. Born at Calcutta, Oct. 19, 1856, son of George Smith (1833-1919), an authority on India and for many years Indian correspondent of *The Times*, he entered the ministry of the Free Church of Scotland and became assistant minister at Brechin in 1880. From 1880-82 he was Hebrew tutor at the Free Church College, Aberdeen, and from 1882-92 minister

Aberdeen. From 1892-1909 Smith was professor of O.T. language, literature, and theology at the Free (later U.F.) Church College, Glasgow, and then became principal of Aberdeen University. He was author of numerous standard books, including *Historical Geography of the Holy Land*, *Life of Henry Drummond*, *The Book of Isaiah*, and *The Twelve Prophets*. He was knighted in 1916.

Sir George A. Smith, British scholar

SMITH, JOHN (1580-1631). English soldier and colonist. Born at Willoughby, Lincolnshire, he saw service in France and Flanders. In 1606 he joined an emigrant party to Virginia, arriving at Chesapeake Bay, April 26, 1607. There he proved an able member of the council. In a fray with the Indians, Smith was captured, but released, according to his own account, at the intercession of Princess Pocahontas (q.v.). In 1608 he became president of Virginia. He explored and mapped Chesapeake Bay, and in 1614 charted the New England coast as far as Cape Cod. He wrote many books and pamphlets relating his own adventures.

SMITH, JOSEPH (1805-44). Founder of Mormonism. Born at Sharon, Vermont, U.S.A., Dec. 23, 1805, he alleged in 1827 that under angelic guidance he had discovered new scriptures, which he professed to translate, and published, 1830, as the *Book of Mormon*. The Church was organized the same year, with Smith as its president, and the remainder of his history is that of the Mormon Church. The doctrine of polygamy was not published to the world, but it was obeyed by Smith and other leading members of the community. So bitter was the hostility aroused among non-Mormons that Smith and his brother were assassinated, June 27, 1844. See Mormons.

SMITH, RODNEY, commonly known as Gipsy Smith (b. 1860). British evangelist. Born at Woodford, Essex, Mar. 31, 1860, he was the son of a gipsy. He began evangelistic work in the Salvation Army, and for many years was chief missionary of the Free Church Federation of Gt. Britain, conducting revival campaigns throughout the empire.

SMITH, SYDNEY (1771-1845). British divine author, and wit. Born at Woodford, Essex, June 3, 1771, he was educated at Winchester and New College, Oxford, where his intellectual gifts made him prominent. In 1794 he was ordained and became curate of Netheravon, Salisbury, but in 1797 he settled in Edinburgh, and with Jeffrey, Brougham, and others founded *The Edinburgh Review*, of which he was the first editor. From 1803-9 he lived in London, and there made his mark as a preacher and lecturer. He was also a prominent figure in Whig circles. After holding other livings, he returned to London in 1831 as canon residentiary of St. Paul's. He died in London, Feb. 22, 1845.

Smith's writings include Peter Plymley's Letters, 1807-8, on Roman Catholic emancipation, many other letters and pamphlets on subjects dear to a Whig reformer, and numerous articles in *The Edinburgh Review*. He is best known, however, as the author of many witty sayings. His *Wit and Wisdom* was published in 1861.

Sydney Smith, British divine and wit

SMITH, WALTER CHALMERS (1824-1908). Scottish poet. Born Dec. 5, 1824, in 1850 he became minister of the Scottish Free Church in Pentonville, London. Later he held ministerial appointments at Milnathort, Kinross-shire, Roxburgh Free Church, Edinburgh, the Free Tron Church, Glasgow, and the Free High Church, Edinburgh. Moderator of the General Assembly, 1893, he retired in 1894, and died Sept. 20, 1908. As a poet Smith began with *The Bishop's Walk*, published in 1861 under the pseudonym of Orwell.

SMITH, WILLIAM HENRY (1825-91). British politician. Born in London June 24, 1825, the son of William H. Smith, who established the business of newspaper distributors now known as W. H. Smith & Son, he joined his father when a youth and enormously developed the business. In 1868 he became a Conservative M.P. He was financial secretary to the treasury, 1874, first lord of the admiralty, 1877, and for short periods, 1885-86, secretary for war and chief secretary for Ireland. In 1886 Smith was made leader of the House of Commons and first lord of the treasury, positions he held until his death, Oct. 6, 1891. His widow was created Viscountess Hambleden, and on her death, in 1913, the title descended to their son, Hon. W. F. D. Smith (1868-1928). See Hambleden, Viscount.

W. H. Smith, British politician

their son, Hon. W. F. D. Smith (1868-1928). See Hambleden, Viscount.

SMITH, WILLIAM ROBERTSON (1846-94). British scholar. Born at Keig, Aberdeenshire, Nov. 8, 1846, he was educated at the university of Aberdeen. After serving as assistant to the professor of natural philosophy in Edinburgh he became, in 1870, professor in the Free Church College, Aberdeen. In consequence of some articles in *The Encyclopaedia Britannica* he was charged with heresy, and in 1881 was deprived of his position. In 1883 Smith was chosen professor of Arabic at Cambridge, and in 1886 university librarian, being also fellow of Trinity, and then of Christ's College. He died March 31, 1894.

Smith was the most prominent Biblical critic of his day. In 1881 he became editor of *The Encyclopaedia Britannica*.

SMITH, SIR WILLIAM SIDNEY (1764-1840). British sailor. Born June 21, 1764, he entered the navy at the age of 13, and served on the N. American station. In 1793 he took

part in Hood's action off Toulon, and commanded a frigate in the North Sea from 1794-96, when he was captured by the French. After two years he escaped, was given a Mediterranean command, and in 1799 undertook the defence of St. Jean d'Acre against Napoleon, holding the place successfully for eleven weeks. He died in Paris, May 26, 1840.

SMITH-DORRIEN, SIR HORACE LOCKWOOD (1858-1930). British soldier. Born May 26, 1858, he entered the Sherwood Foresters in 1876, and in 1879 served in the Zulu War. Between 1882 and 1886, and again in 1898, he was in all the campaigns in Egypt and the Sudan. In the South African War he commanded first a battalion, then a brigade, and finally a division. Adjutant-general in India, 1901-3, he commanded the Quetta division there, 1903-7, and then, returning to England, was commander-in-chief at Aldershot, 1907-12, and from 1912-14 held the southern command. When the Great War broke out he took command of the 2nd Corps, led it in the Mons retreat, and until May, 1915, when he was put at the head of the 2nd Army. Later in 1915 he went to take charge of the operations in East Africa. He was governor of Gibraltar, 1918-23, and he died, the result of a motor accident, August 12, 1930.

Sir Horace Smith-Dorrien, British soldier

SMITHFIELD. London district. It lies S. of Farringdon Street station, between Farringdon Street on the W. and Aldersgate Street on the E. Anciently the scene of jousts, tournaments, and fairs, it became a place of execution and of burnings.

Smithfield, London. South front of the central meat market

The cattle market was removed to Copenhagen Fields in 1855, and on part of its old site the City Corporation erected the central meat market, opened 1868; and the central market for poultry, provisions, fish, vegetables, etc., 1892. The Smithfield Club was founded in 1798. It holds a show of fat stock every December at the Agricultural Hall, Islington.

SMITH'S FALLS. Town of Ontario, Canada. It is on the Rideau river and canal, 39 m. S.S.W. of Ottawa, and is served by the C.P. and C.N. Rlys. Textiles and agricultural implements are manufactured. Pop. 6,790.

SMITHSONIAN INSTITUTION. An American educational institution. It was established by Act of Congress in Washington, 1846, through the bequest of James Macie Smithson, F.R.S. (1765-1829). It has been largely responsible for the success of the

W. R. Smith, British scholar

Weather Bureau, the national museum, the bureau of American ethnology, the national zoological park, the Langley aerodynamical laboratory, and the aerophysical laboratory. Research work at the institution was extended by a later large gift of funds made by T. G. Hodgkins.

SMOKE. Visible vapour or volatile matter, one of the products of combustion. The term is more specifically applied to the visible gaseous product of the combustion of coal, wood, and similar substances. Such smoke consists chiefly of carbon or hydrocarbon particles. Smoke is caused by incomplete combustion, and its production can practically be eliminated by the use of proper furnaces.

Smoke arising from manufactories is subject to regulations under the Public Health Act, 1875. The Coal Smoke Abatement Society exists for the purpose of suggesting means for improvement in smoke abatement in large cities.

SMOLENSK. City of the Union of Soviet Socialist Republics, capital of the prov. of Smolensk. It is situated on the Dnieper, 250 m. W.S.W. of Moscow, and is a rly junction for Riga, Warsaw, and Moscow. A celebrated picture of the Virgin in the cathedral made it a place of pilgrimage. A university was established in 1919. Pop. 78,520.

SMOLLETT, TOBIAS GEORGE (1721-71). British novelist. Born at Dalquhurn, Dumbartonshire, of a good Scottish family, he became a naval surgeon, but turned from that to literature. His first novel, *Roderick Random*, published in 1748, embodies Smollett's own experiences in the navy and elsewhere. It was a decided success, and so also was *Peregrine Pickle*, 1751. Both novels abound in rollicking humour.

Dying the next few years appeared a number of translations and a *History of England*. Smollett ultimately settled at Leghorn, where he wrote *The Expedition of Humphrey Clinker*, which was published in 1771. He died at Leghorn, Sept. 17, 1771.

Tobias Smollett, British novelist

SMUGGLING. Term applied to the offence of defrauding the revenue by evading the customs duties, or by importing or exporting prohibited goods into or from a country. It is also used to denote the illicit distilling of spirituous liquors. Cornwall and Devon were noted smugglers' counties.

Legislation against smuggling in England is frequent from the 14th century. The increased customs imposed by William III led to a marked increase of organized smuggling, especially in brandy, wines, tobacco, and tea. In 1732 a House of Commons committee exposed its enormous spread and the grave corruption of excisemen. Walpole's reduction of wine and tobacco duties, the Smugglers' Act of 1736, making the offence a felony, and later enactments, brought organized smuggling practically to an end. See Coastguard; Customs; Excise.

SMUT (Ustilago). Genus of zygomycetous fungi parasitic upon herbs and grasses. Several of them are pests upon the cultivated cereals,

Jan Christiaan Smuts, S. African politician

Russell

producing the conditions known as "smut," "blackball," "chimney-sweeper," etc. The mycelial threads run between the cells of the deeper tissues and break through to the surface, where they produce their masses of microscopic brown spores, which appear in the mass like soot.

SMUTS, JAN CHRISTIAAN (b. 1870). South African politician and soldier. Born May 24, 1870, at Bovenplaats, Cape Colony, of Boer parentage, he entered Christ's College, Cambridge. In 1896 he settled in Johannesburg and practised at the Transvaal bar. In 1898 Kruger appointed Smuts state attorney

of the South African republic, and he held the office with notable success until the outbreak of the Boer War in 1899. He fought in many actions, and during 1901, in independent command, penetrated to Cape Colony, where he continued a daring guerrilla warfare. In the first Transvaal government, 1907, he was Colonial Secretary, and in the first S. African government, 1910, he held the joint portfolios of the interior, mines, and defence. In 1912 he was transferred to the treasury while still remaining minister of defence

At the outbreak of the Great War Smuts was still Botha's leading colleague. In 1916 he took over the chief command in E. Africa, and he took part in the Peace Conference in Paris in 1919. On the death of Botha, Aug. 27, 1919, Smuts became premier of S. Africa. He held office until 1924, when he was defeated and became leader of the Opposition. After the general election in June, 1929, his party was again in a minority.

Smuts has made a reputation as a philosopher, his philosophy being set forth in his book *Holism and Evolution*, 1926. He was chosen president of the British Association for the centenary meeting in London in 1931.

SMYRNA. City of Turkey, called by the Turks Izmir. It stands on the W. coast of Asia Minor, at the head of the Gulf of Smyrna, and is the capital of the vilayet of the same

Smyrna. Sea front, the diplomatic quarter, rebuilt after destruction by the evacuating Greek army

name, also known as Aidin. It is a great centre of commerce. The fine harbour has ample quays, and Smyrna is the terminus of two rly. systems. Pop. 153,845.

One of the seven churches mentioned in the Book of Revelation, Smyrna has been associated with Christianity from the beginning, and is the seat of archbishops of the Greek, Roman Catholic, and Armenian communions. The Turks obtained possession of it in 1424. By the treaty of Sévres Turkey agreed that Smyrna, with a surrounding strip of territory, should be administered by Greece, but with the retention of Turkish sovereignty, for five years. The Greeks, defeated by the Turks, evacuated the city Sept., 1922.

SMYTH, DAME ETHEL MARY (b. 1858). British composer. Born in London, April 23, 1858, she studied at Leipzig, 1877, where her string quintet attracted favourable attention in 1884. Her *Mass in D* was sung under Sir Joseph Barnby in London in 1893. Her best known operas are *Fantasio*, 1898; *Der Wald*, 1901; *The Wreckers*, 1906, produced in London, 1909; and *The Boatswain's Mate*, 1915. She has also written two symphonies and many other compositions. Ethel Smyth has been a vigorous figure in the feminist movement. She was created D.B.E. in 1922.

Dame Ethel Smyth, British composer
Russell

Snaefell. Highest mountain in the Isle of Man. It is 5 m. S.W. of Ramsey, and is 2,034 ft. high.

SNAIL. Name applied to many gastropod molluscs that possess an external shell. They are of world-wide distribution, the Polar

regions excepted. The British list includes 127 species, of which 81 are land snails and 46 fresh-water. There are also a great number of marine snails, of which the periwinkle is an example.

Snails are most active after rain. In continued dry weather they retire underground or to sheltered spots, and aestivate till the damp weather returns. Most snails hibernate. The great majority are vegetarians, but only three or four species do serious damage to garden plants, others attacking weeds and fungi, and some restricting their attentions to mosses and other low plants. With few exceptions, snails are nocturnal in habit. They glide by wavelike movements of the foot. Most species are hermaphrodite and are reproduced by means of eggs. All land snails are edible, and many of the larger ones are eaten. See *Animal*; *Gastropoda*; *Mollusc*

SNAKE (A.S. *snaca*) OR **SERPENT.** Reptiles of the order Squamata. The upper sides are clothed with small overlapping scales, and the underside with broad plates, except in the Sea-snakes (q.v.), where the body is keeled below and clad with scales. The body is elongated and cylindrical, without any external limbs. The eye is protected by a fixed transparent cover.

The union of the several bones of the skull and jaws is so elastic that dislocation takes place readily to allow the swallowing of prey larger than the snake's head. To assist in such operations the slender, pointed teeth are all directed backward, and those of the jaws are supplemented by others on the palate. In many snakes certain teeth are developed into fangs, and a fold in the enamel provides a channel for the flow of venom from the poison-gland to the victim's wound. The forked tongue can be protruded through a notch without opening the mouth, and is so used constantly to ascertain the nature of near objects. The entire skin is shed at intervals.

In Great Britain the only snake which inflicts a poisonous bite is the adder or viper.

The embryonic stages take place in eggs, which have soft shells and are not incubated; in some species they are retained in the body of the parent and hatch in the oviduct. About a thousand species are known from all parts of the world with the exception of the Polar regions. They are most abundant in the Tropics. They are all carnivorous, and consume their prey whole. See *Anaconda*; *Boa*; *Cobra*; *Copperhead*; *Coral Snake*; *Grass Snake*; *Rattlesnake*; *Reptile*, etc.

SNAKE CHARMING. This is a trick pure and simple, based on an intimate knowledge of the ways of the reptile generally a cobra, whose fangs have usually been removed.

SNAKE ROOT. Popular name for several plants. Black snake root is *Cimicifuga racemosa*, and also the N. American species of *Sanicula*. Button snake root is *Eryngium yuccifolium* and several species of *Liatris*. Sampson's snake root is *Gentiana villosa*; seneca snake root is *Polygala seneca*.

SNAKE'S HEAD (*Fritillaria meleagris*). Bulbous perennial herb of the order Liliaceae, native of Europe and W. Asia. The small bulb consists of only a few swollen scales. The large, drooping flowers are of a dull purple colour spotted with oval patches of a paler tint.

SNAPDRAGON (*Antirrhinum majus*). Perennial herb of the order Scrophulariaceae, native of Europe. The variable leaves are more or less lance-shaped. The tubular flowers are closed by the compression of the

rounded upper lip, and are of various colours, purple, white, yellow, and crimson. Garden snapdragons are mostly cultivated forms of this species. The only British species (*A. orontium*) is found in cornfields

SNARESBROOK (Dan. *Snar* or *Snorre*, the swift). District of Essex, now incorporated with Wanstead. It gives its name to a station on the L.N.E. Rly., 7½ m. from Liverpool Street. It is on the S.W. border of Epping Forest, and was noted for its deer, song birds, and noble trees. About the middle of the 19th century its old country houses began to be surrounded by new villas and shops.

Snail. The Roman or edible snail, *Helix pomatia*

SNEEZEWORT (*Achillea ptarmica*). Perennial herb of the order Compositae. A native of Europe, Asia Minor, and Siberia, it has a long, creeping root-stock and narrow, stalkless leaves with toothed edges. The flower stem branches above, each branch supporting one of the rather simple flower heads, which have white outer ray florets and greenish inner tubular florets. The dried and pulverised root-stock is said to afford a substitute for snuff. See *Yarrow*.

Sneezewort. Flowers of *Achillea ptarmica*

SNEEZING. Reflex action set up by irritation of the nasal mucous membrane. There is first a deep inspiration, then the glottis is momentarily closed and the abdominal muscles, contracting strongly, press the viscera against the diaphragm, thus raising the pressure in the lungs. The glottis then opens and a strong current of air is directed through the nose in order to expel the irritating particle. See *Nose*; *Smell*.

SNIDER, JACOB (d. 1866). Dutch-American inventor. He made a number of inventions, one being for a breech-loading

Snipe. *Gallinago coelestis*, the common British species
W. S. Herridge, F.Z.S.

rifle which, in 1859, he took to England. It was accepted by the British government, but the details of payment had not been settled when Snider died, Oct. 25, 1866.

SNIFE (*Gallinago*). Genus of birds belonging to the plover tribe. Three species are known in Great Britain. The common snipe (*G. coelestis*) is found in most marshy districts, arriving from Scandinavia in Oct. and Nov. and leaving in March. It has mottled black and brown plumage on the upper parts, white bars on the flanks, and white under parts. It is about 10 ins. in length, and has a long beak, with which it probes for worms and insects. The jack snipe (*G. gallinula*) is smaller.

Snake's Head. Flowers of white and speckled varieties

Snipe shooting is carried on in Norfolk and the E. counties, in the W. of Ireland, and in Egypt. Requiring great skill in judging distance and pace, it is regarded as one of the most difficult forms of shooting.

SNOOKER POOL. Game played on a billiard table, a combination of pyramids and ordinary pool. The 15 pyramid balls are set up as for that game, and the pool or different coloured balls are placed according to a definite arrangement. A player first plays on one of the pyramid balls, and should he succeed in potting it, then plays at either of the coloured, or pool, balls he may select. See Billiards; Pyramids.

SNOW. Six-rayed crystals of water vapour formed in the atmosphere directly without the intermediate liquefaction of the vapour. A snow flake comprises many matted or clotted crystals, usually broken or deformed in the conglomeration. Snow is one form of aqueous precipitation from the air, and it is customary to compute a foot of snow as equal to an inch of rain.

The period during which snow lies increases with an increase of latitude, or of elevation, until the permanently snow-covered area is reached. Above the limit of permanent snow—the snow line—lie the snow fields, from which consolidated snow forms glaciers, wherein the snow crystals have been arranged to make granular ice crystals. See Glacier; Rain.

SNOW BLINDNESS. Painful affection of the eyes associated with some dimness of vision.

Snow. Example of a snow-crystal

It results from the glare of sunlight reflected from a large expanse of snow. The symptoms usually pass off in a few days. See Eye.

SNOWBERRY (*Symphoricarpos racemosus*). Shrub of the order Caprifoliaceae, native of N. America. It has slender, upright, branching stems with opposite, oval leaves and spikes of small pink, bell-shaped flowers, succeeded by large, opaque, white berries, each containing two seeds.

SNOW BUNTING (*Plectrophenax nivalis*). British song-bird, a winter visitor from N. Europe and Siberia. The plumage is black and white in the summer, mixed with reddish brown in the winter. It is usually found near the coasts, and feeds on seeds.

SNOWDEN, PHILIP (b. 1864). British politician. Born at Keighley, Yorks, he entered the civil service in 1886, but, retiring in 1893, devoted himself to political and journalistic work. A prominent member of the Independent Labour party, of which he was chairman, 1903-6 and 1917-19, he was M.P. for Blackburn, 1906-18, and for the Colne Valley division from 1922. Snowden made a reputation by his knowledge of financial matters, and in the Labour ministry of 1924 he was chancellor of the exchequer. He returned to that position in 1929.

Mrs. Snowden became prominent as a worker

for the causes of women's suffrage and temperance reform. She is a governor of the British Broadcasting Corporation.

SNOWDON (Welsh Eryri, eagle top). Mountain of Carnarvonshire, Wales. Situated 10 m. S.E. of Carnarvon, it is the highest mountain S. of the Tweed, with five distinct peaks, the loftiest, Y Wyddfa, attaining 3,560 ft. It gives name to the mountainous dist. of Snowdonia. The Snowdon railway runs from Llanberis. See Llanberis.

SNOWDROP (*Galanthus nivalis*). Bulbous perennial herb of the order Amaryllidaceae. It is a native of Europe and W. Asia. The small oval bulb produces two strap-shaped leaves, and a solitary white flower on a long stalk. The three white sepals are larger than the three notched petals.

SNOWDROP TREE (*Halesia carolina*). Small tree of the order Styracaceae, native of N. America. It has alternate, oval, lance-shaped leaves and snowy-white bell-shaped flowers in sprays.

SNOWY RIVER. River of Australia. It rises near Kosciusko in the Snowy Mts. in New South Wales, flows N.E., S.E., and then, in general, S., with a bend to the left to receive the McLaughlin and Delegete, to enter Victoria, and continues S. to Bass Strait.

SOANE, SIR JOHN (1753-1837). British architect. Born at Whitechurch, near Reading, Sept. 10, 1753, he was appointed architect to the Bank of England in 1788, and rebuilt that structure. Other extant works include the Dulwich College picture gallery, 1812, and restorations of colleges of both Oxford and Cambridge. He became A.R.A. in 1795, R.A. in 1802, professor of architecture in 1806, and was knighted in 1831. He died in his house in Lincoln's Inn Fields, Jan. 20, 1837.

After 1833 he devoted himself to extending the museum installed in his house in Lincoln's Inn Fields, and which he subsequently presented to the nation. The contents include various portraits of the founder, good examples of Hogarth, Reynolds, and other leading artists, rare books and MSS., Sheraton and Chippendale furniture.

SOAP. Detergent or cleansing substance produced by the action of caustic soda or caustic potash on animal or vegetable oils or fats. In the first century the ashes of wood were causticised by boiling with lime, and so formed a solution of caustic potash. This boiled with oils or fats produced a soft soap, i.e. a potash soap, which was then boiled with salt to convert it into a hard soap, i.e. a soda soap. The modern developments of the

industry began after solid caustic soda became an important article of commerce in 1850, and the abolition of the taxes on soap and its raw materials in 1853.

In the cold process for hard soaps, melted coconut oil is stirred with a solution of caustic soda in exactly the right proportions; heat is developed by the reaction, which is allowed to go on for 24 hours. The soaps so made contain all the glycerin produced by the chemical reaction. Certain proportions of other oils may be mixed with the coconut oil. The hot process is applicable to any oils or fats by boiling them with caustic soda for hard soaps or caustic potash for soft soaps, but a little of the more expensive potash is mixed with the soda in making certain toilet soaps, and a little soda is added to stiffen soft soaps in summer time.

SOAP BERRY (*Sapindus saponaria*). Tree of the order Sapindaceae, native of tropical America. With alternate leaves and small greenish-white flowers, it has fleshy fruits containing hard, black, round seeds. These have been used as beads and buttons. The outer coverings, when soaked in water, make a lather, and are used as soap. The root has the same property in a lesser degree.

SOAPSTONE. In geology, the name of hydromagnesian tale. Blue-grey to green in colour, soft and heat-resisting, it is extensively used in electricity, etc. See Tale.

SOAPWORT OR FULLER'S HERB (*Saponaria officinalis*). Perennial herb of the order Caryophyllaceae. It has a creeping white rootstock and straight stems with oblong, lance-shaped leaves. The fragrant lilac or white flowers are in clusters. The leaves, bruised in water, produce a lather which may be used for washing purposes.

SOAR. River of England. It rises on the E. border of Warwickshire and flows 40 m. N.E. and N.W. to the Trent, about 11 m. S.E. of Derby. It passes through Leicestershire, forming part of the boundary with Nottinghamshire. It is navigable to Leicester.

SOBIESKI. Name of a famous Polish family. James Sobieski, a noble of Cracow, was the father of John Sobieski, who became king of Poland. John's grand-daughter, Maria Clementina, became the wife of the Old Pretender. See John, King of Poland.

SOCIALISM. Economic and political movement that aims at reforming society by substituting collective for individual action. The term covers a wide field of political and economic doctrines, and represents on the whole a tendency of thought rather than any defined programme of political or economic activity.

Its origins may be traced in the works of Saint-Simon (1760-1825), who taught a blend of ethics and economics which stimulated contemporary thinkers, and at the same time Fourier was evolving his theoretical community of phalansteries. In England, Robert Owen taught a creed from which later social reformers, cooperators, and trade unionists were to learn much. But with Karl Marx the socialist theory was transformed into the socialist movement. Marx analysed the evolution and workings of capitalism, demonstrated the necessity, almost the inevitability, of socialism, and practically founded all the internationalist side of its doctrine and organization.

In Great Britain Chartism and the Christian socialists such as Kingsley contributed something to the growth of the movement which took definite shape when the Social Democratic Federation was founded in 1881. The ideas of H. M. Hyndman and others connected with it were, however, too revolutionary for general acceptance, and much greater influence was exercised by the gentler but more permeating methods of the Fabian Society, to

Snowdon. The Welsh mountain from Llyn Llydaw

Snowdrop. Leaves and flowers

Snow Bunting. A winter visitor to Britain

Philip Snowden, British politician Russell

which, at one time or other, G. B. Shaw, H. G. Wells, J. Ramsay MacDonald, and Sidney Webb belonged.

Since 1900 the tendency has been for all political parties to introduce legislation which can be fairly called socialistic, so that when the Labour Party took office in 1924 and again in 1929 they merely continued, perhaps slightly accelerated, a tendency already in existence. The socialism of the Labour Party, as far as at least as the official element is concerned, has not a great deal in common with the doctrines of Karl Marx, and refuses to have anything to do with revolutionary methods. Its extremists, however, still press for measures for the speedy redistribution of wealth and the public control of banking and industry.

Consult *The Socialist Movement*, J. Ramsay MacDonald, 1911; *A Constitution for the Socialist Commonwealth of Great Britain*, S. and B. Webb, 1920; *A Survey of Socialism*, F. J. C. Hearnshaw, 1928; *The Intelligent Woman's Guide to Socialism*, G. B. Shaw, 1928.

SOCIETY ISLANDS. French archipelago in the South Seas. It includes Tahiti (q.v.). Its area is about 650 sq. m. Most of the islands are volcanic and fringed by coral reefs. Pop. about 14,000.

SOCIETY OF FRIENDS. Christian body, sometimes called the Quakers, found in England, Ireland, and the United States. It began its existence about the middle of the 17th century, as a revolt of mystical or spiritual Christianity against the ecclesiasticism and bibliolatry of the reformed Churches, both Anglican and Nonconformist. Their leader was George Fox, and of those who were convinced by him a number became preachers. Their aim was not to form a new sect, but to bring the whole Christian Church back from "the dark night of apostasy" into the light of truth. They met with fierce persecution.

In public worship the Friends discard all professional ministry and arranged services, except among the pastoral body in America, and meet in silent fellowship and waiting on God, giving freedom to any man or woman who is believed to be moved by the Spirit to preach or lead the company in vocal prayer. They do not practise the outward sacraments of Baptism and the Lord's Supper. They have a unique form of marriage, in which human priesthood finds no place, the man and woman simply taking one another in the presence of God and the congregation. They refuse to take judicial oaths, believing that anyone who walks in the Light will always and everywhere do his best to speak the truth. They refuse also to undertake military service. In church government every member, man or woman, has an equal voice.

The Society has 19,000 members and 393 meeting houses in Great Britain and 2,200 members and 25 meeting houses in Ireland. Its headquarters are at the Friends House, Euston Road, London, N.W.1, and its historic centre is Jordans (q.v.) in Buckinghamshire.

SOCINUS, FAUSTUS (1539-1604). Italian theologian, whose Italian name was Fansto Sozzini. Born at Siena, Dec. 5, 1539, he studied theology at Basel, and went in 1579 to Poland, where he vigorously promulgated his rationalistic and anti-Trinitarian views. He died March 3, 1604.

The sect called, after him, Socinian, rejects all Christian doctrines that cannot, in its view, be based on human reason, particularly those concerning the Person of Christ. It spread in Poland, where it was suppressed in 1648, and survives in Transylvania, where it numbers about 60,000 adherents.

SOCIOLOGY. Scientific study of human life in organized communities. In 1839 Auguste Comte coined the word to express the idea that the phenomena of social life are included within the unity of nature and are

subject to inevitable natural laws. Man being essentially a social animal, the social sciences cover almost all phases of human activity and interest, e.g. economics, the comparative study of property, law and justice, criminology, and penology. All may, however, be grouped under three heads: (1) anthropology; (2) social psychology; (3) social institutions.

Social psychology seeks to discover in the individual human mind the forces which account for the origin and cohesion of social life. The old idea of Hobbes and his successors, that social life sprang from reasoned choice, has long been abandoned, and is being replaced by conceptions based upon the obvious analogy between the social behaviour of men and certain animals.

SOCRATES (c. 470-399 B.C.). Greek philosopher. Son of Sophroniscus and Phænaretê, he was born about 470 B.C. and is said to have learnt the hereditary craft of a sculptor. He married Xanthippê, by whom he had three sons: according to Xenophon she was a shrew. Our knowledge of Socrates is almost wholly derived from the dialogues of Plato. He was thickset and ugly in countenance, with a snub nose and prominent, piercing eyes; his portrait is preserved in many busts.

Socrates.
Greek philosopher
British Museum

Socrates rapidly became a man of note in Athenian society. About 435 B.C. his friend Chaerephon asked the Delphic oracle whether any man was wiser than he, and received a negative answer. Socrates interpreted this to mean that he alone was conscious of his own ignorance, and that his mission was to convince others of the same truth about themselves; and this mission he pursued until the close of his life, seeking opportunities of discussion, especially with the young, and exposing the inner contradiction of popular ideas, particularly in morals and politics, by the method of question and answer. In 432 B.C. the war with Sparta broke out, in which Socrates served with distinction.

In 399 B.C., after the restoration of democracy, he was prosecuted for corrupting youth and introducing new divinities in place of those recognized by the state. The real ground of the prosecution was doubtless political; Socrates was held responsible for the anti-democratic careers of such men as Alcibiades and Critias, who had been members of his circle. The death penalty was only voted by 280 to 220. A month later he drank the hemlock in prison, having refused the offers of his friends to contrive his escape. His last hours were spent in discussing the immortality of the soul with a group of disciples; their talk is recorded by Plato, one of the younger members of the school, in the *Phaedo*. See *Plato*.

SODA. Popular name for sodium carbonate or washing soda, also known as soda-ash. In such expressions as baking soda, sodium bicarbonate is meant, which is more suitable for use in baking powder on account of the larger yield of carbonic acid gas which it gives on contact with acid. See *Sodium*.

A soda lake is a natural sink in which the drainings of alkali plains have collected. They form important sources of soda. Examples are Mono Lake and Owens Lake, in the U.S.A. See *Alkali*; *Magadi*.

SODA WATER. Aerated water charged with carbonic acid gas. The gas is forced into the water under pressure, and the liquid mechanically bottled and corked.

SODALITE. In mineralogy, name given to a group of calcium aluminium silicates. They include sodalite, hauynite, noselite, and lazurite, and are constituents of certain igneous rocks. They are found in limestones. In Norway, the Urals, and various localities in N. America, sodalite occurs in large sky-blue masses, in Rajputana in a pink variety.

SODDY, FREDERICK (b. 1877). British scientist. Born at Eastbourne, Sept. 2, 1877, he was educated there, at Aberystwith and at Merton College, Oxford. In 1902 he went to Montreal as demonstrator in chemistry at McGill university and there began his association with Sir E. Rutherford, whom he assisted in his researches on the properties of radium. From 1904-14 he was lecturer at Glasgow and from 1914-19 professor at Aberdeen. In 1919, having been a F.R.S. since 1910, Soddy was made professor of chemistry at Oxford, and received the Nobel prize for chemistry in 1921 for his work on isotopes.

SODIUM. One of the metallic elements. Its chemical symbol is Na, atomic weight 23, atomic number 11. It is not found in the metallic state, but in the form of compounds. When separated the metal has a silver white lustre, and exhibits most of the properties characteristic of metals generally. It differs, however, in being soft, in being lighter than water (sp. gr. .9724), in melting very easily (at 97°C.), and especially in reacting with water to form caustic soda, hydrogen being released and then bursting into flame.

Most sodium compounds are colourless and readily soluble in water. They impart a yellow colour to the blow-pipe flame. Sodium bromide and sodium iodide are used in medicine. Sodium hydroxide or caustic soda is very soluble in water, forming a highly caustic solution, capable of destroying most animal and vegetable material. The solution attacks oils and fats to form soap (q.v.), in the manufacture of which caustic soda is chiefly used. Sodium carbonate, or washing soda, is manufactured by the Leblanc and the ammonia-soda processes, and is one of the chief products of the alkali industry. Sodium bicarbonate is used in medicine, in the manufacture of baking powder, seidlitz powders, etc. In the Leblanc process of soda manufacture anhydrous sodium sulphate, in the form of salt cake, is obtained. This, on dissolving in water and crystallising, yields Glauber's salt.

SODOM. City of Palestine, near the Dead Sea. One of the so-called cities of the plain, it is associated with Gomorrah as a place of unusual wickedness. After Lot had been warned to leave, the cities were destroyed by fire and brimstone (Gen. 19). The exact site is unknown. See *Dead Sea*.

SODOR AND MAN. Name of a diocese of the Church of England, now confined to the Isle of Man. The diocese of Sodor was formed in 1154, and comprised the Isle of Man and numerous islands off the W. coast of Scotland, then belonging to Norway. It was part of the province of Trondhjem. After Norway lost her Scottish possessions in 1266 the name Sodor was retained for the diocese, which in 1334 was limited to Man, the cathedral being on St. Patrick's Isle near Peel. For some purposes the diocese is in the province of York. The bishop does not sit in the House of Lords.

SOFIA. Capital of Bulgaria. Situated on a plain at the foot of the Rhodope Mts., within a basin traversed by the river Isker, it is an important station on the Orient Express route across Europe to the Bosphorus, and is distant by rail 407 m. N.W. of Constantinople, 100 m. S.E. of Nish, and 284 m. S.W. of Bukarest. The chief buildings are the palace, the government buildings, the cathedral of S. Alexander, and the university. Sofia has a considerable general trade. It is the seat of a Greek metropolitan. Pop. 213,002. See *illus. p. 1259*.

Sofia. Alexander Nevski Chrch. It is built on an island site and has eight entrances. See p. 1258

SOFT GRASS (*Holcus*) Small genus of grasses of the natural order Gramineae. *Holcus lanatus*, known in Britain as Yorkshire fog, is a tufted, downy, perennial meadow grass, with leafy stems and flat, soft leaves. *Holcus mollis* has a creeping root-stock, and the plant is more slender. It grows in woods and waste places. The grass is of little economic value.

SOHAM. Market town of Cambridgeshire. It is 5 m. from Ely, on the L.N.E. Rly. S. Andrew's church dates in part from the 12th century and has a Perpendicular tower. Soham is the centre of a fruit-growing district Market-day, Mon. Pop. 4,737

SOHO. District of W. London. It lies within the area bounded by Oxford Street, Charing Cross Road, Shaftesbury Avenue, and Regent Street, and also in the S.W. corner of Tottenham Court Road. It is notable for its foreign colony and foreign restaurants, and is the centre of the film industry in London. S. Anne's, in Wardour Street, is famous for its musical services. Soho is a district of Birmingham.

SOIL. Surface layer of earth which supplies the food (except that derived from air) necessary for the growth of plants.

Soils are made up of (1) mineral matter, i.e. sand, clay, and carbonate of lime; (2) organic matter (humus), resulting from the decay of plant and animal material. Sandy soil contains up to 5 p.c. of clay. It is a sandy loam with an increase of clay (up to 10 p.c.), a loam with a further increase (up to 20 p.c.), and a clay loam when the clay is in still larger proportion (up to 30 p.c.). Beyond 30 p.c. (up to 40 p.c.) gives a clay soil, and with over 40 p.c. we get a strong and heavy clay. Addition of from 5 to 20 p.c. of carbonate of lime produces a marl, while over 20 p.c. is called calcareous soil.

SOISSONS. Town of France. It stands on the Aisne, 65 m. N.E. of Paris. The Romanesque-Gothic cathedral, founded in the 12th century, was seriously damaged in the Great War, as were also the remains of the great castellated abbey of S. Jean des Vignes. In the Great War it changed hands several times, the Germans being finally driven out by the French on Aug. 2, 1918. In July, 1928, a memorial to missing soldiers was unveiled here. Pop. 17,311. See Aisne; Marne.

SOKOL (Czech, falcon). Czech patriotic and gymnastic organization. It was established in 1862 by Miroslav Tyrsh (1832-84) and Jiudrich Fügner (1822-65), and is democratic and fraternal. The special Sokol dress is a loose fawn jacket, often worn hussar-wise over a red shirt, and a round fawn cap bearing a Sokol feather.

SOKOTRA OR **SOCOTRA.** Island of the Indian Ocean. It has been a British protectorate since 1876, and is administered from Aden. It is situated 135 m. E.N.E. of Cape Guardafui, in the Arabian Sea at the entrance to the gulf of Aden. The area is 1,382 sq. m. Pop. 12,000. See Africa, map.

Solan Goose. Alternative name for the gannet (*Sula bassana*). See Gannet.

SOLAR PLEXUS. Network of nerves situated in the abdomen behind the stomach. A blow on the pit of the stomach is the so-called solar plexus blow, which temporarily paralyses the sensitive network of nerves.

SOLAR SYSTEM. Assemblage of bodies controlled by the attraction of the sun. It includes the planets and their satellites, asteroids, comets, and meteor swarms. All the planets move round the sun in the same direction, as do the asteroids and the majority of the satellites. Comets move in either direction round the sun. The origin of the solar system is generally accounted for by the nebular hypothesis. See Astronomy; Nebula; Planet; Sun.

SOLE (*Solea vulgaris*). Flat fish. One of the important food fishes, it is usually about a foot long, and is dark brown on the right or upper side, with greyish white beneath. For firmness of flesh and delicacy of flavour it is regarded as one of the choicest of marine fish. It is often called the Dover sole, to distinguish it from the inferior Limande or lemon sole. It is taken in the trawl, and is found on sandy shores ranging from the Mediterranean to the N. of Denmark.

SOLENOID. Helical coil of insulated wire through which an electric current is passed. If a bar of iron be inserted within the coil, it is magnetised by the current. Important applications of the solenoid are in the construction of magnetic brakes, known as solenoid brakes, and in electro-magnets for lifting loads. See Magnetism.

SOLENT. Western end of the channel separating the Isle of Wight from Hampshire. Extending from W. Cowes to The Needles, it is 17 m. long and varies in breadth from 2 m. to 4 m. It is a favourite yachting centre. See Hurst Castle.

SOLFERINO. Village of Italy. It is 73 m. W. of Milan, on the hill bordering the S. shore of Lake Garda. Pop. 1,657.

The battle of Solferino was fought on June 24, 1859, between the French and Italians on one side and the Austrians on the other. An Austrian army of 140,000 men had taken up its position round Solferino. The attack on the place was brilliantly executed by the French, who gradually overcame the resistance of the Austrians, who finally retreated. The French losses were 12,000; the Austrian, from 20,000 to 25,000.

SOLICITOR (Lat. *sollicitare*, to ask earnestly). Term used in England and Ireland for a member of the lower branch of the legal profession. Professionally a solicitor is an officer of the supreme court.

Solicitors may be advocates in coroners', police, and county courts, and sometimes at quarter sessions. In Ireland a solicitor may appear at assizes. In England the Incorporated Law Society is the registrar of solicitors, prescribes and conducts their examinations, and exercises discipline over them, subject to the right of appeal to the high court.

A solicitor who has once undertaken a lawsuit cannot drop it so long as the client demands that he shall go on and supplies him with funds for the purpose. See Barrister.

SOLICITOR-GENERAL. In England, one of the law officers of the crown. He ranks second to the attorney-general, and the duties of the two are to advise the various departments of the government on legal matters. He is usually a member of parliament, but not of the cabinet, and must be a barrister of standing; his salary is £6,000 a year and fees. There is a Solicitor-general for Scotland.

SOLIDUS. Roman gold coin. It was struck to replace the aureus, and was a

standard in the Eastern Empire till 1453. The solidus was used in Great Britain till the 7th century, and was adopted by the Franks until the time of Pepin. The silver solidus was valued at one-twentieth of a libra and was worth twelve denarii.

SOLIHULL. Town of Warwickshire. It is 6 m. from Birmingham, with a station on the G.W. Rly. The church is an Early English and Perpendicular building restored. Solihull Hall dates from the 14th century, and there is a town hall. Pop. 11,552.

SOLLUM. Gulf and small port in the extreme W. of Egypt. The approach by land is along the coast, via Matruh, to which point a rly. has been constructed from Alexandria. The port is of considerable political importance in connexion with the control of the Senussi of the interior. During the Great War Sollum was occupied by the Senussi, but was reoccupied by the British, who used it as their principal base against the Senussi (q.v.).

SOLO OR **SOLO WHIST.** Popular card game. It is a development of whist (q.v.). The principal divergence from the parent game is that each player plays independently, except in one call. There are four players, and the cards hold the same values as in whist. There are six calls and the call rests with the player calling the highest.

SOLOMON (d. c. 937

B.C.). Third king of Israel. He was a younger son of David, by his wife Bathsheba. Solomon waged few wars, but consolidated his power by alliances, marrying a daughter of Pharaoh, perhaps the last of the Tanite dynasty, a daughter of Hiram, king of Tyre, and other foreign princesses.

His relations with Phoenicia and Egypt enabled him to share in the traffic with Ophir and other distant countries, and he accumulated wealth which made his reign proverbial for splendour. For his great buildings at Jerusalem Solomon employed forced labour.

He was renowned for his wisdom both as a judge and an author of songs and proverbs, as well as of discourses on plants and animals, but although parts of the collection known as Proverbs may be his, the other extant works attributed to him, viz. Canticles, Ecclesiastes, Wisdom, and the Psalms of Solomon, were composed in later ages.

SOLOMON, SOLOMON JOSEPH (1860-1927). British artist. Born in London, Sept. 16, 1860, he studied at Heatberley's and the R.A. schools, and in Munich and Paris. A vigorous painter of historical subjects and portraits, he was elected A.R.A. in 1896, R.A. in 1908, and became president of the Royal Society of British Artists, 1918. He died July 27, 1927.

SOLOMON ISLANDS. British archipelago in the South Seas. The group is about 120 m. E. of the Bismarck Archipelago, and has an area of 14,800 sq. m. The chief islands are Bougainville, Choiseul, New Georgia, and Ysabel. In 1885 the group was divided between Germany and Britain; in 1899 Choiseul, Ysabel, and some islets were transferred by Germany to Britain; and in 1914 Bougainville and the remaining German islands were seized by an Australian force. Since the treaty of Versailles these last have been administered by Australia under mandate from the League of Nations as part of the territory of New Guinea. The rest of the group form the Solomon Islands Protectorate. Pop. about 200,000.

SOLOMON'S SEAL (*Polygonatum multiflorum*). Perennial herb of the order Liliaceae. A native of Europe and N. Asia, it has a thick,

Sole. Marine flat fish, esteemed for the table. See above

Solomon's seal. Spray of leaves and flowers

branched, creeping root-stock and leafy arching stems. The large oblong leaves form two rows, and the greenish-white, tubular, bell-shaped flowers hang from the lower side of the arch. The flowers are succeeded by small blue-black berries.

SOLON (c. 638-c. 558 B.C.). Athenian statesman and law giver. Of noble birth, he attained such eminence as a gnomic poet that he was accounted one of the Seven Sages. As Athens was suffering great distress from an economic and political crisis, Solon was elected archon in 594, with full power to amend the laws. By his disburdening ordinance he cancelled existing debts, forbade enslavement for debt, and limited the rate of interest. Repealing most of Draco's legislation, he gave Athens a new constitution. To obliterate clan divisions and feuds, the citizens were divided into four classes, according to their wealth. Soon after the overthrow of his constitution by Peisistratus, Solon died.

SOLUTION. In chemistry, name given to certain types of mixtures of two or more substances. These substances may be solid, liquid, or gaseous, and the mixture so formed is homogeneous. The commonest forms of solutions are liquid. Liquids mix according to no well-defined law, but the mixing is important, as upon it depend fractional distillation processes. As a general rule, solids dissolve in liquids at a rate depending upon the temperature, but the rule has a number of notable exceptions, e.g. solubility actually decreases with increase of temperature. A solid dissolves out from a saturated solution on cooling, as a rule, and generally in the form of crystals. Solid solutions are of two kinds, the solution of gases in solids and the solution of solids in solids. See Chemistry; Osmosis

SOLWAY FIRTH. Arm of the Irish Sea. It separates the Scottish counties of Kirkcubright and Dumfries from the English county of Cumberland, extends inland for 38 m., and has a breadth varying from 22 m. to $1\frac{1}{2}$ m., where the Esk flows into it. Besides the Esk it receives the waters of the Annan, Dee, and Nith on the Scottish side, and the Derwent, Eden, and Ellen on the English.

SOLYMAN OR **SULEIMAN**, THE MAGNIFICENT (c. 1495-1566). Sultan of Turkey. Son of Selim I, on ascending the throne in 1520 he crushed rebellions in Syria and Egypt, and then began a series of campaigns against the Western powers. At the battle of Mohacs, August 29, 1526, he dealt a crushing blow to the Christian armies of Louis II. He failed in 1532 to take Vienna, but still held Hungary, and in alliance with Francis I of France ravaged the Mediterranean coasts. He was completely under the influence of Roxalana, the beautiful Russian slave whom he had freed and married. Solyman died Sept. 4, 1566.

SOMALI. People of Hamitic stock, forming the main population of the E. horn of Africa. Numbering under 1,000,000—approximately one-third each in British, Italian, and Abyssinian Somaliland—there are outlying sub-tribes in French Somaliland, and scattered offshoots down to the Tana river in Kenya Colony. The purest type are a stalwart, lithe, dark people.

SOMALILAND. District of N.E. Africa. British Somaliland embraces the hinterland of that portion of the Somali coast on the Gulf of Aden between Loya Ada and Bender Ziade, and has been administered by the colonial office since 1905. It lies between French and Italian Somaliland and adjoins Abyssinia on the S. Only the coast strip, where are Berbera, Zeila, and Bulhar, the chief towns, is effectively occupied. Its area is 68,000 sq. m. Pop. 344,700.

The colony of French Somaliland adjoins Eritrea near the strait of Bab-el-Mandeb, has an inland frontier with Abyssinia, a coastline on the gulf of Aden, and adjoins British Somaliland on the E. France obtained Oboek in 1862, further territory in 1884, created Jibuti, the capital and seaport, in 1888, and has since developed rly connexions with Abyssinia from Jibuti, which does a great transit trade for Abyssinia. Its area is 5,790 sq. m. Pop. 85,778.

The colony of Italian Somaliland extends from the horn of Africa as far as the frontier of Kenya Colony, with a coastline on the Indian Ocean; the inland boundary is with British Somaliland, Abyssinia, and Kenya. Since the Great War the former S.W. boundary has been carried beyond the Juba, so that Italy controls the Juba valley and the port of Kismayu. Southern Somalia comprises the former colony of Benadir and Jubaland. N. of it in order are the territories of Obbia, of the Nugal and of the Mijertins, comprising Northern Somalia. The capital is Mogadishu (Mogadiso). Its area is about 190,000 sq. m. and its population 1,200,000. See Africa; Benadir.

SOMERS, JOHN SOMERS, BARON (1651-1716). English statesman. Born at Claines, near Worcester, March 4, 1651, he entered the Middle Temple, 1669. An expert in civil law, he was one of the counsel for the Seven Bishops, his powerful pleading and wide learning practically deciding the case. In the Parliament of 1688 he took an important part in framing the Declaration of Right. William III's most trusted minister, Somers was appointed lord keeper, 1693, and lord chancellor, 1697, when he was made Baron Somers of Evesham. Anne was hostile to him, but under George I he was a member of the privy council. He died April 26, 1716.

SOMERSBY. Village of Lincolnshire, 6 m. from Horncastle. In the church is a memorial to Alfred Tennyson, who was born here, his father having been the rector. See Tennyson, Baron.

SOMERSET. County of England. In the S.W. of the country, its area is 1,621 sq. m. It has a long coastline on the estuary of the Severn and the Bristol Channel. The surface alternates between ranges of hills, valleys, moorland, and marsh. The hills include the Mendips in the N.E., and the Quantocks and Brendons in the W. Dunkery Beacon on Exmoor is 1,707 ft. high. The chief rivers are the Avon and Parret; others are

the Axe, Tone, Brue, Yeo, and Cary. Somerset is on the whole fertile, especially the vale of Taunton. Wheat, barley, and oats are grown, and there are extensive orchards of cider apples. Sheep and cattle are reared, and there are many dairy farms. There is a coalfield in the Mendips, Radstock being its centre. The rlys. are the Southern and the G.W.

Taunton is the county town, others including Bath, Bridgwater, Wells, Yeovil, and Chard. Places of interest include Cheddar, Sedgemoor, and part of Exmoor; Weston-super-Mare and Minehead are watering places; Watchet and Porlock are small seaports; Glastonbury and Athelney are associated with the early history of England. The county is almost wholly in the diocese of Bath and Wells. Pop. 465,710.

SOMERSET, DUKE OF. English title held by the families of Beaufort and Seymour. In 1397 Richard II granted the earldom of Somerset to his kinsman, John Beaufort. John's son, John (d. 1444), was made duke in 1443, as was another son, Edmund, in 1448. He was killed at St. Albans, May 23, 1455.

In 1547 Edward Seymour was made duke of Somerset. He was attendant on Henry VIII and Wolsey, and in 1537 was made earl of Hertford, his sister Jane having married the king. In charge of the forces sent to Scotland in 1544, he took Edinburgh. In 1547, on the accession of Edward VI, he was chosen protector and made duke of Somerset, and for two years governed England. His fall was secured by his rival, Northumberland, and he was tried for treason and executed Jan. 22, 1552. The title then passed into abeyance, being restored in the person of his grandson, William Seymour, in 1660. He was succeeded by his grandson, on whose death without heirs in 1671 it fell to John Seymour, the 2nd duke's youngest son.

SOMERSET, LADY HENRY (1851-1921). British philanthropist. The daughter of the last Earl Somers, she married, in 1873, Lord Henry Somerset, a son of the 8th duke of Beaufort. About 1890 she became an active worker for temperance and kindred causes. She set up at Duxhurst, Surrey, an industrial colony for inebriate women, and a babies' home. She died Mar. 12, 1921.

Duke of Somerset, English statesman. After Holbein

Lady Henry Somerset, British philanthropist

Somerset. Map of the English county, famous for its historical associations

Somerset House, London. The river front of the government buildings, from Waterloo Bridge

SOMERSET HOUSE. British government building. Erected on the site of the palace built, 1549–52, by the lord protector Somerset, it stands between the Strand, London, W.C., and the Victoria Embankment, and was built, 1776–86, by Sir William Chambers, the E. wing being added by Sir Robert Smirke, 1829–34, and the W. wing, 1854, by Sir James Pennethorne. Apart from the E. wing, occupied by King's College (q.v.), the structure houses the audit, registrar-general's, inland revenue, wills and probate, and other government offices. Wills proved prior to 1700 may be seen free, those of later date on payment of 1s.

SOMERSET LIGHT INFANTRY (PRINCE ALBERT'S). Regiment of the British army. Formerly the 13th Foot, it was raised in 1685, and consisted of pikemen and musketeers, who served in Holland in 1701–3. In 1704 and 1727 it assisted at the defence of Gibraltar.

The regiment served with Abercromby in Egypt, 1801, in the West Indies, 1809–10, in the Burmese War, 1824–26, and in the Afghan War of 1839–42. Further campaigns include the Crimean War, the Indian Mutiny, the Zulu War, 1878–79, the Burmese War, 1885–87, and the South African War. In the Great War the Somersets were in practically all the battles of 1914–18. The regimental depot is Taunton.

SOMERS TOWN. District of N.W. London. Part of the met. bor. of St. Pancras (q.v.), it was built in the latter part of the 18th century, and was named after the Somers family, who then owned the freehold. Part of the area is covered by the yards of the L.M.S. Rly.

SOMERVILLE, EDITH OENONE. Irish novelist and artist. She studied art in Paris and London, and became widely known as collaborator with her cousin, "Martin Ross," in a succession of humorous novels of Irish country society and foxbunting, some of which she illustrated with the same high spirit shown in the collaborators' writing. Their joint works include *Some Irish Experiences* of an Irish R.M., 1899; *Some Irish Yesterdays*, 1906; *Further Experiences of an Irish R.M.*, 1908; *Dan Russel, the Fox*, 1911; *In Mr. Knox's Country*, 1915.

SOMERVILLE COLLEGE. Women's college at Oxford. It was founded in 1879 as Somerville Hall, in memory of Mary Somerville (1780–1872), a writer on science. In that year a building was opened, with residential accommodation, to the W. of the Woodstock Road, adjoining the Radcliffe Infirmary. The hall was enlarged several times, and in 1894, on the occasion of the opening of a new wing, its name was changed to Somerville College. A library and other buildings, designed by Basil Champneys, were opened in 1904.

SOMME. River and dept. of France. The river rises near St. Quentin, and flows to the

English Channel near St. Valéry. Towns on its banks are Péronne, Corbie, Amiens, and Abbeville. Partly canalised, it is connected with the Oise and Schelde by the Somme Canal. Its length is 150 m.

The dept. of Somme is bounded W. by the English Channel, lies adjacent to the depts. of Pas-de-Calais, Nord, Aisne, Oise, and Seine-Inférieure, and is formed of the old prov. of Picardy and part of Artois. Amiens is the capital. Its area is 2,443 sq. m. Pop. 473,916.

BATTLES OF THE SOMME. These were two important offensives in the Great War, July 1–Nov. 20, 1916, and Mar. 21–April 6, 1918. The first, undertaken by the British to relieve the German pressure on Verdun, resolved itself into a series of assaults on fortified villages, each of great strength. At 7.30 a.m. on July 1, 1916, the Allies advanced to the assault, the British enveloping Fricourt, Mametz and Montauban, while the French reached Hardecourt and Curlu. Next day Fricourt fell, and by the 5th the British had secured La Boisselle and reached Contalmaison. The German first line was now in British hands between La Boisselle and Hardecourt, while the French took Bieches. Then came desperate struggles, ending in the capture of Mametz and Trônes woods and Contalmaison.

The next phases of the battle were the assault on the second German line, July 14, the struggle for Delville Wood, and the great German counter-attack on July 18. The wood was completely cleared by the British, with the whole of Longueval, by the end of July, but the attack on Guillemont failed. The fighting throughout the month was of a terrible character, so strongly defended were the German positions, and the British casualties totalled 180,000. During Aug. a combined British and French attack on Guillemont was made, and the French reached the outskirts of Cléry and Péronne.

The closing stages of the battle were the British assault from Beaumont-Hamel to Guillemont on Sept. 3, the great Allied attack on Sept. 15, and that on Sept. 25 on a front from Martinpuich to the Somme. The second attack is notable, as for the first time in the war tanks were employed by the British. In the third attack Thiéval, Gueudecourt, Morval, and Combles were taken, also two of the strongest German works, Stuff and Zollern redoubts. Eaucourt was captured on Oct. 3 and Le Sars stormed on the 7th. German counter-attacks were numerous, but were beaten off with heavy loss. The subsequent Allied operations for the capture of the German positions on the Ancre are described under the article Ancre. The total British loss, including the Ancre battle, was 22,923 officers and 476,553 men.

The second battle of the Somme was the first act of Ludendorff's powerful offensive of the spring of 1918. Owing to the collapse of Russia, the Germans were able to remove all their good troops to France, their forces totalling on the W. front 1½ million men and 16,000 guns. The attack opened on Mar. 21 at

Somme. Map of the Allied advances during the first battle of the Somme, 1916. Much of this area was lost in the second battle

the weakest part of the Allied front, between Cambrai and the Oise, held by Gough's 5th army. On the first day the Germans broke through at St. Quentin, forcing back Gough's army, leading to Allied retirements elsewhere. By Mar. 30 the Germans had driven a great salient into the Allied front, capturing Bapaume, Noyon, Montdidier, Albert, and other important centres, and carrying their line to within a few miles of Amiens. See Albert; Bapaume; Foch; Gough; St. Quentin.

SONATA (Ital. sonare, to sound). Musical composition. Originally applied to an instrumental piece only, the term eventually designated a composition comprising several related movements, played by one or two performers. The sonata was the result of a desire to break away from the dance forms of the suite, and the two continued on separate lines.

SONG THRUSH or **MAVIS** (*Turdus musicus*). British song-bird. It is common in most districts, except the N. of Scotland, and is to be found all the year round, though the majority of the birds migrate in autumn. It is smaller than the mistle thrush (q.v.), which it resembles. It feeds mainly upon worms, snails, and insects. See Thrush.

Song Thrush or Mavis, a common British bird
W. S. Berridge, F.Z.S.

SONNET (Ital. sonetto, a little sound). Form of elegiac verse. Invented in Italy in the 13th century, and perfected by Dante and Petrarch, the regular or Petrarchan sonnet consists of 14 iambic lines of 10 or 11 syllables, the first eight, or octave, generally devoted to the exposition of the theme, having the rhyme-scheme abbaabba, and the last six, or sestet, containing the application of the idea, with two or three rhymes variously arranged, a closing couplet being avoided. The greatest modern English sonnet writers were Wordsworth, E. B. Browning and D. G. Rossetti.

SONNINO, BARON SIDNEY (1847–1922). Italian statesman. Born at Pisa, March 11, 1847, he joined the diplomatic service, and served in Madrid, Paris, and Vienna. He entered parliament in 1877 as a liberal.

conservative, and was under-secretary for finance in the Crispi cabinets, 1887-90 and 1893-96. Afterwards he became minister of the treasury, and saved Italian credit by his drastic reforms. He was premier in 1906 and again in 1909-10. From 1914-19 he was successful as foreign minister, and was one of Italy's representatives at the Peace conference in Paris in 1919. Sonnino died Nov. 24, 1922.

Soo Canal. Popular variant of the Sault Sainte Marie (q.v.) ship canals of N. America.

SOPHIA (1630-1714). Electress of Hanover. The twelfth child of the Elector Palatine and his wife Elizabeth, daughter of James I, she was born at The Hague, Oct. 14, 1630. She married in 1658

Sophia,
Electress of Hanover
After G. Honthorst

Ernest Augustus, a duke of Brunswick, who, in 1692, became elector of Hanover. Neither William III nor Anne, who would succeed him, had any children, and Parliament settled the crown on Sophia and her heirs, being Protestant. She died June 8, 1714, only a few weeks before Anne.

George I (q.v.), who became king of Great Britain on Aug. 1, 1714, was the eldest son of her large family.

Another Sophia was Sophia Dorothea (1666-1726), the wife of George I and the mother of George II. In 1694 she was divorced, and she passed the rest of her days in retirement.

SOPHISTER (Gr. sophos, wise). At Trinity College, Cambridge, junior sophs and senior sophs are undergraduates in their second and third year respectively. At Trinity College, Dublin, the grades are known as junior and senior freshmen and junior and senior sophisters, according to the length of residence in college in each case.

SOPHISTS (Gr. sophistēs, wise man). Class of teachers in Greece, first prominent in the fifth century B.C. They were the representatives of an intellectual movement reflecting the altered social, political, and religious conditions of Greek life. The earliest sophists were Protagoras of Abdera, the first to ask a fee for teaching, and Gorgias of Leontini. Later sophists, as Critias the tyrant, who described religion as the invention of politicians, were advanced freethinkers. Later generations of sophists, by their greed of money and their attacks on family life and all social, religious, and political institutions, drew upon themselves the odium of the public. They were the first to pay attention to style, rhythm, and rhetoric as an art.

SOPHOCLES (495-405 B.C.). Athenian tragic dramatist. Born at Colonus, near Athens, Sophocles received the usual education of an Athenian gentleman. At the age of 15 he was chosen for his grace and beauty to lead the chorus which sang the song of triumph in celebration of the victory over the Persians off Salamis in 480 B.C. He won his first prize for tragedy in 468. For the rest of his long life he was chief favourite on the Athenian stage, winning the first prize 20 times.

Sophocles wrote about 130 plays, but only seven are extant. These were probably produced in the following order: Antigone, Electra, Trachiniae, Oedipus Tyrannus, Ajax, Philoctetes, Oedipus Coloneus, the best known being the first, fourth, and seventh, which deal with the hereditary curse on the house of Oedipus (q.v.). His plays, typical of the Greek spirit in the age of Pericles, are marvels of harmony, proportion, and restraint.

Sophocles,
Athenian dramatist
Lateran Mus., Rome

By introducing a third actor and diminishing the rôle of the chorus, Sophocles was a great reformer of dramatic technique.

SOPWITH, THOMAS OCTAVE MURDOCH (b. 1888). British airman and inventor. In 1910 he won the Baron de Forest £4,000 prize for a flight from England to the Continent, and in the following year he founded the Sopwith Aviation and Engineering Co., Ltd., at Kingston-on-Thames, to design and build aeroplanes and seaplanes. Sopwith was made C.B.E. in 1918. See Aeroplane.

SORATA OR NEVADO DE SORATA. Andean peak in Bolivia, S. America. It is 60 m. N.N.W. of La Paz and has two peaks, Ancohuma, 21,490 ft., and Illampu (q.v.), 21,275 ft.

SORBONNE. French centre of education. It was founded by Robert de Sorbonne in 1252 as a hostel for poor students of the university of Paris belonging to various nations.

Among the benefactors of the Sorbonne was Riobellien. In 1629 he erected new buildings, which remained in use until the vast reconstruction scheme of 1885 onwards.

The only part of the 17th century buildings now standing is the church, where the cardinal was buried. Restored by Napoleon in 1808, the Sorbonne since 1896 has been the university of Paris, and now houses the Faculté des Lettres and other departments. The New Sorbonne is housed in a magnificent range of buildings, with a frontage of 270 yards.

Sorbonne, Paris. Main facade of the college buildings

SORCERY

(Lat. sors, a lot). Originally a simple form of divination by casting lots, the term later came to signify the exercise of supernatural powers by a magician over spiritual agencies. Up to about the middle of the 18th century, sorcery in England was a crime punishable with death. See Divination; Magic; Witchcraft.

SORDELLO (13th century). Italian troubadour. He is supposed to have been born at Goito, near Mantua, and after some rather scandalous behaviour to have taken refuge, about 1230, at the court of Charles of Anjou, and to have died in Provence about forty years later. Several of his love songs and political poems have been preserved. There are several references to him in Dante's Purgatorio; and Robert Browning made Sordello the subject of one of his poems.

SOREL. Town of Quebec, Canada. It stands at the junction of the Richelieu with the St. Lawrence, 51 m. from Montreal. Sorrel is a calling place for steamers on the St. Lawrence. Pop. 8,174.

SORGHUM. Genus of grasses of the order Gramineae. They are natives of the warmer regions, with the flowers in panicles and each glume containing two flowers. The principal species is Indian millet (S. vulgare). There is a variety saccharatum of this species, from whose stems a syrupy sugar is obtained. S. halepense, with broad, white-ribbed leaves, is often cultivated for ornament.

SOROLLA Y BASTIDA, JOAQUIN (1863-1923). Spanish painter. Born at Valencia,

he studied art under F. Pradilla and in Paris. In 1900 he was awarded the Grand Prix of the Paris Salon, and soon came to be recognized as the foremost painter of Spain. A brilliant Impressionist, he produced an immense number of pictures, chiefly landscapes, marine pieces, and portraits. He died in Madrid. Aug. 10, 1923.

SORREL (Rumex).

Large genus of biennial and perennal herbs of the order Polygonaceae, including the Dock (q.v.). The two smallest of the British species are known as sorrels, and are weeds in every meadow and pasture. Their leaves are edible, have a pleasant acid flavour, and are used as a salad ingredient. Rumex acetosa grows 1-2 ft. high; R. acetosella, the sheep's sorrel, ranges from a few inches to about a foot in height.

SORREL TREE OR

SOURWOOD (Oxydendron arboreum). Tree of the order Ericaceae, native of N.E. America. It has oblong lanceolate leaves and clustered sprays of white flowers. The leaves have an acid taste.

SORRENTO. City of Italy. It is a tourist resort picturesquely situated on a promontory between the bays of Naples and Salerno, 16 m. S.S.E. of Naples and 10 m. by tramway W. of Castellammare. It contains ruins of Roman temples and a cathedral. Torquato Tasso, who was a native, is commemorated by a marble statue. Its wine is celebrated. Pop. 7,100.

SOTHEBY'S. London firm of auctioneers.

Founded by Samuel Baker, in York Street, Covent Garden, where its first auction was held Jan. 7, 1744, and carried on by his nephew, John Sotheby, the firm became known later as Sotheby, Wilkinson and Hodge. The rooms in Wellington Street, Strand, were given up May 25, 1917, and new premises opened on the site of the Doré Gallery in Bond Street. Consult Notes on History of Sotheby's, G. Hobson, 1917.

SOTHERN, EDWARD ASKEW (1826-81).

British actor. Born in Liverpool, April 1, 1826, he made no mark as an actor until the production of Tom Taylor's Our American Cousin at Laura Keane's Theatre, New York, May 12, 1858. In this he created the part of Lord Dundreary. On Nov. 11, 1861, he produced the comedy at the Haymarket Theatre, London, where it ran for 496 consecutive nights. Another great London success was his Garrick in T. W. Robertson's David Garrick, 1864. He died Jan. 21, 1881. His third son, George Evelyn Augustus Townley ("Sam"), 1870-1920, was for many years a popular London actor.

SOTHIS. Greek form of the ancient Egyptian name of Sirius, the dog-star. Its rising with the sun on July 20, when the Nile inundation began, gave it importance in the Egyptian calendar.

SOTO, HERNANDO OR FERNANDO DE (c. 1496-1542). Spanish explorer. In 1519 he joined an expedition to Darien, and in 1524 helped to conquer Nicaragua. In 1532 he brought reinforcements to Pizarro in Peru, where he took a prominent part in the conquest. He sailed on an expedition in search of gold in 1539, and for nearly four years explored the country between the Atlantic and the lower Mississippi, crossing that river in 1541, and reaching Arkansas. He died of fever in May or June, 1542.

Sorrel. Leaves, flowers, and stems of Rumex acetosa

Sou. French copper coin. The old sou was the twentieth part of a livre. The present sou is a five centime piece.

SOUCHEZ. Village and river of France. The former is about 4½ m. S.W. of Lens on the Béthune-Arras road, between the ridges of Vimy and Notre Dame de Lorette. The river is known as the Deûle in its lower reaches. The district was the centre of severe fighting May-July, 1915. The village was captured by the French in July, and its sugar refinery, after changing hands several times, was taken by the French early in June. Fierce fighting took place for its cemetery. The village has been adopted by the borough of Kensington, London.

SOUL. Mental principle regarded as a personal entity separate from the body, manifested in individual mental life. It was at first believed that the soul was material and perished with the body. Plato put forward the idea that it was immaterial, immortal, and tripartite, only temporarily connected with the body. Aristotle assumed three different kinds of soul—the nutrient (the vital principle of plants), the sentient (animal), and the thinking (man).

During the Middle Ages the Platonic and Aristotelian theories, modified in order to reconcile them with Christianity, were equally supported, until Aristotelian monism gave way to the dualism of Descartes. He held body and soul to be essentially different beings, whose combination in man was due to divine assistance. Locke assumed the soul to be a sheet of blank paper ready to receive sensations. Spinoza and some more modern thinkers regard the soul, not as an independent entity, but as a modification of the infinite, all-embracing cause of the world. See Metaphysics.

SOULT, NICOLAS JEAN DE DIEU, DUKE OF DALMATIA (1769-1851). French soldier. Born at St. Amans-la-Bastide, March 29, 1769, he

Marshal Soult,
French soldier

joined the army in the ranks in 1785. By 1794 he had become a brigadier-general, and in 1804 was made a marshal. Appointed to the chief command in Spain in 1809, he fought with varying success, until disagreement with Joseph Bonaparte caused him to leave Spain, but he was sent back by Napoleon on receipt of the news of the disastrous battle of Vittoria. In spite of Soult's brilliant generalship, his raw levies were no match for Wellington's veterans, and the defeat of Toulouse laid the way to Paris open to the British. Soult declared again for Napoleon in the Hundred Days' campaign, and went into exile after Waterloo. Under Louis Philippe he was minister for war, 1830-34 and 1840-44. He died Nov. 26, 1851.

SOUND. Term applied both to the cause and to the sensation of hearing. Experiments show that sounds which have the simplest character are musical sounds. A simple, regular to-and-fro motion of the air gives the impression of a single or pure musical note or tone. The frequency of the vibration determines the pitch of the note, i.e. its position in the musical scale. The same musical note will be heard with different degrees of loudness, or intensity, according to the range over which the air particles in the ear move to and fro. This range is called the amplitude of the vibration, and if it is large the sound is loud; if small, the sound is feeble.

In general, any body which vibrates with a frequency lying within certain limits (about 30 to 40,000 per second) will constitute a source of sound, from which the effects are conveyed to the ear. It is necessary that the source

should be in contact with some material medium, for example, the air, as is usual, or water, or even the earth. If the vibrating body is in a vacuum, no acoustic effects proceed from it. In quiescent air sound travels with a velocity of 1,118 ft. per second when the temperature is 60° F. In water, sound travels about 4½ times as fast as in air, the velocity being nearly a mile per second. See Acoustics; Ear; Hearing; Microphone; Telephone.

SOUND, THE. Strait between Denmark and Sweden. It lies between the island of Zealand and Scania, and is 30 m. long, with a breadth of 3 m. at its narrowest between Helsingør (Elsinore), in Denmark, and Helsingborg, in Sweden, and 37 m. at its widest. It leads from the Baltic to the Kattegat.

SOUSA, JOHN PHILIP (b. 1856). American handmaster and composer. Born at Washington, D.C., U.S.A., Nov. 6, 1856, he was leader of the U.S. Marine Corps band, 1880-92, and then became world-famous as the conductor of his own band. He toured in Europe several times, 1900-5, and round the world, 1910-11. He composed many comic operas, but is best known by his stirring military march music, e.g. The Washington Post, Semper Fidelis, and Hands Across the Sea. He came to England in 1930 with a march expressly written for the Royal Welch Fusiliers.

J. P. Sousa,
American musician

SOUTH, ROBERT (1634-1716). English divine. Born in Hackney, he was ordained in 1658, and became public orator to the university of Oxford in 1660. In 1670 he was made canon of Christ Church, holding also the living of Islip. He died July 8, 1716. South won fame as a controversialist, but more by his sermons, long regarded as models of style.

SOUTH AFRICA, UNION OF. Self-governing dominion of the British Empire. It consists of the provs. of the Cape of Good Hope, Natal, the Transvaal, and the Orange Free State. Pretoria is the seat of the government, and Cape Town the seat of the legislature. The area is 471,917 sq. m. Pop. (1921) 6,928,580, of whom 1,519,488 were Europeans. In 1926 the white population numbered 1,676,660.

The Union is administered by a governor-general and an executive council in charge of the departments of state. The legislature consists of a Senate and a House of Assembly. The former contains 40 members, 8 nominated by the governor-general and 8 elected for each province.

In 1909 a national convention agreed upon a form of union. The South Africa Act was passed in 1909, and on May 31, 1910, the Union of South Africa became an accomplished fact.

At the opening of the Great War Boer malecontents under De Wet rebelled, but the rising was quickly suppressed. By July, 1915, South African troops, under General Botha, finally conquered German South-West Africa, which was placed under the administration of the Union government.

General Smuts, who became premier on Botha's death in 1919, was in office until 1924, and it fell to him to deal with the outbreak on the Rand, 1922. Much feeling was roused by the proposal to give the country a new flag, and there was talk of secession from the Empire. After long discussion the proposal for a flag without the Union Jack was withdrawn. General Hertzog succeeded Smuts as prime minister in 1924, and was again returned to power in 1929. See Cape of Good Hope; Natal; Orange Free State; Transvaal.

South Africa arms

SOUTH AFRICAN WAR. Struggle between Great Britain and the Boer republics of the Transvaal and the Orange Free State, Oct., 1899, to May, 1902. Great Britain had, by treaty, the right of controlling the external affairs of the Transvaal, and had an interest in the white population that had been attracted by the discovery of gold. On Oct. 8, 1889, the Boers issued an ultimatum, and this was treated as a declaration of war.

The Boers at once invaded Natal. At Talana Hill and Elandsalaagte the British were victorious, but they met with a disaster at Nicholson's Nek. Before the end of Oct., Sir George White and his small force were shut up in Ladysmith, while other Boer forces invested Mafeking and Kimberley. In Nov. Sir Redvers Buller led the largest British contingent to the relief of Ladysmith. Methuen set out for Kimberley, reaching the Modder on Nov. 27, and delivered a night attack on some strong Boer lines at Magersfontein on Dec. 11-12. This was a total failure, and moreover on the 10th Gatacre had been repulsed at Stormberg.

The hopes of Britain now centred on Buller, who attacked at Colenso on Dec. 15, but the assault failed. These reverses led the Government to send out Lords Roberts and Kitchener, and before they arrived Buller again failed at Spion Kop, Jan. 22, 1900.

Roberts sent Sir John French, who had got away from Ladysmith, to relieve Kimberley, and the town was entered on Feb. 15. The Boer retreat was cut off, and they found refuge in the hed of the Modder. Then took place the battle of Paardeberg, Feb. 27, which ended in the surrender of 4,000 Boer fighting men. On Feb. 28 Buller's army joined hands with the defenders of Ladysmith. Roberts received the surrender of Bloemfontein on March 13. For six weeks the British remained there, preparing for a further advance by clearing the enemy from the neighbourhood.

On May 3 all was made ready for another forward move. On June 5 Roberts entered

South Africa. Map of the four provinces forming the Union

Pretoria. Mafeking had been relieved on May 17, and Buller had cleared the Boers from Natal, thus opening up a converging line of attack on the Transvaal. In Sept. the Transvaal was annexed, and in Dec. Roberts left the completion of the task to Kitchener.

During the African summer the Boer cause revived. Kitchener's plan was to clear the worst areas of their inhabitants and to hunt down the fighting men. He ringed round the foe with a chain of blockhouses, and completed arrangements for operating away from the lines of rly. Overtures for peace came in July, 1901, from the Boers. Encounters continued throughout the year, but in March, 1902, they asked conditionally for peace. The treaty was signed May 31, 1902. The British losses were 5,774 killed and 22,829 wounded, while over 20,000 died of disease. About 4,000 Boers were killed. See Botha; De Wet; Kitchener; Lady Smith; Mafeking, etc.

SOUTHALL. Market town and urban dist. (Southall-Norwood) of Middlesex. It is 12 m. from London, on the G.W. Rly., being also served by the Grand Union Canal. Since about 1880 many industries have been located at Southall. Here bridges carry the road over the canal and the canal over the rly. Market day, Wed. Pop. 30,261.

SOUTH AMERICA. Southern part of the land of the W. Hemisphere. It is a distinct continent or land-mass, surrounded by sea except where the Isthmus of Panama (pierced by a canal) joins it to the Northern continent. The E. coast is washed by the Atlantic, the W. coast by the Pacific; the N. coast, known historically as the Spanish Main, borders the Caribbean Sea. The archipelago of Tierra del Fuego, a S. extension of the continent divided from it by the strait of Magellan, juts into the Antarctic Ocean. The total area is about 7,000,000 sq. m. Brazil, occupying about half the continent, is Portuguese in origin and language: the other republics are Spanish in speech and origin. In the N. strips of Guiana belong to Great Britain, Holland, and France.

S. America has been called the world's great producer of raw materials. The Andes and S. Brazil are rich in minerals. Petroleum deposits occur in many parts. Coal seams are found in central Chile, S. Brazil, and the tropical Andine region. The W. desert produces nitrate. Rubber, timber, dyewoods, etc., come from the interior tropical forests. The cultivated lands in and near the tropics yield coffee, cocoa, sugar, and bananas. The S. plains, as well as those of the Orinoco, yield wheat, maize, and other cereals, wool, meat, and hides.

The population of S. America is compounded of European, African, and indigenous Indian elements. The temperate southern regions may be regarded as European in character. In the tropical Spanish republics at least half the population is pure Indian. In general, European influence and character are predominant, and the S. American countries are developing a civilization of a decidedly Latin type, modified by local influences. See America, map; Argentina; Brazil; Chile, etc.

SOUTHAMPTON. County borough and seaport of Hampshire. It is 79 m. from London, on the Southern Rly., and stands on a peninsula between the mouths of the Itchen and the Test at the head of Southampton Water, an opening of the English Channel extending 10 m. inland from the Solent and Spithead. Steamers go from here to America, the Far East, France, and elsewhere.

The buildings include the old church of S. Michael and the modern ones of All Saints and S. Mary. S. Julian's chapel, part of a 12th century foundation, has been used since the 16th century by French residents. There is an old guildhall. Southampton retains parts of its old fortifications. The most notable is the Bar Gate. The University College was removed

to new buildings at Highfield in 1914. Southampton owes its prosperity to its magnificent harbour. Large new docks were built in the 20th century and it was an important base in the Great War. The bishop of Southampton is suffragan to the bishop of Winchester. Pop. 169,900.

SOUTHAMPTON, EARL OF. English title granted successively to the Fitzwilliam and the Wriothesley families. The first creation was in 1537, in favour of Sir William Fitzwilliam, keeper of the privy seal. On his death in 1542 the title became extinct, but was revived five years later, when Thomas Wriothesley was made earl of Southampton. Henry, the 3rd earl, was a popular figure at court and a generous patron of the poets of the day, notably of Shakespeare. The title became extinct when the 4th earl died in 1667.

SOUTH AUSTRALIA. State of the Commonwealth of Australia. It lies between Victoria and Western Australia, along the S. coast. Adelaide is the capital. The area is 380,070 sq. m. Pop. 579,576.

The coast is harbourless in the W., but indented by Spencer and St. Vincent Gulfs in the E. The N.W. of the state is occupied by the S. portion of the Central Australia plateau. N.E. of the state is the basin of internal drainage of Lake Eyre. Here are intermittent rivers, e.g. Barcoo and Frome. Only small streams reach the sea except the lower Murray.

Wheat is the chief farming product. Fruit-growing is increasing. The irrigation colony of Renmark on the Murray is a celebrated fruit centre. Horses, cattle, and sheep are reared. Dairy farming is on the increase. The minerals include iron, gypsum, and salt. The rly. system centres on Adelaide. See Adelaide; Australia, and map p. 162.

SOUTHBOROUGH. Urban dist. of Kent. It is 2 m. from Tunbridge Wells on the Southern Rly. The place has a chalybeate spring and is a residential area. Pop. 7,100.

SOUTHBOROUGH, FRANCIS JOHN STEPHENS HOPWOOD, 1ST BARON (b. 1860). British civil servant. The son of a barrister, he entered the civil service in 1885 as a law clerk in the Board of Trade. In 1893 he was promoted to be secretary to the Railway Department, and in 1901 he became the Board's permanent secretary, being transferred in 1907 to a like post in the Colonial Office. Vice-chairman of the Development Commission, 1910-12, he was then appointed an additional civil lord of the Admiralty. In 1917-18 he acted as secretary to the Irish Convention, after which he retired from the public service and was made a peer.

SOUTHCOTT, JOANNA (1750-1814). Religious fanatic. Born at Gittisham, Devonshire, she joined the Methodists, and began to write prophecies. In 1802 she settled in London, where a chapel was opened for her

followers, and Joanna put forward the idea that she was about to become the mother of Shiloh, the second Christ (Rev. 12). Great preparations were made for the event, but on Oct. 29, 1814, she died of brain fever. Several collections of Joanna's prophecies are published, and a box containing others was the object of much interest until opened in 1927. Her followers formed a religious sect, which still existed in the 20th century.

Joanna Southcott, Religious fanatic

SOUTHEND-ON-SEA. County borough and watering place of Essex. It stands at the mouth of the Thames estuary, 36 m. from London, on the L.M.S. and L.N.E. Rlys. The borough includes Leigh-on-Sea, Westcliff, and Thorpe Bay. Among features are a long pier, promenades, Kursaal, swimming baths, golf links, and a yachting port. During the summer there is steamboat service to London, Margate, Ramsgate, etc. A new arterial road to London was opened in 1925. The place owes its rapid growth to its proximity to London and its bracing climate. Pop. 120,000.

Southernwood. Left, flower spray; right, fragrant leaves

SOUTHERNWOOD (*Artemisia abrotanum*). Shrubby perennial plant of the order Compositae, native of Europe. The flowers are insignificant, but the plants are popular favourites on account of their fragrant feathery, hair-like foliage. Southernwood is known in various parts of Britain by the names of Old Maa, Boy's Love, Old Woman.

SOUTHEY, ROBERT (1774-1843). English poet, historian, and biographer. He was born at Bristol, Aug. 12, 1774. Influenced by the French Revolution, he developed advanced ideas in politics and religion. In 1803 he moved to Greta Hall, Keswick, to be near Coleridge, having married a sister of the latter's wife. This friendship was not to last, but Southey found at Keswick a new friend in Wordsworth. Years of continuous overwork affected his health, and when he died, March 21, 1843, he had been insane for three years.

Robert Southey, English poet
After P. Vandike, Nat. Port. Gallery

His early republicanism having gradually changed to Toryism, he had been appointed poet laureate in 1813. Southey's output was prodigious, but his only enduring work is his *Life of Nelson*, 1813, written in his lucid and direct prose style.

SOUTHGATE. Urban dist. of Middlesex. It is 1½ m. N.E. of New Southgate station on the L.N.E. Rly., and was so named as being the gate of Enfield Chase. Leigh Hunt was born at South-

Southampton. Aerial view of the port, with the floating dock in the centre foreground and the town quay to the left. Beyond the latter is seen part of Queen's Park

gate, and the once rural lanes between Southgate and Colney Hatch were favourite haunts of Lamb. Pop. 42,800.

SOUTH GEORGIA. British island in the Atlantic Ocean. Situated 800 m. S.E. of the Falkland Islands, of which it is a dependency, it is mountainous, with glaciers descending the gorges. It is a whaling settlement and sealing ground. Its area is 1,000 sq. m. Here Sir Ernest Shackleton (q.v.) was buried.

SOUTH LANCASHIRE REGIMENT. Regiment of the British army. Known also as the Prince of Wales's Volunteers, it was originally the 40th and 82nd Foot. The former was raised in 1717 and the latter in 1793. The regiment served with distinction at Alexandria, 1801, in the Peninsular War, and at Waterloo. After serving in the Crimean War it was present at the relief of Lucknow, took part in the New Zealand War, 1860-65, and in the South African War. During the Great War the 1st battalion was in Mesopotamia in 1916. The 2nd went to France in 1914, and participated in all the chief battles. Other battalions did equally good service. The depot is at Warrington.

South Lancashire Regimental badge

SOUTH ORKNEY. Group of British islands in the Atlantic. It is a dependency of the Falkland Islands, from which it is 790 m. to the S.E. The area is 800 sq. m.

SOUTHPORT. County borough, market town, and watering place of Lancashire. It stands at the mouth of the Ribbles estuary, 18 m. from Liverpool, and is served by the L.M.S. and Cheshire Lines Rlys. There are fine promenades, a pier, marine lake, winter gardens, botanic gardens, and parks. Byng House, a holiday home for ex-service men, was opened in 1921. Market days, Wed. and Sat. Pop. 70,644.

SOUTHSEA. Watering place of Hampshire, a suburb of Portsmouth (q.v.). It lies to the S.E. of the city, overlooking Spithead, and is served by the Southern Rly. It is a yachting centre, and has good bathing, esplanade with naval monuments, two piers, and other attractions. Southsea Castle dates from about 1540. Southsea Common is a fine stretch of ground.

SOUTH SEA BUBBLE. Popular name given to a group of speculative financial schemes in England, resulting in a crisis in 1720. In 1711 the South Sea Co. was started, having secured to it, under government guarantee, actual or anticipated commercial rights in consideration of which it took over £9,000,000 of the national debt. Soon afterwards there arose an epidemic of speculation.

In spite of Walpole's warning the shares ruced up. In the first months of 1720 the price of a £100 share rose to £1,100; then a series of fraudulent companies collapsed. The public took alarm, and in three months the shares had fallen to £150. Vast numbers of persons were ruined, and Walpole was called in to remedy the disaster. £2,000,000 was raised by the forfeiture of the property of directors and other persons who had made profits, the government resumed the national debt, and the company was reconstituted on a sober basis.

SOUTH SHETLAND. Group of islands in the Antarctic. A British possession, the group forms a dependency of the Falkland Islands, and is 580 m. S.S.E. of Cape Horn. The islands are a centre of the sealing industry. They were proclaimed a British possession in 1908. The area is 880 sq. m.

SOUTH STAFFORDSHIRE REGIMENT. British regiment. It is composed of the former 38th Foot and the 80th Foot, raised in 1702 and 1793 respectively. The regiment's distinguished record includes all the leading campaigns of the 18th-19th centuries, battle honours having been gained at Guadeloupe, in the Peninsular War, Crimea, Indian Mutiny, Egypt, and S. Africa. In the Great War it had a large number of service and two territorial, in addition to four regular and special reserve battalions. The 1st and 2nd battalions were in France and Belgium in 1914, and the regiment participated in all the great battles of the war. The regimental depot is at Lichfield.

South Staffordshire Regimental badge

SOUTH WALES BORDERERS. Regiment of the British army. Formerly the 24th Foot, it was raised in 1689. It fought at Blenheim, Ramillies, Oudenarde, and Malplaquet. Against the Sikhs the Borderers displayed daring heroism at Chillianwalla (1848), and they served in India during the Mutiny. On the greatest day in the history of the regiment, Jan. 22, 1879, the 1st battalion was annihilated by the Zulus at Isandhlwana, and a single company defended Rorke's Drift (q.v.). In the Great War the 1st battalion made a stand at Gheluvelt in the first battle of Ypres. Its later services included the battles of the Somme, 1916, and of Cambrai, 1918. The 2nd battalion was in Gallipoli, 1915. Other battalions rendered notable services on various fronts. The regimental depot is at Brecon.

South Wales Borderers badge

SOUTHWARK. Met. bor. of London. In the co. of Surrey, it is bounded N. by the Thames, S. by Camberwell, E. by Bermondsey, and W by Lambeth. Among its buildings are S. Saviour's or Southwark cathedral, S. George's church, S. George's R.C. cathedral, Guy's Hospital, S. Olave's and S. Saviour's schools, and the headquarters of the London fire brigade. In Lavington Street and Sumner Street are the large printing works of the Amalgamated Press (q.v.). The market, mainly for fruit and vegetables, dates from the time of Edward VI. Southwark Bridge, opened June 6, 1921, has five arches, and replaced one built 1815-19. The Bethlem (Bedlam) Hospital grounds were presented as a public park by Viscount Rothermere. Since 1551 Southwark has been known as the Borough. In 1905 it was made the seat of a bishop. Pop. 184,404. See Bankside; Globe Theatre; Harvard, John; London. Pron. Suthuk.

Southwark. The cathedral church of S. Saviour's, from the south. It dates from the early 12th century, and was restored in the late 19th

SOUTHWELL. City of Nottinghamshire. It is 16 m. from Nottingham, on the L.M.S. Rly. The cathedral dates mainly from the 12th century. It is a beautiful cruciform building with Norman nave and towers and Early English choir. The chapter house is especially notable. Southwell was made the seat of a bishop in 1884. Pop. 3,085. See illus. below.

SOUTH-WEST AFRICA. British protectorate in Africa, formerly known as German South-West Africa. The Germans formally annexed it in 1884. It was conquered by the South Africans in 1915, and in 1919 its administration was entrusted to the Union of South Africa as mandatory of the League of Nations. In 1925 a constitution was given to the country. This consists of an executive committee, an advisory council and a legislative assembly.

The protectorate has an area of 311,820 sq. m. It lies between Angola (Portuguese W. Africa) on the N. and the province of the Cape of Good Hope on the S. On the E. is Bechuanaland, while its W. side fronts the Atlantic. Walvis Bay is a small enclave on the coast. Windhoek is the chief town. There are harbours at Swakopmund and Angra Pequena. Pop. (European), 24,115.

THE CONQUEST. In the autumn of 1914 the S. Africans occupied Lüderitz Bay and Walvis Bay. After a period spent in making preparations, a force of about 50,000 men advanced on Windhoek and entered the capital in May, 1915. The Germans retired farther into the interior, but on July 9, 1915, they surrendered.

SOUTHWICK.

Urban dist., in full Southwick-on-Wear, of Durham. It stands on the Wear, adjacent to Sunderland, of which it is practi-

Southwell, Notts. West front of the beautiful minster founded in the 12th century. See above

cally an industrial suburb. Here are traces of a monastery. Pop. 14,641.

Another Southwick is an urban dist. on the Sussex coast, 4 m. from Brighton. It has a station on the Southern Rly. Pop. 4,849.

SOUTHWOLD. Borough and seaport of Suffolk. It stands on the E. coast, at the mouth of the Blythe, 41 m. from Ipswich, with a station on the L.N.E. Rly. It is a popular watering place. The chief building is the church of S. Edmund. There is a harbour and an extensive common. Southwold became a busy seaport in the 13th century or earlier, having a market and a fair. In its bay, called also Sole Bay, the Dutch fleet fought, in 1672, an indecisive battle with the English. Pop. 3,370.

SOVEREIGN. British gold coin, the standard monetary unit. One pound sterling, or twenty shillings in value, it was introduced by Henry VII, and weighed 240 grains. The coin did not become the standard monetary unit until 1817. The sovereign is 22 carats fine and weighs 123.274 grains. Copper is the usual alloy. Half-sovereigns are coined, and two and five sovereign pieces were struck at various times. The introduction of treasury notes in 1914 led to the withdrawal of the sovereign from circulation. See illus. p. 1266.

SOVEREIGNTY. Term used in political philosophy for the possession of supreme power. John Austin defined the sovereign as one who receives obedience from, but does not render obedience to, any determinate human superior. Against this view is that of the historical school that sovereignty is a gradual growth, and cannot be thus defined.

Sovereignty, in Austin's sense, implies an advanced state of society, one wherein the idea of law exists, for in its internal aspect it means the power to make and enforce law. This power was the sovereignty exercised in Rome by the emperors and in modern states by legislative bodies, but it is not absolute sovereignty.

In the ordinary sense sovereignty is freedom from all external control, the countries that possess this being known as sovereign states. See Divine Right; Federalism; King; State.

SOVIET. Russian word, meaning council, which has come to denote a method of republican government. An Englishman, James Elia Smith, early in the 19th century advocated a House of Trades to take the place of the House of Commons, and in 1848 such an assembly was chosen. From that date the idea took root in the minds of Russian revolutionary writers. A soviet was formed during the attempted St. Petersburg revolution of 1905, and the plan of setting up a representative system, which should give votes only to workers, manual and intellectual, was held in readiness. The opportunity to put it into practice came when the reformers forced the tsar to abdicate. At once a workers' and soldiers' council came into being.

Then after some months the Bolsheviks ousted the moderates, and the Soviet scheme was put into operation. To a certain extent the primary units are the councils elected by towns and large villages or groups of villages. The next body is the county council, which consists of the rural councils meeting together.

Both county councils and town councils send members to a regional council. Then there is a provincial council for each province. Finally comes the All-Russia Soviet Congress, made up of members sent from the town councils, one to each 25,000 voters, and from the provincial councils. In Hungary and Bavaria Soviet governments were set up in 1919, but neither endured. See Bolshevism; Russia.

Sovereign. Reverse and obverse of the British gold coin. Actual diameter $\frac{1}{2}$ in. See p. 1265

SOWERBY BRIDGE. Urban dist. of Yorkshire (W.R.). It stands on the Calder, where it is joined by the canal to Rochdale, 3 m. from Halifax, and has a station on the L.M.S. Rly. The town has manufactures of woollen, worsted, and cotton goods. Pop. 16,632.

SOW THISTLE (*Sonchus*). Genus of tender herbs, with milky juice, of the natural order Compositae. Natives of the temperate regions, they have brittle, hollow stems and alternate leaves with toothed lobes. The flower heads are yellow, and the fruits are flat and ribbed, with numerous silky hairs attached. There are four British species.

SOYA BEAN (*Glycine soja*). Annual herb of the order Leguminosae. A native of tropical Asia, it has erect, hairy stems, and the leaves are divided into three leaflets. The fruits are hairy pods containing from two to five small beans. For long it was cultivated chiefly as a principal ingredient in the composition of soy, a piquant sauce used in Japan, but in recent years the beans have been extensively grown as a source of oil for employment in the making of margarine, etc.

Soya Bean. Leaves and buds; inset, pods containing beans

Soya bean cake, a valuable artificial feeding stuff, is prepared by compression of the seeds after extraction of most of the oil.

SOYER, ALEXIS BENOT (1809-58). French cook. Born at Meaux, he became famous as a chef in Paris, but fled to England on the outbreak of the Revolution of 1830. He was head cook at the Reform Club, 1837-50, and the practical interest he showed in the Irish famine of 1847 caused the Government to appoint him to establish food-kitchens in Dublin. He died Aug. 8, 1858. He wrote *The Shilling Cookery Book*, 1854.

SPA. Name given to a health resort at which natural waters or baths can be taken for therapeutic purposes. It is derived from Spa in Belgium, one of the oldest watering places. Many forms of natural waters exist, suitable for the treatment of various complaints, but the particular character of the water is not the sole factor which gives a spa its therapeutic efficiency.

The chief English spas are Bath, Buxton, Harrogate, Leamington, Matlock, Cheltenham, Droitwich, Malvern, etc. In France the chief natural waters are found at Plombières, St. Amand, Mont Doré, Aix-les-Bains, Bourbon l'Archambault, Châtel-Guyon, Vichy, Vals, Royat, Salins-Moutiers, Contrexéville, Martigny-les-Bains, Vittel, and Vernet-les-Bains. In Switzerland there are natural waters at St. Moritz, Baden, and Weissenburg; in Italy at Abano. See Baths.

SPA. Town of Belgium. It is 21 m. by rly. S.E. of Liège, 7 m. from the junction at Pepinster. A famous inland watering place, it has attractive promenades, kursaal, race-course, golf course, etc. Pop. 8,245.

Occupied by the Germans in the Great War from Aug. 4, 1914, it became their headquarters in March, 1918, and the emperor lived in a château 2 m. E. of Spa. Here took place the meetings which immediately preceded his flight into Holland, Nov. 8, 1918. Spa was the meeting place of the armistice commission.

SPACE. One of the fundamental conceptions. Philosophically it has been explained as continuous extension, a phrase which involves the conception itself. Newton stated that absolute space, in its own nature, without relation to anything external, remains always similar and immovable. See Ether; Light; Relativity; Time.

SPAGHETTI (Ital. little ropes). Farinaceous food. It is made of the same paste as macaroni, but, unlike the latter, pressed out into a solid cord-like form thicker than vermicelli. It is cooked with cheese, meat, tomatoes, etc., and is used for puddings and savouries. See Macaroni.

SPAHI (Persian sipahi, soldier, mounted warrior). Name given to men of the Algerian and Tunisian cavalry regiments in the French army. Originating in the Turkish army, the spahis were horsemen furnished by the sultan's feudal lords. On their occupation of Algiers and Tunis the French incorporated the Turkish native regiments in their own army, supplying French officers. The word is identical with sepoy (q.v.), the Anglo-Indian term for Indian soldier.

SPAIN. Kingdom of S.W. Europe, the larger portion of the Iberian peninsula. It is bounded E. and S. by the Mediterranean, W. by Portugal

Spain. Map of the Iberian peninsula, showing the provinces into which Spain is divided

Spain. Peasant types of Alicante (left) and Castile (right)

and the Atlantic, N. by the Bay of Biscay and France, from which it is separated by the Pyrenees. The strait of Gibraltar separates it from Africa. For administrative purposes the Balearic and Canary Islands, as well as the Moroccan ports of Ceuta and Melilla, are regarded as part of the kingdom. Madrid is the capital. The area is 190,050 sq. m. Pop. 22,601,753.

The country consists of a high tableland surrounded and crossed by mt. ranges. The rivers include the Tagus, Ebro, Guadalquivir, and Guadiana. Olives, vines, and fruits are grown. The chief agricultural crops are wheat, barley, oats, and rye. Spain is rich in minerals, including coal, iron, copper, mercury, and lead. Railways total just over 10,000 m. in length, and are all in private hands.

Spain has been since 1875 a constitutional monarchy, with the sovereign as the executive, and the Cortes with the king as the legislative authority. The sovereign is assisted by a council of ministers. The senate consists of 360 members, of three classes: senators in their own right, senators for life, and 180 elected senators. The remainder of the Cortes, the congress, is composed of elected deputies. The national church is that of Rome. Military service is compulsory. Attached to the navy is a flying service.

The great period of Spanish history begins with the reign of Ferdinand and Isabella, under whose firm rule order and prosperity were restored. In 1492 the Moors' last stronghold, Granada, was captured, and in the same year Columbus discovered America. Spaniards crossed the Atlantic to take possession of the new lands, the wealth of which formed an almost inexhaustible treasure house. The decay of Spain dates from the time of Philip II. He became involved in the war with England which led to the Armada, while the Netherlands revolted and the northern states declared themselves independent.

Early in the 19th century Spain lost her American colonies. In 1833 there was a civil war between Ferdinand's daughter Isabella and Don Carlos, the former securing the throne. Meanwhile, constitutional privileges had been obtained, but unrest continued. In 1875 Isabella's son, Alphonso XII, was proclaimed king. In 1886 his posthumous son, Alphonso XIII (q.v.), succeeded. In 1898 Spain and the United States came to blows, the end being the loss of Cuba and the Philippines.

The early years of the 20th century were marked by disorders caused by anarchists and others. In 1916 there were serious riots and martial law was proclaimed, and in 1920 the problem of home rule for Catalonia became acute. In Sept., 1923, a military revolt broke out. Primo de Rivera (q.v.) formed a provisional military government, or directory, the king accepted his dictatorship, and parliament was dissolved. In Dec., 1925,

Aspalathos, it stands on a peninsula on the Adriatic Sea, picturesquely encircled by hills, 74 m. S.E. of Zara. The most important structure is the palace of Diocletian, constructed in 303, when he founded the town. The cathedral, 650, originally the mausoleum of Diocletian, contains some reliefs on the portal representing scenes from the life of Christ. Manufactures include wine and oil. Pop. 30,000.

SPALDING. Market town and urban dist. of Lincolnshire. It stands on the Welland, 14 m. from Boston, with a station on the L.N.E. Ry. and the joint line of the L.N.E. and L.M.S. Ry. The principal building is the parish church of SS. Mary and Nicholas, a 13th century building restored in the 19th century. Other buildings include the corn exchange and the Johnson hospital.

There is a grammar school founded in 1567, but occupying a modern building. An important agricultural centre, Spalding has a trade along the river. Ayscoughfice Hall, dating from 1420, is now a museum. Market day, Tues. Pop. 10,700.

SPANDAU. Town of Prussia. In the prov. of Brandenburg, it stands at the junction of the Havel and the Spree, 8 m. from Berlin, of which it is practically a suburb. There is a trade along the Havel. Before the Great War it was a garrison town, having also an arsenal and many factories for the manufacture of arms and ammunition. The chief building is the citadel, and the Julius tower therein was selected to hold £6,000,000 of gold exacted from France in 1871. Pop. 111,629.

SPANDREL. In architecture, the space between the extrados or outer curve of an arch, a horizontal line from the crown of the arch, and a vertical line from its springing. It is a favourite place for sculptural and other decoration. See Arch.

SPANIEL. Group of dogs, distinguished by a wide short skull, a high forehead, heavy build, and large pendent ears. Most have thick, long, and silky hair. The three main classes are land, water, and toy spaniels. The Clumber spaniel is a large, heavy animal, with a dense coat of white and lemon-coloured hair, and makes a good dog with guns.

The cocker spaniel (q.v.) is only half the size, with a longer head and

the dictatorship came to an end, and a ministry of the usual kind was formed. In 1927 an assembly was called together to take the place of the chamber suppressed in 1923, but its functions were advisory only, and it was dissolved in Feb., 1930.

SPALATO OR **SPLIT.** Town and seaport of Yugoslavia. The ancient

the dictatorship came to an end, and a ministry of the usual kind was formed. In 1927 an assembly was called together to take the place of the chamber suppressed in 1923, but its functions were advisory only, and it was dissolved in Feb., 1930.

SPANISH-AMERICAN WAR. Conflict between the United States of America and Spain, 1898. On Feb. 15, 1898, the U.S. battleship Maine was blown up in Havana Harbor, according to investigators by a mine, and on March 11 the U.S. army mobilised Congress declared the independence of Cuba, and Spain declared war, April 24, 1898.

The naval campaign was localised to the Philippine Islands and Cuba. In the former Dewey destroyed the Spanish fleet in Manila Bay, May 1; while off Cuba another fleet was blockaded in Santiago Bay until July 3, when the Spaniards slipped out, were chased, and totally defeated. In the meantime, military operations had begun in Cuba. Aided by the Cubans, the Americans attacked Santiago, which capitulated July 16. The Americans then landed at Porto Rico, and the end of the war came with an attack on Manila, Aug. 13, the Spanish forces capitulating next day. Peace was concluded in Paris, Dec. 10. Spain relinquished Cuba, and in return for £4,000,000 ceded the Philippines, Porto Rico, and Guam to the U.S.A. See Cuba; Philippine Islands.

SPANISH MAIN. Name formerly given to the Spanish possessions on the coast of the American mainland from the mouth of the Orinoco to Yucatan, and often loosely used as a synonym for the Caribbean Sea.

SPANISH SUCCESSION, WAR OF THE. European war, fought 1702-14, by France, Spain, and Bavaria, against Austria, Prussia, Great Britain, Holland, Denmark, and Portugal. By the partition treaties of 1698 and 1700 Louis XIV had renounced all claims of his family to the throne of Spain. When, however, Charles II of Spain died childless, Nov. 1, 1700, Louis ignored his obligations and claimed the throne for his grandson, Philip of Anjou, while the emperor Leopold claimed it for his son, the archduke Charles.

The campaign was carried on in the Netherlands, Germany, Italy, and at sea. The chief successes on the allied side were Marlborough's four great victories of Blenheim, Ramillies, Oudenarde, and Malplaquet, and the capture of Gibraltar in 1704. The French won victories of a temporary nature by capturing some of the fortresses in the Netherlands, and in Spain they took Madrid and won the battle of Almansa. The war dragged on until an armistice between Great Britain and France was signed in June, 1712. Holland, Prussia and Savoy continued the war until the peace

treaty signed at Utrecht (q.v.), April 11, 1713.

The result of this war was that the Bourbon candidate Philip of Anjou retained the throne, on the condition that no one person should ever wear the crowns of both France and Spain; Austria obtained the Spanish Netherlands,

Milan, Naples, and Sardinia, which last was later exchanged for Sicily, originally awarded to Savoy. Great Britain secured Newfoundland, Nova Scotia, Hudson Bay, Gibraltar, and Minorca, and important trading rights.

SPANISH TOWN. Town of Jamaica, in the British West Indies. It is a rly. junction situated on the Cobre river, 15 m. by rly. W.N.W. of Kingston (q.v.). Founded by

Spandrel in architecture

Spaniel. 1. Springer, a breed resembling the smaller cocker. 2. Clumber, a heavy white and lemon-coloured animal

Diego Columbus in 1525, and originally called Santiago de la Vega, it was the capital of the island until 1871. Pop. 8,694.

Sparking Plug. Electrical device for igniting the explosive charge in an internal combustion engine. See Magneto.

SPARROW. Genus of finches, of which the best known is the house sparrow (*Passer domesticus*). This, the familiar small, black-streaked brown finch, has followed man in his advance over the globe so thoroughly that its original country is now uncertain. Though destructive in the garden, it eats innumerable insects and is a useful scavenger. The male is distinguished by his black throat and by his coloration, being more ashy than the female.

The tree sparrow (*P. montanus*) is slightly smaller, and has brown plumage, with a white collar around the throat and two white bars on the tail. It occurs in England and Scotland, but is rare in Wales and Ireland. See Accentor.

SPARROW HAWK (*Accipiter nisus*). British bird of prey, found in most country districts. The plumage is bluish grey on the upper parts and reddish white, barred with dark brown, on the under parts. The tail is barred with grey and black, and the beak is blue. The female has brown upper parts, while the under parts are barred with light and dark grey. It is very destructive in game coverts during the breeding season.

SPARTA. City and kingdom of Greece. It was in Laconia in the south of the country, and was sometimes called Lacedaemon. The city was founded about 1100 B.C.; its authority was extended over the surrounding country and it became the recognized head of the Greek states. It had two kings, but the real power was in the hands of a council and of officials called ephors. The Spartan system was directed to a single supreme end, military efficiency. The Spartans were bred to be soldiers, contemptuous of the amenities of life, and equally contemptuous of pain and of death. The system was attributed to the lawgiver Lycurgus.

With the prestige won by Athens in the Persian wars, the rivalry between Athens and Sparta for the leadership of the Hellenic world began in 431. Ten years of contest left the fight drawn, and the war was temporarily suspended; but Athens dissipated her power in a disastrous expedition to Sicily, and in 412 Sparta renewed hostilities. When Lysander annihilated the Athenian fleet at Aegospotami, in 405, Sparta achieved a decisive victory.

For 25 years Sparta was the dictator of Greece, but in 379 Thebes revolted against her domination, and Spartan ascendancy never recovered from the great Theban victory at Leuctra in 371.

SPARTACUS (d. 71 B.C.). Thracian soldier who commanded the insurgents in the third Servile war of Rome. Originally a shepherd, he was taken prisoner by the Romans and trained in the gladiators' school at Capua, whence in 73 B.C. he escaped with 70 others to the crater of Vesuvius. He gathered an army of runaway gladiators and other slaves, estimated at 100,000 men, and devastated Italy from end to end. In 71 he was defeated and slain.

The name was given to an extreme socialist group in Germany between 1916 and 1919. Karl Liebknecht adopted this pseudonym, and towards the end of the war his followers, called Spartacists, became powerful. Fierce fighting occurred between them and the republican forces, and the Spartacists were finally defeated in Jan., 1919.

SPASM. Involuntary contraction of a muscle or group of muscles. Spasms may be due to hysteria, reflex irritation of a nerve, or various diseases of the nervous system. A mild form of hysterical spasm, most often observed in children, in which a group of muscles are contracted at intervals, causing, for example, lifting of the eyebrow or pulling down of an angle of the jaw, is known as habit-spasm. A severer form is termed a tie.

SPEAKER. Term used for the presiding officer of the British House of Commons. The first person to receive the title was Sir Thomas Hungerford, speaker in 1377. He and his successors were called speakers because it was their duty to voice the wishes of the members of the house to the king. The speaker is elected by the members, and receives a salary of £5,000 a year and a residence. He takes precedence of all commoners in the kingdom, represents the House of Commons on various ceremonial and other occasions, and is usually made a viscount and pensioned on retirement. The lord chancellor is the speaker of the House of Lords.

SPEAR (A.S. *specc*, perhaps cognate with *spar*). Offensive weapon, consisting of a sharply pointed shaft, used in war and the chase. It may be used for thrusting or hurling. Specialised forms are the pike, lance, javelin, dart, arrow, and bayonet. The shaft, of varying length, is usually of wood, and the pointed head of metal. A bone point probably succeeded the charred end of a stick, and in the palaeolithic age flint spearheads already occur. The spear was the chief weapon in the Homeric age. See Assagai; Lance.

spear. 1. Barbed weapon used by Fiji Islanders. 2. Broad-headed Soudanese spear. 3. English hunting spear of the 16th century

SPEARMINT (*Mentha spicata*). Perennial herb of the order Labiate, native of Europe, widely cultivated for culinary purposes.

Spearmint. Leaves and flower whorls

It has creeping underground stems, and erect aerial stems with opposite, oval-lance-shaped, aromatic leaves. The stems end in spikes of whorled purplish flowers.

SPEARWORT (*Ranunculus lingua*). Perennial herb of the order Ranunculaceae, a native of Europe and temperate Asia. It is found chiefly in marshes and ditches. The hollow stem is about 3 ft. high, with large, stalkless, lance-shaped leaves that clasp the stem at their base. The golden-yellow flowers are 1½ ins. across. The lesser spearwort (*R. flammula*) is a similar plant, but smaller in all its parts.

SPECIAL CONSTABLE. In the United Kingdom, a person sworn in to assist the regular police in preserving order in times of special danger or emergency. Throughout the Great War the specials did valuable work. In 1919 a constabulary medal was authorised to be issued in recognition of their services, 1914-18. The special constables were called out during the general strike in 1926. See Constable; Police.

SPECIAL LICENCE. Form of marriage licence granted on certain conditions and in

exceptional circumstances. Special licences are granted only by the archbishop of Canterbury, and enable the holder to be married at any time or place without previous residence in the district. Special licences are issued by the court of faculties, 23, Knightbridge Street, London, E.C., the fees amounting to £25.

Speaker of the British House of Commons in his official chair

from those of another species than those which distinguish the offspring of one individual or pair. The idea of species is relative, its value practical. See Biology; Hybrid.

SPECIFIC GRAVITY. Ratio between the weights of equal volumes of any substance and of some other substance that has been chosen as a standard. For gases the standard chosen is hydrogen or air; for liquids and solids, water. The specific gravity of solids and liquids is determined generally by methods based on the law of Archimedes that a solid, floating or immersed in a liquid, loses weight equal to that of the liquid it displaces. Special balances are employed to enable the solid to be accurately weighed, both in air and water. See Hydrometer.

SPECIFIC HEAT. Quantity of heat necessary to raise the temperature of 1 gram of a substance through 1° C. at any given temperature. It varies at different temperatures. If 100 grams of water at 100° C. are mixed with 100 grams at 0° C. the temperature of the mixture is approximately 50° C. But if 100 grams of copper at 100° C. are placed in 100 grams of water at 0° C. the resulting temperature of the water and copper is about 9.1° C. The heat given out by the copper in cooling through 90.9° C. has heated an equal mass of water through 9.1° C. The amount of heat necessary to raise the temperature of a substance through 1° varies at different temperatures. There is a relation between the specific heat of a substance and its atomic weight (See Atom).

The amount of heat required to raise one gram of water through one degree centigrade is called a calorie, and is the metric unit of heat. In British units the British Thermal Unit or B.T.U. is the heat required to raise 1 lb. of water 1° F. See Calorie; Therm.

SPECTACLES (Lat. *spectaculum*, show). Device for aiding sight, consisting of lenses of glass or rock crystal, mechanically supported before the eyes. The invention of spectacles is probably due to the Chinese. Alessandro de Spina, a Florentine monk, and Rogor Bacon are both credited with their invention in

Europe, and to Benjamin Franklin is given the credit of the bifocal lens.

Eye-glass lenses are made from optical glass and rock crystal or pebbles. The lenses are divided into two main classes, spherical and cylindrical, each subdivided into concave and convex and their combinations. Concave lenses are used for the correction of short sight, convex lenses for long sight, and cylindrical lenses for astigmatism. See Eye; Optics; Refraction; Sight.

SPECTATOR, THE. Periodical essays begun by Joseph Addison, March 1, 1711, in succession to *The Tatler*, issued daily until Dec. 6, 1712, and then revived June 28, 1714, and issued thrice weekly until Dec. 20 of the same year. See Addison, J.; Steele, Sir R.

The existing *Spectator* is a London weekly review. It was founded July 5, 1828, and its features include a summary of the week's news, political and social articles, literary criticism, and correspondence. Its editors have included Robert Stephen Rintoul, 1828-58; Richard Holt Hutton, 1861-97; and J. St. Loe Strachey, 1897-1927.

SPECTROSCOPE (Lat. spectrum, something seen). Instrument by which light is resolved into vibrations of different frequencies, and can thus be examined and its properties defined. It generally includes a slit and a collimator to admit the light in a parallel beam, and a viewing telescope. With a camera replacing the eyepiece the instrument becomes a spectrograph, and when equipped with measuring scales, etc., a spectrometer.

When a ray of light from any source is passed through a prism a spectrum is seen, consisting of coloured bands formed by dispersion of the ray. The visible portion of the spectrum varies from red, through orange, yellow, green, and blue to violet, but the spectrum is continued beyond the red and violet, these invisible portions being termed the infra-red and the ultra-violet respectively.

The actual analysis is effected in refracting spectroscopes by one or more prisms of glass, or other refracting medium, which splits up the beam into a rainbow spectrum. For very refined measurements the resolving power of prisms is insufficient, and a diffraction grating is used.

SPECTROSCOPY. This is the science which deals with the methods of production of the spectra from various sources of light, and also with their study. In 1672 Newton communicated to the Royal Society his famous theory concerning the solar spectrum, and in 1815 Fraunhofer discovered the dark lines in it which bear his name, but spectroscopy as a practical science really began with Kirchhoff's interpretation of the Fraunhofer lines in 1859, that they indicated gases and metallic vapours surrounding the incandescent body of the sun. Many known elements were soon proved to be represented, and incidentally several new ones were discovered on the earth. The brighter stars showed similar spectra. Other lines in the solar spectrum, intensified when the sun is low, are due to the atmosphere and are called telluric lines. See Diffraction; Fraunhofer; Light, etc.

SPEE, MAXIMILIAN, COUNT VON (1861-1914). German sailor. Born at Copenhagen,

he had a distinguished career in the German navy. In 1914 he was in command of the Far Eastern squadron, and on the outbreak of the Great War escaped from China waters. On Nov. 1 he defeated Craddock's squadron at Coronel (q.v.), but on Dec. 8 was beaten at the battle of the Falkland Islands (q.v.), he himself going down with his flagship, the armoured cruiser *Scharnhorst*.

SPEECH. Faculty of uttering articulate sounds with the mouth for the purpose of communication, which distinguishes man from the lower animals. The sound of the voice is produced by a current of air passing through the air passages from the lungs, the cavities of the pharynx, mouth, and nose acting as resonators or sounding boxes. Fine movements of the tongue are essential for speech.

Defects in speech may be due to partial blocking of the air passages, or to paralysis of the nerves supplying the muscles of speech. See Aphasia; Language; Larynx; Pharynx; Phonetics; Stammering; Voice.

SPEED HOUSE. Building in the Forest of Dean. Built about 1680, in it was held the verderers' court for the business connected with the forest. See Dean, Forest of.

SPEEDOMETER. Speed indicator used largely for automobiles, on electric generators, marine engines, etc. In one form it comprises a rotating spindle, driven from a convenient source, and carrying pivoted weights projected outwards by centrifugal force and controlled by springs or gravity. The outward and inward movements of the weights are communicated to a pointer moving over a dial graduated in miles per hour or revolutions per minute.

Speedway. Name given for a track of dirt or cinders on which motor cycles race. In 1930 *The Daily Mail* presented a trophy known as the National Speedway Cup, for competition among the speedways of Gt. Britain.

See Dirt Track Racing.

SPEEDWELL (*Veronica chamaedrys*). Perennial herb of the order Scrophulariaceae, native of Europe and Siberia. The opposite leaves are oval, strongly toothed, and stalkless, and the flowers, bright blue and shortly tubular, divide into four lobes, of which the upper and lower are broader than the side pair.

SPEKE. Village of Lancashire. It is 7 m. from Liverpool, with a station on the L.M.S. Rly. It is notable for its timbered manor house, built about 1600. Pop. 366.

SPEKE, JOHN HANNING (1827-64). British explorer. Born May 4, 1827, he entered the Indian army in 1844. During his service he travelled extensively. In 1854 he accompanied Sir Richard Burton into Somaliland. He and Burton made another journey from Zanzibar in 1857, pushing up to Lake Tanganyika; eventually Speke reached Victoria Nyanza, having left Burton ill at Kaze. In 1862 Speke again made his way to Victoria Nyanza, and established the fact that the Nile is an outlet of the lake. He accidentally shot himself, Sept. 18, 1864. Consult his *Journal of the Discovery of the Source of the Nile*, 1863.

Count von Spee,
German sailor

J. H. Speke,
British explorer

Spelter. Trade name for zinc (q.v.). The term is also used for an alloy of copper and zinc.

SPENBOROUGH. Urban dist. of Yorkshire (W.R.). It is in the Spen Valley, 9 m. from Leeds. A centre of the woolen manufacture, it is of modern growth. The chief building is the town hall. Pop. 31,092.

SPENCER, EARL. British title borne since 1765 by the family of Spencer. John Spencer, a grandson of the 3rd earl of Sunderland, was made a baron and a viscount in 1761, and Earl Spencer in 1765. His son, George John, the 2nd earl, was first lord of the admiralty; the 3rd earl was a celebrated politician. The 5th earl was the noted Liberal statesman, and when he died the title passed to his half-brother, Charles Robert (1857-1922), long a Liberal member of Parliament and from 1905-12 lord chamberlain. The earl's estates are mainly in Northamptonshire, around his residence, Althorp (q.v.).

SPENCER, JOHN CHARLES SPENCER, 3rd EARL (1782-1845). British statesman. Born in London, May 30, 1782, he entered Parliament in 1804. In 1827 he became leader of the Whig opposition to Wellington, and in the ministry of Lord Grey Viscount Althorp, as he still was, became at one step chancellor of the exchequer and leader of the House, 1830, and was largely responsible for carrying through the Reform Bill. His father's death in 1834 translated him to the House of Lords and he left political life. He died at Wiseton, Northamptonshire, Oct. 1, 1845.

Speedwell. Blue flowers of the common wayside plant

SPENCER, JOHN POYNTE SPENCER, 5th EARL (1835-1910). British statesman. Elder son of the 4th earl, he was born in London, Oct. 27, 1835. In 1868 Spencer became lord-lieutenant of Ireland, and he retained his office until 1874. From 1880-82 he was lord president; then in 1882 he went again to Ireland. He followed Gladstone on Home Rule, and in 1886 was again lord president. In 1892 he became first lord of the admiralty. Spencer was Gladstone's choice as his successor in 1894, but when Rosebery was preferred he served him loyally; in opposition he was again active, and in 1902 became leader of his party in the Lords. He died Aug. 14, 1910.

SPENCER, HERBERT (1820-1903). British philosopher. Born at Derby, April 27, 1820, he was privately educated. From 1837 to 1846 he was engaged in civil engineering, and was sub-editor of *The Economist*, 1848-53. He opened his career as an author in 1842 with *Letters on the Proper Sphere of Government*, already noteworthy for their uncompromising individualism, and in 1850 published his first important work, *Social Statics*, in which an evolutionary theory of progress is clearly set forth. This was followed in 1855 by *The Principles of Psychology*.

Spencer now perceived the possibility of making evolution the foundation of an interpretation of life, mind, and society, and in March, 1860, he

5th Earl Spencer,
British statesman
Bersford

Herbert Spencer,
British philosopher
Elliott & Fry

issued the prospectus of his System of Synthetic Philosophy. This system is in ten volumes and occupied him for 36 years. His other works include Education, 1861; The Study of Sociology, 1873; and Man versus the State, 1884. Spencer died at Brighton, Dec. 8, 1903.

SPENDER, JOHN ALFRED (b. 1862). British journalist. Born at Bath, he was the eldest son of John Kent Spender, M.D., his mother (d. 1895) being known as a novelist.

J. A. Spender.
British journalist.
Elliott & Fry

He was educated at Bath College and Balliol College, Oxford. Editor of The Eastern Morning News, Hull, 1886-90, he joined the staff of The Pall Mall Gazette, 1892, was assistant editor of The Westminster Gazette, 1893-96, and editor, 1896-1921. Spender's writings include The Comments of Bagshot; The Foundations of British Policy; The Indian Scene; The Life of Sir H. Campbell-Bannerman, 1925; The Changing East, 1926; Life, Journalism and Politics, 1927, Life of Lord Cowdray, 1929, and Sir Robert Hudson, 1930.

Spender's brother, Edward Harold Spender (1864-1926), served on the leading Liberal newspapers and wrote a number of biographies.

SPENNYMOOR. Urban dist. of Durham. It is 6 m. from Durham on the L.N.E. Rly. The industries are connected with coal mines and iron and steel works. Pop. 18,242.

SPENSER, EDMUND (c. 1552-99). English poet. Born in London of humble parents, though he claimed connexion with the Spencers of Althorp, he was educated at Merchant Taylors' School and Pembroke Hall, Cambridge. The Shepherds' Calendar, published in 1579, brought him immediate fame. Already introduced at court by his powerful patrons, the earl of Leicester and Sir Philip Sidney, Spenser went to Ireland in 1580 as secretary to the lord deputy. Spenser was rewarded with an estate of 3,000 acres in county Cork. His ideas on English colonisation of Ireland are to be found in his prose work, A View of the State of Ireland. During these years a close friendship sprang up between Spenser and Raleigh, and it was at Spenser's castle of Kilcolman, about 1589, that the poet showed to his friend the first three books of The Faerie Queene, on which he had long been at work.

Marrying in 1594 a lady, the story of whose wooing Spenser tells in his Amoretti, he had made Ireland his home, when in 1597 an insurrection took place. Kilcolman Castle was burned, and one of Spenser's children, it is said, perished in the flames. He died in London, Jan. 16, 1599.

SPERMACEITI. A waxy substance obtained from the oil contained in the large skull cavity of the sperm whale. Mainly cetyl palmitate, it is hard, translucent, nearly white, and unctuous. Separating at a low temperature from the sperm oil, it is repeatedly washed with hot water and boiling potash lye. Spermaceti is used for making candles and dressing textiles, and in medicine and surgery.

SPERMATOZOON. Male germ cell. In the lowest form of life the spermatozoon

and the female cell, or egg, are very similar, but in the higher forms the spermatozoon becomes a highly specialised active locomotor cell, and the female egg or ovum becomes a larger, more passive cell. The spermatozoon is provided with a head, body, and tail, the tail providing the power for movement. See Biology; Embryology; Fertilisation; Sex.

Sperm Whale. Large cetacean, also known as the cachalot. See Whale.

Sperrin. Mountains in Ireland. They extend mainly between Strabane in co. Tyrone and Draperstown in co. Londonderry.

SPEY. River of Scotland. Rising in the hills between Lochs Lochy and Laggan, it flows E. and N.E. through Inverness-shire and Morayshire, forms part of the boundary between the latter county and Banffshire, and enters the Moray Firth at Kingston. It is 110 m. long, and has valuable salmon fisheries. Speyside is noted for whisky distilling.

Sphegodon. Nocturnal reptile somewhat similar to a lizard, that lives in New Zealand
W. S. Berridge, F.Z.S.

SPEZIA. City and seaport of Italy. It is situated on the gulf of Spezia, 56 m. by rly. S.E. of Genoa. It has an arsenal, docks, shipyards, in which some of the largest Italian warships have been built, and electrical works. Spezia is a winter resort. Here Shelley was drowned in 1822. Pop. 110,401.

SPHENODON. Lizard-like reptile of New Zealand, known to the Maoris as Tuatara, and now called scientifically Hatteria punctata. It is the only surviving representative of the order Rhynchocephalia (snout-headed) of the reptiles. The mandible is beak-like, and there is a pineal body in the top of the skull. The skin is tubercled, and a crest of small spines runs along the middle line of the back and tail. About 20 ins. long, its colour is usually dark olive with yellow dots. It lives in burrows and feeds at night on insects and worms.

SPHINX (Gr. sphingein, to strangle). Figure of a composite monster. The oldest example, the Great Sphinx of Gizeh, in lower Egypt, is a recumbent image of a man-headed lion, hewn out of a rocky knoll near the pyramid of Khafra. It is 187 ft. long, the head 30 ft. long, the face 14 ft. wide, and the height to the top of the head 66 ft. Portions of the

Sphinx of Gizeh after restoration. Hewn from the living rock, it is nearly 5,000 years old
"The Times" Copyright

beard and uraeus are in the British Museum. In front of the breast Thothmes IV set up a granite slab, mentioning Khafra's name, to commemorate the digging of the image out of the drifted sand. The next oldest, a granite pair 7 ft. long, bear the name of Pepi I, of the VIth dynasty.

According to Greek mythology the sphinx propounded riddles, strangling those who failed to solve them, but slaying herself when Oedipus offered the solution.

SPICE. Produce of plants that are aromatic to the smell and pungent to the taste. The spices are collected from different parts of plants. The most used are allspice, the berries of the pimento; cinnamon, the bark of a small evergreen tree of Ceylon; clove, the dried calyx and flower buds of a myrtle; ginger, the root of a tropical plant; and nutmeg, the kernel of another, while mace is the covering of nutmeg. Ground spices are used as flavourings.

Spice Islands. Name for the group of spice-yielding islands in the Dutch E. Indies, now usually known as the Molucces (q.v.).

SPIDER. Order (Araneidae) of the class Arachnida (q.v.) of the Arthropods. The spider's body is divided into two parts: (1) The head and breast, fused into one piece (the cephalothorax), and (2) the abdomen. Between these there is typically a narrow waist.

On the top of the head are several pairs of simple short-sighted eyes. From the region corresponding to the thorax there arise four pairs of seven-jointed legs, ending in minute curved claws, by means of which spiders grip the surface on which they creep. At the end of the abdomen there are 4-6 minute spinnerets, from which

Spider. 1. Full-grown garden spider, about natural size. 2. South American trapdoor spider, at the mouth of its burrow, reduced. 3. House spider, devouring a bluebottle fly, slightly magnified

the silken threads emerge. Each spinneret bears many tiny spinning tubes, through which the silk issues, and each tube is connected with an internal gland. The gland is enclosed in a muscular envelope, the contraction of which forces the liquid silk down a duct and out at a spinning tube. The thread is a fusion of many jets of liquid silk, which solidifies instantaneously on exposure to air.

Spiders breathe by means of lung-books and tracheae. The newly hatched young of a spider is practically a miniature of the adult, and there is no metamorphosis. Spiders live on the juices of insects, which they suck. They are characteristically terrestrial, but a few occur in fresh water, notably the water spider (Argyroneta aquatica).

When a spider is in danger of losing its foothold, it pays out a drag-line of silk. This is the origin of the irregular snare, as in the house spider, and of the beautifully regular web.

SPIDER MONKEY (*Ateles*) Genus of American monkeys notable for their attenuated limbs, slender bodies, and long prehensile tails. Marvellously agile, they swing from bough to bough, making use of their tail. There are many species, all found between Mexico and Uruguay, and in Brazil the natives use them for food.

SPIDERWORT (*Tradescantia*). Genus of perennial herbs of the natural order Commelinaceae. Natives of America, they vary considerably in form and habit. Some of the tropical species are in cultivation in hothouses and greenhouses; but the best known is the hardy Virginian spiderwort (*T. virginiana*), which has narrow leaves with purple veins.

Spike Island. Small island of co. Cork, Irish Free State. It lies in Cork Harbour, and on it from 1847-85 was a convict prison.

SPIKENARD (*Nardostachys jatamansi*). Perennial herb of the order Valerianaceae, native of the Himalayas. Sometimes called nard, it has a short, thick, spindle-shaped root-stock, very fragrant, which constituted the spikenard of the ancients. The lance-shaped leaves are tufted, and the small, rosy-purple flowers of the herb are gathered into dense heads.

Spikenard. Left, leaves and flower heads; right, root-stock

SPILSBURY, SIR BERNARD HENRY (b. 1878). British pathologist. He took his medical degree in 1905, and became lecturer in anatomy, forensic medicine, and pathology at various London hospitals, including St. Mary's and St. Bartholomew's. His services were frequently in use by the Home Office in connexion with crime and mystery cases. He wrote extensively on the medical investigation of crimes. He was knighted in 1923.

SPILSBY. Market town of Lincolnshire. It is 17 m. from Boston, on the L.N.E. Rly. The church, a 14th century building, contains monuments of the family of the earl of Ancaster. The town has an old butter cross and a statue of Sir John Franklin, who was born here. There is a trade in agricultural produce. Market day, Mon. Pop. 1,400.

SPINACH (*Spinacia oleracea*). Annual herb of the order Chenopodiaceae. Native of the East, it was introduced to Britain in 1568. As the leaves of the spring sown plants are ready to be picked in from six weeks to two months after sowing, spinach is a good catch crop. It is one of the most easily grown and profitable vegetables. Spinach beet or perpetual spinach is a variety of beetroot grown for its leaves. Pron. spinnidge.

Spinach. Leaves and flowers

SPINAL COLUMN. In vertebrate animals a series of hollow, connected bones enclosing the spinal cord and supporting the trunk. In the human species the spine is composed of 24 separate bones or vertebrae. These are connected with each other by cartilaginous disks, thus permitting of movements between any two vertebrae, and, extended over the column as a whole, allowing a considerable degree of rotation and bending of the body. The spine is not a straight column, but is

curved forwards in the cervical and lumbar regions, and backwards in the dorsal and sacral regions. (See illustration, p. 81.)

The spine serves two functions. It provides a firm pillar, which supports the skull and ribs and enables the body to be maintained in the upright position, and the arches attached to the vertebrae form a continuous canal, in which the spinal cord is lodged and thereby protected from injury.

Curvature of the spine is most frequently due to rickets in childhood, or bad habits when the child is growing rapidly, such as continuous stooping, which may result from sitting at too low a desk at school.

SPINAL CORD. Column of nerve fibres and cells, continuous above with the brain, which extends from the lower border of the large aperture in the base of the skull to the lower border of the first lumbar vertebra, where it terminates in a slender filament. It occupies the canal of the spine and is surrounded by prolongations of the membranes covering the brain, namely the dura mater, arachnoid, and pia mater. A section of the cord shows that it is composed of white matter and grey matter. Thirty-one pairs of nerves are given off from the spinal cord. Disease or injury of the spinal cord most often leads to paralysis. See Brain; Ganglion; Locomotor Ataxia; Nervous System; Paralysis, etc.

SPINDLE TREE (*Euonymus europaeus*). Small tree of the order Celastraceae, native of Europe, W. Siberia, and N. Africa. It grows to a height of about 20 ft. and has smooth grey bark. The fruits are four-lobed crimson capsules, which open to disclose the orange jackets (arillodes) of the few large seeds. The tough wood is of use for making small hard, articles.

SPINEL. In mineralogy, group of minerals containing iron, alumina, magnesia, etc., in varying combinations. The best known are precious spinel or balas ruby, found chiefly in Ceylon, Siam, etc., which forms transparent red crystals; magnetite, a black magnetic spinel; chromite, a dark brown to black variety; pleonaste, another black variety, and rubicelle, yellow or orange in colour.

SPINET (It. spinetta, little thorn). Keyboard instrument of the harpsichord type, but smaller. Like it, the strings were plucked by means of quills. The spinet varied in compass from under four to just five octaves. Early examples were small enough to be placed upon a table when in use, but later and larger specimens stood on legs. It was a favourite household instrument in the 16th-18th centuries. See illus. above.

SPINNAKER. Sail set out from the weather side of a vessel and opposite the mainsail. It is used largely in racing yachts. Mostly, the spinnaker is set when the vessel is running before the wind. A spinnaker topsail is a topsail set on a jack yard or short boom. See Ship.

SPINNING. Art of drawing, twisting, and combining animal or vegetable fibres into continuous threads. The simplest method of hand-spinning is by employing the distaff. The spinning wheel, in an

early form, consisted of a stool carrying a large and heavy wheel and a support to carry the spindle, which was belt-driven from the fly-wheel. The spinster maintained the motion of the wheel by strokes of the right hand, and with the left stretched the cord of roving or prepared fibre, first twisting the cord and then winding it on a spindle.

An improved form of wheel was furnished with a treadle to drive the fly-wheel. The spindle was fitted with a flyer to wind the yarn, and carried a bobbin revolving with separate motion. Bobbin and spindle rotated at different speeds. Thus both hands of the spinster were liberated and, the flyer supplying the necessary drag, the twisting of the cord and the winding-on of the yarn continued simultaneously.

The spinning wheel formed the basis of Hargreaves's jenny, which was, in the first instance, an apparatus for enabling one person to spin sixteen or more threads at once. The jenny was turned by hand. Lewis

Spinet. Italian instrument of wood and ivory ornamented with coloured stones, made by Annibale dei Rossi, 1577. See below

Paul, of Birmingham, in 1738, invented the means of superseding human fingers in drawing the sliver, or roving, out finer by passing the material in succession through pairs of rollers. It was in Sir Richard Arkwright's machine, 1769, known as the water-frame, that Paul's invention was first brought into successful employment. See Arkwright, Sir R.; Bobbin; Cotton; Crompton, S.; Distaff; Hargreaves, J.; Loom; Silk; Weaving.

SPINOZA, BARUCH DE (1632-77). Dutch philosopher. Born at Amsterdam, Nov. 24, 1632, of Portuguese-Jewish parentage, he at first studied theology, but his unorthodox views led to his excommunication. He refused a professorship at Heidelberg lest it might interfere with his philosophical studies, and obtained a living by polishing lenses. He died at The Hague, Feb. 21, 1677.

Baruch de Spinoza, Dutch philosopher

Spinoza's philosophy is based upon that of Descartes, but set forth according to a rigorously geometrical method. It is the most perfect form of pantheism. Starting from the definition of substance as that which is in itself and is conceived by itself, he shows that there is only one substance—God the absolutely infinite. According to Spinoza's teaching this infinite substance possesses infinite attributes, of which we only know two, namely thought and extension.

SPION KOP, BATTLE or. Defeat of the British army in the S. African War. Sir Charles Warren crossed the Tugela, and on Jan. 22, 1900, decided to attack Spion Kop, an eminence which formed the centre of the Boer right. On the night of Jan. 23-24 th

Spinnaker. Stern view of a racing cutter, showing her sails. A. Top-sail. B. Mainsail. C. Spinnaker

position was captured, but being very exposed it was abandoned during the next night, the British leaving behind 300 dead.

SPIRAEA. Large genus of perennial herbs and shrubs of the order Rosaceae, natives of the N. temperate and cold regions. British species are dropwort and meadow sweet. The name is used for *Astilbe japonica*.

SPIRES. City of Bavaria, Germany. Also known as Speyer, it is on the left bank of the Rhine, 10 m. S. of Mannheim. The term protestant originated with a protest of the Lutherans at the diet of Spires in 1529. Pop. 25,609. See Protestantism.

SPIRIT. In theology, the life-giving principle. In accordance with a primitive conception, the word in many languages means the breath (e.g. Heb. ruach, Gr. pneuma, Lat. spiritus, anima). God is spirit (John 4, 24), but beliefs differ as to the relation of other spirits to God, some regarding them as from their creation eternally distinct, others holding them to be emanations from the universal Spirit, into which they will be reabsorbed. The N.T. recognizes impure or evil spirits. See Animism; Mind; Psychology; Soul.

SPIRITS. General term for alcoholic liquors above a certain strength. Such liquors include not only those used as drinks, e.g. whisky, brandy, gin, etc., but also those used for lighting, power, and other purposes, e.g. nethylated spirits. The word is also used in chemistry for various solutions, e.g. spirits of hartshorn, a solution of ammonia in water. See Alcohol; Brandy; Distillation; Whisky.

SPIRITUALISM. System of thought or belief in which the possibility is maintained of mutual communication between living persons and discarnate spirits, especially of the dead. What is commonly known as spiritualism originated in 1848 at Hydesville, New York, with rappings alleged to be messages given to two girls named Fox, who afterwards became regular mediums at Rochester, New York. Thence the movement spread very rapidly through the U.S.A., and in 1852 it spread to Britain and the Continent. Spirit-rapping, table-turning, and exhibitions by mediums, accompanied sometimes by "materialisations," had an enormous vogue.

The frequent frauds of paid mediums did much to discredit the movement. With the advance of psychology and psychical research it came to be recognized that many facts uncritically regarded as demonstrating communication from the dead could be referred to other causes. Emotional expectancy creates an atmosphere unfavourable to exact observation, telepathy may account for much, the subconscious mind has been found to possess unsuspected faculties of inference and dramatisation, and dual personality has been the subject of investigation.

In England the London Spiritualist Alliance, the organ of which is *Light*, dates from 1884. Among those who did much to popularise the movement were W. T. Stead (q.v.), and after the Great War, which gave it a powerful impetus, Sir A. Conan Doyle (q.v.). See Psychical Research.

SPIITALFIELDS. Dist. of E. London. In the met. hor. of Stepney (q.v.), it lies between Whitechapel and Mile End New Town, E., and the City and Shoreditch, W. Christ Church is notable for its arched portico. The silk industry was established here by French Huguenot refugees in 1685 and flourished for a century or more. Spitalfields Market for fruit and vegetables dates from the 17th century. In 1928 a new market was opened.

SPIITHEAD. Roadstead off the S. coast of England. It extends for 12 m. N.W. to S.E., between East Cowes and Portsmouth, and communicates from the E. with the Solent and Southampton Water. See Portsmouth.

SPITSBERGEN. Arctic archipelago. Lying some 360 m. N. of Norway, it consists of Mainland or West Spitsbergen; North East Land, Barents, Edge, and Hope Islands on the E.; Prince Charles Foreland on the W., and many smaller islands. Bear Island, 130 m. S.S.E. of Spitsbergen, is generally included in the archipelago. The name of the whole of Norwegian Polar territory, including Spitsbergen, Bear Island, etc., is Svalbard. The total land area is about 25,000 sq. m.

Vegetation is scanty, but bird life is abundant in summer. Land animals include the reindeer, fox, and polar bears. Since its discovery by the Dutch in 1596 Spitsbergen has been the resort of whalers, trappers, and hunters. Since about 1900 the minerals have attracted attention; these include coal, copper, and asbestos. In 1920 Spitsbergen was placed under Norwegian sovereignty.

Spittal. Watery place of Northumberland. It stands at the mouth of the Tweed, opposite Berwick. Pop. 1,900.

SPLEEN. Organ of oblong, flattened form placed in the upper part of the abdomen on the left side. It is about 6 ins. long, 3 ins. broad, and weighs from 6 to 8 ounces. The spleen is the largest of the ductless glands. Its functions are (1) to form white blood corpuscles and, in certain animals, red corpuscles; (2) to disintegrate some of the red blood corpuscles which have discharged their function and are worn out; (3) to take part in nitrogenous metabolism in the formation of uric acid.

SPLEENWORT (*Ceterach officinarum*). Fern of the natural order Polypodiaceae, a native of Europe, W. Asia, and N. and S. Africa.

Spleenwort. Fronds of the sea spleenwort, *Asplenium maritimum*

The fronds are narrow lance-shaped, the two sides cut into semi-elliptic lobes.

Spleenwort is also used as a popular name for ferns of the extensive genus *Asplenium*. Species found in Britain include the wall rue, maiden-hair spleenwort, black spleenwort, and sea spleenwort (*Asplenium marinum*). See Fern.

SPLINT. Artificial support for limbs when the bones are broken, or weakened or bent by disease. They may be made of wood, leather, zinc, poroplastic material, etc., and are of numerous forms, sizes, and shapes, according to the condition of the limb or the purpose to be achieved. See First Aid.

SPLÜGEN. Alpine pass between Switzerland and Italy. Its height is 6,945 ft. There is a carriage road between Chiavenna and Coire, connecting the valley of the farther or hinter Rhine with that of Lako Como.

SPODE. Variety of chinaware. In 1770 Josiah Spode began to make felspar porcelain at Stoke-upon-Trent. He introduced crushed bone into its composition, which was a soft paste, giving a very transparent body. Spode's

shapes were good, and his pieces rather highly decorated with flowers and gilding. His firm became one of the leading houses in the trade. See Pottery.

Spode. Plate of this delicate decorated porcelain. Herbert Allen Collection, Victoria & Albert Museum

was a member of the first Australian team to come to England in 1878, and during the tour he took from start to finish 764 wickets (including 326 in England) for 608 runs each. In 1884, his greatest season with the ball, he took 218 wickets in first-class cricket for an average of 12.53 per wicket. He died June 4, 1926.

SPOHR, LOUIS OR LUDWIG (1784-1859). German composer. Born at Brunswick.

April 5, 1784, he entered the court orchestra at Brunswick in 1798. He toured extensively in Germany, visited England in 1820, conducting Philharmonic Society concerts with success, and was court conductor at Cassel from 1822-57. He died there on Oct. 22, 1859. His two hundred works include eleven operas, several oratorios, notably *The Last Judgement*, 1826, nine symphonies, some chamber music, and violin music of considerable interest. His violin course, still a standard work, was published in 1831.

SPOGE. Name for lowly animals comprised in the phylum Porifera. Many occur in colonies, but some are simple individuals. A simple sponge consists of a short tube, attached at the base, and with an opening at the top. The body wall is pierced by pores through which water enters the cavity and is then expelled at the top. There is an intermediate layer or layers of jelly and cells between the inner and outer integuments. There are no internal organs, but part of the body cavity is lined with specialised cells which catch and absorb the minute organisms brought in with the water. Other cells are specialised for reproductive functions, and still others secrete minute flinty or calcareous spicules.

The sponge fishery is carried on by trawling and the use of pronged forks; but the best sponges are obtained by diving.

SPOON (A.S. spon, a chip of wood). Implement consisting of a small bowl with a

Sponge. Bottom, alive. Top, as prepared for commerce. Dr. C. M. Yonge

Spoon. 1. Pewter, 15-16th century. 2. Horn, 16-17th cent. 3 and 5. Latten, 17th cent. 4. Pewter, 17th cent. 6. Pewter, 18th cent. Guildhall Museum, London

handle, used primarily for conveying liquid or soft food to the mouth. The ancient Egyptians made spoons of ivory, flint, etc.; the Greeks and Romans used metal. *See* Apostle.

SPOONBILL (*Platalea leucorodia*). Bird, related to the ibis. It is rare in Great Britain. It is about 32 ins. long, and has white plumage with a tinge of buff on the neck. The long flat beak is black with the exception of the tip, which is yellow. It widens out at the tip somewhat like a spoon. The legs are long, and the general form of the bird is suggestive of a heron. It is always found near water, usually in marshes.

Spoonbill. Flat-beaked marsh bird

SPOONERISM. In speech the involuntary transformation of the initial letters of two adjacent words. It owes its name to the Rev. W. A. Spooner (1844-1930), warden of New College, Oxford, who is regarded as the author of many of them. An example is "A half-warmed fish," when the speaker intended to say "A half-formed wish."

SPORADES. Greek islands in the Aegean Sea. They lie E. of the Cyclades, and include Astropalia and Patmos. Formerly they were Turkish, but during the Turco-Italian war Italy seized 12 of them, and during the Balkan war Greece occupied the remainder. By the treaty of peace (1919) they became Greek.

SPORE. Reproductive cell of plants. Reproduction by spores is one of the most prominent causes of plant growth, and may be asexual or sexual. The spores of many plants, as fungi, are light and easily carried through the air by the wind, while others are so constructed as to cling to passing animals, etc. Most consist of a hard outer and a delicate inner wall. *See* Cell; Fungus; Moss; Seed.

SPOROZOA. Parasitic protozoa. They form important and widespread organisms, and include malaria germs, Texas cattle-fever germs, tsetse disease, etc. Living by absorption of the fluid juices of the tissues of their host, sporozoa develop from spores which break up into small bodies or sporozoites, and before their life cycle is complete they must leave their original host for a second host. Thus the sporozoites of malaria are developed in mosquitoes and are then transferred to man. *See* Malaria; Mosquito; Parasite.

SPRAIN or **STRAIN**. Tearing or stretching of the synovial membrane of a joint or of ligaments, resulting from sudden violence applied to the joint. Inflammatory effusion, swelling, and pain follow. The joint should immediately be supported with a firm, wet bandage, and the limb kept quiet and raised. *See* First Aid; Massage.

SPRAT (*Clupea sprattus*). Small European fish of the herring family, common in British seas. It varies in length from three to five inches when adult, the young being known as whitebait. Sprats occur largely in brackish water about river estuaries; but spawning takes place at sea. The fishery is of importance in the late autumn, seines, drift nets, and stow nets being used for the purpose.

SPRIGG, SIR JOHN GORDON (1830-1913). S. African statesman. The son of a Baptist minister at Ipswich, he settled in 1858 in Cape Colony, where he became a journalist and politician. He entered the house of assembly in 1873, and became prime minister five years later, resigning in 1881. Prime minister again, 1880-90, 1896-98, and 1900-4, he

Sprat. Small variety of herring caught off the British coasts

was defeated at the elections in the latter year and retired from politics. Sprigg was knighted in 1902, and died Feb. 4, 1913.

SPRINGBOK (*Gazella euchores*). Species of gazelle found in S. Africa. It stands about 30 ins. high, and has cinnamon-yellow hair with white under parts and a line of white hair along the back. The horns are lyre-shaped and about 15 ins. long. *See* illus. below.

SPRINGFIELD. City of Massachusetts, U.S.A. It stands on the Connecticut river, 100 m. by rly. W. by S. of Boston, and is served by the Boston and Maine and other rlys. Educational institutions include the American International College and the Y.M.C.A. College. Industries include the manufacture of electric cars, motor vehicles, cotton and woolen goods, electrical appliances, cigars and tobacco, machinery and confectionery. Abraham Lincoln is buried here. Pop. 142,065.

Spring Hill. Town of Nova Scotia, Canada. It is 75 m. due N.N.W. of Halifax, and is in a colliery district. Pop. 5,681.

SPRING-RICE, SIR CECIL ARTHUR (1859-1918). British diplomat. Born Feb. 27, 1859, and educated at Eton and Oxford, he joined the staff of the British embassy at Washington in 1886, and later served at Tokyo, Teheran, Cairo, and St. Petersburg. In 1908, having been knighted, he was appointed minister to Sweden, and in 1913 British ambassador to the United States. During the Great War he handled the delicate situation due to America's neutrality, 1914-17, with much tact, dealt ably with the treatment of neutrals and neutral shipping, and conducted the British side of the negotiations leading up to America's participation in the war. He died at Ottawa, Feb. 14, 1918.

SPRINGTAIL. Sub-order (Collembola) of small wingless insects, which have a forked organ turned forwards under the abdomen. When this is suddenly released it strikes the surface on which the insect is standing and so throws it up into the air. They are common under stones and bark. Some of the species are aquatic, and one, known as the glacier flea, is fairly common on the ice in the Alps.

SPRINTING. Short distance running. The sprint is regarded as one of the most strenuous of athletic events. Although the most popular sprint distance is 100 yards, races of 60 yards, 75 yards, 120 yards, 220 yards, and even 440 yards are also classed as sprint races. The practice of short bursts of speed, from 30 to 40 yards, the maintenance of a long stride, and speed in getting off the mark are important factors in sprinting.

The world's professional record is held by J. Donaldson, who accomplished 93 secs. in 1910. For several years 9½ secs. has stood as the world's amateur record. *See* Running.

SPROCKET. In machinery, a tooth or projection on the circumference of a wheel. A sprocket wheel is one with cogs to engage with the links of a chain, as in the driving-wheel of an ordinary bicycle.

SPRUCE (*Picea excelsa*). Evergreen tree of the order Coniferae. Native of Europe, it was introduced into Britain before 1548. It attains a maximum height of considerably over 100 ft. when planted in deep, rich loam. Grown abroad for its timber, it is planted in Britain as an ornamental tree. The timber is used for roofing, flooring, poles, and ladders, or for scaffold poles, masts, or pit props. Blackspruce (*P. nigra*) is largely used in the manufacture of paper pulp.

Spruce. Cones and leaves of the black spruce

SPUR (A.S. *spura*). Sharp instrument fitted to the heel of a rider, to press into the side of a horse to urge it on. Modern spurs usually have rowels or little wheels edged with sharp points. At one time gold spurs were a sign of knighthood.

The battle of the spurs was fought near Théroutan, Aug. 16, 1513. It was only a cavalry skirmish between the English and some French knights.

SPURGE (*Euphorbia*). Large genus of trees, shrubs, and herbs of the order Euphorbiaceae, natives of all except extremely cold climates. Most of them have milky acrid juice, and many are succulent like cacti. Few of them have conspicuous flowers but in some species the yellow blossoms are surrounded by large bracts, which are brilliantly coloured red. Some of the European species are mere weeds of cultivated ground. The wood spurge is a shrublike perennial with large persistent leaves. Cypress spurge is another European species.

Spur. Ornamented spur of the sixteenth century

SPURGEON, CHARLES HADDON (1834-92). British preacher. Born at Kelvedon, June 19, 1834, the son of an Independent minister, he joined the Baptists and became, in 1852, minister of a Baptist chapel at Waterbeach, where his success won for him an invitation to a church in Southwark. There his preaching attracted great crowds, and after Exeter Hall and the Surrey Gardens Music Hall had been used for the services, the Metropolitan Tabernacle was built for him, 1860-61. There he preached until his death, Jan. 31, 1892.

Charles H. Spurgeon
British preacher

Eccentric and sensational in his appeals, possessing a fund of humour and a remarkable power of homely speech, Spurgeon was the most popular preacher of his day. His activities included the foundation of a college for training Baptist ministers, an orphanage at Stockwell, and some almshouses. His sermons, published regularly, had an enormous sale, and his magazine, *The Sword and Trowel*, was popular. Consult *Life*, W. Y. Fullerton, 1921.

Spurn Head. A promontory on the E. coast of Yorkshire (E.R.). It extends 2½ miles, into the estuary of the Humber.

Sprocket wheel, with cogs a, a, a

SQUADRON. Military term for a cavalry unit. In the British army the cavalry regiment is divided into four squadrons. The

position was captured, but being very exposed it was abandoned during the next night, the British leaving behind 300 dead.

SPIRAEA. Large genus of perennial herbs and shrubs of the order Rosaceae, natives of the N. temperate and cold regions. British species are dropwort and meadow sweet. The name is used for *Astilbe japonica*.

SPIRES. City of Bavaria, Germany. Also known as Speyer, it is on the left bank of the Rhine, 10 m. S. of Mannheim. The term protestant originated with a protest of the Lutherans at the diet of Spire in 1529. Pop. 25,809. See Protestantism.

SPIRIT. In theology, the life-giving principle. In accordance with a primitive conception, the word in many languages means the breath (e.g. Heb. ruach, Gr. pneuma, Lat. spiritus, anima). God is spirit (John 4, 24), but beliefs differ as to the relation of other spirits to God, some regarding them as from their creation eternally distinct, others holding them to be emanations from the universal Spirit, into which they will be reabsorbed. The N.T. recognizes impure or evil spirits. See Animism; Mind: Psychology; Soul.

SPIRITS. General term for alcoholic liquors above a certain strength. Such liquors include not only those used as drinks, e.g. whisky, brandy, gin, etc., but also those used for lighting, power, and other purposes, e.g. methylated spirits. The word is also used in chemistry for various solutions, e.g. spirits of hartshorn, a solution of ammonia in water. See Alcohol; Brandy; Distillation; Whisky.

SPIRITUALISM. System of thought or belief in which the possibility is maintained of mutual communication between living persons and discarnate spirits, especially of the dead. What is commonly known as spiritualism originated in 1848 at Hydesville, New York, with rappings alleged to be messages given to two girls named Fox, who afterwards became regular mediums at Rochester, New York. Thence the movement spread very rapidly through the U.S.A., and in 1852 it spread to Britain and the Continent. Spirit-rapping, table-turning, and exhibitions by mediums, accompanied sometimes by "materialisations," had an enormous vogue.

The frequent frauds of paid mediums did much to discredit the movement. With the advance of psychology and psychological research it came to be recognized that many facts uncritically regarded as demonstrating communication from the dead could be referred to other causes. Emotional expectancy creates an atmosphere unfavourable to exact observation, telepathy may account for much, the subconscious mind has been found to possess unsuspected faculties of inference and dramatisation, and dual personality has been the subject of investigation.

In England the London Spiritualist Alliance, the organ of which is *Light*, dates from 1884. Among those who did much to popularise the movement were W. T. Stead (q.v.), and after the Great War, which gave it a powerful impetus, Sir A. Conan Doyle (q.v.). See Psychological Research.

SPIITALFIELDS. Dist. of E. London. In the met. bor. of Stepney (q.v.), it lies between Whitechapel and Mile End New Town, E., and the City and Shoreditch, W. Christ Church is notable for its arched portico. The silk industry was established here by French Huguenot refugees in 1685 and flourished for a century or more. Spitalfields Market for fruit and vegetables dates from the 17th century. In 1928 a new market was opened.

SPLITHEAD. Roadstead off the S. coast of England. It extends for 12 m. N.W. to S.E., between East Cowes and Portsmouth, and communicates from the E. with the Solent and Southampton Water. See Portsmouth.

SPITSBERGEN. Arctic archipelago. Lying some 360 m. N. of Norway, it consists of Mainland or West Spitsbergen; North East Land, Barents, Edge, and Hope Islands on the E.; Prince Charles Foreland on the W., and many smaller islands. Bear Island, 130 m. S.S.E. of Spitsbergen, is generally included in the archipelago. The name of the whole of Norwegian Polar territory, including Spitsbergen, Bear Island, etc., is Svalbard. The total land area is about 25,000 sq. m.

Vegetation is scanty, but bird life is abundant in summer. Land animals include the reindeer, fox, and polar bears. Since its discovery by the Dutch in 1596 Spitsbergen has been the resort of whalers, trappers, and hunters. Since about 1900 the minerals have attracted attention; these include coal, copper, and asbestos. In 1920 Spitsbergen was placed under Norwegian sovereignty.

Spittal. Watering place of Northumberland. It stands at the mouth of the Tweed. opposite Berwick. Pop. 1,900.

SPLEEN. Organ of oblong, flattened form placed in the upper part of the abdomen on the left side. It is about 6 ins. long, 3 ins. broad, and weighs from 6 to 8 ounces. The spleen is the largest of the ductless glands. Its functions are (1) to form white blood corpuscles and, in certain animals, red corpuscles; (2) to disintegrate some of the red blood corpuscles which have discharged their function and are worn out; (3) to take part in nitrogenous metabolism in the formation of uric acid.

SPLEENWORT (*Ceterach officinarum*). Fern of the natural order Polypodiaceae, a native of Europe W. Asia, and N. and S. Africa.

The fronds are narrow lance-shaped, the two sides cut into semi-elliptic lobes.

Spleenwort is also used as a popular name for ferns of the extensive genus *Asplenium*. Species found in Britain include the wall rue, maiden-hair spleenwort, black spleenwort, and sea spleenwort (*Asplenium marinum*). See Fern.

SPLINT. Artificial support for limbs when the bones are broken, or weakened or bent by disease. They may be made of wood, leather, zinc, poroplastic material, etc., and are of numerous forms, sizes, and shapes, according to the condition of the limb or the purpose to be achieved. See First Aid.

SPLÜGEN. Alpine pass between Switzerland and Italy. Its height is 6,945 ft. There is a carriage road between Chiavenna and Coire, connecting the valley of the farther or hinter Rhine with that of Lake Como.

SPODE. Variety of chinaware. In 1770 Josiah Spode began to make felspar porcelain at Stoke-upon-Trent. He introduced crushed bone into its composition, which was a soft paste, giving a very transparent body. Spode's

shapes were good, and his pieces rather highly decorated with flowers and gilding. His firm became one of the leading houses in the trade. See Pottery.

Spode. Plate of this delicate decorated porcelain. Herbert Allen Collection, Victoria & Albert Museum

was a member of the first Australian team to come to England in 1878, and during the tour he took from start to finish 764 wickets (including 326 in England) for 608 runs each. In 1884, his greatest season with the ball, he took 218 wickets in first-class cricket for an average of 12.53 per wicket. He died June 4, 1926.

SPOHR, LOUIS OR LUDWIG (1784-1859). German composer. Born at Brunswick.

April 5, 1784, he entered the court orchestra at Brunswick in 1798. He toured extensively in Germany, visited England in 1820, conducting Philharmonic Society concerts with success, and was court conductor at Cassel from 1822-57. He died there on Oct. 22, 1859. His two hundred works include eleven operas, several oratorios, notably *The Last Judgement*, 1826, nine symphonies, some chamber music, and violin music of considerable interest. His violin course, still a standard work, was published in 1831.

SPONGE. Name for lowly animals comprised in the phylum Porifera. Many occur in colonies, but some are simple individuals. A simple sponge consists of a short tube, attached at the base, and with an opening at the top. The body wall is pierced by pores through which water enters the cavity and is then expelled at the top. There is an intermediate layer or layers of jelly and cells between the inner and outer integuments. There are no internal organs, but part of the body cavity is lined with specialised cells which catch and absorb the minute organisms brought in with the water. Other cells are specialised for reproductive functions, and still others secrete minute flinty or calcareous spicules.

The sponge fishery is carried on by trawling and the use of pronged forks; but the best sponges are obtained by diving.

SPOON (A.S. spon, a chip of wood). Implement consisting of a small bowl with a

Sponge. Bottom, alive. Top, as prepared for commerce. Dr. C. M. Yonge

Spoon. 1. Pewter, 15-16th century. 2. Horn, 16-17th cent. 3 and 5. Latten, tinned, 17th cent. 4. Pewter, 17th cent. 6. Pewter, 18th cent. Guildhall Museum, London

handle, used primarily for conveying liquid or soft food to the mouth. The ancient Egyptians made spoons of ivory, flint, etc.; the Greeks and Romans used metal. See Apostle.

SPOONBILL (*Platalea leucorodia*). Bird, related to the ibis. It is rare in Great Britain. It is about 32 ins. long, and has white plumage with a tinge of buff on the neck. The long flat beak is black with the exception of the tip, which is yellow. It widens out at the tip somewhat like a spoon. The legs are long, and the general form of the bird is suggestive of a heron. It is always found near water, usually in marshes.

Spoonbill. Flat-beaked marsh bird

SPONDERISM. In speech the involuntary transformation of the initial letters of two adjacent words. It owes its name to the Rev. W. A. Spooner (1844-1930), warden of New College, Oxford, who is regarded as the author of many of them. An example is "A half-warmed fish," when the speaker intended to say "A half-formed wish."

SPORADES. Greek islands in the Aegean Sea. They lie E. of the Cyclades, and include Astropalia and Patmos. Formerly they were Turkish, but during the Tureo-Italian war Italy seized 12 of them, and during the Balkan war Greece occupied the remainder. By the treaty of peace (1919) they became Greek.

SPORE. Reproductive cell of plants. Reproduction by spores is one of the most prominent causes of plant growth, and may be asexual or sexual. The spores of many plants, as fungi, are light and easily carried through the air by the wind, while others are so constructed as to cling to passing animals, etc. Most consist of a hard outer and a delicate inner wall. See Cell; Fungus; Moss; Seed.

SPOROZOA. Parasitic protozoa. They form important and widespread organisms, and include malaria germs, Texas cattle-fever germs, tsetse disease, etc. Living by absorption of the fluid juices of the tissues of their host, sporozoa develop from spores which break up into small bodies or sporozoites, and before their life cycle is complete they must leave their original host for a second host. Thus the sporozoites of malaria are developed in mosquitoes and are then transferred to man. See Malaria; Mosquito; Parasite.

SPRAIN OR STRAIN. Tearing or stretching of the synovial membrane of a joint or of ligaments, resulting from sudden violence applied to the joint. Inflammatory effusion, swelling, and pain follow. The joint should immediately be supported with a firm, wet bandage, and the limb kept quiet and raised. See First Aid; Massage.

SPRAT (*Clupea sprattus*). Small European fish of the herring family, common in British seas. It varies in length from three to five inches when adult, the young being known as whitebait. Sprats occur largely in brackish water about river estuaries; but spawning takes place at sea. The fishery is of importance in the late autumn, seines, drift nets, and stow nets being used for the purpose.

SPRIGG, SIR JOHN GORDON (1830-1913). S. African statesman. The son of a Baptist minister at Ipswich, he settled in 1858 in Cape Colony, where he became a journalist and politician. He entered the house of assembly in 1873, and became prime minister five years later, resigning in 1881. Prime minister again, 1886-90, 1896-98, and 1900-4, he

Sprat. Small variety of herring caught off the British coasts

was defeated at the elections in the latter year and retired from politics. Sprigg was knighted in 1902, and died Feb. 4, 1913.

SPRINGBOK (*Gazella euclora*). Species of gazelle found in S. Africa. It stands about 30 ins. high, and has cinnamon-yellow hair with white under parts and a line of white hair along the back. The horns are lyre-shaped and about 15 ins. long. See illus. below.

SPRINGFIELD. City of Massachusetts, U.S.A. It stands on the Connecticut river, 100 m. by rly. W. by S. of Boston, and is served by the Boston and Maine and other rlys. Educational institutions include the American International College and the Y.M.C.A. College. Industries include the manufacture of electric cars, motor vehicles, cotton and woolen goods, electrical appliances, cigars and tobacco, machinery and confectionery. Abraham Lincoln is buried here. Pop. 142,065.

Springbok. Gazelle inhabiting South Africa. See above

Spring Hill. Town of Nova Scotia, Canada. It is 75 m. due N.N.W. of Halifax, and is in a colliery district. Pop. 5,681

SPRING-RICE, SIR CECIL ARTHUR (1859-1918). British diplomat. Born Feb. 27, 1859, and educated at Eton and Oxford, he joined the staff of the British embassy at Washington in 1886, and later served at Tokyo, Teheran, Cairo, and St. Petersburg. In 1908, having been knighted, he was appointed minister to Sweden, and in 1913 British ambassador to the United States. During the Great War he handled the delicate situation due to America's neutrality, 1914-17, with much tact, dealt ably with the treatment of neutrals and neutral shipping, and conducted the British side of the negotiations leading up to America's participation in the war. He died at Ottawa, Feb. 14, 1918.

SPRINGTAIL. Sub-order (Collembola) of small wingless insects, which have a forked organ turned forwards under the abdomen. When this is suddenly released it strikes the surface on which the insect is standing and so throws it up into the air. They are common under stones and bark. Some of the species are aquatic, and one, known as the glacier flea, is fairly common on the ice in the Alps.

SPRINTING. Short distance running. The sprint is regarded as one of the most strenuous of athletic events. Although the most popular sprint distance is 100 yards, races of 60 yards, 75 yards, 120 yards, 220 yards, and even 440 yards are also classed as sprint races. The practice of short hursts of speed, from 30 to 40 yards, the maintenance of a long stride, and speed in getting off the mark are important factors in sprinting.

The world's professional record is held by J. Donaldson, who accomplished 9½ secs. in 1910. For several years 9½ secs. has stood as the world's amateur record. See Running.

SPROCKET. In machinery, a tooth or projection on the circumference of a wheel. A sprocket wheel is one with cogs to engage with the links of a chain, as in the driving-wheel of an ordinary bicycle.

SPRUCE (*Picea excelsa*). Evergreen tree of the order Coniferae. Native of Europe, it was introduced into Britain before 1548. It attains a maximum height of considerably over 100 ft. when planted in deep, rich loam. Grown abroad for its timber, it is planted in Britain as an ornamental tree. The timber is used for roofing, flooring, poles, and ladders, or for scaffold poles, masts, or pit props. Blackspruce (*P. nigra*) is largely used in the manufacture of paper pulp.

spruce. Cones and leaves of the black spruce

SPUR (A.S. *spura*). Sharp instrument fitted to the heel of a rider. To press into the side of a horse to urge it on. Modern spurs usually have rowels or little wheels edged with sharp points. At one time gold spurs were a sign of knighthood.

The battle of the spurs was fought near Therouanne, Aug. 16, 1513. It was only a cavalry skirmish between the English and some French knights.

SPURGE (*Euphorbia*). Large genus of trees, shrubs, and herbs of the order Euphorbiaceae, natives of all except extremely cold climates. Most of them have milky acid juice, and many are succulent like cacti. Few of them have conspicuous flowers but in some species the yellow blossoms are surrounded by large bracts, which are brilliantly coloured red. Some of the European species are mere weeds of cultivated ground. The wood spurge is a shrublike perennial with large persistent leaves. Cypress spurge is another European species.

Spur. Ornamented spur of the sixteenth century

SPURGEON, CHARLES HADDON (1834-92). British preacher. Born at Kelvedon, June 19, 1834, the son of an Independent minister, he joined the Baptists and became, in 1852, minister of a Baptist chapel at Waterbeach, where his success won for him an invitation to a church in Southwark. There his preaching attracted great crowds, and after Exeter Hall and the Surrey Gardens Music Hall had been used for the services, the Metropolitan Tabernacle was built for him, 1860-61. There he preached until his death. Jan. 31, 1892.

Charles H. Spurgeon
British preacher

Eccentric and sensational in his appeals, possessing a fund of humour and a remarkable power of homely speech, Spurgeon was the most popular preacher of his day. His activities included the foundation of a college for training Baptist ministers, an orphanage at Stockwell, and some almshouses. His sermons, published regularly, had an enormous sale, and his magazine, *The Sword and Trowel*, was popular. Consult *Life*, W. Y. Fullerton, 1921.

Sprocket wheel, with cogs a, a, a

Spurn Head. A promontory on the E. coast of Yorkshire (E.R.). It extends 2½ miles into the estuary of the Humber.

SQUADRON. Military term for a cavalry unit. In the British army the cavalry regiment is divided into four squadrons. The

squadron is composed of two troops consisting of 120 to 200 men. In the naval sense a squadron is any number of vessels under the command of an officer of flag rank. In the Royal Air Force a squadron is commanded by an officer known as a squadron leader, his rank being equivalent to that of lieutenant-commander in the navy and major in the army.

SQUASH (*Cucurbita maxima*). Annual herb of the order Cucurbitaceae. A trailing plant, like the vegetable marrow, its fruits are fleshy and edible. See Gourd; Pumpkin.

SQUASH RACKETS. Game played in a similar manner to ordinary rackets, but on a considerably smaller court, which confines the game to two persons. The ball is of india-rubber, the size of a fives ball. The walls of the court are either of smooth wood or of cement, and the game is much slower than rackets. Squash is governed by most of the rules appertaining to single rackets. Successful play depends on the accurate placing of the ball. There are courts at Lord's, Queen's Club, the Bath, etc. See Rackets.

SQUID. Name popularly given to the genus *Loligo* of the cuttles, found around the British coasts. The common species

(*L. forbesii*) has a rather long, cylindrical body, a short head surrounded by tentacles, and two triangular "fins" on the hinder portion of the body. Active animals, able to swim rapidly backwards by expelling water from their siphons, they feed upon small molluscs and crustaceans. See Cephalopoda; Cuttle; Flying Squid.

SQUINT. Defect of the eye. In squinting, or strabismus, the visual axis of one of the eyes deviates from its proper position, with the result that the two visual axes cannot be directed simultaneously upon the same point.

SQUIRES, SIR RICHARD ANDERSON (b. 1880). Newfoundland politician. Born Jan. 18, 1880, at Harbour Grace, he went to the university at Halifax and became a lawyer in 1902. In 1909 he was elected to the House of Assembly, and in 1914 was made minister of justice and attorney-general. He returned to office in 1917 as secretary of state, and in 1919 became prime minister, a post he held until 1923. In 1921 he was knighted. In 1928 Squires again became premier, and as such he attended the Imperial Conference held in London in Oct.-Nov., 1930.

Sir R. A. Squires,
Newfoundland
politician

SQUIRREL (Gr. *skia*, shadow; *oura*, tail). Genus of small rodents of the family *Sciuridae*. The common squirrel (*Sciurus vulgaris*) occurs throughout Europe and N. Asia. The British variety is 8 ins. long in body, with a tail of 7 ins. In the winter the coat is brownish red on the head and back, grey at the sides, chestnut on the limbs, dark reddish-brown on the tail, and white on the under parts; and the ear-tufts are long and conspicuous. In summer the grey disappears.

Squirrel. 1. Common red species. 2. American grey squirrel

Squirrels spend most of their time in the trees, and on the ground progress by bounds. They build nests in hollows of trees, in which to rear the young. Large stores of nuts, etc., are laid up for the cold season. The grey squirrel (*S. cinereus*) is a N. American species. See Chipmunk; Flying Squirrel; Prairie Dog; Sable.

SQUIRTING CUCUMBER (*Ecballium elaterium*). Annual herb of the order Cucurbitaceae, native of the Mediterranean region. It has trailing stems, and heart-shaped leaves with toothed margins. The flowers are yellow, and the fruit is a small green prickly gourd. When ripe, the fruit parts from its stalk and violently ejects its seeds, together with the thin pulp surrounding them, through the base.

SRINAGAR. Capital of the state of Kashmir, India. It stands on both banks of the Jhelum, over 5,000 ft. above sea level, 175 m. N.N.E. of Lahore, in the vale of Kashmir. The town was formerly the hot weather capital of the Mogul emperors. Pop. 141,735.

STABILIZATION. The basing of a nation's currency on a recognized and real standard of value, usually gold. After the Great War the currencies of most European states fell into chaos, the mark and krone becoming almost worthless.

Stabilization was thus necessary, and in 1924 Germany placed her currency on a gold basis, i.e. gave the mark a definite value in gold. Italy stabilized the lire in 1927, and France the franc in 1928.

STADIUM (Gr. *stadion*). Greek measure of length equivalent to about 582·5 English feet. This was the distance of the short race at Olympia, and the name came to be applied, first to the race, and then to a building in which the racing and other contests took place. The stadium at Olympia was rectangular, but most of the others had one semicircular end. A stadium was erected at Shepherd's Bush, London, for the Olympic Games in 1908. One at Wembley was opened in 1923. See Amphitheatre; Circus; also *illus.* above.

STADTHOLDER (Dutch *stadhouder*, substitute, deputy). Chief magistrate of the United Netherlands. The title was originally given to the representatives of the Spanish crown in the Netherlands. After the revolt of the seven states from Spain, 1579, Friesland elected John of Orange as stadtholder, while the six remaining states chose his brother, William the Silent (q.v.). The authority of the stadtholders was based solely on the powers delegated to them by the states.

STAËL, ANNE LOUISE GERMAINE, BARONNE DE (1766-1817). French writer. She was born in Paris, April 22, 1766, daughter of the financier Necker, and became the wife of the Swedish minister, the Baron de Staël-Holstein. Driven from France by the Revolution, she retired to her father's estate at Coppet, near Geneva, and though she returned to Paris in 1797, she was presently exiled by Napoleon. M. de Staël died in 1802, and in 1811 his widow married a Swiss officer, Albert de Rocca. She settled in Paris on the fall of the Empire, and she died there, July 14, 1817.

Madame de Staël's principal works are her early *Lettres sur Rousseau*, 1788, and two sentimental novels, *Delphine*, 1802, and *Corinne*, 1807.

STAFF. In the military sense, a group of officers of various ranks serving at the headquarters of a military unit larger than a regiment. They serve under the officer commanding the unit, and are engaged in administrative or executive duties connected with the various branches. The general staff is that for the army, navy, or air force as a whole.

A staff college is an institution where officers are specially trained in the subjects required

Stadium. Reconstruction of the old Athenian stadium erected for the Olympic Games at Athens, 1900

for staff appointments. The staff college for the British army is at Camberley. There is a staff college for the R.A.F. at Andover. The naval staff college is at Greenwich.

STAFFA. Island of the Inner Hebrides, Argyllshire. Lying 6 m. N. of Iona, it is 71 acres in extent. Its coast is remarkable for caverns, the most notable being Fingal's Cave, the entrance to which is columnar basalt.

STAFFORD. Borough and county town of Staffordshire. It stands on the river Sow, 23 m. from Birmingham, on the L.M.S. and L.N.E. Rlys. The principal churches are S. Mary's and S. Chad's. Notable old houses include High House and the Swan Hotel. Stafford Castle occupies the site of an ancient stronghold. Stafford is a rly. centre. Boots are manufactured, and there are engineering works. Pop. 28,635.

STAFFORD, EARL AND MARQUESS OF. English titles borne by the families of Stafford, Howard, and Leveson-Gower. Edmund de

Stafford became a baron in 1299, and his son, Ralph, was in 1351 created earl of Stafford. Humphrey, the 6th earl, was made duke of Buckingham. The titles became extinct when the 3rd duke was executed in 1521. In 1547 the duke's eldest son, Henry, was made Lord Stafford, and in 1640 the barony, and later a viscountcy, was given to Mary Stafford and her husband, Sir William Howard. Denounced by Titus Oates for participation in the Popish Plot, Howard was executed in 1680.

The title of marquess of Stafford dates from 1758, when it was bestowed upon Earl Gower. His son, the 2nd marquess, was made duke of Sutherland (q.v.).

Stafford House. London mansion housing the London Museum (q.v.) and now known as Lancaster House.

STAFFORDSHIRE. County of England. Its area is 1,158 sq. m. The surface is low or undulating save in the N., where the Pennines enter it, and on Cannock Chase. Axe Edge, on

Viscount Stafford,
English nobleman
After Van Dyck

Mme. de Staël
French writer
After P. L. Bowyer

the Derbyshire border, is 1,684 ft. high. The chief river is the Trent. Rudyard Lake is in the county. In the N. are the Potteries; in the centre is Cannock Chase; and in the S. is part of the Black Country. The chief branches of agriculture are rearing of cattle, cultivation of wheat; barley, oats, and dairy farming. The county is served by L.M.S. and L.N.E. Rlys.

Stafford is the county town, others including Stoke-upon-Trent, Wolverhampton, Walsall, Burton-upon-Trent, Lichfield, and Leek. In the co. are part of Dove Dale, Tutbury and Chartley, and Needwood, and the mansion of Beaudesert. Staffordshire is in the diocese of Lichfield. Pop 1,348,877.

STAG. Male of the red deer (*Cervus elaphus*). It is distinguished from the hind, or female, by the presence of antlers on the head, and is of larger size. See Deer.

STAG BEETLE (*Lucanus cervinus*). Popular name for a large lamellicorn beetle. The male has large mandibles, which bear some resemblance to the antlers of a stag. The largest British species of beetle, being sometimes over two inches long in body, it occurs locally in the S. counties of England; and the larvae live in decaying oak trees. See Coleoptera; also illus. p. 223.

STAGE COACH. Public horse-drawn conveyance, plying regularly by stages between two towns. It was a large four-wheeled covered carriage, with seats inside and out, a guard's dicky, and a boot or receptacle for luggage, mails, and parcels, and was drawn by from two to eight horses. A coach between London and Bristol, put on the road by John Palmer, M.P., Aug. 8, 1784, was the first to carry mails. After this there was a steady improvement; lighter vehicles, the so-called flying coaches, were introduced, and a speed of 12 m. an hour was often attained. The advent of the rly. made them obsolete.

STAGGERS. Complaint affecting horses and sheep. It is characterised by trembling, swaying, or falling due to imperfect coordination of the voluntary muscles, and has various origins. See Horse; Sheep.

STAGHOUND. Name given to several breeds of hounds used for hunting the stag. The old English staghound, now thought to be extinct, was a variety of bloodhound, a large heavy animal with short broad head, pendent ears, dewlap, and heavily fringed tail. There were two strains, the northern and southern. The modern staghound is a large foxhound (q.v.) trained for the special work of stag-hunting. The name staghound is also some times given to the Scottish deerhound.

STAGHUNTING. This is a form of the chase common from ancient times in England and other lands. The deer in England which are hunted with hounds are the red deer on Exmoor, in Yorkshire, and in the New Forest; the fallow buck in the New Forest; and the roe deer in Dorset. Carted deer are also hunted in various districts. Stags are hunted from Aug. 12 to Oct 8, hinds from Nov. to Christmas or later. See Deer Stalking.

STAINED GLASS. Glass coloured by the introduction of certain metallic oxides or chlorides, the colours being fused into its surface at a moderate heat. Crown glass, made with only a little alkali, is most suitable. Stained glass has been used for windows of churches since the 6th century A.D., when S. Gregory is recorded to have inserted coloured windows in the church of S. Martin of Tours.

An important school of glass painting is believed to have existed near Chartres, France, in the 12th century, and there was probably a close connexion between this and the English glass centre at Canterbury. Early painted windows were made by the mosaic method, each colour being represented by a separate piece of glass, kept in position by ties of lead.

The late Gothic period, which nearly synchronised with the 15th century, is regarded

as the best period in England for stained glass. White canopy work became more elaborate; white and colour were admirably mixed. Costumes and faces were often left white. New College, Oxford, Gloucester Cathedral, York Minster, Great Malvern Abbey, the church of S. Mary, Shrewsbury, and Fairford church, Gloucestershire, contain some specimens of this period. See Rose Window.

STAINER, SIR JOHN (1840-1901). British composer. Born in London, June 6, 1840, he was a chorister in S. Paul's Cathedral, 1847-56, and in 1859 went to Oxford as university organist. He was organist of S. Paul's Cathedral, 1872-88, and, knighted in 1888, became professor of music at Oxford in 1889. He died March 31, 1901. Among his works are the oratorio Gideon, the cantatas The Daughter of Jairus, 1878, and The Crucifixion, 1887. Stainer was part editor of a Dictionary of Musical Terms, 1876.

STAINES. Urban dist. of Middlesex. On the Thames, where the Colne flows into it, 19 m. from London, it is served by the G.W. and Southern Rlys. The stone bridge across the Thames, by Rennie, was opened in 1832. The trial of Sir Walter Raleigh in 1603 took place in the old market house here. Near is Runnymede (q.v.). Pop. 7,709.

STAINLAND. Urban dist. of Yorkshire (W.R.). It is 3 m. from Halifax, on the L.M.S. Rly. The industries include the manufacture of woollens and worsted goods. Pop. 4,520.

Stainless Steel. Form of steel which is alloyed with chromium, etc., and thus rendered incoerodible. See Steel.

STAIRS OR STAMCASE. Part of a building containing steps, leading from one floor to another, or from the ground to the entrance.

The ornamental staircase dates only from the latter part of the 16th century. Although the corkscrew or spiral type was still retained in places, and certain splendid mansions, such as Hardwicke Hall, were provided with nothing more elaborate than plain flights of steps, the broad wooden staircase, with short flights connecting the landings, became the general rule. These were stoutly constructed with thick wooden balusters and massive handrails, the newels being carried up very high and finished with decorative finials. In the 18th century the whole construction became very much lighter in character. See Baluster; Escalator; Finial.

Staffordshire. Map of this midland county. See p. 1274

STALACTITE. Calcareous mass, usually conical or cylindrical in shape, formed by drippings from the roofs of caves. Water which

Stalactites and stalagmites in Cox's Cavern, Cheddar

has passed through lime-stone contains dissolved carbonate of lime. This water may find its way to the roof of a cave, and thence drip to the floor. Each hanging drop is partly evaporated, and leaves behind a little carbonate of lime; successive drops leave more lime, until an icicle-like pendant, the stalactite, is formed. Stalagmites are calcareous masses upon the floors of caves.

STALBRIDGE. Village of Dorset. It is 6 m. from Sherborne, on the G.W. Rly. There are stone quarries. The market cross dates from the 14th century. Stalbridge gives the title of baron to the Grosvenors. Pop. 1,222.

STALIN, JOSEF VISSARIONOVITCH (b. 1879). Russian politician. In 1896 he joined the social democrats, and in 1902 was arrested and sent to Siberia, but was finally freed in 1917. By then he had come into close contact with Lenin and Trotsky, and during the next few years he was a Bolshevik leader. After the death of Lenin he was one of the three in supreme authority, but in 1927 he had a serious quarrel with Trotsky's following. He managed to oust them from the party, and from then, 1927-28, was practically dictator of Russia, his power being confirmed in 1930. See Russia.

J. V. Stalin, Russian politician

Stalingrad. New name for the town of the Soviet republic of Ukraine known also as Tsaritsyn (q.v.).

STALL. In ecclesiastical architecture an elevated seat in the choir or chancel of a cathedral or church. It is enclosed at the back and sides, high, projecting arms separating it from its neighbour. The word is used in a figurative sense for the office of a canon residentiary in cathedrals and collegiate churches. See illus. p. 1190.

STALYBRIDGE. Borough and market town of Cheshire. It stands on the Tame, 7 m. from Manchester, on the L.M.S. and L.N.E. Rlys. Of modern growth, Stalybridge manufactures cotton and calico goods and paper, and has engineering works and foundries. Market day, Sat. Pop. 25,216.

STAMBOLISKY, ALEXANDER (1879-1923). Bulgarian statesman. He became a journalist, and in 1902 edited the leading organ of the agrarian party in Bulgaria. He became a member of the Sobranje in 1911. In 1913 Stambolisky headed the agrarians, and when, in 1915, Bulgaria was definitely committed to assist Germany in the Great War, he registered an emphatic protest. He suffered three years' imprisonment, and on his release headed the insurgent troops who deposed Ferdinand. In 1919 he became premier. He was shot, June 14, 1923. See Bulgaria.

Stamboul or STAMBUL. Turkish name for the main part of the city formerly known as Constantinople. See Istanbul.

STAMBULOV, STEFAN NIKOLOV (1854-95). Bulgarian statesman. Born at Timovo, Jan. 31, 1854, he entered the Sobranje, and in

1884 became its president. In 1886 he assisted in the restoration of Prince Alexander, and, when Alexander was compelled by Russian hostility to abdicate, Stambulov was a member of the council of regency. In 1887 he helped to secure the election of Ferdinand of Saxe-Coburg, and became prime minister. His violent measures brought about his fall, and on July 15, 1895, he was attacked in the street in Sofia, and died of his injuries three days later.

S. N. Stambulov,
Bulgarian statesman

STAMEN. Male organ of a flower, as the pistil is the female organ. There are usually several stamens, and may be many in each flower, and these are known collectively as the androecium. A stamen consists of a more or less slender stalk (the filament) and the anther, which as a rule has two hollow lobes (thecae). These are filled with grains of pollen, which is the male element; the thecae split to allow the pollen to escape. See Botany; Flower; Pistil; Plant.

STAMFORD. Borough and market town of Lincolnshire and Northamptonshire. It stands on the Welland, 16 m. N.W. of Peterborough, on the L.N.E. and L.M.S. Rlys. Notable churches include those of S. Mary and All Saints, both mainly of the 13th century, S. George and S. John, both of the 14th century, and S. Martin, in which Lord Burghley, Queen Elizabeth's minister, is buried. The most interesting of the almshouses is Browne's Hospital. There are remains of a 7th century Benedictine monastery. An agricultural centre, Stamford has engineering works, breweries, and manufactures of wagons, farm implements, etc. Market days, Mon. and Fri. Pop. 9,882.

The title of earl of Stamford has been held since 1628 by the family of Grey.

STAMFORD BRIDGE. London Athletic Club headquarters. Near the Chelsea and Fulham station of the West London Extension Rly. in the Fulham Road, it was opened in 1878. It is rented during the season by the Chelsea F.C., and accommodates over 80,000 spectators. In 1929 the university sports were held here for the first time.

The village of Stamford Bridge in Yorkshire (E.R.), 9 m. N.E. of York by the L.N.E. Rly., was the scene of the defeat of the Norwegians by the English under Harold, Sept. 25, 1066.

STAMFORD HILL. London district. N. of the met. bor. of Hackney (q.v.), with Stoke Newington W., and the Essex border on the E., it contains Clapton Common, Springfield Park, and the Skinners' Company's school for girls. At Stamford Hill the lord mayor and corporation of the city met James I. on his way to London in 1603.

STAMMERING. Defect of speech in which there is inability to pronounce certain letters or combinations of letters, or a tendency to stumble over syllables, transpose letters, or rapidly repeat letters (stuttering). Stammering may be manifested in early childhood, or may arise later in life as a result of severe nervous shock, in which case it is a symptom of hysteria. In the Great War the symptom was frequently seen in soldiers suffering from shell shock. See Speech.

STAMP. Official mark made by stamping. The commonest kind of stamps are postage stamps, the collection of which, called philately, is a popular hobby. It has a press of some 200 journals and many societies, including the Royal Philatelic Society.

Stamp duties are duties paid by means of long slips. They are necessary for debentures, and other important documents; and in suits, and medicines, playing cards, etc.

STAMP, SIR JOSIAH CHARLES (b. 1880). British economist. Born June 21, 1880, he entered the civil service in 1896. In 1919 he resigned to become secretary of Nobel Industrials, Ltd. Editor of The Journal of the Statistical Society, he was a member of the commission on the income tax and a prolific writer. In 1926 he was appointed president of the executive of the L.M.S. Rly., soon becoming the chairman. Knighted in 1920, Sir Josiah was a member of the Dawes committee on Reparations in 1924, and represented Great Britain on the inquiry of 1929.

STANCHESTER. Site of a Romano-British villa in Somerset, E. of the parish church of Curry Rivell. It has yielded coins of Trajan, Antoninus Pius, and later emperors, Samian potsherds, etc.

STANDARD. Literally, that which stands, and used in one sense for a flag or other ensign of war. The Royal standard or personal flag of the British sovereign measures 15 ft. by 7½ ft., and is emblazoned with the royal arms in their proper colours. It should only be flown when the sovereign is present, or by his viceroys and the governors and lieutenant-governors of colonies and possessions.

The standard borne by the household cavalry and by regiments of dragoon guards is of crimson silk damask, embroidered and fringed with gold, the tassels and cords crimson and gold mixed. See Colours; Flag; Oriflamme.

STANDARD, BATTLE OF THE. Fought near Northallerton, Yorkshire, between the English and the Scots, Aug. 22, 1138. Under David I the Scots invaded England to support the cause of Matilda against Stephen. The English army gathered around the banners of S. Cuthbert of Durham, S. Peter of York, S. John of Boverley, and S. Wilfred of Ripon. These were fastened together on a pole, thus giving to the battle its name. The English were victorious.

STANDARDISATION. In industry, a method for securing uniformity in type and quality, and regulating methods of production with a view to expediting and increasing output for a given expenditure. Standardisation has been applied to every branch of science and manufacture. Time is standardised by observations at Greenwich. Temperatures are expressed in degrees of delicate thermometers; light, heat, and electricity have their units of quantity and intensity. The foot-pound has been adopted as the unit of work; engine-power is stated in terms of the horsepower introduced by James Watt. In engineering standardisation is essential for cheap production.

The Standards department is a department of the British board of trade, charged with the duty of seeing that all weights and measures are up to the required standard.

STANDERTON. Town of the Transvaal. It stands on the Vaal river, at an alt. of 5,000 ft., 110 m. S.E. of Pretoria. An agricultural centre, it is the chief town of the E. Transvaal. Here is an experimental farm. Pop. 3,000.

STANDING ORDER. In British parliamentary procedure, a resolution of either House made for the guidance and order of proceedings. They regulate the procedure on bills, the sittings of committees, and other matters, and remain in force until repealed by the House. Many resolutions regarding procedure have become customary, and are thus equivalent in effect to standing orders.

STANDISH. Dist. of Lancashire, forming part of the urban dist. of Standish with Langtree. It is 3 m. from Wigan, on the L.M.S. Rly. The industry is coal mining. Pop. 7,680.

STANDISH, MYLES OR MILES (c. 1584-1656). One of the Pilgrim Fathers. Born at Duxbury, Lancashire, he sailed in 1620 in the Mayflower for Plymouth, Massachusetts, where the first New England colony was founded. Owing to his experience in the Netherlands Standish was appointed commander of the Pilgrims, and successfully conducted several campaigns against the Indians. He died at Duxbury, Massachusetts, Oct. 3, 1656.

Myles Standish,
Pilgrim Father

STANE STREET. Early English name for a Roman road in Sussex and Surrey. Traceable from Chichester for 9 m. straight to Bignor Hill, after some meandering it runs straight again for 18 m. from Hardham to Minnick Wood. Hence it passes through Dorking, Epsom, Clapham, to Newington Causeway.

STANFORD, SIR CHARLES VILLIERS (1852-1924). British composer. Born in Dublin, Sept. 30, 1852, he was organist of Trinity College, Cambridge, from 1873-92, and became professor of composition at the Royal College of Music, 1883, and professor of music at Cambridge in 1887. He was knighted in 1902. Of his operas, Shamus O'Brien, 1896, was the most successful in production. Of his choral works several are sacred compositions. His publications include Studies and Memories, 1908; and (with C. Forsyth) A History of Music, 1916. He died Mar. 29, 1924.

STANHOPE. Urban dist. of Durham. It stands on the Wear, 25 m. from Darlington, on the L.N.E. Rly. The chief industries are connected with the quarries. Pop. 1,923.

STANHOPE, EARL. British title borne since 1718 by the family of Stanhope, named from Stanhope in Durham. Philip Stanhope, 1st earl of Chesterfield (d. 1656), had a younger son, Alexander, who was the father of James Stanhope (1673-1721), soldier and politician. In 1718 he was made an earl, and from him the present earl is descended. His seat is Chevening Park, Kent, and his eldest son is called Viscount Mabon.

STANHOPE, LADY HESTER LUCY (1776-1839). Niece of Pitt. Born at Chevening, Kent, March 12, 1776, eldest daughter of the 3rd Earl Stanhope, she went, in 1803, to keep house for her uncle, William Pitt, over whom she acquired a remarkable ascendancy. On his death in 1806 she received a pension of £1,200 a year. In 1810, with a small entourage, she left England, and by 1813 had settled at Mt. Lebanon, in Syria, where she lived until her death, June 23, 1839, exercising a sort of dominion over the neighbouring tribes. Her memoirs appeared 1845.

Stanley. Urban dist. of Durham. It stands in a colliery district, 8 miles from Durham. Pop. 25,089.

STANLEY. Urban dist. of Yorkshire (W.R.). It is 3 m. from Wakefield on the L.N.E. Rly. It stands in a colliery district. Pop. 14,689.

STANLEY. Port of Tasmania. On the N. coast, it is 157 m. from Launceston, and has steamer connexion with Melbourne and Sydney. Pop. 3,000.

Standard. The British Royal standard, comprising the arms of England, Scotland, and Ireland

Lady Hester
Stanhope
After W. Wright

STANLEY. Name of a famous English family, of which the earl of Derby (q.v.) is head. In the 14th century Sir John Stanley, descended from a Staffordshire family, married a Lancashire heiress, Isobel Latham. Through her he obtained Knowsley, still the family residence, and much of the land on which Liverpool now stands. His grandson Thomas was made Lord Stanley in 1456, and the latter's son Thomas earl of Derby in 1485. From the elder Thomas is also descended the branch now represented by Lord Sheffield, who holds the barony of Stanley of Alderley.

STANLEY, ARTHUR PENRYN (1815-81). British divine. Born at Alderley, Cheshire, Dec. 13, 1815, he was the son of a clergyman, afterwards bishop of Norwich. Having been elected fellow of University College, Oxford, he was ordained, and for the next few years took a leading part in university life. In 1851 he was made a canon of Canterbury, and in 1856 professor of ecclesiastical history at Oxford. In 1864 Stanley was appointed dean of Westminster. He died July 18, 1881, and was buried in Henry VII's chapel, Westminster.

As an author, Stanley is best known by his *Lectures on the History of the Jewish Church*, 1863-76. He also wrote a *Life of Thomas Arnold*, 1844; *Memorials of Canterbury*, 1855; *Sinai and Palestine*, 1856; and *Memorials of Westminster Abbey*, 1865.

STANLEY, SIR HENRY MORTON (1841-1904). British explorer. Born at Denbigh, June 29, 1841, the son of John Rowlands, a grazier, in 1859 he went to New Orleans, where he was adopted by a cotton broker named Stanley, whose name he assumed. In 1868 he accompanied Napier's expedition to Magdala as representative of *The New York Herald*. In 1869 Gordon Bennett, proprietor of *The New York Herald*, commissioned Stanley to find Livingstone. He started from Zanzibar, and in November, 1871, found Livingstone at Ujiji. Stanley published his adventures in *How I Found Livingstone*, 1872.

In 1873 he accompanied Wolseley's Ashanti expedition, which he described in *Coomassie and Magdala*, 1874, and in the latter year set out on his second journey to Central Africa. He occupied three years in crossing the continent, reaching Boma in Aug., 1877, with only a few survivors. Through the Dark Continent, 1878, recounted his adventures on this journey. He returned to the Congo in 1879, to spend five years. In 1885 he was entrusted with the expedition which relieved Emin Pasha, who had been cut off in equatorial Africa by a Mahdist rising. From 1893-1900 he was M.P. for North Lambeth. He married, in 1890, Dorothy Tennant, who edited his *Autobiography*, 1909, and died May 10, 1904.

STANLEYVILLE. Town of the Belgian Congo. It is situated on the Congo, about 1,000 m. from Leopoldville, and is connected by rly. with Ponthierville, 78 m., where the Congo again becomes navigable.

STANMORE. District of Middlesex. It stands 13½ m. from Euston on the L.M.S. Rly. Near the parish church of S. John the Evangelist are the ruins of a church consecrated by Laud in 1632. Bentley Priory, now occupied by the R.A.F., has historical associations. Pop. 3,864.

STANNARIES (Lat. stannum, tin). Term used for tin mines, especially those of Cornwall and Devon. For hundreds of years the tin mines of that region had their own laws, customs, and organization. Their own representative assembly, or parliament, met for the last time at Truro in 1752. The district had its courts, which dealt with matters affecting the mines, but the jurisdiction of these was transferred to the county court in 1896. They still exist for minor purposes, as does the office of lord warden of the stannaries.

Stanthorpe. Town in Queensland. It is 200 m. by rly. from Brisbane, and is a tin mining centre. Pop. 1,300.

STANTON HARCOURT. Village of Oxfordshire. It is near the Thames, 5 m. W. of Oxford. For 600 years its manor house was the residence of the Harcourt family.

STAPLE. Originally a mart or emporium, and so a town where certain goods were collected and sold; hence the goods thus sold, the principal commodities produced by a country and sold or exchanged for goods from abroad.

In the U.K. during the Middle Ages certain privileged towns were called staple towns. It was only in these markets that the staple goods, wool, fells or sheepskins, leather, lead, and tin, might be sold for export. The wool trade was in the hands of a guild known as the Merchants of the Staple, who exported the raw material and imported finished cloth. Among their members were foreign merchants who used their privileges to such purpose that an outcry was raised by English traders. See *Hanseatic League*; *Steelyard*.

STAPLEFORD. Village of Nottinghamshire. It stands on the Erewash, 6 m. from Nottingham, on the L.M.S. Rly. It has a 9th century churchyard cross. Pop. 8,513.

STAPLE INN. Relic of old London. It is on the S. side of Holborn, W.C., facing Gray's Inn Road. In ancient times a centre associated with wool staplers, it was one of the inns of chancery from the time of Henry V until 1884. It has a picturesque Dutch garden. The hall, dating from 1581, with hammer-beam roof, is let to the Institute of Actuaries. See *Holborn*.

STAR. Heavenly body of a nature similar to the sun, of dimensions far superior to the earth. They are isolated from the earth by vast distances. About 6,000 stars are sufficiently bright to be seen with the naked eye. Powerful telescopes, aided by the photographic plate, reveal objects at least a million times fainter, and the number rises to some hundreds of millions.

The configuration of the stars in the sky has not noticeably altered in historic times, but the positions are not absolutely fixed, and in most cases a small displacement can be detected in the course of, say, half a century. Of the bright northern stars Arcturus has a motion of 2.3 seconds per year. The motion of Arcturus is surpassed by that of a number of faint stars, but in most cases the movements are very much smaller. A great advance in knowledge has been gained by the application of the spectroscope (q.v.) to measure the rate at which a star is approaching or receding from the earth.

The sun, carrying with it the earth and planets, is moving at a speed of 12 m. a second towards a point not far from the star Vega. The stars stream predominantly in two particular directions, as though two great systems moving in different directions had met one another and were now intermingled. The nearest known star is a Centauri, its distance being 24,000,000,000,000 m., about the average distance which separates one star from its nearest neighbour. Many of the stars which appear single to the naked eye are found with the telescope to be double.

Even when a star is seen as a single point with the telescope, it is often found by the spectroscope to be alternately receding and approaching in a regular cycle, as if revolving round another body of great mass.

Many stars vary periodically in brightness. Some, the Algol variables, are simply double stars in which the fainter component partially hides its companion once in each revolution. The long period variables have a periodicity usually between 200 and 600 days, and more intense fluctuation of light. The Cepheid variables undergo a quick cycle of change, the period being sometimes only a few hours. The change of brightness that takes place is small. See *Astronomy*; *Constellation*; *Planet*; *Telescope*, etc.

STAR. Word employed for anything that is in the shape of a star. Decorations for military and other services are frequently made in this form, and so we have the stars of the orders of knighthood, the Mons star, and many others. See *India: Heraldry: Knighthood*; *Medal*.

STAR APPLE (*Chrysophyllum cainito*). Evergreen tree of the order Sapotaceae, native of the West Indies. Its branches are clothed with rusty down and the juice is milky. It has alternate, oblong leaves, covered with rusty hairs on the under side, and small white flowers. The fruit, like a large apple, is yellowish green tinted with rose. It has soft sweet flesh and can be eaten.

Star Apple. Spray of leaves and flowers; right, fruit

STARCH. One of the most important carbohydrates. Widely distributed in the vegetable kingdom, it is a white glistening powder, consisting of little granules which differ in size and appearance according to the species of plant whence they are derived. When heated with water the granules swell enormously, and at the temperature of boiling water are ruptured, forming a gelatinous paste. Apart from its importance as the largest constituent of farinaceous and of prepared starch foods, starch in a separated form is widely utilised in the industrial arts. The starch of wheat is extracted by kneading dough in a stream of water, or by a fermentation process. Starch is also made from potatoes and rice. See *Dextrin*; *Farina*.

STAR CHAMBER, THE. English law court constituted by statute in 1487. It was used by Henry VII as an instrument for checking the influence of powerful nobles. Its creation was a formal assertion of the privileges of jurisdiction long claimed by the privy council, the officers of state who acted as judges being drawn from that body. Under the Stuarts the Star Chamber became distinguished for its tyrannical procedure and was abolished in 1641. See *Privy Council*.

STARFISH. Popular name for the order Asteroidea of the echinoderms. In it the body is extended into a series of rays or lobes producing the conventional star shape. The mouth is situated in the centre of the underside of the body, and the rays are covered beneath with rows of small suckers by means

Starfish. Five Fingers, *Asterias rubens*, the common starfish

of which the animal crawls slowly along. The alimentary canal consists of a sac in the centre of the body, communicating with the mouth beneath and with a minute anus above. The food consists chiefly of bivalve molluscs.

STARK, JAMES (1794-1859). British artist. Born at Norwich, Nov. 19, 1794, he studied under John Crome (q.v.) and at the R.A. schools, and became one of the most prominent painters of the Norwich group, painting woodland, river, and const scenery. He died March 24, 1859.

STARLING (*Sturnus vulgaris*). Name applied to many birds, but particularly to the common starling of Europe, a familiar British bird. It has black plumage with green and purple reflections, the upper feathers being tipped with buff and the under tail coverts edged with white. It is remarkable for the variety of its notes. Mainly insectivorous in diet, it spends much of its time on the ground probing for worms and grubs. Starlings occur in large flocks, which migrate from one district to another when food becomes scarce. See Pastor.

Starling. Insectivorous bird, common in large flocks throughout Britain and Europe.
W. S. Berridge, F.Z.S.

STAR OF BETHLEHEM (*Ornithogalum umbellatum*). Bulbous herb of the order Liliaceae, a native of Europe. The scaly bulb

Star of Bethlehem. Grass-like leaves and clustered flowers

STARS AND STRIPES. Popular name for the flag of the United States of America, also known as "Old Glory." It is now composed of seven horizontal red stripes and six horizontal white stripes (which represent the original 13 states seceding from the British crown), and a blue canton emblazoned with 48 stars, arranged in six rows of eight stars. The flag as adopted in June, 1777, had only 13 stars, but it was later decreed that a star should be added for every state joining the union.

Starwort. Alternative name for plants of the genus *Stellaria*, for example, chickweed. See Chickweed; Stitchwort.

STATE. Modern name for the body politic. The government is its agent, while its constitution is its form of government. The state is sometimes confused with the nation; but while a man's nationality is determined by such things as sentiment, race, language, history, and common traditions, the state is the creature of legal enactment, and depends on organization, territorial considerations, and subjection to one government.

The boundaries of a state may possibly coincide with those of a particular nation;

but this is not necessary. A citizen, for example, of the United Kingdom may be English, Scottish, Irish (Northern), or Welsh. Naturalization, again, substitutes a new state for the old one, but not necessarily a new nationality.

"An independent organized community" is perhaps the briefest definition ever attempted of the modern state; and it may be accepted as adequate, if the full content of each of its three terms is appreciated. Thus community implies a considerable group of individuals permanently banded together, not merely for religious, commercial, or social purposes, but politically in the widest sense of that word. The term organized excludes the idea of a mere mob or casual association, and postulates subjection to a system of government or constitution, with its fixed laws and officials competent to enforce them, and in the habit of enforcing them. Independent points to the non-existence of any foreign influence capable of effective interference within that community's legitimate sphere.

To these three essentials of a modern state a fourth is often added, namely, the possession of a separate territory of its own. While this addition may not be required in strict logic, yet no modern state, whose existence as such is recognized, is entirely without some territory, however small, under its exclusive control. See Sovereign.

STATEN ISLAND. Island of New York, U.S.A. It is situated at the mouth of the Hudson river, and is separated from Manhattan Island by the Narrows. It covers 70 sq. m. and contains New Brighton, Port Richmond, West New Brighton, and other villages, several of them seaside resorts. In June, 1928, two bridges were opened between the island and the mainland. Pop. 116,531. See New York.

STATER. Name of standard gold and silver coins, current in the ancient Greek world. Of gold staters, the oldest were probably the double staters of Cyziens and Phocaea, the value of which was low, owing to debasement of the coinage. The Persian gold stater, called a daric after Darius, weighed two drachmae, and was current at Athens, where, as well as in Macedonia, staters of the same value, about £1 2s., were coined. Silver staters were coined in Asia Minor and Greece.

STATES GENERAL. Body representing the three estates of the French kingdom, the clergy, the nobility, and the commons. It was first called in 1302. The states general had no legislative functions and could only make its influence felt by petitioning against grievances. It was dismissed in 1614 and did not meet again until called by Louis XVI, 1789, when it took the title of the national assembly.

The term states general was also applied to the representatives of the seven provinces of the old republic of the Netherlands (q.v.). The name survives in the parliament of the present kingdom of the Netherlands.

STATICS (Gr. *statikos*, relating to standing).

Branch of mechanics which deals with bodies and forces or systems of bodies and forces in equilibrium. One of the fundamental propositions of statics is that the sum of the moments of all the forces about any axis must vanish. The potential energy of a statical system is a minimum. Statics also treats of the relations of strains and stresses of a body. Many of the problems of statics may be solved by graphical methods. See Equilibrium.

STATIONERS' COMPANY. London city livery company. Dating from 1556, it once had the monopoly of printing in England,

and until 1911 every work published in Great Britain had to be entered or registered for copyright purposes at Stationers' Hall. Until 1771 the company had the sole right to print almanacs. The hall, in Stationers' Hall Court, Ludgate Hill E.C., was rebuilt 1670-74. The company maintains a school for about 600 boys at Haringay.

STATIONERY OFFICE. British government department. It was founded in 1782 to supply the public departments with books and stationery. The head office is Prince's St., Storey's Gate, London, S.W.1. The publications are sold wholesale at Cornwall House, Stamford St., London, S.E.1, and 120, George St., Edinburgh. There are branches and retail shops at Adastral House, Kingsway, W.C.2, 26, York St., Manchester, 120, George St., Edinburgh, Cardiff, and Belfast. The printing works are at Harrow.

STATIONS OF THE CROSS. Popular name of a devotional practice in the R.C. Church. A series of pictorial representations of scenes in the Passion is usually placed on the walls of R.C. places of worship, and during Lent and in Passion Week the faithful proceed from one to another, kneeling and reciting appropriate prayers before each. The stations usually number 14. The devotion dates from 1726, when the indulgences to be gained by a visit to the holy places of Jerusalem were declared obtainable by visits to representations of the Stations of the Cross.

STAVANGER. City and seaport of Norway. It is 105 m. S. of Bergen, on the Stavanger Fiord, an arm of the Bukke Fiord. The cathedral was founded in the 11th century by Bishop Reinald, an Englishman; the existing Gothic structure, one of the finest in Norway, replaces the one burnt down in 1272. Textiles, soap, margarine, and earthenware are the main products. There are foundries and shipyards, and fishing and fish curing are carried on. Founded in the 8th century, the town has been frequently burnt down and rebuilt. Pop. 43,778. See Norway.

STAVE. In music, the lines upon which, with the intervening spaces, notes are placed in order to indicate pitch. The most convenient number is found to be five, and a clef (q.v.) is placed upon it to fix their alphabetical names and their pitch. All staves are really selections from the great staff of eleven lines, which covers the range of the human voice from bass to soprano.

STAVELEY. Market town of Derbyshire. It is 4 m. from Chesterfield, on the L.M.S. and L.N.E. Rlys. Its chief industries are coal mining and iron working. The church contains monuments to the Frecheville family. Market day, Fri. Pop. 12,646.

STAWELL. Township and rly. junction of Victoria, Australia. It stands on the main Melbourne to Adelaide line, 150 m. from the latter city. The district is agricultural and contains gold mines, and also freestone quarries. Pop. 4,740.

STEAD, WILLIAM THOMAS (1849-1912). British journalist. Son of a Congregational minister, he was born at Embleton, Durham, July 5, 1849. He edited *The Northern Echo*, Darlington, 1871-80, was assistant editor of

W. T. Stead, British journalist

The Pall Mall Gazette, 1880-83, and editor, 1883-89. He founded *The Review of Reviews*, 1890, started a penny Masterpiece Library, 1895, and was the author of a number of political and other works. He was drowned when the Titanic foundered, April 15, 1912. Stead travelled on the Continent and in

the U.S.A. as peace propagandist, advocated a strong British navy, was largely concerned in social work, especially in criminal law amendment, and was interested in spiritualism.

His brother, Francis Herbert Stead (1857-1928), was warden of the Robert Browning Settlement, Walworth, 1894-1922.

STEAM ENGINE. Machine for the conversion of heat energy into useful work by means of the expansive force of steam. Many early attempts were made to use steam as a motive power. Thomas Savery patented an engine in 1698. It consisted of a cylinder into which steam entered and forced out a charge of water, sucked into it by a previous charge of steam that was suddenly condensed by a jet of cold water flowing over the outer surface of the cylinder. Thomas Newcomen and John Cawley introduced a piston, driven down by atmospheric pressure as a vacuum was created in the cylinder by the condensation of the steam. The steam was condensed by a jet of water inside the cylinder. The idea of the piston originated with a French engineer, Papin. Newcomen's engine, like Savery's, was used for pumping water.

Both these steam engines were very wasteful of power, and the next important step came from James Watt, who patented a separate condenser in 1769. The double-acting engine followed. From the time of Watt's improvements the advance of the steam engine was rapid. Richard Trevithick applied it to the

Steam Engine. Uniflow Engine, 1,100 H.P. Valves are opened and closed by cams operated by eccentrics from the layshaft
Courtesy of Robey & Co., Ltd.

first locomotive to run on rails in 1804. Hornblower a few years previously brought out the first compound engine, and the improvements which followed were mainly those based on a wider knowledge of the strength of materials and in the boiler, valves, and the like.

Steam engines may be classified as single-acting or double-acting, condensing or non-condensing, or of the high-speed or low-speed types. When the expansion of the steam is carried out in two or more consecutive cylinders we have as a further classification the single, compound, triple, or quadruple expansion engines.

Essentially a steam engine consists of a piston and cylinder with the necessary gear to transmit the motion of the piston to a shaft. An automatic valve distributes the steam, and a governor controls the speed.

When the motion is transmitted directly to the crank from the piston by a connecting rod, the engine is called direct acting. In the oscillating engine the piston rod itself connects with the crank direct, and the cylinder oscillates with the motion, being mounted on trunnions for the purpose. Single-acting engines are those in which the steam acts on one side of the piston only, double-acting where it acts on one side and then on the other alternately. See Boiler; Governor; Locomotive; Turbine.

STEAM HAMMER. Power-driven hammer. The invention of James Nasmyth about 1842, the tup, or massive striker, of the steam hammer was attached to the lower end of the

piston rod of an inverted cylinder. Steam was admitted below the piston to raise the hammer, and above it to accelerate the fall, by the movements of a lever controlling a steam valve. Nasmyth's partner, Robert Wilson, introduced improvements which made it self-acting.

STEARIC ACID. Fatty acid. It occurs widely diffused throughout the animal kingdom, combined with glycerin, and constitutes the bulk of hard fats, such as suet and tallow. It is also found in many vegetable fats. It forms stearates with the alkalis and alkaline earths. The stearates are the chief constituent of all ordinary soaps. Stearic acid is used for making candles. Stearin is the glyceride of stearic acid, which occurs in many natural fats.

STEATITE. Name given to a variety of talc. White, grey, green, or brown in colour, soft, and easily cut, it has been used from earliest times for ornaments, earrings, etc. It is heat-resisting, and is consequently used for firebricks, etc., while in a powdered form steatite is an ingredient of soaps, paints, lubricants, French chalk, etc. It is found in Cornwall, in co. Donegal, the Shetlands, N. America, etc. See Soapstone; Talc.

STEEL. Steel may be defined as a mixture of carbide of iron (Fe_3C) with pure iron (Fe), which after cooling from fusion is (after re-heating) capable of being forged from ingots into sound merchant sections.

Fluid steels are divided into cutting steels and structural steels. The former are made into milling cutters, turning tools, drills, chisels, etc. The latter are cast into titanic masses for making guns, shafts, armour plates, shells, and rails, as well as bridge and boiler plates. The highest quality of cutting steel is made by the white crucible process from the best Swedish bar irons. In the early 'seventies R. F. Mushet discovered the beneficial influence of tungsten and a little chromium on tool steel, thus laying the foundation of those wonderful alloys called high speed steels. A modern high speed tool will cut hard steel up to 700° C.

Up to the late 'sixties steel rails and steel plates for ships, bridges, and boilers were practically unknown, wrought iron being still supreme for structural purposes. About 1856 Henry Bessemer (q.v.) patented his method, which introduced a revolutionary change in steel melting, inasmuch as its fuel was internal, consisting of the elements silicon, carbon, and manganese. In crucible steel melting the fuel is quite external, consisting of coke or producer gas burning outside the covered pot. The Bessemer is the standard method for making steel rails. For most purposes, however, Bessemer steel has been replaced by Siemens-Martin steel, since Martin's open hearth process was made practicable by the application to it of Siemens' regenerative or recuperative heat system.

Rustless or stainless steels have been developed for the manufacture of entery, surgical instruments, parts of machines, etc. Such steels contain up to 20 p.c. of chromium.

The chief steel producing countries are, in order of importance, the U.S.A., Germany, Great Britain, France, Russia, and Belgium. In 1929 the world's production of steel was, in round figures, 118,000,000 tons; of this the U.S.A. contributed 55,000,000 and Gt. Britain 9,800,000 tons. For the six months ended June 30, 1930, the quantities were: U.S.A. 23,751,700 tons, Gt. Britain 4,361,700 tons. See Furnace; Iron; Metallurgy.

STEEL, FLORA ANNE (1847-1929). British novelist. The daughter of a Scottish legal

official, she married in 1867 an officer in the Bengal civil service, and lived for many years in India. There she obtained that profound knowledge of the country which is reflected in many of her novels. These include a fine story of the Indian Mutiny, *On the Face of the Waters*, 1896; *The Potter's Thumb*, 1894 and many others. In 1929 appeared an autobiographical volume, *The Garden of Fidelity*. She died April 12, 1929.

STEELE, SIR RICHARD (1672-1729). English writer. Born in Dublin of English and Irish parentage, he was educated at the Charterhouse. The year 1701 saw the production of his first play, a comedy entitled *The Funeral*; or, *Grief à la Mode*, followed later by two others. The moral tone which characterised Steele's plays was a welcome change after the licence of the Restoration dramatists. His fourth and best play, *The Conscious Lovers*, was produced in 1722.

Steele is best known as the founder of *The Tatler*, the first number of which appeared April 12, 1709. From the 18th number he had the co-operation of Addison, his friend at school and university, and the literary partnership continued when *The Tatler* was discontinued, and two months' later, March 1, 1711, *The Spectator* was started. In the meantime Steele had entered politics as a Whig, and was elected M.P. for Stockbridge in 1713, but a violent pamphlet issued by him, entitled *The Crisis*, resulted in his expulsion from the House. In 1715 he re-entered Parliament as member for Boroughbridge, and was knighted. He died at Carmarthen, Sept. 1, 1729. See *Spectator*, *The*.

STEEL-MAITLAND, SIR ARTHUR HERBERT DRUMMOND RAMSAY (b. 1876). British politician. Born July 5, 1876, he was educated at Rugby and Oxford, where he rowed against Cambridge. In 1910 he entered Parliament as M.P. for E. Birmingham, and in 1918 was returned for the Erdington division. He lost his seat in 1929, but was elected a little later for the Tamworth division. In 1915 he was made under-secretary for the colonies, and from 1917-19 was under-secretary for foreign affairs and head of the department of overseas trade. From 1924 to 1929 he was minister of labour. In 1917 he was made a baronet.

STEELYARD. Balance or weighing machine having a lever with two arms of unequal length. In a special sense the Steelyard was the name given to a community of foreign merchants, mostly German.

Steam Hammer. Massey hammer, showing cylinder, tup, and anvil

who settled in London in the 13th century under the protection of charters. In 1579 the Steelyard lost all rights, and on August 4, 1598, the German merchants were forced to leave their stronghold.

STEEN, JAN (1626-79). Dutch painter. Born at Leiden, he studied at Utrecht, and later under Jan van Goyen at The Hague. He worked alternately at Leiden, The Hague, Delft, and Haarlem, where he was influenced by Adrian Ostado. His genre pictures are prized. He died at Leiden.

STEENBOK (Dutch, stone buck). Small species of S. African antelope, *Nanotragus* or *Raphiceros campestris*. It is distinguished by its upright horns, about 4 ins. long, and the absence of lateral boofs. Less than 2 ft. high and of a tawny colour, it conceals itself well on the veld. Pron. Stainbok.

STEEPLECHASING. Form of horse racing, taking place either across country from point to point, with natural obstacles, such as fences, hedges, and brooks, or on a prepared course with artificial obstacles. The name is due to the fact that in early steeplechases a church tower was often the point aimed at. Races across country are now, however, generally known as point to point (q.v.) races, and steeplechasing proper is confined to race-courses with hurdles, water-jumps, etc.

Steeplechases take place during the winter and early spring on most of the best known race-courses. The Grand National is the chief cross-country event of the year. No steeplechase of less distance than 2 m. is allowed. See Grand National: Horse Racing.

STEFANSSON, VILHJALMAR (b. 1879). Arctic explorer. Born in Canada, of Icelandic parentage, he was commissioned in 1908 by the American Museum of Natural History to make an ethnological survey of the Central Arctic coast of America. In 1913 he was sent north by the Canadian government and, notwithstanding the loss of his vessel, the *Karluk*, pursued his exploration on sledge and discovered Prince Patrik Land. He remained in the Arctic regions until 1918, having mapped large areas of the N. American coast. His works include *The Friendly Arctic*, 1921, and *The Folklore of the Eskimos*, 1930.

Stegosaurus. Prehistoric reptile of England and America, measuring 30 feet in length

STEGOSAURUS. Large fossil dinosaur of the Jurassic period. Ranging up to 30 ft. in length, including the long tail, its fore limbs were short and the head small. It was characterised by a ganglion, controlling the nervous system, which was larger than the brain of the animal. See Dinosaur.

STEIN, CHARLOTTE VON (1742-1827). Friend of Goethe. The wife of the duke of Saxe-Weimar's master of the horse, she became the intimate friend of Goethe, and is known to fame as the recipient of a long series of his letters. The intimacy was broken for a time by his marriage, but had been renewed before Charlotte died, Jan. 6, 1827. Goethe's letters to her were first published in 1848-51.

STEIN, HEINRICH FRIEDRICH KARL, BARON VON (1757-1831). German statesman. Born Oct. 26, 1757, he entered the Prussian service, in which he rose rapidly. He rendered great service to King Frederick William III during the troubled years 1804-6. As minister of the interior his wise statesmanship conferred a large measure of self-government on the German towns, and he would have proceeded to a similar measure for the rural districts, but Napoleon demanded his dismissal. Stein escaped to Bohemia and in 1812 to St. Petersburg. At the Congress of Vienna he worked hard to secure the consolidation of Germany. He died June 29, 1831.

Sir Aurel Stein, British archaeologist
Elliott & Fry

STEIN, SIR MARK AUREL (b. 1862). British archaeologist. Born at Budapest, Nov. 26, 1862, he studied in Germany and England. As head of Lahore Oriental College, 1888-99, he made researches in Kashmir. Entering the Indian educational service, he conducted three expeditions, principally to Chinese Turkistan, in 1900-1, 1906-8, and 1913-16, resulting in priceless additions to the British Museum and the Delhi Central Indian Museum. In 1926-28 he was engaged in excavating in Baluchistan. He became a naturalized British subject, and in 1912 was knighted.

STELA or **STELE** (Gr. stēlē, upright post). Upright slab bearing sculptural designs or inscriptions. The word is applied also to a prepared rock-surface similarly inscribed.

The most numerous examples and the oldest pertain to ancient Egypt, but stelae are found in Greece, Asia, S. America, etc. They are either funerary, mostly in tomb-chambers, or votive, usually dedicated by kings or eminent personages in temples and public places.

STELLA (Lat. star). Name by which Sir Philip Sidney addressed Lady Penelope Devereux, afterwards Lady Rich, in his love sonnets, *Astrophel* and *Stella*. It was also given by Jonathan Swift to Esther Johnson. See Rich.

STELLENBOSCH. Town of Cape Province, S. Africa. It is 31 m. by rly. from Cape Town. An important educational centre, it is the seat of the university of Stellenbosch, formed from Victoria College in 1918. There are several 17th and 18th century houses in the Dutch style. Around are vineyards and fruit farms. Pop. (European) 3,697.

STELVIO PASS. Alpine pass in Italy. It is on the great highway from Milan to Innsbruck, and carries a carriage road, the summit of which is 9,055 ft. above sea level.

STEM. In botany, the axis of a plant, that which bears the flower, leaves, and root. It may be erect, climbing, creeping, or pendulous, or may extend underground, in which case it differs from the roots in its capacity for bearing leaves. In trees, shrubs, and certain other plants the stem persists all the year round; in herbaceous plants it dies down in the autumn, in which case the plant has an underground stem, e.g. a rhizome, bulb, corn, or tuber. See Botany: Plant.

The word is also used for anything that resembles a stalk or stem. In shipbuilding, it is the upright bar of iron or piece of timber at the fore end of a vessel, to which are attached the forward ends of the strakes. See Ship.

STENCILLING (Old Fr. estinceller, to powder with stars). Printing, on paper or other prepared surface, of a pattern by means of a thin sheet of metal, cardboard, etc., pierced with spaces. When the ink or colour is brushed over the whole surface, it falls into the spaces intended to receive it, and is excluded by the sheet from the intervening spaces. Stencilling was the earliest method of printing coloured wall-papers, and is used in various forms of surface decoration.

STENDHAL. Pen name of Marie Henri Beyle, French novelist (1783-1842). Born at Grenoble, Jan. 23, 1783, he obtained a post in the ministry of war. He saw some military service, and from 1830-41 was a consul in Italy. Stendhal, who wrote three novels, *Armance*, 1827; *Le Rouge et le Noir*, 1831; and *La Chartreuse de Parme*, 1839, notable for its account of the battle of Waterloo, may be regarded as the creator of that modern novel of psychological analysis which Bourget and D'Annunzio did much to popularise. He died in Paris, Mar. 23, 1842.

"Stendhal," French novelist
After H. Dujardin

STENNESS, STONES OF. Megalithic stone circles near Macshewe, Orkney. A 30-ft. moat encloses about 2½ acres, within which stands the Ring of Brogar, a circle of unhewn sandstone monoliths, 366 ft. across. Outside a smaller circle stood the perforated Stone of Odin, mentioned by Sir W. Scott in *The Pirate*.

STENTOR. In Greek mythology, the herald of the Greeks in the Trojan War. He was famous for the loudness of his voice, which was said to be equal to that of thirty men. The English word stentorian is derived from him.

STEPHEN. Christian saint and martyr. After the death of Christ he became a member of the Christian society in Jerusalem. One of the seven chosen to look after the poor (Acts 6), he was a man "full of faith and the Holy Ghost," and took a prominent part in controversy. His words made his enemies angry, and he was brought before the council. His speech (Acts 7) did not save him, and he was stoned to death. His day is Dec. 26.

STEPHEN (c. 1097-1154). King of England. A younger son of Stephen, count of Blois, and Adela, a daughter of William the Conqueror, he lived in boyhood at the court of his uncle Henry I. Although he had sworn to help Henry's daughter, Matilda, to obtain the throne on her father's death, when that event occurred he put himself forward and was

Stelvio Pass. Windings in one of the highest carriage roads in Europe

crowned, his brother Henry, bishop of Winchester, being one of his chief supporters. His reign was a period of general anarchy, due in part to his subservience to the barons. Rebellions broke out and in 1139 Matilda appeared

to claim the throne. In 1141 Stephen was captured, but before the end of the year he was free again and the civil war continued for about twelve years. The treaty of Wallingford provided that Matilda's son Henry should succeed Stephen, who died Oct. 24, 1154. Stephen's elder son, Eustace, died in 1153; the younger, William, called the Clito, fought against Henry II.

STEPHEN (977-1038). King of Hungary and saint. The son of Geza, duke of Hungary, he changed his name from Vajk to Stephen at his conversion and baptism in 997. In 998 he took the title of king, and in 1001 received from Pope Sylvester II the iron crown. His reign was spent in wars against the heathen, and in 1030 he repelled an invasion by the emperor Conrad. He was canonised in 1083.

STEPHEN, SIR JAMES (1789-1859). British historian. Born at Lambeth, Jan. 3, 1789, he was educated at Trinity Hall, Cambridge. In 1825 he became counsel to the colonial office and board of trade. He became under-secretary to the colonial office, 1836-47, when he was knighted. His historical knowledge gained him the appointment of regius professor of modern history at Cambridge in 1849. Stephen died at Coblenz, Sept. 14, 1859.

His son, Sir James Fitzjames Stephen (1829-94), was a judge of the high court, 1879-91, when he received a baronetcy. He wrote largely for *The Saturday Review* and *The Pall Mall Gazette*, while his works on legal subjects include *Digest of the Law of Evidence*, 1876, and *History of the Criminal Law of England*, 1883. He died at Ipswich, March 11, 1894.

STEPHEN, SIR LESLIE (1832-1904). British author. Born in London, a son of Sir James Stephen, Nov. 28, 1832, he was educated at Eton and Cambridge. He was a tutor at Cambridge until 1864 and a clergyman from 1862 to 1875, when, having become an agnostic, he relinquished his orders. He wrote for *The Saturday Review* and other papers, and in 1880 undertook the editorship of *The Dictionary of National Biography*. He was knighted in 1902, and died Feb. 22, 1904.

Stephen wrote *Hours in a Library*, 1874-77; and *An Agnostic's Apology*, 1893; also lives of Swift, Pope, Johnson, George Eliot, and Hobbes in the *English Men of Letters* series. A keen mountaineer, he wrote *The Playground of Europe*, which appeared in 1871.

STEPHENSON, GEORGE (1781-1848). British engineer. Born at Newcastle, June 9, 1781, he was the son of Robert Stephenson, a colliery fireman. In 1808 he contracted with two others to work the engines of Killingworth pit, and he dismantled his engine once a week until he was thorough master of its construction. In 1815 he invented a safety lamp for the use of miners. He built his first locomotive in 1814, and in 1815 he made a number of improvements in its construction. The failure of steam locomotives to work on any real gradient on the roads turned Stephenson's attention to the construction of railroads, and in 1819 he superintended the laying down of a short line at Hetton Collieries and in 1823 the line between Stockton and Darlington. In 1826 Stephenson began the construction of the Liverpool and Manchester Rly., and in 1829 he built the Rocket. He died Aug. 12, 1848. See *Locomotive*; *Railway*.

STEPHENSON, ROBERT (1803-59). British engineer. Son of George Stephenson, he was born Oct. 16, 1803. He helped his father to

survey the Stockton and Darlington Rly., 1821, and then entered Edinburgh University. On his return from a mining appointment in Canada in 1827 he assisted his father in building the Rocket and constructing the first railway into London, the Birmingham-London line, 1833-38. The Menai Bridge, the Victoria bridge at Montreal, and many others were built by him. He was M.P. for Whitchy from 1847 till his death. He died Oct. 12, 1859.

Robert Stephenson,
British engineer

STEPNEY. Met. bor. of London. It has Bethnal Green on the N., the city and Shoreditch W., Poplar E., and the Thames S. It contains the Tower, Mint, St. Katharine's and London docks, Shadwell Basin, and includes Spitalfields, Whitechapel, Mile End, St. George's in the East, Shadwell, Wapping, and Limehouse. The church of St. Dunstan was rebuilt by Wren. Charitable institutions include Barnardo's Homes and the London Hospital. Since 1895 Stepney has given its name to a suffragan bishopric. Pop. 249,738.

STEPNIAK, SERGIUS (1852-95). Russian writer. He was born of noble descent, his proper name being Sergius Michaelovitch Kravchinsky. He early associated himself with the fight for freedom, and when he was little over twenty was arrested owing to his association with a known group of Nihilists, and was later placed under police surveillance. Before he was thirty he got away from Russia, and lived first in Switzerland and later in England, where he became known as a writer and lecturer. He was killed at a railway crossing at Chiswick, Dec. 23, 1895.

Sergius Stepnjak,
Russian writer

STEPPE. Name given to the vast grassy plain in the S. and S.E. of the European territory of the Union of Socialist Soviet Republics and in the S.W. of its Asiatic territory. Owing to the scanty rainfall or, in some cases, to the porous character of the soil, trees are not found except along the banks of rivers, or where there are permanent supplies of moisture. See *Pampas*; *Siberia*.

STEREOSCOPE. Optical instrument which presents to each eye separately a flat image, either a drawing or a photograph, of an object, as seen by the respective eyes, and so produces the effect of relief. The instrument was invented by Wheatstone in 1838, and the separate pictures were reflected by mirrors. The use of two prism eyepieces was due to Brewster, 1849, and, as modified by making the prisms in the form of sections of convex lenses, has been generally adopted.

STEREOTYPING. Method of reproducing for printing a surface of movable type or relief printing blocks. Two operations are involved, the moulding of the matrix from the type, and the casting of the stereotype from the mould. It is executed by making in plaster of Paris or papier-maché by extreme pressure heavy impressions of the surface of a forme containing type or illustrations, or both, and a mould or matrix is thus secured into which molten metal is poured, producing a new metal surface with characters in relief identical with the original. See *Autoplate*.

STERILISATION (Lat. sterilis, barren). Term used in bacteriology and chemistry for destroying microbes or bacteria.

The sterilisation of food forms an important part of its preparation for human consumption.

Water may be sterilised by boiling or distillation, and milk by boiling or exposing to superheated steam. Boiling or exposing milk to great heat alters its character and its food value, and sterilisation is better carried out by pasteurization. Milk can also be sterilised by the addition of antiseptic substances, e.g. boric acid.

The idea of preventing persons from reproducing their kind by sterilising them is carried out in California and some other states of the U.S.A. In 1928 a law for the sterilisation of the feeble-minded was passed in Alberta.

STERLING, ANTOINETTE (1850-1904). American singer. She was born at Sterlingville, New York, Jan. 23, 1850, and studied singing in New York and under Marchesi, Viardot-Garcia, and Manuel Garcia, returning to New York in 1871 and soon becoming known as a leading contralto concert singer. She made her first London appearance in 1873, and thereafter remained in England, though touring the U.S.A., 1875, and Australia, 1893. Her dramatic sense made her a powerful ballad singer. Married to John Mackinlay, 1875, she died at Hampstead, Jan. 9, 1904.

STERLING, JOHN (1806-44). Scottish author. Born July 20, 1806, at Kames Castle, Bute, the son of Captain Edward Sterling (1773-1847), who became a leader writer on *The Times*, he was educated at Glasgow University and Trinity College, Cambridge. In 1828 he became for a time part proprietor of *The Athenaeum*. In search of health he went to St. Vincent as manager of a sugar plantation, but after fifteen months he returned to England, took orders, and for a short time was a curate. He died Sept. 18, 1844. He is chiefly remembered by the biography written by his friend Thomas Carlyle.

STERN, DANIEL (1805-76). Pseudonym of Marie Catherine Sophie de Flavigny. Born at Frankfurt, Dec. 31, 1805, she married in 1827 the Comte d'Agout, but deserted him for Liszt, the composer, to whom she bore three daughters. The eldest child married Emile Ollivier, and the youngest married Hans von Bülow and subsequently Wagner. Stern's best work is *Moral Sketches*, published in 1849. She died March 5, 1876.

STERNE, LAURENCE (1713-68). British novelist. He was born Nov. 24, 1713, at Clonmel, and on his father's death in a duel was sent by relatives to Jesus College, Cambridge. He was ordained in 1736, and soon received the living of Sutton, Yorkshire. He married and lived there quietly until 1759, when he published the first two volumes of *Tristram Shandy*. This made him known, and, having produced its two concluding volumes, he went to London to enjoy the fame it brought him. He was presented to another living at Coxwold, but he spent much of his time in travel. His foreign wanderings are reflected in the latter part of *Tristram Shandy* and in *The Sentimental Journey* through France and Italy, published just before his sudden death, Mar. 18, 1768.

STERNHOLD, THOMAS (c. 1500-49). English versifier of the Psalms. A small landed proprietor in Hampshire, he is believed to have been groom of the robes to Henry VIII. He was the author, with John Hopkins (d. 1570), of metrical versions of the Psalms, which enjoyed great popularity. The first edition contained 19 psalms, and the second,

Laurence Sterne,
British novelist
After Sir Joshua Reynolds

George Stephenson,
British engineer
After Briggs

1549, had 37 by Sternhold and seven by Hopkins. The complete volume, 1562, had no rival until the New Version of Tate and Brady, 1696. He died Aug. 23, 1549.

STETHOSCOPE (Gr. stēthos, chest; skopein, to look into). Medical instrument invented by R. T. H. Laennec. It enables the physician to hear sounds originating in the heart or lungs, or other parts of the body. Laennec's instrument consisted of a hollow wooden tube expanded at each end. The modern form of stethoscope consists of a chest piece, from which lead two rubber tubes terminating in bone or metal ear pieces which the physician places in his ears, the chest piece being applied to the body over the organ which is to be auscultated.

STETTIN. Town and seaport of Prussia. It stands on the Oder, 17 m. above its entrance into the Stettiner Haff, 30 m. from the

Stettin. Baum bridge, which admits ocean steamers to the Oder wharves

Baltic and 83 from Berlin, of which it is the port. The palace, built in the 16th century, formerly the residence of the dukes of Pomerania, is now the law courts. The clock in its tower, which contains the museum of antiquities, has a dial representing a moving face. Stettin has ship-building yards and engineering works and is a rly. junction. As a port Stettin developed during the 19th century, and has now extensive modern docks and wharves. It has a free harbour at Lastadie. Pop. 254,466.

STEVENAGE. Market town and urban dist. of Hertfordshire. It is 28 m. from London, on the L.N.E. Rly. The church of S. Nicholas is mainly Early English. Market day, Sat. Pop. 5,038.

STEVENS, ALFRED (1818-75). British sculptor. Born at Blandford, Dorset, Jan. 28, 1818, he studied painting in Italy, but while there turned to sculpture, and about 1841 entered Thorwaldsen's studio. He returned to England in 1843, and in 1856-57 received the commission for his greatest work, the Wellington monument in S. Paul's Cathedral, but this monument was left unfinished at his death in London, May 1, 1875. Stevens was the perfect modern interpreter of Renaissance art ideals. See Tweed, John.

STEVENS, ALFRED (1828-1906). Belgian painter. Born in Brussels, May 11, 1828, he studied under Navez there, and Roqueplan in Paris. In 1849 he painted his first notable picture, and he later frequently exhibited in the Paris Salons. He painted the elegant bourgeois life of his time, chiefly interior scenes, with furniture, costumes, etc., faithfully rendered. He died Aug. 24, 1906.

STEVENSON, ROBERT (1772-1850). Scottish civil engineer. Born in Glasgow, June 8, 1772, he was a son of Alan Stevenson, a merchant. He learnt lighthouse engineering from his stepfather, Thomas Smith. In 1797 he was appointed engineer to the Scottish lighthouse board, a position which had been filled by his stepfather. Robert Stevenson erected a number of important lighthouses, the most famous of which was the Bell Rock. Stevenson made many improvements in the methods of lighting lighthouses and lightships, and was honoured by many British scientific societies and institutions. He died July 12, 1850. His work was carried on by his sons, Thomas Stevenson and David Stevenson.

STEVENSON, ROBERT LOUIS (1850-1894). Scottish novelist. Born Nov. 13, 1850, his full name was Robert Lewis Balfour Stevenson, his father being Thomas Stevenson.

After education at private schools he entered the university of Edinburgh and in 1875 became an advocate. About this time he published his first volumes, *Familiar Studies of Men and Books* and *Virginibus Puerisque*.

In 1876 he wrote *An Inland Voyage and Travels with a Donkey in the Cevennes*. He also contributed to *The Academy* and *Vanity Fair*. To the weekly review, *London*, edited by Henley, Stevenson contributed *The New Arabian Nights*, a brilliant fantasy. In 1879, owing partly to family differences, Stevenson travelled to California and fell very ill. Nevertheless, he wrote *The Pavilion on the Links*, drafted *Prince Otto*, and began *The Amateur Emigrant*. In 1880 he married an American, Mrs. Osbourne, and with her and her son, Samuel Lloyd Osbourne, lived at Juan Silverado, above Calistoga. In 1881 Stevenson wrote *Thrawn Janet* and *The Merry Men*, and during this year and the next, 1882, wrote *Treasure Island*, which made his reputation with the great public. In 1883 he wrote *The Treasure of Franchard* and *The Black Arrow*. To the years 1884-86 belong *A Child's Garden of Verses*, the plays *Beau Austin*, *Admiral Guinea*, and *Robert Macaire*, written in collaboration with W. E. Henley, the second series (in collaboration with his wife) of *The New Arabian Nights*, and various short stories and beginnings. Then, in Dr. Jekyll and Mr. Hyde, he achieved his second popular success. In the same year, 1886, he published *Kidnapped*.

On his father's death, in May, 1887, he quitted England and went to America. There he wrote *Ticonderoga*, contributed to *Scribner's Magazine* the essays afterwards published under the title of *Pulvis et Umbra*, wrote, with S. Lloyd Osbourne, *The Wrong Box*, a farce, and began *The Master of Ballantrae*. At Christmas, 1889, the Stevensons reached Samoa, where, at Apia, Louis bought an estate, which he named *Vailima*. At Vailima he wrote the *Footnote to History*, *Catrina*, and, in collaboration with S. Lloyd Osbourne, *The Ebb Tide*. In 1893, during illness, he dictated *St. Ives*. In the winter of 1894 he was at work upon *Weir of Hermiston*, which he never finished. On Dec. 4, while talking with his wife, he suddenly lost consciousness and died. He was buried upon the summit of Mount Vaea.

STEVENSTON. Coal and iron working centre of Ayrshire. It stands near the Firth of Clyde, 28 m. from Glasgow, on the L.M.S. Rly. Here the firm of Nobel established a factory for explosives. Pop. 10,730.

STEWART (A.S. stigo, sty; weard, keeper). One who manages an estate. It is also used for attendants on ships and for officials at race meetings. In some churches, e.g. among the Methodists, certain officials are known as stewards. In England the lord high steward is one of the great officers of state, and there is also a lord steward in the royal household. See Bailiff; Jockey Club; Royal Household; Shop Steward.

STEWART, STUART, OR STEUART. Name of a Scottish family and clan of Breton origin. An ancestor, Walter, was great steward of Scotland in the time of David I. Robert (1316-90), son of the 6th steward, became

Robert Louis Stevenson
Scottish novelist

king of Scotland in 1371, and from him descended the royal line in male succession to James V (d. 1542). Through James's daughter, Mary, the succession to the crown continued in James VI, who came to the English throne in 1603. The last male representative of the house was Henry, cardinal of York, who died in 1807. See Charles Edward; Jacobites; James, the old Pretender; Royal Family, etc.

STEWART, BALFOUR (1828-87). Scottish physicist and meteorologist. Born in Edinburgh, Nov. 1, 1828, in 1856 he became an observer at the Kew Observatory, and in 1868 was awarded the Rumford medal of the Royal Society for his work on radiant heat. He became director of the Kew Observatory in 1859, and in 1870 professor of natural philosophy at Owens College, Manchester. He wrote many text-books and, with Professor Tait, published anonymously *The Unseen Universe*, 1875. He died Dec. 19, 1887.

STEWART, DUGALD (1753-1828). Scottish philosopher. Born Nov. 22, 1753, he was professor of mathematics at Edinburgh University in 1775, and proceeded to the chair of moral philosophy in 1785.

He died in Edinburgh, June 11, 1828. His philosophy upheld "common sense" as the fundamental law of human belief. The existence of the Ego is suggested by the understanding; the existence of the objects of the external world is shown by the repeated perception of the same thing and the fixed and coherent order of nature.

STEWARTON. Burgh of Ayrshire. It stands on Annick Water, 19 m. from Glasgow, on the L.M.S. Rly. There are manufactories of textiles and dyeworks, and important cattle and horse fairs are held. Pop. 2,858.

STEWARTRY. In Scotland, former name of a district administered by a steward. The term is now applied only to the stewardry of Kirkeudbrightshire (q.v.).

STEYN, MARTINUS THEUNIS (1857-1916). South African statesman. Born in the Orange Free State, Oct. 2, 1857, he was educated in Holland and England. Called to the bar at the Inner Temple in 1882, he practised law at Bloemfontein, becoming state attorney in 1889 and five years later a judge. President of the Free State in 1896, in 1899 he followed the Transvaal in declaring war, but after the war became a supporter of the British government. He died Nov. 23, 1916.

STEYNING. Town of Sussex. It is 4 m. from Shoreham on the S.R. The chief buildings are S. Andrew's Church, with some notable Norman work, and the grammar school, founded in 1614. It was a Roman settlement and a seaport until the sea receded in the 14th century. Pop. 1,875.

STICK INSECT (Phasmodae). Family of orthopterous (straight-winged) insects.

Cardinal Stewart,
Jacobite prince
After Carrier

Dugald Stewart,
Scottish philosopher

M. T. Steyn, South
African statesman

Stick Insect from
Borneo, flying

In them the body closely resembles a twig. About 600 species are known, of which four or five are found in Europe.

STICKLEBACK (Gastrosteus). Group of small fishes, which have sharp spines on the back. Three species occur in Great Britain, and are known as the three-spined, ten-spined, and fifteen-spined, the first two fresh-water species, the third marine, the first being most common. In the breeding season the male becomes resplendent with blue and red, and builds a nest in which the female lays her eggs.

Stickleback. Three-spined species on guard over the nest which it has built among the weeds

STIFF NECK, WRY NECK, OR TORTICOLLIS. Affection of the neck muscles which leads the patient to rotate the whole body instead of turning the head to look at an object. The so-called rheumatic variety is due to inflammatory changes in the fibrous tissue surrounding the muscles. Chronic torticollis may be present at birth, or due to cicatricial changes in the sterno-mastoid muscle. Spasmodic torticollis is a form in which the head is continually jerked or twisted to one side.

STIGAND (d. 1072). English prelate. A priest at Assundun, he became chaplain to Canute, and was a leading supporter of his widow, Emma. In 1043 he was made bishop of Elmham, in 1047 bishop of Winchester, and in 1052 archbishop of Canterbury. In 1070 the papal legates brought charges against him, he was put in prison, and there remained until his death, probably on Feb. 22, 1072.

STIGMA. In flowering plants, the summit of the ovary or of the style, which, if present, is a prolongation of the ovary. It is specially adapted to retain the pollen grains, which are brought to it by insects, the wind, or in self-fertilised species by the action of the stamens.

STIGMATA (Gr. punctures, marks). Name for the five wounds of Jesus Christ, in the hands, feet, and side. Between three and four hundred cases are on record of the appearance of the stigmata on those who have subjected themselves to prolonged meditation on the passion of Christ. One of the earliest cases is that of S. Francis of Assisi, and one of the latest is that of Father Pio of Foggia, 1919-20. It is probably due to auto-suggestion.

STILBITE. In mineralogy, one of the zeolite group. A hydrated silicate of calcium and aluminium, white to red in colour with a pearly lustre, it occurs in basaltic rocks, granites, and gneisses, and is found in Scotland, the Faroe Islands, Iceland, etc.

STILETTO. Dagger with a slender and narrow blade. It was much used in Italian vendettas, as it could be easily concealed. The name was given later to a pointed instrument used to make eyelet holes in garments.

STILICHO, FLAVIUS (c. 359-408). Roman soldier and statesman. A Vandal by birth, he became a notable commander and diplomatist under Theodosius I, on whose death in 395 he virtually ruled the Western empire. Guardian of Honorius, he defeated Alaric, king of the Visigoths, at Pollentia in 403 and overthrew the invading army of Radagaisus at Faesulae (Fiesole) in 405. He was murdered, Aug. 23, 408. Stilicho was the patron of the poet Claudian. Pron. Stilly-ko.

STILL. Apparatus used for distilling spirits. It consists of a vessel in which the liquid to be distilled is placed. The vapour is then conducted by means of a head or neck to the condenser, or worm, where it is cooled by water or other means until it again forms a liquid. A simple form of still is the pot still, and a more modern one the patent still. See Distillation.

STILLINGFLEET. EDWARD (1635-99). English divine. Born at Cranborne, Dorset, April 17, 1635, and educated at S. John's College, Cambridge, he became dean of S. Paul's in 1678, and in 1689 bishop of Worcester. He died March 26, 1699. His great learning was employed in opposing Nonconformist and Roman Catholic claims, and he was one of the most noted preachers of his time.

STILT (HIMANTOPUS). Wading bird of the sandpiper group, so called on account of its very long legs. There are several species, of which the black-winged stilt (*H. candidus*) occurs as a migratory bird in Europe and is occasionally found in Great Britain.

STILTON. Village of Huntingdonshire. It is 7 m. from Peterborough, on the Roman Ermine Street. Stilton cheese was called Stilton because it was brought here by the makers, in order that the stage coaches might carry it to London. Pop. 500.

STILUS (Gr. *stylos*). Writing implement used in classic times. Made of iron or other hard material, the stilus was pointed sharply at one end for inscribing on wax tablets.

STIMSON, HENRY LEWIS (b. 1867). American politician. Born Sept. 21, 1867, in New York, he was educated at Harvard and became a lawyer. A member of the republican party, he was their candidate for the governorship of New York state in 1910 and in 1911-13 was secretary for war. He was with the American forces in France in 1917-18 and in 1927 was sent to deal with the trouble in Nicaragua. In 1928-29 he was governor-general of the Philippine Islands and in 1929 he was appointed secretary of state.

Stinchar. River of Scotland. It rises in the S.E. part of Ayrshire and flows 30 m. to the Firth of Clyde at Ballantrae.

STING. In insects, an adaptation of the egg-conduit (ovipositor) to serve as a weapon, the piercing organ being connected with glands from which acid or alkaline poison flows into the puncture. These organs reach their highest development in bees, wasps, ants, and gall-wasps. In scorpions the sting consists of a hardened and hooked point to the last segment of the narrowed hind body, within which are the poison glands. The sting of the nettle consists of a hollow hair, through which poison flows.

The so-called stinging of mosquitoes and fleas is effected by the modified mouth parts. The weaver and sting ray make punctures by a cleverly manipulated spine, and the consequent irritation results from the introduction of slime from the skin of the fish.

STING RAY. Popular name for a family of fishes (Trygonidae), in which a serrated spine is present on the whip-like tail. About 25 species are known, mainly restricted to the warmer seas, but one is found around the S. shores of England.

Sting Ray. The Fire Flare, showing the serrated spine on its tail

STINKHORN (*Phallus impudicus*). Fungus of the order Gastromycetae. The mycelium runs through leaf-mould, and bears at intervals knobs which become the size and shape of a fowl's egg. The top splits, and from it arises a white, spongy column with a conical cap divided into open cells, which are filled with an olive-green slime, containing the spores. This slime, which attracts flies, is the principal source of the odour.

STINKWOOD (*Foetidia mauritiana*). Evergreen tree of the order Myrtaceae. A native of Mauritius and Madagascar, it attains a height of 30 ft., and has a tough, bitter, and astringent bark. The alternate leaves are oval and the solitary flowers are without petals; they are succeeded by four-sided nuts. The wood has an unpleasant smell.

STINNES, HUGO (1870-1924). German financier. Born Feb. 12, 1870, he inherited a large fortune in 1897. During the Great War he was the chief contractor for war material. After the downfall of the empire he bought up newspapers, organized shipping companies, took over engineering and mining works, and controlled the greater part of Germany's coal, iron, and steel supply. He died April 10, 1924.

Hugo Stinnes, German financier

STINT. Genus of shore birds (*Tringa*). Belonging to the plover tribe, three species occur in Great Britain. The little stint (*T. minuta*), no larger than a sparrow, has mottled brown and black plumage with white under parts. It is found about the E. coasts and nests in the N. parts of Norway.

Stint. *Tringa minuta*, a shore bird of the British coast

STIPENDIARY. Literally, one who receives a stipend. It is applied usually to paid magistrates. Stipendiaries are appointed by the crown, and must be barristers of at least five years' standing. See Magistrate.

STIPPLE (Dutch *stippel*, little point). Term in engraving, etching, and drawing, to denote the process of dotting or making small, short marks with a brush, pencil, or other medium, to produce detail or a local effect of light and shade.

STIRLING. Burgh and co. town of Stirlingshire, Scotland. It stands on the Forth, 29 m. from Glasgow, and is served by the L.N.E. and L.M.S. Rlys. The castle, now public property, was a residence of the Scottish kings. In its precincts are the parliament house, chapel royal, and palace. Other features include the Greyfriars church, trades hall, Cowane's hospital (now the guildhall), the "auld brig," and the statue of Bruce. There are manufactories of leather, tartans, and tweeds

Sting. Enlarged needle of a bee's sting, a barbed point; b, piston; c, base

Stirling owes its importance as the key to the Highlands. Pop. 21,345.

At Stirling Bridge, Sept 11, 1297, the Scots under Sir William Wallace defeated an English army under the earl of Surrey.

Stirling Castle, formerly a residence of the Scottish kings

STIRLING, MARY ANNE (1815-95). British actress. Born in London, daughter of an army captain named Kehl, she made her debut in

1827 under the name of Fanny Clifton. After touring with her husband, Edward Stirling, she appeared at the Adelphi and Drury Lane. In 1852 she made her greatest hit as Peg Woffington in *Masks and Faces*. Later she was unexcelled as Mrs. Malaprop, and the Nurse in *Romeo and Juliet*. From 1870 she taught reciting and elocution at the R.A.M. In 1894 she married Sir C. H. Gregory, but died Dec. 31 of the following year.

STIRLINGSHIRE. Midland county of Scotland. With an area of 451 sq. m., it is served by the L.M.S. and L.N.E. Rlys. and the Forth and Clyde Canal. In the N.W. are the outliers of the Grampians (Ben Lomond 3,192 ft.).

In the centre are the Campsie Fells and Gargunnoch, Fintry, and Kilsyth Hills. The rivers are the Forth, Kelvin, and Endrick. In the shire are parts of Loehs Lomond and Katrine, and all Loeh Arklet. Agriculture is the staple industry, but there are coal and ironstone mines. Stirling, near which is Bannockburn (q.v.), is the co. town. With Clackmannan it returns two M.P.'s. Pop. (1921) 162,000.

STIRRUP (A.S. stiráp, stigráp, from stigan, to climb; ráp, rope). Loop of metal with a horizontal portion for receiving the foot of a rider and attached by a strap to the saddle. It is used to assist a horseman in mounting, and as a support while riding.

STITCHWORT (*Stellaria holostea*). Perennial herb of the order Caryophyllaceae, native of Europe and W. Asia. It has four-angled, brittle, jointed stems, which give off rigid, grass-like leaves in pairs from the joints. The beautiful white flowers are about three-quarters of an inch across. The name is also given to the chickweed. See Chickweed.

Stitchwort, a familiar British wild flower

long in body, with a tail of 4½ ins. In summer the fur is reddish brown above and white below, with white edges to ears and a black tip to tail. The winter coat is pure white or yellowish white, with the exception of the black tip to the tail.

The animal makes its home in hollow trees and holes in banks, and is fairly common in England and Scotland, but does not occur in Ireland. It preys on rats, mice, voles, hares, and rabbits. The winter fur is in great demand. See Ermine.

STOBS. Military camp in Roxburghshire, Scotland. It is 4 m. S. of Hawick on the L.N.E.R. and is used as a training ground. German prisoners were interned here.

Stoat or ermine, whose coat in winter becomes yellowish white W. S. Berridge, F.Z.S.

STOCK. Horses, cattle, etc., kept on a farm. The raising of stock divides itself into two distinct branches applicable to differing conditions. The original or normal method is that in which the more or less unimproved, hardy and slow maturity breeds exist on the food that nature provides. These are seen on unimproved uplands and in pioneer ranching in all parts of the world. The modern method aims at early maturity and quick returns, and implies artificial conditions of life, with greatly increased expenditure on pedigree animals, and high rationing on artificially grown products, imported cakes and other concentrated feeding stuffs. See Cattle

Stirlingshire. Map of the Scottish county famous for its battlefields

STOCK (*Matthiola*). Herbs and shrubby plants of the order Cruciferae, natives of S. Europe, W. Asia, N. and S. Africa. Two species are British. The popular Brompton stock is a cultivated variety of *M. incana* (British); the ten-week stock is the S. European *M. annual*, and the night-scented

stocks are *M. odoratissima* and *Hesperis tristis*. Most can be sown in the open like annuals.

STOCKBRIDGE. Town of Hampshire. It stands on the Test, 19 m. from Southampton, on the Southern Rly. It is known as an angling resort and a centre for training racehorses. Pop. 862.

STOCK EXCHANGE. A building in which stocks, shares, and negotiable securities are bought and sold. In Paris and other continental cities it is known as the Bourse. The London Stock Exchange was founded in 1773 and is owned by a company, directed by a board of trustees and managers elected by the shareholders, and derives its income from entrance fees and subscriptions of members. The members, who deal with or for the public, are managed by their own annually elected committee. Every new member must become a shareholder. In 1930 there were about 4,000 members and a number of clerks who have authority to deal for members. Every candidate must be British, or have been resident in the British Dominions for ten years.

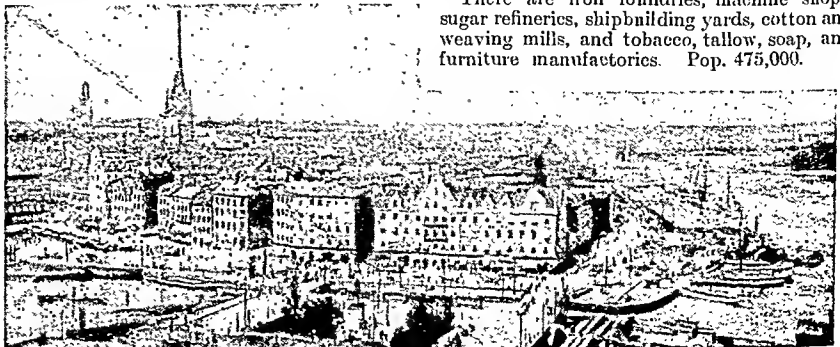

The ordinary method of business is for a broker member to ask a jobber member to "make a price" in the security his client wants to buy or sell. The jobber mentions the price at which he will buy and the price at which he will sell. The broker sends his client a contract note, and the next morning the jobber's clerk and the broker's clerk meet and check the transaction. When settlement time arrives the broker sends his client an account, and the accounts are paid on settlement pay-day. Speculators for a rise are known as bulls, those for a fall as bears. Members are not allowed to advertise. Following the Hatry (q.v.) affair, in 1930, the committee inaugurated reforms to prevent similar frauds. The office of the secretary is at 23, Throgmorton Street, London, E.C.2. See Birmingham.

STOCKHOLM. Capital and largest port of Sweden. It is situated on a cluster of islands at the influx of Lake Mälaren into the Baltic, and is connected by rly. with Malmö, Göteborg (Gothenburg), Oslo, and Trondheim. The chief buildings include the Renaissance royal palace, begun in 1697; the Gothic Riddarholm Kyrka (church), the burial place of Sweden's kings and heroes; the Riddarhus or Knights' House, with a collection of armorial bearings; and the Riksdagshuset or houses of parliament, 1898-1905. Others are the opera house, national museum, academy of science, and national library. The palace of Drottningholm, on Lofö Island, has many relics of former kings. Waxholm is a summer resort. The fortress was founded by Gustavus Vasa.

There are iron foundries, machine shops, sugar refineries, shipbuilding yards, cotton and weaving mills, and tobacco, tallow, soap, and furniture manufactories. Pop. 475,000.

Stock. Double Brompton variety

Stockholm. General view of the old town, showing steamers and other craft in the wharves along the harbour. The spire is that of the Tyska Kyrka; beyond it, to the left, is the Stor Kyrka tower

By the treaty of Stockholm, concluded between Great Britain and Sweden, Nov. 20, 1719, George I obtained for Hanover the duchies of Bremen and Verden, and Stettin for his ally, the king of Prussia. See Sweden.

STOCKPORT. Co. hor. and market town of Cheshire and Lancashire. Standing where the Goyt and Tame flow into the Mersey, it is 6 m. from Manchester on the L.M.S. and L.N.E. Rlys. The buildings include S. Mary's church, with a 13th century chancel, the modern town hall, and the grammar school, founded in 1487. There is a museum in Vernon Park. The large Sunday school is a feature of the town. There are cotton industries, foundries, breweries, and hat making factories. It sends two members to Parliament. Market days, Fri. and Sat. Pop. 125,400.

STOCKS. Punitive wooden structure for confining the legs. Stocks consisted of two pieces of wood, fitting edge to edge, with semicircles cut out of the contiguous edges just large enough to hold a man's ankles and keep them securely when the boards were locked together. Used for minor offences, stocks were in use in almost every village till the early 19th century.

Stocks, a former instrument of punishment

STOCKSBRIDGE. Urban dist. of Yorkshire (W.R.). It is 8 m. from Sheffield, and is a coal-mining centre, having also iron and steel works. Pop. 9,060.

STOCKTON-ON-TEES. Borough, market town and port of Durham. It stands on the Tees, 4 m. from Middlesbrough on the L.N.E.R. There are shipbuilding yards, blast furnaces, ironworks, foundries, machine shops, and glass works. Coal is exported. One member is sent to Parliament. From here to Darlington ran the first passenger railway in England. Market days, Wed. and Sat. Pop. 64,126.

STOCKWELL. Dist. of S.W. London. In the bor. of Lambeth, it lies between Clapham S., and N. Brixton, N. Here are Stockwell Orphanage, founded in 1867 by C. H. Spurgeon, which maintains about 500 children and has a home at Margate; a training college of the British and Foreign Schools Society; and the S.W. Fever Hospital, established 1877.

STOICISM (Gr. stoa, porch). Greek philosophical system founded at Athens by Zeno of Citium in Cyprus, about 300 B.C. It divided philosophy into logic, physics, and ethics. Logic furnishes the means of acquiring true knowledge. All knowledge comes from sensual perceptions, but only those perceptions and notions are true which carry conviction. Physics teaches the laws of the universe. There are two principles of things: passive matter and active God. God is the universal intelligence. Man's soul is partly divine, but perishable. Ethics provides rules for practical life. Virtue consists in living according to nature in rational action. Pleasure is rather an evil than a good. Suicide was permissible.

STOKE. English place-name. It is generally regarded as meaning a fenced place, connected with the word stockade. Stoke in Nottinghamshire, 4 m. from Newark, is famous as the scene of the battle on June 16, 1487, in which Henry VII defeated Lambert Simnel. Stoke d'Abernon, 3 m. from Leatherhead, Surrey, on the S.R., has in its church the oldest brass in England.

STOKE NEWINGTON. Met. bor. of London. It includes the old parish of the same name, and part of S. Hornsey, and has Islington W. and Hackney E. The 16th century church of S. Mary was superseded as

the parish church by a structure by Sir Gilbert Scott. Clissold Park, through which winds the New River, was opened July, 1889: to the E. is Ahney Park cemetery. One member is returned to Parliament. Pop. 53,080.

STOKE POGES. Village of Buckinghamshire. It is 20 m. W. of London, on the G.W.R. The chief building is the church of S. Giles, parts of which are Norman and Early English. Its churchyard is the burial place of the poet Gray and is generally regarded as the scene of his famous Elegy Pop. 1,400.

Stoke Poges. The church and its churchyard, made famous by Gray D. McLeish

STOKES, SIR GEORGE GABRIEL (1819-1903). British mathematician and physicist. Born at Skreen, co. Sligo, Ireland, Aug. 13, 1819, he was educated at Bristol and Cambridge, where he became Lucasian professor of mathematics in 1849. He was appointed secretary of the Royal Society in 1854, was president 1885-90, and was honoured by every important scientific body. From 1887-91 he represented his university in Parliament. He died at Cambridge, Feb. 1, 1903.

Sir George Stokes British mathematician Elliott & Fry

To Stokes is due the modern theory of motion of viscous fluids, in optics his theory of diffraction opened up hitherto unexplored fields of research, and he was the practical founder of the science of geodesy and an original investigator.

STOKESAY. Village of Shropshire. The station, Craven Arms and Stokesay, 6½ m. N.W. of Ludlow, serves the L.M.S. and G.W. Rlys. The castle, a fine example of a fortified residence of the 13th century, is surrounded by a moat. Pop. 1,100.

Stokesay Castle, one of the oldest fortified manor houses in England. It dates from the 13th century

STOKESLEY. Market town of Yorkshire (N.R.). It stands on the Leven, 16 m. from Stockton-on-Tees, and has a station on the L.N.E.R. Around are ironstone mines. Market day, Mon. Pop. 1,641.

STOKE-UPON-TRENT. Co. bor. and city of Staffordshire. The centre of the Potteries district, it is served by the L.M.S. Rly. and the Grand Union Canal. The bor. includes the former bors. of Burslem, Hanley, and Longton, and the urban dists. of Tunstall and Fenton, as well as Stoke-upon-Trent proper. There is a school of science and technology. S. Peter's is chief of many churches. The staple industry is the making of pottery, before

the introduction of which in the 18th century it was a country village. Made a corporate town in 1874 and a city in 1925, in 1928 its chief magistrate was given the title of lord mayor. Three members are returned to Parliament. Pop. (1921) 275,600

STOLE (Lat. stola, long robe). Eccles. scarf. It originated in the Roman torus, is from 3 ins. to 4 ins. wide, and, when passed over the neck, each end reaches to about the knee. The ends are often ornamented, and the colour varies according to the season.

STOLL, SIR OSWALD (b. 1866). British theatre proprietor. Born in Melbourne, Australia, Jan. 20, 1866, he was educated at Liverpool. He established a number of successful theatrical undertakings in the provinces and London, initiated the War Seal Foundation in the Great War, and was knighted in 1919. He wrote The Grand Survival: a Theory of Immortality by Natural Law, 1904; The People's Credit, 1916. Freedom in Finance, 1918.

Stoke-upon-Trent. Main front of the Town Hall

STOLYPIN, PIOTR ARKADIEVITCH (1862-1911). Russian statesman. Son of a Russian general, he was born at Baden Baden and educated at the university of St. Petersburg. Appointed administrator of the crown estates of Kovno in 1888 and governor of Grodno in 1902, he became governor of Saratov in 1903, and served with distinction through the critical winter of 1905. He was minister of the interior in 1906, and in July of the same year he succeeded Goremykin as prime minister. He was shot at a gala performance at Kiev, Sept. 15, 1911, and died three days later.

Piotr Stolypin, Russian statesman

STOMACH (Gr. stomachos, from stoma, mouth). Dilated part of the alimentary canal in which food is digested. It is conical in shape, and its base or fundus is on the left side of the body. The oesophagus (or gullet) opens into the upper part of the fundus by the cardiac orifice. The right extremity (or pylorus) passes into the duodenum, the beginning of the small intestine.

The stomach is about 10 to 12 ins. long and 4 to 5 ins. in diameter in the widest part. It lies beneath the diaphragm and is in close relation with the liver and pancreas. It is supplied by the pneumogastric nerves and the sympathetic nerve system. Externally it is almost covered by the peritoneum. Beneath this are three muscular layers, and internally the organ is lined by mucous membrane, which contains three varieties of secreting glands. The mixed secretion forms the gastric juice, which plays an important part in digestion.

Stomach. Diagram of the human organ, showing its blood and lymph supply and its relation to the intestines

STONE. Measure of weight. The standard, or imperial, British stone is 14 lb, and is used commonly in giving the weight of persons.

A butcher's and fishmonger's stone is 8 lb., that for cheese 16 lb., for lemp 32 lb.

STONE. In geology, a small fragment of rock. The name is applied particularly to small weather- or water-worn fragments, and also to portions of rocks shaped and dressed for building. Precious stones are those minerals, as diamonds, distinguished by their beauty, colour, and rarity. The word is also applied to the hard kernels of certain fruits.

STONE MONEY. Currency tokens used by the Micronesian people of Yap, one of the Caroline islands. The native name is *fei*. They are solid limestone disks, from 1 ft. to 12 ft. in diameter, with square holes for pole transport.

STONE MONUMENTS. Term denoting a homogeneous class of prehistoric structures of unburnt or slightly worked megalithic stones. Their construction still survives in India and elsewhere. See Cromlech; Dolmen; Menhir, etc.

STONE. Urban dist and market town of Staffordshire. It stands on the Trent, 7 m. from Stafford, on the L.M.S. Rly. The chief buildings are the church of S. Michael, successor of the abbey church, town hall, market hall, and a grammar school of 1558. Shoes and beer are made. Market day, Tues. Pop. 5,552.

STONE AGE. Term denoting the phase of human culture prior to the use of metals. It was adopted by C. Thomsen in 1836 when classifying Denmark's prehistoric implements into the sequence of stone, bronze, and iron. But the stone age utilised wood, bone, horn, shells, and skins, and witnessed the advent of articulate speech, fire-making, and the expression of the emotions both in ritual and art.

Stone Age. Neolithic blade with serrated edges, Deamark. Top, Neolithic flint arrowhead, Ireland. Courtesy of the Trustees, British Museum

The European stone age is divisible into eolithic, palaeolithic, and neolithic. The oldest is attested by implements revealing traces of artificial fabrication. Of the palaeolithic phase the Chellian and Acheulian form the lower, the Mousterian the middle, the Aurignacian, Solutrian, and Magdalenian the upper division. In the new stone age many edged tools were made of stones. See Aleutian Islands; Anthropology; Archæology.

Stonechat, often found on British commons

speckled with white and red. The bird is about 5 ins. long.

Stone Crop (Sedum). Popular name for a number of hardy, creeping plants of the natural order Crassulaceae. See Sedum.

STONEHAVEN. Burgh, port, and co. town of Kincardineshire. It is 16 m. from Aberdeen, on the L.N.E. and L.M.S. Rlys. It consists of a new and an old town, and has a harbour for the herring fishery. Pop. 4,856.

The 1st Baron Stonehaven (h. 1874) was governor-general of Australia, 1925-30. Previously, as Sir J. L. Baird, he was first commissioner of works, 1922-24.

STONEHENGE (A.S. Stanhengest, hanging stones). Prehistoric stone monument. Supposed by many to be connected with sun worship and in part a sepulchral monument, it is on Salisbury Plain, 2½ m. W.N.W. of Amesbury, Wiltshire. The most imposing megalithic structure in Britain, it comprised integrally two concentric stone rows on a horseshoe plan, surrounded by two con-

Stonehenge. The ancient stone monument on Salisbury Plain after its restoration in 1920. Top, plan from the same point, showing original position of existing stones; A marks the Altar stone

centric stone circles. Now much impaired, it stands within a circular earthwork, 300 ft. across, opening towards the N.E. into an embanked avenue still 200 ft. long. At the summer solstice the open part of the horseshoe faces the sunrise.

Restoration and excavations have revealed many flint axes, with quartzite hammerstones up to 6 lb. and mauls up to 64 lb., besides antler picks and other relics. The property was presented to the nation by Sir Cecil Chubb, of Salisbury, Sept. 15, 1918.

STONEHOUSE. Town of Lanarkshire, Scotland. It is 18 m. S.E. of Glasgow by the L.M.S. Rly., and has weaving and coal mining industries. Pop. 4,200.

STONELEIGH. Village of Warwickshire. It is on the Avon, about 2 m. E. of Kenilworth. Stoneleigh Abbey, the seat of Lord Leigh, is a palatial structure of Italianate design dating from the early part of the 18th century, but embracing portions of a 12th century monastery founded by Henry II and a 14th century gatehouse. It contains a fine collection of portraits and paintings by celebrated artists and stands in a well-wooded park.

Stonor. Village of Oxfordshire. It is 4 m. N.W. of Henley-on-Thames. Stonor Park is the seat of Lord Camoys. Pop. 170.

STONYHURST COLLEGE. Roman Catholic public school. In Lancashire, about 4 m. from Whalley, it is the successor of a school founded at St. Omer about 1592 by the Jesuit, Robert Parsons. This was moved to Bruges in 1762, and to Liège in 1773, while the French Revolution drove it to England. A Lancashire squire gave his house at Stonyhurst for the school, and there it has been since 1794. There is accommodation for about 400 boys. The head is the rector.

STONY STRATFORD. Market town of Buckinghamshire. It stands on the Ouse 2 m. from its station, Wolverton, on the L.M.S. Rly. The churches of S. Mary Magdalene and S. Giles were rebuilt in the 18th century. There are engineering works and corn and cattle markets. Market day, Mon. Pop. 1,992.

STOOL (A.S. *stol*, seat). Small seat without a back. One of the first articles of furniture to be made, it is usually a square or round block supported by three or four legs, and frequently upholstered. It varies in size.

The stool of repentance was a pew or seat in a Scottish church upon which those guilty of moral offences were made to stand.

STOOLBALL. English game, regarded as the ancestor of cricket. A stool was placed on the ground and defended by a player with his hand, afterwards with a stick, against a ball tossed at it by his opponent. Every time the ball was hit away it counted one to the batsman; if it hit the stool the batsman was out.

To-day a wooden bat, not more than 7½ ins. wide and shaped like a tennis racket, is used. The ball is of solid rubber. The batsman stands in front of wickets, which are pieces of wood, each 1 ft. sq., placed on poles, 4 ft. 8 ins. above the ground and pitched 16 yds apart. Ten balls go to the over. See Cricket.

STOPES, MARIE CARMICHAEL. British scientist and writer on eugenics. Daughter of Henry and Charlotte Carmichael Stopes and educated at Edinburgh, Munich, and London University, she was appointed to the science staff of Manchester University in 1904, and three years later went to Japan, where she spent 18 months collecting fossils. In 1918 she married H. V. Roe. She wrote on botany, and became widely known by a number of works dealing with the relations between the sexes.

STORK. Family of large birds (Ciconiidae) belonging to the heron tribe. They have long, straight, and sharp beaks and long legs. The white stork (*C. alba*) is common in Central Europe, and occurs occasionally in E. England. It winters in Africa, builds its nest on a house roof or church tower, and feeds on reptiles, small mammals, insects, and offal.

Stork. White stork, common in Central Europe. W. S. Berridge, F.Z.S.

The black stork (*C. nigra*) is smaller in size and is widely distributed in Central and S. Europe, in Asia, and in some parts of Africa. It is found chiefly in swamps, where it nests in the trees. See Adjutant; Marabou.

Stool in oak, c. 1650. Courtesy of the Director, Victoria & Albert Museum

STORK'S BILL (*Erodium cicutarium*). Annual or biennial herb of the order Geraniaceae, a native of Europe, W. Asia, and N. Africa. It has oblong leaves divided into many acutely lobed segments and rosy, clustered flowers. The long tapering fruits split into five

segments, each forming a tail to a seed. The tail coils into a spiral, which by alternate lengthening and shortening under the influence of the dryness and moisture of the atmosphere forces it into the earth.

STORMONT. District in co. Down, Ulster. It is just outside the city boundary of Belfast (q.v.). The castle and grounds were purchased in 1921 as a site for the parliament house, public offices, etc., of Northern Ireland, the foundation stone being laid in 1928. They were given by Great Britain under the Act of 1920 and cost £500,000.

STORNOWAY. Seaport and burgh of Lewis, Scotland. Standing on a large modern harbour, it is 180 m. from Oban and is the chief town of the Outer Hebrides. It is a fishing centre. Pop. 4,079. See Callernish.

STOTHARD, THOMAS (1755-1834). British artist. Born in London, Aug. 17, 1755, he painted subject pictures in oils, particularly for Boydell's Shakespeare Gallery, but his real talent lay in illustrative design. Richardson's novels, and many other classics, were illustrated by him. He became A.R.A. in 1791, R.A. in 1794, and librarian in 1812. He died in London, April 27, 1834. See illus. pp. 546, 1099.

Stotinka. Bulgarian monetary unit, nominally the equivalent of a centime.

STOUR. Name of several English rivers. One rises N. of Hythe in Kent and flows past Canterbury to the sea. Its length is 40 m.

The Essex Stour rises in several headstreams which unite near Haverhill, whence it passes between Essex and Suffolk to the North Sea at Harwich. It is 47 m. long.

The Oxfordshire Stour rises about 5 m. S.W. of Banbury, and flows past Shipston-on-Stour to the Avon, near Stratford-on-Avon. Its length is 20 m. Another river of this name rises near the S.E. boundary of Somerset, and flows 55 m. to the Avon at Christchurch. The Worcestershire Stour rises near Halesowen, and joins the Severn at Stourport. Its length is about 20 m.

STOURBRIDGE. Borough and market town of Worcestershire. It stands on the Stour, 12 m. from Birmingham, on the G.W.R. The town is noted for its fine clay, which is made into firebricks, and also for its glass. Hardware and leather are manufactured, and around are coal mines. Its old name was Bedeote. Market day, Fri. Pop. 18,830.

STOURBRIDGE FAIR. Fair held at Barnwell, Cambridge, and for long perhaps the most important in England. It probably began in the 12th century, was held in Oct. and Nov., and the articles sold were cheese, wool, timber, horses, etc.

STOURPORT. Urban dist. and market town of Worcestershire. At the junction of the Stour and Severn, it is the terminus of the Staffordshire and Worcestershire canal, and has a station on the G.W.R. Market day, Sat. Pop. 4,778.

STOW, JOHN (c. 1525-1605). English antiquary. Born in London, he became a tailor at Aldgate, but from about 1560 devoted himself to antiquarian research. He was buried, April 8, 1605, in the London church of S. Andrew Under-shaft. Stow's works include notable summaries of old English chronicles, but he is chiefly remembered for his valuable Survey of London, which was edited and enlarged in 1618; 1633, 1720, and 1754.

John Stow,
English antiquary
From a print by
G. Vertue

STOWE. English public school, formerly the residence of the duke of Buckingham. It is

3 m. N. of Buckingham. Surrounded by vast grounds, the house was mainly built by Sir Richard Temple about 1660, and was

Stowe, Buckinghamshire. North front of the mansion, now a public school

the seat of the dukes of Buckingham and Chandos until 1889, when it passed to the 3rd duke's daughter, by whose order it was sold, July 4, 1921, with about 272 acres, and was opened as a public school in 1923. The Stowe MSS. were acquired by the British Museum in 1883.

STOWE, HARRIET ELIZABETH BEECHER (1811-96). American writer and abolitionist. Born in Litchfield, Connecticut, June 14,

Mrs. Beecher Stowe,
American abolitionist

1811, the daughter of Lyman Beecher, she married in 1836 the Rev. Calvin E. Stowe. Uncle Tom's Cabin, the novel which made her name and helped so largely to abolish slavery in America, appeared as a serial in The National Era, of Washington, between June, 1851, and April, 1852, and was published in book form in Boston in 1852. She also wrote Dred: a Tale of the Dismal Swamp, 1856, and Lady Byron Vindicated, 1870. She died at Hartford, Connecticut, July 1, 1896.

STOWMARKET. Market town and urban dist. of Suffolk. It stands on the Gipping, 12 m. from Ipswich, on the L.N.E. Rly. There are manufactures of chemicals and agricultural implements, and a trade in corn. Market day, Thurs. Pop. 4,245.

STOW-ON-THE-WOLD. Urban dist. of Gloucestershire. It stands on the Fosse Way, 20 m. from Cheltenham, on the G.W.R. There is an old church and in the market place a 14th century cross. Horse and cattle fairs are held. Pop. 1,200.

STRABANE. Urban dist. of co. Tyrone, Northern Ireland. It stands on the Mourne, 14 m. from Londonderry on the G.N.R. Industries include iron foundries and shirt factories, and there is a trade in agricultural produce. A short canal connects it with the Foyle. Pop. 5,156.

STRABO (c. 63 B.C.-A.D. 19). Greek geographer. Born in Amasia, Pontus, he travelled extensively, and in 29 B.C. settled in Rome, where he died. He was the author of two important works: (1) Historical Memoirs, in 46 books, a continuation of Polybius from 146 B.C. to the death of Caesar, lost with the exception of some fragments; (2) Geographica, in 17 books, nearly all preserved. After that of Ptolemy, it is the chief authority on ancient geography. See Polybius; Ptolemy.

STRACHEY, GILES LYTON (b. 1880). British author. Born March 1, 1880, a son of Sir Richard Strachey (1817-1903), a distinguished servant of the E. India Co., he was educated at Trinity College, Cambridge. In 1912 he wrote Landmarks in French Literature, and in 1918 Eminent Victorians, which displayed a mordant humour and marked a new method in biography. His Queen Victoria appeared in 1921, a volume on Pope in 1925, and in 1928 Elizabeth and Essex.

STRADIVARI, ANTONIO (c. 1644-1737). Italian violin maker. Born at Cremona, and apprenticed to Nicholas Amati, he at first modelled his instruments on those of his master, but about 1684 became more independent, and on the instruments of his maturest period rests his fame as the greatest of all violin makers. He made over a thousand instruments, many of which are still extant. On his labels he Latinised his name as Antonius Stradivarius. He died Dec. 18, 1737.

STRAFFORD, THOMAS WENTWORTH, 1ST EARL OF (1593-1641). English statesman. Born in London, April 13, 1593, of a great Yorkshire family, for about 14 years from 1614 he represented Yorkshire in Parliament. In 1628 he was active in promoting the Petition of Right, but it was hardly passed when he went over to the king's side. Created baron and viscount 1628, he was president of the North 1631-32 and lord deputy of Ireland 1632-39. He was created earl of Strafford in 1639.

Earl of Strafford,
English statesman
After Van Dyck

When the Long Parliament was summoned its first step (Nov., 1640) was to move for the impeachment of Strafford. But fear of the northern army and of a plot to release him and introduce Irish and Dutch troops led the Commons to pass a bill of attainder, condemning the earl to death, and on May 11, 1641, Strafford was beheaded on Tower Hill.

STRAITS SETTLEMENTS. British crown colony. It comprises Singapore, Malacca, Penang, the Cocos Islands, Christmas Island, and Labuan. Administration is exercised by a governor, assisted by an executive council of 10 and a legislative council of 13 official and 13 unofficial members. Para rubber, tin, preserved pineapples, tapioca, gambier, copra, pepper, sago, coconut oil, tanned hides, raw hides, rattans, coffee, spices, gums, and dye-stuffs are exported. Area 1,600 sq. m. Pop. (1929) 1,131,903. See Malaya.

STRALSUND. Town and seaport of Prussia. In the prov. of Pomerania, it stands on the Strelasund, 67 m. from Stettin. The town has a good harbour, and manufactures of machinery, tobacco, sugar, etc. It was a member of the Hanseatic League. Pop. 39,469.

STRAND, THE. London thoroughfare. It runs W. from Temple Bar to Charing Cross and contains two old churches—S. Clement

Strand, London, looking east from Wellington Street. Centre, church of S. Mary-le-Strand; left, Gaiety Theatre, with a wing of Bush House beyond

Danes, built by Wren, 1681, with tower by Gibbs, 1719; and S. Mary-le-Strand, by Gibbs, 1714, replacing a church of the same name, of which Thomas Becket was rector, and near the site of the famous maypole, removed 1718. On the N. side are part of the law courts, Gladstone statue, Australia House, Marconi House, Gaitey, Lyceum, Vaudeville, and Adelphi theatres, and the Strand Palace hotel. On the S. are Aldwych (tube) station, King's College, Somerset House, the Savoy hotel, Strand Lane with old Roman bath, the Adelphi, Ontario House (opened in 1930), and Charing Cross rly. stations. The Hotel Cecil was pulled down in 1930. The Strand Theatre is a London playhouse in Aldwych, W.C.

STRANG, WILLIAM (1859-1921). British painter and etcher. He was born at Dumbarton, Feb. 13, 1859, educated at University College, London, and attained remarkable distinctions as an etcher, ranging over a vast variety of subjects, and emulating Rembrandt's broad masses of light and shade. A.R.A., 1906, and R.A., 1921, he died April 12, 1921.

William Strang,
British painter

STRANRAER. Burgh and port of Wigtownshire, Scotland. It stands at the head of Loch Ryan, 59 m. from Ayr on the L.M.S. Rly. It has a large tidal harbour and regular steamer connexion with Belfast and Larne. Near the town is Lochinch, the seat of the earl of Stair. The ruins of Castle Kennedy are in the grounds, which are remarkable for their rare trees. Stranraer was made a burgh in 1596. In 1928 it was decided to set up an aircraft base here. Pop. 6,138.

STRASBOURG (Ger. Strassburg). City of France, capital of the dept. of Bas-Rhin. Standing where the Ill joins the Breusch, about 2 m. from the Rhine, it consists of an old part, with to some extent the appearance of a medieval city, and modern suburbs. It is well served by railways and canals. The cathedral, or minster, is a line Gothic edifice, built mainly in the 13th and 14th centuries, and notable for its lofty tower (465 ft.) and clock (see illus. p. 422). The university was founded in 1567. The products include locomotives, beer, chemicals, tobacco, leather, and paté de fois gras. Printing is important. Since the Great War Strasbourg has become a great port with modern wharves, a basin for oil traffic, and a great power station. Pop. 174,550.

On the site of Strasbourg the Romans had their station of Argentoratum. In Sept., 1870, it surrendered to the Germans, and in 1919 it was returned to France.

STRATA FLORIDA (Latinised from Welsh Ystrad Fflur, plain of the Fflur). Village and parish of Cardiganshire, Wales. It is on the G.W.R., 5 m. from Tregaron. Four miles away, on the Teify, are the ruins of the Cistercian abbey of Strata Florida, once the largest

in Wales and a centre of learning and statecraft. Founded in 1091, it was dissolved by Henry VIII.

STRATEGY (Gr. stratêgos, a general). In warfare, the art of preparing, mobilising, deploying, concentrating, and moving forces in a theatre of war with a view to success in battles. Strategy decides when to fight, tactics decide how to fight. In both arts time is a most important factor.

The military strategist must study the nature of his forces, the means at his disposal for moving

Stratford-on-Avon. Church of Holy Trinity, in which Shakespeare is buried. Above, the poet's birthplace in Henley Street, restored 1857-58

them, their daily requirements in food, water, and munitions, and above all the cause which inspires them to effort. He must also study the theatre of war in which they are employed. The movement of armies depends upon food, transport, and water; their success in battle depends upon replenishment of ammunition. For such reasons they require lines of communication to the bases from which they are operating. The complete disintegration of an army can seldom be achieved as long as these lines of communication are secure.

Sea strategy differs from military strategy in many respects, the most essential being the fact that, unlike armies, fleets can manoeuvre round each other; but are entirely dependent upon mechanical appliances and the replenishment of fuel and lubricants for movement, and for fighting power upon replenishment of ammunition and torpedoes. They are also dependent upon bases for docking, for repairs, and for security when not under way. The strategy of air forces is as yet in its infancy.

STRATFORD. Dist. of Greater London. In the borough of West Ham, 4 m. from Liverpool Street, on the L.N.E.R., which has an important junction, machine shops, and depot here, its old name was Stratford Langthorne. The industries include the manufacture of chemicals, paint, varnish, and candles, printing, and brewing. The principal buildings include the town hall, built 1867-69, and S. John's church, 1834.

STRATFORD. City of Ontario, Canada. It stands on the Avon, 88 m. from Toronto, and is the capital of Perth County, with railway shops and a number of manufactures. Pop. 16,094.

STRATFORD DE REDCLIFFE, STRATFORD CANNING, VISCOUNT (1786-1880). British diplomatist. Born in London, Nov. 4, 1786, and educated at Eton and King's College, Cambridge, he held his first diplomatic appointment at 21. He was minister plenipotentiary at Constantinople in 1810, and negotiated the treaty of Bukarest, 1812. After holding other important appointments he served from 1825-28 and 1842-58 as ambassador to Turkey, making there the extraordinary reputation, so vividly described by Kinglake, which won him the title of the Great Elchi (Turkish for ambassador). In 1856 he persuaded the sultan to grant a decree securing rights for Christians. He received his peerage in 1852, retired in 1858, and died at Frant, Aug. 14, 1880.

STRATFORD-ON-AVON. Borough and market town of Warwickshire. Pleasantly situated on the Avon, it is 24 m. from Birmingham, on the G.W., L.M.S. and L.N.E. Rlys. The cruciform parish church of Holy Trinity, restored 1891-92, dates principally from the 14th and 15th centuries. It contains the grave of Shakespeare and that of his wife. The old guildhall was restored in 1892.

The reputed birthplace of Shakespeare in Henley Street was purchased for the nation in 1847 for £3,000, and contains a museum. New Place, in which the poet died, was destroyed in 1703, and its site purchased by public subscription in 1861 and handed over to the trustees of the birthplace. A fine statue of Shakespeare was presented by Lord Ronald Gower in 1888, and a memorial fountain was erected in 1887. Charlecot, Clopton, Ludington, Snitterfield, and Wilmeote, in the neighbourhood, have memories of Shakespeare, and at Shottery (q.v.) is the cottage of Anne Hathaway, now public property.

The Shakespeare Memorial Theatre, erected in 1878, was destroyed by fire in March, 1926, the architect of its successor being Miss Elizabeth Scott. An extensive trade in agricultural produce and cattle is carried on. Market days, Tues. and Fri. Pop. 10,427.

STRATHAVEN. Parish of Lanarkshire, Scotland. It is 16 m. from Glasgow on the L.M.S. Rly. Near the town are the ruins of the castle, once a stronghold of the Hamilton family. Pop. 4,207.

STRATHCLYDE. Ancient British or Welsh kingdom in S.W. Scotland. Also called Cumbria, it included the basin of the Clyde and Ayrshire, and, at an early period, Cumberland. The capital was Dumbarton. Strathclyde was not fully merged in Scotland until the 11th century.

STRATHCLYDE, ALEXANDER URE, 1ST BARON (1853-1928). Scottish lawyer and politician. Born at Glasgow, Feb. 24, 1853, and educated at Glasgow and Edinburgh, he was called to the Scottish bar, 1878. He was M.P. for Linlithgow, 1895-1913, solicitor-general for Scotland, 1905-9, lord advocate for Scotland, 1909-13, and lord president of the court of session, 1913-20. Created a baron in 1914, he died Oct. 2, 1928.

STRATHCONA. Town of Alberta, Canada, since 1912 part of Edmonton (q.v.). It stands on the Saskatchewan river. Here are the buildings of the university of Alberta.

STRATHCONA, DONALD ALEXANDER SMITH, BARON (1820-1914). Canadian politician. Born Aug. 6, 1820, at Archibestown, Morayshire, Scotland, he emigrated to Canada when 18 as a junior clerk in the Hudson's Bay Company, of which he became general

Strasbourg, France. West facade of the minster, begun in 1217

manager, and eventually governor. He was administrator of Red River Territory after the rebellion of 1869, and was one of the first representatives of Manitoba in the Dominion House of Commons. With his cousin, afterwards Baron Mount Stephen (q.v.), and others he formed a syndicate to build the Canadian Pacific Railway. Knighted in 1886, Smith accepted in 1896 the high commissionership for Canada in England. In 1897 he was made a baron, and died Jan. 21, 1914. His title descended by special decree to his daughter, whose son, Donald S. R. Howard, became baron in 1926.

Lord Strathcona,
Canadian politician
Russell

STRATHFIELDSAYE. Village of Hampshire. It is 7 m. S.E. of Basingstoke, and contains the estate granted by Parliament to the first duke of Wellington in 1817, being purchased at a cost of £263,000. Pop. 460.

STRATHMORE. Valley of Scotland. Generally it is regarded as comprising the area between the Grampian Mts. on the N. and the Lennox, Ochil, and Sidlaw Hills on the S., with a length of about 100 m.

EARL OF STRATHMORE. This is a Scottish title held by the family of Bowes-Lyon. Patrick Lyon, 9th Baron Glamis, was created earl of Kinghorne in 1606. His grandson Patrick, 3rd earl, was made earl of Strathmore and Kinghorne. John, 9th earl, took the additional name of Bowes. The family seat is the historic Glamis Castle, Angus, and the earl's eldest son bears the courtesy title of Lord Glamis. One of the earl's four daughters, Elizabeth, married Albert, duke of York, in 1923. Their family consists of two daughters.

STRATHPEFFER. Watering place of Ross and Cromarty, Scotland. It is 5 m. W. of Dingwall on the L.M.S., and is noted for its sulphur and chalybeate springs. Pop. 875.

STRATHSPEY. Scottish dance said to have originated in the valley (strath) of the Spey. It has been compared with the reel, from which, however, it differs by its more broken movements in dancing.

STRATTON. Market town of Cornwall, part of the urban dist. of Stratton and Bude. It is 16 m. from Launceston, with a station $\frac{1}{2}$ m. away at Bude (S.R.). Market day, first Tues. in month. Pop., urban dist., 3,962.

STRATUM or **BED.** In geology, name given to a formation of sedimentary rocks. Sandstones, shales, coals, and limestones are examples. See Anticline; Geology; Rock.

STRAUSS, DAVID FRIEDRICH (1808-74). German theologian. Born at Ludwigshurg, Jan. 27, 1808, and educated at Tübingen and Berlin, his chief work is his *Life of Jesus*, 1835, which caused a temporary sensation by its extreme rationalistic standpoint. He died Feb. 8, 1874.

STRAUSS, JOHANN (1825-99). Austrian composer. Born in Vienna, Oct. 25, 1825, he was the son of Johann Strauss (1804-49), a popular composer of waltz music, and outdid his father's fame with some astonishingly successful waltzes, including *The Blue Danube*, first performed in 1867. His light operas, full of flowing melodies, include *Die Fledermaus*, 1874; *Eine Nacht in Venedig*, 1883; and *Der Zigeunerbaron*, 1885. Master of waltz composition in Viennese tradition, he died June 3, 1899.

Johann Strauss,
Austrian composer
After L. Horowitz

STRAUSS, RICHARD (b. 1864). German composer. Born at Munich, June 11, 1864, son of Franz Strauss (1822-1905), his remarkable F minor symphony was first performed in 1884 in New York. His tone poems, *Don Juan*, 1889, and *Tod und Verklärung*, 1890, bear witness to Wagnerian influence, and were followed by *Tyl Eulenspiegel*, 1895; *Don Quixote*, 1898; *Ein Heldenleben*, 1899; and *Die Sinfonia Domestica*, 1904. He turned to opera with *Guntram*, 1894, *Feuersnot*, 1901, *Salome*, 1905, and *Elektra*, 1909. *Der Rosenkavalier*, 1911, was in lighter vein. He first appeared in London in Jan., 1922. *Die Aegyptische Helena* was produced in 1928.

STRAVINSKI, IGOR FEDOROVITCH (b. 1882). Russian composer. Born at Oranienbaum, near Leningrad, Jan. 17, 1882, his compositions have aroused much controversy by their revolutionary character. Much of his work was written for the Russian ballet. The opera *Le Rossignol* was produced in Paris, 1914, and other notable works include the *Fireworks* orchestral piece, 1908.

STRAW. Stems of cereals (white straw crops) and also those of pea and bean (black straw crops). By chaffing or steaming pea straw it can be converted into useful fodder for milk cows and ewes. Cereal straws, especially of wheat, are employed as litter, which afterwards has an important mechanical action on the soil as a constituent of manure.

Straw-plaiting is an industry preparatory to the manufacture of straw hats. The best straw for this purpose is grown in Tuscany, being that of a special kind of wheat. The industry was introduced into England about 1600 and gave employment to thousands of females, but towards the end of the 19th century the import of plaits from Japan and Italy almost destroyed the industry in England.

STRAWBERRY (*Fragaria*). Genus of perennial herbs of the order Rosaceae. The leaf is a trefoil, rough and toothed, hairy upon the under side; the white or yellow five-petalled flowers are unisexual. The edible fruits consist of a fleshy receptacle, with numerous achenes embedded on the surface. Of the eight species, *F. vesca* is a native of Great Britain, and, but for its smaller size, is similar to the cultivated varieties. The chief garden varieties have been derived from the wild strawberry, the Virginian strawberry (*F. virginiana*), the Chilean (*F. chilensis*), and the bauthois (*F. elatior*).

Strawberry. The edible fruit in different stages of growth

STRAWBERRY HILL. London suburb. It is between Twickenham and Hampton, on the S.R. The district takes its name from the villa built in 1747 by Horace Walpole.

STREATHAM. Suburb of London. In the metropolitan bor. of Wandsworth, it is about 6 m. from London, on the S.R. It comprises the three districts of Streatham proper (associated with Dr. Johnson and the Thrales), Streatham Hill, and Streatham Common. The chief building is S. Leonard's church, and at Streatham Hill is a large theatre opened in 1929. Streatham Common is a fine open space. One member is returned to Parliament.

Streathley. Village of Berkshire. It stands on the Thames, opposite Goring, on the G.W.R., and is a boating centre.

Street. Urban dist. of Somerset. It is 14 m. from Bridgwater, on the G.W.R., and manufactures boots and shoes. Pop. 4,369.

STREET, GEORGE EDMUND (1824-81). British architect. Born at Woodford, Essex, June 20, 1824, he was a leading authority on the Gothic style. He was elected A.R.A. in 1866 and R.A. in 1871. He was architect of the royal courts of justice in London, but the nave of Bristol Cathedral is probably his best work. He died in London, Dec. 18, 1881.

STRESEMANN, GUSTAV (1878-1929). German statesman. Born in Berlin, May 10, 1878, he entered the Reichstag in 1907 as a National Liberal. He became leader of his party in 1917, and after 1918 founded the people's party, which he led very ably during 1918-22. In 1923 he became chancellor, a coalition government being formed under him. In 1924, after another short term as chancellor, Stresemann became foreign minister, and this

Gustav Stresemann,
German statesman

post he held till his death on Oct. 3, 1929. He was an author of the Pact of Locarno (q.v.).

Stretford. Urban dist. of Lancashire. It is 4 m. from Manchester, with a station on the L.M.S. Rly. Pop. 56,088.

STRETTON. Common place-name in England. Church Stretton is an inland watering place in Shropshire, 12 m. from Shrewsbury, on the G.W.R.

STRICKLAND, AGNES (1796-1874). British historian. Born in London, August 19, 1796, and educated at home, her most successful work was the *Lives of the Queens of England, 1840-48*, written in collaboration with her sister Elizabeth, as were *Lives of the Queens of Scotland and English Princesses, 1850-59*; *Seven Bishops, 1866*; and *Tudor Princesses, 1868*. Among her other works are several volumes of poetry. She died at Southwold, Suffolk, July 13, 1874.

Agnes Strickland,
British historian

and English Princesses, 1850-59; Seven Bishops, 1866; and Tudor Princesses, 1868. Among her other works are several volumes of poetry. She died at Southwold, Suffolk, July 13, 1874.

STRICTURE. Abnormal narrowing of a natural passage in the body, such as the gullet, intestine, or urethra, so as to cause obstruction. The most common causes are inflammation and new growths, e.g. cancer. When the word stricture is used without further limitation, stricture of the urethra is meant.

STRIKE. Term used in the industrial world for the act of workmen in ceasing to work in order to enforce their demands upon an employer. The opposite process is a lock-out. Strikes are usually organized by trade unions, strike pay given to those affected, and steps taken to prevent others from taking their place. At first strikes were confined to the masters and men concerned, but with the growth of combinations the numbers involved became so numerous as to compel state action.

In Great Britain a general strike was attempted in 1926 in support of the coal miners. It began on May 3 and lasted until May 12. The Government, acting under an Act of 1920, divided the whole country into districts, each under a civil commissioner. The supply of food and other essentials was maintained and, with volunteer labour, a fair service of transport was possible. In that year

146,456,000 working hours were lost by strikes in Great Britain.

Notable strikes were in Pittsburg in 1892 and in Chicago in 1894, both attended with much violence. In Great Britain the strike of the dockers in 1889 and of the coal miners in 1893 both attracted much attention. The miners and railway workers struck work in 1919 and 1921, and in 1926 there was a general strike.

The Trade Disputes Act of 1927 made a general strike illegal. Any person convicted summarily of inciting others, or acting in furtherance of an illegal strike or lock-out, may be fined or imprisoned. This Act proved unacceptable to the Labour Party, who, being again in office, announced a bill to repeal it in the King's speech, Oct., 1930.

STRINDBERG, August (1849-1912). Swedish author. Born Jan. 22, 1849, at Stockholm, the son of a small tradesman, he studied at Upsala and became teacher in an elementary school, afterwards turning to journalism and the drama. His first play, *Mäster Olof*, 1872, was unsuccessful. His first two novels were bitterly satirical at the expense of Stockholm society, and his *Marriages*, 1884, was held to be an outrage on the Christian religion. In 1885 he published *Real Utopias*. The *People of Hemsö* and *The Life of the Skerry Men* followed in 1887-88. In 1887 he wrote also *The Father*. In *Confessions of a Fool*, 1893, he tells the story of his first unhappy marriage. His *Inferno*, 1897, is a strange study in abnormal psychology. He died May 14, 1912.

August Strindberg,
Swedish author

Stripe. In military usage, mark of rank for the three lowest grades of non-commissioned officers in the army. See *Chevron*.

STROMBOLI. Volcano of the Mediterranean Sea. It rises to 3,040 ft. on the north-easternmost of the Lipari Islands, Italy, and is continuously in a mild form of activity. Pron. Strómbolly.

STROMNESS. Burgh and port of the Orkney Islands, Scotland. It stands on the S.W. coast of Pomona, 14 m. W.S.W. of Kirkwall, is a summer resort, and has a good natural harbour. It conducts a herring fishery and carries on ship repairing, distilling, and rope making. Pop. 1,665.

STRONGBOW. Name of Richard de Clare, 2nd earl of Pembroke (d. 1176). In 1170 he went to Ireland, and, after subduing Waterford and Dublin, married Eva, daughter of the king of Leinster, succeeding to the kingdom in 1171. His exploits marked the beginnings of the English dominion in Ireland.

Strongbow was the name of a British destroyer which, along with the *Mary Rose*, was sunk in action in the North Sea by a German naval force, Oct. 17, 1917.

STRONTIUM. One of the metallic elements. Its chemical symbol is Sr, atomic weight 87.63, and atomic number 38. One of the calcium group of elements, it is a hard yellowish metal, malleable and ductile, oxidises easily on exposure to the air, and burns with a brilliant crimson flame. It was discovered by Davy in 1808. It occurs in mineral form in celestine and strontianite, and in small quantities in a few other minerals.

Strontium forms the monoxide SrO and the dioxide SrO_2 . The hydroxide is used in the beet-sugar industry for the separation of sugar from beetroot molasses. In medicine, the bromide, iodide, salicylate, and lactate are used for diabetes, Bright's disease, rheumatic and other affections.

STROOD. District of Rochester, in Kent, on the S.R. The two parishes, Strood intra and Strood extra, stand on the left bank of the Medway, opposite Rochester proper.

STROUD. Market town and urban dist. of Gloucestershire. At the junction of the Slade and Frome, it is 12 m. from Gloucester, on the G.W. and L.M.S. Rlys. A centre of the woollen manufacture since the 16th century, Stroud has a number of cloth mills and is noted for its scarlet dyes. The town has also saw mills, breweries, and iron foundries. Market day, Fri. Pop. 8,561.

Stroud is the name of a township of New South Wales. It is 113 m. N. of Sydney by rly., in the well-timbered Port Stephens dist., with the Copland goldfield. Pop. 1,100.

Stroud Green. Residential suburb of N. London. It is in the bor. of Hornsey, $\frac{3}{4}$ m. from King's Cross, on the L.N.E.R. See *Hornsey*.

STRUTT, JEDEDIAH (1726-97). British inventor. The son of a farmer, he was born at Blackwell, Derbyshire, July 28, 1726. About 1755, with his brother-in-law, William Woollett, he invented a machine by which ribbed hosiery could be produced. Strutt was next associated with Richard Arkwright in spinning cotton, in which other of his inventions were utilised. As the result he amassed a large fortune before he died at Derby, May 6, 1797.

Joseph Strutt (1749-1802) was the author of a notable work entitled *The Sports and Pastimes of the People of England*, 1801.

STRYCHNINE. Alkaloid prepared from the seeds of *Strychnos nux-vomica* and other species of *Strychnos*. It is a white, inodorous crystalline powder, almost insoluble in water, with an intensely bitter taste. In medicine, strychnine and its derivatives are used as a stomachic and carminative, to stimulate the flow of gastric juices, and in feebleness of digestion. Strychnine is a valuable cardiac stimulant and a respiratory stimulant. The alkaloid is exceedingly poisonous.

STUART, LADY ARABELLA (1575-1615). English princess. Daughter of Charles Stuart, earl of Lennox, grandson of Margaret, sister of Henry VIII, Arabella stood next in the succession to James and his family when Elizabeth died. She was the figurehead of a conspiracy in 1603. In 1610 she married secretly William Seymour, afterwards duke of Somerset, and with her husband was arrested by James I. Both escaped, but Arabella was retaken near Calais and imprisoned in the Tower, where she died insane, Sept. 25, 1615.

Lady Arabella Stuart,
English princess
After van Somer

Stuart is an alternative spelling of Stewart (q.v.), the name of the later Scottish kings.

STUBBS, WILLIAM (1825-1901). British historian and prelate. Born at Knaresborough, June 21, 1825, he was educated at Ripon Grammar School and Christ Church, Oxford, where he was regius professor of modern history 1866-84. He was bishop of Chester 1884-87 and bishop of Oxford 1888-1901. He died at Oxford, April 22, 1901.

Stubbs's *Constitutional History of England*,

Jedediah Strutt,
British inventor
After J. Wright

William Stubbs,
British historian
Elliott & Fry

1875-78, takes the story down to 1485, and is one of the most solid achievements in British scholarship. He also selected and edited a volume of *Select Charters*.

STUDD. English amateur cricketing family. Charles T. Studd, the most prominent member, was born Dec. 2, 1860. Educated at Eton and Cambridge, he played for Middlesex, and was chosen for England v. Australia at the Oval in 1882. In both 1882 and 1883 he scored more than 1,000 runs and captured upwards of 100 wickets. In 1884 he went as a missionary to China.

Sir John Edward Kynaston Studd (b. July 26, 1858) was captain of the Cambridge eleven in 1884. Since 1903 president of the Regent Street Polytechnic, he was sheriff of London 1922-23, alderman in 1923, and lord mayor in 1928-29. In 1929 he was made a baronet.

STUPA (Sanskrit, mound). Dome-shaped structure erected over relics of Buddha or his sainted followers, or commemorating Jain or Buddhist events. The Hindustani variety is *tope*. Outstanding examples are at Sanchi, Bharhut, Amaravati, and Peshawar, where was found in 1909 a casket containing reputed Buddha relics. Pron. *stoopa*.

STURDEE, SIR FREDERICK CHARLES DOVETON (1859-1925). British sailor. Born June 9, 1859, he entered the navy, 1871, and was chief of the war staff, 1914-15. Lord Fisher sent him to the Pacific to find and defeat von Spee. The crushing defeat of the German squadron off the Falkland Islands followed on Dec. 8, 1914. In the battle of Jutland Sturdee was in command of the fourth battle squadron. He was commander-in-chief at the Nore, 1918-21. Promoted rear-admiral, 1910, and admiral, 1917, he was made admiral of the fleet, 1921. Knighted in 1913, he was created a baronet, Jan. 1, 1916. In 1919 he received a grant of £10,000. He died May 7, 1925.

Sir Doveton Sturdee,
British sailor
Russell

STURGEON (*Acipenser sturio*). Large ganoid fish of the family *Acipenseridae*. A native of the N. Atlantic and the principal rivers opening thereon, it is an irregular visitor to the British estuaries. It varies usually from 8 ft. to 9 ft. in length. A bottom fish, it obtains its food by grubbing with its snout in the sand and mud, obtaining worms and other invertebrates. It ascends the rivers for spawn-

Sturgeon, known as a royal fish. All caught in British rivers belong to the sovereign

ing. An Act of Parliament of Edward II constituted the sturgeon a "royal fish."

About twenty species are known, and half the number occur in Europe. The largest (*A. huso*) occurs in the Caspian, the sea of Azov, the Black Sea, the Danube, etc. Vast numbers are taken to be eaten fresh, smoked, or salted. The roe, salted and dried, forms caviare, and the air-bladder is made into isinglass.

STURRY. Village of Kent near Canterbury. The 16th century manor house was bought by Lord Milner, and given by Lady Milner to King's School, Canterbury. The junior school was moved there, and it is known as Milner Court. Pop. 1,386.

STUTT GART. Capital of Württemberg, Germany. It stands near the Neckar, 127 m. from Frankfurt-on-Main. A fine town with many notable buildings, an important

technical high school, and a large library, it manufactures chemicals, leather, and beer, and is a publishing centre and a rly. junction. It is also a banking and trading centre. An early residence of the count of Württemberg, it became the capital about 1490. Pop. 343,048.

STYE. Little abscess at the root of one of the eyelashes, caused by infection of the sebaceous glands in the margin of the lid. There is first a red and very painful swelling at the root of the lash, which in the course of a few days becomes yellowish on the top and bursts, the discharge of matter relieving all the symptoms. Treatment consists in pulling out the affected lash and applying hot fomentations to the eye. See Eye.

STYRIA. Formerly a duchy of the Austrian Empire, now a division of the republic of Austria (q.v.). About half the area is forest and a fifth arable, chiefly devoted to wheat, rye, oats, and barley. Graz is the capital. In the N.E. the Semmering Pass carries the rly. from Vienna. In the break-up of the dual monarchy Styria decreased in area from 8,670 to 6,323 sq. m., losing the S. portion to Yugoslavia. The Styrian Alps, a section of the E. Alps, stretch to the N.E. between the valleys of the Mur and the Enns.

Styx. In Greek mythology, river of Hades, the abode of the dead. Its waters were poisonous. See Charon

SUAKIN or **SUAKIM.** Port of the Anglo-Egyptian Sudan. It is situated partly on a coral islet in the Red Sea and partly on the mainland, and is connected by rail with Athara Junction (308 m.) and with Port Sudan (47 m.) Since the construction of Port Sudan, Suakin's value as a port has declined. It was occupied by the Egyptians when their power was extended over the Sudan. Pop. 8,000.

SUBCONSCIOUSNESS. Psychological term with two different shades of meaning: (1) a lowered state of consciousness, in which perception is weaker and less distinctive; (2) actions of the mind which cannot be traced by the observation of one's own mental state, mental processes unaccompanied by consciousness. Instances of the latter are absent-mindedness, the involuntary repetition of certain actions, the resumption of a habit which changed environment renders undesirable. These processes tend to the abnormal as exhibited in somnambulism, an hypnotic condition, hysteria, or in cases of drug-influence. The terms subliminal and marginal are used in much the same sense.

SUBMARINE. Vessel which keeps the surface of the sea normally, but is built to operate below the surface when required. As a craft designed for fighting, she submerges to

secure invulnerability. In that position she makes surface observations through her periscopes. Her chief weapon is the torpedo, but modern submarines have one or more heavy guns mounted for horizontal and anti-aircraft fire. These weapons can be withdrawn within the hull before submersion, or their bores can be made completely watertight. Submerging is effected by admitting water into the ballast and trimming tanks, a reserve of buoyancy being always retained to prevent the submarine from going to the bottom.

Rapid submersion is assisted by hydroplanes, or horizontal rudders. When it is desired to rise, the tanks are blown out by the use of electric pumps. Diesel or other heavy oil engines drive the submarine on the surface up to a speed of about 17 knots and, while cruising, accumulators are charged for submerged propulsion at a speed of about 10 knots.

The British submarines *Oswald*, and *Otis*, completed in 1929, have a length of 283½ ft. and a beam of 29·8 ft.; the displacement is 1,540 tons (2,030 tons submerged). The speed on the surface is 17 knots (4,400 h.p.) and when submerged, 9 knots (1,320 h.p.). They carry a crew of 52, the armament consisting of eight torpedo tubes and one 4-in. gun. The *X.1*, completed in 1925, has a length of 363½ ft., and carries a crew of 100. The surface displacement is 2,525 tons, h.p. 7,000, and speed 19½ knots. There are six torpedo tubes, four 5·2-in. guns, and two Lewis guns.

At Washington in 1922 and at Geneva in 1928 Great Britain proposed the abolition of the submarine, but the suggestion, was negatived. By the London Naval Treaty (q.v.), 1930, Britain, U.S.A., and Japan each agreed to scrap a specified number of submarines. See Conning Tower; Navy; Periscope

SUBPOENA (Lat. under a penalty). Writ issued out of a court of justice commanding the person to whom it is addressed to be present in court at a certain time, under a penalty if he fails to comply. Used as a means of compelling the attendance of witnesses, it is called *sub poena ad testificandum*. A subpoena duces tecum is a writ ordering a witness to bring to court documents or other things in his possession.

SUCCINIC ACID (Lat. succinum, amber). Solid acid, usually prepared by the dry distillation of amber. It is a yellow-coloured crystalline substance. See Amber.

SUCHAU or **SOOCHOW.** Town of China, the provincial capital of Kiang-su. It is on the Grand Canal, 54 m. N.W. of Shanghai, with which it is connected by rly. and the Suchau Creek. Its walls are about 30 ft. in

height and have a circuit of some 12 m. Without the walls are extensive suburbs. Numerous canals wind through the city. Suchau is an important centre of the silk industry, and its minor industries include the production of metal goods, lacquer, and glass. It was opened to foreign trade in 1890. Pop. 350,000.

SUCK. River of the Irish Free State. It rises in Lough O'Flynn, Roscommon, and flows 60 m. between that co. and Galway to the Shannon at Shannonbridge.

SUCKER. In gardening, term applied to a shoot making growth from the root or ground level of a shrub or tree. Removed in autumn and replanted, they form a valuable means for increasing stock.

SUCKING FISH. Name popularly applied to several groups of fishes distinguished by the presence of a disk on the upper part of the head, or on the breast, which acts as a sucker and enables the animal to attach itself to any object. About seven species occur in British waters. They attach themselves to moving objects, such as ships, sharks, and turtles, as well as stones.

SUCKLING, Sir John (1609-42). English poet and courtier. Born at Whitton, Middlesex, and educated at Trinity College, Cambridge, he served under Gustavus Adolphus, was knighted in 1630, raised a troop of horse to aid Charles I against the Scots, and was M.P. for Bramber. He is best remembered by his lyrics, including *Why so pale and wan, fond lover?* He is believed to have invented cribbage.

Sir John Suckling, English poet

SUCRE. Official capital of the republic of Bolivia. It is on a plateau of the E. Cordillera of the Andes, 45 m. N.E. of Potosí. The cathedral (1553), the president's palace, and the university, by repute the oldest in S. America, are the chief buildings. Agriculture is the principal industry and mining is carried on. Founded by Spaniards in 1536, it was originally called Ciudad de la Plata, then Chuquisaca. Here Bolivian independence was proclaimed in 1825, and the city took its modern name from Antonio Sucre, the first president of the republic. Pop. 33,983.

SUDAN or **SOUDAN.** THE (Arabic Beled-es-Sudan, land of the Blacks). Region of N. Africa. Including French Sudan, it stretches from the Atlantic to the Red Sea and Abyssinia, and from the Sahara and Egypt in the N. to the central equatorial regions. It is divided into the Western and Central Sudan, and the Anglo-Egyptian Sudan (q.v.). Most of Western and Central Sudan is French.

French Sudan is the name given in 1920 to the colony of French W. Africa formerly known as Upper Senegal-Niger. It is bounded N. by the Algerian sphere, S. by the frontiers of the Ivory Coast and the colony of the Upper Volta, E. by the colony of the Niger, W. by

Stuttgart. Old Palace Square, with the Stiftskirche and the Schiller statue

Submarine. Sectional diagram of the British submarine X.1, showing the double hull and arrangements of the interior for navigating and fighting

Mauretania, and the frontier of French Guinea. The exports include ground nuts, cattle, rubber, gum, and skins. Bamako is the capital. The area is 300,331 sq. m. Pop. about 2,630,000. See map, p. 88.

SUDBURY. Residential district of Greater London. In the co. of Middlesex, and part of the Wembley urban district, it is served by the L.M.S., Bakerloo (Tube), L.N.E., and District Rlys., and has tram and bus services.

SUDBURY. Borough and market town of Suffolk. It stands on the Stour, 16 m. from Bury St. Edmunds, on the L.N.E.R. There are three old Perpendicular churches and many interesting half-timbered houses. The manufactures include matting, flour, malt, bricks, etc. Flemings introduced the manufacture of woollens here in the 14th century. Market day, Thurs. Pop. 7,046.

Sudbury. Town of Ontario, Canada, 440 m. from Montreal. There are important nickel mines in the vicinity. Pop. 8,621.

SUDELEY. Village of Gloucestershire. It is 1 m. from Winchcombe, and has an old church, S. Mary's. Sudeley Castle was built by Thomas Boteler, Lord Sudeley, in the 14th century, and passed to Sir Thomas Seymour, fourth husband of Catherine Parr.

SUDERMANN, HERMANN (1857-1928). German dramatist and novelist. Born Sept. 30, 1857, he achieved fame with his first play, *Die Ehre*, 1888, which was followed in the same year by a brilliant novel, *Frau Sorge*. His principal dramas are *Sodom's Ende*, 1890; *Heimat*, 1893 (Eng. trans. Magda, 1895); *Johannes*, 1898; *Es Lebe das Leben*, 1902 (Eng. trans. *The Joy of Living*); *Strandkinder*, 1910; *Der Bettler von Syrakus*, 1911; and *Der Gute Ruf*,

H. Sudermann,
German dramatist

1913. He died Nov. 23, 1928.

SUETONIUS (70-140). Roman writer, whose full name was Gaius Suetonius Tranquillus. He was private secretary to the emperor Hadrian. His *Lives of the Twelve Caesars*, published in A.D. 120, is the only one of his voluminous writings which has survived intact. The *Lives* do not rank high as literature, but are a mine of information about the emperors of the 1st century A.D.

SUEZ. Town of Egypt. It is situated at the S. end of the Suez Canal, and connected by rail with Cairo, Port Said, and with Port Ibrahim, at the S. entrance to the canal. Pop. 40,523.

The Gulf of Suez is a gulf of the Red Sea

between the Sinai peninsula and Egypt. Its length is about 190 m.

SUEZ CANAL. Ship canal between the Mediterranean and the Red Sea. The concession for its construction was given by Said Pasha to Ferdinand de Lesseps, Nov. 30, 1854; it was for 99 years from the date of opening. The company was launched with a capital of £8,000,000 in 400,000 shares of £20, but the issue was only saved from failure by Said taking up the balance of shares. Work was begun on April 25, 1859, and the canal opened Nov. 17, 1869, at a cost of about £17,000,000. In 1875 Said's successor, Ismail Pasha, sold his shares to Britain for £4,000,000.

Suez Canal. Map showing course from Port Said to Suez

waterless, water is supplied by the Sweetwater Canal. In 1928 the total net tonnage exceeded 31,900,000, of which the share of Great Britain was more than 18,000,000.

SUFFOLK. Eastern co. of England. It has a coastline of 62 m. and an area of 1,482 sq. m. In the N. are Oulton Broad and other sheets of water. The rivers include the Waveney, Deben, Orwell, Stour, Blyth, and Lark. Agriculture is the chief industry, but fishing is also important. The co. is noted for its horses. Cereals are largely grown; sheep and cattle are reared; and there are many dairy and poultry farms. The L.N.E. Rly. serves the county.

Ipswich is the co. town, Lowestoft being the next important place. The co. is in the diocese of St. Edmundsbury and Ipswich. Five members are returned to Parliament. Suffolk is divided into two administrative counties, East and West, each with its own county council. Pop. 400,000.

SUFFOLK, DUKE or. English title borne by the families of Pole, Brandon, Grey, and Howard. The first earl was Robert de Ufford (d. 1369), who distinguished himself at Poitiers. Charles Brandon (d. 1545), another duke, was with Henry VIII on the Field of the Cloth of Gold. Henry Grey (d. 1554), the last

Suez Canal. Stretch of the waterway, looking north

duke, was father of Lady Jane Grey. In 1603 the earldom was given to Thomas, a son of Thomas Howard, 4th duke of Norfolk. In 1626 his younger son was made earl of Berkshire, and in 1745 the 4th earl of Berkshire inherited the earldom of Suffolk. Charles Howard (b. 1906) bears the title of earl of Suffolk and Berkshire.

Suffolk Punch. Powerful breed of horse used for agricultural purposes. 'See Horse.

SUFFOLK REGIMENT. Regiment of the British army. Formerly the 12th Foot, it originated in a company established to garrison Windsor Castle in 1690; the company was enlarged and became a regiment in 1685. It took part in the last siege of Gibraltar, 1779-83, an event commemorated by the castle and key on the badge, and has many other battle honours. The regiment had a large number of battalions in the Great War. The 1st battalion distinguished itself around Frezenberg in May, 1915. The 4th fought at Neuve Chapelle, 1915; the 8th shared in the desperate fighting in the latter stages of the Somme battle, 1916. Other battalions rendered equally splendid services. The 9th particularly distinguished itself at Loos, Sept., 1915. Its depot is at Bury St. Edmunds.

Suffolk Regimental badge

SUFFRAGAN (late Lat. *suffraganeus*, from *suffragari*, to vote for, support). Eccles. term applied to bishops. All bishops are suffragan to the archbishop of their province, but specifically suffragans are bishops consecrated to act as deputies for or assistants to a bishop in a particular part of his diocese.

SUFFRAGE (Lat. *suffragari*, to vote for). Literally, the right to vote. In the U.K. the Reform Acts of 1832, 1867 and 1885 and the Representation of the People Acts of 1918 and 1928 extended the suffrage as far as voting for members of parliament was concerned, while the establishment of a representative system of local government created a wide suffrage in local affairs. See Franchise; Reform; Woman.

SUGAR. Sucrose or saccharose extracted from cane, beet, maple, palm, and other plants. Raw cane and beet sugars contain from 90 to 98 p.c. of sucrose. Refined sugar contains about 99.9 p.c. of sucrose, in the form of granulated, cube, loaf, castor, or icing sugars. Sucrose and other carbohydrates are manufactured in the leaves of plants, sunlight and heat being essential agents. The sucrose dissolves in the plant sap, and is thus stored in the long stem of the sugar cane and in the tap-root of the beet.

The sugar cane is a native of the old world tropics and has been introduced into most tropical and sub-tropical countries. It belongs to the same botanical order as wheat, oats, corn, and maize, but attains a height of from 15 to 20 ft. It is propagated from cuttings of the stem and matures in about 270 days near the equator, but more slowly in sub-tropical countries. After the ripe canes are cut the buried root-stock produces new crops (called

Suffolk. Map of the maritime county of East Anglia

ractions) for several successive years. The jointed stem varies in colour from pale yellow and green to deep purple. Each joint bears a single leaf, from 3 to 4 ft. in length, but the lower leaves wither and are sometimes stripped off by hand during ripening of the stem. Most varieties produce a feathery tuft of minute flowers borne on a stalk, called the arrow, ultimately producing seed.

Juice is extracted from the sugar cane by crushing the stems. The crushed fibre (bagasse) is used as fuel under the factory boilers.

The estimated world production of sugar for 1929-30 was 17,537,600 tons cane sugar and 9,229,300 tons beet sugar. The European production (beet sugar) was 8,300,000 tons, of which Gt. Britain provided about 300,000 tons. For the 1930-31 season Gt. Britain, with a beet area of 346,700 acres, was expected to produce 400,000 tons of sugar. See Beet; Maple.

SUIR. River of the Irish Free State. It rises in the N. of Tipperary and unites with the Barrow in Waterford Harbour. It is 85 m. long, and is navigable for barges to Clonmel. It has a salmon fishery. Pron. Shure.

SUKHUM. Town and harbour of the Socialist Soviet republic of Georgia, on the Black Sea, capital of the republic of Abkhazia. It is said to occupy the site of the ancient Dioscurias. Pop. 20,032.

Sulby. Village in the Isle of Man. It is famous for its woollen mill, founded early in the 19th century by two Yorkshiremen.

SULGRAVE. Village of Northamptonshire. It is 2½ m. N.W. of Helmdon. Sulgrave Manor was purchased in 1539 by Lawrence Washington, ancestor of George Washington, and remained the family home until 1610. In commemoration of the centenary of the peace of Ghent, the manor house, at that time a farm house, was bought by the British Peace Centenary Committee (later called the Sulgrave Institution) and opened as a Washington Museum, 1914. In the church of S. James are some brasses of the Washington family.

Sulgrave, Northamptonshire. The old manor house formerly occupied by the Washington family

SULINA. Seaport of Rumania. It is built on piles at the mouth of the Sulina arm of the Danube, and is about 120 m. N.E. of Constanta. Pop. 10,000.

SULLA, LUCIUS CORNELIUS (138-78 B.C.). Roman soldier and statesman. Of noble birth, he overthrew Marius and Mithradates, king of Pontus, and was appointed dictator. He revolutionised the constitution, made the Senate supreme, reformed the judiciary and executive, but at an unparalleled height of power resigned all his offices in 79 and retired to a life of debauchery. Intellectually above any of his contemporaries, Sulla was a

Lucius Sulla, Roman soldier
Vatican Museum

master of war and statecraft, steeped in culture, perfectly self-reliant, but absolutely devoid of morality.

SULLIVAN, SIR ARTHUR SEYMOUR (1842-1900). British composer. Born in London, May 13, 1842, he entered the Chapel Royal choir in 1854, studied at the R.A.M. and at

Sir Arthur Sullivan,
British composer
Elliott & Fry

Leipzig, 1857-61, and is best known by his collaboration with Sir W. S. Gilbert (q.v.) in their famous light operas from *Thespis*, 1871, to *The Grand Duke*, 1896. His other work included an oratorio, *The Golden Legend*, 1886; a grand opera, *Ivanhoe*, 1891; incidental music for several Shakespearean plays; and some of his songs, e.g. *The Lost Chord*, 1877, were very popular. Knighted in 1883, Sullivan died in London, Nov. 22, 1900.

SULLIVAN, BARRY (1821-91). Irish tragedian. Born at Birmingham, July 5, 1821, he made his debut at Cork in 1840, and his first appearance in London at the Haymarket Theatre, Feb. 7, 1852, as Hamlet. He acted in America and Australia and at Drury Lane, London. He died May 3, 1891.

SULLIVAN, JOHN LAWRENCE (1858-1918). American pugilist. Born at Boston, U.S.A., Oct. 15, 1858, he knocked out Paddy Ryan, Feb. 7, 1882, in nine rounds, beat Charlie Mitchell, May 14, 1883, in three rounds at New York, and in 1888 fought a draw with him of 39 rounds at Chantilly. In 1889 he won the heavy-weight championship of America by beating Jake Kilrain in 75 rounds at Richburg. He was defeated by Jim Corbett, Sept. 7, 1892, at New Orleans, and died on Feb. 2, 1918.

J. L. Sullivan,
American pugilist

SULLY, MAXIMILIEN DE BÉTHUNE, DUC DE (1560-1641). French statesman. Born at Rosny, near Mantes, Dec. 13, 1560, as chief adviser to Henry of Navarre he did much to improve the wretched condition of France. Taxes were lightened, and the wasteful and corrupt system of collecting them reformed; roads and bridges were built, and something was done for agriculture, while the defences of the country were not neglected. Made a duke in 1606, he remained throughout life a Protestant. He died Dec. 22, 1641, leaving some valuable Memoirs.

SULLY-PRUDHOMME, RENÉ FRANÇOIS ARMAND (1839-1907). French poet. He was born in Paris, March 16, 1839. He began his literary career as a disciple of Leconte de Lisle (Stances et Poèmes), but his later work departed widely both by its intense subjectivity, e.g. *Les Solitudes*, *Les Vaines Tendresses*, and by its didacticism, e.g. *La Justice*, *Le Bonheur*, from the principles of the Parnassian school. He was elected to the Academy in 1881, was awarded a Nobel prize for literature in 1901, and died Sept. 6, 1907.

SULPHATES. Name given to certain salts of sulphuric acid. The natural sulphates include Epsom salts, gypsum, celestine, barite, and chalcantinite. Sulphate of ammonia is a nitrogenous manure, produced as a by-product of gas works. It is of particular value for barley, potatoes, and permanent grass.

SULPHUR. One of the non-metallic elements. Its symbol is S, its atomic weight 32.06, and its atomic number 16. It occurs in the free state in volcanic districts, and in

combination with other elements in all parts of the world. Iron pyrites, galena, blende, and cinnabar are among the more important sulphide ores; gypsum and heavy spar typify the naturally occurring sulphates. Proteins, certain essential oils, and some mineral oils contain small proportions of sulphur. Most of the sulphur of commerce is derived from deposits in the oil districts of the U.S.A. and from the volcanic deposits on the Mediterranean border.

Ordinary sulphur is a bright yellow crystalline substance, without appreciable taste or odour; sp. gr. 2.05. It is insoluble in water; heated in air to 260° C., it takes fire and burns with a blue flame, producing sulphur dioxide, SO₂, together with a little sulphur trioxide, SO₃. It combines directly with several other elements, forming sulphides. The chief uses of sulphur are in the manufacture of sulphuric acid, carbon disulphide, gunpowder, the vulcanisation of indiarubber, and in medical treatment of skin diseases.

SULPHURIC ACID. Oil of vitriol, H₂SO₄. There are two chief processes of manufacture, one in which sulphur dioxide, nitric acid vapour, air, and steam are mingled in a chamber, and produce by their reaction clouds of sulphuric acid; and the other in which sulphur trioxide fumes are passed into water to form the acid.

Concentrated sulphuric acid is a heavy, colourless, odourless liquid of oily consistence, sp. gr. 1.84. When mixed with water it generates a great deal of heat. Alcohol, on being heated with it, loses the elements of water and produces ether or ethylene. Sulphuric acid is very corrosive and a powerful poison. Calcined magnesia is the best antidote, but sodium bicarbonate, chalk, whitening, or even ceiling plaster may be given. The acid produces painful wounds on the skin and destroys nearly all vegetable and animal substances. It attacks nearly all the metals, producing their respective sulphates.

SULPHUROUS ACID (H₂SO₃). Acid, only known in solution, formed when sulphur dioxide is dissolved in water. It forms the salts known as sulphites. See Sulphur.

SULPICIANS. R.C. society of secular priests. It was founded in 1645 by Jean Jacques Olier, when curé of S. Sulpice, Paris, to train young men for the priesthood; and the seminary of S. Sulpice (now converted to secular uses) was the outcome.

SULTAN. Mahomedan title meaning ruler. It was used for the ruler of the Turkish dominions until Nov., 1922. It is also applied to other princes, e.g. those of Morocco and Johore. The feminine is sultana. See Turkey.

SULTANA. Small seedless raisin. They are prepared in a very similar way to raisins, from sun-dried white grapes which are grown chiefly in Asia Minor.

SUMAC OR SUMACH (Rhus). Genus of trees and shrubs of the order Anacardiaceae. Natives of temperate regions, the species are mostly poisonous. The small flowers usually form dense clusters. *R. coriaria* affords the commercial sumac used for tanning, and *R. cotinus* the yellow dye-stuff known as young fustic, old fustic being *Maclura tinctoria*. *R. vernicifera* yields Japanese lacquer and *R. succedanea* red lacquer. *R. toxicodendron* (poison ivy) and *R. venenata* (poison elder) are the two most deadly species, it being dangerous even to handle cut branches.

SUMATRA. Island of the Malay Archipelago. It forms a part of the Dutch East Indies. The total area is about 163,000 sq. m. and pop. over six millions, mainly Malay. Fronting the Indian Ocean, the W. coast is formed by the Bukit Barisan or Chain Mts. (7,000-10,000 ft.), and from them the ground

slopes to the E. coast in rich alluvial soil. In the mts., which are heavily forested, are numerous lakes. Among the products are sugar, rice, coffee, ground-nuts, copra, pepper, tobacco, kapok, and petroleum. Gold is found, coal is worked, and tin exists on the neighbouring island of Sinkah. The forests give oak, tea, and camphor. In the wilds are elephants, two-horned rhinoceroses, tigers, bears, deer, and monkeys. The chief towns are Padang, Palembang, Bencoolen, and Achin.

SUMER or **SHUMER**. Ancient name of the lower Euphrates plain, afterwards called Babylonia. It is the biblical land of Sinar (Gen. 10). See Babylonia.

SUMMERSIDE. Town and pleasure resort of Prince Edward Island, Canada. It stands on Northumberland Strait, 48 m. N.W. of Charlottetown. It is a centre of the fox-ranging industry. Pop 3,228.

Summer Time. Period during which the official time is advanced one hour ahead of Greenwich mean time. See Daylight Saving.

SUMMONS (Lat. summonere, to give a hint). In English law, a request, in the nature of an order, to anyone to appear in a court of justice. It must state what the person summoned is wanted for and specify the day and hour for his appearance. See Writ.

SUMPTUARY LAWS (Lat. sumptus, expense). Statutes to repress private extravagance and luxury. They also aim at safeguarding the prestige of privileged classes, directing trade and industry into desired channels, and incidentally raising revenue. In England sumptuary laws existed from the time of Edward II till that of James I.

SUN. Heavenly body, around which the earth and its companion planets travel and from which we derive light and heat. Its average distance from the earth is estimated at 92,830,000 m. We are 3,000,000 m. nearer to it in Jan. than in July. Its diameter is put at 864,000 m., 109 times that of the earth, and its bulk at 1,300,000 times that of the earth. The sun's mass or weight is 332,000 times the earth's. The path of the sun's apparent motion through the heavens is called the ecliptic. Its plane makes an angle with the celestial equator. The sun's rotation period varies in different solar latitudes; at the

equator it is 25 days; at regions in latitude 30°, 27 days, and in latitude 45°, 29 days.

Sunspots wax and wane in a period that averages 11 years. They consist of an outermost penumbra, a darker inner shade, the umbra, and a central dark spot, the nucleus. Years of many spots have active magnetic disturbances and frequent auroral displays.

Outside the sun's radiating surface (or photosphere) are three appendages; the outermost is a composite structure, the corona, an ethereal veil which stretches out sometimes millions of miles from the sun. Inside the photosphere is the chromosphere. This is of a bright red colour, and arises from uprushes of glowing gas, chiefly hydrogen. There are also quiescent prominences, resembling our clouds. Below the chromosphere is the reversing layer, the true solar atmosphere. The solar spectrum is crossed by a vast number of dark lines, which arise from the absorption of sunlight by the gases in this layer.

The intensity of the sun's light at the earth's surface is equal to that of 5,600 candles one foot distant. Its heat at the earth's surface would suffice to raise the temperature of a layer of water 1 centimetre thick 2° C. per minute. It is generally thought that the sun's heat is derived from the coming together of its particles from a nebulous state. It has passed the stage of its greatest luminosity.

SOLAR SYSTEM. The assemblage of bodies controlled by the sun includes the planets with their satellites, the asteroids, comets, and meteors. Until recently Neptune was thought to mark the outermost limit of the system, making the system's span about 5,500,000,000 miles. In Jan., 1930, however, the Lowell Observatory, California, announced the discovery of a trans-Neptunian body, thought to be a planet, for which the name Pluto has been suggested. The planets all move round the sun in the same direction and in practically the same plane (see Ecliptic), as do the asteroids also and most of the planetary satellites. The chief planets in their order of distance from the sun, beginning with the nearest, are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. See Bolometer; Comet; Earth; Eclipse; Halo; Moon; Planet; Pluto; Satellite, etc.

SUN WORSHIP. Primeval cult, the adherents to which worship the sun as the supreme deity or as a divine symbol.

It has appealed especially to peoples practising settled agriculture in non-torrid regions, and is associated with early Egypt, aboriginal America, India, and Japan.

Sunart. Sea-loch of Argyllshire, Scotland, between Ardnamurchan and Sunart and Morven.

SUNBEAM. Yacht in which the 1st Earl and Lady Brassey journeyed thousands of miles. Lady Brassey's book, *A Voyage in the Sunbeam*, 1878, made its name widely familiar. She died on board the yacht in 1887.

SUN BIRD. Popular name for the Nectariniidae. A family of small tropical birds, they occur only in the E. hemisphere. The males have plumage glowing with metallic colours; the females are very soberly coloured. They have long curved beaks, comparatively short wings, long tails, and feed on the nectar of flowers and on small insects.

SUN BITTERN (*Eurypyga helias*). Crane-like bird, native

of Guiana and Brazil. It is about 16 ins. long, and has a long beak, and plumage striped and mottled with black, white, and brown. It is usually found about rivers, and feeds on insects. A larger species (*E. major*) is found in Colombia and Central America. See illus. p. 259.

SUNBURY-ON-THAMES. Urban dist. and boating centre of Middlesex. It is 4 m. from Kingston on the S.R. S. Mary's church dates from the 18th century. On Sunbury Common are reservoirs and works of the Metropolitan Water Board. Here is Kempton Park, notable for its racecourse. Pop. 6,000.

SUNDAY. First day of the week, set aside by Christians for public worship in memory of the resurrection of Christ. In the early days of Christianity, both the Sabbath and Sunday were observed as days of worship. In 321, by a constitution of the Roman Emperor Constantine, Sunday was made a day of rest in the towns, though the country population were allowed to work. During the Middle Ages Sunday was very strictly kept. See Sabbath; Week.

SUNDAY CLOSING. Term applied to the stoppage of business on Sundays, especially in hotels, shops, etc. Sunday trading in England is forbidden by an Act of 1677. Nevertheless it is widely prevalent apart from the legal sale of perishable goods. Public-houses, however, are open within certain hours only; in Wales they are closed under an Act of 1881. In Scotland liquor cannot be sold on Sundays except to travellers.

To promote the observance of Sunday as a day of rest there is an Imperial Alliance for the Defence of Sunday at 1, Palace Chambers, Bridge St., London, S.W.1; also a Lord's Day Observance Society at 22, Red Lion Square, London, W.C.1.

The National Sunday League, at 34, Red Lion Square, London, W.C.1, has quite different aims. It was founded in 1855 to promote recreation, including the opening of museums and picture galleries, on Sunday.

SUNDAY SCHOOL. Institution where religious instruction is given to children and others on Sunday. The Sunday school movement was founded in England by Robert Raikes (q.v.), who in 1780 started a Sunday

school in Gloucester. His efforts were strengthened by the Sunday School Society, founded by William Fox, 1785, and by the Sunday School Union, an

Sun Bird. Purple-rumped species, *Arachnothera zelowica*. W. S. Berridge, F.Z.S.

inter-denominational organization formed in London, 1803, which superseded the Sunday School Society. This society, now the National Sunday School Union, which has offices at 56, Old Bailey, London, E.C.4, has done an immense work for the Sunday School movement by starting branch unions, initiating lesson systems, promoting conferences and publishing a mass of useful literature. There is a residential training institute for Sunday-school workers at Westhill, Solihull, Birmingham. Its organ is *The New Chronicle*. Statistics which were prepared in 1928 gave the world figures as 356,146 schools, with 3,603,517 officers and teachers and over 29,411,435 scholars.

SUNDERLAND. County borough and seaport of Durham. It stands at the mouth of the Wear, 12 m. from Newcastle, on the L.N.E.R. The bor. includes Bishopwearmouth and Monkwearmouth, on either side of the Wear, which is here crossed by two bridges. Sunderland became populous in the 19th

Sun. Spectroscopic photograph of photosphere of sun at time of maximum sun-spot activity. Chromosphere, ring of light surrounding the less brightly glowing globe, averages 5,000 miles in depth. Note solar prominences, A, erupting from chromosphere and reversal of E. and W. through telescope.

Courtesy of Dr. J. Evershed

century owing to the development of the Durham coalfield. Its industries include shipping, ship-building, and the manufacture of machinery, chemicals, glass, etc. The harbour is enclosed by two stone piers and the docks, which cover over 200 acres, can accommodate the largest vessels. Coal is the chief article of export. Sunderland has a famous Association football club. The bor. was incorporated in 1634 and sends two members to Parliament. Pop. 161,100.

Sunderland. Alexandra Bridge, over the river Wear.

SUNDERLAND, EARL of. English title held by the family of Spencer. In 1643, Henry, 3rd Baron Spencer, a royalist, was made earl of Sunderland. He was killed at Newbury the same year. His grandson Charles, the 3rd earl, married Anne, daughter of the great duke of Marlborough.

Robert Spencer (1640-1702), the 2nd earl of Sunderland, was secretary of state, 1679, and one of the small cabal that surrounded Charles II. He supported James II, while maintaining secret relations with William of Orange. Charles, the 5th earl, became duke of Marlborough in 1733, and since then the title has been merged in that dukedom.

SUNDEW (*Drosera rotundifolia*). Perennial herb of the order Roseraceae. A native of Europe, N. and W. Asia, and N. America,

Sundew. Flower spikes and fringed leaves; inset, leaf

it is a small rosette-plant growing in boggy ground. Its long-stalked leaves have a circular blade studded with crimson threads. Glandular at the tips, they secrete a gummy fluid. The flower spikes are 4 to 6 ins. long, and bear two rows of small white flowers which open only in sunshine. The leaf-glands are extremely sensitive to the touch of any organic matter. Insects are attracted by the dewy appearance of the glands, alight on the leaves, and set up irritation by their efforts to get free. The margins of the leaf curve towards the centre, forming a hollow into which a fluid is poured, in which the insect is digested and the product absorbed. There are about a hundred species in the genus, three being British.

SUNDIAL. Instrument for measuring time. The sun's shadow is cast on to a flat surface by an upright piece of iron called a stile or gnomon. The surface, which is firmly fixed to a wall or pillar, and is sometimes horizontal, sometimes vertical, bears marks showing the hours, half-hours, etc., of the day, and the observer tells the time by noticing where the shadow falls. Many sundials bear Latin mottoes on the brevity of life.

SUN FISH (*Orthogoriscus*). Genus of large fishes with short and laterally compressed bodies. The depth of the fish is almost equal to the length, so that its outline approaches a circle. The rough sun fish (*O. mola*) occasionally occurs in the British seas, and is sometimes 7 ft. long.

Sundial. 1. At Coppell Hall, Essex. 2. Pedestal sundial from Ditton Park

SUNFLOWER (*Helianthus annuus*). Annual herb of the order Compositae, native of N. America, and introduced to British gardens in 1596. It has a stout stem, 6 ft. or more in height, with large, rough, alternate, oval leaves and huge flower heads with deep-yellow ray florets and a broad brown disk. Each head produces hundreds of large grey seeds, valuable as poultry food and as a source of oil. The genus *Helianthus* includes 55 species, many of them perennials. Several other species are cultivated in Britain, including the so-called Jerusalem artichoke (*H. tuberosus*). See Artichoke.

SUNIUM (Gr. Sounion). Ancient name of the rocky promontory at the S. end of Attica, Greece. On its highest point (200 ft.) are the ruins of a temple of Poseidon. The temple of Athena was a little distance away to the N.E. The modern name of Sunium is Cape Colonna.

SUNLIGHT. The treatment of certain diseases by the application of artificial sunlight is quite usual to-day. It is used as a cure for debility in children and others, who thus get the ultra-violet rays of light so essential to health. The patient lies so that the rays fall on him or her. Various kinds of apparatus are used. None should be used save under medical direction. There is a Sunlight League at 29, Gordon Square, London, W.1.

Sunningdale. Village of Berkshire. It is 27 m. from London on the S.R., and has excellent golf links. Pop. 1,657.

SUNSHINE RECORDER. Instrument for recording the duration of sunshine and its intensity. In the Campbell-Stokes pattern a glass sphere, about four inches in diameter, focuses the sun's rays upon a strip of cardboard in a cup-shaped frame which partially surrounds the sphere. As the sun passes from E. to W., its rays burn a line in the cardboard during the periods of bright sunshine. The hours and tenths.

Sunshine Recorder. Instrument of the Campbell-Stokes pattern. Courtesy of Negretti & Zambra

SUNSTONE. Form of translucent felspar emitting a brilliant red metallic glitter from the background. It is found in Siberia, Norway, and N. America.

SUNSTROKE. Disease caused by high air temperature and humidity. The condition is most frequently seen in tropical regions. Heat-stroke is more common among children than among adults.

The predisposing causes are physical exhaustion and heavy clothing. Pathologically, the disease is due to the action of heat on the cerebro-spinal nervous system. Treatment consists in loosening the patient's clothing at once and taking him to a cool place. An ice-bag should be applied to the head, and the body sponged with cold water till the temperature falls to about 101.6 F., when the patient should be wrapped in blankets.

SUN YAT SEN (1866-1925). Chinese statesman.

Born near Canton and educated in the American university at Hawaii, he led the Canton rising of 1895, and organized the revolution of 1911

Sunflower. Large flower head

which deposed the Manchu dynasty. He became provisional president of the Chinese republic, but stepped aside for Yuan Shi Kai. When, in 1917, the government's policy regarding the Great War caused the southern states of China to declare a military government of their own at Canton, Sun Yat Sen was elected president of the South Chinese republic. Civil war followed, and on the defeat of his army Sun resigned, May, 1918. In 1921 he was elected president of the Canton government. He died Mar. 12, 1925.

SUPERCHARGER. Ordinary motor car engines rely upon atmospheric pressure (15 lbs. per square inch) to force the fuel into the cylinders, and at high engine speeds this is insufficient to develop the full engine power. By using the pumping effect obtained from blower or rotating vanes driven by the engine an extra pressure of 7 lbs. in an ordinary road car engine increases the power by nearly 50 per cent. Higher pressures up to 35 lbs. per square inch (total) may be used on racing engines. They are said to be supercharged.

SUPERIOR. Lake separating Canada from the U.S.A. Its shores extend 1,500 m., and its area is 31,800 sq. m. It is 354 m. long, 162 m. wide, 601 ft. above sea level, 1,008 ft. deep, forms the largest reservoir of the St. Lawrence, and discharges into Lake Huron.

SUPERPHOSPHATE. Fertiliser used for the soil. Phosphates, being insoluble, are not absorbed by plants, but when treated with sulphuric acid are converted into soluble acid phosphates or superphosphates.

SUPERTAX. In the U.K. an additional income tax levied on incomes above a certain figure. Introduced in 1909 and now known as surtax, it was fixed at 6d. in the £ on all incomes in excess of £5,000, but was not payable on the first £3,000. In April, 1914, it was made payable on all incomes in excess of £3,000, the first £2,500 being exempt, and the rates varied from 5d. to 1s. 4d. In Nov., 1914, the rates were doubled, and in 1915 those on incomes in excess of £8,000 a year were raised, the maximum rate being 3s. 6d. in the £ on incomes of over £10,000 a year. In 1930 there was another increase, and the maximum rate became 7s. 6d. In 1928-29 the super-tax yield was £56,150,000.

In 1930 the scale was as follows:

	£	Rate in £
		s. d.
On the first	2,000 of income ..	Nil
" " next	500 " ..	1 0
" " "	500 " ..	1 3
" " "	1,000 " ..	2 0
" " "	1,000 " ..	3 0
" " "	1,000 " ..	3 6
" " "	2,000 " ..	4 0
" " "	2,000 " ..	5 0
" " "	5,000 " ..	5 6
" " "	5,000 " ..	6 0
" " "	10,000 " ..	6 6
" " "	20,000 " ..	7 0
On all incomes over 50,000	" ..	7 6

SUPPORTER (Lat. sub, up; portare, to carry). Literally, one who assists. In heraldry, the symbolical figures placed on both sides, one side, or at the back of a shield. See United Kingdom.

Sun Yat Sen, Chinese statesman

SUPPURATION (Lat. sub, under; pus, matter). Formation of matter or pus within the tissues of the body. It is due to infection by micro-organisms. A collection of pus constitutes an abscess. See Inflammation.

SUPREME COUNCIL. Allied organizations during and after the Great War. The first was set up after the disaster of Caporetto in Nov., 1917, under the name Supreme War Council, and met at Versailles. Its object was to coordinate military and other war plans. It disappeared in March, 1918. The second council grew out of the executive of the Allied delegates at the Paris peace conference, 1919. After the signing of the treaties of Versailles, St. Germain, Sévres, etc., its function was to enforce their terms.

SUPREME COURT OF JUDICATURE. Chief court of law for England and Wales. It was established by an Act of 1873, when various courts of law were united under this name. It is divided into the high court of justice and the court of appeal. The judges of the high court are the ordinary judges—or justices. Other officials are the masters, who hear cases of minor importance; there are also official referees and a taxing officer. Appeal lies from the high court to the court of appeal, which is composed of the master of the rolls and five lords justices; and from these there is a final appeal to the House of Lords. The supreme court sits at the Royal Courts of Justice, Strand, London, W.C.

SURAJ - UD - DOWLAH (c. 1732-57). Nawab of Bengal. Grandson of Alivardi Khan, whom he succeeded in 1756, he attacked Calcutta, June 18, 1756, and, after two days' siege, entered the city. Thereupon occurred the tragedy of the Black Hole. Clive retook Calcutta, Jan. 2, 1757; and after his crushing defeat by Clive at Plassey, June 23, Suraj-ud-Dowlah took to flight, but was captured and executed by his rival, Mir Jafar, July 4, 1757. See Black Hole; Clive, Lord.

Suraj-ud-Dowlah, Nawab of Bengal
From an Indian miniature

SURAT. Dist. and town of India, in the N. division of Bombay. Cotton is the chief crop, and rice, native food grains, and pulses are grown. The town is at the mouth of the Tapi on the gulf of Cambay. It was the first English settlement in India in 1613, and monopolised the cotton trade. In 1684 the headquarters of the East India Co. were moved thence to Bombay. Area, 1,651 sq. m. Pop., dist., 674,351; town, 117,434.

SURBITON. Urban dist. of Surrey. A favourite river resort, it is 12 m. from Waterloo on the S.R. It has pleasant promenades, recreation grounds, several churches, and a golf club. Pop. 19,536.

SURETY or **GUARANTOR.** One who promises to answer for the debt, default, or miscarriage of another. The contract entered into by the surety is called a guarantee.

SURF RIDING. Aquatic pastime. Practised by natives of the Pacific islands, especially the Hawaiians, it has become popular in a mild form at seaside resorts in Britain and other countries. It is also a popular pastime in Australia. A flat board is placed on the water, and the surf rider either stands, kneels, or lies on it, and is carried landward on the crest of a breaking wave. A modern form is riding on a plank drawn by a motor boat.

SURGEON. Word, a variant of *chirurgion*, for one who treats disease by manual operations. In London, in the 14th century, surgery was practised by the Barbers' Company and the Guild of Surgeons. The surgeons were separately incorporated, and in 1800 they were re-established as the Royal College of Surgeons of England.

The college possesses a fine building in Lincoln's Inn Fields, with a splendid laboratory and the famous Hunterian Museum.

In conjunction with the Royal College of Physicians the college forms a conjoint board for the examination of students and the granting of licences to practise. There are also colleges of surgeons in Edinburgh and Dublin.

SURGERY (Greek *cheir*, hand, and *ergein*, to work). Science and art of treating morbid, i.e. diseased or accidental, conditions by means of manipulation and by the use of the knife. Surgery was practised by the ancient Egyptians. The two great schools of surgery in antiquity were, however, the Indian and the Greek. Dissection, introduced in the Alexandrian age, led to advance in many directions. The great surgeons of Rome, mostly Greeks, introduced improvements in ligatures and in operations on the eye, bladder, limbs, etc. Ancient surgery culminated in the work of the Byzantine Paul of Aegina (c. A.D. 650), after whom the art fell into a state of increasing decay for nearly 900 years, as the Arabs, who kept alive a knowledge of medicine, were forbidden by their religion to practise anatomy.

Paracelsus, who combined originality with fantastic theories, began to free surgery from the mass of tradition and superstition that encumbered it, but much greater service was rendered by the great French military surgeon Ambroise Paré. His contemporaries, the Paduan professors, A. Vesalius and G. Fallopius, founded modern anatomy, and, with the scientific movement of the 17th century, progress became continuous. The pioneer in England was Richard Wiseman (c. 1622-76). A century later a great advance is marked by the work of John Hunter. The principal landmarks which have resulted in its present state of perfection are the introduction of anaesthetics, antiseptics and asepsis, X-rays, blood tests, and other chemical investigations, vaccines, electro-therapeutics, and massage.

SURINAM. River of Dutch Guiana, S. America. It flows into the Atlantic near Paramaribo after a course of about 400 m. Surinam is the alternative name for the Dutch colony of S. America also known as Dutch Guiana. See Guiana, Dutch.

SURINAM TOAD (*Pipa americana*). Large species of toad, native of Guiana and Brazil. It has a triangular head and small eyes; the upper side is blackish brown, studded with spine-bearing pimples, and the smoother under side whitish. The mouth is deficient in both tongue and teeth. The eggs are hatched out in cells on the back of the female, where the larvae remain until the completion of the tadpole stage. The Surinam toad spends its life in the water, except during the dry season, when it aestivates by burying itself in mud.

SURPLICE (late Lat. *superpellicium*, over the fur). Vestment of the Anglican and R.C. Churches. The Anglican surplice is of white linen, reaches to the knees, is pleated from the yoke and made with ample sleeves, that worn by choristers and

readers being usually less full than those worn by the clergy. The R.C. surplice is ornamented with lace and reaches only to the hips. The surplice was originally worn over furs by priests when conducting services in cold churches. Its recorded use as a vestment dates from the 12th century.

SURREY. Co. of S.E. England. It is bounded N. by the Thames, W. by Berks and Hants, S. by Sussex, E. by Kent, and is traversed E. to W. by the N. Downs. The chief rivers are tributaries of the Thames, and include the Mole, Wey, and Wandie. Kingston is the county town; other places are Croydon, Guildford, Reigate, Godalming, Richmond, and Wimbledon. Epsom contains the Derby racecourse. The co. is noted for its heaths

Surplice as worn in the Anglican Church

Surrey. Map of the home county south of the Thames

and commons. Cereals and hops are grown. Sheep are reared. There are market gardens. The industries of the county include the manufacture of gunpowder, the mining of fuller's earth, and the growing of lavender. The S.R. serves the co., which contains many places of interest and beauty, among them Newark Priory, Sutton Place, Box Hill, Virginia Water, and Friday Street; also pretty villages such as Shere. Seven members are returned to Parliament. The co. is mainly in the dioceses of Guildford and Southwark. In early days Surrey was in the kingdom of Mercia, and then in Wessex. Its area is 722 sq. m. Pop. 930,000.

SURREY, EARL OF. English title. William de Warenne, the first earl, was a follower of William I. Although the direct line failed with the 3rd earl in 1143, the title passed to Hamelin Plantagenet, who had married the last earl's heiress. His successors were earls of Surrey until 1347, when, upon the failure of the male line, the title devolved on Richard Fitzalan, earl of Arundel. In 1451 it was granted to John Mowbray, 4th duke of Norfolk, and was regranted in 1483 to Thomas Howard. Since then it has been a courtesy title of the eldest son of the dukes of Norfolk. See Howard; Norfolk, Earl and Duke of.

Surinam Toad. Female of the South American toad, showing young issuing from cavities in her back

SURREY, HENRY HOWARD, EARL OF (c. 1517-47). English soldier and poet. Son of the 3rd duke of Norfolk, he fought with distinction in France, but being defeated by a superior force at St. Etienne while governor of Boulogne, was recalled in 1546. Falsely accused of treason, he was beheaded on Tower Hill, Jan. 19, 1547. As a poet, he was co-founder with Wyatt of the English sonnet-form and the first to use in English, in his translation of the *Aeneid* (books 1 and 4) dactylic blank verse.

Henry Howard,
4th Earl of Surrey

SURROGATE (from Lat. *surrogare*, to elect in place of another). In eccles. government, a surrogate is the deputy of a bishop or a diocesan chancellor who grants marriage licences or probates.

Surtax. Name now used in the United Kingdom for the supertax (q.v.).

SURTEES, ROBERT SMITH (1803-64). British novelist. In 1831, with Rudolph Ackermann, he founded The New Sporting Magazine, in which first appeared his celebrated character Mr. John Jorrocks. The Jorrocks episodes were collected and published as *Jorrocks's Jaunts and Jollities*, in 1838. Jorrocks also figured as the principal character in *Handley Cross* (1843). He wrote a number of other novels, and died March 10, 1864.

SURVEYING (Anglo-Fr. *surveier*, to overlook). Art of ascertaining by measurement the shape and size of any part of the surface of the earth. Such a survey is necessary in the preparation of maps, and in the construction of railways, canals, tunnels, roads, reservoirs, etc. In aerial survey work a series of overlapping photographs are taken from an aeroplane. These enable all objects within the area to be shown easily in their relative positions. (See *Photography*.)

In ordinary land surveying the area obtained is the horizontal projection of the real surface. The topographical survey makes use of the actual landmarks and also the contour of the land. A hydrographic survey is one concerned with charts of the sea-shore or shore of large bodies of water, and with the measurement of the velocities of rivers, etc. Mine surveying deals with both surface and underground surveys for mining purposes.

Surveying is a profession, and as such is controlled by the Chartered Surveyors' Institution at 12, Gt. George St., London, S.W.1. See Bench Mark; Ordnance Survey; Theodolite.

SURVIVAL. Term for the continued existence after death of the human spirit as an individual entity. Attempts to obtain scientific proof have so far been unsuccessful. The barrier between the two worlds may be

absolute. Apparitions seen hours after death may be due to deferred telepathic impressions. In judging alleged messages conveyed by automatic writing or disinterested mediums, the possibility of telepathy from the living must be considered, although in certain complex cases it seems excluded. See *Spiritualism*.

SUSA or **SHUSHAN.** Ancient city of Persia. Capital of the old prov. of Susiana, it stood on the Choaspes (the modern Kar Pheh) and was the winter residence of the Persian kings. The ruins include the pilgrim resort known as the tomb of Daniel, and the acropolis. Excavations have laid bare remains of the palace built by Darius.

Susa. Port of Tunis. It is situated on the gulf of Hammamet, 75 m. S. of Tunis by railway. Pop. 21,298.

SUSQUEHANNA. River of the U.S.A. Rising in two main branches, the N. in Otsego Lake, New York, and the W. in the Allegheny Mts., it unites at Sunbury, Penn., and enters Chesapeake Bay at Havre de Grace. It is nearly 500 m. long.

SUSSEX. Maritime co. of S.E. England. It is bounded W. by Hants, N. by Surrey and Kent, and S. by the English Channel. For administrative purposes it is divided into east and west, each with its county council. Crossing from Hampshire to Beachy Head are the S. Downs. The chief rivers are the Adur, Ouse, Rother, and Arun. The co., which is served by the S.R., is celebrated for its South-down sheep. Hops are grown in the E.

Along the 91-m. coastline are watering places, Brighton, Eastbourne, Hastings, and Worthing among them. Newhaven is a port. Lewes is the co. town, and Chichester the seat of a bishop. The co. contains the ruins of Pevensey and Hurstmonceux castles, abbeys such as Bayham and Battle; great houses such as Arundel and Petworth; and Goodwood, famous for its races. Six members are returned to Parliament. Sussex was originally the kingdom of the South Saxons. The area is 1,457 sq. m. Pop. 728,000.

A cruiser of the Norfolk class is named the *Sussex*. See *Norfolk*.

SUSSEX, EARL OF. English title. In 1529 it was given to Robert Radclyffe. Thomas the 3rd earl (d. 1583) was lord-lieutenant of

Sutherlandshire. Scottish county famous for its grouse moors. See below

Ireland under Elizabeth. In 1644 Thomas Savile was made earl of *Sussex*. The title was revived for Thomas Lennard, Baron Dacre, in 1684, and was held by the Yelverton family from 1717-99. In 1801 George III made his sixth son, Augustus Fred. crick (1773-1843), duke of *Sussex*. The duke of Connaught is also earl of *Sussex*.

Sussex fowl, a breed sometimes mis-called Surrey fowl

table bird. The hens weigh 6 to 8 lb. and the cockerels up to 10 lb. There are brown, red, speckled, and light varieties. The breed is often mis-called the Surrey fowl.

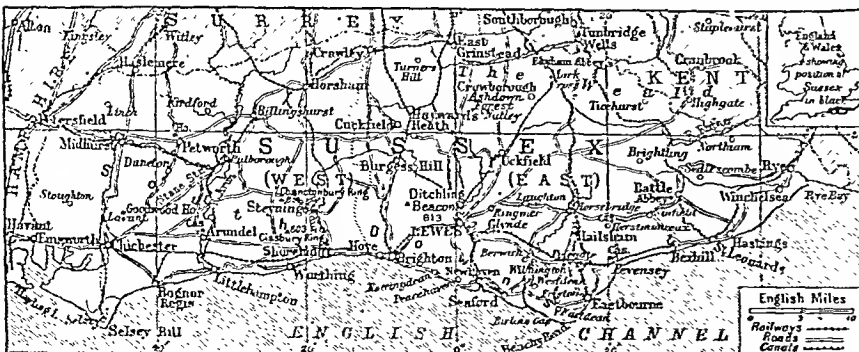

SUSSEX REGIMENT, ROYAL Regiment of the British army. Originally the 35th and 107th Foot, it was raised in 1701. It has a distinguished record, and has borne the title "royal" since 1882. In addition to its regular and special reserve battalions it had nearly a dozen others in the Great War. The depot is at Chichester.

SUSTENTATION (Lat. *sub*, up; *tenere*, to hold). Literally, the act of sustaining. The fund raised by Presbyterian Churches to assist their poorer ministers is called a sustentation fund.

SUTHERLAND, DUKE OF. Scottish title borne by the family of Leveson-Gower since 1833. The duke owns much of the co. of Sutherland, in which is his chief residence, Dunrobin Castle. His eldest son is the marquis of Stafford, a title conferred on George G. Leveson-Gower (the first duke) in 1803. He was ambassador in Paris, and from him the later dukes are descended. See *Stafford*.

SUTHERLANDSHIRE. Co. of Scotland. In the extreme N., its surface varies between mountainous moorland and narrow valleys. Loch Shin is the largest of many lakes. The chief rivers are the Oykel, Helmsdale, Biora, Shin, and Fleet. The co. is known for its grouse moors and deer forests. The chief

Sussex. Map of the southern maritime county, celebrated for its watering places and downland scenery

industries are sheep rearing and fishing. Much of the land is cultivated by crofters. The L.M.S. Rly crosses the county. Dornoch is the co. town. With Caithness, Sutherland sends one member to Parliament. The area is 2,028 sq. m. Pop. 17,800.

SUTLEJ. River of the Punjab, India. It rises in the sacred Rakas Tal Lake, at the S. foot of Mt. Kailas, in Tibet, crosses the Himalayas, skirts the Siwalik hills, enters the great alluvial plain of N. India at Rupar, and joins the Indus after a course of 900 m. A great irrigation scheme in the valley of the Sutlej is being carried out.

SUTRAS (Skt. sutra, string). In Sanskrit literature, a class of commentaries on the Vedas. Consisting usually of strings of brief aphorisms, they were learnt by heart as aids to memory in matters of ritual, law, philosophy, grammar, prosody, etc.

SUTRO, ALFRED (b. 1863). British dramatist. Born in London, August 7, 1863, and educated at the City of London School and in Brussels, he achieved success in 1904 with *The Walls of Jericho*, a comedy of modern society. Among his other plays are *John Gayde's Honour*, and *The Barrier*, 1907; *The Builder of Bridges*, 1908; *The Choice*, 1919; *Far Above Rubies*, 1924; and *The Desperate Lovers*, 1927.

Suttee. Variant spelling of the Hindu word sati (q.v.).

SUTTON. Urban dist. of Surrey. It is 11 m. from London, and has a station on the Southern Rly. S. Nicholas church contains some interesting memorials. The sign of the Greyhound inn, which hangs across the road, is one of the few signs of this kind now remaining. In 1927 Cheam was added to Sutton. In 1929 an electric rly. from Wimbledon was opened. Pop. 25,000.

SUTTON, MARTIN JOHN (1850-1913). British agriculturist. The eldest son of Martin Hopo Sutton, who with his brother Alfred founded the firm of Sutton & Sons, he became, in 1887, head of the firm. He died Dec. 14, 1913. His book, *Permanent and Temporary Pastures*, 1886, was based on an essay by his father.

SUTTON BRIDGE. Urban dist. and river port of Lincolnshire. It is on the Nene, 3 m. from the Wash on the L.M.S. and L.N.E. Rlys., and stands on land reclaimed from the sea. About 3 m. away is Long Sutton, whose church contains a Norman nave. Pop. 2,342.

SUTTON COLDFIELD. Borough of Warwickshire. It is 8 m. from Birmingham, on the L.N.E. and L.M.S. Rlys. The church of Holy Trinity has a Norman font. There is a 16th century grammar school. Sutton Park recreation ground covers 2,400 acres. Near the town is New Hall, a moated residence built in the 13th century. Hardware is manufactured, and there is a trade in agricultural produce. The bor. is sometimes known as King's Sutton. Pop. 23,028.

SUTTON COURTENAY. Village of Berkshire. It stands on a backwater of the Thames, 2 m. from Abingdon. There is an old manor house. Pop. 863.

SUTTON-IN-ASHFIELD. Urban dist. and market town of Nottinghamshire. It is 13 m. from Nottingham, on the L.M.S. and L.N.E. Rlys. The church of S. Mary Magdalene is a restored 12th century edifice. Hosiery is manufactured, and around are coal mines. Market day, Sat. Pop. 23,852.

Sutton-on-Sea. Watering place of Lincolnshire. It is 28 m. from Boston and has a station on the L.N.E.R. Pop. 1,605.

SUTTON PLACE. Manor house in Surrey. It is 4 m. from Guildford, and was built, 1523-30, by Sir Richard Weston. One

Sutton Place, Surrey. South front of the Tudor manor house. It is built of brick and terra-cotta

of the finest examples in England of the transition from castle to mansion in Tudor domestic architecture, it is constructed of terra-cotta and brick. Frederic Harrison restored the long gallery in 1878. The house was occupied, 1905-16, by Viscount Northcliffe, and was sold in 1916 to the duke of Sutherland.

SUVLA BAY. Bay of Gallipoli. On the W. side of the Dardanelles between Suvla Burnu (Cape Suvla) and Nibrunesi points, it is sometimes known as Anafarta Bay.

Suvla Bay. Unloading stores from a barge beside the light railway

with a successful advance on Sari Bair by the Anzacs, would have given the Allies control of the central heights of the Gallipoli peninsula. The Anzacs began their movement in the afternoon of Aug. 6, 1915, and fighting went on till the 21st. Some progress was made, but as a whole the attack failed.

SUZERAIN (Fr. from Lat. *suzum*, above). In feudalism, a lord paramount, or over-lord. The king, as ultimate owner of the soil, was suzerain-in-chief, his immediate vassals being the great barons, who held their land on condition of rendering military service personally and also through their own vassals, who in return for protection by their own suzerains were pledged to serve at their call. This system formed the basis of feudalism (q.v.).

SVALBARD. Official name for the whole of the Polar territory belonging to Norway. The individual islands, Spitsbergen, Bear Island, etc., retain their former names.

SVERDRUP, OTTO (1854-1930). Norwegian explorer. Born Oct. 31, 1854, he was a master mariner when he took part in Nansen's journey across Greenland in 1888. In 1893 he commanded the Fram in Nansen's Polar expedition, attempted to circumnavigate Greenland, 1898-1902, and in 1914-15 undertook a voyage for the relief of missing Arctic explorers. In May, 1920, he commanded the ice-breaker *Sviatogor*, lent by the British admiralty to Norway, which went to the rescue of the Russian icebreaker *Solovoi*, ice-bound in the Kara Sea. He died Nov. 26, 1930.

Otto Sverdrup, Norwegian explorer

SWABIA. One of the duchies into which medieval Germany was divided. The duchy lay between Franconia, Bavaria, and the Rhine. It is now part of Württemberg, Bavaria, and Hesse. The name is used more precisely for a prov. of Bavaria.

SWADLINCOTE. Urban dist. of Derbyshire. It is 5 m. from Burton-upon-Trent, on the L.M.S. Rly. Earthenware is made, and near are coal mines. Pop. 20,026.

SWAFFHAM. Urban dist. and market town of Norfolk. It is 15 m. from King's Lynn, on the L.N.E.R. The parish church of SS. Peter and Paul is a perpendicular edifice with a notable roof. Cattle and sheep fairs are held, and there is an agricultural trade. Market day, Sat. Pop. 2,913. Swaffham Prior is a village 8 m. from Cambridge.

SWAHILI (Arab. coast-people). Hybrid peoples, mostly on the coast and islands of Kenya Colony and the Tanganyika Territory. Numbering less than 1,000,000, and descended from the Moslemised medieval Zanj population, they represent twenty centuries of Arab contact with the coast negroes. The lower ranks make good porters and scamen.

SWAKOPMUND. Port is the S.W. Africa Protectorate. Situated in sterile country 25 m. N. of Walvis Bay, the town is well planned and is connected by rly. with Windhoek, the capital, and thence with Cape Town. It was occupied by the S. African forces on Jan. 14, 1915, in the campaign against the Germans in German S.W. Africa. Pop. (European), 1,125.

Swale. River of Yorkshire (N.R.). It rises on the Westmorland border and joins the Ure a little below Myton.

SWALLOW (*Hirundo rustica*). Migratory bird of the family *Hirundinidae*. It is a native of Europe, Asia, and Africa, visiting Britain in April and staying till late in Sept. It has long wings and a forked tail. The bird is entirely insectivorous, its food being taken usually on the wing. The nest, of mud and grass, etc., is built usually upon a raft or other shelf in barns or out-houses. As a rule, there are two broods each year.

Swallow hovering as about to enter nest
W. J. Herridge, F.Z.S.

SWALLOW-TAIL BUTTERFLY (*Papilio machaon*). Large yellow and black butterfly, native of Europe and Asia. As a British species it is now restricted to the fens of Norfolk and Cambridgeshire. When annoyed the green caterpillar protrudes a pink V-shaped organ from behind the head, which emits a strong odour, apparently of a protective nature. It feeds upon milk-parsley and other umbelliferous plants.

Swallow-tail Butterfly, found in the English fen country

SWALLOW-WORT (*Asclepias*). Genus of perennial herbs of the order *Asclepiadaceae*, natives of America. Other names for them are milkweed and silkweed. They have a milky juice, and the flowers have the corolla deeply divided into five segments. Several of the species are used medicinally; others yield fibres.

SWAN (*Cygnus*). Small genus of large aquatic birds of the family *Anatidae*. They are natives of many regions, from the Arctic to the Australian. Closely related to the ducks and geese, they are distinguished by the extremely long necks, short legs, and the

absence of feathers on the face from the eye to the bill. Three species visit the British Islands in winter, and of these one known as the mute swan (*Cygnus olor*) has lived here in a semi-domesticated state for centuries.

The mute swan—the only species that nests in Britain—constructs a huge bed of flags and reeds, lining it with down, and lays from five to ten greenish-white eggs. The young swans, or cygnets as they are called in their first year, are of a grey-brown colour until they are a year old. The swans on the upper Thames are owned by the Crown and the Dyers' and Vintners' companies.

SWAN. River of W. Australia. It rises as the Avon and enters the Indian Ocean at Fremantle, 12 m. below Perth. Here, in 1829, was founded the Swan River Colony, from which Western Australia was formed.

SWAN, JOHN MACALLAN (1847–1910). British sculptor and painter. His chief reputation was as a painter and sculptor of animals; but he was also an accomplished painter of the human figure. He became A.R.A. in 1894, R.A. in 1905, and died in London, Feb. 14, 1910.

SWAN, SIR JOSEPH WILSON (1828–1917). British inventor. Born in Sunderland, Oct. 31, 1828, and educated privately, he is remembered as a pioneer in electric lighting. In 1860 he constructed a carbon filament lamp, but it was not till 1880 that he publicly exhibited the first successful carbon filament vacuum lamp. He died May 27, 1917.

SWANAGE. Urban dist., seaport, and watering place of Dorset. It stands on Swanage Bay, 24 m. from Bournemouth, by the Southern Rly. The ancient church of S. Mary has a notable tower. The main industry is the quarrying of Purbeck stone. The place has good bathing facilities. Near are the Tilly Whim caves, once the resort of smugglers, and a curious stone globe. Pop. 5,480.

SWANSEA (Welsh, Aber Tawe). County bor. of Glamorganshire, Wales. It stands on Swansea Bay at the mouth of the Tawe, 45 m. from Cardiff, on the G.W. and L.M.S. Rlys. Among notable buildings are the church of S. Mary, rebuilt in the 19th century, the Royal Institution, with library and museum, the university college and the art gallery. Parts of the castle still stand. The main industries are the manufacture of tinplate and the smelting of copper, zinc, silver, and other metals. Another is the refining of oil, for which there are large storage facilities. Pop. 163,200.

Swansea ware, porcelain produced at the Cambrian Works, is remarkable for its dark blue colour and its beautiful paintings of birds, flowers, etc. See Pottery.

SWARAJIST (Sanskrit, self-ruling). Name given to an Indian political party. It came into existence about 1923, and was composed of those who broke away from Gandhi on the policy of taking no part in the general election. The Swarajists secured a substantial representation in the central assembly and

dominated the provincial councils. Their policy was to secure home rule for India. Their early leader was C. R.

Swan. 1. Australian black swan. 2. British domesticated white swan

mouth of the Han river. Sugar is the principal product, but the trade has steadily declined, and mining for wolfram is carried on. Swatow is the centre of a stream of emigration to the Straits Settlements, Dutch East Indies, Cochin China, and Siam. Pop. 25,000.

SWAZILAND. British Protectorate of S. Africa. It is bounded N. and W. by the Transvaal, S. by the Transvaal and Natal, and E. by Portuguese E. Africa and Natal. Mbabane is the capital. The country is administered by the high commissioner for S. Africa, through a resident commissioner, although the native chiefs exercise a great deal of civil authority. There is considerable mineral wealth, tin and gold being worked. The natives possess large herds of cattle and sheep. The area is 6,704 sq. m. Pop. (European) 112,838. See South Africa.

SWEARING. Act of making declaration upon oath. Profane swearing or cursing is punishable by fine under the Profane Oaths Act, 1745. The use of profane language in the streets renders the offender liable to a fine of 40s. See Affirmation; Oath.

Sweat. Moisture from the skin, also known as perspiration (q.v.). See Skin.

SWEATING. Term applied in the 19th century to the practice of working poor persons at starvation wages through the medium of middlemen employers. The practice was particularly common in the clothing and furniture trades. Most of the work was done at home under the worst conditions, and a select committee appointed by the House of Lords in 1888 revealed a grave and wide-spread social evil. Substantial improvement was eventually effected in all sweating trades by the setting up of trade boards, which fixed a minimum wage. See Trade Board; Wages.

SWEATING SICKNESS. Disease characterised by fever, profuse sweating, and an eruption on the skin. It was prevalent in England in the 15th and 16th centuries.

SWEDE OR SWEDISH TURNIP (*Brassica campestris*, var. *napobrassica*). Root crop, a variety of turnip. It is harder and possesses greater feeding value than the ordinary turnip, from which it is distinguished by smooth bluish leaves and the presence of a narrow "neck" at the top of the root. The cultivated forms

are divided into green-top, bronze-top, and purple-top, the last including the kinds known as tankard, intermediate and globe.

SWASTIKA (Skt. well-being). Symbol formed of an equal-armed cross whose extremities are bent uniformly at right angles. Although traced in pre-Aryan Europe, it is

primarily an Aryan sun-symbol, being found at Troy, and in India. Buddhist migration carried it to China and Japan; it may also owe its presence in America and W. Africa to cultural migration. It was freely employed in early Christian art.

SWATOW. Treaty port in Kwangtung prov., China, at the

mouth of the Han river. Sugar is the principal product, but the trade has steadily declined, and mining for wolfram is carried on. Swatow is the centre of a stream of emigration to the Straits Settlements, Dutch East Indies, Cochin China, and Siam. Pop. 25,000.

SWEDEN. Kingdom of N. Europe, comprising the E. part of the Scandinavian peninsula. It is bounded W. by the Sound, the Kattegat, the Skagerrak and Norway, N. by Finland, and E. and S. by the Baltic. The islands of Gotland and Öland in the Baltic and Hven in the Sound belong to Sweden. The area is 173,156 sq. m. Stockholm is the capital. Pop. 6,105,190.

The country may be divided broadly into three regions—N., central, and S. The first is the highland forest area, the second the lowland mining area, and the third the agricultural plains. Forests cover about half the entire country. The great lakes, Wener, Wetter, Mälardalen, and Hjelmars, are situated in the central lowlands. See map, p. 1021.

The chief crops are oats, rye, barley and wheat. Potatoes, sugar beet, and much hay are grown. Cattle, sheep, and pigs are reared, and the dairy industry is increasing. Reindeer are bred by the Lapps. The fisheries include herring, mackerel, and eels. The iron ore deposits are very valuable. Copper, zinc, manganese, and molybdenum ore are worked, and granite and marble are quarried. The timber trade is of great importance, and connected with it is the extensive paper and pulp industry. Matches are exported. The mileage of the rlys. exceeds 10,000. Train ferries run to Germany and Denmark.

Swastika, an ancient Aryan symbol

Sweden. Dalecarlian peasants in gala dress performing a folk dance

The three Scandinavian kingdoms, Sweden, Norway, and Denmark, were united by the union of Kalmar, 1397, and it was not until 1523, under Gustavus Vasa, that the independence of Sweden was established. Gustavus Adolphus is best remembered for the redoubtable part he played in the Thirty Years' War, at the close of which, in 1648, Sweden was in possession of Pomerania and of extensive territories on the E. shores of the Baltic. The peace of Nystadt, 1721, left Sweden with no possessions on the continental side of the Baltic S. of the gulf of Finland.

In 1810 the French marshal, Bernadotte, was nominated crown prince and heir of Charles XIII. He utilised the fall of Napoleon to wrest Norway from Napoleon's ally Denmark, and from 1814 to 1905 Norway was attached to Sweden, autonomous but not independent. Bernadotte became king as

Swansea. Remains of the 14th century castle built by Bishop Gower

Charles XIV in 1818, and his dynasty still occupies the throne of Sweden, though the union between that country and Norway was repealed in 1905. In 1907 Gustavus V succeeded his father Oscar II as king. The kingdom is a member of the League of Nations.

The constitution, with modifications, dates from 1809. The king is an hereditary monarch and rules in association with the council of state. The Riksdag consists of two chambers. The first has 159 members, returned for a period of eight years. The second (popular) chamber, with 230 members, is elected for four years. The state church is Lutheran.

SWEDENBORG, EMANUEL (1688-1772). Swedish scientist and mystic. He was born at Stockholm, Jan. 29, 1688.

E. Swedenborg, Swedish mystic

In 1743 he declared that insight into the spiritual world had been granted him by direct revelation. He abandoned his scientific work in 1747, and gave up the rest of his life to meditation and exposition. He died in London, March 29, 1772.

According to Swedenborg there is an exact correspondence between the physical and spiritual worlds. Most books of the Bible have two senses, a literal and a spiritual. Those who are actuated by love of God and man enter heaven as angels, those whose motive is self-love enter hell. All life flows from God. The Holy Trinity became incarnate in Jesus Christ, who raised humanity to union with God, but there is no atonement in the accepted sense.

The Swedenborgian body, called the New Church was organized in 1757. Of Swedenborg's numerous mystical works many were published in English by the Swedenborg Society, founded in 1810.

SWEDISH DRILL. System of physical exercise originated in Sweden. The benefits derived from the system have induced other countries to include it in the curriculum of physical training provided for the naval, military, and police forces, and a modified system is adopted by the board of education in a syllabus for schools in Great Britain.

The exercises are practised without apparatus. There are special exercises for the legs, arms, neck, spine, lungs (breathing exercises), balance or maintenance of the body's equilibrium, development of lateral trunk and abdominal muscles, and strengthening of the shoulders and back. See Physical Training.

SWEEPSTAKE. Form of competing for money or other prizes. The money is contributed in equal proportion by each competitor. In another variety of sweepstake, held upon horse races, slips of paper are issued for each subscription, some bearing the names of the horses, the remainder being blank. The slips are shuffled together and placed in a box, from which they are drawn. The largest sweepstake is that on the Derby promoted by the Calcutta Turf Club. In England, the law on sweepstakes is somewhat contradictory.

SWEET BRIAR or **EGLANTINE** (*Rosa eglanteria*). Shrub of the order Rosaceae. A native of Europe and N. and W. Asia, it forms a small bush with erect prickly stems, clothed also with gland-tipped bristles. The leaves are divided into five or seven roundish leaflets with toothed edges. On the under side they are covered with glands, whose sticky excreta give off the well-known sweet briar

Sweet Briar. Flower and fragrant leaves

odour. The small rosy flowers are about 1½ ins. across, the scarlet fruits egg- or pear-shaped.

SWEET FLAG (*Acorus calamus*). Perennial aromatic waterside herb of the order Araceae, a native of Europe, N. Asia, and N. America. It has a thick, creeping rootstock and sword-shaped leaves 4 to 6 ft. long. The flowering stem is also sword-shaped, and ends in a flattened spathe, from which emerges the spadix, with hundreds of yellow-green simple flowers.

SWEETHEART. Ruined Cistercian abbey near Dumfries. It was built by Devorguila in 1275 to commemorate her husband, John Baliol. The abbey and the village around it are now known as New Abbey. See Baliol.

SWEET LIME. Popular name for the fruit of *Citrus limetta*, to distinguish it from the W. Indian lime, from which lime juice is obtained. It is a native of E. Asia. See Bergamot; Lime.

SWEET PEA (*Lathyrus odoratus*). Annual herb of the order Leguminosae. It is a native of S. Europe, whence it was introduced to Britain in 1700. Its

long, flattened, and winged stem is too weak to stand, and the plant supports itself by numerous tendrils. The fragrant flowers are produced in clusters of two or three at the end of long stalks, and are of various tints, white, pink, and purple. Under cultivation the colour variation, as well as the size, has been increased, chiefly at the expense of the fragrance.

Sweet Pea. Single bloom of the annual

SWEET POTATO (*Ipomoea batatas*). Trailing perennial herb of the order Convolvulaceae. It is a native probably of S. America, but is grown extensively as a food crop in most warm countries. It has a long, slender stem which sometimes climbs by twining, large lobed or angular leaves about 6 ins. long, and funnel-shaped flowers which are white outside and purple within.

SWEET WILLIAM (*Dianthus barbatus*). Perennial herb of the order Caryophyllaceae. It is a native of S. and E. Europe, whence it was introduced to Britain about

Sweet William. Clustered flowers of a cultivated variety

1573, and became a favourite garden plant. The stiff, jointed stem bears lance-shaped leaves in pairs, and divides at the top into a cluster of flower-stalks. The flowers are naturally pink or white, but as the result of cultivation innumerable varieties exist in all shades of colour, from crimson almost to black.

SWIFT (*Micropus apus*). Bird of the order Picariae. A native of Europe, Asia, and Africa, it is famed for its

Swift. Summer migrant to the British Isles, with its long narrow wings spread in flight

rapid, steady flight and wonderful evolutions in the air. In Britain it is a summer migrant, arriving at the end of April and leaving in August. Its nest, slightly conical of straw, dry grasses, and feathers, gummed together by the bird's saliva, is built under the eaves of a house, in church towers, and crevices. The swift never perches, its short feet and hook-like claws enabling it only to cling to walls, etc. It is entirely insectivorous and hunts in companies, filling the air with joyous screams.

SWIFT, JONATHAN (1697-1745). Irish satirist. Born in Dublin, Nov. 29, 1697, son of a clergyman of English descent, in 1699 he was secretary, at Moor

Jonathan Swift, British satirist. After Charles Kneller, 1745

Park, Surrey, to Sir William Temple, and was tutor to Esther Johnson, the Stella of his *Journal and Sonnets*. Ordained priest, 1693, he obtained the living of Kilroot, Belfast Lough, but returned to Moor Park, 1696-98. While in Temple's service, Swift wrote *The Battle of the Books*, 1697, which was published, 1704, with *A Tale of a Tub*, a brilliant satire on the divisions of Christianity, but a work that prejudiced his chances of ecclesiastical preferment. However, in 1713 he was made dean of S. Patrick's cathedral, Dublin.

While in England, which he visited again 1726 and 1727, he began his famous friendship with Stella, whom he is said to have married secretly in Ireland about 1714 and who died Jan. 23, 1728. The friendship with Esther Vanhomrigh (Vanessa) began about 1710, and is related in the poem *Cadenus and Vanessa*. Meanwhile he had written *Sentiments of a Church of England Man*, 1708; *Proposal for the Advancement of Religion*, 1709; his ironical *Argument Against Abolishing Christianity*; and his humorous pamphlets, signed Isaac Bickerstaff, on the almanac-maker, Partridge. His masterpiece, *Gulliver's Travels*, appeared 1726-1727. Swift died Oct. 19, 1745, his last years having been darkened by mental trouble.

SWILLY, LORCH. Inlet of the N. coast of co. Donegal, Irish Free State. Its entrance is 4 m. broad, and it extends S. for about 25 m. with an average breadth of 3 m.

SWIMMING. Method of moving progressively on or through water, without artificial aid. The breast stroke is the most useful of the various methods, although a slow racing stroke as compared with the trudgeon or the crawl. In using the breast stroke, the arms should be bent in with the elbows about four inches from the sides of the body, the hands in front of the chin and touching, with the palms downwards, but near the surface of the water, the body inclined forward and the head slightly back. When the stroke is made the arms are vigorously pushed forward to their fullest extent, and when fully extended the hands should be turned slightly outward, and then pulled round until they are in a line with the shoulder. The recovery is made by the arms being bent in, thus bringing the elbows again near the sides of the body ready for the next stroke. During this last portion of the movement inward breathing should take place. The proper regulation of breathing is the all-important factor in swimming.

The back stroke is, in its primary movements at least, merely the breast stroke performed on the back. The overarm stroke was formerly considered the fastest, a stroke known as the trudgeon being considered speedy only for a short distance. But with the advent of water polo an adaptation of this stroke became popular. In 1902 R. Cavill, an Australian

swimmer, gave an exhibition of the crawl stroke, and this method of progression has since revolutionised speed swimming.

In 1892 the hundred yards record stood at 1 min. 5½ secs. J. Weissmuller (U.S.A.) did it in 51 secs. in 1927. He and Arne Borg of Sweden hold nearly all the amateur records. The British amateur record for the 100 yds. is held by P. Samson (54½ secs.), and for the mile by T. S. Battersby (24 min. 1½ sec.).

In 1930 the English Channel had been swum some 16 times. The first woman to do it was Miss G. Ederle (Aug. 6, 1926), in 14 hrs. 34 mins. Of the men, G. Michel swam it in 11 hrs. 5 mins. (Sept. 10, 1926). In 1930 A. Rizzo, of Malta, set up the endurance record of 68 hours 11 min. See Dover.

SWINBURNE, ALGERNON CHARLES (1837—1909). British poet and dramatist. Born in London, April 5, 1837, eldest child of Admiral Charles Henry Swinburne and Lady Jane, daughter of the 3rd earl of Ashburnham, he entered Balliol College, Oxford, in 1856, but went down without a degree in 1859.

In 1861 he settled in London and began to write. His first published volume contained two plays, *The Queen Mother* and *Rosamond*, 1860. He won his place among the chief of British lyrical poets with *Afalanta in Calydon*, 1865, and *Poems and Ballads*, 1866. Later came *William Blake*, 1868, possibly his best book of prose criticism, and *Songs before Sunrise*, 1871, perhaps his best book of lyrics. Other of Swinburne's numerous publications are the prose study of Chapman, 1874; *Erechtheus*, 1876, a tragedy in Greek form; *Poems and Ballads*, Second Series, 1878; *The Heptalogia*, 1880, a remarkable collection of parodies; and *Trisframo of Lyonese*, 1882,

A. C. Swinburne,
British poet.
Elliott & Fry

a sort of Wagnerian music-drama.

From 1879, his health dissipated by an irregular life in London, he lived at Putney under the care of Theodore Watts-Dunton. He died April 10, 1909. Consult Swinburne at Home. C. Watts-Dunton, 1922; Swinburne, Hon. H. Nicolson, 1926.

SWINDON. Borough and market town of Wiltshire. It is 77 m. from London, on the G.W. Rly., being an important junction. It consists of Old Swindon, on a hill, and New Swindon below. The latter grew up owing to the establishment here in 1841 of the G.W. Rly. works. These provide the chief occupation, but there is also an agricultural trade. Near is Coate Reservoir, a large artificial lake. Market day, Mon. Pop. 60,000.

SWINE FEVER. Name given to three separate infectious diseases which attack swine. They are (1) swine plague, a septic gastro-enteritis caused by a bacillus; (2) infectious pneumonia, caused by an ovoid bacterium; (3) the real hog cholera. An animal infected by any one of these three diseases becomes dull, loses its appetite, and seeks a dark corner. Its eyes are affected, and later its flexor muscles. No cure is known. An outbreak must be immediately notified and the infected animals slaughtered.

SWINTON. Urban dist. of Yorkshire (W.R.). It is 10 m. from Sheffield, a junction on the L.M.S. and L.N.E. Rlys. Here the Don navigation joins that of the Dearne and Dove. Iron goods, pottery, and glass are made, and there are coal mines. Pop. 13,925.

SWINTON. Dist. of Lancashire, part of the urban dist. of Swinton and Pendlebury. It is 4 m. from Manchester, on the L.M.S. Rly. There are cotton factories and engineering works. Pop., urban dist., 31,000.

SWISS GUARD. Former regiment of bodyguards to the French throne. Recruited in Switzerland, the regiment was first raised in 1616. In the

Swiss Guards.
Private in the
Papal Guard

Revolution, after bravely resisting the mob which invaded the Tuileries, Aug. 10, 1792, they were massacred. Another body of troops, the Swiss Guard, or Papal Guard, is employed at the Vatican.

SWITCH. In electricity a switch is a device for opening and closing an electric circuit by the movement of a lever or wheel. A single pole switch acts on one conductor only; a double pole switch breaks or closes the circuit in two conductors simultaneously. The simplest form of switch consists of a knife-shaped hinged bar, pivoted at one end on an insulated mounting, and forced by an insulated handle between two slightly elastic terminals, each connected with the main. The blade, by making contact with both, bridges the gap and completes the circuit.

When a circuit is broken, sparking takes place at the points of rupture, and destructive arcing may be set up. To reduce this to a minimum, a switch is made quick-acting. Circuit-breakers, or cut-outs, are automatic switches which operate when the current becomes excessive, fails altogether, or reverses its direction.

SWITHIN or **SWITHEN** (d. 862). English saint and bishop. According to tradition, he was of noble birth. In 852 Ethelwulf made him bishop of Winchester, where he was famed as a builder of churches. He died at Winchester, and to him the cathedral was dedicated. The popular superstition about rain on St. Swithun's day (July 15) meaning rain for the forty days following is said to have originated in the fact that the removal of his body to the cathedral in 971 was delayed by heavy rain.

SWITZERLAND. Federal republic of central Europe. Entirely inland, it is enclosed by France, Germany, Austria and Italy. The languages spoken comprise German, French, Italian, and, in parts of Grisons, Romansch. Berne (or Bern) is the capital. The area is 15,940 sq. m. Pop. 4,018,500.

The Alps occupy most of the interior and form the S. and E. frontiers, while on the N.W. are the Jura Mts. The rivers include the Rhône, Rhine, Inn, Reuss, and Aar, and the lakes those of Geneva, Constance, Lucerne and Neuchâtel, with small parts of Lakes Maggiore and Lugano. About one-fifth of

the country is forest. The magnificent scenery and the opportunities for winter sports have made Switzerland the playground of Europe.

The agricultural products include wheat, rye, oats, barley, vegetables, and fruits. Asphalt is obtained in the Val de Travers, and iron ores and salt are mined. The scarcity of coal is set off by ample water power resources, which are being increasingly utilised. Exports include watches and clocks, silk and artificial silk goods, embroidery, condensed milk, cheese, chocolate, machinery and chemicals. There are over 3,000 m. of rly.: many of the lines have been electrified.

Switch. Double pole
type shown in plan

In 1291 the forest cantons of Schwyz, Uri, and Unterwalden formed themselves into a defensive league. By 1513 the confederation of 13 cantons had been completed, and in 1648 the Swiss Confederacy became formally independent of the Empire. For the next century and a half Switzerland was virtually dominated by France, and in 1798 the Helvetic Republic was formed. In 1803 Napoleon reorganized its constitution, and increased the number of cantons to 19. In 1815 the Congress of Vienna restored those districts that had been annexed by France, raising the number of cantons to 22, and the Napoleonic system was dissolved.

The legislative power resides in a Parliament of two chambers, a Council of State of 44 members and a National Council of 198 members; both unified form the Federal Assembly. The executive power is vested in a Federal Council of seven members, elected by the Federal Assembly. Legislation may be initiated or vetoed by the popular vote; the referendum, which is invoked by a petition of 30,000 citizens or eight cantons, is in frequent use. See Alps.

SWORD. Weapon of offence in fighting. The early sword, as used by Asiatic, Greek, and Roman soldiery, was short, often leaf-shaped, and pointed. It was more used as a cutting than as a stabbing weapon. The swords of the 8th and 9th centuries were longer, and at the time of the Norman Conquest assumed a very

Switzerland. Peasants from the Rhine Valley and Appenzell

Switzerland. Map of the mountain republic known as the playground of Europe

ill-balanced form with long wide blade, short pommel, and cross hilt. By the 15th century a type had evolved with blade tapering to a fine point, adapted rather for thrusting than cutting, and a long grip. From this type branched off the two-hand sword, often five feet long over all which needed a wide

its full growth of 60 to 80 ft. in about 50 years, though it lives for some 200. The winged fruit, or samaras, enable it to propagate freely. The firm, fine-grained timber is used in the making of furniture, etc. See Maple.

SYDENHAM. Residential suburb of S.E. London. It is about 8 m. from London, and is mainly in the metropolitan borough of Lewisham. The Southern Rly. has stations here. To the S.W. is the Crystal Palace (q.v.).

SYDENHAM, CHARLES EDWARD POULETT THOMSON, BARON (1799-1841). British statesman. Born at Wimbledon, Sept. 13, 1799, in 1826 he entered Parliament for Dover, and became vice-president of the board of trade in 1830. M.P. for Manchester in the Reform Parliament of 1832, two years later he became president of the board of trade. In 1839 he was appointed governor-general of Canada, and was largely instrumental in effecting the union of the provinces. Raised to the peerage in 1840, he died Sept. 19, 1841.

SYDENHAM, GEORGE SYDENHAM CLARKE, BARON (b. 1848). British soldier and administrator. Born July 4, 1848, he was commissioned in the Royal Engineers in 1868. He served with distinction in Egypt, 1882, and the Sudan, 1885, and on his return became secretary to the colonial defence committee, 1885-92. Knighted in 1893, he was governor of Victoria, Australia, 1901-4. On his return he was largely responsible for the re-constitution of the war office and the formation of the imperial war council. In 1907 he was appointed governor of Bombay, retiring with a peerage in 1913. In 1927 he published *My Working Life*, and in 1928 *Studies of an Imperialist*.

SYDENHAM, THOMAS (1624-89). English physician. Born Sept. 10, 1624, in 1647 he entered Wadham College and studied medicine there and in France. About 1663 he began to practise in London, and in 1676 published his *Observationes Medicæ*. He died Dec. 29, 1689.

Sydenham, one of the great independent medical thinkers of his time, carried out a series of observations on epidemic diseases and introduced new treatment of small pox and fevers.

SYDNEY. Light cruiser belonging to the Australian navy. On Nov. 9, 1914, she caught the German raiding cruiser Emden at Cocos

Keeling Island, forced her to fight, and drove her ashore. Later the Sydney was attached to the cruiser squadron under Sir D. Beatty. See Cocos; Emden.

SYDNEY. City, first class naval station and principal seaport of Australia, capital of New South Wales. It stands on the shores of Port Jackson, one of the finest natural harbours in the world, and was named after Thomas Townshend, 1st Viscount Sydney (1733-1800), who was colonial secretary.

The harbour has graving docks, floating docks, and patent slips, with extensive loading, unloading, and coaling plant, and facilities for storing and loading grain in bulk. The wharves were in private hands until 1901, when the Harbour Trust was formed. The two halves of the arch of the great bridge over the harbour, begun in 1925, were closed in 1930. The bridge has a main span of 1,650 ft. and an overall length of 3,770 ft., and provides for four electric rly. lines, a roadway sufficient for six lines of traffic, and two footways.

The city has its main streets laid out to the cardinal points of the compass. With its suburbs it abounds in easily quarried sandstone, and its modern buildings invite comparison with any in Europe. The university, founded in 1850, is in 15th century Gothic style, and is surrounded by a park. Other buildings include the Anglican cathedral of S. Andrew, the R.C. cathedral, the Jewish synagogue, town hall, Government House, and the Commonwealth Bank of Australia. There are many parks, squares, and public gardens. The Zoological Gardens are in Taronga Park.

There are fine surfing beaches within easy reach of the city. Sydney is the seat of Anglican and R.C. archbishops. It has many first-class newspapers, including *The Sydney Bulletin*. Pop. 1,127,470. See illus. below.

SYDNEY. City and port of Cape Breton Island, Nova Scotia. Its importance is due to its fine harbour and to the coal mines in the vicinity. It is 277 m. from Halifax. The chief industries are connected with the iron and steel trades. Pop. 22,545.

SYDNEY, NORTH. Port of Nova Scotia, on Cape Breton Island. It is 18 m. N.W. of Sydney. It has tanneries, boot and shoe factories, and coal mines, and exports coal and iron ore. Pop. 6,585.

North Sydney, a suburb of Sydney, N.S.W., stands on the N. side of the Parramatta.

SYDNEY MINES. Town of Cape Breton Island, Nova Scotia. On the N. side of Sydney Harbour, 3 m. from N. Sydney, it is on the Cape Breton coalfield, and its industries are associated therewith. Pop. 8,327.

Sword. 1. Left to right, English, c. 1300; German, c. 1200; Scandinavian, c. 900. 2. State sword of Edward V. 3. Spanish rapier, 1650. 4. Sword presented by the City of London to Earl Beatty, 1919. 1 and 3, Wallace Collection; 2, British Museum.

swinging space for its use. See Armour; Broadsword; Claymore; Regalia; Sabre.

SWORD DANCE. Dance in which use is made of a sword or swords. Such dances are known in many parts of the world. In the Scottish dance, two swords are laid cross-wise on the ground, the dancer performing his steps between the blades. See Morris Dance.

SWORD BEAN (*Canavalia ensiformis*). Climbing herb of the order Leguminosae, native of India, Africa, and tropical America. Its leaves are divided into three large oval leaflets, and the purple, pea-like flowers are borne in long sprays. They are succeeded by scimitar-shaped pods a foot long.

SWORD FISH (*Xiphiidae*). Family of fishes. It is distinguished by having the upper jaw greatly prolonged to form a sword-like weapon. They range in length from 4 to 15 ft., and the sword is sometimes more than 3 ft. long. The common sword-fish (*Xiphias*

Sword-fish, *Xiphiidae*, showing the strong, sword-like elongation of the upper jaw.

gladius) is found on both shores of the Atlantic, and occasionally in the British seas.

SWORDS. Town of co. Dublin, Irish Free State. It is 8 m. from Dublin, on the G.N. of Ireland Rly. There are remains of an abbey and a castle, as well as a round tower. Pop. 839. See Round Tower.

SYBARIS. Greek town in Lucania, S. Italy, on the W. side of the gulf of Tarentum. Its inhabitants were so notorious for their love of luxury that the term Sybarite became synonymous with voluptuary. In 501 B.C. Sybaris was completely destroyed.

SYCAMORE (*Acer pseudoplatanus*). Tree of the order Aceraceae. A native of Europe and W. Asia, it was introduced into Britain about 1551. It is a hardy, quick-growing tree, flourishing in exposed situations, and reaching

Baron Sydenham, British soldier. Russell.

Thomas Sydenham, English physician.

Sydney. The City Hall. Above, architect's drawing of Sydney Bridge, which crosses the harbour in a single span. It has a 57-ft. roadway, two footways, and four lines of railway. See above.

SYENITE. Igneous rock of granite-like texture, consisting chiefly of orthoclase feldspar and mica, hornblende, and augite. So called from Syene in Egypt, syenite is found in various parts of Europe, N. America, Asia, etc.

SYKES, SIR FREDERICK HUGH (b. 1877). British air administrator. Born July 23, 1877, he entered the army in 1901. Qualifying as a pilot in 1911, he was then appointed commander R.F.C., military wing, which he raised. During the Great War he served with it in

France, 1914-15, and commanded the R.N.A.S. in the E. Mediterranean, 1915-16. Controller-general of civil aviation, 1919-22, he was

Sir Frederick Sykes,
British Air administrator
Russell

chief of the air section at the Paris peace conference in 1919. He was made K.C.B. and G.B.E. in 1919, and in 1922 was returned as M.P. for the Hallam div. of Sheffield. In 1928 he resigned his seat on being made governor of Bombay. He published *Aviation in Peace and War*, 1922.

SYKES, SIR MARK (1879-1919). British soldier

and traveller. Born March 16, 1879, son of Sir Tatton Sykes, 5th baronet, whom he succeeded in 1913. He served in the S. African War, 1899-1902, and in 1905-7 was hon. attaché at the British embassy, Constantinople, during which period he journeyed in Asiatic Turkey. In the Great War he raised a battalion of the Yorkshire regt., and acted as special emissary to Petrograd and the Caucasus, and later to Mesopotamia. M.P. for Central Hull, 1911-19, he took an active interest in many public questions, and was an enthusiastic supporter of Zionism. He died Feb. 16, 1919.

His grandfather, Sir Tatton Sykes (1772-1863), 4th baronet, was noted as an owner of racehorses, a breeder of horses and sheep, and a master of foxhounds.

SYKES, SIR PERCY MOLESWORTH (b. 1867). British administrator. Born Feb. 28, 1867, and educated at Rugby and Sandhurst, he joined the 10th Lancers in 1888. He travelled extensively in Persia and Baluchistan, and took part in the South African War. After service in the Great War, 1914-15, he was appointed consul-general in Chinese Turkistan in 1915, and in 1916 was sent to Persia to protect British interests, and there he remained until 1920.

Sir Percy Sykes,
British soldier
Lafayette

SYLLOGISM (Gr. *syn*, together; *logizesthai*, to reckon). Typical form of deductive reasoning, in which certain propositions having been laid down, something different from them follows as a necessary consequence: All men are mortal; Socrates is a man; therefore, Socrates is mortal. Every syllogism contains two premises and a conclusion; the major term is the predicate, the minor the subject, of the conclusion. There are four modes: A (universal affirmative; all men are mortal); E (universal negative; no men are immortal); I (particular affirmative; some men are clever); O (particular negative; some men are not clever). See *Logic*.

SYLPH (Fr. *sylphe*, from Gr. *silpē*, a kind of beetle). Fairy-like being holding an intermediate place between the material and the immaterial and inhabiting the air, according to the mythology of the Rosicrucians (q.v.).

SYMBIOSIS (Gr. *syn*, together; *bios*, life). In biology, term for a kind of partnership between living organisms of unrelated species: associated existence for purposes of nutrition. Plants which live in this manner are dependent in various ways one upon another. Symbiosis is best seen in the *liebens*, which are composite plants consisting of algae and fungi.

SYMBOLISM (Gr. *symbolon*, a token). Conventional representation of an idea, person, or thing by something else which recalls it by some analogy or association. It is an essential element in primitive, hieratic, and heraldic art. Early Christian

symbolism, of which such examples as the lamb, dolphin, fish, dove, and palm branch are common in the catacombs, was largely derived from Jewish and pagan sources.

Symbolism was the term applied to a school of French poets, influential in the latter years of the 19th century, who used symbolic methods of expression.

SYMONDS, JOHN ADDINGTON (1840-93). British man of letters. Born at Bristol, Oct. 5, 1840, he was educated at Harrow and Balliol College, Oxford, where he took the Newdigate prize and an open fellowship at Magdalen. Severe study led to a breakdown in health, and the last 20 years of his life were largely spent at Davos Platz, Switzerland. He died April 9, 1893.

Symonds's first book was *An Introduction to the Study of Dante*, 1872. His greatest work, *The Renaissance in Italy*, took him 11 years to write, 1875-86. His most characteristic effort was the sonnet sequence, *Animi Figura*, 1882. His other books include studies of the Greek poets, *Lives of Shelley, Sidney, Ben Jonson, and Michelangelo*, a volume on *Shakespeare's Predecessors in the English Drama*, and English versions of *Cellini's Autobiography* and *Carlo Gozzi's Memoirs*.

SYMOND'S YAT. Beauty spot on the Wye in Herefordshire. The Yat (gate) is an opening, 600 yards across, between two hills at the neck of a meander of the river.

SYMPHONY (Gr. *symphonia*, a sounding together). Musical composition, essentially a sonata (q.v.), for orchestra. Developed from the Italian operatic overture, a definite form was fixed by Haydn, to whom justly belongs the title of Father of the Symphony. He produced about a hundred, while Mozart wrote 49. Beethoven composed only nine, but into them he infused a depth of emotion and expression unknown to his predecessors, and unsurpassed by any of his successors. Other eminent composers of symphonies are Schubert, Schumann, Mendelssohn, Spohr, Raff, Rubinstein, Brahms, Mahler, Elgar and Tchaikovsky.

SYNAGOGUE (Gr. *synagōgē*, a gathering, from *synagēin*, to bring together). In the history of Judaism, an assembly of Jews for worship and religious instruction, and hence a building specially set apart for that purpose. As a focus of national life the institution of the synagogue has been dated from the great exile, when the Jews, deprived of the services of the Temple, gathered together to worship Jehovah. In time the synagogue was used, not only as a place of worship, but also as a court of law and as a school. The worship, which included prayers and the reading and exposition of the law and the Prophets, was conducted by the *chazan* or reader. At the east end was the ark, containing the scrolls of the law. See *Jews*; *Temple*.

SYNCLINE. In geology, the dipping of the strata inwards towards the axis of an earth fold, producing a trough-shaped or basin-like arrangement of the strata. Synclines form the troughs and antilines the arches of a series of earth folds. See *Anticline*, and *illus.* p. 99.

SYNDICALISM. Extreme development of trade unionism. The syndicalist is not content, like the earlier trade unionist, to strive for better conditions of labour, higher wages, and shorter hours; he believes in the complete removal of the capitalist class and the substitution of the trade union as the owner and director of each particular industry. Hence he is also in opposition to the Socialist, who believes in the collective ownership of the sources of industry and of the

means of distribution and exchange. The syndicalist movement had its origin in France, where it has been clearly and carefully expounded in the writings of G. Sorel. See *Socialism*; *Trade Union*.

SYNDICATE. Term literally meaning a body of syndies, but now generally applied to a body of persons banded together to carry out some business enterprise, a temporary organization preparatory to a more permanent one. In its more correct signification of a body of syndies, that is, delegates who are appointed for certain specific purposes, the word is used in the university of Cambridge.

SYNGE, JOHN MILLINGTON (1871-1909). Irish dramatist. Born at Rathfarnham, near Dublin, April 16, 1871, he graduated at Trinity College, Dublin, and later went to the Aran Isles and Galway Bay to study the life of the peasants. He combined extreme realism with immense imagination, and achieved great success as a dramatist.

The following are the best known of his plays: *The Shadow of the Glen*, 1903; *Riders to the Sea*, 1904; *The Well of the Saints*, 1905; *The Tinker's Wedding*, 1907; *The Playboy of the Western World*, 1907; and *Deirdre of the Sorrows*, 1910. He died March 24, 1909. Pron. Sing.

John M. Synge,
Irish dramatist

SYNOD (Gr. *synodos*, assembly). Eccles. term for a meeting of churchmen for deliberation on church affairs. In the early Church a universal synod, to which the bishops of the whole Church were summoned, was usually known as a general or oecumenical council;

a provincial synod was an assembly of the clergy of one province or patriarchate. The convocation of Canterbury is an existing example of the provincial synod. Among Presbyterians the synod is a court between the General Assembly and the presbyteries.

Symond's Yat. Bend of the Wye as it passes the Yat (right)

SYON HOUSE. Seat of the duke of Northumberland. In the co. of Middlesex, between Brentford and Isleworth, it is a large quadrangular building of three storeys, surmounted since 1874 by the stone lion which once stood on old Northumberland House, near Trafalgar Square. It occupies the site of a monastery founded in 1415, and converted by the protector Somerset into a palace. The existing structure was remodelled by Robert Adam about 1760.

SYPHILIS. Infectious disease caused by a micro-organism, the *Treponema pallidum* or *Spirochaeta pallida*. It is of world-wide occurrence, and is responsible for widespread sickness, misery, and mortality. In the great majority of instances infection is conveyed during the sexual act. The period from the date of infection to the commencement of symptoms is from three to four weeks. The first sign of the disease is a small red pimple which gradually enlarges, becomes ulcerated, and develops into the hard chancre typical of the disease.

A sufferer from active syphilis should lead a carefully regulated life. Prolonged administration of mercury is still essential. Organic

preparations of arsenic are also used. Treatment should last for at least two years, and a patient should not marry for two years after the termination of treatment, and only then if periodic tests have been negative. Free treatment, under the strictest secrecy, is provided in all populous centres.

Syracuse, Sicily. Remains of the Greek theatre, hewn in the living rock

SYRACUSE. Seaport of Sicily, capital of the prov. of Syracuse. It is 54 m. by rly. and 32 m. direct S. of Catania, which has superseded it as a port. The cathedral embodies the remains of a Doric temple; the museum contains a collection of pre-Christian antiquities. Founded in 734 B.C., Syracuse became the chief Greek colony in Sicily. Dionysius, tyrant after 405 B.C., extended the authority of the city over E. Sicily and S. Italy. After a siege, 214-212 B.C., the city was captured by the Romans, and sacked. Its ruins include Greek fortifications and a theatre, Doric temples, a Roman amphitheatre, Roman houses, and Christian catacombs. Pop. 56,000.

SYRACUSE. City of New York, U.S.A. It stands at the head of Onondaga Lake, 150 m. W. of Albany, on the New York State barge canal, and the Erie and Oswego canals. It is the seat of Syracuse University. Manufactures include motor vehicles, typewriters, agricultural implements, foundry and machine-shop products, clothing, chemicals, boots and shoes, furniture, and cement. Pop. 182,003.

SYRIA. French mandated territory of W. Asia. To the ancients Syria was the coastland of the E. Mediterranean between the Taurus and Egypt. Syria under the mandate is bounded N. by Turkey, S. by Palestine and Transjordan, E. by Iraq, W. by the Mediterranean. Originally comprising five territories, it now consists of the republic of Syria, together with the states of the Alawis (Alawites) and Jebel ed Druz (Druze), and the republic of the Lebanon. Important cities include Damascus, Aleppo, Beirut, Homs, Hama, Tripoli, Antioch, Latakia and Alexandretta. The area is estimated at 60,000 sq. m. Pop. 2,831,622.

About 2000 B.C. Syria formed part of Aram (q.v.). It was subject to Egypt from about 1530 B.C. till about 1250, when the growing power of Assyria began to make itself felt. In the 8th century Assyria subjugated the whole land, which, however, passed to Babylon in the 7th. Persia overran it, 538 B.C., and held it till Alexander the Great took it 200 years later. In 64 B.C. it became a Roman prov., and the country remained under Rome and then under the Byzantine Empire till A.D. 634. Syria next passed to the Saracens. In the second half of the 11th century it was occupied by the Seljuks. In 1516 it was occupied by the Ottoman Turks, who retained it till 1831-33, when it was conquered by Mehmet Ali, who restored it to the Turks in 1840. The Turks held it till they were driven out by the British in 1918.

Ever since France had intervened in the Lebanon to stop Turkish atrocities, she had maintained political claims to Syria, and her

special position was recognized by an Anglo-French agreement in 1916. Accordingly, after the Great War the British withdrew from the country, and the Supreme Council of the Allies gave the mandate for Syria to France. In 1928 the Constituent Assembly drew up a new constitution, but this did not receive the approval of the French, who in 1929 dismissed the assembly. See Damascus; Druses; Palestine; Turkey.

SYRINGA. Genus of shrubs of the order Oleaceae, of which the best known is lilac. The mock orange usually known as the syringa belongs to the order Saxifragaceae. A native of the Himalayas, it is a hardy shrub bearing cymes of sweet-scented creamy-white flowers, frequently used at weddings as a substitute for orange blossom. See Lilac.

SZEGED. City of Hungary. It stands on the right bank of the Theiss (Tisa, Tisza), 118 m. by rly. S.E. of Budapest. The town hall, Gothic cathedral and museum are buildings of importance. The Franciscan monastery has a fine library and a museum of antiquities. There is a university. Szeged is the chief commercial centre of the Alföld. Pop. 125,039. See Alföld.

T. Twentieth letter of the English and Latin alphabets. It is a hard dental or teeth-sound, to which the soft d corresponds. Its normal sound is that of t in tent. Before ia, io it takes the sound of sh, as in partial, cautious, unless s precedes, as in digestion, question, although here some prefer to pronounce queshun. T is frequently silent between two consonants, as in castle and listen. In combination with h it forms what is really a separate letter, with two distinct sounds, one hard, the other soft, e.g. think, and smooth. In most words borrowed from French, e.g. Thames, Thomas, thyme, it is pronounced as a simple t. See Alphabet; Phonetics.

TAAL (Dutch, language). Dialect of Dutch spoken in South Africa. It originated in the colloquial North-Dutch of the 17th century, but early underwent great changes. It is remarkable for the almost complete loss of inflexional endings, the absence of gender, laxity of syntax, and its generally analytic character. It has been influenced by English, French, etc.

TABARD. Official cloak worn by heralds, and also by trumpeters and drummers of the British household cavalry when in full uniform. In the heralds' tabard the back and front parts and shoulder wings are emblazoned in the proper tinctures with the royal arms:

Syria. Map of the French mandatory state of W. Asia

in that of the trumpeters and drummers they are embroidered with the royal badge and cipher. See Herald.

The Tabard Inn was an ancient hostelry in Southwark, near the S. end of London Bridge. It is famous as the inn from which Chaucers' Canterbury Pilgrims set out on their journey to the shrine of S. Thomas.

Syringa, the sweet scented Mock Orange

sides boarded, and the E. side hung with curtains, while the top was covered with sheets of various materials. The larger part of the tent, called the Holy Place, contained the golden altar of incense, table of shewbread, and golden candlestick. The inner part, or Holy of Holies, screened by a veil, contained the ark (q.v.), and was only entered by the high priest, on the day of atonement.

The Feast of Tabernacles was a Hebrew festival celebrating the completion of the harvest. It was kept for seven days in

October, during which worshippers lived in booths of green boughs, perhaps in allusion to those used by labourers in vineyards.

TABLE (Lat. tabula). Smooth, flat, elevated surface used mainly as an article of furniture. The altar, or communion table, is

sometimes known as the Lord's Table. Table is also used for a hard surface on which something is written or engraved, for instance the Ten Commandments or the Twelve Tables.

Tables of the Roman patricians were made of precious woods, finely inlaid, or of bronze. English tables were quite narrow at first. In the Jacobean period, tables were of solid oak, with moulded edges and heavily carved legs. Under Charles I wings were added, originating the gate-legged type. See Furniture.

TABLE BAY. Bay of the Cape Peninsula, S. Africa, on the N.W. side. It was first visited by Antonio de Saldanha in 1503. From 1620 onwards Table Bay became a port of call for ships proceeding E. On the S. side of the bay is Cape Town, and farther S. lies Table Mountain, 3,582 ft. high. There is another Table Mountain in Natal.

Table 1. Carved oak refectory table. 2. Oak octagonal gate-leg, 17th century

1. Courtesy of Gill & Reigate; 2. Victoria & Albert Museum, S. Kensington

TABLE TENNIS OR PING PONG. Indoor form of lawn tennis. About 1900 the game was introduced into England, and the Ping-Pong Association and the Table Tennis Association were formed. It was first played with a battledore, but later a wooden bat was used. Scoring was as in lawn tennis.

In the game as played to-day each player serves five times in turn, and the game is 21 up. The server must make the ball hit the table on his own side of the net, whence it must bounce into the opponent's court. Volleying is not allowed either in the return of service or rally—otherwise the rally is played just as in lawn tennis. The regulation size of the table is 9 ft. long and 5 ft. wide. The net, which divides it into two courts, must be attached at each end to a post 67 ins. in height. The ball is of celluloid and between 4½ and 4¾ ins. in circumference.

TABOO. Polynesian word denoting persons, places, things, or acts which are to be shunned. In modern anthropology it embraces all prohibitions enforced by magico-religious sanctions, fortified by fear of ill-fuck, disease, or death. The violator of a taboo is himself taboo, lest his transgression should become contagious. The principle is encountered in Melanesia, Siberia, Madagascar, and W. Africa. Linked in early Semitic society with religious sanctions, it became the basis of the Mosaic sanitary law.

TABOR. Mountain of Galilee, the traditional scene of the Transfiguration. It is about 6 m. E. of Nazareth, and is known as Jebel at Tur.

TABRIZ. City of Persia. Lying about 350 m. N.W. of Teheran, is a trade centre. During the Persian revolution of 1909 the royalists besieged it, but it was relieved by a Russian force, who occupied the city until the beginning of the Caucasus campaign in the Great War. The Turks seized the city in Jan., 1915, but evacuated it at the close of the month. Abandoned by the Russians early in 1918, it was again seized by the Turks, who held it until Oct., 1918. Pop. 180,000.

TACHOMETER. Instrument for registering small variations in the velocities of machines. One such instrument consists of a mercury tube and bulb which is whirled round by the machine. Centrifugal action causes the recession of the mercury in the tube, and the degree of its descent (or ascent) measures variations in the running speed. For measuring the angular speed of a revolving shaft a device similar to a small Watt governor is used. The instrument known as a speedometer (q.v.) is a variety of tachometer.

TACITUS, MARCUS CLAUDIUS. Roman emperor, Sept., 275–April, 276. He was consul in 273, and at the age of 70 was chosen emperor by the senate, after the murder of Aurelian. During his short reign he endeavoured to restore the power of the senate, and to check extravagance by means of sumptuary laws. He fell victim to a conspiracy, and was succeeded by Probus.

TACITUS, CORNELIUS (c. A.D. 55–c. 119). Roman historian. His first work was a dialogue on oratory. When he was about 40 appeared the Agricola and the Germania, the latter valuable as giving the first detailed account of the manners and customs of the people who inhabited central Europe in the beginning of the Christian era. But the great work of Tacitus was his history of the Roman Empire from the accession of Tiberius. Of the 30 books only about half have been preserved, but sufficient to give the author's views concerning the emperors Tiberius, Claudius, Nero, and the events of 69 A.D., when there were three emperors in one year.

To Tacitus more than any other Roman writer is due the long-standing belief that the early Roman empire was a mass of iniquity and corruption, both public and private.

TACNA. Province of Peru, in the arid region of the S. Its area is 5,909 sq. m.

In 1883 Tacna and the neighbouring province of Arica came into dispute between Chile and Peru. In that year they were given to Chile for ten years, at the end of which a plebiscite was to decide their fate. This did not take place, and Chile remained in possession. In 1927 the U.S.A. government proposed that they should be given to Bolivia, in return for certain payments, but Peru objected. In 1929 the dispute was settled. Tacna was given to Peru, and Arica to Chile, Chile agreeing to pay £1,200,000 to Peru.

TACOMA. City of Washington state, U.S.A. At the head of Commencement Bay, a branch of Puget Sound, 27 m. S. of Seattle, it is a busy Pacific port, and carries on a flourishing wholesale trade. Pop. 104,455.

Tacoma is a name for a quiescent volcano of the Cascade Range, Washington, better known as Mt. Rainier. It is 14,363 ft. high.

TACTICS. Art of conducting battles after the strategist has brought the combatants within striking distance of each other.

The objects in naval tactics have always been to sink or disable the enemy's ships, and to kill the crews or force them to surrender. In olden days the issue was decided at close quarters, but later most battles were decided by the gun, and the object of the tactician was to manoeuvre so as to concentrate the fire from a large number of ships upon a smaller number. As gun ranges have increased, relative visibility from different directions has required more consideration. Skill in gunnery, in range-finding, and in observing the fall of projectiles are most potent factors in modern naval actions. Aircraft-carrying vessels have been introduced with a view to air attack upon capital ships by bomb and torpedo, thus adding an additional factor to the problem confronting the naval tactician.

In military tactics changes in weapons have brought corresponding changes in the tactical handling of armies and of their component parts. The result of a modern battle is determined mainly by fire action. Infantry, which can combine movement with fire action, and can also engage in hand-to-hand combat, is still considered the decisive arm, and the action of the other arms is subsidiary. See Artillery; Cavalry; Infantry; Strategy; Tank.

TADCASTER. Market town of Yorkshire (W.R.). It stands on both sides of the Wharfe, 9 m. from York, on the L.N.E. Rly. For centuries the town has been famous for its beer; another industry is the quarrying of limestone. About 2 m. away is the battlefield of Towton, scene of a Lancastrian defeat, 1461. Market day, Mon. Pop. 3,504.

Tadmor. Original name of the old city of Syria whose Greek name was Palmyra (q.v.).

TAL (Malay tail, a weight). Name for the Chinese liang or silver pound weight. It is the uncoined monetary unit of China, equalling by treaty 1½ ounce av., and fluctuating in value with that of silver. It is divided for currency purposes into ten mace, 10 candaren, and 1,000 li, or 1,220 copper cash.

TAFF. River of S. Wales. Rising in the Brecknock Beacons, it flows 40 m. S.S.E. through Glamorganshire, passing Merthyr Tydfil, Pontypridd, and Llandaff, and entering the Bristol Channel at Cardiff. It traverses a coal and iron dist. and its course is followed by the Taff Vale Rly., now part of the G.W. system. This line, opened in 1840, served Merthyr, Cardiff, and other places in the great industrial area around them, and owned docks at Cardiff and Penarth. Its headquarters and works were at Cardiff.

There is another river of S. Wales called Taff or Taf. Rising in N.E. Pembrokeshire, it flows 25 m. S. and S.E. to Carmarthen Bay.

TAFT, WILLIAM HOWARD (1857–1930). American statesman. Born at Cincinnati, Ohio, Sept. 15, 1857, he practised law in his native state. Judge of the superior court of Ohio.

William H. Taft, American statesman

1887–90, he then became U.S. solicitor-general. He was a judge of appeal, 1892–1900, and civil governor of the Philippine Islands, 1901–4. On his return Taft became secretary of war in Roosevelt's cabinet. Elected president of the U.S.A., 1908, his term of office was unmarked by any striking events. On his retirement Taft became professor of law at Yale University. In July, 1921, he was appointed chief justice of the Supreme Court of the U.S.A. He died March 8, 1930.

TAGANROG. Town of the Socialist Soviet Republic. It is situated on the N.E. shore of the sea of Azov, 20 m. from the mouth of the Don. Its importance has declined owing to the silting up of the harbour and the competition of Rostov. The chief exports are grain, butter, tallow, and caviare. Pop. 83,465.

TAGG'S ISLAND. Islet of the Thames. It lies about half-way between Molesey lock and Hampton ferry, opposite the E. end of Hurst Park racecourse. In 1928 it was leased for a pleasure resort.

TAGLIAMENTO. River at N.E. Italy. It rises in the Carnic Alps and flows S. across Udine to the gulf of Venice, after a course of 100 m. Heavy fighting took place along the line of the Tagliamento in the Great War. After the Italian reverse at Caporetto, the armies retreated to the river, where, from Oct. 28–Nov. 5, 1917, they maintained a stubborn resistance. See Caporetto; Italy; Piave. Pron. Tahl-yamento.

TAGLIONI, MARIA (1804–84). Italian dancer. Born at Stockholm, April 23, 1804, daughter of a ballet master, she made her first appearance in Vienna at the age of 18. In 1827 she appeared in Paris, and immediately attained an enormous popularity, for the next twenty years being the most famous ballet dancer in Europe. Her greatest success was in her father's ballet La Sylphide. She died April, 23, 1884. Pron. Tahl-yohne.

Maria Taglioni, Italian dancer

TAGORE, SIR RABINDRANATH (b. 1861). Bengali poet. Of a family distinguished in religion, letters, and art, he was born in Calcutta May 6, 1861. In 1901 he founded a reformed school at Bolpur, Bengal, which he made his life-work. He was awarded the Nobel prize for literature in 1913, being knighted in 1915. He wrote many poems, dramas, and novels in Bengali and English, including Gitanjali (Song Offerings), 1913; The Crescent Moon, 1913; The King of the Dark Chamber, 1914; The Post Office, 1914; Home and the World, 1919; Fireflies, and Letters to a Friend, 1928.

Rabindranath Tagore, Bengali man of letters
Bourne & Shepherd

He also wrote My Reminiscences, 1917; Nationalism, 1917; and Greater India, 1923.

TAGUS (Span. Tajo; Port. Tejo). River of the Iberian peninsula. It rises in Spain in the Sierra de Albaracin, curves to the N.W., then flows W.S.W. past Toledo and Alcántara,

forms for a few m. the boundary of Spain, and finally crosses Portugal to its estuary near Lisbon after a course of 565 m., of which 192 m. are in Portugal. It is tidal, and navigable by large vessels to Santarem.

TAHITI OR OTANEITE. Most important of the Society Islands. It is mountainous with a low fertile coastland. Papeete is the chief town. It was shelled and damaged by German cruisers in Sept., 1914. The area is about 600 sq. m. Pop. 8,585. See Society Islands.

TAILOR BIRD (*Orthotomus sutorius*). Species of Asiatic bird, belonging to the Sylviidae. It derives its name from its method of nest building. Two large leaves are drawn together, and sown at the edges with cocoon silk or vegetable fibres; and inside the pocket thus formed the birds construct a nest of grass and hair. The birds are common in India and China, are 6 ins. long, and have greenish plumage.

TAILTEANN GAMES. Irish national games. Held in the distant past, they were revived in 1924 and held again in Dublin in 1928. There are international and national sections and competitions, not only in athletic events, but in literary work, poetry, drama and prose; also in art, music and dancing.

TAIN. Burgh and seaport of Ross and Cromarty, Scotland. It stands near the south side of Dornoch Firth, 44 m. from Inverness, on the L.M.S. Rly. The church of S. Duthus was founded in the 15th century. The industries include distilling. Pop. 1,561.

TAINAN. Town of Formosa. It stands near the S.W. coast, a few miles S.E. of Anping, its port, and is connected by rly. with the capital, Taihoku, in the N. Pop. 87,930.

TAINE, HIPOLYTE ADOLPHE (1828-93). French historian, critic, and academician. Born at Vouziers, Ardennes, April 21, 1828, for some years his religious opinions dobarred him from an academic career, and he occupied himself with independent work, e.g. *Les Philosophes du XIXe Siecle*, 1856, and *Histoire de la Littérature Anglaise*, 1863-64; but in 1864 he was appointed professor of aesthetics in the École des Beaux Arts, four volumes on *La Philosophie de l'Art* being a direct result of his academic lectures. His treatise *De l'Intelligence* made a noteworthy contribution to the scientific study of mind. Taine's last twenty years were devoted mainly to a series of works on *Les Origines de la France Contemporaine*, which by their learning, impartiality, and energy of stylo give him a high place among historians. He became a member of the Academy in 1878, and died March 5, 1893.

TAIT, ARCHIBALD CAMPBELL (1811-82). British prelate. Born in Edinburgh, Dec. 22, 1811, he became fellow and tutor at Balliol College, Oxford, and was ordained in the Church of England in 1836. In 1842 Tait succeeded Arnold as headmaster of Rugby; in 1849 he was made dean of Carlisle, and in 1856 bishop of London. In 1868 he was appointed archbishop of Canterbury, and he died Dec. 3, 1882.

TAJIKISTAN. Autonomous republic of Soviet Central Asia. It lies N. of

the river Oxus, and is bounded N. and W. by the Kirghiz and Uzbekistan republics, S. by Afghanistan, and E. by Sin-Kiang. It was formed from the regions of Bokhara and Turkistan. Stalinabad (Dushambe) is the capital Area 56,608 sq. m. Pop. 827,400. See Russia.

TAJ MAHAL. Indo-Moslem mausoleum near Agra. It was completed in 1650 by the Mogul emperor, Shah Jehan, in memory of his favourite wife, the sultana Nour Mahal. The building is mainly constructed of white marble, and occupied 20,000 workmen for over 20 years. See illus. p. 33.

TAKIN (*Budorcas taxicolor*). Large ruminant mammal, occupying a rather doubtful position between the goats and the antelopes. It seems to occur only in the N. of Assam, in Bhutan, and in N.W. China. It is a heavy and bulky animal, and is found in small herds in the mountains.

TAKORADI. Harbour of the Gold Coast, near Sekondi. In 1921, to provide an outlet for the produce of the colony, it was decided to build a harbour at Takoradi. In March, 1928, the harbour was opened. Protected by breakwaters, it has extensive wharves and other equipment.

TAKU. Village situated at the mouth of the Haiho (Peiho) in Chih-li prov., China. Its forts formerly constituted a first line of defence for Tientsin, 47 m. up the river, and Peking. They were taken by the British and French forces in 1858, in 1860, and during the Boxer rising in 1900, when the forts were demolished. See Boxers; China; Peking.

TALAVERA. Town of Spain. The ancient Caesaro-briga, it stands on the Tagus, 83 m. by rly. S.W. of Madrid. Parts of the ancient walls, a Roman gateway, a 10th century Moorish tower, and a Gothic church are of historical interest. A 15th century bridge of 35 arches spans the river. Pop. 12,000.

The battle of Talavera was fought July 27-28, 1809, in the Peninsular War. After a stubborn fight the French, with losses of over 7,000, retired to Madrid, but the British were unable to pursue them.

TALBOT. Name of an ancient English family. The family proves descent from Richard Talbot, lord of Linton, Herefordshire, who was appointed custodian of Ludlow Castle by Richard I. The manor of Linton was confirmed by Edward III to Gilbert, who sat as Baron Talbot in the Parliament of 1331. The head of the family under Henry V was Gilbert, a distinguished soldier, upon whose death the title descended to his brother John, first earl of Shrewsbury (q.v.), whose descendants have since retained it. Talbot is the name of a breed of dogs, something like the bloodhound of to-day. It is the badge of the Talbot family.

Talbot House. Soldiers' rest-house at Poperinghe in the Great War, more popularly known as *Toe H.* (q.v.).

TALC. In mineralogy, a magnesium silicate. A soft stone with a greasy feel, it is silvery white in appearance and easily cut. Yellow

and green varieties occur, the latter in Tirol. It is used, powdered, under the name of French or Spanish chalk by tailors. Talc is also a common name for Muscovite or common mica. See Soapstone; Steatite.

Takin. Ruminant animal, large and heavily built, found in herds in the Tibetan mountains

TALENT (Gr. *talanton*, weight, balance). Unit of weight and monetary unit of the ancient Greeks. There were two talents in general use, the Babylonian or Aeginetan, and the Attic or Euboic. The talent was 60 minae or 6,000 drachmae (roughly, £240). The Attic talent weighed about 57½ lb.

TALKING FILM. Name for a cinematograph film in which speech, music and other sounds are reproduced together with the moving pictures. See Cinematograph.

TALLBOYS. Double chest of drawers, placed one above the other, the upper usually being narrower and recessed. High-boys (Fr. *hautbois*) are much the same, but have taller top sections. Lowboys are small chests of drawers placed on tall legs, usually of the cabriole type.

Tallboys in walnut, Queen Anne period: height, 6 ft. 2 ins.; width, 3 ft. 3 ins. By courtesy of Gill & Raigate, Ltd., London

TALLEYRAND-PÉRIGORD, CHARLES MAURICE DE (1754-1838). French statesman. Born Feb 13, 1754, son of the Comte de Talleyrand-Périgord, he entered the Church, and in 1789 was made bishop of Autun, representing his diocese when the States-General assembled in that year. He acquired a position of distinction in the National Assembly, and took a leading part in attacking the privileges of the Church. He relinquished his orders in 1791, and in 1792 went to England on an unofficial political mission, the French monarchy not having as yet been formally ended. To the extremists, however, he was suspect, and did not return to France until the Terror was passed.

He became the foreign minister of the Directory in 1797 and, after the establishment of the Consulate, continued as foreign minister to Napoleon until the treaty of Tilsit, 1807, after which he retired with the title of prince of Benevento. In 1812 Talleyrand took the lead in the faction which worked against the emperor, and on his deposition in 1814 was rewarded by becoming foreign minister to Louis XVIII. At the

Tailor Bird of Eastern Asia

Hippolyte Taine, French historian. After Bonnat

Archibald Tait, British prelate

Congress of Vienna he secured to France recognition on an equal footing with the four Great Powers. He was counsellor to Louis Philippe in the July Revolution of 1830, and as ambassador he established friendly relations between Great Britain and the Orleans monarchy. He retired finally in 1834, and died May 17, 1838.

Tallinn. Alternative name for the capital of Estonia, also known as Reval (q.v.).

TALLIS, THOMAS (c. 1515-85). English composer. He was organist of Waltham Abbey until its dissolution in 1540, and was later a gentleman of the Chapel Royal and organist there with his pupil W. Byrd (q.v.). In 1575 they published their 34 motets, 16 of which were by Tallis. He wrote a large amount of church music. Tallis died Nov. 23, 1585.

TALLOW TREE (*Excoecaria sebifera*). Tree of the order Euphorbiaceae, native of China. It has alternate, oval leaves with a pair of prominent glands at the top of the leaf-stalk. The rather large capsules contain three seeds coated with a substance like tallow, used by the Chinese for candle-making.

TALLY (Fr. *tailleur*, to cut). Device formerly used for recording payments, consisting of a stick, which was marked with cross notches of various sizes and then split, each party to the transaction retaining a half. Names, dates, etc., were written on the stick. The accounts of the royal exchequer in England were kept by means of tallies until 1826, although account books were also used. In some rural districts, notably in the Kentish hop-fields, accounts are still kept with tallies. The name is given to a system of buying and selling goods in which payment is made by instalments.

TALMA, FRANÇOIS JOSEPH (1763-1826). French actor. Born in Paris, Jan. 15, 1763, he made his début in 1787 at the Comédie Française, where two years later he created a furore in Chénier's *Charles IX*. He achieved a series of successes which made him the greatest tragedian of his time. He died Oct. 19, 1826.

François Talma,
French actor
After J. P. Davis

TALMAGE, ALGERNON (b 1871). British artist. A son of Rev. J. M. Talmage, rector of Fifeild, Oxfordshire, he studied art and soon won medals at the Paris Salon. For a time he lived in Cornwall and was associated with the Newlyn School. In 1918 he was the official artist for Canada in France; he was elected A.R.A. in 1922 and R.A. in 1929.

TALMAGE, THOMAS DE WITT (1832-1902). American preacher. Born in New Jersey, Jan. 7, 1832, in 1856 he became minister of a Reformed Church in Belleville, N.J., removing in 1859 to Syracuse, and in 1869 to Brooklyn. From 1895-99 he was a minister at Washington. Talmage edited Frank Leslie's Sunday Magazine and The Christian Herald, and wrote a number of books. He died at Washington, April 12, 1902.

T. de Witt Talmage,
American preacher

TALMUD, THE Compilation which incorporates the labours of the Jewish schools during several centuries. Its basis is the Mishna (repetition), a work which gathered up for the most part the traditional legal discussions (called the Torah) of the scholars who lived between A.D. 70 and about A.D. 200. The discussions were committed to writing about A.D. 200.

There are two Talmuds, the Jerusalem Talmud or Talmud of Palestine, completed towards the end of the 4th century or during the 5th century, and the Babylonian Talmud, completed about A.D. 500.

TAMAR. River of England. Rising in the N. of Cornwall, and flowing S. by E., it forms for part of its length the boundary between Cornwall and Devonshire. It enters the English Channel after a course of 60 m., through Plymouth Sound by an estuary called the Hamoaze. See Saltash.

TAMARIND (*Tamarindus indica*). Tree of the order Leguminosae, a native of the tropics. It attains a height of 50 or 60 ft. and has long leaves. The flowers are succeeded by bean-like pods filled with acid pulp in which the hard seeds are embedded. The outer skin of these pods is removed before they are pre-

pared for the gentle laxative medicine. The wood is used for building and for charcoal, and the bark is administered in dysentery and as a tonic. A yellow dye is extracted from the leaves.

TAMARISK (*Tamarix*). Genus of shrubs and small trees of the order Tamaricaceae, natives of the shores of S.W. Europe, W. Asia, and India. One species, *T. gallica*, found wild upon the coasts of England, is an evergreen tree, 6 ft. to 20 ft. in height, with minute, scale-like foliage and dense spikes of white or rosy flowers in late summer. *T. mannifera* exudes manna (q.v.).

TAMATAVE. Chief port of Madagascar. On the E. coast, it is 229 m. by rly. from Antananarivo. It has an excellent harbour. Pop. 15,022.

TAME. River of England. It rises near Walsall, in Staffordshire, and flows 30 m. to join the Trent about 7 m. above Tamworth. Another Tame is a tributary of the Mersey.

TAMERLANE, TAMBURLAINE, OR TIMUR (1336-1405). Tartar conqueror. He was born of noble birth near Samarkand, and in 1353 began his military career by invading Khorassan. In 1369 he was crowned king of Samarkand, and began his famous series of conquests. His victorious armies reached the Caspian, subdued most of Persia, and routed the Golden Horde. In 1398 he invaded India and sacked Delhi. His victorious war against the Turks and Egyptians resulted in the capture of Damascus and Aleppo, and culminated in the defeat and capture of Bayazid I, 1402. Tamerlane then planned the invasion of China, but died in the midst of his preparations, Feb. 17, 1405.

TAMIL. Agglutinative speech of the Dravidian language-family, spoken in S. Madras, N. Ceylon, and by the Indo-China

Klings. The Tamil-speaking peoples are the most virile element in the S. Indian population. Tamil literature developed under the Jains during the 9th to 13th centuries A.D. Its masterpiece is generally acknowledged to be the Kurral, a didactic poem embodying Bhuddist philosophy, written by Tiruvalluvar.

TAMMANY HALL. Properly designating the building in which is housed a political organization in New York, the term has come to be applied to the organization itself. The genesis of the movement is to be found in the Society of S. Tammany, formed May 12, 1789,

by William Mooney. Concerned at the outset with social and benevolent objects, before long it assumed a political cast, and from 1800 onwards it has identified itself with the National Democratic party. The institution has also devoted much of its activities to municipal politics. A large part of the real power of Tammany is in the hands of its head for the time being, known as the boss. The first of these was William M. Tweed. In 1923 the Hall was sold to a gas company.

Tamarind. Spray of flowers and foliage

TAMMUZ OR THAMMUZ. Phœnician god of the sun. Half the year he spends with the goddess of the underworld, and half with Astarte, goddess of the heavens. He is usually regarded as being equivalent to the Greek Adonis.

TAMWORTH. Borough and market town of Staffordshire. It stands on the Tame, 13 m. from Birmingham, on the L.M.S. Rly. The church of S. Editha, late Decorated, has windows by Ford Madox Brown. The castle, a 17th century building, with remains of a much older one, is public property, being used as a museum. The industries include the manufacture of paper, clothing, leather, and beer. Sir Robert Peel, to whom there is a statue, was at one time M.P. In 1913 the thousandth anniversary of the building of a fort here by Ethelfleda was celebrated. Market day, Sat. Pop. 8,032.

There is a town called Tamworth in New South Wales, 281 m. by rly. from Sydney. It is in a pastoral and farming centre which produces gold and diamonds. Pop. 7,560

TANAGER. Large family of finch-like birds, inhabiting tropical America. There are many genera and some four hundred species, and they are remarkable for their gaudy plumage. See illus. below.

TANAGRA. Town of ancient Greece, in Bocotia, near the frontier of Attica. Excavations have yielded terra-cotta figurines, which throw light on ancient Greek costumes.

TANDERAGEE. Urban dist. of co. Armagh, Northern Ireland. It stands on the Casher, 5 m. from Portadown, on the G.N. of I. Rly. The castle is a seat of the duke of Manchester. Lincen is manufactured. Pop. 1,400.

TANDY, JAMES NAPPER (1740-1803). Irish patriot. Son of a small tradesman in Dublin,

Tanager. The blue species, *Tanagra episcopus*. See above

Tamarisk. Feathery leaves and dense spike of blossoms

he was a founder and first secretary of the United Irishmen, 1791. An ardent sympathiser with the French Revolution, he was forced to take refuge in America, remaining there until 1798, when he joined Wolfe Tone in Paris. Tandy made an abortive landing in Aran, Sept. 16, 1798. Arrested in Hamburg and handed over to the British Government, he was found guilty of treason but was reprieved, and died in France, Aug. 24, 1803.

J. Napper Tandy,
Irish patriot

TANFIELD. Urban dist. of Durham. It is 7 m. from Durham and is a coal mining centre. Bricks and tiles are manufactured. Its station is Shield Row on the L.N.E. Rly. Pop. 10,393.

TANGA. Port of Tanganyika Territory. It lies opposite the island of Pemba, and is the coastal terminus of the Northern Rly. to Moshi and Arusha. There are rly. workshops. Most of the livestock sent to Zanzibar is shipped from Tanga. Pop. about 11,000.

TANGANYIKA. Lake of Central Africa. It lies between Tanganyika Territory and the Belgian Congo, and extends some 450 m. from N. to S. into Northern Rhodesia. Its average breadth is 40 to 50 m., and it is 2,550 ft. above sea level. The waters are over 1,000 ft. deep. The best harbours are on the E. littoral, and include Kigoma, Ujiji, Karema, Kirando, Kasanga (formerly Bismarckburg), and Kitnla. Albertville, the principal harbour on the Belgian side, is the terminus of the rly. to Kabalo.

TANGANYIKA TERRITORY. Area in E. Central Africa administered by Britain under mandate of the League of Nations. With the dist. of Ruanda and Urundi in the N.W., now part of Belgian Congo, and the so-called Kionga Triangle S. of the Rovuma river, now in Mozambique (Portuguese E. Africa), the territory comprised German E. Africa. Dar-es-Salaam, the capital, Tanga, and Bagamoyo are some of the seaports; Kigoma and Ujiji are ports on Lake Tanganyika, and Mwanza and Bukoba ports on Lake Victoria. The area is about 374,000 sq. m. Pop. 5,808 Europeans, 4,742,000 natives.

Tanganyika has a coastline about 470 m. long on the Indian Ocean, and reaches Lake Victoria in the N.W., Lake Tanganyika in the W. and Lake Nyasa in the S.W. It adjoins Mozambique on the S., Belgian Congo on the W., and forms a British connexion between Northern Rhodesia and Nyasaland on the S.W. and Uganda and Kenya on the N. Off the coast lie the islands of Zanzibar and Pemba.

The exports include sisal, cotton, coffee, ground nuts, hides, copra, grain, beeswax, diamonds, and gold. The Northern Rly., 220 m. from Tanga to Moshi, was extended in 1929 to Arusha (54 m.). The Central Rly. runs from Dar-es-Salaam to Kigoma (772 m.).

The territory is under a governor, assisted by an executive council. In 1926 a legislative council was established, of 13 official members and not more than 10 non-official. A department of native affairs was set up in 1926. In 1930 it was suggested that Tanganyika, Kenya, and Uganda should be united to form a dominion of E. Africa. See Africa, map.

TANGIER. Seaport of N.W. Africa. It lies on a small bay in Morocco, 38 m. by sea

S.W. of Gibraltar. With the surrounding district it forms a special zone distinct from the French and Spanish zones. This was made an international area from June 1, 1925, but the agreement was not signed by all the powers concerned until July 25, 1928. The zone is permanently neutralised and demilitarised. The legislative power resides in an international assembly of 27 members, over which a committee of control has certain powers of veto. The administration is in the hands of an administrator and his assistants, who are French, British, Spanish and Italian

Tangier. The market place in this historic port of N.W. Africa

respectively for the first six years. Pop. 60,000, including many Spanish Jews. See Morocco.

TANGLE SEAWEED OR SEA GIRDLES (*Laminaria digitata*). Large olive seaweed of the order Laminariaceae. Attached to northern maritime rocks below ordinary low tides, it has a solid stem, as much as six feet in length and from an inch to two inches thick. The thick, leathery frond is six or eight feet long and is cut into broad segments. See Algae.

TANGO. Modern dance founded on an old gipsy dance of Moorish origin imported into Argentina from Spain. It was much danced by the American negroes, and was introduced into England in 1912.

TANIS. Ancient city near San, 13 m. from Port Said, Lower Egypt. It is the biblical Zoan (Num. 13), on the Tanitic arm of the Nile. Here in 1884 Flinders Petrie inaugurated modern scientific exploration. It has yielded fine sphinxes, notably of Amenemhat III.

TANIT. Phoenician goddess. A temple at Carthage originally founded in her honour was preserved by the Romans after the fall of

the city, at which time it was consecrated to the goddess Astarte. The Christians transformed it into a church. About A.D. 400 it disappeared, and the site, which was first discovered in 1885, was excavated in 1921-22. See Astarte; Carthage.

Tank. Above, early type, used in the first battle of the Somme, 1916. Below, light tank, the modern type of armoured fighting vehicle

TANJORE. Dist. and town of Madras, India. The dist. is S. of the Cauvery, of which the delta comprises the fertile N.E., the "garden of Southern India." Rice is the chief crop. Its area is 3,727 sq. m. The town, which has a famous pagoda, is an important rly. junction. Pop. 59,913.

TANK. Tractor-propelled armoured car, capable of operating independently of roads and able to traverse open country and natural obstacles. It was devised in 1914-15 as the result of the suggestions of a number of independent inventors. Tanks, which were a British invention, first appeared in action Sept. 15, 1916, on the Somme. Tanks of the heavy type, as used in the Great War, carried two six-pounder guns and one machine gun, or five machine guns and no six-pounders. The Mark V was 26 ft. long, 8 ft. 4 ins. wide, weighed 27 tons, and had engines of 150 h.p. The normal speed was 5 m. an hour, and the armour was proof against ordinary and armour-piercing bullets. The crew consisted of an officer, one driver, and seven others.

The mechanism comprised a petrol engine coupled through a clutch to an epicyclic gear. The drive was taken from the gear box to a countershaft on which were epicyclic gears, whence chains transmitted the drive to the driving sprockets, the teeth of which engaged the endless belt of track links. The tractor helt, on either side of the tank, was capable of independent motion forward or reverse, and this formed a steering gear. The guns were carried in sponsons or casemates

Tangle Seaweed. Long fronds growing upon rocks uncovered by the tide

ROYAL TANK CORPS. British corps formed in March, 1916, from volunteer officer cadets, officers, and men of the Machine Gun Corps. The Tank Corps was reorganized in 1921, and consisted of two service tank battalions for service in Great Britain, two cadre battalions, and 12 armoured car companies. The headquarters are at Wool, in Dorset.

The Corps is equipped with light Tanks Mark I and II, and with two types of armoured cars. Fully equipped, the light tanks weigh 11 to 12 tons. The armament comprises one 3-pdr. 2 cwt. gun, two Vickers machine guns, and one Hotchkiss gun. Another Hotchkiss gun is carried as an anti-aircraft weapon. The crew numbers five. The speed is 9 to 12 miles per hour. A heavier type of tank is being developed with, it is reported, a speed of about 30 miles per hour.

TANNENBERG. Village in the district of Osterode, E. Prussia. Near it the Lithuanians and Poles defeated the Teutonic Knights in 1410.

Tannenberg gives its name to the German victory over the Russians in Aug., 1914. Hindenburg, with 160,000 men, took up his quarters at Marienburg, and began his offensive against the two Russian armies under Rennenkampf and Samsonoff. Attacking the latter, within three days Hindenburg established himself on the rly. and road from Osterode to the frontier. Samsonoff failed to recapture Soldau and was driven back E., and after

Tanks Corps Badge

fighting lasting from Aug. 26 to Aug. 28 was compelled to retreat. Hindenburg next drove in a wedge between the two armies. The Russians had to retreat over a tract of marsh and lake, and Hindenburg's knowledge of the terrain enabled him to inflict terrible punishment on the disorganized Russians. Only about 60,000 men escaped across the frontier into Russia. The Germans took 90,000 prisoners and captured hundreds of guns.

TANNHÄUSER. Hero of a medieval German legendary romance. He visits the Venusberg, and afterwards seeks pardon of the pope, who declares that he will never be forgiven unless the staff he holds breaks into blossom. Tannhäuser returns to the sensual fascinations of the Venusberg, and after his departure the pope's staff blossoms. Wagner used the story in his opera, *Tannhäuser*, 1845.

TANNIN OR **TANNIC ACID.** Astringent substance obtained from galls and known as digallie acid. The name is also applied to a series of plant constituents which possess the properties associated with tannic acid.

The best acid is obtained from nut-galls, produced by the puncture of the gall-fly in the young shoots of a kind of oak tree, or produced by a plant louse on the leaves and leaf stalks of *Rhus semialata*. Galls contain from 60 to 80 p.e. of tannin. Tannic acid is used in medicine as an astringent and for making ink and clarifying wine and beer.

TANNING. Preparation of natural skins and their conversion into leather. It is carried out chiefly by vegetable tanning, chrome tanning, alum tanning, and oil tanning or ebamosing. The first depends upon the use of tannin, the second on chromium compounds, the third on alum, and the last on an oil which produces the well-known ehamois leather. See *Leather*.

TANSY (*Tanacetum vulgare*). Perennial strong-scented herb of the order Compositae, a native of Europe, Siberia, and N.W. America. It has grooved, angular, leafy stems about 3 ft. in height. The large leaves are deeply cut from the edges feather-wise, and are fragrant when touched. The florets are all tubular, and the dull yellow flower-heads are grouped in large flat clusters. It was formerly much used as a domestic tonic and vermifuge, and also as a flavouring.

Tansy. Cluster of yellow flower-heads

TANTALLON CASTLE. Ruined building of Haddingtonshire, Scotland. It stands 3 m. E. of North Berwick, and almost due S. of Bass Rock. Built probably in the 14th century, it was a stronghold of the Douglasses. It was captured and wrecked by the Covenanters in 1639. See *illus.* p. 205.

TANTALUM. One of the metallic elements. Its chemical symbol is Ta, atomic weight, 181.5; atomic number 73. It is a silvery white metal, ductile, extremely hard, and with a high fusing point, 2,250°C. It does not occur native, but chiefly as tantalite, or ferrous tantalate. Combined with carbon tantalum becomes as hard as diamond, and alloyed with steel it increases the hardness and tensile strength of the latter. The metal is also used in the manufacture of the filaments of electric lamps.

TANTALUS. In Greek mythology, son of Zeus and father of Pelops. He was a favourite of the gods, but betrayed the confidence reposed in him by divulging the secrets of Zeus. For this he was condemned to stand in Hades with water all round him and rich fruits above his head; both the water and the fruits receded whenever he tried to reach them.

From *tantalus* is derived the English word *tantalise*. A locked stand for spirit bottles is called a *tantalus*.

TAOISM. One of the great doctrinal systems of China. Its earliest explicit presentation occurs in the *Tao-Teh King*, the Canon of Reason and Virtue. This introspective treatise is traditionally ascribed to the sage Lao-tse. About 150 B.C. the canon became by imperial decree a school classic. Lao-tse taught that the universe is based upon a formative principle, *Tao*—the Way—whence all reality, *Teh*, is derived. Other early writers of a Taoist cast were Lich-tse, Han Fei, and Hwainan-tse. The most brilliant was Chwang-tse, of the 4th century B.C.

The growing activity of Buddhism led the Taoist priesthood of the 2nd century to absorb much of its organization and ritual and to copy its monasteries and temples. To-day Taoism is little more than a medley of primitive superstitions. See *Lao-tse*.

TAPESTRY. Hand-made fabric of ribbed surface, in which a picture or design is woven by weft threads passing alternately before and behind warpstrings, which become completely hidden by the process. Tapestry weaving in its crudest form was practised by many primitive races. In Egypt it was in a high state of excellence about 14 centuries B.C. Beautiful fragments which have been preserved to us show the high standard of Greek weaving nearly 1,000 years later.

In 1619 James I, inspired by the success of Flemish workshops instituted in Paris by Henry IV, procured many weavers from the Netherlands and set them to work at Mortlake under the direction of Sir Francis Crane. In 1662 Louis XIV consolidated the various royal tapestry workshops in Paris and lodged them in the Gobelins, a building belonging to the descendants of a famous family of dyers of that name. The excellence of the work produced caused the word *Gobelin* to become a synonym for tapestry on the Continent. The English 18th century manufactories were mostly offshoots of the Mortlake manufactory, as, for example, at Lambeth. See *Bayeux Tapestry*; *Gobelin*.

TAPEWORM OR **CESTODES.** Parasite largely distributed throughout the animal kingdom, found in the adult stage in vertebrates. The common species (*Taenia solium*), attacking man, is a very long chain of oblong joints produced by budding from the "head," which is at the narrow extremity, attached to its host by suckers and hooks. It is acquired by eating infected pork. The segments, containing ova, are passed in the faeces.

With *Bothriocephalus latus* the intermediate hosts are varieties of fish, and in the case of *Taenia eelunococcus* the cysticercus stage occurs in man, the adult worm being a parasite of the dog, wolf, etc. The symptoms set up by these tapeworms are abdominal pains, nausea, diarrhoea, and restlessness at night. The worm is usually expelled by the administration of extract of male fern. Unless the head is dislodged, it will grow again.

TAPIOCA (*Manihot utilissima*). Perennial herb of the order Euphorbiaceae, a native of S. America. It has a thick, fleshy, spindle-shaped root-stock, from which arise knotted stems bearing alternate leaves. The root is permeated with a bitter, poisonous juice, which is got rid of by grating the flesh and pressing it into cakes, which are subjected to heat. The expressed juice also deposits much

Tapioca. Palm-like leaves and clusters of flowers

starch, which is dried on hot plates and becomes the tapioca of commerce.

TAPIR (*Tapirus*). Genus of odd-toed ungulate mammals. They are natives of S. and C. America, Malaya, Java, Borneo, and Sumatra. The nose and upper lip are united to form a short, movable trunk, and there are four toes on the front and three on the hind feet. The Malayau tapir has a broad band of white around the centre of the body. The tapirs are all vegetarians and among the oldest existing mammals.

Tapir. Brown Brazilian species of the mammal found also in Asia

Gambier Bolton, F.Z.S.

TAPLOW. Village of Buckinghamshire. It stands on the Thames, 4 m. from Slough, on the G.W. Rly. Across the river is Maidenhead, with which it is connected by a stone bridge. It is a popular boating centre. Taplow Court is the seat of Lord Desborough. Pop. 1,502.

TAR. Black oily liquid with characteristic odour obtained by the destructive distillation of coal, wood, and bituminous minerals. Tar varies in composition according to its source, but all kinds consist largely of hydrocarbons and contain suspended carbon, to which the black colour is due. By subjecting tar to distillation various constituents are separated, and are employed as the raw

material for making aniline dyes. Shale tar is an oily liquid which is obtained in the S. of Scotland by the destructive distillation of bituminous shale.

Tar is used as a dust-preventing agent on roads, as a binding agent in the manufacture of briquettes, and as a protection for iron and wood. It is used in medicine in the form of an ointment in the treatment of skin diseases. See *Shale*.

Tara, Ireland Statue of S. Patrick erected on the spot where the Stone of Destiny is said to have stood before its removal to Scotland

TARA. Village of co. Meath, Irish Free State. It stands on the Boyne, 6 m. from Navan. On the Hill of Tara, 507 ft. high, on which the kings were crowned and to which people were summoned for national assemblies, the kings of Ireland had a palace, and there are other remains of early Irish life and culture.

TARANTO. Seaport of S. Italy. The ancient *Taras* or *Tarentum*, it is 44 m. by rly. W.S.W. of Brindisi, on an island at the head of a deep inlet of the gulf of Taranto. The fortified harbour was an important base in the Great War. There are shipyards, and a commercial harbour; also the 11th century cathedral and the castle and museum.

Founded by Sparta in the 8th century B.C., Tarentum became the wealthiest city of Magna Graecia. It was taken by the Romans, 272 B.C. After passing to the Goths and Byzantines, it was destroyed by the Saracens, A.D. 927, but was afterwards rebuilt by the Normans. Pop. 121,937.

TARANTULA. Name applied loosely to various species of spiders, but belonging properly to one of the wolf-spiders, *Lycosa*

narbonensis, which is common in various parts of South Europe. It takes its popular name from the town of Taranto situated in South Italy. See Spider

Tarantula. The wolf-spider, found in S. Europe
Hugh Main

this event. The town has a castle, once the residence of the rulers of Provence, and a 17th century town hall. On the other side of the Rhône is Beaucaire. Alphonse Daudet satirised the provincial life of the place in several of his stories. Pop. 8,478.

TARBERT. Village of Argyllshire. It stands on the E. side of the Mull of Kintyre, on the neck of land that just prevents the Mull from becoming an island, 30 m. N. of Campbelltown. The chief industry is the herring fishing. Pop. 1,700.

The two sea-lochs known as East and West Loch Tarbert are situated at the N end and on either side of Kintyre peninsula.

TARBOLTON. Village of Ayrshire. It stands on Fail Water, 7 m N.E. of Ayr by the L.M.S. Rly., and is associated with the poet Burns Pop. 4,981.

TARDIEU. **ANDRÉ PIERRE GABRIEL AMÉDÉE** (b. 1876). French statesman. Born at Paris, Sept. 22, 1876, he entered the diplomatic service, becoming attaché at Berlin in 1897. In 1898 he returned to the foreign office in Paris, and from 1899-1902 was secretary to the council of ministers. During the Great War he was employed on diplomatic missions, being high commissioner of France to the U.S.A., 1917-19. A close collaborator with Clemenceau, in 1919 he was one of the French representatives at the peace conference. He was minister of liberated regions, 1919-20, and minister of public works, 1926-28, when he became minister of the interior. In Nov., 1929, he became premier, and he returned to that office after a brief crisis in March, 1930.

TARIFA. Town of Spain, in the prov. of Cadiz. It is on the strait of Gibraltar, 21 m. by rly. S.W. of Gibraltar. Its Moorish walls and an ancient citadel still stand. It has fisheries, and trades in fish, fruit, especially oranges, cattle, and leather. It was unsuccessfully attacked by the French in 1811, when it was defended by Sir Hugh, afterwards Viscount, Gough. Pop. 12,500.

TARIFF REFORM. Any reform of the tariff or duty on goods imported into a country. The term is usually confined to the agitation which began in 1903 against the admission of foreign goods into Great Britain without paying any duty.

The proposals put forward by Joseph Chamberlain included a tariff of duties on imports into Britain, with preference within the Empire, or an imperial customs union. The broad outlines of his proposals were laid down in a speech delivered at Glasgow, Oct. 6, 1903. A duty of 2s. per quarter (480 lb.) was to be imposed on imported foreign, not colonial, corn, with a proportionately higher duty on imported flour. There were also to be low duties (5 p.e.) on imports of other competitive

foodstuffs, such as meat, dairy produce, etc., and duties averaging 10 p.e. on manufactured goods. He proposed to counterbalance the new taxation of all imports on competitive foodstuffs by an equivalent reduction of existing taxation on non-competitive imports such as tea, sugar, etc., and preference to imports from countries within the empire was prominent in the scheme. He founded a propagandist body, the Tariff Reform League, and at the end of 1903 he established the Tariff Commission, to inquire as to the best means of giving effect to his policy.

The result of the general election of 1906 was very unfavourable to the cause of tariff reform, but its advocates continued their campaign until the Great War broke out in 1914. See Safeguarding.

Taro. Variant name for the cocco (Colocasia antiquorum). See Cocco; Paddocs.

TARPEIA. In ancient Roman legend, daughter of Spurius Tarpeius, the governor of the citadel on the Capitoline Hill. Bribe by the besieging Sabines, she betrayed the garrison by opening a gate, but the Sabines as they entered crushed the traitress to death with their shields. The memory of her baseness was perpetuated in the name of the cliff on the Capitoline Hill, the Tarpeian rock from which traitors were hurled to death.

TARPON (Megalops atlanticus). Large fish of the order Telosteii. It is a native of the S Atlantic, whence it enters several of the rivers in pursuit of mullet. It resembles a huge herring in form and colour. From the hinder part of the dorsal fin there is a long streaming thread-like extension: and the silvery scales are four inches across. It affords good sport with rod and line.

TARQUINIUS PRISCUS, **LUCIUS**. Fifth of the legendary kings of ancient Rome, reputed to have reigned 616-578 B.C. An exile from Corinth, he went to Rome, where he won the favour of King Ancus Martius. Elected king when Ancus died, he proved a vigorous ruler. He was murdered by the sons of Ancus Martius.

TARQUINIUS SUPERBUS, **LUCIUS**. Seventh and last of the legendary kings of Rome, reputed to have reigned from 534 to 510 B.C. Though an able and vigorous monarch, he incurred odium by his oppressive tyranny. The violation of Lucretia by his son Sextus Tarquinius caused a revolt, and Tarquin, with all his family, was banished from Rome, being finally defeated at Lake Regillus 496.

TARRAGON (*Artemisia dracunculoides*). Perennial herb of the order Compositae, native of S. Europe. Its stems are about two feet high, with narrow oblong leaves and roundish, pale green flower-heads. The aromatic leaves are without the bitterness characteristic of most species of *Artemisia*, and are used to flavour salads, pickles, and Tarragon vinegar.

TARRAGONA. Seaport city of Spain. The ancient Tarraco, it is on the Mediterranean

Tarragon. Leaves and flowers of the bitter herb

harbour. Wine, olive oil, and nuts are exported. Pop. 32,027.

TARRING, **WEST**. Village of Sussex, part of the borough of Worthing. It is noted for its fig garden. An old building is the reputed palace of Thomas Becket. East Tarring is a village 2 m. from Newhaven.

TARRYTOWN. Village of New York, U.S.A. It stands on a bay in Hudson river, 25 m. N. of New York city. It is the Sleepy Hollow of Washington Irving, whose grave is in Sleepy Hollow cemetery. Near is Sunnyside, the birthplace of Irving. Features of Tarrytown are the old Dutch church and Philipse manor house. Pop. 5,800.

TARSHISH. Biblical name of an unidentified Phoenician mart. It is presumably the classical Tartessus, a shipping port for metals in S.W. Spain, near the Guadalquivir mouth, which was then farther inland. The Red Sea Tarshish ships (1 Kings 22) were merchantmen like those in the Tarshish trade.

TARSIER (*Tarsius spectrum*). Small lemuroid primate. It is a native of Borneo, Sumatra, and other islands of the Malay Archipelago. Smaller than the European squirrel, and of similar arboreal habits, it is remarkable for its large eyes and the great length of the ankle. The tarsier is nocturnal in habit, hunting for the insects which are its chief food, and

sleeping by day in a tree-hole. See illus. below.

TARSUS. Ancient city of Cilicia, Asia Minor. The modern Tersous, it is about 12 m. from its port at the mouth of the Cydnus. Originally a Syrian city, it became a centre of Greek culture. Previous to its incorporation in the Roman empire as capital of the prov. of Cilicia, 66 B.C., it had been subject to Persian rule. It was the birthplace of S. Paul (q.v.).

TARTAN. Woollen cloth with coloured check pattern. The name is specially applied to the kilt and plaid of the national dress of the Highlanders of Scotland, the variations in the markings denoting the different clans. The distinctive patterns of clan tartans are believed to have been settled before or during the 17th century. The wearing of the Highland dress was forbidden after the rebellion of 1745, but the prohibiting Acts were repealed in 1782, and clan tartans are still recognized as national dress at the British court, and still used by the Highland regiments. Cloth makers have evolved many new combinations of colours and checks. The black and white checkered plaid is called shepherd's tartan. See Clan; Highlands, The

TARTAR. Name employed in China and medieval Europe for central Asian mounted nomads. Under Jenghiz Khan and his successors they established the empire of Tartary and, from 1238 to 1462, dominated E. Europe. In the form Tatar the name survives in Russian use to denote several moslemised groups of Turkic speech.

In European Russia there are about 2,000,000. They comprise the Kazan Tartars of the Volga banks, representing the Kipchak irruption; the Astrakhan Tartars of the Volga

Tarpon. Large fish found in the S. Atlantic

Tarsier. Small climbing primate remarkable for its large eyes

Henri Manuel

mouth, remnants of the Golden Horde with Khazar admixture; and the Krim and Nogai Tartars—the former on the mountains and coasts, the latter on the steppes. There are

also a number in Bulgaria and the Ploek district of Poland. In the Caucasus are about 1,500,000. In Siberia and Central Asia they number some 300,000.

The Tartar Republic is an autonomous republic of the Union of Socialist Soviet Republics, situated between the Chuvash and Bashkir autonomous republics. It was formed in 1920. Kazan is the capital. The area is about 25,000 sq. m. Pop. 2,589,645.

Tartar. Calcareous incrustation which forms round the base of the teeth if cleanliness is neglected.

TARTAR EMETIC. Common name for potassium antimony tartrate, so called because in small

Tartar. Azerbaijan
Tartar from Nij

doses it causes vomiting. It is the only readily soluble salt of antimony. Tartar emetic is used in small doses in medicine, but in larger quantities is a violent poison. It is also employed as a mordant in dyeing.

Tartaric acid, $C_4H_4O_6$, is prepared from argol or crude cream of tartar. See Argol.

TARTARUS. In Greek mythology, the prison or place of punishment in Hades (q.v.). It was surrounded by a brazen wall, and veiled in perpetual and impenetrable darkness.

TARTARY. Name formerly used vaguely for the country between the Pacific Ocean and the Dnieper. Little Tartary, or Krim Tartary, became the name for part of Russia, and Great Tartary for Turkistan and the surrounding district. The gulf of Tartary is between the island of Sakhalin and the mainland.

TARTU. Town of Estonia. The Russian name is Yuriev and the German Dorpat. It is about 120 m. S.E. of the capital, Tallinn (Reval), and has a university, founded by Gustavus Adolphus in 1632. Pop. 65,000.

TASHKENT or TASHKEND. Town of Soviet Central Asia in Uzbekistan. It consists of an old Asiatic and a new European quarter, and lies in the valley of the Chirchik, surrounded by orchards and gardens. It is on the rly. S.E. from Orenburg with connexions to Samarqand and Andijan, and also on the line from Omsk through Semipalatinsk. A university was founded in 1919. Pop. 323,613.

TASMAN, ABEL JANSZON (c. 1602–59). Dutch explorer. Born near Groningen, he made several voyages in eastern waters. Circumnavigating Australia, he discovered, Nov. 24, 1642, land which he called Van Diemen's Land, but which was renamed Tasmania in 1853. He also discovered New Zealand, the Friendly, and the Fiji Islands. He made another voyage in 1644, when he discovered the gulf of Carpentaria, and commanded other expeditions in 1647 and 1648.

Tasman Bay, or Blind Bay, is a wide opening on the N. coast of S. Island, New Zealand, at the W. end of Cook Strait. The Tasman Sea is that portion of the S. Pacific Ocean

occupying the 1,000 m. stretch between New Zealand and S.E. Australia.

TASMANIA. Island S. of Australia, a constituent state of the Commonwealth of Australia. It was formerly connected with Victoria on the mainland by a land bridge across Bass Strait, now represented by the islands of the Furneaux and Kent groups. The area is 26,215 sq. m. Hobart is the capital. The university of Tasmania, founded in 1890, is at Hobart. Pop. 212,043.

The surface is largely mountainous. Rivers include the Derwent and Tamar. Forests of eucalyptus, acacia, and pine cover extensive areas; temperate fruits grow well, and Tasmanian apples are of high quality. Oats, peas, hay, and potatoes are grown, and sheep and cattle are reared.

Tasmania became British in 1803 as a settlement of New South Wales, and was made independent in 1825; responsible government was achieved in 1856, and in 1901 the island joined the Commonwealth of Australia. The local parliament comprises a legislative council of 18 members and an elected house of assembly of 30 members. The governor is assisted by a cabinet. See Australia; Hobart.

TASMANIAN DEVIL. (*Sarcophilus ursinus*). Name given by the original British settlers at Hobart to a marsupial mammal in consequence of its persistent raids on their poultry, etc. In size, short limbs, short muzzle, and bear-like feet it is not unlike the badger. It is a nocturnal, carnivorous animal of great strength, clad in thick, close fur of a black or blackish-brown hue, with white patches on the neck, shoulders, chest, and hinder parts. Its length is about 23 ins., to which the tail adds another 12 ins.

Tasmanian Wolf. Name given to the thylacine, a wolf-like carnivorous marsupial of Tasmania. See Thylacine.

TASSO, TORQUATO (1544–95). Italian poet. Born at Sorrento, March 11, 1544, the son of a nobleman, he went in 1557 to Urbino. There in 1562 Torquato completed his first narrative poem, *Rinaldo*, which established his reputation. Given a post in the retinue of Cardinal Luigi d'Este at Ferrara, in 1565, he soon became the central figure at that court. In 1573 his pastoral drama, *Aminta*, appeared, and in 1574 he completed the *Gerusalemme Liberata*, a great epic which tells the story of the First Crusade and the capture of Jerusalem. While a prisoner, Tasso escaped in 1577 from Ferrara and wandered from place to place. When he returned he was imprisoned for seven years. While in confinement others edited his *Gerusalemme* and also his sonnets and odes. In 1586 he was released, and began once again his life of wandering between Rome, Naples, and Florence. He settled in Rome in 1594, but died April 25, 1595.

TASTE. One of the five senses. The organs of taste are the tongue and soft palate. The mucous membrane of the tongue is

Tasmania. Billy Lannee, the last man of the aboriginal inhabitants, with his wife and daughter

Torquato Tasso, Italian poet
After a print by Raphael Morghen

scattered over with papillae of various forms and taste-buds which contain gustatory cells in close association with nerve fibres. The nerve of taste is the glosso-pharyngeal nerve. Tastes are classified into sweet, bitter, acid or sour, and salt. See Tongue.

TATE, SIR HENRY (1819–99). British merchant and art patron. Born at Chorley, Lancs, March 4, 1819, he founded the firm of Henry Tate and Sons, sugar refiners. A generous benefactor to hospitals, public libraries, and to University College, Liverpool, he was also a judicious collector of modern pictures, which later he presented to the nation. In 1893 he was made a baronet, and he died Dec. 5, 1899.

TATE GALLERY. Popular name for the National Gallery of British Art at Millbank, London. Opened Aug. 16, 1897, it was the gift, together with 65 pictures by modern

Tasmanian Devil. Fierce marsupial which resembles a badger

British artists, of Sir Henry Tate, and its principal contents are the pictures and sculptures purchased under the Chantry bequest, the Watts gift, part of the Vernon Collection, the Turner pictures and drawings, housed in the Turner wing, completed 1910, and drawings by Alfred Stevens. See illus. above.

TATTERSALL'S. Racehorse auction mart and subscription rooms in London. It was established near Hyde Park Corner in 1766 by Richard Tattersall (1724–95), who had been stud-groom to the second duke of Kingston. The establishment was removed to new premises in Knightsbridge, S.W., in 1865. Two subscription rooms were reserved for members of the Jockey Club, and formed the meeting place of the principal bookmakers and backers. See Betting.

TATTERSHALL. Village of Lincolnshire, 7 m. from Horncastle. The castle, built by Ralph, Lord Cromwell, in the 15th century, was restored by the Marquess Curzon, who bequeathed it to the nation. It is regarded as one of the finest existing examples of a fortified dwelling in England. The church contains tombs of the Cromwell family. Pop. 424.

TATTOO. Signal by bugles and drums used in the British army to bring soldiers to their quarters at night. It varies in different branches of the service. That for the infantry consists of "The First Post" by the bugles, followed by the "Rolls" for the big drum and side drums. After the players have marched up and down the barrack yard to a succession of quick marches, "God Save the King" and "The Last Post" conclude the tattoo. At military tournaments tattoo is used for an evening parade.

TATTOOING (Tahitian tatau, markings). Practice of producing durable designs under the human skin with the aid of pigments.

It is effected by puncturing or cutting the skin and introducing charcoal powder or other colouring matters and ingredients. Burmese work is uniformly blue-black, except love-spells and devices to ensure immunity from wounds and disease, which are usually vermilion. Japanese tattooing, always more artistic, and formerly prevalent among the lower classes as a substitute for clothing, is now illegal. Tattooing, as adopted by European seamen, comprises Oriental designs such as dragons, in addition to ships, anchors, and amatory tokens. Electric needles and a wide range of colours are employed in the process.

TAUCHNITZ, KARL CHRISTOPH TRAUGOTT (1761-1836). German publisher. Born near Grünma, Oct. 29, 1761, he began printing books in 1796 at Leipzig. His editions of Greek and Latin classics were widely famed for cheapness and accuracy. His nephew, Christian Bernhard, born at Schleinitz, Aug. 25, 1816, founded the Tauchnitz publishing house in 1837, from which more than 4,000 vols. by British authors have been issued. He also published French and German works. He died at Leipzig, Aug. 13, 1895.

TAUNTON. Borough, co. town, and market town of Somerset. It stands on the Tone, 45 m. from Bristol, on the G.W. Rly., in the fertile valley of Taunton Dene. The church of S. Mary Magdalene is a large and beautiful Perpendicular building with a tower 155 ft. high. The castle, dating from the 12th century, is a museum. Cider, gloves, and agricultural machinery are made, and the town is an agricultural centre. Market days, Wed and Sat. Pop. 24,110.

TAUNUS. Mt. range of Germany, in Hesse Nassau. It stretches N.E. for 45 m. from the right bank of the Rhine between Mainz and Bingen, and culminates in the N.E. at 2,587 ft. in the Great Feldberg. It contains, among others, the mineral springs of Wiesbaden, Homburg, and Nauheim.

TAUT or **TOGARIS** (Egypt. the mighty one). Egyptian deity. Represented as a hippopotamus in calf, sometimes crowned with disk, horns, and plumes, she was a primitive animal-goddess, afterwards included in the theogony as consort of Set and, in the Theban form Apet or Opet, as the mother of Osiris. As nurse she presided at childbirth.

TAURUS or **THE BULL**. In astronomy, one of the signs of the Zodiac. Originally the first sign of the Zodiac, it is now the second, the sun entering the constellation about April 22. The Pleiades mark the shoulder of Taurus, the Hyades its head. The chief star is Aldebaran or Alpha Tauri. The constellation contains a number of variable stars, and the well-known Crab nebula. See Constellation.

TAURUS. Mountains of Asia Minor. Consisting chiefly of two ranges, named by the Turks the Bulghar Dag and Ala Dag, they run almost parallel to the coast of S.E. Asia Minor. The famous pass known as the Cilician Gates leads into the valley of Adana. The Anti-Taurus is an extension N. from the E. end of the Taurus. In it is Mt. Argæus, the highest point in Asia Minor.

TAVETA. Settlement of Kenya Colony. It is 75 m. from Voi on the Uganda Rly., and 28 m. by rly. from Moshi, near the N.E. slopes of Mt. Kilima-Njaro, 2,350 ft. above sea level. The dist. was the scene of numerous encounters during the Great War. A branch of the Uganda Rly. has been built from Voi, through Taveta, to the Usambara Rly.

TAVISTOCK. Market town and urban dist. of Devonshire. It stands on the Tavy, 15 m. from Plymouth, on the G.W. and Southern Rlys. A canal leads to the Tamar. Notable buildings include the Gothic parish church and the guildhall. There are remains

of a monastery founded in the 10th century. Formerly a stannary town, Tavistock was the centre of an important mining district. It is now chiefly an agricultural centre. Market day, Friday. Pop. 4,392.

The duke of Bedford has a seat, Endsleigh, near the town, and his eldest son is called the marquess of Tavistock.

TAVY. River of Devonshire. It rises on Dartmoor and after a course of 20 m. falls into the Tamar. Tavistock is on its banks, and it also passes Buckland Abbey.

TAW. River of Devonshire. Rising on Okement Hill, Dartmoor, it flows N.E. to Lapford, and then N.W. to Barnstaple, at the head of its estuary. Its length is 50 m.

Tawe. River of Wales. Rising in Brecknockshire, it flows 36 m. S.W. through Glamorganshire to Swansea Bay, at Swansea.

TAXATION. System of monetary payments demanded by a government. They have two essential characteristics: (1) they are compulsory; (2) their payment does not establish any guarantee for definite or measured services in return.

This view of the nature of taxation is relatively modern. It was first given exactly by Sidgwick in 1883, and is now generally held by economists. The prevailing earlier view, which it displaced, was that taxes were in fact prices—a tax was a price paid for benefits received from the state. This sprang from the idea of an implicit contract between the state and the citizens. It gave rise, in turn, to the idea that citizens should pay taxes in proportion to the benefits they received, and it was not noticed at first that by this rule the weak, who receive most state protection, would pay most of the taxes.

Tay Bridge. Railway viaduct, 2 miles and 73 yards in length, across the Firth at Dundee. It was opened in 1857

Taxation is usually divided into direct, such as income tax, and indirect, such as customs and excise duties. The arguments in favour of direct as against indirect taxation are: (1) the taxpayer feels the payment and therefore is interested in the money being well spent; (2) the cost of collection is much less than in the case of indirect taxation; (3) it is fairer in its incidence, because indirect taxation falls more heavily upon the poor than upon the rich.

In the United Kingdom, and to some extent in other countries, the policy of relieving indirect at the expense of direct taxation has been steadily pursued since about 1860.

TAXIDERMY (Gr. taxis, arrangement; derma, skin). Art of skinning, preserving, stuffing, and mounting animals. The skin is treated with arsenical preparations to preserve it, and the fat, etc. is removed. Mounting is an elaborate process, which requires a thorough knowledge of the anatomy of the animal as well as of its natural habits and surroundings. In the main, small birds and mammals are supported by suitable wiring, but for larger birds and mammals the only really satisfactory way is to take an accurate model of the animal in plaster materials and to cover it with the skin, the tongue, lips, etc., being simulated in the material.

TAXIMETER. Device used on taxicabs to indicate payments due by the hirer. The inventor of the modern taximeter was A. Grüner, of Magdeburg, in 1895. The basic

principle of the instrument lies in the fact that, for any complete revolution of a wheel of a vehicle, a certain distance is travelled by the vehicle. Hence, if the revolutions of the wheel be counted during a certain period, the distance travelled in that period may be calculated. To provide for different tariffs the parts are linked together in such a way that, by turning keys on the outside of the instrument case, the gears can be thrown in or out as required. The fare is shown for the ordinary or distance hire, plus any "extras," while by turning a key an alternative clock-operated time hire tariff is brought into work.

TAXODIUM. Summer-leaving tree of the order Coniferae. It is noted for the richness of the tints of its autumnal foliage. A native of the U.S.A., whence it was introduced into Britain in 1640, it thrives in a moist, loamy soil, preferably by the edges of lakes or rivers, and is propagated in the ordinary way by seeds or cuttings, or by layering in the autumn. *T. distichum* is known as the swamp cypress.

TAY. River of Scotland. It drains the greater part of Perthshire and portions of Angus (Forfarshire), Argyllshire, and Inverness-shire, and has a length of 118 m., including its chief headstream and the Firth of Tay. Rising as the Fillan on Ben Lui, on the W. border of Perthshire, it flows to Loch Dochart, and then on to Loch Tay. On issuing from this loch it assumes its own name, and flows past Aberfeldy, Dunkeld, and Perth to the firth. The area of its basin is 2,400 sq. m. Its salmon fisheries are important.

The Tay Bridge, over the Firth of Tay, was built 1882-87, is just over 2 m. long, and carries two lines of rly. For part of its length the railway tracks are carried on top

of the girders, but across the 13 main central spans the tracks are laid between the main girders so as to allow a clear height of 79 ft. for the passage of ships below. It was constructed within 60 ft. of the site of the original bridge, which was opened in 1878 and blown down in a gale the following year.

TAYLOR, BAYARD (1825-78). American writer. Born in Chester co., Pa., Jan. 11, 1825, he was apprenticed to a printer, and in 1844 he published *Nimena*, his first volume of poems. Disliking his trade, he got commissions for travel articles from various editors, and went on a pedestrian tour of Europe, which he described in *Views Afloat*, or *Europe Seen with Knapsack and Staff* (1846). In 1847 he joined the staff of the *New York Tribune*, for which he travelled widely. Subsequently he spent many years in Germany, the fruit of which was his translation of Faust, 1871. He died Dec. 17, 1878.

Bayard Taylor, American writer

TAYLOR, JEREMY (1613-67). English divine and scholar. A barber's son, born at Cambridge, he became a fellow of All Souls College, Oxford, in 1636. Chaplain to Laud and Charles I, he was made rector of Uppingham in 1638; and of Overstone, Northamptonshire in 1643. Deprived of his living by the

Parliamentarians, he was for a time a school-master in Wales, and chaplain to the earl of Carbery at Golden Grove, Carmarthenshire, where his chief works were written. In 1661 Charles II appointed him bishop of Down and Connor. He died at Lisburn, Aug. 13, 1667.

Taylor's 36 separate works include *Episcopacy Asserted*, 1642; *The Liberty of Prophecy*, 1646; *The Great Exemplar (Life of Christ)*, 1649; *The Rule and Exercises of Holy Living*, 1650; *The Rule and Exercises of Holy Dying*, 1651, both of which have been reissued in numerous editions.

TAYLOR, JOHN (1580-1653). English writer, known as the water poet. Born at Gloucester, Aug. 24, 1580,

John Taylor,
English writer
Bodleian Library

and apprenticed to a Thames waterman, he served in the navy, after which he returned to the Thames as a waterman. Having travelled, he settled down in 1645 as an innkeeper in Long Acre, London. His ruggedly racy writings, *A Penniless Pilgrimage*, *Travels in Germany*, and

others, upwards of 150 in number, were reprinted by the Spenser Society, 1869-78.

TAYLOR, TOM (1817-80). British dramatist. He was born at Sunderland, Oct. 19, 1817, and was educated at Cambridge. From 1844-46 he was professor of English Literature at London University, and from 1850 to 1872 he was secretary of the board of health. He became connected with Punch, and in 1874 accepted the editorship. His dramatic career, on which his fame chiefly rests, had begun in 1844, when four of his burlesques were produced. He wrote, adapted, or collaborated in about 100 plays, some of which still hold the stage. His best known pieces are *Masks and Faces*, 1852, with Charles Reade; *Still Waters Run Deep*, 1855; and *The Ticket-of-Leave Man*, 1863. Taylor died July 12, 1880.

Tom Taylor,
British dramatist

TAYPORT OR FERRYPORT-ON-CRAIG. Burgh of Fifeshire. On the S. side of the Firth of Tay, it stands on the L.N.E. Rly., $\frac{3}{4}$ m. S.E. of Dundee and opposite Broughty Ferry. There is a ferry service across the estuary, and linen and jute factories and engine works. Pop. 3,273.

TCHITCHERIN, GEORGI VASILIEVITCH (b. 1879). Russian revolutionary. Of noble descent, he became a socialist, and on the outbreak of the Great War was living in England. Appointed Bolshevik envoy in London, he was interned owing to his propaganda, but, released in Dec., 1917, was deported to Russia, and given the post of assistant commissioner for foreign affairs, later becoming people's commissioner, or foreign commissar. He held that position until November, 1929. See Bolshevism.

TEA. Term applied specifically to the leaves of the tea plant and to the beverage infused from them, and generally to similar decoctions used either medicinally or as beverages. The Chinese name is *cha*. The tea plant is an evergreen tree of the genus *Thea* and order *Ternstroemiaceae*. The leaf is strongly veined, the flower usually white, often stalkless, and delicately fragrant, and the fruit has three spherical seeds.

For tea-planting a hot, moist climate. light friable soil, and good drainage are desirable. The plants come to maturity in three years. Tea is made only from the immature shoots, which are nipped off with the band. In the factory the pluckings are exposed to the sun or hot air until soft and flaccid. After rolling, the leaves are allowed to ferment in a cool, moist room. They are quickly re-rolled and at once fired to extract moisture and prevent further fermentation, then sifted into grades, again fired, and finally packed. In China, tea is grown chiefly by peasant proprietors on small plots, and is made entirely by hand. Green tea is unfermented, and possesses more stimulating properties than black.

In China the provinces

Tea. Packing dried and prepared leaves into large wood chests ready for export. Above, twig of leaves and flowers of the tea plant

watered by the Yang-tse are the principal source of the Moning or black-leaf Congous and of fine green teas. Farther S., in Fu-kien province, grow the Kaisow or red-leaf Congous. The finest Fu-kien teas are grown on the Wu-i hills. From a dialect form of Wu-i comes the name Bohea, early used in England for fine tea generally, and later as a trade term for a low-quality tea. Formosa produces chiefly Formosa Oolong, a species of green tea with a yellowish leaf. Japan makes mostly green, and exports it direct to the U.S.A. Among the principal tea districts of India are Assam, Darjeeling, Cachar, Travancore, and Dooars.

Teak. Foliage and fruit of the Malayan tree

of 100-150 ft., and has opposite, oval leaves. It is cultivated in India, Burma, and Java for its timber, which is exceedingly valuable in shipbuilding. Before felling, a ring of bark is cut from the base of the trunk, which kills the tree and denudes it of sap. It is then left standing for two years. The tree known as African teak belongs to the spurgefamily. The wood is hard and heavy.

TEAL (*Querquedula erythraea*). Small species of

Teal. Drake of the small European species of wild duck
W. S. Berridge, F.Z.S.

duck, a native of Europe (including Britain) and Asia. The drake is marked by a jagged white line with black below it along the wing, a buff triangular patch below the tail, and the red-brown head with a buff-edged, curved green band on each side. The duck has a more uniform dress of buff dappled with brown. It is a bird of inland lakes and pools, though in winter large numbers may be seen at the mouths of rivers.

TEA ROSE. Name given to a class of perpetual or autumnal roses. Mostly hybrids of *Rosa indica*, they include many of the most popular varieties, e.g. *Maréchal Niel*. The name is derived from the scent. See Rose.

TEAR SHELL. Popular name for a lachrymatory shell. These shells were first introduced by the Germans in the Great War, the Allies adopting them later. See Gas.

TEASEL OR TEAZEL (*Dipsacus sylvestris*). Tall biennial herb of the order *Dipsacaceae*, a native of Europe, W. Asia, and the Canaries. In the first year it forms a large spreading rosette of oblong, lance-shaped leaves with prickly midribs. The small, tubular, purplish flowers, separated by stiff, hooked bracts, are gathered into an oblong head. In the cultivated form known as the fuller's teasel (*D. fullonum*) the bracts are used for raising the nap on cloth, or teasing it, whence the name.

TEA TREE (*Leptospermum lanigerum*). Small tree of the order *Myrtaceae*, native of Australasia. It has alternate, oblong, leathery and downy leaves, and its flowers are white with a woolly calyx. The leaves were used by early English settlers as a substitute for tea. In other parts of the world various plants bear this popular name; in England it is applied to *Lycium chinense*.

Teasel. Stiff bracts around dead flowers

TECK. Castle of Württemberg, Germany. It stood near Kirchheim, and was destroyed in 1575. In 1863 Alexander (1804-85), a member of the royal family of Württemberg, having made a morganatic marriage, was created prince of Teck. Alexander's son, Francis (1837-1900), made duke of Teck in 1871, had married, in 1866, Mary Adelaide, daughter of the duke of Cambridge. They made their home at White Lodge, Richmond. Their sons were Adolphus (1868-1927), Francis (1870-1910), and Alexander (b. 1874).

The daughter, Mary, became the wife of George V. In 1917 the family changed its name to Cambridge. Adolphus, who had succeeded his father as duke, Jan. 20, 1900, was made marquess of Cambridge, and Alexander, earl of Athlone. See Mary, Queen.

TEDDINGTON. Urban dist. of Middlesex. It is $1\frac{3}{4}$ m. from Waterloo on the Southern Rly., and $1\frac{1}{2}$ m. from London Bridge by the Thames, which is tidal as far as Teddington Lock. The National Physiological Laboratory for physical research was established here in 1901. Pop. 21,216.

TE DEUM LAUDAMUS. Latin canticle or hymn, so called from the opening words translated in the English Book of Common Prayer, "We praise Thee, O God." The rubric directs that it shall be said or sung in English daily throughout the year.

Duchess of Teck,
mother of Queen
Mary

TEES. River of England. It rises in Crossfell, Cumberland, and forms, first, the boundary between Durham and Westmorland, and then that between Durham and Yorkshire. Teesdale, the valley of the upper Tees, contains the waterfall High Force, and other beauty spots. Near its mouth the river flows through an industrial area, passing by Darlington, Stockton, and Middlesbrough, where the estuary begins. Its length is about 80 m.

TEETH. Bone-like structures in the mouth. The part of the jaw that carries the teeth is called the alveolus, and along this are arranged the tooth sockets. A tooth consists of a crown projecting through the gum, and a root embedded in the underlying tissue. The crown is covered with enamel, and the root with a bone-like substance called cementum. The neck of the tooth is the part between the crown

Teeth. 1, in upper and 2, lower jaw: A, canine; B, central incisor; C, lateral incisor; D and E, 1st and 2nd premolars; F, G, H, 1st, 2nd, and 3rd molars. 3, Section of tooth: A, enamel; B, dentine; C, pulp; D, gum; E, bone; F, cement

and the root where the gum surrounds it. The enamel is the hardest tissue in the body. It is white or bluish-white and slightly translucent, having a polished appearance on the surface. It consists almost entirely of inorganic salts of calcium and magnesium. Underneath the enamel is dentine, which as a rule forms its greater part. This is a hard, yellowish bone-like substance, and in one form, ivory, is well known. It consists in a considerable degree of organic matter.

The teeth of mammals are adapted to, and vary considerably according to, the uses to which they are put. In higher mammals, as a rule, there are two sets of teeth—the milk dentition subserving the needs of the animal during its growth, and the permanent dentition from maturity onwards. The teeth are also differentiated according to their position in the mouth. In man there are 8 incisor, or cutting teeth; 4 canine, or tearing teeth; 8 bicuspid; and 12 molar, or grinding teeth.

Artificial teeth are usually made of a special pottery ware known as mineral teeth. A single tooth is fitted to the root of an old one by a gold pin, or for one or more teeth a plate is provided, to which they are fastened. The plate is made of gold, silver, or platinum plate, vulcanite, celluloid, etc., and is shaped from a mould of the gums. See Toothache.

TEGNÉR, ESALAS (1782-1846). Swedish poet and bishop. Born Nov. 13, 1782, he graduated in 1802 at Lund, where he was appointed lecturer, and in 1812 was professor of Greek at Stockholm. In 1824 he was made bishop of Växjö, where he remained until his death, Nov. 2, 1846. Tegnér began to write poetry at an early age. In 1808 his War-song of the Troops of Scania was enthusiastically greeted, as was Svea, a patriotic poem. His masterpiece, Frithiof's Saga, 1825, has been translated into many languages. Consult Works, ed. C. W. Böttiger, 1847-51. Pron. Tegnare.

TEHRAN or TEHERAN. Capital of Persia. It stands in the midst of a fertile plain, about 70 m. S. of the Caspian. There is a short rly. to Shah Abdul-azim. With an area of 7½ m.,

it is girt about with bastioned walls, pierced by 12 gates, and contains numerous mosques and the Ark or citadel, within which is the royal palace. It has a carpet-making industry. Tehran replaced Ispahan as the capital of Persia about the end of the 18th century, and is the residence of the shah and seat of the government. Pop. 210,000. See Persia.

TEIFI. River of S. Wales. It rises near the border of Radnorshire and flows into Cardigan Bay after a course of about 50 m. For most of its course below Lampeter it forms the S. boundary of Cardiganshire.

TEIGN. River of Devon. It rises on Dartmoor, and falls into the English Channel at Teignmouth. Its length is 30 m.

TEIGNMOUTH. Seaport, watering place and urban district of Devonshire. It stands on the S. coast at the mouth of the Teign, 15 m. from Exeter, on the G.W. Rly. S. Michael's church, rebuilt in the 19th century, contains a little of the earlier Norman church. S. James's retains a Norman tower. China clay is exported and coal imported. The town consists of two parts, known as E. and W. Teignmouth. Pop. 10,976. Pron. Tinnuth.

TELAMON. In Greek legend, brother of Peleus and father of Ajax. He took part in the hunt for the Calydonian boar and the expedition

of the Argonauts. See Argonauts

TELEGENOSUS. In Greek mythology, son of Odysseus by the enchantress Circe. When he grew up to manhood, his mother sent him out in search of his father, and, shipwrecked on the coast of Ithaca, he began to ravage the country. Odysseus and his son Telemachus went to meet the stranger, who, ignorant of his identity, killed his father.

TELEGRAPH (Gr. télc, afar; graphein, to write). Device for conveying intelligence between distant points. The first serviceable telegraphic device, invented in 1792 by the French engineer, Claude Chappe, was a kind of semaphore. In a modified form the Chappe telegraph survives to-day in the ship semaphore and in railway signals.

The first practical electric telegraph was produced in 1837, when Cooke and Wheatstone, in England, brought out the needle telegraph, and Morse, in America, produced his electro-magnetic telegraph. The needle telegraph is based on the fact that a current of electricity flowing in a wire causes a magnetic needle placed near it to turn to the right or left, according to the direction in which the current flows. The Morse code (see p. 982) is used, the dots and dashes being represented

Tehran, Persia. Parliament House, formerly the Baharistan Palace, built in 1879

by movements of the top of the needle to the left and right respectively.

The Morse telegraph consists of a U-shaped electro-magnet. When a current flows through the winding, an armature carried on a pivoted lever is attracted and the lever is drawn down. When the current stops, a spring pulls the lever back. Long and short currents, corresponding to the dashes and dots of the Morse code, are sent by means of the Morse key. The arrangement of a typical telegraph circuit is shown in the illustration below.

With high speed apparatus the transmitter is actuated by means of a paper tape perforated with groups of holes corresponding to different letters of the alphabet. At the receiving end the messages are recorded automatically, either (a) as dots and dashes on a tape; (b) as a perforated ribbon which is afterwards used to work an automatic typewriter; or (c) directly as printed letters.

Duplex telegraphy consists in transmitting a message simultaneously in each direction; in quadruplex, two messages are sent simultaneously in each direction. Systems in which numbers of messages are transmitted simultaneously are known as multiplex.

In submarine telegraphy a specially delicate instrument invented by Lord Kelvin, and known as the siphon recorder, is employed. With this the message is recorded as a wavy line on a paper tape, up and down waves corresponding respectively to the Morse dots and dashes. In recent years the thermionic valve relay has been applied to submarine cable working, with excellent results. See Cable; Electricity; Morse, S.; Phototelegraphy; Post Office; Signalling; Thermionic Valve; Wireless.

TEL-EL-KEBIR, BATTLE OF. Victory by a British force under Sir Garnet Wolseley over Egyptian rebels led by Arabi Pasha, Sept. 13, 1882. After the battle of Kassassin, Aug. 28, the British were concentrated to attack the main enemy position, about 2½ m.

Telegraph. Principle of Morse telegraph circuit in general use.

long, at Tel-el-Kebir. The battle began by an assault on the enemy's trenches by the Highland brigade. Next day the cavalry pushed on to Cairo and secured the surrender of 15,000 troops in the city.

TELEMACHUS. In Greek mythology, son of Odysseus and Penelope. He was an infant when his father left to take part in the Trojan War, but after twenty years had passed without Odysseus reaching home, Telemachus set out to look for him, visiting Nestor at Pylos and Menelaus at Sparta. On reaching home again, he found that his father had arrived, and assisted him in slaying the suitors. See Odysseus. Pron. Te-lemma-cus.

TELEOLOGY (Gr. telos, end; logos, theory). In general, the doctrine of final causes, all speculation in reference to the idea of purpose, not only in man's conscious actions, but in all natural and historical processes. In theology, the teleological argument is, that the evidence of design in nature proves the existence of a personal God. Teleology is opposed to the mechanical theory, which would explain all phenomena by the law of mechanical causation. Teleology held the field till

the rise of modern philosophy, when it was repudiated by Descartes, Spinoza, and Bacon in favour of "operating causes."

TELEOSAURUS. Fossil marine crocodile found in rocks of the Jurassic period. The animal was remarkable for a long pointed snout armed with a large number of small teeth, and for a body covered with bony tuberculated plates. See Dinosaur.

TELEPATHY (Gr. *têle*, afar; *pathein*, to feel). Communication between two minds apart from the ordinary sense channels. Since about 1876, when Prof. Sir W. F. Barrett drew attention to such phenomena, the existence of the faculty has slowly gained acceptance. In many carefully conducted experiments the percipient has named a high proportion of playing cards, copied diagrams and sketches looked at by the agent, described scenes thought of, or objects tasted or smelt, localised pains, etc. Hypnosis greatly increases the power. See Hypnotism; Psychical Research.

TELEPHONE (Gr. *têlc*, afar; *phōnē*, sound). Device for transmitting sound and especially speech to a distance by means of electricity.

In 1860 J. P. Reis devised an instrument which could reproduce musical sounds but which could not transmit speech. This was first done by Graham Bell in 1876. His instrument consisted of an iron diaphragm free to vibrate in front of the pole of an electro-magnet. The coil of the magnet was in series with the telephone circuit. When speech waves strike the iron diaphragm of such an apparatus it is set into vibration. The movements of the iron cause currents of electricity of varying strength and direction to be set up in the magnet coil. These currents flow along the line, and at the distant end pass through the coil of a similar instrument. Here they vary the strength of the magnet, and therefore the pull which it exerts on the iron diaphragm, and so the latter is set into vibration. This in turn sets up sound waves in the surrounding air. The vibrations of the first diaphragm, the currents in the line, and the vibrations of the second diaphragm are copies of the original speech vibrations. In modern telephones the Bell instrument is retained as the receiver, but for the transmitter the carbon microphone is used (see Microphone).

Telephone connexion between distant towns is provided for by trunk lines. The efficiency of trunk lines has been increased by the introduction

of superimposed circuits, that is, by arrangements which permit the same line to be used for more than one conversation simultaneously. A further improvement has been made by the introduction of the thermionic valve relay. See Electricity; Post Office; Sound; Thermionic Valve; Wireless.

TELEPHOTOGRAPHY. OR **PHOTO-TELEGRAPHY.** Name given to the art of transmitting by wire or wireless a drawing or a photograph to be reproduced on paper, or on some medium by means of which it can be transferred to paper. See Phototelegraphy.

TELEPHUS. In Greek legend, a son of Hercules. He became king of Mysia, married Laodice, daughter of King Priam, and was wounded by Achilles. An oracle having declared that the wound could only be cured by the man who inflicted it, and that the help of Telephus was necessary for the taking of Troy, Achilles cured his wound.

TELESCOPE (Gr. *têle*, afar; *skopein*, to see). Instrument formed by a combination of lenses, or of mirrors and lenses, for the purpose of seeing distant objects distinctly.

The essential feature of a telescope is a lens or mirror, called the objective, which collects more of the rays emanating from any point of a distant object than would otherwise enter the eye, and bends or reflects them so that they unite in a point called the focus. The rays then pass through an eyepiece to the eye. The objective gathers sufficient light to make a perceptible image in the focal plane. The eyepiece enables the eye to see that image when as near to it as possible, so that the angle it subtends at the eye may be large.

Early telescopes suffered from two defects known as aberrations. To obviate these defects long telescopes were made, but these proved unwieldy, and "aerial" telescopes were used in which the tube was dispensed with. Chromatic aberration is almost absent in the achromatic telescope, in which the object glass is formed of two or more lenses, convex and concave, which are made of different kinds of glass.

Before the invention of the achromatic object glass it was recognized that a concave mirror with a reflecting surface of parabolic shape would unite, at the focus of the paraboloid, the parallel rays which fell over its surface, and that this would supply an objective free from aberrations. James Gregory, 1663, was the first to give a complete explanation of the construction of a reflecting telescope. The objective is a mirror placed at the end of a tube, the

other end of which is open to the sky. From the object mirror the rays passing down the tube are reflected to one side, or back through a central hole in the object mirror, and then pass through an ordinary eyepiece. In the Herschelian type the image in the object mirror is viewed directly without a secondary mirror. See Astronomy; Lens; Observatory; Reflection; Refraction.

TELEVISION. Reproduction of a visual image at a distance. In 1880 Carey, an American, published details of an instrument to achieve television by imitating the human eye. Rignoux and Fournier, in France, in 1906, were among those who attempted television on these lines. Rühmer, in Berlin, in 1907, constructed a mosaic of selenium cells as transmitter and a corresponding bank of lights as receiver. In later devices it was sought to bring small units of the scene to be transmitted in turn before a light-sensitive cell. Bélin, in Paris, used oscillating mirrors to direct a beam of light over the lace to be transmitted. C. Francis Jenkins, in Washington (1925), used glass disks ground at the edge as a prism to zigzag his light beam, and

that the wound could only be cured by the man who inflicted it, and that the help of Telephus was necessary for the taking of Troy, Achilles cured his wound.

TELESCOPE (Gr. *têle*, afar; *skopein*, to see). Instrument formed by a combination of lenses, or of mirrors and lenses, for the purpose of seeing distant objects distinctly.

The essential feature of a telescope is a lens or mirror, called the objective, which collects more of the rays emanating from any point of a distant object than would otherwise enter the eye, and bends or reflects them so that they unite in a point called the focus. The rays then pass through an eyepiece to the eye. The objective gathers sufficient light to make a perceptible image in the focal plane. The eyepiece enables the eye to see that image when as near to it as possible, so that the angle it subtends at the eye may be large.

Television. 1. Neon lamp. 2. Photo-electric cell. 3. Baird television receiver

1 and 2, courtesy of Baird Television, Ltd.; 3, General Electric Co., Ltd.

in this way he obtained shadows of objects.

On Jan. 27, 1926, John L. Baird gave a demonstration of light and shade television to members of the Royal Institution, when the human face was transmitted. Baird used a scanning disk which carried two spirals of lenses, and the reflected light from the illuminated object was caused to affect a photo-electric cell. The apparatus then used is exhibited at the South Kensington Museum.

In April, 1927, the American Telephone and Telegraph Co. gave a demonstration of television by land line and by wireless. Using the same disk

method Dr. E. F. W. Alexanderson, for the General Electric Co., broadcast, in Jan., 1928, images of faces to several homes in New York.

On Sept. 30, 1929, the B.B.C. and the Baird Television Co. started a public television broadcasting service.

THE BAIRD TELEVISION PROCESS. The person to be televised sits in front of a screen facing a small window in a partition dividing the darkened studio from the apparatus. Facing him above are several photo-electric cells. Light from an optical projector is focused on to the subject through the window, and by means of a scanning disk the beam is made to traverse strip by strip the whole of the area comprising the subject (i.e. the sitter's head and shoulders, and the background). Each

Telescope. Above, Gregorian form. Below, Newtonian, with eyepiece in side of tube

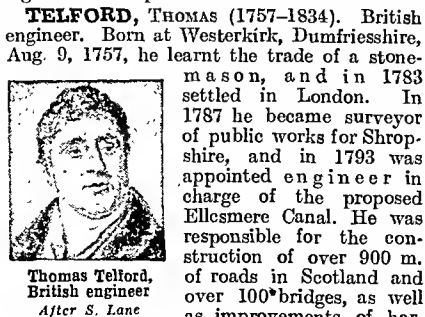

Television, the Baird System. 1. Diagram showing how the subject is explored by moving light spot: a, projector; b, scanning disk; c, d, photo-electric cells. 2. Scanning disk: area occupied by image is shown in black rectangle. 3. Illuminated area on background, formed by light strips. Dark band at top furnishes the synchronising signal

portion thus scanned has a particular light value, and the current from the photo-electric cells varies in strength according to the intensity of the light reflected on to them at any instant from the subject. The current from the cells is amplified, and caused to modulate the carrier wave sent out by wireless to be picked up by distant receiving apparatus.

The receiver comprises a scanning disk revolving in front of a neon lamp at the same speed as the transmitting disk and in phase with the latter. Both disks contain 30 rectangular holes arranged in a spiral near the periphery. The lamp, which has a large rectangular anode plate, is connected in the output circuit of a wireless receiver, and when the television signals are picked up they cause a fluctuating current in the neon lamp, so that its anode glows with a varying intensity proportionate to the current strength. The current strength, of course, is dependent on the light value of the area of the subject being scanned.

Each hole in the disk traverses an area of the illuminated plate corresponding in position with the part of the subject area then being explored by the light spot of the transmitter. Owing to persistence of vision the light strips are not seen separately or successively, but the thirty, combined side by side, build up a light picture of the subject being televised. The image is viewed by a magnifying lens and its size and shape is controlled by a mask. Synchronisation is effected automatically, a periodic impulse sent out from the transmitter actuating a magnetic device on the receiver, and thus holding sending and receiving disks in step.

Thomas Telford, British engineer
After S. Lane

at Wick, Aberdeen, Peterhead, Banff, Leith, etc. He superintended the construction of many roads in England, and the Menai suspension bridge. Telford died Sept. 2, 1834.

TELL, WILLIAM. Legendary national hero of Switzerland. He is first mentioned in a ballad and a chronicle. It relates that Gessler, the tyrannical bailiff of the duke of Austria, ordered those who passed to salute the duke's hat set up in Altdorf. Refusing to do so, Tell, a peasant of Uri, escaped execution by shooting an apple placed on his young son's head. Taken as prisoner in a boat with Gessler and his men, he leapt ashore during a storm, and from an ambush shot the tyrant. Tell then led a rising, resulting in Swiss independence. These events are dated 1307. It has been shown that the story is unhistorical. Schiller's great drama, *Wilhelm Tell*, was written 1804, and Rossini's opera, *Guillaume Tell*, was produced in 1829.

TELL-EL-AMARNA. Ancient city on the right bank of the Nile. It is 25 m. upstream from Beni Hasan, Upper Egypt. In 1892 Flinders Petrie excavated, in Akhenaton's royal residence Akhetaton, stucco pavements with naturalistic paintings and much pottery. About 300 clay tablets in Babylonian cuneiform, from the archives of Amenhotep III, and Akhenaton, recovered in 1887 and subsequently, include letters from Mesopotamian kings and Syrian governors.

Temperature. Map showing the actual average temperature experienced throughout the year in the British Isles, indicating the difference in temperature between the highlands and lowlands

TELLURIUM. One of the non-metallic elements. Its chemical symbol is *Te*, atomic weight 127.5, atomic number, 52. It is found in small quantities in the native state, but usually combined with metals, e.g. as tetradymite or bismuth telluride. Tellurium is greyish-white with a metallic lustre, and was long thought to be a metal, but belongs to the sulphur group of elements.

TELPHERAGE (Gr. *tele*, far; *pherein*, to bear). Name given to a form of cableway transportation in which the supporting trolleys are equipped with their own self-propelling electric motors. See *Rope*.

TEME. River of Wales and England. It rises on the borders of the cos. of Radnor and Montgomery and flows S.E. to join the Severn 1½ m. S. of Worcester, after a course of 60 m.

TÉMÉRAIRE. British warship. The first was a wooden vessel carrying 98 guns captured from the French at the battle of the Nile. Under Harvey she fought at Trafalgar. Her record won for her the name of the *Fighting Téméraire*, and she was immortalised by Turner's picture showing her tugged to her last berth. In 1875 another *Téméraire*, an ironclad, was built. The third *Téméraire* was a Dreadnought launched in 1907.

TEMORA. Township of New South Wales. It is 296 m. by rly. S. of Sydney, and is a centre for the goldfields and for a sheep rearing dist. Pop. 3,600.

TEMPE (Gr. *cuttings*). Name of a valley in Thessaly. Lying between Mts. Olympus and Ossa, about 6 m. long, and watered by the river Peneus, it was associated with the worship of Apollo, and was one of the most important passes of northern Greece. Its modern name is Lykostomo, wolf's mouth.

TEMPERATURE. Condition which determines the direction of flow of heat energy from one substance to another with which it is in contact. Substances at a high temperature impart heat to all adjoining substances which are at a lower temperature. Temperature is measured by a thermometer.

The atmosphere owes its temperature almost entirely to solar heat. Everywhere there are rhythmic changes of air temperature; daily, with the march of the sun across the sky and, annually, with the variation in the sun's altitude; the changing seasons testify to this solar source of warmth. But the atmosphere receives little solar heat directly, otherwise the mountain tops would not be snow-capped. The sun warms the land and the sea, which in turn warm the air impinging on their surfaces, and this air moves and carries heat to air at higher levels. See *Aethrioscope*; *Atmosphere*; *Thermometer*.

IN MEDICINE. The temperature of the body may afford valuable help in the diagnosis of disease. In health the bodily temperature is about 98.6° F., but varies slightly during the day, being most often rather higher in the evening than in the early morning.

TEMPERING. Process for the hardening of metals. The metal is heated to a certain point and then cooled rapidly or slowly in accordance with the result required. Wrought iron and mild steel are often case-hardened. See *Metallurgy*.

TEMPEST, MARIE (b. 1866). Stage name of Marie Susan Brown, British actress. Born July 15, 1866, and educated abroad, she made her first appearance on the stage as Fiametta in the operetta of Bocaccio, at the Comedy Theatre, London, 1885. She won great popularity in comic opera, performing in the title-role of Dorothy 931 times (Lyric, 1887), but really made her name as a comedy actress in *Becky Sharp*, 1901. She visited America in 1890, and, again in London, produced many plays under her own management. She appeared in *The First Mrs. Fraser* at the Haymarket, London, 1929-30.

Marie Tempest, British actress
Hoppe

Templars. Name by which the knights of the order of the Temple are sometimes known. See *Knights Templars*.

TEMPLATE or **TEMPLET.** Pattern made of wood or sheet metal to show the outline size of a thing, the position of bolt-holes, rivet-holes, etc. In masonry, templates are slabs of hard stone set in a wall to take the ends of a beam or girder, and so to distribute the stress over a greater area.

TEMPLE (Lat. *templum*). Building dedicated to the worship of a god or goddess. The first temple of the Romans was simply the space of earth and sky marked off by an altar for divination. Egyptian temples were built by degrees over a long period, each new king adding to the original plan by building new courts in front of old ones, or converting courts into covered halls, until a vast area was covered by the sacred building. The solid materials used gave permanence. Temples in Mesopotamia were built of unbaked bricks.

The Hindu temples of India resemble those of the Egyptians in regard to successive growth, though their style is widely different, the peculiar religious ideals of the Indians finding expression in luxuriant and involved ornamentation rather than in rational principles of construction. Many are cut out of solid rock. The pagoda form is well illustrated at Madura. Buddhist temples in China and Japan are generally of two storeys. The Greek temple affords the most conspicuous examples of Greek architecture. See Agrigutum; Benares; Cave Temple; Karnak; Kyoto; Pantheon; Rome, etc.

THE TEMPLE AT JERUSALEM. Occupied by three temples in succession, the site of this was on the E. ridge, sometimes called Moriah, separated from the main part of the city by the Tyropoeon valley. Solomon's temple, described in 1 Kings 6, 7, appears to have belonged to the Phoenician type, with certain Egyptian and Aegean features. Destroyed by Nebuchadrezzar, 586 B.C., it was rebuilt by Zerubbabel, encouraged by Haggai and Zechariah, 520-516 B.C. Herod the Great, who had in 37 B.C. destroyed the temple, began in 20 B.C. to rebuild it on a magnificent scale. The area, doubled in size, and 26 acres in extent, was surrounded by a lofty colonnade, triple on the S. side. It was burnt by the Romans, A.D. 70.

The Temple was a group of buildings formerly standing in Paris, originally the headquarters of the order of Knights Templars.

TEMPLE. District of London. It lies between W. Fleet Street and E. Strand and the Thames, was the property, 1184-1313, of the Knights Templars (q.v.), then of the Knights of St. John of Jerusalem (q.v.), and since 1608 has belonged to the two inns of court, middle and inner, who maintain the church. The E. or Inner Temple portion is marked by the device of a winged horse; the W. or Middle Temple by the lamb and flag. The Middle Temple Hall was built 1562-72, the entrance tower being added in 1832.

THE TEMPLE CHURCH. One of the four round churches in England, this is in the Temple, London, and is the church of the Inner and Middle Temple. Its head is the Master. It was built by the Knights Templars, was consecrated in 1185, and is dedicated to S. Mary. It contains recumbent marble figures of the Templars of the 12th and 13th centuries, and other ancient monuments. Outside is the grave of Oliver Goldsmith. See Knights Templars.

TEMPLE, EARL. British title held by the family of Temple since 1749. About 1590 John Temple bought the estate of Stowe. His son Thomas was made a baronet in 1611, and from him the earls are descended. The title was first bestowed upon Hester, daughter of Sir Richard Temple of Stowe. She married Richard Grenville, and their son was Richard Grenville Temple, who was lord privy seal 1757-61, and is known as the brother-in-law and colleague of Pitt.

On his death, in 1779, the earldom passed to a nephew, George Grenville-Temple-Nugent. Twice lord-lieutenant of Ireland, he was made marquess of Buckingham, and was the father of the 1st duke of Buckingham and Chandos who, in 1822, was created Earl Temple of Stowe, with remainder to his granddaughter Anna, who married W. H. P. Gore-Langton. On the death of the 3rd duke of Buckingham, in 1889, the original earldom of Temple became extinct, and the new earldom passed to W. S. Gore-Langton.

TEMPLE, FREDERICK (1821-1902). British prelate. He was born in the Ionian Islands, Nov. 30, 1821, second son of Major Octavius Temple, lieutenant-governor of Sierra Leone. In 1846 he was ordained, and for some

years he was an inspector under the board of education. From 1857 to 1869 he was headmaster of Rugby. In 1869 he was chosen bishop of Exeter, and in 1885 was translated to London, remaining there until elected archbishop of Canterbury in 1896. He died at Lambeth, Dec. 23, 1902.

TEMPLE, SIR WILLIAM (1628-99). English diplomatist. Eldest son of Sir John Temple (1600-77), master of the rolls in Ireland, he was born in London and educated at Emmanuel College, Cambridge. After a period of foreign travel he married Dorothy Osborne in 1655, represented Carlow in the Irish parliament, 1660, and began his diplomatic career in 1665. In 1668 he effected the alliance between England, Holland, and Sweden; and in 1677 brought about the marriage of William of Orange and Mary. He spent the latter part of his life at Moor Park, Surrey, where Jonathan Swift was his secretary. He died Jan. 27, 1699. Temple wrote Memoirs, Letters, and Essays, as well as some verse.

TEMPLE, WILLIAM (b. 1831). British prelate. Born at Exeter, Oct. 15, 1831, the second son of Frederick Temple, he was educated at Rugby and Balliol College, Oxford. From 1904 to 1910 he was in Oxford as fellow and tutor of Queen's College, and from 1910-14 he was head of Repton School.

Temple, London. Interior of Middle Temple Hall, built 1562-72. Above, Temple Church

Ordained in 1908, he became rector of S. James's, Piccadilly, in 1914, and canon of Westminster in 1919. In 1920 he was chosen bishop of Manchester, and in 1928 succeeded Lang as archbishop of York.

TEMPLE BAR. E. boundary of the city of London liberties. The spot in that street has been marked since 1830 by Temple Bar Memorial. The original bar or chain was superseded in 1533 by a stone gateway, which was replaced, 1670-72, by another, built by Wren. This was removed, 1878-79, and re-erected, 1888, at Theobald's Park. At Temple Bar, on the occasion of a royal visit to the city, the lord mayor of London presents the civic sword to the sovereign.

TEMPLEMORE. Urban dist. of co. Tipperary, Irish Free State. The centre of an agricultural district, it stands on the Suir, 11 m. S. of Roscrea, on the Gt. Southern Rlys. The town was founded by the Templars. Pop. 2,233.

Frederick Temple, British prelate

TEMPLE NEWSAM. Estate of Yorkshire (W.R.), 3½ m. from Leeds. The name is due to the fact that here, in 1181, the Knights Templars built a house. After the suppression of the order the estate passed to the family of D'Arcy and

came later to the Meynell Ingrams. From them it was inherited by the Hon. E. Lindley Wood, afterwards Lord Irwin, who sold the estate in 1921 to the corporation of Leeds.

TEMPO (Ital. time). Term relating to the pace of music, and not to time in the technical sense. It is usually indicated by Italian words which have now gained a cosmopolitan meaning. These words are sometimes exact in signification, e.g. *lento*, slow; *presto*, quick; sometimes they are indicative of character, e.g. *allegro*, gay; *andante*, going. They can be modified by the addition of other words.

TEMPSFORD. Village of Bedfordshire. Situated at the junction of the Ouse and Ivel, on the L.N.E. Rly., it is 9 m. N.E. of Bedford. The Early English church of All Saints was restored in 1867. Pop. 468.

TENANT. In English law, one who holds, i.e. possesses property of which another is the owner. In theory, no one in England is the owner of land. He always holds of someone; and, if of no one else, of the king. This is part of the feudal law. Thus we speak of a tenant in fee simple, a tenant in fee tail, a tenant for life, a tenant for years, a tenant from year to year, a weekly tenant, etc.

In a more limited sense, a tenant is one who holds for a definite period,

subject sometimes to notice to quit, at a rent. A service tenant is one who holds a tenement as part of his contract of service and as part of his remuneration.

In England, tenant right is a custom whereby an outgoing agricultural tenant can recover from his landlord compensation for some labour expended, or improvement effected by the tenant in the holding, of which by reason of the termination of the tenancy he has not reaped the full benefit. In Ireland, tenant right means the right of a tenant to remain in his holding, and not to have his rent raised except under certain conditions. See Land; Landlord; Rent.

TENBURY OR TENBURY WELLS. Market town of Worcestershire. It is 22 m. N.W. of Worcester on a branch line of the G.W. Rly. It is on the river Teme, which here forms the boundary between Worcestershire and Shropshire. There are pump and bath rooms for the medicinal springs, which yield water beneficial to gouty and rheumatic complaints. In the vicinity is the church and college of S. Michael, built in 1856, for the study of sacred music. Market day, Tues. Pop. 1,922.

TENBY. Borough, seaport, market town, and watering place of Pembrokeshire. With a

Temple Bar. The old London gate before its removal in 1878

station on the Great Western Railway, it is 9½ m. E. of Pembroke, on Carmarthen Bay. Formerly a busy seaport, Tenby now depends on its increasing popularity as a seaside resort. The town walls,

repaired by Henry VIII, are mostly existing, while the keep of the castle, built by the Flemings, is still almost intact. The church of S. Mary was restored in 1885. There was a Flemish colony of weavers in Tenby in the 12th century. Market day, Sat. Pop. 4,830.

TENCH (*Tinea vulgaris*). Fresh-water fish of the carp family, a native of Europe, including Britain, and of parts of Asia Minor. Attaining a length of about 18 ins. with a weight between 3 lb. and 4 lb., its upper parts are olive, paling to light grey beneath, but the coloration varies with its surroundings. The fish inhabits still waters, preferably those with deep muddy bottoms, in which it can hibernate, and on which in summer it lies lazily. Its food is mainly water weeds and the snails and insects found among them. With proper treatment it is a palatable food.

Tench. European fresh-water fish swimming among weeds

TEN COMMANDMENTS. Term used for the Decalogue, or code of ten laws given through Moses to the children of Israel. They formed part of the Jewish law and were adopted by the Christian Church, finding a place in the prayer book of the Church of England and in other service books. They are given in Exodus 20. See Decalogue.

TENDON. Fibrous cord which connects the fleshy part of a muscle with the bone into which the muscle is inserted. Rupture of a tendon is most frequently the result of violent strain. Satisfactory recovery usually occurs.

The tendon of Achilles is a stout tendon forming the lower part of the gastrocnemius muscle. It passes down the leg and is inserted into the back of the heel. The name perpetuates the legend that it was the place where Achilles was vulnerable and received his fatal wound. See Anatomy; Muscle.

TENEBRAE (Lat. darkness). Name given in the R.C. liturgy to the office of matins and lauds of the three last days of Holy Week. Originally said in the early hours of the morning; the combined office is now said or sung, by way of anticipation, on the evenings.

TENEDOS. Turkish island in the Aegean Sea off the W. coast of Asia Minor. About 6 m long and 2 m. broad, its area is 16 sq. m. Formerly belonging to Turkey, it passed to Greece under the treaty of Sévres, 1920, but was returned to Turkey in 1923. Pop. 6,052.

TENERIFE, TENERIFFE, OR SANTA CRUZ. Largest of the Canary Islands. The island is of volcanic origin and is crowned by the Peak of Tenerife, El Pico de Teide, 12,100 ft. alt., with a crater 300 ft. in diameter and 70 ft. deep. The Peak, which erupted in 1910, may be seen more than 100 m. away and forms a landmark for navigators. The chief town and seaport is Santa Cruz de Tenerife. Its area is 782 sq. m. Pop. 176,998.

TENIERS. Name of a family of Flemish Artists. The first to attain distinction was David Teniers the elder (1582-1649). He studied under Rubens and passed most of his life in Antwerp. The National Gallery, London, and other European galleries contain many of his works.

Thomas Telford, British engineer After S. Lane

son, David Teniers the younger was born in Antwerp, Dec. 15, 1610, and was his father. Nearly 1,000 of his pictures are known to exist; mostly small ones, but many of great interest. They show the life of the people of his time, and are of great value as illustrations of the life of the people of his time. He died at Antwerp, 1690.

TENISON, THOMAS (1636-1715). English prelate. Born at Cottenham, Sept. 29, 1636, he was educated at Norwich and Cambridge. Ordained in 1659, he held livings in Cambridge and at Norwich—S. Peter Mancroft—and in London—S. Martin's-in-the-Fields. In 1691 he was made bishop of Lincoln and in 1695 archbishop of Canterbury. He died Dec. 14, 1715. When at S. Martin's-in-the-Fields he built and endowed a school for boys. From 1871 to 1928 this was in Leicester Square.

In 1928 it was moved to a new building near the Oval at Kennington, where there is accommodation for 450 boys and a roof playground.

TENNANT, SIR CHARLES (1823-1906). British merchant. Born at Glasgow, Nov. 4, 1823, he was educated there, and in 1846 joined his father as partner in the chemical works at St. Rollox founded by his grandfather, another Charles Tennant (1768-1838). Tennant also secured interests in explosive, mining, and other companies. He represented Glasgow and Peebles and Selkirk in Parliament, 1878-86, and in 1885 was made a baronet. Tennant made a fine collection of pictures by British masters, now housed at 34, Queen Anne's Gate, London, and known as the Tennant Gallery. He died June 4, 1906.

His eldest son, Edward (1859-1920), was made Lord Glenconner in 1911.

The youngest son, Harold John Tennant (b. 1865), was Liberal M.P. for Berwickshire, 1894-1918. He was parliamentary secretary to the board of trade, 1909-11; financial secretary to the war office, 1911-12; under-secretary for war, 1912-16; and secretary for Scotland, July-Dec., 1916. One of his daughters was the countess of Oxford and Asquith.

TENNESSEE. State of the U.S.A. In the N. the river Cumberland enters and leaves the state by way of Kentucky. Maize, wheat, oats, peanuts, tobacco, and cotton comprise the chief crops, and a considerable quantity of hardwood is obtained. Coal, iron, copper, phosphate, and marble are worked, and iron and steel, timber products, cotton, leather, and tobacco are among the manufactures. Two senators and ten representatives are returned to Congress. Nashville is the capital. It was admitted to the Union in 1796. Its area is 42,022 sq. m. Pop. 2,502,000.

The Tennessee river is a tributary of the Ohio. It flows through the state and into Kentucky. With tributaries it is 1,200 m. long.

TENNIEL, SIR JOHN (1820-1914). British artist. The son of a teacher of dancing, he studied at the R.A. schools. In 1850 he began to supply a weekly political cartoon to Punch, and continued this work till he retired in 1901. Although deprived early, through a fencing accident, of the sight of one eye, he was a meticulously accurate draughtsman, and always effective in his humour. His illustrations to Lewis Carroll's *Alice's Adventures Under the Looking-Glass* are famous. He was knighted in 1893 and died Feb. 25, 1914. See Cartoon; John Bull.

Sir John Tenniel, British artist Elliott & Fry

TENNIS. Game played with a ball and rackets by two or four persons on a walled court divided across the middle by a net. The game was first played with the hand and in the open air. By degrees the racket was developed, chiefly in Italy, and in that country, France, England, and elsewhere courts were built for the game.

There is no standard size for a tennis court, which is an oblong building with four walls and roof, but the main dimensions are about as follows—greatest internal length 110 ft., greatest internal breadth 38 ft. 10 ins., length of floor 96 ft., breadth of floor 31 ft., height of side walls in play 24 ft., height of end walls in play 30 ft. The net is 5 ft. high at the sides and 3 ft. in the centre of the court. Round the outer walls there runs on three sides of the court an inner wall with a sloping roof.

Tennis. Plan of court: a, passage beneath penthouse; b, galleries; c, dedans; d, tambour; e, service line; f, pass line; g, grille; h, net; i, chaises; k, galleries. Above, right, tennis racket

This roof, which joins the outer walls at a height of 10 ft. 7 ins., and the inner wall at a height of 7 ft. 2 ins., is known as the pent-house. The remaining outer wall, known as the main wall, is plain, with one buttress known as the tambour. On one side, the service side, there is a large opening in the inner end wall known as the dedans, and on the other, the hazard side, is a small opening in the inner end wall known as the grille. In the inner side walls on either side of the net are a number of openings known as galleries. The last opening farthest from the net on the hazard side is known as the winning gallery. The rackets are made of ash, and weigh 15-17 ozs.

TENNYSON, ALFRED (1809-92). British poet. Born Aug. 6, 1809, at the Rectory, Somersby, Lincolnshire, he was the fourth son of the Rev. George Clayton Tennyson, and was educated at Louth Grammar School.

After leaving school he prepared, mainly with the help of his brother Charles, the Poems by Two Brothers, and entered Trinity College, Cambridge, where he met Arthur Henry Hallam.

Tennyson made his first real bid for public recognition with Poems Chiefly Lyrical in 1830, but he did

little more until 1842, when he published the famous two-volume edition of his poems. With *The Princess*, 1847, he manifested new style and power. The year 1850, in which he married and was appointed poet laureate in succession to Wordsworth, was made memorable by the publication, at first anonymously, of *In Memoriam*. Two other works were to crown the poet's career—*Maud*, in 1855, and the prolonged series of *Idylls of the King*, 1859-72.

The poet was amazingly prolific in his old age, and his successive volumes excited interest amounting to enthusiasm. His first drama was published when he was 66; and Queen Mary, though doubtfully received, was followed rapidly by *Harold and Becket*, all on the Elizabethan model; later came *The Falcon*, *The Cup*, *The Promise of May*, and *The Foresters*. Of greater value were his *Ballads and Poems*, 1880. He died Oct. 6, 1892, and was buried in Westminster Abbey.

Alfred, Lord Tennyson, British poet

In 1884 Tennyson was made a baron, and this title passed to his only surviving son, Hallam Tennyson (1852-1928). He was governor-general of Australia, 1902-04, and wrote the standard life of his father, 1907.

Licnel Hallam Tennyson (b. 1889), the 3rd baron, was famous as a cricketer. He served throughout the Great War, being wounded three times. He played cricket for Eton, and afterwards for Hampshire. He played for England against Australia in 1921, becoming captain after the first two test matches. In 1921 he was made captain of Hampshire, and he was still captain in 1930.

TENOR (Lat. *tenere*, to hold). Musical term with several connotations. The male voice which lies between the bass and the alto, having moreover its own distinctive quality, is called tenor, because when a lower part was added to the plainsong, the latter was said to be "held" by the higher voice. Tenor is also applied to one of the trombones and to a military drum. In a peal of bells, the tenor is the lowest in pitch. The tenor clef is the C clef placed on the fourth line of the stave.

TENREC (Centetes). Genus of small mammals of the order Insectivora. Natives of Madagascar, they are much like hedgehogs in appearance and habits, being sometimes known as the tailless groundhog. They are about 14 ins. in length, brown in colour, and are clothed with a mixed

Tenrec. Madagascan mammal resembling the hedgehog

coat of hair and spiny bristles. They have long pointed muzzles and rudimentary tails. They partially roll up when attacked. Their food consists of insects (beetles) and occasionally frogs.

TENTERDEN. Borough and market town of Kent. It is 62 m. from London on the Southern Ry. The 13th century church of S. Mildred has a massive Perpendicular tower. On its N. side is an exelusion, or penitentiary, where Protestant martyrs were imprisoned in Queen Mary's reign. The town is an agricultural centre in the Weald district. Market day, Mon. Pop. 3,438.

TENTERFIELD. Municipality in Clive co., New South Wales. A road junction on the main rly. line from Brisbane to Sydney, 11 m. from Wallangarra on the border, it is the centre of a pastoral district. Pop. 2,700.

TEOCALLI (Mex. god-house). Pre-Columbian temple-pyramid in Mexico and Central America. Usually a solid earth or stone four-sided step-pyramid, a winding ascent or a stairway on each side led to a temple-crowned platform. The five-terraced Aztec pyramid in Mexico city, 375 ft. by 300 ft., was surmounted by shrines of colossal deities. See Aztec.

TERBIUM. Rare earth metal of the yttrium group. Its symbol is Tb; atomic weight 159.2; atomic number 65. It was isolated from yttrium in 1843 by Mosander, and is found in gadolinite.

TERBURG OR **TERBORCH**, GERARD (c.1617-81). Dutch painter. Born at Zwolle, he studied under his father, Geert Terburg, and Pieter Nolinj at Haarlem. He settled at Deventer, Holland, where he became burgo-master. As a painter of pleasant Dutch interiors he has few rivals.

TEREBENE. Colourless liquid with a pleasant smell resembling thyme and camphor. It is prepared by thoroughly shaking American

oil of turpentine with successive quantities of sulphuric acid. The product is then distilled. Terebene is used as an inhalation in affections of the throat and lungs. Painters' terebene is a preparation added to paints to promote drying, and consists of manganese and lead soaps dissolved in oil of turpentine.

TEREBINTH OR **TURPENTINE TREE** (*Pistacia terebinthus*). Small tree of the order Anacardiaceae, a native of the Mediterranean

Terebinth. Foliage and flower sprays of the turpentine tree

region. Its height is about 30 ft. The small, greenish flowers are without petals and in large clusters. From incisions in the bark a resinous fluid is obtained, the Chian or Cyprus turpentine. Horn-shaped galls, useful for dyeing and tanning, are also obtained from this tree. *P. lentiscus* yields fruits of *P. vera* are called pistachio nuts.

TEREDO OR **SHIPWORM**. Genus of marine bivalve molluscs. The valves of the helmet-shaped shell are small and gaping, and the worm-like animal is a foot or more long. For the protection of the eleven-twelfths that are not covered by the shell it secretes a chalky tube. Using the shell as a tunnelling shield, the teredo, with its foot, bores into submerged timber. A pair of siphons extend through the chalky tube and open into the water. Through one siphon water is inhaled to the gills, and then exhaled through the other laden with the wood pulp excavated by the foot. The burrow is made merely as a retreat.

TERENCE (c. 194-159 B.C.). Roman comic poet, whose full name was Publius Terentius Afer. Devoting himself to translating Greek drama into the Latin tongue, his first play, *Andria*, was produced in 166, and its instant success admitted its author into a brilliant literary group, including Caius Laelius Lucilius and Polybius. *Andria* was followed by *Heeyra* 165, *Heaton Timorumenos* 163, *Eunuchus* and *Phormio*, both in 161, and *Adelphi* 160. Terence was supposed to have died in 159 or 158 B.C. of grief at the loss at sea of his translations of Menander. He is a great figure in Roman literature.

TERESA (1515-82). Spanish nun and saint. Of the noble Castilian family of Cepeda, she was born at Avila, March 28, 1515, and in 1534 entered a Carmelite convent. Experiencing a sudden conversion in 1555, she practised extreme austerities and saw many visions. Resolved to reform the order, she founded with a few companions a new convent at Avila in 1562. She secured the foundation of many reformed Carmelite convents both for men and women. These were placed under a separate administration approved by the pope in 1580. Teresa de Jesus, as she

Teresa, Spanish saint After Rubens

called herself, died at Alva, Oct. 4, 1582. She was canonised in 1622.

One of the greatest women Spain has produced, S. Teresa described her own spiritual experiences and life in *The Way of Perfection* and *The Book of the Foundations*.

TERM (Lat. *terminus*, boundary line). Word used in many cognate senses. In English legal procedure the legal year was divided into four terms or periods when the courts at Westminster were open. These were: Michaelmas, Nov. 2-25; Hilary, Jan. 11-31; Easter, April 15-May 8; Trinity, May 22-June 12. In 1873 the judicial terms were abolished, their place being taken by sittings of the courts. At the Inns of Court, however, the terms are still kept by students. School and university years are also divided into terms.

TERMINUS. In Roman mythology, a deity who presided over boundaries and frontiers. When a boundary was fixed, a sacrifice was made and a trench dug, into which the body of the animal, together with other offerings, was put. A fire of pine branches was then lighted in the trench and the stone or emblem of Terminus was erected upon the ashes.

TERMITE OR **WHITE ANT**. Family (Termitidae) of neuropterous insects, natives of all the warmer countries of the world. They are entirely distinct from the ants. There are exceedingly prolific females ("queens") of huge dimensions, smaller males, workers, and "soldiers." They are all pale and soft-bodied, and very sensitive to light. They tunnel underground, cementing the walls of their runs with their excrement, which hardens into a brick-like substance; of this material some species erect tall, conical "ant hills," sometimes 20 ft. high. Termites live mainly upon decaying vegetation.

TERN (*Sterna*). Genus of sea-birds of the gull family (Laridae). Characterised by their long wings, forked tails, and short legs, they feed mainly upon fish, which they snatch from the sea with great skill. They are poor walkers, and when seen on land are mostly resting. Five species—common tern, Arctic tern, roseate tern, little tern, and Sandwich tern—breed in Britain, while several others are occasional visitors.

Tern. Common species of the British long-winged sea-bird W. S. Berridge, F.Z.S.

TERN. River of Shropshire. It rises in the N.E. of the co., and joins the Severn 4 m. S.E. of Shrewsbury, after a course of 30 m. Its chief affluent is the Roden.

TERNI. City of Italy. It stands on the river Nera, near its union with the Velino, 68 m. by rly. N.N.E. of Rome. The 13th century cathedral has been much altered and restored. Among ancient relics are an amphitheatre, theatre, baths, temple, sculptures, and a necropolis. In the vicinity are the Velino waterfalls, which descend about 650 ft. in a series of leaps. In 1928 a scheme was completed for using the water to generate electric power. Pop. 71,442.

TERPANDER (fl. c. 700 B.C.). Greek poet and musician. A native of Lesbos, he wrote lyrics, of which only scanty fragments have survived, and is said to have been the first to set poetry to music.

TERPENES. Hydrocarbons which form the chief constituents of the essential oils obtained from plants. They are colourless

volatile liquids with the exception of camphene, which is a solid resembling camphor. Pinene, one of the group, is a constituent of American and French oil of turpentine. From it an artificial camphor is obtained. Limonene, another terpene, occurs in lemon, orange, bergamot, and caraway oil.

TERRA COTTA (Ital. baked earth). Unglazed earthenware of fine fired clay, either red or yellow. In English use the term is rarely applied to pottery. The ancient Greeks employed terra cotta extensively in architecture and statuary. In the 14th century architectural decoration in terra cotta revived in Germany and N. Italy, and much use was made of it in the Renaissance age. In the second half of the 19th century the material was favoured for facing and decorating important buildings, partly because of its resistance to the corrosive action of the atmosphere peculiar to great cities.

***TERRAPIN.** Name applied to various water tortoises of the family Testudinidae, but attaching specially to *Malacoelemmys terrapin*, a native of the salt marshes on the E. coast of N. America. The terrapin is an omnivorous feeder and of amphibious habits. See Tortoise.

Terrapin. Species of water tortoise, used as food in the U.S.A.
W. S. Berridge, F.Z.S.

TERRIER. Group of domestic dogs. Its name (Fr. terrier, a rabbit burrow) indicates the original use of these dogs for unearthing game, and is used to include dogs such as the bull terrier, and others whose relation to the true terriers is rather remote. All terriers have short, arched skulls and alert appearance, and possess a high degree of intelligence. See Airedale; Fox Terrier; Griffon; Irish Terrier; Skye Terrier.

TERRISS, WILLIAM (1847-97). Stage name of the British actor, William Charles James Lewin. Born in London, Feb. 20, 1847, he made his first appearance in London in T. W. Robertson's comedy, *Society*, in 1865, and scored his first considerable success as Squire Thornhill in Wills's *Vicar of Wakefield* at The Court, March 30, 1878. He was in Irving's company at The Lyceum, 1880-85. He was stabbed to death by a madman outside the Adelphi theatre, Dec. 16, 1897. His daughter Ellaline (Mrs. Seymour Hicks), has won many successes in musical comedy. See Hicks, E. S.

TERRITORIAL ARMY. Second line of defence of the British military organization, formerly called the Territorial Force. The country was divided into districts and the counties taken as units, each having a Territorial Force Association, under the lord-lieutenant. Men from 17 to 35 years of age were eligible for enlistment, serving for four years. They were expected to attend a training camp each year, and also certain drills and musketry exercises. They undertook to serve in any part of the U.K. in case of invasion, but not abroad. The Force dates from 1907.

The strength of the force on July 1, 1914, was 255,864, and recruits enlisted between then and June 28, 1916, totalled 888,989. The Territorial casualties in 1914-18 (excluding officers) were 115,576 killed, and the grand total, killed, wounded, and missing, was 541,245. In 1921 the name was changed to the Territorial Army. In 1930 its strength was 3,226 officers and 79,869 other ranks.

TERRITORY (Lat. terra, earth). Land belonging to a city or state. It is used in the U.S.A. for a district which has not received state rights. Canada and Australia use the word in the same sense; Canada has the North-West Territories and Australia Northern Territory. See Federalism; Sovereignty; State.

Territorial waters is a term for the sea within a distance of three miles of a country's coastline, regarded as belonging to it.

TERROR. Volcano on Ross Island, South Victoria Land, Antarctica. lat. 77° 30' S., and reaches an alt. of about 11,000 ft. It was discovered by Sir J. Ross, 1841, and was named after his vessel. It is situated in

TERRY, EDWARD O'CONNOR (1844-1912). British actor. Born in London, he went on the stage in 1863, and from 1868-75 was principal comedian at the Strand Theatre, London, making a special success in 1874 as Paul Pry in Poole's comedy of that name. He played at the old Gaiety Theatre, 1876-85, and in 1888 produced at the theatre called after his name *Pincro's sentimental comedy*, *Sweet Lavender*. Terry died April 3, 1912.

Edward Terry, British actor
Elliott & Fry

TERRY, DAME ELLEN ALICIA (1848-1928). British actress. Daughter of Benjamin and Sarah Terry, popular provincial actors, she was born at Coventry, Feb. 27, 1848, and at the age

of eight made her first appearance, as Mamilins, at the Princess's Theatre, London, in Kean's revival of *The Winter's Tale*. In 1864 she married the painter, G. F. Watts. This marriage was soon dissolved, and Ellen Terry returned to the stage in 1867, acting with H. Irving. In 1868 she married E. A. Wardell (Charles Kelly), and retired from the stage for six years. She joined the Bancrofts in 1875, and following this she became leading lady to Henry Irving, and began a long series of triumphs in Shakespearean and other characters. In 1902 Ellen Terry and Mrs. Kendal appeared in *The Merry Wives of Windsor*, under Tree, at His Majesty's. In 1907 she married an American actor, James Carew. In 1925 she was created G.B.E. She died July 21, 1928.

Dame Ellen Terry, British actress
Histed

TERRY, FRED (b. 1863). British actor. Born in London, Nov. 9, 1863, the brother of Ellen Terry, his first stage appearance was at the Haymarket Theatre in 1880. The next few years he toured with Ben Greet's and other companies, visiting America in 1885. Two years later he settled in London, and was successively in the companies of Tree, Forbes-Robertson, Alexander, and Irving. In 1900 he and his wife, Julia Neilson, produced *Sweet Nell of Old Drury* at The Haymarket. One of his greatest successes was as Blakeney in *The Scarlet Pimpernel*.

TERTIARY. Name of a period of geological time. It is sub-divided into the Eocene, Oligocene, Miocene, and Pliocene systems, and rocks of this period lie below the Quaternary, Pleistocene, and Glacial deposits, and above the Cretaceous. During the Tertiary period the climate over the world was comparatively mild, and even sub-tropical in N. latitudes, and huge animals, fishes, and amphibians flourished, more closely resembling existing species than those of the Cretaceous.

TERTULLIAN (c. 155-c. 230). Christian theologian, whose full name was Quintus Septimius Tertullianus. The son of a Roman centurion, he was born at Carthage, was well educated, and probably became an advocate.

Converted to Christianity about 190, he was ordained priest, and devoted his life to the defence of the faith. About 202 he adopted the Montanist heresy, and became the leader of this sect in Africa. Of his many works the chief is the *Apologeticum*.

TESCHEN. Town of Poland. It is known to the Poles as Cieszyn, and to the Czechs as Tesin. It stands on the right bank of the Olsa, a tributary of the Oder. Originally an independent principality, the duchy and town fell in 1625 to the crown of Bohemia, and to Austria in 1722. The treaty of peace which ended the war of the Bavarian succession was signed here, May 13, 1779. In 1920 the Teschen dist. was divided between Poland and Czechoslovakia, the town being given to Poland. Pop. 23,336. See Silesia.

TESLA, NIKOLA (b. 1857). American inventor. Born at Smiljan, Yugoslavia, in 1884 he went to America, became naturalized, and for a time worked for Thomas Edison. He discovered the rotary magnetic field which resulted in the multi- and polyphase systems of electric current transmission. Tesla invented a large number of electrical appliances and improvements, including the Tesla coil, oscillators, arc lamps, etc., and carried out some remarkable experiments.

TEST. River of Hampshire. It rises near Upton and flows S. past Stockbridge and Romsey into Southampton Water, near Totton. Near Fullerton it is joined by the Anton, and the united stream is sometimes known by that name.

Tetanus. Infective disease caused by the bacillus tetani. See Lockjaw.

TETANY. Spasmodic contraction of the muscles, most often of the hands and feet. It occurs in children suffering from rickets, and less frequently in adults after removal of the thyroid gland, or in the course of certain diseases. Treatment is directed towards curing the underlying cause.

TETBURY. Market town and urban dist. of Gloucestershire. Situated 10 m. S.W. of Cirencester, on the G.W. Rly., it marks the site of an ancient British camp. The church of S. Mary Magdalene replaced a Norman church. Market day, Wed. Pop. 2,146.

TETRADYMITE. In mineralogy, name given to a mineral, bismuth telluride. It is usually mixed with sulphur and selenium, and is found in Scandinavia, the U.S.A., etc. The mineral, which has a metallic, steel-grey lustre, is often associated with gold-bearing quartz.

TETRARCH (Gr. tetrates, four; archon, to rule). Ruler of one of four parts of a region. Losing its original meaning, the word came to be applied to minor rulers, and especially to the princes of Syria under the Roman emperors. Herod Antipas, to whom Christ was sent by Pilate, was tetrarch of Galilee (Luke 3, 1). See Herod.

TETRAZZINI, LUISA (b. 1874). Italian soprano singer. Born in Florence, she there made her first appearance in *L'Africaino* in 1895. Her first London appearance was in 1907. She sang at the Manhattan Opera House, New York, 1908, and thereafter her career was triumphal, both on stage and concert platform. Her voice was of extraordinary range and tone. In 1921 she published a volume of recollections, *My Life of Song*.

Luisa Tetrazzini, Italian singer

TETTENHALL. Urban dist. and parish of Staffordshire. Situated 2 m. W. of Wolverhampton, it possesses a fine church, S. Michael's, with monuments of the Wrottesley family. In the neighbourhood is Wrottesley Hall, the seat of Lord Wrottesley. Tettenhall College is a Nonconformist public school. Pop. 5,489.

TETUAN. Town on the N.E. coast of Morocco. It is about 6 m. from the bay of Tetuan, and is connected with its port, at the mouth of the Rio Martin, by a short rly. A rly. has been constructed from Tetuan to Ceuta, 25 m. Tetuan is the capital of the Spanish zone and the headquarters of the Moroccan khalifa, who rules under the control of the Spanish high commissioner. Pop. 24,000, of whom 4,500 are Jews and 6,500 Europeans.

TETZEL, JOHANN (c. 1460-1519). German friar. Born at Leipzig, he became a Dominican. He was employed in 1517 by the elector of Mainz as a seller of indulgences, half the proceeds being remitted to the pope as a contribution towards the cost of building St. Peter's. Luther denounced this sale of indulgences in his theses, Oct. 31, 1517. To these Tetzel replied, but with such extravagance as to involve himself in obloquy and disgrace, and he retired to the Dominican convent at Leipzig, where he died July 4, 1519. See Luther.

TEUCER. In Greek legend, first king of Troy. Teucri was an alternative name for the Trojans. Another Teucer was the half-brother of Ajax who fought on the Greek side at the siege of Troy. See Troy.

TEUTON. Name denoting a group of peoples, of the Caucasian or white race, whose languages constitute the Teutonic sub-family of Indo-European speech. The word Teutonic, used by the late Roman writers as synonymous with Germanic, is preferred in modern English because Germanic is liable to confusion with German, which has a narrower implication. It is derived from the tribal name of the Teutones, who lived probably in or near Jutland in the 2nd century B.C.

The Teutonic languages form one of the great divisions of the Indo-European family, also called the Germanic languages. Their chief characteristics are the sound-shiftings known as Grimm's and Verner's laws, the development of the weak and strong adjectival forms and of the preterite of weak verbs. Like other Indo-European languages, the Teutonic are inflexional.

TEUTONIC ORDER. Order of knight-hood established in 1198. Originating in the charity of some German merchants who established a hospital during the siege of Acre, 1190, it was formally constituted in Jerusalem, 1198. Membership was confined to Germans of noble birth. Although its headquarters for a century (1191-1291) were at Acre, the order carried out its greatest work in Germany, where it undertook the conquest of Prussia.

Acquiring political importance, the order ruled large districts on the borders of Poland and Russia, owing allegiance to no power save the pope. Its seat was moved to Marienburg in 1308, and for another hundred years the grand masters there held their court and ruled extensive territories. In 1526 its grand master Albert of Brandenburg became a Protestant and made the territories an hereditary grand duchy. The order continued to exist, with headquarters at Mergentheim, until 1809. See Knighthood; Prussia.

TEVIOT. River of Scotland, in Roxburghshire. It rises near the eo. boundary and joins the Tweed near Kelso, after a course of 37 m. There are salmon and trout fisheries. The valley is known as Teviotdale.

TEWFIK PASHA (1852-92). Khedive of Egypt. Son of Ismail Pasha, he was born Nov. 15, 1852, and in 1879 succeeded his father, who had been deposed. The confusion into which Ismail's policy and extravagance had thrown the country necessitated the intervention of Britain and France. This foreign influence occasioned the rising in 1882 of Arabi Pasha, who was defeated at Tel-el-Kebir (q.v.). In 1884, at Baring's persuasion, Tewfik evacuated the Sudan. He died Jan. 7, 1892.

TWESKESBURY. Mun. bor. and market town of Gloucestershire. On the Avon, near the Worcestershire border and 10 m. N. of Gloucester, it has a station on the L.M.S. Rly. Its church, once the church of the great Benedictine abbey here, is one of the finest Norman buildings in England. The central tower, N. porch, and W. front are perfect examples of the style. Other buildings of interest are the grammar school, founded in 1576, the town hall, corn exchange, and Tolsey Hall. There are also many fine old houses in the town, which figures as Nortonbury in John Halifax, Gentleman. Market day, Wed. Pop. 4,704.

The battle of Tewkesbury was fought May 3, 1471.

Tewkesbury. Church of the old Benedictine Abbey, a notable example of Norman architecture

during the Wars of the Roses. In it the Lancastrians were routed and their cause lost, and Queen Margaret was captured and her son Edward was killed.

TEXAS. Largest state of the U.S.A. In the S. of the country, it has about 400 m. of coastline on the gulf of Mexico. Its area is 265,900 sq. m. A series of low, sandy islands lie along the coast. The chief rivers are the Red, Sabine, Trinity, Brazos, Colorado, Guadalupe, Pecos, and Grande, the last named separating the state from Mexico. Agriculture and stock-raising are the staple industries, and as a cotton growing state Texas takes the lead. The forests, about 47,000 sq. m. in extent, yield yellow pine and oak. Austin is the capital. Pop. 5,487,000.

Texas was settled in the 17th and 18th centuries by Spaniards, taking its name from an Indian tribe. When Mexico declared itself an independent state in 1821, Texas was included therein. Texas was a republic from 1836 until 1845, when the Texans entered the union. The question of the boundary between the new state and Mexico led to the Mexican war of 1846.

TEXEL. Island of the Netherlands, in the West Frisian group. To the N. of the island is the dist. called Eijerland, or Land of Eggs, from the large numbers of sea-birds' eggs. De Burg is the chief town. Off Texel the English fleet, under Monk, defeated Tromp, July 31, 1653. Its area is 71 sq. m. Pop. 7,378.

THACKERAY, WILLIAM MAKEPEACE (1811-63). British novelist. He was born at Calcutta, July 18, 1811, and was educated at Charterhouse from 1822-28, and later at Trinity College, Cambridge. In 1833 he purchased The National Standard, which he edited for the few months it survived, and in 1836 he went to Paris as correspondent for the short-lived Constitutional. He wrote a good deal in those early days for Fraser's Magazine, to which he contributed stories, essays, verses, caricatures, art criticism, and reviews.

W. M. Thackeray, British novelist. After Samuel Laurence

Somo of these appeared in volume form, notably The Paris Sketch Book, 1840. He became known to a wider public by his contributions to Punch, especially the sketches on snobs and on Jeames.

Fame in the broader sense came to Thackeray with the publication of Vanity Fair, which was issued in monthly parts during 1847-48. Pendennis appeared 1848-50, and Esmond was published in three vols. in 1852. In 1852 Thackeray went to the U.S.A. to deliver lectures on The English Humourists of the 18th Century, which he had already given in England. On his return he published The Newcomes, 1853-55. In 1855, in which year was issued The Rose and the Ring, he went again to America to lecture on The Four Georges, which series he presently gave in London and the provinces. He then wrote The Virginians, 1857-59. The Cornhill Magazine was founded in 1860, and to it he contributed Lovel the Widower, 1860, Philip, 1861-62, and many delightful Roundabout Papers, 1860-63. The fragment, Denis Duval, appeared posthumously. 1864. Thackeray died on Christmas Eve, 1863.

THAIS. Athenian courtesan. She is said to have accompanied Alexander the Great on his Eastern campaigns, and to have persuaded him, during a drunken bout, to set fire to the old palace of the Persians at Persepolis, by way of reprisal for the destruction of Athens by Xerxes. Dryden's ode, Alexander's Feast, 1697, describes the event.

THALER. German silver coin. First struck at Joachimsthal, Bohemia, about 1519, it was current in Germany until the 19th century, and was the unit of the German monetary union until 1873, when it was replaced by the mark. The word dollar is a modern corruption.

THALES (640-550 B.C.). Greek philosopher, one of the seven wise men of ancient Greece. Born in Miletus, Asia Minor, and supposed to be of Phoenician descent, he was the first human being, so far as is known, to suggest a scientific as opposed to a mythological explanation of the universe. Thales held that water was the all-pervading principle of the universe, and that all material substances were variants of water. He also held that the universe is a living creature. Thales is regarded as the pioneer in the sciences of geometry and astronomy among the Greeks.

Thalia. In Greek mythology, one of the nine Muses, whose province was pastoral poetry and comedy. See Muse.

THALLIUM. One of the rare metallic elements. Its chemical symbol is Tl, atomic weight 204.39; atomic number 81. It is found in small quantities in iron and copper pyrites, in copper and silver ores as thallium selenide, and in certain mineral waters and rare earths. It is a soft, lead-like metal which oxidises easily on exposure to the atmosphere. All the compounds are extremely poisonous.

Thallophyta. Division of plant life which includes the two sub-divisions the algae and the fungi. See Algae; Fungus.

THAME. Market town and urban dist. of Oxfordshire. It stands on the Thame, 12 m. from Oxford, on the G.W. Rly. The chief building is the church of St. Mary the Virgin, mainly Early English, with some remarkable tombs and other monuments. There is a town hall and a grammar school founded by Lord Williams of Thame (d. 1559). Thame Park is a fine house standing in a large park. Market day, Tues. Pop. 2,918. Pron. Tame.

THAMES, THE (Lat. Tamesis or Tamisis). Longest and most important river in England. It rises on the E. side of the Cotswolds in four headstreams: Thames or Isis, Churn,

however, the Thebans ejected their Spartan masters and entered on the struggle for independence, and Epaminondas led her troops to victory over Sparta at Leuctra in 371 B.C.

Though Thebes could not maintain her supremacy, she joined with Athens in resisting Philip of Macedonia, but the allied troops were crushed at Chacrona in 338 B.C. After Philip's death she revolted against Alexander the Great, bringing on herself final destruction in 336 B.C. Nothing was left standing except the temples and the house of Pindar the poet.

THECLA. Saint and virgin of Asia Minor. A member of a noble family, she lived in Iconium, Lycaonia, and was there converted by S. Paul. She was much persecuted for her faith, but is said to have lived to the age of 90, dying in Seleucia.

THEEBAW (d. 1916). King of Burma, 1878-85. Son and successor of Mindon, Theebaw inaugurated his reign by murdering all his relations who might jeopardise his power. Bad government and neglect of obligations soon strained his relations with Britain, and war was declared, Nov. 9, 1885. An expeditionary force entered Burma, and on Nov. 26 Theebaw submitted, the country being annexed by Great Britain, Jan. 1, 1886. The ex-king was sent to India, where he died Dec. 16, 1916. See Burma; Mandalay.

THEFT. Compendious term which covers many forms of acquiring property dishonestly. It is properly confined to the taking of money or goods, or securities for money or goods, feloniously. The most common form of theft is the taking away of the property of another.

Another form is where a person has property committed to his possession and, with intent to defraud, appropriates it to his own use. When a servant takes his master's property out of his master's premises (e.g. money out of the till) it is larceny; but where, having received money on behalf of his master, he fraudulently appropriates it, it is embezzlement. See Larceny.

THEISM. In the widest sense, a term denoting a belief in the existence of a Divine Being or Beings. Theism may thus include both polytheistic and pantheistic conceptions of religion. In modern usage, however, the word has acquired a much more definite connotation. It is not only restricted to monotheism, but it implies as well a certain relationship between God and the universe. In this technical sense, theism is the belief in an infinite eternal spiritual Personality who is perfect in goodness and beauty, who is immanent in the universe yet infinitely transcends it. There are only three types of pure theism in the history of religion—Judaism, Christianity, and Islam. See Christianity; Deism; Theology.

THEISS, TISZA, or TISA. River of Central Europe, formerly entirely within Hungary. It rises in Ruthenia, Czechoslovakia, flows S. and then W., and then passes into Hungary to form, at its bend at Csap (Cap), part of the boundary between Hungary and Czechoslovakia. It then flows past Senta (Zenta) to join the Danube below Titel. The river has a very tortuous course, estimated to exceed 800 m. in length. Pron. Tice.

THELUSSON, PETER (1737-97). British merchant. Born in Paris, June 27, 1737, son of the envoy of Geneva, he settled in London in 1762, and was naturalised. He acquired an immense fortune in trading with the Continent and the West Indies, and died July 21, 1797. His son Peter Isaac was created Baron Rendlesham in 1806.

Thellusson, after making some provision in his will for his wife and children, left instructions for the residue of his estate to accumulate during the lives of his three sons and of their sons, and for the fortune thus accumulated to go to the eldest male descendant of his sons.

This will was established, but the public disadvantage inherent in its principle led to the passing of the Accumulations Act of 1800. Pron. Tel-lus-on.

THEMIS. In Greek mythology, daughter of Uranus and Ge, the wife of Zeus before Hera. Among her children by Zeus were the three Horae or Hours and the Fates. Themis was the personification of law and order and presided over the oracle at Delphi before Apollo. Pron. Themmis.

THEMISTOCLES (c. 514-449 B.C.). Athenian statesman. Realizing the capacity of Athens for maritime development, he foresaw that imperial ascendancy would follow upon naval supremacy. Themistocles procured the ostracism or exile of the conservative leader Aristides in 483, and secured the direction of Athenian policy.

Themistocles, Athenian statesman

When the Persians invaded the Greek peninsula in 480 their fleet was annihilated at Salamis by the Greek fleet under Themistocles. In 479 the diplomacy of Themistocles compelled Sparta to advance to the protection of Attica and fight against the Persians at Plataea (q.v.). He carried through the re-fortification of the Piræus before Sparta could prevent it; and from this time the Athenian naval supremacy was assured. In 471 B.C. he was charged with peculation, and was expelled from Athens. In his exile he was accused of treasonable intrigues with Persia. In Athens it was believed that he took poison through despair at the failure of his schemes. See Greece. Pron. Themiss-tokleez.

THEOBALD'S PARK. Mansion and park in Hertfordshire, England. The mansion, of red brick, built 1765-70, is 1 m. W. of Waltham Cross, and at one of the park entrances old Temple Bar (q.v.) was re-erected in 1888. The famous palace of Theobalds, built by Burghley, stood 1½ m. N.W. The remains of the palace disappeared in 1765. It gave its name to Theobald's Road, which runs from Southampton Row to Gray's Inn Road, London. Pron. Tibbalds.

THEOCRITUS (c. 270 B.C.). Greek poet. Born at Syracuse, he lived for a long time at Alexandria at the court of Ptolemy Philadelphus. A rude poetry in the Dorian dialect had been characteristic of the shepherds and rustics of his native Sicily, but Theocritus was the first to raise such poetry to the dignity of literary form. His poems abound in passages of exquisite beauty, and show much dramatic skill. Some 30 extant poems known as Idylls (Gr. eidyllia, little pictures) are attributed to Theocritus. He has had many imitators, Virgil's Eclogues being closely modelled on the Idylls. Among later imitators are Spenser and Milton. There is a prose translation by Andrew Lang; also one by Edmonds, in the Loeb Classical Library.

Theocritus, Greek pastoral poet From a bust

THEODOLITE. Instrument for measuring horizontal and vertical angles, although some of the simpler forms measure only horizontal angles. It is commonly employed in surveying to obtain a system of triangles in a horizontal plane and the positions of objects within the triangles. When altitudes are measured separately, they are generally applied to give corrections by calculation to chain or other actual measurements upon the surface.

Theodolite, Instrument used by surveyors By courtesy of Negretti & Zambra

The instrument consists of a small telescope mounted to turn about a vertical axis passing through the centre of a horizontal graduated circle, and also about a horizontal axis, so that it may be set at any elevation. If fitted with a vertical graduated circle in which the telescope can be rotated, it is called a transit theodolite. See Surveying; Transit Circle.

THEODORA. Name of two Byzantine princesses. (1) Wife of Justinian I. Born in Cyprus or Constantinople, she was in turns actress, courtesan, then mistress and wife of Justinian. She had great influence over her husband and took a prominent part in politics and religious affairs.

(2) Wife of the East Roman emperor Theophilus. After his death, 842, she administered affairs for her infant son Michael III. In opposition to her husband, she was a supporter of the worship of images, which was definitely restored at a synod convened by her at Constantinople.

THEODORIC (c. 454-526). King of the Ostrogoths, called the Great. He was born

Theodora (centre), wife of Justinian I. From contemporary mosaic in the church of S. Vitale, Ravenna

in Pannonia, the son of Theodemir, by whom he was sent at an early age as a hostage to Constantinople. On succeeding his father as king of the Goths in 473 he received signal marks of favour from the East Roman emperor Zeno, who gave him permission to attack Odoacer in Italy. The treacherous murder of the latter left Theodoric master of that country, which he ruled nominally as Zeno's viceregent, but in reality as an independent sovereign. During his 33 years of rule Italy was at peace, and consequently prospered exceedingly. He died Aug. 30, 526, and was buried at Ravenna in a splendid mausoleum, which is still to be seen.

THEODOSIUS. Names of Roman emperors of the East. Theodosius I was born

in Spain, the son of Theodosius, a general of Valentinian I. He served under his father in Britain, and as commander-in-chief in Moesia defeated the Sarmatians in 374. In 379 he was called to the eastern throne by Gratian, the emperor of the West, just after the disastrous defeat of the Romans by the Goths at Adrianople. Theodosius was equal to the emergency, and by 382 had cleared the Balkan peninsula of the Goths. The reign of Theodosius was marked by the complete triumph of orthodox Christianity. Both Theodosius and Gratian were dominated by S. Ambrose, and the result was seen in the many enactments prohibiting both pagan and heretical worship in both sections

of the empire. Theodosius, by punishing with unnecessary severity a riot in Thessalonica, incurred the displeasure of the great churchman, and had to do penance. Theodosius died at Milan, Jan. 17, 395.

Theodosius II succeeded his father Arcadius at the age of seven, being placed under the guardianship of his sister Pulcheria. His name is chiefly associated with the code of laws, *Codex Theodosianus*.

THEOGNIS (c. 540-500 B.C.). Greek elegiac poet. He was a native of Megara, in Attica. A collection of some 1,400 verses to which his name is attached contains a bitter attack upon the bad citizens, the democrats, who are contrasted with the good, the aristocrats. Most of the poems are addressed to a young Megarian noble named Cynus and in addition to a number of *gnomes* or sententious maxims, sing the praises of wine and club life. Much of the collection is of later date.

THEOLOGY. Science which deals with our knowledge of the nature of God and His relation with the world. There may be deep religious experience without any highly developed theology, but some kind of belief about the meaning of the world and the character of the Divine is implied in all forms of religion. Every religion, therefore, has a theology, explicit or implicit. The aim of theology is to give a coherent account of religious beliefs, to indicate their relations with one another, and to bring them into harmony with the general knowledge and thought of the time.

There is a close connexion between theology and philosophy. Both agree in attempting to interpret the meaning of the world as a whole. Theology, however, although it pursues rational methods, lays stress on the importance of revelation, in which it finds its most significant material for the solution of the problems which it has in common with philosophy, and a large part of its task consists in interpreting revelation and vindicating its claim.

A common distinction is made between natural and revealed theology. The truths of natural theology are those which are attainable by the human reason and may be reached by philosophy. Other truths which, though not contrary to reason, are not discoverable by its unaided power are said to belong to revealed theology.

THEORBO. Large lute with a double neck, having two sets of tuning pegs. The lower set applied

Theorbo of the 17th century

onwards are in part derived. Paracelsus, Giordano Bruno, and above all Jacob Boehme, were prominent theosophists.

In a narrower sense the term is generally applied to a system propagated by H. P. Blavatsky and H. S. Olcott, who founded the Theosophical Society in 1875 in the U.S.A.

It aims at establishing a universal brotherhood by showing the unity of all religions, especially in their esoteric teaching, manifested by occult phenomena. See *Besant, A.*

THEOTOCOPULI, DOMENICO, known as *El Greco* (c. 1547-1614). Greco-Spanish painter. Born at Candia, Crete, he studied at Venice under Titian, and painted portraits and religious pictures in Rome. Settling in Spain about 1577, he worked at Toledo as painter, architect, and sculptor until his death in that city, April 7, 1614. *El Greco* anticipated modern impressionism by his use of cold white, blue, and grey colour-schemes, and by his sacrifice of truth of drawing to emotional effect. The *Burial of the Count of Orgaz*, painted 1578, is considered his masterpiece. See *illus. p. 203.*

THERM. In physics, name given to the British thermal unit of heat, generally abbreviated B.T.U. It is the amount of heat required to raise one pound of water at its maximum density through 1° F. The calorie (q.v.) is the corresponding metric unit of heat. A therm equals nearly 252 calories. The gas therm, by which gas is charged to consumers, is equal to 100,000 B.T.U. See *Gas; Heat.*

Thermionic Valve. 1. Marconi Transmitting Valve (3 ft. long). 2. Receiving valve, mains screen-grid type. 3. Detector valve with outer wall removed

THERMIONIC VALVE. Instrument largely used in telegraphy and telephony, especially wireless. The triode or three-electrode valve consists of an exhausted glass bulb containing (a) a metal wire, the filament, (b) a metal plate, the anode, and (c) a wire network, the grid, placed between the anode and the filament. When the filament is heated (e.g. by current from a battery) electrons are given off, and if another battery is connected between filament and anode a current can then be sent from the anode through the bulb to the filament. This electron stream has to pass through the grid, by varying the potential of which as regards the filament the strength of the anode current can be controlled. Valves are employed as transmitters and receivers in wireless telegraphy and telephony, and as sensitive relays in the ordinary telegraphy and telephony systems.

The diode, or two-electrode valve, was invented by Fleming in 1904. It contained

a filament and a plate. The three-electrode valve was patented by Lee de Forest in 1906. In 1907 de Forest patented his amplifying circuit, in which the incoming signal impulses were caused to vary the grid potential of the valve, and so to cause much greater changes in the strength of the anode current. In 1913 Franklin coupled grid circuit and plate circuit, making use of regeneration or reaction, energy thus being fed back from anode circuit to grid circuit. Meissner (1913) utilised a similar arrangement to obtain continuous oscillations from the valve, so that it functioned as a generator. See *Amplifier; Grid; Reaction; Wireless.*

THERMIT. Mixture of magnetic iron oxide and aluminium powder used for the production of high temperatures. The mixture is placed in a crucible and the reaction started by means of a priming of barium peroxide and aluminium powder, into which a piece of magnesium ribbon is inserted and fired. A very violent reaction takes place, and a temperature of about 3,000° C. is obtained. The compound is used for welding iron or steel rails together, and can be employed in situ. It is also employed for repairing steel castings which have defects in them.

THERMODYNAMICS (Gr. *thermē*, heat; *dynamis*, power). Science which deals with the relations between heat and work. There are two fundamental laws of thermodynamics. The first states that a definite quantity of heat is absorbed for each unit of work produced, and conversely that a definite quantity of heat is produced by a given quantity of work. The second law states that it is impossible to convey heat from one body to another at a higher temperature by the agency of a purely self-acting machine. In other words, heat energy of itself always passes from high to low temperature. See *Carnot, L.N.M.; Heat; Joule; Specific Heat.*

THERMO-ELECTRICITY. Study of electric currents caused by heat. Seebeck, in 1822, noticed that when a circuit was formed of two or more different conductors and the junctions of the conductors were at different temperatures, an electric current was produced varying in strength with the differences in temperature. Such a junction is called a thermo-couple. By coupling up alternate strips, say, of antimony and bismuth, an instrument known as the thermopile is formed, enabling very small temperatures to be measured.

THERMOGRAPH. Self-registering thermometer. The movements of the thermometer are registered on a clockwork revolving drum, sometimes by a pen which traces a curve, and sometimes photographically.

THERMOMETER. Instrument for measuring temperature. Its invention is probably due to Galileo. Fahrenheit introduced the alcohol thermometer in 1709. In 1714 Fahrenheit used mercury, and fixed the freezing point of water and its boiling point as two points in his scale, dividing the distance between them into 180 degrees. This is the thermometer now most commonly used in Great Britain, the U.S.A., etc. Réaumur, in 1731, divided the difference between the freezing and boiling points of water into 80°, and this type of thermometer is still in use on the Continent. The centigrade thermometer,

due to Celsius in 1742, calls the freezing point of water 0° and the boiling point 100°, and is the thermometer most used by scientists.

The ordinary mercurial thermometer consists of a long capillary sealed glass tube terminating in a glass bulb. The bulb and the lower part of the tube contain mercury, the upper part of the tube being a vacuum.

CONVERSION OF SCALES. To convert centigrade readings into Fahrenheit, multiply by 9 and divide by 5. Then add or subtract 32, according as the degrees are positive or negative. To convert Réaumur to Fahrenheit, multiply by 9 and divide by 4. Then add or subtract 32 as above. See Bolometer; Heat; Hygrometer; Pyrometer; Temperature.

THERMOPYLAE. Pass in Greece, leading into Thessaly. It afforded the only passage for an army from N. to S. Greece, and an heroic effort was made to hold it in 480 B.C. against the Persians by a small Greek force of some 1,000 men under Leonidas, king of Sparta. As the result of treachery, the Persians were enabled to take the Greeks in the rear, who were all killed. Pron. Ther-moppy-lee.

THERMOSTAT. Automatic apparatus or instrument for regulating temperatures, or for giving warning of an undue rise of temperature. It is particularly a device in which the expansion of a metal or a volume of gas acts directly or indirectly through an electric circuit upon an alarm, or, in another type of apparatus, to control a source of heat. It is used in conjunction with fire alarms, for regulating the positions of furnace dampers, controlling steam pressures, etc. In some types of incubator the temperature is regulated by a thermostatic capsule. See illus. p. 764.

THERSITES. In Greek legend, the ugliest man in the Greek army before Troy. He is represented as a man of the people who delighted in disputing with his superiors. Pron. Ther-sight-eez.

THESEUS. In Greek legend, the great hero of Attica and Athens. The unacknowledged son of Aegeus, king of Athens, he was brought up at Troezen by his mother, Aethra, who gave him his father's sword and sent him to Athens. Acknowledged by Aegeus as his son and successor, he slew the bull of Marathon, went to Crete and, helped by Ariadne, killed the Minotaur. On the death of Aegeus, Theseus became king of Athens. He led an expedition against the Amazons, married their queen, Hippolyte, who bore him Hippolytus. Failing to carry off Persephone from Hades as a wife for Peirithous, Theseus was confined in Hades until released by Hercules. On returning to Athens he found that Helen's brothers, Castor and Pollux, had recovered their sister. Theseus retired to Seyros, and was there murdered by Lyeomedes. His alleged bones were brought to Athens in 469 B.C., and a temple was built to receive them. See illus. p. 965.

THESPIA (6th century B.C.). Founder of the Greek drama. He was born at Icaria in Attica, an early seat of the religious worship of Bacchus, in the drunken festivals connected with which Athenian tragedy and comedy originated. In order to give the Dionysian chorus some rest Thespis introduced an actor into these exhibitions, devising a linen mask so that the actor might sustain more than one character. He invented the prologue and the dialogue of Greek drama, while by placing the actor upon a table so that he might be on an

equal elevation with the chorus ranged upon the steps of the altar of Bacchus, he introduced the earliest form of stage. See Drama.

THESSALONIANS, EPISTLES TO THE. Two of the Epistles of S. Paul, usually grouped by themselves as being the earliest of his writings. S. Paul visited Thessalonica, the modern Salonica, on his second missionary journey, and made many converts there; but the opposition of the Jews necessitated a hurried withdrawal to Berea. Later he sent Timothy to Thessalonica, and on his return the apostle wrote from Corinth the First Epistle to the Thessalonians. The Second Epistle was written from the same place, not long after the first, which it resembles closely, and both belong to the year A.D. 52 or 53.

THESSALY. District of N. Greece, between Epirus and the Aegean Sea. It consists mainly of the basin of the river Salambria (Peneus), a depression roughly circular in shape and about 70 m. across, almost entirely surrounded by mts. The central plain produces much grain, and was famous in antiquity for horse-breeding. In the S.E. the peninsula of Magnesia encloses the land-locked gulf of Volo. Most of Thessaly was ceded by Turkey to Greece in 1881, and in 1897 it was the chief scene of the Greco-Turkish War.

THETFORD. Borough and market town of Norfolk. It lies at the junction of the Thet and the little Ouse, 14 m. N. of Bury St. Edmunds, on the L.N.E. Rly. Formerly the capital of the kingdom of East Anglia and the seat of a bishop, it has ruins of a Cluniac priory, 1104, and a Dominican friary, 1340. The principal trades are brewing and tanning; there are also an iron foundry and agricultural machinery works. Market day, Sat. Pop. 4,706.

Thetford Mines. City of Quebec. It is 76 m. S. of Quebec. There are asbestos and chrome iron mines. Pop. 7,886.

THETIS. In Greek mythology, one of the Nereids, or sea-nymphs. She was the wife of Peleus and the mother of Achilles. See Achilles; Paris; Peleus.

THEYDON. Name of three parishes in Essex, all near Epping. A fourth Theydon has long been known as Coopersale. Theydon Bois (pron. Boys) has a station on the L.N.E. Rly. Theydon Garmon (or Theydon Gernon) church, All Saints', has a brick tower dating from 1552. Theydon Mount church, S. Michael's, was built in 1600.

THIEPVAL. Village of France. It is on the Ancre river, 4½ m. N.N.E. of Albert. The village, destroyed during the Great War, was prominent in the battles of the Somme (q.v.). A lofty stone tower was dedicated here as a war memorial to the Ulster Division.

THIERS, LOUIS ADOLPHE (1797-1877). French statesman and historian. Born at Marseilles, April 16, 1797, he studied law at Aix, and becoming an advocate made his way to Paris. After the revolution of July, 1830, Thiers proposed Louis Philippe as successor to Charles X. Taking office under his friend Lafitte, the banker, he made his mark as a debater and financier, and from 1832-36 as minister of the interior took drastic measures against the revolutionaries. President of the

Adolphe Thiers, French statesman
After Bonnat

council for short periods in 1836 and 1840, when his foreign policy brought Europe to the verge of war, he was in active opposition till the revolution of 1848. In Dec., 1851, he was arrested and exiled, but though he returned to Paris in Aug., 1852, he did not re-enter politics till 1860. After

the fall of the empire, Sept., 1870, Thiers was elected to the Assembly by 26 departments.

As president of the executive government he faced the tremendous task of reorganizing France. Virtual dictator, he used his power wisely in the true interests of peace, but in May, 1873, he was driven from office by a coalition. Thiers died Sept. 4, 1877. As an historian Thiers won a high reputation by his *History of the French Revolution*, followed by his *History of the Consulate and Empire*.

THIRD PARTY. Term used in English law. Where there are two persons in a definite relation to each other, and someone else is brought on the scene, the latter is spoken of as the third party. Thus, if a principal and his agent are the two parties spoken of, and the agent introduces someone to do business with his principal, this last person is a third party.

An Act of 1930 making important changes in the law about motor vehicles enacted compulsory insurance against third party risks.

THIRLMERE. Lake of Cumberland. Lying under Helvellyn, 5 m. from Keswick, it is a narrow sheet of water about 3½ m. long. The lake is the source whence Manchester obtains its water. The aqueduct is 106 m. long. See Cumberland; Lake District.

Thirlmere. The Cumberland lake after it had been made the reservoir for Manchester

THIRLWALL, CONNOP (1797-1875). British divine and historian. Born at Stepney, Jan. 11, 1797, he was educated at the Charterhouse and Trinity College, Cambridge. A precocious child, his university career was very brilliant. Having been ordained, he became, in 1832, a tutor at Trinity; but he resigned in 1834 because he had expressed himself in favour of the removal of religious tests. In 1840 he became bishop of St. David's, and remained in Wales for 34 years. He died July 27, 1875, and was buried in Westminster Abbey. Thirlwall's *History of Greece, 1835-47*, is a standard work.

THIRSK. Market town of Yorkshire (N.R.). It is 22 m. from York, on the L.N.E. Rly. S. Mary's church is a beautiful Perpendicular building. There is an agricultural trade and works for making agricultural machinery; also flour mills and tanneries. Market day, Mon. Pop. 2,755.

THIRTY-NINE ARTICLES, THE. Colloquial term for the Articles of Religion printed at the end of the Anglican Book of Common Prayer. They constitute a formulary of faith such as was found necessary by all Protestant bodies in the 16th century, and were accepted by Parliament in 1571. They have to be subscribed by all candidates for ordination, are regarded as binding on the lay members of the Church of England, and form part of the statute law of England. Until 1871 subscription to them was obligatory on all taking degrees at Oxford and Cambridge.

The declaration which precedes the Thirty-Nine Articles was drawn up by Laud in 1628, and enjoins their interpretation in a literal and grammatical sense. See Church of England.

THIRTY YEARS' WAR. THE European war which raged over almost all Germany from 1618 to 1648. In 1618 Bohemia rejected the succession of the emperor Ferdinand to its crown, which it offered to Frederick, the elector palatine, who was a Protestant. His acceptance opened the war. In its first phase it was a contest for the crown of Bohemia. The Protestants failed to combine in support of Frederick, who suffered a heavy defeat in Bohemia, Nov. 8, 1621, and was driven out of the Palatinate.

James I of Great Britain made an attempt to assist Frederick, who was his son-in-law, but no good came either of his diplomacy or of the expedition of 1625. The king of Denmark then intervened to save the Protestant cause, but he was defeated by the emperor's army led by Tilly. Wallenstein raised an army which acted independently of the one led by Tilly, and together the two dominated the land. In these circumstances Ferdinand felt able to issue the edict of restitution ordering all land taken by Protestant princes to be restored to the Church.

In 1630 Wallenstein was deprived of his command, and in the same year Gustavus Adolphus, king of Sweden, landed in Pomerania to champion the Protestant cause. For a time he was held inactive by the persistent abstention of Saxony and Brandenburg; he was thereby prevented from saving the city of Magdeburg, which was sacked, May 20, 1631. At last Brandenburg and Saxony joined him and Gustavus defeated Tilly, who was killed a little later, at Breitenfeld, and Ferdinand was compelled to call Wallenstein from his retirement. Gustavus met Wallenstein at Lützen, Nov. 16, 1632, and fell there, but the Swedes won the victory.

From this time the war became a chaos. The Swedes, no longer led by an idealist, were mainly concerned with the acquisition of territory; France joined the combatants and sought to turn the German war to account by the extension of her own borders. German princes, great and small, were more interested in personal aggrandisement than in the common cause, whether of Protestantism or of Roman Catholicism.

In 1648 the war was ended by the treaty of Westphalia, which left German lands in the possession both of Sweden and of France, and to some extent redistributed the territories of German princes. One of its effects was to weaken greatly the Holy Roman Empire.

Thïsbe. In Babylonian legend, heroine of the love tragedy of Pyramus (q.v.) and Thïsbe.

THISTLE. Common name applied to many prickly plants, but more strictly to those of the genus *Carduus* of the order Compositae.

Thistle. Flower of the red musk thistle.

These are perennial or biennial herbs, forming large rosettes of spiny leaves the first year, and developing prickly stems the second year.

The most striking species are the musk thistle, with large, drooping, musk-scented crimson flowers, and the spear thistle (*C. lanceolatus*), with long spines to the large, lance-shaped leaves and purple flowers. The field thistle (*C. arvensis*), with thick creeping underground stem and dark purple flowers, is one of the greatest pests of agriculture. See Carline Thistle; Cotton Thistle.

THISTLE, ORDER OF THE. Scottish order of knighthood. It was founded in 1687, and consists of the sovereign and 16 knights. The knights wear a collar of thistles, alternating with double sprigs of rue in saltire in their proper colours and pendant therefrom a golden star of eight rays, called the glory. Thereon is

the figure of S. Andrew. The ribbon is green and the motto is *Nemo me impune lacessit* (No one attacks me with impunity). The order has a dean and a chapel in S. Giles's Cathedral, Edinburgh. See Knighthood.

THOMAS. One of the twelve apostles. His name, which, like his Greek designation Didymus, means twin, is really an epithet, and his proper name is said to have been Judas. He showed courage in calling on the other apostles to follow Our Lord into Judaea (John 11, 16), and although he would not believe the resurrection without ocular demonstration, yet, when that was granted, he made a confession of faith (John 20, 19-29). According to tradition he preached in Parthia and was buried at Edessa. Later stories make him the founder of a church in India. His day is Dec. 21.

Albert Thomas, French politician

L'Humanité on the foundation of that paper in 1904. In 1910 he was elected to the chamber of deputies. On May 21, 1915, he was made under-secretary of state for artillery and munitions.

After the armistice, Thomas steadfastly opposed the interference of French troops in the internal affairs of Russia, but recommended economic intervention. He was one of the earliest advocates of the League of Nations, and in 1920 he was appointed head of the labour section of the League.

THOMAS, ARTHUR GORING (1850-92). British composer. Born near Eastbourne, Nov. 20, 1850, he studied music in Paris and at the Royal Academy of Music, London, 1877-80. His operas include *Esmeralda*, produced at Covent Garden, 1883; *Nadeshda*, 1885; and the comic opera, *The Golden Web*, posthumously produced in 1893. His choral ode, *The Sun Worshippers*, was first performed in 1881, and his lyric gift was well displayed in a number of successful songs. Thomas committed suicide, March 20, 1892.

THOMAS, BRANDON (1849-1914). British playwright. Born in Hull, he worked as a clerk in Liverpool and Hull before going on the stage in John Hare's company in 1879. He acted in comedy parts in England and the U.S.A., but was more successful as a playwright. His greatest triumph was with his farce, *Charley's Aunt*, produced in 1892. Among his other plays were *Comrades*, 1882; *The Colour-Sergeant*, 1885; *Women Are So Serious*, 1901; and *A Judge's Memory*, 1906. He died June 19, 1914.

J. H. Thomas, British politician

THOMAS, JAMES HENRY (b. 1875). British politician. Born in Wales, Oct. 3, 1875, he was educated in elementary schools, and entered the service of the G.W. Rly. Having made himself a leader among his fellows,

he was elected organizing secretary of the amalgamated society for railway servants, from which he passed to be general secretary of the national union of railwaymen.

In 1910 Thomas was chosen M.P. for Derby in the labour interest, and in 1917 he was made a privy councillor. He took a leading part in all the negotiations about railway strikes, actual or threatened. In 1920 he was president of the trades union congress. In 1924 Thomas was colonial secretary, and in 1929 he was chosen lord privy seal and minister to deal with unemployment. In 1930 he became secretary for the Dominions.

THOMAS, PHILIP EDWARD (1878-1917). British poet and nature writer. Born in London, he was educated at St. Paul's School and at Lincoln College, Oxford. In 1897 appeared his first book, *The Woodland Life*. His volumes of essays include *Horae Solitariae*, 1902; *Rest and Unrest*, 1910; and *Light and Twilight*, 1911. Among his biographies are those of Richard Jefferies, 1909; Swinburne, 1912; and Walter Pater, 1913. Later works are two remarkable volumes of verse, *Poems*, 1917; and *Last Poems*, 1918; a collected edition appearing in 1920. Thomas was killed in France, April 9, 1917.

THOMAS THE RHYMER OR THOMAS RYMOUR (fl. c. 1270). Scottish seer and poet. He lived at Erceuldoune, now Earlsdon, in Berwickshire, whence he is also called Thomas of Erceuldoune. He is supposed to have foretold the death of Alexander III.

According to legend, Thomas was beloved of an elf queen, by whom he was carried off to Elfland, returning with the gift of prophecy.

THOMOND. Ancient dist. of Ireland. It covered the N. part of Munster. It gave its name to the earldom of Thomond, a title dating from 1543 and borne by the family of O'Brien. On the death of Henry, 8th earl, in 1741, the title became dormant. Revived in 1756, the line again failed in 1774, and the marquessate of Thomond, created in 1800, died out in 1855. See Munster.

THOMPSON, FRANCIS (1859-1907). British poet. Born at Preston, of Roman Catholic parents, Dec. 18, 1859, he was educated at Ushaw College.

Francis Thompson, British poet
Elliot & Fry

He then studied medicine in Manchester, but, failing to qualify, he settled in London, where for some time he was in great straits. Two poems written on scraps of paper were accepted by Merrie England, whose editor, Wilfred Meynell, set himself to rehabilitate the poet. Further poems appeared, and Thompson also wrote a considerable amount of literary criticism. His poems include *The Hound of Heaven*, which achieved wide popularity, *The Mistress of Vision*, and *Anthem of the Earth*, all three of very high order. He died Nov. 13, 1907.

THOMPSON, SIR HENRY (1820-1904). British surgeon. Born at Framlingham, Suffolk, Aug. 6, 1820, he was apprenticed to a doctor at Croydon, and in 1844 entered University College, London, as a medical student. In 1850 he was made house surgeon at University College Hospital, and in 1851 started as a medical practitioner in London. He became professor of surgery at University College Hospital in 1866, and Hunterian professor at the College of Surgeons in 1883.

Thompson was an astronomer, and built an observatory at Molesey. He wrote novels and

Sir Henry Thompson, British surgeon

magazine articles. He was an authority on diet, and one of the earliest advocates of cremation. Knighted in 1869, he was made a baronet in 1899, and died April 18, 1904.

THOMPSON, SIR JOHN SPARROW DAVID (1844-94). Canadian politician. Born at Halifax, Nova Scotia, Nov. 10, 1844, he became a harrister. In 1877 he entered the legislature of the province, and in 1878 was made attorney-general. For a short time in 1881-82 he was premier of Nova Scotia, after which he was for three years a judge. In 1885 Thompson left the bench to become minister of justice in the cabinet of the Dominion and a member of the Dominion House of Commons. He remained at that post for seven years, and in 1892 became premier. He died Dec. 12, 1894.

THOMPSON, LYDIA (1836-1908). British actress. Born in London, Feb. 19, 1836, she made her first appearance as a stage dancer at Her Majesty's Theatre in 1852, and the following year scored a success in the Haymarket pantomime, *Little Silverhair*. After a Continental tour she took a company to America in 1868, touring the U.S.A. with great success. In 1874 she returned to the London stage in Farnie's burlesque, *Bluebeard*. She retired in 1904, and died Nov. 17, 1908.

Lydia Thompson.
British actress

THOMSON, CHRISTOPHER BIRDWOOD THOMSON, BARON (1875-1930). British politician. Son of Major-General David Thomson, he was born April 13, 1875, and educated at Cheltenham and the R.M.A., Woolwich. He joined the R.E. in 1894

Lord Thomson.
British politician

and served in the Mahdaland and S. African campaigns, and was on the war office staff, 1911-14. He went to France in 1914; in 1915 became military attaché to Rumania, and later served in Palestine. Later he was at Versailles as military representative on the supreme war council. Military adviser to the Labour party's commission which visited Ireland in 1920, he became secretary for air in the Labour government of 1924 and again in 1929. His peerage dated from 1924. He was killed in the wreck of the airship R101, Oct. 5, 1930.

THOMSON, HUGH (1860-1920). British artist. Born June 1, 1860, in Ireland, he went to London about 1885, and at once found work on *The English Illustrated Magazine*. His work was immediately successful, and specialising in the 18th and early 19th centuries, he illustrated *The Vicar of Wakefield*, Cranford, *Quality Street*, and the works of Jane Austen, Thackeray, Austin Dobson, etc. He also did distinctive topographical drawings in black and white series. He died in London, May 7, 1920.

THOMSON, JAMES (1700-48). British poet. Born at Ednam, Roxburghshire, Sept. 11, 1700, son of the minister of the parish, he entered Edinburgh University, and in 1725 settled in London. In 1726 appeared his famous poem in blank verse, *Winter*. It was followed during the next four years by companion poems, *Summer*, *Spring*, *Autumn*; the quartette being published as *The Seasons* in 1730. The *Masque of Alfred*, 1740, written in conjunction with Mallet, is

James Thomson,
British poet

notable only as containing the lyric, *Rule Britannia*. His only other poem of value is *The Castle of Indolence*, 1748. He died at Richmond, Aug. 27, 1748.

THOMSON, JAMES (1834-82). British poet. He was born at Port Glasgow, Nov. 23, 1834, and educated at the Royal Caledonian Asylum. After some years as an army schoolmaster, he was befriended by Charles Bradlaugh and wrote for *The National Reformer*, in which journal appeared, in 1874, *The City of Dreadful Night*, the gloomy but impressive poem upon which Thomson's fame chiefly rests. A pessimist by temperament, Thomson lived a lonely life, the wretchedness of which was aggravated by his habit of intemperance. He died June 3, 1882. His other works include *Vane's Story*, which has been styled an autobiographical phantasy; some lyrics of beauty, and some prose essays and criticisms.

James Thomson,
British poet

THOMSON, SIR JOHN ARTHUR (b. 1861). British scientist. Born July 8, 1861, he was educated at the universities of Edinburgh, Jena, and Berlin. He became a lecturer at the school of medicine in Edinburgh, and in 1899 was made regius professor of natural history at Aberdeen, a post he held until 1929. Thomson became known owing to the lucid way in which he wrote on scientific subjects for the general public. His books include *The Bible of Nature*, 1909; *Darwinism and Human Life*, 1910; *Introduction to Science*, 1911; etc. In 1930 he was knighted.

THOMSON, JOSEPH (1858-1895). British explorer. Born at Penpont, Dumfriesshire, Feb. 14, 1858, he worked in his father's quarry before studying science at Edinburgh. In 1878 he went with an expedition to Africa, where he did valuable work as an explorer. In 1885 he headed an expedition to Sokoto, and in 1888 explored part of Morocco. His last work was done in Rhodesia for the Chartered Co., and he died in London, Aug. 2, 1895. Thomson wrote several books.

THOMSON, SIR JOSEPH JOHN (b. 1856). British scientist. Born at Manchester, Dec. 18, 1856, he was educated at Owens College, Manchester, and Trinity College, Cambridge. He was a fellow of Trinity in 1880, and Cavendish professor of experimental physics, 1884, a position he retained until 1918. He was appointed professor of physics at the Royal Institution, London, 1905, and awarded the Nobel Prize for physics, 1906. Sir Joseph was appointed master of Trinity College, Cambridge, in 1918. In 1908 he was knighted, and in 1912 was given the O.M.

Sir J. J. Thomson,
British physicist
Russell

THOR. Norse god of thunder, son of Odin (the heavens) and Jord (the earth), husband of Sif (the cornfield); the friend of man and foe of giants. His red beard flaming, he drove to battle in a goat-drawn car. There are numerous stories of his dealings with the giants. His home is Bilskirnir, containing 540 halls. Thursday comes from Thor's dag. See *Mythology*; *Norse*.

THORAX (Gr. breastplate). Anatomical name for the chest. The thorax in man is conical in shape, the front being formed by the breastbone and cartilages of the ribs, the sides and back by the ribs, the back being completed by the dorsal vertebrae of the spine.

THOREAU, HENRY DAVID (1817-62). American author and naturalist. Born at

Concord, Mass. July 12, 1817, and educated at Harvard, he became a teacher and a surveyor; but in 1845 took up his abode in a hut on the shores of Walden Pond. Providing for his wants by casual manual labour, he remained there until, in 1847, he made his home with Emerson. He died at Concord, May 6, 1862. In his *Walden, or Life in the Woods*, 1854, he described his experiences. He also wrote *Excursions*, 1863; *The Maine Woods*, 1864; and *Letters and Poems*, 1865.

H. D. Thoreau,
American author

Thorianite. In mineralogy, a mineral containing thorium, uranium, cerium, and other rare earths. It is found in Ceylon.

THORIUM. Rare earth metal. Its chemical symbol is Th, atomic weight 232.15; atomic number 90. Discovered by Berzelius in 1828 it is found in the monazite sands of Norway, N. and S. Carolina, Brazil, etc. It is a grey metallic powder. A radioactive element, it forms a number of compounds, the most important of which is thorium.

THORN. General term applied to shrubs or trees whose branches are armed with spines or have some of their shoots hardened into thorns, e.g. blackthorn, hawthorn, and furze (q.v.).

THORN. Town in Poland. Known also as Torun, it stands on the Vistula, 90 m. S. of Danzig. Founded in the 13th century, it was annexed to Poland in 1454. At the partition of 1793 it reverted to Prussia. Napoleon added it to his new grand duchy of Warsaw, but Prussia recovered it in 1815. By the treaty of Versailles it was given to Poland. In the market place stands a colossal bronze statue of Copernicus. Pop. 39,424.

THORNABY-ON-TEES. Borough of Yorkshire (N.R.). It is on the Tees, opposite Stockton, and is served by the L.N.E.R. There are shipbuilding yards, flour and saw mills, potteries, iron foundries, and engineering works. Pop. 19,831.

THORN APPLE

(*Datura stramonium*). Annual herb of the order Solanaceae. It occurs in a semi-wild condition throughout the world. It bears ovate leaves with wavy and toothed margins. The large white funnel-shaped flowers are succeeded by large four-valved, prickly capsules. It is narcotic-poisonous, and the dried leaves are smoked for the relief of asthma.

Thorn Apple. Faded leaves and prickly seed capsule

THORNDIKE, SYBIL (b. 1885). British actress. Born at Gainsborough, she was the daughter of Rev. A. J. W. Thorndike. Her early years were passed in Rochester, Kent. She made her stage debut at Oxford in 1903, and after touring with the Ben Greet Co. she joined Miss Roy Horniman in Manchester. She first appeared in London in 1910, and from 1914-18 played at the Old Vic. In 1912 she played in Houghton's *Hindle Wakes*. This was a great success, but her reputation as a tragic actress was made by her acting in *The Trojan Women* and *Medea* in 1919. Her other successes included *St. Joan* in G. B. Shaw's play, *Lady Macbeth and Jane Clegg*. In 1908 she married an actor, Lewis Thomas Casson, and the two

Sybil Thorndike,
British actress

were associated on the stage and also in the management of several theatres. Her brother, Russell Thorndike, is also an actor.

Thorne. Market town of Yorkshire (W.R.) It is 10 m. from Doncaster on the L.N.E.R. Market day, Wed. Pop. 6,076.

THORNE, WILL (b. 1857). British politician. Born at Birmingham, Oct. 8, 1857, he began work at the age of six in a barber's shop. In 1889 he founded the national union of general workers, of which he became general secretary. A member of the West Ham town council from 1890, he was mayor in 1917-18. He was president of the trade union congress, 1912, and was Labour M.P. for West Ham from 1906. In 1925 he published *My Life's Battles*.

Will Thorne, British Labour leader
Bassano

THORNEYCROFT, ALEXANDER WHITE-LAW (b. 1859). British soldier. Born Jan. 29, 1859, he was gazetted to the Royal Scots Fusiliers at the age of twenty, and at once served in the Zulu War. He saw action in the Boer War of 1881 and the S. African War, at the opening of which he raised the corps named after him, Thorneycroft's Horse. Staff colonel, 1904-5, and commander of the 14th infantry brigade, 1905-9, he retired in 1913.

THORNTON HEATH. District of Croydon. It is largely residential, has a station on the Southern Rly., and is connected with London and Croydon (q.v.) by tramways.

THORNYCROFT, SIR JOHN ISAAC (1843-1923). British naval architect. Born in Rome and educated at Glasgow University, he founded a shipbuilding works at Chiswick in 1866, and obtained a reputation for torpedo-boat construction. He introduced the turbine propeller, water-tube boilers, etc. Knighted in 1902, he died at Bembridge, June 28, 1923.

THORNYCROFT, SIR WILLIAM HAMO (1850-1925). British sculptor. Born in London, Mar. 9, 1850, he was educated at Macclesfield and University College School, London. He gained the R.A. gold medal in 1875; was elected A.R.A. in 1884 and R.A. in 1888. His *Teucer* was bought for the Chantry Collection in 1881. The Gordon statue in Trafalgar Square, London, is his work. Knighted in 1917, Thorneycroft died Dec. 18, 1925.

Sir W. H. Thorneycroft, British sculptor
Russell

THOROUGHbred. Name given to a graceful breed of horses of mainly Eastern descent. With long, slender head and legs and short back, they all trace their ancestry to one or other of three sires, the Darley Arabian, imported in 1706; the Godolphin Barb, foaled in 1724; and the Byerly Turk, which carried its owner, Capt. Byerly, at the battle of the Boyne. All the racehorses of the world have been derived from British stock.

THORPE, SIR EDWARD (1845-1925). British chemist. Born near Manchester, Dec. 8, 1845, and educated at Owens College, and Heidelberg and Bonn universities, he was made professor of chemistry in the Andersonian Institution, Glasgow, 1870; at Yorkshire College, Leeds, 1874; Royal College of Science, London, 1885; and emeritus professor of general chemistry in the Imperial College of Science and Technology, S. Kensington. He was knighted in 1909, and died Feb. 23, 1925. His chief research work was concerned with the paraffin hydrocarbons and the derivatives of fluorine and phosphorus.

THORWALDSEN, BERTEL (1770-1844). Danish sculptor. Born at Copenhagen, Nov. 19, 1770, son of a carver of ships' figureheads, in 1793 he gained a scholarship enabling him to pass three years abroad. In 1796 he went to Rome, where in 1809 he produced a Jason which won him reputation. In mythological statuary he reproduced with wonderful success the style and spirit of ancient Greek sculpture. He died on March 24, 1844. See illus. p. 716.

B Thorwaldsen, Danish sculptor

THOTH. Egyptian deity. The name means measurer. As the divine scribe, Thoth recorded the result of the weighing of souls in the underworld. See Amenti.

THOTHMES OR THUTMES. Name of four kings of Egypt of the XVIIIth dynasty. Thothmes I, son of Amenhotep I, reigned for 25 years from about 1539 B.C. The first great Egyptian military commander, in his Syrian campaigns he carried Egyptian arms to the Euphrates. His son Thothmes II reigned for 13 years, from about 1514 B.C., with his half-sister Hatshepsut. Thothmes III apparently became co-regent with his aunt and step-mother Hatshepsut about 1501 B.C., and after his aunt's death reigned alone for 32 years. He established his power from Armenia to the Sudan. Modern scholarship tends to identify him with the Pharaoh of the Oppression. Thothmes IV, son of Amenhotep II, reigned for nine years from about 1447 B.C.

Thothmes II, from his mummy in the Cairo Museum. Right, Thothmes III, from a statue at Karnak

of the tyranny of the Four Hundred in 411 B.C., but when the new oligarchy of the Thirty Tyrants was established by the Spartans after the capture of Athens in 404 he suffered banishment. With the help of the Thebans he re-established the democracy at Athens in 403. He met his death while commanding the Athenian fleet in the Aegean (390-389).

THREADNEEDLE STREET. London thoroughfare. It runs S.W. from Bishopsgate to the Bank of England, by the enlargement of which and the rebuilding of the Royal Exchange its length was curtailed. It contains in addition to the Bank (called The Old Lady of Threadneedle Street) the Sun Fire Insurance office and Merchant Taylors' Hall. South Sea House stood on its N. side.

THREADWORM OR NEMATODE. Low form of animal life found in water, damp earth, and decaying animal or vegetable matter. While some are parasitic all their lives, others are free as larvae and parasitic as adults. Worms in dogs, strangles in horses, cattle, and sheep, gapes in poultry, and trichina in hogs are caused by these parasites, which are also responsible for ear-cockles in corn and the sickness of beet.

THREAT. Term used in English law for pressure by intimidation. To demand any property by threats, with intent to steal, is a felony. To send a letter threatening to accuse any person of a serious crime is a felony; and even to threaten verbally to accuse

any person of an infamous crime with intent to extort money is a felony. It is a misdemeanour to threaten to publish a libel with intent to extort money, and it is a felony maliciously to send or to cause to be received any letter or writing threatening harm or damage to person or property.

Three-Colour Process. Method of making prints in natural colours by photographic or mechanical printing. See Colour.

THREE RIVERS. City and port of Quebec, Canada. It is 92 m. from Montreal, on the N. side of the St. Lawrence at its junction with the St. Maurice, which has two mouths. There is a fine harbour, much lumber is exported, and pulp and paper are made, power being derived from Shawinigan Falls. Pop. 35,000.

THRESHER OR FOX-SHARK (*Alopias vulpes*). Shark of the family Lamnidae. It is a native of the Atlantic and Pacific, visiting S. and W. Britain during the summer. It is a very dark blue on the upper surface, paling to whitish on the under side; the body is cylindrical, the dorsal fin high, and the pectoral fins are long. The upper lobe of the tail fin is equal in length to the head and body. The total length of the thresher may be as much as 15 ft. See Shark.

Thresher. Shark of the Atlantic and Pacific Oceans, showing the long upper lobe to the tail fin
W. S. Berridge, F.Z.S.

THOUGHT READING. Popular name for a performance also known as the willing game. It was popularised in England in 1881 by the professional entertainers, Stuart Cumberland and Bishop. The thought reader, often blindfolded, performs any simple action decided on in his absence by the spectators, provided his hand after he enters the room is in contact with a person in the secret.

THOUSAND ISLANDS. Group of 1,700 islands and islets at the E. end of Lake Ontario. Wolfe and Howe belong to Canada and Wells and Carlton to the U.S.A.

THRACE (Gr. Thrakē; Lat. Thracia). In ancient geography, a country in the E. of the modern Balkan peninsula. Its boundaries may be roughly stated as on the N. the Danube, E. the Euxine, S. the Aegean and Propontis, W. Macedonia. The Balkan range traversed it from E. to W.; the chief rivers were the Strymon (Struma) and Hebrus (Maritsa). The land was little cultivated, but minerals abounded. In 1919 Thrace was assigned to Greece.

THRALE, HENRY (1728-81). English brewer. Son of Ralph Thrale of Offley, Hertfordshire, he inherited his father's brewery business in 1758, and in 1763 married Hester Salusbury. M.P. for Southwark, 1765-80, he is remembered as the host of Dr. Johnson at Streatham Park. He died April 4, 1781. See Piozzi, H. L.

THRASYBULUS. Athenian statesman and general. He assisted in the overthrow

THRIFT OR SEA-PINK (*Statice armeria*). Summer-flowering hardy perennial herb of the order Plumbaginaceae. A native of Europe, Asia, N. America, and Chile, it is found wild, and forms cushion-like tufts on the rocks of sea-shores and high mountains, and has

Thrift. Rosy flowers of the sea-pink

slender, stiff leaves growing in bundles from the woody branches of the root-stock. The funnel-shaped rosy flowers are massed in bunched heads or spikes.

THRING, EDWARD (1821-1887). British schoolmaster. The son of Rev. J. G. D. Thring, rector of Alford, Somerset. He was born Nov. 19, 1821, and educated at Eton and King's College, Cambridge, of which he became a fellow. In 1846 he was ordained, and after spending some time as a curate at Gloucester and elsewhere, was headmaster of Uppingham from 1853 till his death there on Oct. 22, 1887.

THROAT. In anatomy, the passage from the base of the tongue to the trachea or windpipe. It is the organ for the production of sound, and affords passage to food and drink on their way to the stomach, and air to the lungs. On looking into the mouth, the uvula or little tongue is seen, hanging from the soft palate. On either side the soft palate becomes continuous with the two pillars of the fauces, and below these, again, are continuous with the root or base of the tongue. Between the pillars of the fauces on either side are the tonsils. Above and behind the soft palate is the nasopharynx, into which the posterior ends of the nostrils open.

Projecting upwards in the middle line at the base of the tongue is a leaf-like structure called the epiglottis (q.v.). Food is prevented from entering the larynx by a muscular mechanism that closes the entrance to the larynx and opens the entrance to the gullet. Deep in the larynx are the vocal cords, the organs of sound, enclosed in a more or less rigid box of cartilage. See Larynx; Pharynx.

THROGMORTON STREET. London thoroughfare. It links Lothbury with Old Broad Street, E.C., and was named after Sir Nicholas Throgmorton (1515-71), an English diplomatist. Drapers' Hall is on the N. side, and on the S. is the Stock Exchange.

THROMBOSIS (Gr. curdling). Formation of a clot in a blood vessel, usually a vein. It may result from injury or inflammation of a vein, or thickening of the coats of an artery in old age. Thrombosis of a vessel in the brain may lead to paralysis.

THRONE. Royal or episcopal chair of state. The use of a raised seat as a symbol of authority is almost universal and of great antiquity. The royal throne in the House of Lords at Westminster is only occupied by the sovereign when opening or proroguing Parliament. Episcopal thrones are placed in cathedral chancels, and are occupied by the bishop of the diocese, whose official installation is usually known as his enthronement.

Throttle. In engineering, a valve for regulating the supply of steam, gas, or air to an engine. It is operated by a lever.

THRUMS. Scottish village which figures in several books by Sir J. M. Barrie, e.g. *Auld Licht Idylls* and *A Window in Thrums*. Its prototype is Kirriemuir, Barrie's birthplace. See Barrie, Sir J. M.; Kirriemuir.

THRUSH. Large family of song-birds (Turdidae), of which the song thrush, missel thrush, blackbird, ring ouzel, fieldfare, and redwing occur in Britain. The first three

are to be met with all the year round; the ring ouzel is seen in the summer; while the fieldfare and the redwing are winter visitors.

THRUSH. Inflammatory condition of the mucous membrane of the mouth due to infection by a fungus of the yeast family. It is usually due to improper diet and uncleanliness of the mouth.

THUCYDIDES (c. 461-c. 404 B.C.). Greek historian. His history, in eight books, of the Peloponnesian War, a 27 years' fight to a finish between Athens and Sparta for the hegemony of the Greek world, takes the story to 411 B.C., though the war did not end till 404. The work is characterised by the most scrupulous accuracy and impartiality. The love of Thucydides for Athens did not blind him to her defects and mistakes, and he holds the balance equally between her and her enemies. Furthermore, he endeavours to show the causes that underlay the events he describes. In this respect he is the first, and remains the greatest of philosophical historians. A notable feature of the work is to be found in the speeches he puts in the mouths of prominent men on both sides, such as the funeral oration delivered by Pericles on the Athenians who had died in the first year of the war. The account of the Athenian expedition to Sicily was regarded by Macaulay as the finest prose composition in the world.

Another Thucydides (c. 449 B.C.), was an Athenian statesman. After the death of Cimon he became leader of the aristocratic party, and thus the opponent of Pericles (q.v.).

THUG (Hind. thag, deceiver). One of a fraternity in India who strangled travellers with a noose, handkerchief, or turban, and then robbed and buried them. They were also called phansigars (noosers). Their secret jargon was called Ramasee. The early Thugs were Mahomedans. Gradually Hindus were initiated, and Thuggee became an institution under the protection of the goddess Kali. Thuggee was stamped out, 1830-48.

THULÉ. Name given by ancient writers to a remote island in the northern seas, often called Ultima Thule. It has been identified with the Orkneys, Shetlands, Iceland, and Norway. It is first mentioned by the ancient voyager Pytheas of Marseilles. Pron. Thew-lee.

THULITE. In mineralogy, a variety of zoisite. It is a basic calcium and aluminium silicate, rose-red in colour, and is found in the co. of Telemarken, Norway.

THULIUM. Rare earth element of the yttrium group. Its chemical symbol is Tm; atomic weight 169.4; atomic number 69. Discovered in 1879, but not isolated until 1900, thulium is found in

cuxenite, samarskite, ytterspar, and a number of other minerals.

THUMBSREW or **THUMBKINS**. Instrument of torture for compressing or breaking the thumbs. It was used in Spain during the Inquisition and in Scotland during the persecutions of the Covenanters. See Torture.

THUN (Fr.

Thonne). Lake of Switzerland, in Berne canton. Situated W. of Interlaken, and traversed by the river Aar, it is 11 m. in length, with a breadth averaging 2 m. Its area is nearly 19 sq. m.

The town of this name stands on the Aar, 19 m. by rly. S.S.E. of Berne. Pop. 18,600.

THUNDER. Noise which follows a flash of lightning. It is caused by the vibrations set up in the air by the sudden expansion and contraction which occur along the path followed by the discharge. It is produced in exactly the same way as the crackle which follows the discharge of electric sparks created artificially. A thunderstorm is a violent commotion of the atmosphere, due to unequal distribution of atmospheric pressure, accompanied by thunder, lightning, and rain or hail. Typical thunderstorms are violent and relatively local disturbances of which a peculiar feature is an outbursting gust of wind. They are also marked by certain characteristic types of cloud formations. See Brontometer; Cloud.

THUNDERSTONE. Name given to objects found in the ground and superstitiously regarded as the agents of lightning flashes and thunder-claps. They may be meteorites, nodules of iron pyrites, belemnites and other fossil cephalopods, or prehistoric stone implements, especially arrowheads and axes. As amulets their use is widespread throughout Asia and Africa.

THURIFER (Lat. incense bearer). In ecclesiastical ritual, one who carries the thurible or censer at ceremonial services. He keeps the incense burning by swinging the censer, which he hands to the priest for censuring the altar. In High Mass he censes the priests, choir, and congregation.

THURINGIA. Republic of Germany. It was formed in 1919, when the seven small Thuringian states united in a single republic. They were Saxe-Weimar-Eisenach, Saxe-Meiningen, Gotha, Saxe-Altenburg, Reuss, Schwarzburg-Rudolstadt, and Schwarzburg-Sonderhausen. The area is 4,669 sq. m. and the pop. 1,607,339. Thuringia is mainly an agricultural area, with a good deal of the land covered with forests. The capital is Weimar. The republic has a constitution adopted on March 11, 1921, which includes a state council and an elected diet.

The Thuringian Forest (Ger Thüringer Wald) is a forested mt. range and tourist resort of Germany. It extends for 60-70 m. N.W. from the Frankenwald to Eisenach. Gross Beerberg is 3,238 ft. in alt. Iron, copper, and manganese are mined.

THURLES. Urban dist. of co. Tipperary, Irish Free State. Situated on the Suir, 29 m. N. of Clonmel, on the G.S. Rlys., it is built on

Thucydides.
Greek historian
From a bust

Thurles, Ireland. Roman Catholic cathedral of St. Patrick. See below

Throne. Royal thrones in House of Lords. The queen consort's, right, is one inch lower than that of the king

both sides of the river. The castle was a stronghold of the Butlers. Thurles is the seat of the Roman Catholic bishop of Cashel and Emly. Pop. 4,815. See illus. p. 1329.

THURLOE, JOHN (1616-68). English lawyer and statesman. Son of an Essex clergyman, he helped to raise Oliver Cromwell to the Protectorate, supported Richard Cromwell, and after the Restoration was often consulted by Charles II and his ministers. He died at Lincoln's Inn, Feb. 21, 1668. His papers, preserved in the Bodleian and the British Museum, are our chief authority for the history of the Protectorate.

THURLOW, EDWARD THURLOW, 1st BARON (1731-1806). British lawyer and politician. Born near Norwich, Dec. 9, 1731, the son of a clergyman, he was educated at Canterbury, and Gonville and Caius College, Cambridge. Called to the bar in 1754, he made his name in several famous cases, entered Parliament in 1768, and, apart from a short interval, was lord chancellor 1778-92. A staunch Tory, with an ingrained aversion to change, he died at Brighton, Sept. 12, 1806.

THURSDAY ISLAND. Small island in Torres Straits. It is 30 m. N.W. of Capo York, a coaling station and headquarters of the Queensland pearl and tropane fisheries.

THURSLEY. Village of Surry, near Hindhead. In 1928 it was discovered that the earliest part of its church is Saxon, not Norman. The common was once a centre of the iron industry. Pop. 762.

THURSO. Burgh and seaport of Caithness, Scotland. It lies at the mouth of the Thurso river, 21 m. N.W. of Wick, on the L.N.E. and L.M.S. Rlys. There are ruins of an episcopal palace, burnt in 1222; the castle, the old seat of the Sinolairs; and Harold's Tower. Pop. 3,039.

THURSTON, ERNEST TEMPLE (b. 1879). British novelist and playwright. Born Sept. 23, 1879, he issued two books of poems in 1895, and his first play, *Red and White Earth*, in 1902. His first novel, *The Apple of Eden*, came in 1904. His other novels include *The City of Beautiful Nonsense*, 1909; *The Greatest Wish in the World*, 1910; *The Garden of Resurrection*, 1911; and *Jane Carroll*, an Irish revolutionary romance, 1927. He dramatised his first wife's novel, *John Chilcote*, M.P., 1905, and his other plays include *The Greatest Wish*, 1913; *The Wandering Jew*, 1920; *The Blue Peter*, 1924; and *Emma Hamilton*, 1929.

Thylacine. Wolf-like mammal of Tasmania, now almost exterminated as a marauder of flocks
W. S. Berridge, F.Z.S.

THYLACINE or **TASMANIAN WOLF** (*Thylacinus cynocephalus*). Carnivorous pouched mammal of Tasmania. It slightly resembles a wolf, but the fur is close and short, the tail slender and tapering, and the loins bear black stripes on a greyish brown ground. It lives among clefts of rocks. Owing to the havoc it works among sheep, it has been almost exterminated in populous districts.

THYME (*Thymus*). Genus of perennial aromatic plants of the order Labiatae. All the species contain an essential oil and

have very small flowers and leaves. The flowers are generally arranged in whorls, and are purple, reddish, or white. Common thyme (*T. Serpyllum*) is wild on hills in Britain. The dried shoots of lemon thyme, a variety, are powdered and used for sachets. Garden thyme (*T. vulgaris*), a native of the Mediterranean region, is used for flavouring dishes. From the flower-heads of several species a stimulant is obtained which is used for medical purposes. Pron. Time.

Thyme. Sprays of garden thyme

THYMOL. Solid phenol obtained from the essential oils of *Thymus vulgaris* (thyme), *Monarda punctata* (horsemint), and *Carum copticum* (ajowan). The most economical source is the ajowan plant. Thymol forms large colourless translucent crystals with a thyme-like odour. It is an antiseptic.

THYROID GLAND. Gland consisting of two connected lobes, one on each side of the trachea or windpipe. It forms an internal secretion which plays an important part in maintaining the bodily health. Hypothyroidism is reduction of the functions of the gland, and produces cretinism in children and myxoedema in adults. Hyperthyroidism is abnormal activity of the gland and leads to exophthalmic goitre or Grave's disease. When the gland is much enlarged the condition is known as a goitre. Experiments have been made in the application of thyroid gland in certain diseases; and also in changing tadpoles into frogs, control of sex of frogs' eggs, etc.

THYSANURA or **BRISTLE TAIL.** Sub-order of minute wingless insects found on damp earth and in decaying vegetable matter. They are covered with hairs or scales, and the young leave the egg in the adult form. They have long, many-jointed antennae.

Only five species are found in Britain, two of which are probably introductions from abroad. One of the latter is the familiar fish insect, which often swarms in store cupboards. *Campodea staphylinus* is the fragile, white, and eyeless species found on damp earth and decayed wood.

TIAHUANACO. Ruined city of Bolivia, a former centre of Inca culture. It stands on a plain, at an alt. of 12,900 ft., 38 m. S.W. of La Paz. The modern town is close by. Only a few stones of interest have survived. Chief of these is a monolithic gateway of trachytic rock, 18 ins. thick, 13½ ft. high, and 7 ft. 2 ins. wide. It is believed that the builders were Aymaras of the pre-Inca period. See Inca.

TIARA (Gr. a Persian head-dress). Ornate head-dress of various forms. Originally a kind of hat worn by ancient Persian kings, magi, and others, it was worn under the Roman empire by men and women, and became in medieval and modern times a lady's headband. A tiara is worn by the pope as a sign of sovereignty. At first a tall, pointed white cap, it was gradually elaborated.

Tiara. Triple crown worn by the pope

TIBER or **TEVERE** River of central Italy. Called Albula in early times, it is said to have been renamed after Tiberinus, a king of Alba who was drowned in it and as a river god was its patron deity. It rises in the Tuscan Apennines, and flows 245 m. to the Tyrrhenian Sea. Here the river has been canalised for the use of small steamers. The alluvium of its flood waters has given it the name of the 'yellow' Tiber. See Rome.

TIBERIAS. Town of Palestine. Founded by Herod Antipas, it was the chief town of ancient Galilee, and long famous for its school of Jewish teachers. It lies on the W. shore of the Sea of Galilee, or Lake of Tiberias, sometimes called the Lake of Gennesareth. Excavations have revealed remains believed to mark the site of the old town. Pop. 6,950.

TIBERIUS (42 B.C.-A.D. 37). Roman emperor, A.D. 14-37. Born Nov. 16, 42 B.C., he was the son of Tiberius Claudius Nero and Livia Drusilla, whom Augustus married in 38 B.C. In 2 B.C. Augustus formally adopted his stepson as his heir, and in A.D. 14 Tiberius succeeded to the principate. In the ungrateful work of guarding the frontiers on the Rhine and the Danube he had displayed the highest ability, but his character had become morose and embittered.

In 26 he retired to Capreae, and Sejanus was practically given

imperial powers, which he used to institute a reign of terror. In 31, Tiberius awoke to his treasonable designs and put him to death, but the reign of terror continued. Hideous tales were told of Tiberius's life at Capreae, and at last he was murdered in 37.

Tiberius was also the name of an East Roman emperor who reigned 578-82.

Tibesti. Region of the Sahara. Lying about 360 m. N.E. of Lake Chad, it is largely mountainous.

Tiberius, Roman Emperor
From a statue in the Vatican

five ministers) and the spiritual headship of the Tashi Lama at Tashi Lumpo, it has an area of about 750,000 sq. m. and an estimated population of about 3,000,000.

It lies between the Himalaya and Kunlun mts. and China, and contains the highest mass of mts. in the world. A large part of the higher region (mean altitude about 16,500 ft.) is occupied by lakes; most of the soil here is frozen solid for eight months of the year and during the other four is mud. In the central region (mean alt. 15,000 ft.) a few animals feed scantily upon grudging pastures. The S. zone is fairly fertile, and well watered, and suitable for growing varied crops, even peaches and grapes. Among the rivers which rise amongst the mts. are the Yang-tze, the Mekong, the Hwang-ho, and the Salween. Eastern Tibet has a good deal of timber, while farther to the west and south agriculture is carried on with considerable success.

The pursuits of the people are mainly pastoral. Sheep, yaks, buffaloes, camels, and pigs are bred. The manufactures are concerned mostly with the needs of the numerous monasteries. The chief imports are tea and tobacco, cotton and silk goods, sugar, rice, and household requisites. Wool, borax, salt, and musk are exported. Lamaism, a corrupt form of Buddhism, is the prevailing religion, but there are many adherents of the Bon, or Shamanistic, faith. The capital, Lhasa, was

for a long time known as the Forbidden City owing to the efforts which were made to exclude foreigners, but hostility to strangers has been passing away since a British Mission under Younghusband fought its way to the capital in 1904. See India; Lamaism.

TIBIA OR SHIN-BONE. The inner and larger of the two bones of the lower leg. It is attached by ligaments to the fibula at its upper and lower ends. Above, the tibia articulates with the femur to form the knee joint, and below with the foot, forming the ankle joint. The prominence of the lower end is known as the internal malleolus. See Anatomy; Knee Joint; Leg.

Tibetan lady of high rank

TIBULLUS, ALBIUS (53-18 B.C.). Roman poet. Four books of his Elegies are extant, all distinguished by a fastidious delicacy of mind and by a depth of pure emotion perceptible beneath singularly limpid and smoothly flowing verse.

Tic Douloureux. Severe form of neuralgia affecting the side of the face. See Neuralgia.

TICHBORNE CASE. In English law, a celebrated impersonation case. In March, 1853, Roger Charles Tichborne (1829-54), heir to an ancient Hampshire baronetcy, sailed for Valparaiso, whence on April 20, 1854, he sailed in the Bella for Jamaica, and was never seen or heard of again. In Oct., 1865, "R. C. Tichborne" turned up at Wagga Wagga, Australia, in the person of a man locally known as Tom Castro. On Christmas Day, 1866, he landed in England as a claimant to the baronetcy. Roger's mother professed to recognize him, as did others. Finally Castro was identified as Arthur Orton, son of a Wapping butcher. His claim was non-suited, March 6, 1872.

After a trial (April, 1873, to Feb., 1874), Orton was sentenced, on two counts of perjury, to fourteen years' hard labour. He died in London, April 1, 1898, aged 64.

TICINO (anc. Ticinus). River of S. Switzerland and N. Italy. It rises on Mt. St. Gotthard, and joins the Po below Pavia. It is 154 m. long. The chief towns on its banks are Pavia and Bellinzona. Pron. Ticheeno.

Tick. Dog or sheep tick. Top, brown tick. Both enlarged

TICK. Name applied to many genera of Arachnida allied to the mites. Most of them are temporarily parasitic on animals, whose blood they suck by means of the rostrum or beak, swelling sometimes to several times their original size. In the tropics they convey the germs of relapsing or tick fever and spotted fever in man, Texas or red-water fever in cattle, and piroplasmiasis in horses and dogs. The brown tick causes coast fever in cattle in S. Africa.

TICKHILL. Urban dist. of Yorkshire (W.R.). On the Nottinghamshire border, 6 m. S. of Doncaster, it has a large Early Perpendicular church built about 1360, the remains of a hospital of S. Leonard founded about 1225, the ruins of a priory, and a ruined Norman castle. Pop. 2,106.

TICKNOR, GEORGE (1791-1871). American literary historian. Born at Boston, Mass., Aug. 1, 1791, he graduated at Dartmouth in 1807, and from 1819-35 was professor of

Belles-Lettres and of French and Spanish at Harvard. In 1849 he published his magnum opus, *The History of Spanish Literature*, and in 1864 his *Life of Prescott*. Ticknor died Jan. 26, 1871.

TICONDEROGA. Village of the U.S.A., in New York state. It is at the N. end of Lake George. Here, in 1755, the French built a fort, known at first as Fort Carillon, and later by the Indian name Ticonderoga.

TIC-TAC. Method of signalling in use on racecourses. Its object is to communicate the betting movements in Tattersall's to bookmakers in the smaller rings and on the course when outside betting is permitted.

The betting movements in Tattersall's are communicated by one of the operators to someone on the grand stand, who passes on the message to a third person, who, in turn, communicates the information to the bookmaker for whom he works. The signs are made by touching various parts of the body and are varied at times to deceive outsiders.

TIDE. Rhythmic rise and fall of the oceanic waters. The average interval between successive high tides is 12 hrs. 25 mins. Usually the highest, or spring, tides occur at or near the time when the moon is new or full, and the lowest, or neap, tides when the moon is in the first or third quarter.

The mass of the moon attracts the oceanic waters, which make a little peak pointing from the earth's centre to the centre of the moon; this peak is held on the line of centres while the earth rotates beneath it. At the antipodes of this peak, on the side of the earth remote from the moon, a second peak occurs. These peaks are the successive high tides.

The lunar attraction is coupled with a similar attraction due to the sun, but of less magnitude. When the line of centres of the earth and moon approximates to the line of centres of the earth and sun, i.e. at full and new moon, spring tides are produced. When the two lines of centres are at right angles, at the first and third quarters, neap tides occur. The interposition of the great land masses, and the differences in the oceanic depths, cause variations in the tides along the coasts.

TIDAL POWER. Utilisation of the tidal flow to provide power. An enormous amount of energy is represented by the rise and fall of the tides, but, apart from mechanical difficulties, a bar to its utilisation is offered by the fact that it is intermittent and irregular. The time of high and low tide is continually changing, and there is the big difference in level between spring tides and neaps to be reckoned with. Some means of storing power is imperative, so that it can be utilised during the periods when the apparatus is idle.

TIDSWELL. Market town of Derbyshire. In the Peak district, it is 6 m. from Buxton. The church of S. John the Baptist is a beautiful example of 14th century architecture. Near the town are Miller's Dale and other beauty spots. Market day, Wed. Pop. 1,972.

TIDWORTH. Village of Wiltshire. It is 9 m. W. of Andover. The parish church of Holy Trinity was restored in 1882; the tower dates from 1360. There is an important military camp at Tidworth. Pop. 1,997.

TIECK, JOHANN LUDWIG (1773-1853). German critic, poet, and novelist. He was born in Berlin, May 31, 1773, and after studying at Halle, Göttingen, and Erlangen became a leader of the Romantic movement. His *Fairy*

Tales of Peter Lebrecht, 1797, was his earliest work of distinction. His poetic plays, *Genoveva*, and *Kaiser Octavianus*, 1804, perhaps represent the best of his original work. He also published works on Shakespeare. He died in Berlin, April 28, 1853.

J. Ludwig Tieck. German critic

TIENTSIN. Treaty port of China. Meaning the ford of heaven, it lies at the junction of the Pei-ho and the Grand Canal, about 70 m. from the sea and 70 m. from Peking. Railways connect Manchuria, the Kaiping coal mines, and Hankow. The river is frozen from November to April, but the port receives most of the goods destined for Peking, has a great trade in salt, and is the point of departure of the tea caravans for Siberia and Russia. The Chinese city was opened to foreign trade in 1860. It is insalubrious, in striking contrast to the foreign city, 1½ m. downstream, with its fine buildings, well kept streets and electric lighting. Pop. 800,000.

Tientsin. Offices of the Imperial Railways of North China. Above, native shop sign in a typical business street

TIEPOLO, GIANBATTISTA (1692-1769). Italian painter. He began his career in his native Venice, where the bulk of his frescoes and oil paintings (e.g. his Antony and Cleopatra series in the Palazzo Labia) are preserved. From 1750-53 he was at Würzburg, employed with his sons on the decoration of the archbishop's palace. He died in Madrid. Pron. Tee-cpp-olo.

TIERRA DEL FUEGO (Sp. Land of Fire). Island at the S. extremity of S. America, forming part of an archipelago. It was discovered by Magellan in 1520 and is divided between Chile and Argentina. The coasts are deeply indented and the mountainous surface culminates in the twin peaks of Darwin (6,800 ft.) and Sarmiento (7,200 ft.). The chief industries are timber cutting, sheep raising, and seal fishing. The capital of the Chilean portion is Punta Arenas (Magallanes) and that of the Argentine territory is Ushuaia. Its area is about 20,000 sq. m. The original Fuegians number scarcely 1,000.

TIETJENS OR TITIENS, TERESA CAROLINA JOHANNA (1831-77). German operatic singer. Born of a Hungarian family at Hamburg, July 17, 1831, she made her first appearance there, 1849, and by 1856 her mezzo-soprano voice and capable dramatic powers had made her widely famous. Her success in *Les Huguenots* in London, 1858, led her to make England her home. She died in London, Oct. 3, 1877.

TIFLIS. Capital of the Soviet republic of Georgia, also of the Transcaucasian Socialist Federated Soviet Republic. It is on the Kura. The chief industries are goldsmiths' work and

the manufacture of weapons, carpets, cotton goods, soap, and tobacco. Pop. 293,000.

TIGER (*Felis tigris*). Carnivorous mammal. It is the largest of the cats, except the lion. The fur is a reddish fawn with white under parts and white markings on face and ears. The transverse stripes on the body are black. The hair is short in the Indian specimens, but long and woolly in the Siberian or Manchurian variety. A smaller and heavily striped variety occurs in Malaya.

The tiger is found throughout most parts of Central and S. Asia, occurring in most parts of India, but not in Ceylon. Its favourite haunts are the jungles and forests. It preys at night upon cattle, deer, and other animals. Solitary in its habits, it consorts in the breeding season with only one female, and from two to five cubs are born in a litter. They become adult at the age of three years.

TIGER. British battle cruiser. Completed Oct., 1914, her estimated cost was £2,500,000. She is 670 ft. long, 90½ ft. in beam, displaces 28,500 tons, and has engines of 108,000 h.p., giving a speed of about 31 knots. Her guns include eight 13.5-in. and twelve 6-in. She took part in the Dogger Bank action, and in the Jutland. In 1930 it was announced that under the London Naval Treaty this ship was to be scrapped. See Lion.

TIGER BEETLE (Cicindelidae). Extensive family of beetles. Natives chiefly of the warmer regions, five species are British. Of these the green tiger (Cicindela campestris) flies freely in sunshine over heaths in late spring. It is coloured green and blue, with the long thin legs a shining copper colour. See Beetle.

Tiger Beetle. British green species, natural size

in equatorial Africa and Central and S. America. One, found in Africa, is remarkable for the fact that the colour of its coat varies at different ages.

TIGER LILY (*Lilium tigrinum*). Bulbous herb of the order Liliaceae. A native of China, it is much cultivated in Britain. In late summer it bears racemes of orange-red flowers spotted with purplish black. See illus. p. 871.

TIGLATH-PILESER. Name of four Assyrian kings. Tiglath-pileser I, about 1100 B.C., who extended Assyrian power into Armenia, Cappadocia, and Lebanon, rebuilt Asshur. Tiglath-pileser IV, 745-727, subdued N. Syria, holding a court at Damascus attended by Ahaz of Jerusalem (2 Kings 16).

Tiglath-pileser III, from a bas-relief at Nimroud

TIGRANES. Name of several kings of ancient Armenia. Tigranes the Great (121-55 B.C.), succeeded his father Artavasdes II in 95, and reigned for 40 years. Aided by his father-in-law, Mithradates the Great, king of Pontus, he ruled W. Asia from Pamphylia to the Caspian. Arousing Roman enmity, he was defeated by Lucullus in 69 and 68 and subjugated by Pompey in 66. Pron. Tig-ray-noes.

Tiger. Full-grown male specimen of the powerful Indian variety Gambler Bolton, F.Z.S.

TIGRIDIA. Small genus of bulbous plants, of the natural order Iridaceae, natives of Mexico and Central America. It flourishes in a cool greenhouse in a sandy loam, but is not extensively grown in England, as the flowers only last at their best for two days. In the warmer districts of England the tiger flower, as it is called, is hardy out of doors in a warm shady bed or border, but the bulbs should be lifted and stored in autumn, after flowering, in the same manner as dahlias and gladioli. They are about 18 ins. in height.

Tigridia. Leaves and bloom of *T. pavonia*

TIGRIS. River of Iraq (Mesopotamia). It is formed by the union of several streams, including the Shat on the W. and the Bohtan Su on the E., flowing from the mts. of E. Asia Minor (Armenia). Upwards of 1,100 m. in length, it flows to the Shatt al Arab, near Kurna (Al Qurra). The Great and Little Zab and the Diyala join it from the E. The Tigris is the Hiddekel of Gen. 2, 14, Dan. 10, 4. Several of the most famous cities of antiquity stood on or near its banks. During the Great War the navigability of the channel was vastly improved by the Inland Water Transport Service. See Iraq.

TILBURY. Urban district of Essex, on the N. bank of the Thames, about 23 m. from Fenchurch Street, on the L.M.S. Rly. East Tilbury is 1½ m. S.E. and West Tilbury, ¾ m. W. of Low Street station. In 1927 a route from Tilbury to Dunkirk was inaugurated. The docks (extended 1928-30 at a cost of £2,500,000) can now compete with Southampton and Liverpool for big ocean liner traffic. Pop. 15,000.

Tilbury Fort, which stands in marshy flats, 2 m. S.W. of West Tilbury, was built by Henry VIII in 1539. Here Queen Elizabeth reviewed her troops in 1588.

TILDEN, WILLIAM TATEM (b. 1893). American lawn tennis player. Born at Germantown, Pa., Feb. 10, 1893, he became a journalist, and later was connected with the film industry. In 1920 and 1921 he won the singles championship at Wimbledon, and in 1927, with F. T. Hunter, won the doubles. He has won many championships in the United States. In 1928 he lost his amateur status by writing articles on the Wimbledon tournament. He wrote Lawn Tennis, 1920, and The Phantom Drive, 1924.

TILE. Thin plate of various materials, e.g. earthenware, glass, concrete, copper, and other metals, used for roofing, flooring, walls, fire-places, etc. Whether tiles are glazed or unglazed, flat or curved, plain or decorative, they are, when made of clay, manufactured by processes that are fundamentally the same as for brickmaking. In hand moulding

tiles, which, for roofing, commonly take a curved or corrugated surface, the process is naturally more elaborate than that for the production of plain rectangular bricks, and the tools and appliances are varied accordingly.

TILE FISH (*Lopholatilus chamaeleonticeps*). Spiny-finned marine fish of the order Teleostei, native of the Gulf Stream slope off New England. It is related to the perch.

Till. River of Northumberland. It rises in the Cheviots and joins the Tweed below Coldstream. It is 32 m. long.

TILLET, BENJAMIN (b. 1860). British politician. Born at Bristol, he worked in a brickyard at eight, went to sea in a trawler, served in the navy and mercantile marine, organized the Dockers' Union, and became secretary of the Dock, Wharf, Riverside, and General Workers' Union. He was a leader of the dock strike in 1889, and organizer of others in 1911-12. He was one of the pioneer organizers of the General Federation of Trade Unions and the National Transport Workers' Federation. Long an olderman of the L.C.C., he was M.P. for N. Salford, 1917-24, and from 1929.

Benjamin Tillet, British labour leader Elliott & Fry

TILLEY, VESTA (b. 1864). Stage name of Matilda Alice, Lady de Frece, née Powles, British actress. Born at Worcester, May 13, 1864, she won great popularity as a male impersonator on the variety stage and in pantomime, but retired after her husband, Walter de Frece, was knighted in 1919. He was M.P. for Ashton-under-Lyne, 1920-24, and then represented Blackpool.

TILLOCULTRY. Burgh of Clackmannanshire, Scotland. Situated on the Devon river, on the L.N.E.R., it is 5 m. N.E. of Alloa. It is noted for its manufacture of shawls, plaids, tartans, and tweeds. Pop. 3,100.

TILLOTSON, JOHN ROBERT (1680-94). English prelate. Born in Halifax, he was educated at Clare College, Cambridge. At first a Presbyterian, he accepted the Act of Uniformity, and was in turn rector of Kedington, dean of Canterbury, and canon and dean of S. Paul's. He succeeded Sancroft as archbishop of Canterbury in 1691, and died Nov. 22, 1694. A tolerant divine with Puritan sympathies, and a tactful controversialist, he was the author of The Rule of Faith. His published sermons are among the best examples of the pulpit oratory of his age, and he was long admired as a master of English prose.

TILLY, JOHN TZERCLAES, COUNT OF (1559-1632). German soldier. Of a Walloon family, he was born at Tilly, in Brabant. He served with distinction in the Netherlands and in Hungary, commanded the army of Maximilian of Bavaria, and was commander-in-chief of the Imperial forces in the Thirty Years' War. The most notable of his victories were those of Wimpfen, May 6, 1622, and Lutter, Aug. 27, 1626. Gustavus routed his forces at Breitenfeld, Sept. 17, 1631, and at the passage of the Lech, April 15, 1632, where the old soldier was wounded, dying at Ingolstadt, April 30.

John Tillotson, English prelate After Kneller

Count John Tilly, German soldier After Van Dyck

TILMANSTONE. Village of Kent. It is 5 m. from Deal and has an old and interesting church. It is now a colliery centre, as coal mines have been sunk in the district and many houses built for the workers.

TILSIT. Town of Germany in E. Prussia. It stands on the Memel, or Niemen, 60 m. N.E. of Königsberg. There are iron foundries and machine shops, oil mills, sugar refineries, and shoddy factories. Pop. 50,834.

By the treaty signed here June 25, 1807, between France, Russia, and Prussia, after the defeat of the Russians at Friedland, Russia was given a free hand in Sweden and Turkey, provided she maintained the continental system; but Prussia lost her possessions west of the Elbe, submitted to a heavy indemnity, and had her standing army reduced to 42,000.

TIMBER. General term for wood when of size sufficient for building purposes, furniture making, pulp making, etc. Trees grown closely in woods are the most valuable, the trunks being uniformly straight. Coniferous trees lend themselves especially to this method of growth; the wood is soft and easily worked, and, being permeated with resin cells, does not decay readily. Roughly speaking, the structure of timber is fibrous and elastic, capable of resisting great strains, and of being split with ease in the line of growth.

Timbers whose fibres do not run straightly are valuable for engraving, carving, and the firm holding of driven nails. Woods of this character include box, maple, lime, elm, and poplar. Among British trees oak and Scots pine afford the most useful timbers.

Timber. Sections showing graining of British trees used commercially. Left to right, oak, elm, larch, ash, Scots pine

Timbrel. Ancient percussion instrument of the tambourine type. Instead of always being round, it was often square or oblong.

TIMBUKTU or **TOUMBOUCTOU.** City of the French Sudan. Situated on the S. edge of the Sahara, it is on one of the most important trade routes in W. Africa. It is in communication, by means of small steamboats on the Niger, with Koulikoro, the terminus of the rly. from Ambididi and Kayes. It was occupied by the French in 1894. Pop. 6,118.

Timbuktu, French Sudan. One of the market places

TIME. Conception of the sequence of events; or the duration of anything. The measurement of time is, in some respects, easier than its definition, and originally depended upon the constant recurrence of certain phenomena, e.g. the rising and setting of the sun, stars, etc. The day, month, and year are natural units of time on the earth,

the second, minute, and hour artificial, but the former are difficult to determine precisely.

The earth makes a complete rotation W. to E. in 24 hours, or 15° in 1 hour. Since the earth rotates from W. to E., a place 30° E. of Greenwich will have noon 2 hours before Greenwich, and a place 30° W., 2 hours later. The difficulty is overcome by the establishment of standard times according to longitudinal belts. As the time changes one full hour for a difference in longitude of 15°, each meridian or longitude divisible by 15 is taken, and the belt bounded by meridians 7½° on each side takes its time from the central meridian. There are five standard time belts in Canada (corresponding to the meridians 60°, 75°, 90°, 105°, and 120° W long.) having noon 4, 5, 6, 7 and 8 hours after Greenwich. In Europe, standard time is taken from the meridians 0°, 15° E., 30° E., and in Australia from those of 120° E., 142½° E. (the 135° passes through an area of sparse population), and 150° E. See Calendar; Clock; Daylight Saving; Relativity.

TIME. In music, the measurement based on the periodicity of the accents and classified according to the subdivision of the beats. If the accent occurs on every other beat, the time is duple; if once in three, triple; and if once in four, quadruple. A bar-line is drawn through the stave or staves immediately before the accented beat, and hence it is commonly said that the accent falls on the first of the bar. If each beat is divisible into two lesser values, the time is simple; if into three (the beat being dotted), it is compound. See Beat; Harmony; Music.

TIMES, THE. British newspaper. Founded, Jan. 1, 1785, by John Walter and for a time known as The Daily Universal Register, its greatness began under John Walter II, who made it the principal source of information about international affairs throughout the world, and appointed the most famous editor the paper has had, John T. Delane (q.v.). John Walter III was the first to print by steam. In 1908 Lord Northcliffe acquired a controlling interest, and after his death in 1922 the control passed to Major J. J. Astor, who created a trust to prevent the paper from being sold as a commercial undertaking. From The Times office are issued Weekly Law Reports, a Weekly Edition Illustrated, and a literary and other supplements. See Walter J.

TIMGAD. Ruined city of Algeria. It is 24 m. from Batna, at the intersection of six Roman roads, the Thamugas of the Romans. Excavations have uncovered the forum, the theatre, baths, temple of Jupiter, and numerous other buildings. The arch of Trajan is one of the best preserved of existing Roman triumphal arches.

TIMOLEON (c. 411-337 B.C.). Greek soldier, the liberator of Sicily. Born at Corinth, of noble family, he freed Syracuse from the tyrant Dionysius, the younger, and the Carthaginians, and re-established democratic government. He then turned his attention to other Sicilian cities oppressed by tyrants. In 338 the boundary of the Carthaginian dominion was fixed at the river Halycus. Thereafter Timoleon divested himself of all authority, and became a private citizen of Syracuse.

TIMON. Athenian misanthrope of the 5th century B.C. He was so disgusted with the conduct of his friends when he lost his fortune that he retired into seclusion, shutting him-

self up in a tower, into which nobody was admitted except Alcibiades. His life story is the theme of a tragedy by Shakespeare.

Time. Map showing position of international date line

TIMOR. East Indian island, one of the Sunda Islands. The N.E. half is Portuguese, the remainder being Dutch. Portuguese territory covers 7,450 sq. m.; the Dutch area is 6,000 sq. m. The people are said to be Belonese, with affinities to the Papuans in the centre and E., and Timorese, related to the Malays, in the W.; in Portuguese Timor they number 395,000, and in Dutch Timor probably an equal number. Dili and Kupang are the respective capitals. Crops are maize, rice, sugar cane, bread fruit, and bananas.

Timor Laut is the name of a Dutch group of coralline islands in the Malay Archipelago. The area is 2,060 sq. m. Pop. 25,000.

Timor Sea is the name given to that portion of the Indian Ocean lying between the island of Timor and the N. coast of Australia.

TIMOTHY or **TIMOtheus.** Companion of S. Paul. The son of a Gentile father and of Eunice, a Jewess of Lystra, he accompanied S. Paul to Europe, was with him at Athens and Corinth, on his third missionary journey, and shared his imprisonment at Rome. He became bishop at Ephesus.

TIMOTHY, EPISTLES to. Two N.T. epistles ascribed to S. Paul, and belonging, with the Epistle to Titus, to a group known as the Pastoral Epistles, because they are addressed to pastors and deal with matters relating to the ministry. Many scholars consider that while the Epistles may contain genuine fragments of S. Paul's writings, on the whole they appear to have been written in the name of the apostle, rather than by him. On the other hand it is contended that the difference in style between the Pastoral Epistles and the other Pauline writings is due to the circumstance that, while the earlier epistles were addressed to churches at an early stage of their development, the pastorals were written to individuals who presided over well-established Christian communities.

Timothy Grass. Alternative name for the perennial grass known as cat's tail (q.v.).

Timgad. Part of the ruined city; on the left is the Arch of Trajan, once the western gateway

TIN. Metallic element. Its chemical symbol is Sn (Lat. stannum, tin); atomic weight 118.7; atomic number 50; melting point 232° C. It is a silver-white, lustrous metal, highly ductile and malleable, takes a high polish, is a poor conductor of electricity, and is not easily acted on by the air. Known from prehistoric times, it occurs native in small

quantities, chiefly associated with other metals. The principal source of the metal is the ore cassiterite, or tin oxide, SnO_2 , also known as tinstone. Tin pyrites or stannite is the sulphide. Tin ores are found in Cornwall and in many parts of Europe, N. America, Bolivia, Dutch E. Indies, W. Africa, etc. It occurs as veins in granite, and in alluvial deposits as lode tin, black tin, etc. The tin is extracted by concentration processes, and roasted to remove sulphur and arsenic. The ore is then melted in a reverberatory furnace, the reduced tin being cast into ingots.

Tin is largely used in the manufacture of tinplate (q.v.); in many alloys, as bell metal, Britannia metal, bronze, gun metal, pewter, etc. It forms a number of compounds.

The world's production of tin averages about 199,000 tons, of which the Federated Malay States contribute 67,000, Bolivia 43,000, the Dutch East Indies 35,000, and Nigeria 10,500 tons. The average price of tin for the year 1900 was £133 per ton; for 1910, £155; for 1918, £329; for 1920, £165; and for 1929, £204. During 1930 the price fell steadily, and in Nov. it was £112 per ton. To remedy the situation a restriction of output was put into operation by a number of producers.

TINAMOU (Tinamus). Genus of S. American birds belonging to the small order Tinamiformes. They are related to the game birds, but are thought to have affinities with the Ratitae or flightless birds. In general appearance they are rather like partridges, and are usually found among the long grass in the plains. They are valued for the table.

TINPLATE. Sheets of wrought iron or mild steel which have been given a thin coating of tin. This coating serves to prevent the iron or steel from rusting. Tinplate is used in the manufacture of containers for preserving foodstuffs, for kitchen utensils, etc. A cheaper form of tinplate uses a mixture of tin and lead for the tinning. These plates, which are calledterne, are largely used in the U.S.A. and Canada for roofing purposes.

The Tinplate Workers' Company is a London city livery company. It was granted a charter in 1671, and has offices at Bakers' Hall, Harp Lane, E.C.

TINTAGEL. Village of Cornwall. On the coast, 5 m. N.W. of Camelford, it is one of the most picturesque places in the co.

Tintagel Castle, the reputed birthplace of King Arthur, stands on a ridge of rock connecting Tintagel Head to the mainland. The 13th century walls remain in parts, and near by is a small chapel of the same period. Parts of the castle have been restored. Pop. 1,307.

TINTERN ABBEY. Ruined abbey on the Wye, in Monmouthshire. It is beautifully situated 5 m. N. of Chepstow. A Cistercian house was founded here by Walter de Clare about 1131. The magnificent building was mainly erected between 1269 and 1287 by Roger Bigod, earl of Norfolk. The cloisters were added about 1470. The chief remains are the ruins of the cruciform church, 228 ft. long by 150 ft. broad. The abbey was long the property of the duke of Beaufort, but in 1900 it was acquired by the crown, and extensive repairs were undertaken. See illus. above.

TINTORETTO. Popular name of Jacopo Robusti (1518-94), Italian painter. Born in Venice, he studied under Titian, and was influenced by Michelangelo. His first important work was the Miracle of S. Mark, 1548. Venice possesses the most famous of his paintings. These include over 60 works in

Tintern Abbey. Remains of the 13th century Cistercian house. It is now crown property. See below

the Scuola di San Rocco, the church of San Rocco, the Collegio, and the Doge's palace. There are examples in the National Gallery, London, and at Hampton Court. The great Crucifixion in the Scuola has been acclaimed as illustrating at their best his extraordinary draughtsmanship, resonant colour, and sense of dramatic composition; but his Presentation in Madonna dell' Orto, and many more, are hardly less arresting. His last work of importance was the Paradise (74 ft. by 30 ft.), in the Doge's palace, considered by Tintoretto the crowning work of his life. Tintoretto died in Venice, May 31, 1594.

TINWORTH, GEORGE (1843-1913). British artist. Born at Walworth, London, Nov. 5, 1843, the son of a wheelwright, he became a skilled artist in terra-cotta. His works include panels in the cathedrals of York and Wells, and the Fawcett memorial in Victoria Park, London. Tinworth wrote From Sunset to Sunset, 1907. He died Sept. 10, 1913.

TIPPERARY. Co. of Munster, Irish Free State. An inland co., its area is 1,662 sq. m. The centre is mainly level and fertile, but on the borders are hills. The chief river is the Suir, while along the W. flows the Shannon. Agriculture is the chief industry, the most flourishing branch being dairy farming, but coal and copper are worked. The G.S. Rlys. serve the co. In the S.W. are interesting stalactite caverns. The co. is divided into the north and the south riding, the respective capitals being Nenagh and Clonmel. Pop. 141,015.

TIPPERARY. Urban dist. of Co. Tipperary, Irish Free State. It is 110 m. from Dublin, on the G.S. Rlys., and has trade in farm and dairy produce, and works for making condensed milk. It grew up around a castle built by the English. Pop. 5,555.

Tipperary is the short name for a popular song. It's a long, long way to Tipperary, written and composed by Jack Judge in 1911. It had an extraordinary vogue during the Great War. The chorus runs—

It's a long way to Tipperary, it's a long way to go; it's a long way to Tipperary, to the sweetest girl I know: Good-bye, Piccadilly—farewell, Leicester Square; It's a long, long way to Tipperary, but my heart's right there.

TIPPERMUIR, BATTLE OF. Fought Sept. 1, 1644, on a plain three miles from Perth, between the Scottish Covenanters and a Royalist force commanded by Montrose. Some 2,000 Covenanters were slain, many were taken prisoners, and Montrose was able to occupy Perth. See Montrose, Marquess of.

TIPPOO SAHIB (1749-99). Sultan of Mysore. Son of Haider Ali (q.v.), whom he succeeded in 1782, he planned vast schemes for the expulsion of the British. The plot was discovered, Wellesley made a rapid advance on Seringapatam, and Tipoo was slain in the capture of the city, May 4, 1799.

TIPSTAFF. Official of the English high court of justice. The name is derived from the staff of office, which is tipped with metal or with a small crown. His duty is to make arrests, in the precincts of the court, of persons committed for contempt or other offences.

TIPTON. Urban dist. of Staffordshire. One mile from Dudley, it is served by the L.M.S. and G.W. Rlys. In the heart of the Black Country, it manufactures iron goods, cement, and bricks. In and around the town are coal mines. S. Martin's is the chief of several churches. Pop. 34,131.

TIRAH. Dist. of India, in the N.W. Frontier Province. It comprises all the glens on the S. side of the Safed Koh Range. The natives, Afridis and Orakzais, cultivate the lower slopes and valley floors.

The Tirah Campaign is the name given to a British expedition against the Afridis and Orakzais, 1897-98. British posts in the Khyber Pass garrisoned by Afridi ruffians having been overwhelmed by Afridi insurgents, a force of 35,000 men under Sir William Lockhart captured the Dargai heights, Oct. 20, 1897, stormed the Sempagha Pass, Oct. 29, and the Arhanga Pass, Oct. 31. The force returned to India by two routes and, a junction having been effected near Peshawar, the Khyber forts were retaken. The Afridis then sued for peace. Terms were imposed, and the expeditionary force was dispersed, April, 1898.

TIRE. Hoop, band, or air-filled tube on the rim of a wheel. The steel tire of a wooden carriage or cart wheel binds the felloes and spokes tightly together and takes the wear of usage. The tire is made rather smaller than the wheel, is expanded by heat till it will pass over the felloes, and is then allowed to cool. The rolled-steel tire of a railway locomotive, carriage, or car wheel is shrunk on to the cast-iron or steel centre in a similar way.

The invention of the bicycle led to the introduction of solid rubber tires, which are still used for light carts and heavy automobiles.

Tintoretto, Italian painter. Self-portrait

Tintagel. Ruins of the castle, the reputed birthplace of King Arthur

Tipperary. Map of the Irish agricultural county

The pneumatic tire, now universal for cycles and for motor cars of up to 2 tons weight, and used to an increasing extent for heavy motor vehicles, appears to have been invented in 1846 by T. Thomeon, but the credit for first making practical use of the idea is due to J. B. Dunlop (d. Oct. 23, 1921) in 1888. It consists of an inner air-tube of rubber, and an external cover of cotton threads embedded in rubber with a thick coating of that material, which is often protected by steel studs.

Tire. Section of beaded edge cord tire showing four diagonal layers of cord.

TIREE OR **TYREE**. Island of the Inner Hebrides, Argyllshire, Scotland. It is 14 m. from N. to S., and averages 3 m. in breadth. Cattle and poultry are reared. Pop. 1,716.

TIRESIAS. In Greek legend, a soothsayer of Thebes. He was blind from childhood. Athena, having been asked to restore his sight, gave him the gift of prophecy.

TIRIDATES. Name of several Parthian and Armenian kings. (1) King of Parthia, 32 B.C. (2) Grandson of Phraates IV, set up as king of Parthia by Tiberius, A.D. 35. (3) Brother of Vologases I, by whom he was made king of Armenia about A.D. 54. (4) King of Armenia in the 3rd century. A.D., twice expelled by the Persians and definitely restored by the emperor Diocletian after the peace of Nisibis, 298.

Tiridates, King of Parthia. From a coin.

TIRNOVO OR **TENOV**. Town and former capital of Bulgaria. It stands on the Jantra (Yantra), N. of the Balkan Mts., on the rly. from Ruschuk (Ruse) to Stara Zagora, 35 m. S.S.E. of Sistova (Svishtov). Pop. 12,067.

TIROL. Province of the republic of Austria. With an area of 4,882 sq. m., it lies between Bavaria on the N. and Italy on the S., and between the Austrian provs. of Salzburg and Vorarlberg. Before the Great War the prov. extended S. to Lake Garda, but the treaty of Saint Germain-en-Laye gave the Trentino district to Italy. The Brenner route is almost the sole way S. into Italy. Innsbruck is the capital. Pop. 313,885.

TIRPITZ, ALFRED FRIEDRICH VON (1849-1930). German sailor. Born at Küstrin, March 19, 1849, he entered the Prussian navy, April 24, 1865. Made Prussian minister of state in 1898, he devoted his energy to the creation of a navy capable of challenging that of Great Britain. In 1903 he became grand admiral of the German navy and head of the naval staff. Shortly after the outbreak of the Great War he announced the submarine campaign against the Allies, but disputes as to the value of this campaign brought about his fall in March, 1916. He published *My Memories, 1919*, and died on March 6, 1930.

A. F. von Tirpitz, German sailor.

TIRYNS. Ancient Greek city of Argolis, in Peloponnesus. According to legend, its massive walls, still standing, were built for Proetus, king of Argos, by masons from Lycia in Asia Minor called Cyclopes, whence the term Cyclopean architecture. Tiryns was destroyed by Argos (468 B.C.). Schliemann and Dörpfeld in 1804 discovered the ruins of a large palace, which in general structure exhibits a remarkable correspondence with the descriptions in the Homeric poems. See Aegean Civilization.

TISSOT, JAMES JOSEPH JACQUES (1836-1902). French painter. Born at Nantes, Oct. 15, 1836, he passed his early years in Paris, but after the Franco-Prussian war removed to London, where he produced some clever etchings and worked as a portraitist and caricaturist. About 1884 he set out for Palestine to collect materials for illustrating the life of Christ. Returning to Paris in 1895, he exhibited some 350 watercolour drawings of N.T. subjects marked by over-scrupulous historical realism. They were also shown in London. He died Aug. 8, 1902. See Ark.

TISZA, ISTVAN, COUNT (1861-1918). Hungarian statesman. Born April 22, 1861, he entered the Hungarian chamber in 1886, and became a leading force in political life. He was premier, 1903-5 and 1912-17. His aim was to Magyarise Hungary, and to promote her ascendancy within the Dual Monarchy. He collaborated with Count Berchtold (q.v.) in framing the ultimatum to Serbia, in July, 1914. He was assassinated Nov. 1, 1918.

TIT OR **TITMOUSE**. Family of small, rather long-tailed arboreal birds (Paridae), of which seven species occur in Great Britain. Of these the blue tit (*Parus caeruleus*), often called the tomtit, is the best known. The bearded tit (*Panurus biarmicus*) only occurs in the neighbourhood of the Norfolk Broads. The long-tailed tit (*Acredula caudata*), one of the smallest of British birds, occurs freely in England and Ireland. The great tit (*P. major*), or ox-eye, occurs locally in woods and orchards, but is nowhere abundant. The marsh tit (*P. palustris*) is common in England, rare in Scotland, and absent from Ireland. The crested tit (*P. cristatus*) is only found in certain pine forests in the N. of Scotland.

Tit. The small long-tailed species. Above, great tit or ox-eye. W. S. Berridge, F.Z.S.

TITAN. Sixth Saturnian moon in point of distance from the planet. It was the first to be discovered, being detected by Huygens in 1655. Its diameter is a little over 3,000 m. It varies slightly in brightness between the 8th and 9th magnitudes, and it is believed that its period of rotation is equal to its period of revolution about the planet.

TITAN. In Greek mythology, a family of giants, the progeny of Uranus and Ge. They were 12 or 13 in number, and the best known are Oceanus, Hyperion, Cronos, Rhea, and Themis. At the instigation of their mother, Ge, the Titans rose against their father, Uranus, and made Cronos ruler of the universe in his stead. When Zeus became king of the gods the Titans refused to acknowledge his authority and carried on a struggle with him.

TITANIC. British steamship of 46,328 gross tonnage, sunk in the Atlantic, April 15, 1912. Belonging to the White Star Line, she was at the time the largest ship in the world and reputed unsinkable. While on her maiden voyage from Southampton to New York she collided, it is believed, with a sunken iceberg at 11.40 p.m. on April 14, 1912, and sank at 2.20 a.m. next morning, over 1,500 lives being lost. Among those who perished were W. T. Stead, Col. J. J. Astor, and G. D. Widener. The Carpathia picked up about 700 survivors.

Titanic. The White Star liner, the largest vessel of her time, as she appeared before her maiden voyage to New York, during which she sank, with a loss of over a thousand lives.

TITANIUM. Metallic element. Its chemical symbol is Ti, atomic weight 48.1; atomic number 22. A lustrous, steel-like white metal which has a melting point of 1,825° C., it is found as the oxide TiO₂ in rutile, brookite, and anatase; in titanous iron ores; and in various titanates. It is used to increase the brilliancy of the light in carbon arc lamps and in the manufacture of the filaments for incandescent lamps. With steel it forms a hard and tough alloy. Various titanium salts are used in dyeing.

TITCHFIELD. Village of Hampshire. It stands on the river Meon, 2 m. from Fareham. The eldest son of the duke of Portland bears the title of marquess of Titchfield.

TITHE (A.S. teohta, a tenth). Originally the tenth part of an income payable for maintenance of the parish priest. They included predial tithes, produce of the soil; personal tithes, profits of handicraft or merchandise; and mixed tithes, including butter and eggs. Where the income from tithes exceeded local needs, the tithes were often

inappropriated to cathedrals and monasteries, and later came often into secular hands. By the Tithe Commutation Act of 1836, and subsequent amending Acts, tithes were commuted to an annual tithe rent charge. In 1925 an Act fixed the annual value at £105 and provided, by means of a sinking fund, for its extinction in 85 years. In 1928 a further Act fixed the date when incumbents receive payment.

A tithe barn was a medieval store-house for grain and fodder payable to the church in kind. There are notable examples at Bradford-on-Avon, Tisbury, and Glastonbury.

TITHONUS. In Greek mythology, the son of Laomedon, king of Troy, by a river nymph. Tithonus begged of Eos to give him immortality. His request was granted, but he forgot to ask for perpetual youth. On his begging Eos to revoke her gift, the goddess changed him into a grasshopper.

TITIAN. Anglified name of Tiziano Vecelli (c. 1477-1576), Italian painter. He was born at Pieve, learned painting in Venice,

and studied under Gentile Bellini and Giorgione. One of his earliest allegorical compositions, Sacred and Profane Love, exemplifies his skill as a colourist and his strength in composition. In 1516 he was made official painter to the council in Venice, where the greater part of his life was spent; but he was heard of at Ferrara, Mantua, Bologna, Augsburg, Milan, and Rome. His portrait of Charles V is one of the noblest works of the 16th century, and he also painted several portraits of Philip II of Spain. Titian died of plague, Aug. 27, 1576.

Titian, Italian painter
Self-portrait at Windsor

Titian's art is the highest perfection of sensuous beauty, frankly materialistic, frankly decorative. As a portrait painter he is regarded as in certain respects the greatest of all time. His work can best be studied in Venice and Madrid. The Louvre, Paris, also possesses many works, and others of almost equal importance are to be seen in Florence, Dresden, the Villa Borghese, Rome, and Vienna, while the galleries of Milan, Munich, London, and Antwerp contain fine examples. See illus. pp. 21, 124, 944, 1073, 1092, etc.

TITICACA. Lake of S. America. It lies on the boundaries of Peru and Bolivia, between the main Andean range and the Cordillera Real, at an alt. of 13,000 ft. It has a length of 130 m. from N.W. to S.E., an average width of 30 m., a maximum depth of 700 ft., and an estimated area of 3,200 sq. m. Its shores are indented by numerous bays.

Titlark (*Anthus pratensis*). Name applied to the meadow pipit. See Pipit.

TITLE. In English law, the right of ownership, especially in regard to property in land.

In England land can be registered at the land transfer office, and after a time an absolute title is secured for it. In Australia practically all titles are registered. In the U.S.A. a number of societies guarantee titles to land on payment of a fee. Title deeds embrace all deeds and documents by which the owner proves his ownership, a mortgagee his mortgage, and the like. See Mortgage.

TITRATION (Fr. titre, standard). Method of chemical analysis. It consists in ascertaining the strength of a chemical substance by noting the quantity of a standardised solution, i.e. a solution of a known strength, that is required to complete a definite chemical reaction.

TITUS. Companion of S. Paul. A Greek by birth, he is first mentioned as accompanying S. Paul from Antioch to Jerusalem (Gal. 2, 1). On three occasions he was working in Corinth. S. Paul, who addressed a short epistle to him, left him in Crete, where he had charge of the Church (Tit. 1, 5). He was with S. Paul in his second imprisonment at Rome (2 Tim. 4, 10). See Paul, S.

TITUS, FLAVIUS SABINUS VESPASIANUS (b. d. 40-81). Roman emperor, A.D. 79-81. He was the son of Vespasian, he was born in Rome, Ma.

Dec. 30, 40, and served as military tribune in Britain and Germany. He ended the war with the Jews by taking Jerusalem in 70, an event celebrated by the arch at Rome which bears his name. He

TINTORETTO. roved in his short reign Robusti (1518-94). It was two years to be one of Venice, he studied in most popular of all influenced by Michelangelo. He died important work was the Mt. St. See Rome. 1548. Venice possesses the bology, a giant his paintings These include ovo the goddess

Artemis. For this he was killed by Apollo, brother of Artemis, or by Zeus. Consigned to Tartarus, he lay on the ground with two vultures perpetually tearing his liver.

TIVERTON. Mun. bor. of Devonshire. It is 14 m. from Exeter, on the G.W.R. The town lies on both sides of the Exe. S. Peter's church has some fine brasses and a Norman doorway. The castle, built about 1100, has been largely rebuilt. Here is Blundell's School, and a free school dating from 1611. There is a trade in agricultural produce. Pop. 9,715.

TIVOLI (anc. Tibur). City of Italy, in the prov. of Rome. Situated on the Sabine Hills, on a rocky eminence 750 ft. high, by which flows the river Teverone (Anio), Tivoli has been a celebrated summer resort from antiquity. The chief Roman remains are the beautiful circular Temple of the Sibyl, the temple of Tiburtus, and the villas of Hadrian and Maecenas. The Villa d'Este (q.v.) dates from 1549. The castle of Pius III, built about 1460, is now a prison. The falls of the Anio, which are famous for their beauty, supply electric power for Rome. Pop. 16,389.

Tivoli, Italy. General view of the Sabine town, showing the waterfalls of the Anio

TLEMSEN OR TLEMEN. Town of Algeria. In the Oran div., and the Pomaria of the Romans, it was occupied by the French in 1842. It exports olive oil, alfa, and blankets. It was once the Moorish capital of N.W. Africa. There are fine mosques dating from the 12th-13th centuries, a fortress, and a museum of local antiquities which contains the epitaph of Boabdil, king of Granada. Pop. 26,758.

T.N.T. Abbreviation for the high explosive trinitrotoluene (q.v.).

TOAD (*Bufo*). Large genus—over 100 species—of batrachians. Closely related to the frogs (*Rana*), they differ from them in their flatter upper side, broader head, shorter limbs, and in the skin being dry and pimply, with glands which secrete an acrid fluid. In addition, toads are toothless, and the tip of the tongue is not divided. They pass through a larval ("tadpole") stage similar to that of the frog, the eggs being extruded in a double chain enclosed in a string of jelly, which is wound around water plants. The tadpoles are smaller and darker than those of the frogs.

The genus is represented in Britain by two

species: the common toad (*B. vulgaris*) and the natterjack. The common species seeks drier situations than the frog, is inactive during the day, and feeds upon insects, worms, and snails. See Natterjack; Surinam Toad.

TOADFLAX (*Linaria*). Genus of herbs of the order Scrophulariaceae. Natives of Europe and W. Asia, the flowers are tubular, with a hollow spur, and the mouth is closed by a couple of lips, which can only be opened by strong insects, like bees. The best known species are the yellow toadflax (*Linaria vulgaris*) and the ivy-leaved toadflax. The first named is common in dry wastes, and the dense clusters of bright yellow flowers are very much similar to those of the snapdragon.

Toadflax. Sprays of *Linaria vulgaris*

TOADSTOOL. Term popularly applied to mushroom-shaped fungi to indicate their supposed poisonous character. As a matter of fact, few of this order of fungi (the Hymenomycetaceae) are known to be poisonous, and a fair percentage are known to be as wholesome as the common mushroom (*Psalliota campestris*).

TOAST. Term used for drinking a health and for the health drunk; originally applied only to a lady, who was known as "a toast."

A toastmaster is an official at public banquets who announces the healths. A loud, clear voice is essential, and toastmasters are usually selected from those officials of such institutions as Lloyd's whose duty it is to "call" members.

TOBACCO. Narcotic plant of the genus *Nicotiana*, prepared for smoking, chowing, and as snuff. Its name is derived from the Mexican word *tabaco* or from the tobacco, a Y-shaped instrument used by the old inhabitants of Santo Domingo for inhaling tobacco smoke through the nostrils.

The tobacco plant was first brought to Europe in 1558 by Francisco Fernandez, a Spanish physician; but the smoking of tobacco in Europe was started by English example. In 1586, Ralph Lane, the first governor of Virginia, and Sir Francis Drake brought smoking materials and implements to Sir Walter Raleigh, who rapidly popularised the custom.

The tobacco plant is a coarse, rank-growing annual. Its stem is unbranched and grows to a height of about six or seven feet, terminating in a bunch of yellow or rose-coloured flowers. It is grown in British gardens for the sake of its flowers. Clayey, moist soils produce tobaccos which are dark brown or reddish in colour when cured. Bright and yellow tobaccos are grown on sandy soils, and the leaf of this variety is thinner. The bright tobacco of Virginia and N. Carolina is all grown in loose sandy soil with a clay subsoil.

Syria produces and manufactures a smoking tobacco known as Latakia. Tobacco for pipe-smoking is mostly grown in Kentucky, North Carolina, and Virginia. Cigarette tobaccos are principally imported from Virginia. The Egyptian cigarette is made from Turkish leaf. The best cigar tobaccos are grown in Cuba, but a good cigar leaf is produced in Jamaica, Sumatra, and North Borneo. Canada, Australia and S. Africa (especially Rhodesia) are increasing their output. Japan has extensive tobacco plantations.

Since the introduction of tobacco into England, it has been subject to import duties, but Empire grown tobacco is admitted at a reduced rate of duty. In Great Britain in 1929 tobacco and snuff contributed £59,194,861 to the national revenue.

Toad. *Bufo vulgaris*, the common species

TOBAGO. Island in the British W. Indies, a dependency of Trinidad. It lies 21 m. N.E. of Trinidad, and has an area of 114 sq. m. The cultivation of rubber, cotton, and tobacco is established, and the production of cocoa and copra is being developed. Scarborough (pop. 1,588) is the port and chief town. Discovered by Columbus in 1498, it was successively Dutch, British, and French, finally becoming British in 1814. Pop. 23,390.

TOBERMORY. Seaport and burgh of Argyllshire, Scotland. It is 30 m. from Oban, and has a good harbour. After the defeat of the Armada in 1588 a Spanish galleon put into Tobermory Bay, and sank in about 66 ft. of water. She was believed to contain treasure to the value of over £300,000. In 1912 Colonel Foss conducted salvage operations, and, by means of divers, recovered silver goblets, dishes, and coins. Pop. 850.

Tobias. Character in the book of Tobit. Of Hebrew origin, it means God is good.

TOBIT, BOOK OF. One of the O.T. Apocrypha, composed probably by an Egyptian Jew in Aramaic in the 3rd century B.C. It tells the story of a pious Jew named Tobit, who with his wife Anna and his son Tobias had been carried captive to Nineveh by Shalmaneser.

TOBOGGANING. Snow sport. The word represents the American Indian odahaggan, which was used by the Indians of N. America for transporting goods across the snow. The Canadian and American toboggan is a sled with a flat bottom, sometimes fitted with low iron runners from 4 to 8 ft. long and about 2 ft. wide, accommodating up to six persons. The runs, or slides, in Canada and the U.S.A., are straight and divided into chutes or slides by low banked walls of snow, so that several toboggans can descend side by side.

The most modern form of tobogganing is obtained in the Engadine, Switzerland, during the winter season, notably on the Buol run at Davos Platz, and the Cresta run at St. Moritz.

Toby Jug,
by Wedgwood

TOBY JUG. Small jug or mug. It is shaped like a stout man wearing a cocked hat, the three corners of which form the spouts. Toby jugs were introduced in England early in the 18th century and were used for holding beer.

TOC H. British social organization. In 1915 there was established in Poperinghe, a church institute known as Talbot House, in memory of a fallen officer, G. W. L. Talbot, son of the bishop of Winchester. Soon the name was universally known as Toc H.

After the war the Toc H. association was formed, and a fellowship created of young men pledged to help one another. There are three London centres, one in Manchester, and over 70 branches. Headquarters are at 47, Francis Street, London, S.W.1. The guild church is All Hallows, Barking.

TOCQUEVILLE, ALEXIS CHARLES HENRI MAURICE CLÉREL DE (1805-59). French politician and writer. Born at Verneuil, Seine-et-Oise, July 29, 1805, he was called to the bar, 1826, and became a judge, 1830. He visited the U.S.A., 1831, and published his famous *La Démocratie en Amérique*, 1835. Deputy for Valognes, 1839-48, he was elected to the constituent assembly 1848, and was minister of foreign affairs in 1849. He died April 14, 1859.

TODDY PALM (*Caryota urens*). Tree of the order Palmae, a native of India and Ceylon. It grows to a height of 50 or 60 ft., with a crown of curving, much-divided leaves, which are 12 to 20 ft. long. The flowers are in drooping spikes, 10 or 12 ft. long, and the fruits are small, yellow-skinned berries.

Toddy Palm. Crown of leaves and drooping flower spikes

The juice of the flower spike is known as palm wine or toddy, and when boiled it yields jaggery, or palm sugar, and sugar candy. The central parts of the stem yield a kind of sago, and the fibres of the leaf-stalk constitute kuttal fibre, which is used for brooms, brushes, and ropes.

TODMORDEN. Mun. hor. and market town in Yorkshire (W.R.). It is on the river Calder, 19 m. by rly. from Manchester, on the L.M.S. Rly. The chief industries are cotton spinning and weaving, and there are also machine works and foundries. There is coal in the dist. Market day, Wed. Pop. 23,892.

TOGA (Lat. *tegere*, to cover). National outer garment of men in ancient Rome. A woollen cloak, of elliptical, or in later times crescent shape, with pointed ends, about four or five yards long, it was worn over the tunic and wrapped round the body, generally with one end hanging in front to the ankles, and the other drawn round the back under the right arm and thrown over the left shoulder. Its use was forbidden to slaves and foreigners, and it remained a ceremonial and official robe until the 5th century A.D.

TOGO, HEIHACHIRO, COUNT (b. 1847). Japanese sailor. Coming of a Samurai family, he trained in the Japanese navy from 1863-73, seeing action in the Civil War of 1868, and then entered the British training ship Worcester and spent some time in the R.N. college at Greenwich. Distinguishing himself in the Chinese war of 1894, he became rear-admiral. Promoted vice-admiral in 1900, he was commander-in-chief at the outbreak of the Russo-Japanese War, and destroyed the Russian fleet in Port Arthur, Feb. 8 and 9, 1904, and defeated Rozhdestvensky's fleet at the battle of Tsushima, May 27, 1905. He was given the British Order of Merit in 1906.

Count Togo,
Japanese sailor

TOGOLAND. District of W. Africa, administered under a mandate by Great Britain and France. Bounded W. by the Gold Coast Colony, N. by French Sudan, E. by Dahomé, and S. by the Gulf of Guinea, it extends about 320 m. from N. to S. and 140 m. from W. to E. in the broadest part, with a coastline of about 33 m. The area is 34,493 sq. m. and the pop. about 743,000. Teak and mahogany are the chief timbers. With the exception of the Volta, most of the rivers are without water during the dry season. The deadly tsetse fly abounds.

Numerous roads, unsurpassed in West Africa, serve as feeders to the rlys. The products are palm oil and kernels, cocoa, maize, rubber, coconuts and

copra, cotton, and rice. Lomé is the seat of administration and the chief port.

A German protectorate from July 5, 1884, Togoland surrendered to the Allies Aug. 26, 1914. After the war the portion bordering upon Dahomé, including Lomé, was allotted to France, while the districts bordering the Gold Coast fell to Great Britain. British Togoland covers 12,600 sq. m. and has a pop. of about 188,000. French Togoland covers 21,893 sq. m. and has a pop. of about 560,000.

Toga. Statue of M. Maximus, a Roman senator, wearing the toga
Naples Museum

TOKAY OR **TOKAJ.** Town of Hungary. It stands at the confluence of the Bodrog and Theiss (Tisa), 43 m. N.N.W. of Debrecen (Debreczin). Pop. 5,073. Tokay is the market for the celebrated Tokay wine, produced on the vine-clad slopes of a hill ridge to the N.W. A sweet, delicious white wine, it owes its qualities to the hot climate and to the mode of preparation.

TOKEN. Numismatic term for any redeemable coin circulated at a higher value than that of the metal it contains. All silver and bronze coins now minted in Great Britain are tokens protected from depreciation. Lack of legal small change in England caused the use of illegal leaden tokens early in the 15th century. Elizabeth licensed the city of Bristol to issue copper tokens. Leaden tokens were again in use during the reign of James I, but the mass issues by tradesmen and others took place in the three periods 1648-72, 1787-99, and 1811-15, including latterly silver and gold tokens. The Token Acts of 1817-18 finally stopped the private minting of currency.

Token. Swansea halfpenny,
issued in 1796

TOKYO. Capital of the Japanese empire. Situated on the S.E. of Honshu Island, it occupies both banks of the river Sumida, and is the terminus of several rly. lines. Formerly called Yedo or Jeddo, it was renamed Tokyo,

Tokyo. View in the Hibiya Central Park district: left, City Public Hall; right, Japan Hypothec Bank. Above, the newly completed Imperial Theatre

meaning Eastern capital, in 1868. The river divides the city into two parts, Honjo, on the E., and Tokyo proper, on the W. The former is entirely surrounded by water, and is divided into several districts by canals. It contains many temples.

The palace of the emperor, a handsome

modern structure in Japanese style, occupies the centre of the ward of Kojimachi, which contains the mercantile quarter, the government buildings, educational establishments, factories, mills, and workshops. The Midzi or suburbs are noteworthy for the number of their temples. Here is the imperial university, taking rank with the principal universities in the world. In the W. and S.W. are located the foreign embassies and legations and the barracks. Uyeno Park contains the zoological gardens and the imperial museum. Printing and publishing are important industries. There are extensive libraries. The pop. in 1922 was 2,200,000. The city was almost destroyed by an earthquake on Sept. 1, 1923. It has since been rebuilt.

Tokyo Bay, or Yedo Bay, is an inlet on the S.E. coast of Honshu Island.

TOLBOOTH. Term originally applied to the hooth at a fair in which dues were collected and offenders against fair regulations were detained. From the latter use it came to mean a town prison. The most famous tolbooth was the former prison of Edinburgh, described in Scott's *The Heart of Midlothian*.

TOLEDO. City of Spain. It stands on the Tagus, 47 m. by rly. S.S.W. of Madrid. Situated on a rocky bluff and defended by lofty Moorish-Gothic walls, and dominated by the cathedral and the Alcázar, it is one of the most imposing and romantic cities of Spain, full of churches of great age, interest, and beauty. It manufactures cloth, cutlery, and church vestments. Toledo sword blades, famous from Roman times, are still highly esteemed. Pop. 21,670.

TOLEDO. City of Ohio, U.S.A. It stands at the head of Maumee Bay, at the W. end of Lake Erie, has an excellent harbour, and carries on an active trade in grain, lumber, and soft coal. Its products include motor vehicles, bottles, glass, wagons, bicycles, and electrical appliances. Pop. 315,464.

TOLERATION. Term applied to state recognition of the right of private judgement, especially in regard to religion. Its spirit is dated from the protest made by a Frenchman, Châtillon, who, writing under the name of Martin Bellius, protested against the act of Calvin in burning Servetus for his opinions on the Trinity. Its growth was due to the gradually increasing influence, in France, of the writings of Montaigne, Descartes, and Bayle, and, in England, of the works of Milton, Roger Williams, Jeremy Taylor, Berkeley, Chillingworth, Robert Barclay, John Locke, and John Stuart Mill.

The Toleration Act was passed by the English Parliament in 1689. It permitted Protestant Nonconformists who accepted the doctrine of the Trinity, and were willing to take the oaths of allegiance and supremacy, to hold religious services with open doors.

TOLL. In general, duty paid in consideration of certain privileges or services. The term is applied particularly to the charges levied by local authorities for the use of certain roads or bridges, the proceeds being devoted to their construction, improvement, or upkeep. Toll gates remained a familiar feature of main road travel until well on into the 19th century.

Tollerton. Village of Nottinghamshire, 4½ m. S.E. of Nottingham. Here is the city's airport, opened in June, 1930.

TOLSTOY, COUNT LEO NIKOLAEVITCH (1828-1910). Russian novelist, social reformer, and religious teacher. He belonged to an ancient family ennobled under Peter the Great. He was born at Yasnaya Polyana, in the prov. of Tula, Aug. 28 (O.S.), 1828.

Count Leo Tolstoy.
Russian novelist.

In 1843 he entered the university of Kazan. As a student he shared in the frivolous life of his class. In 1851 he went to the Caucasus, took a commission in the army, and began writing his first story, *The Cossacks*, published in 1863. His first published work was *Childhood*, largely biographical. It was followed by *Boyhood* and *Youth*. The *Sevastopol Stories*, the first instalment of which appeared in 1854, were based on Tolstoy's personal impressions of the Crimean War. Two great novels, *War and Peace*, written in 1865-69, and *Anna Karenina*, 1875-76, represent his highest achievements in art.

Tolstoy did his utmost to make his own life simple and adjust it to the life of the peasant. In his last year he carried out a long-cherished dream of abandoning his comfortable home and disappearing among the peasants. He set out to go away on Oct. 28, 1910, but fell ill and died at a railway station on Nov. 7. His widow died on Nov. 4, 1919.

TOLTEC. Name denoting an ancient culture anterior to the Aztec domination on the Mexican tableland. The existence of an advanced pre-Aztec culture is attested by remains at Tollan, Cholula, Teotihuacan, and elsewhere. See Aztec; Maya.

TOLUENE. Liquid resembling benzene, obtained as one of the products on distilling coal-tar. It was discovered by Pelletier and Walter, two French chemists, and so called from tolu balsam, from which it may be distilled. Toluene is used in the manufacture of explosives and aniline dyes. See Trinitrotoluene.

TOLUIDINE. Colourless oily liquid prepared by reducing nitrotoluene in the same way that aniline is made from nitrobenzene. The toluidines are employed in the manufacture of aniline dyes. See Aniline.

TOMAHAWK (Cree, hammer). Name applied to various ceremonial implements and weapons of the Algonquian tribes of N. America. Horn or polished stone celt hatchets were fitted into holed clubs, closely resembling those belonging to the European Stone Age.

TOMATO (*Lycopersicon esculentum*). Annual plant of the order Solanaceae. A native of S. America, it was introduced into Britain in 1596. It was originally grown as a greenhouse climber for the sake of its red and yellow berries, as they were termed. As the Solanaceae include poisonous species, its edible properties were not at first appreciated.

Tomatoes for out-of-door culture are raised from seed sown in pots in rich soil in early spring and forced on in gentle heat. When about two months old, the plants are removed to a cold frame for hardening off before planting out, which takes place in June. Out of doors they require a position against a warm S. wall, and a soil which has

not been recently manured. For indoor culture the seed is sown in January in the stove house, and the seedlings transferred in March to the intermediate house.

Tomato. Fruits of a cultivated English variety.
Sutton & Sons

dates from 1888.

TOMBOLA. Lottery game. It is popular in France and the Southern states of the U.S.A. Each entrant is provided with a card containing certain numbers, prizes being awarded to the holders of cards all of whose numbers have been drawn.

TOMSK. Town of Siberia. It is on the Tom, a tributary of the Ob, and on a branch line of the Trans-Siberian Rly. Candles, soap, vehicles, and spirits are manufactured, and there is a carrying trade in metals and agricultural products. The university Pop. 92,418.

TOM THUMB. Title of a fairy story by Charles Perrault (q.v.). The name has frequently been given to dwarfs the best known being

Charles Sherwood Stratton (1838-83), or General Tom Thumb. He was exhibited in England in 1844, and again in 1857, at the time of his first exhibition being only 2 ft. in height. He subsequently grew to 40 ins. In 1863 he married Lavinia Warren, another dwarf, and died in 1883. His widow (d. 1919) married Count Magri, the Italian "Tom Thumb," 37 ins. high, who died Nov. 1, 1920. See Dwarf.

Tom Thumb, Charles S. Stratton and his bride, Lavinia Warren

TON. Measure of weight and capacity. The British ton is 20 cwt., or 2,240 lb. avoirdupois. The U.S.A. ton, or the short ton, weighs 2,000 lb. and the corresponding hundredweight is 100 lb. The British ton is also used, and is known as the long ton. The metric ton is 2,204.6 lb. The term is also used to express a given amount of timber, gravel, coke, lime, etc., e.g. a load or cubic yard of gravel is a ton. The word is the same as tun, a cask or harrel, and from that meaning is derived tonnage (q.v.).

TONALITE. In geology, group of rocks consisting chiefly of quartz, orthoclase, plagioclase, hornblende, and biotite. Apatite, magnetite, zircon, iron oxides, etc., are also often present in the rocks of this group. Tonalite resembles dark granite in general appearance, and is so called for its occurrence at Monte Adamello, near Tonale, in the E. Alps. The rocks occur also in Scotland, Ireland, etc.

TONBRIDGE. Market town and urban dist. of Kent. It stands on the Medway, 29 m. S.E. of London, on the Southern Rly. The gateway of the castle remains, and the Chequers Inn is a timbered building of the 16th century. The chief building is the church of SS. Peter and Paul, restored in 1880. There is a cricket ground where Kent holds an annual cricket week. Market day, Tues. Pop. 15,947.

Tonbridge School was founded in 1553 by Sir Andrew Judd, in 1550. The governing body is the Skinners' Company.

Toledo. Gothic cathedral, with its graceful 16th century tower

TONE, THEOBALD WOLFE (1763-98). Irish patriot. Born in Dublin, June 20, 1763, the son of a cnamaker, he was educated at

T. Wolfe Tone,
Irish patriot

Trinity College, Dublin. Under the influence of the ideas of the French Revolution he was instrumental in forming the society of United Irishmen in 1790. Arrested for treason and liberated, he made his way from America to Paris, where in 1796 he persuaded the French government to undertake an Irish expedition, which ended in failure. In 1798 Tone again persuaded the French government to send several small raiding expeditions. The ship which he was aboard was compelled to surrender near Lough Swilly. Tone was taken prisoner, and sentenced to be hanged, but he committed suicide, dying Nov. 19, 1798.

Tonga Islands. British protectorate in the S. Pacific Ocean, usually known as the Friendly Islands (q.v.).

TONGALAND, AMATONGALAND, OR MAPUTALAND. Dist. in the N. of Natal. It borders on Zululand, Swaziland, and Mozambique (Portuguese East Africa). In 1890 it was proclaimed part of Zululand; in 1895 a British protectorate was declared, and in 1897 it was annexed to Natal. Its area is about 600 sq. m. Pop. about 13,500. See Natal.

TONGKING. Northern portion of French Indo-China. Formerly a province of the kingdom of Annam, it became a French protectorate in 1883-85. It lies between China and Annam, and has an area of 40,530 sq. m. The N. is mountainous, and here the virgin forest yields teak; the S., comprising the shores of the gulf of Tongking, is flat, marshy, and frequently flooded. Rice, sugar, tobacco, ramie, tin, coal, and silk are among the products. Hanoi is the capital. Pop. 7,401,912.

The gulf of Tongking is 300 m. long, and receives the waters of the Hong-Kiang.

TONGUE. Muscular organ placed on the floor of the mouth. The base of the tongue is connected with the hyoid bone, the epiglottis, the pillars of the soft palate, and the pharynx. The organ is covered with a mucous membrane with many papillae distributed over the anterior two-thirds of the upper surface.

The tongue is supplied by three nerves: the lingual, which conveys tactile sensation; the glosso-pharyngeal or nerve of taste; and the hypoglossal, which is distributed to the muscles. The mucous membrane on the under surface of the tongue is smooth and thin. In the central plane it forms a fold, the frenum linguae. The tongue has important functions in connexion with mastication, swallowing, and articulation. See Anatomy; Taste.

TONIC SOL FA.

System of writing music in a letter notation. It was first employed in teaching sight reading to children by Elizabeth Glover of Norwich. John Curwen, a non-conformist minister, devoted his life to improving and systematising the method.

It takes as its basis the major scale and the tonal relationships of the notes thereof. These are named Doh, Ray, Me, Fah, Soh, Lah, Te, and Doh, the key being stated. The minor scale is taught as an adjunct of the major, and is called the Lah mode. Sharpened notes always have the vowel "e," thus the raised fourth is called Fe; flattened notes have the

vowel "a" (pron. aw), thus the lowered seventh is Ta. In modulation, bridge tones are used, and the Doh changed according to circumstances. A chart called the modulator shows all these bridge tones. All measures are made of equal spacing.

The Tonic Sol Fa College was founded in 1863 by the Rev. John Curwen to conduct examinations and to provide music teaching on Tonic Sol Fa lines. Its offices are at 26, Bloomsbury Square, London, W.C.

TONKA BEAN or **TONQUI BEAN** (Dipteryx odorata). Evergreen tree of the order Leguminosae, native of Guiana. It is about 60 ft. in height, and has alternate leaves divided into five or six leaflets. The violet-purple flowers are clustered, and are succeeded by short pods containing a single fragrant bean, which is used for scenting.

TONNAGE. Nautical term used to describe the size of a ship. Gross tonnage means the total cubical interior space of a merchant vessel. Net tonnage means the cubical space actually available for carrying cargo. The word ton used in this connexion indicates a space of 40 cubic ft. But when speaking of a warship's tonnage the actual weight (displacement) of the vessel in tons is meant.

Tonnage dues are charges paid by vessels on entering a port. They are calculated upon the registered net tonnage of a ship, this being its gross tonnage less allowances for the space occupied by the machinery, etc. They are devoted to the upkeep of the harbours and the maintenance of buoys, lights, etc. Tonnage dues are also charged upon ships passing through the Suez, Panama, and other canals.

TONSIL (Lat. tonsilla, a stake). Name of two prominent rounded glandular organs situated between

Tongue. Upper surface of the human organ, showing papillae and component parts

the pillars of the soft palate at the back of the mouth. They may consist mainly of lymphoid tissue, and are covered with mucous membrane. They are often removed when the seat of septic infection, especially in children, some medical men believing that this process is beneficial to health.

TONSILLITIS. Inflammation of the tonsils. Acute tonsillitis may result from cold or inhalation of impure air. When accompanied with suppuration within and around the tonsil, the condition is known as quinsy. Treatment consists in the

administration of a purge with inhalations of steam from hot water to which eucalypti or carbolic acid has been added. Hot fomentations on the neck and throat often give relief to the sufferer. When suppuration occurs, incision is necessary.

Chronic hypertrophic tonsillitis occurs in weakly children, often in association with

adenoids. The tonsils are enlarged, breathing through the nose is restricted, and the child usually breathes with the mouth open. In mild cases, change of air, administration of iron and cod-liver oil, and painting the tonsils with glycerin or tannic acid are usually beneficial; if not, it may be necessary to remove the tonsils. See Adenoid.

TONSON, JACOB (c. 1656-1736). English publisher. He started business in Chancery Lane, London, in 1678, moved later to Gray's Inn Gate, and then to the Shakespeare's Head in the Strand. He was secretary of the Kit-Cat Club, and is remembered as publisher of Milton's *Paradise Lost*, Rowe's *Shakespeare*, and works by Dryden, Addison, and Steele. Retiring in 1720, he died April 2, 1736. His nephew, Jacob Tonson (d. 1735), was his partner after 1712, and his great-nephew, also named Jacob Tonson (d. 1767), carried on the business.

Jacob Tonson,
English publisher

TONSURE (Lat. tonsure, to shear). In eccles. usage, the ritual shaving of the head, or a part of the crown, as a sign of admission to the clerical state and preliminary to taking holy orders. The Roman, or St. Peter's, tonsure was of the whole head except a narrow circle of hair; the Eastern, or St. Paul's, of the whole head; the Celtic, or St. John's, of the head in front of a line drawn from ear to ear. In practice, it is usual for only a small circle on the crown of the head to be shaven.

Tonsure of old Roman type

TONTINE. Method of life insurance. It owes its name to an Italian banker, Lorenzo Tonti. The main idea is that a number of persons contribute to a fund with which property is bought; the income is portioned between them, but as each one dies his share is divided between the others until the whole is enjoyed by the last survivor. In Great Britain and other countries the governments have raised money by tontines, and R. L. Stevenson used the idea in *The Wrong Box*.

TOOKE, JOHN HORNE (1736-1812). British politician. Son of John Horne, a London tradesman, he was born, June 25, 1736, and educated at Westminster, Eton, and St. John's College, Cambridge. Ordained in 1759, he held the cure of New Brentford, 1760-73.

John Horne Tooke,
British politician

Entertaining strong political views, he became an adherent of John Wilkes, with whom, however, he quarrelled in 1771. In 1777 his acknowledged sympathy with the N. American colonists was punished by fines and imprisonment. He assumed the name of his friend and patron, William Tooke, in 1782. He was elected M.P. for Old Sarum in 1801, but was excluded by an Act passed immediately afterwards, disqualifying clergy from sitting in parliament. He died March 18, 1812.

TOOLE, JOHN LAWRENCE (1832-1906). British actor. Born in London, March 12, 1832, it was in 1852 that he first appeared on the regular stage, his part being one in *The Spitalfields Weaver* at Dublin. In 1854 he made his debut in London—St. James's Theatre—and soon won a reputation by his presentation of humorous parts,

especially after 1859, when he was made the leading comedian at The Adelphi. From 1869-74 he was at The Gaiety, and later became proprietor of the Polly Theatre, which, as Toole's, had a successful period from 1882-93. Toole retired in 1893, and died at Brighton, July 30, 1906.

J. L. Toole,
British actor

TOOTH. In architecture, a tooth ornament is a decorative design consisting generally of a row of small sculptured four-leaved flowers, in a hollow moulding. See Dog Tooth; Moulding.

TOOTHACHE. Pain associated with disease of the teeth, most often due to caries or decay. When only the dentine, which lies beneath the enamel or hard exterior covering of the tooth, is involved, the pain is not very severe, but if the decay is extended to the deeper pulp of the tooth, the pain is often intense. Inflammation and swelling of the gums are often present in addition. The only satisfactory treatment is to have the tooth stopped, with or without killing the nerve, or if the decay is too far advanced, to have it extracted. The pain may be relieved by placing a small piece of cotton wool in the cavity of the tooth, soaked in camphorated chloroform, or, in severe cases, a strong solution of carbolic acid. If the latter is used, care must be taken to avoid touching the lips or gums with the carbolic acid. See Caries; Dentist; Teeth.

TOOTHWORT (*Lathraea squamaria*). Perennial root-parasite of the order Orobanchaceae, native of Europe and Asia. It has a thick fleshy white root-stock whose rootlets are attached to those of its victim, chiefly hazel. The stout whitish stems are from four to ten ins. high, clothed with broad scales in lieu of leaves, which are folded back upon themselves, enclosing several chambers whose walls are studded with stalked glands. See Root Parasites.

TOOTING. District of S.W. London, in the bor. of Wandsworth. It is divided into Upper Tooting or Tooting Bee, and Tooting Graveney, or Lower Tooting. Tooting Graveney and Tooting Bee commons form a large open space under the control of the L.C.C. In the dist. are Lambeth and Streatham cemeteries, Tooting Bee mental hospital, Grove fever hospital, and Wandsworth infirmary. Part of the dist., which is served by the Southern Rly., belonged to Bee abbey, Normandy.

TOOWOOMBA. Town of Queensland. On the Darling Downs, 100 m. W. of Brisbane on the main line to Sydney, it is an agricultural centre, with butter, condensed milk, and bacon factories, and contains foundries and government rly. works. Pop. 25,150.

TOPAZ. In mineralogy, a mineral aluminium fluosilicate. Yellow, green, blue, or red in colour with a glassy lustre, fine varieties of the mineral are valued as gem stones. It is found in gneiss or granite, and is frequently associated with tinstone, tourmaline, mica, beryl, etc. The deep orange yellow varieties of the mineral are most valued, and the finest stones have been found in the Ural Mts. and Brazil. Many so-called topazes are yellow varieties of quartz. See Gem.

TOPE (*Galeus canis*). Species of small shark. It is found in most of the tropic and temperate seas, and often occurs round the British coasts. It is about 6 ft long, and is grey on the back and whitish beneath. It spends most of its time on the bottom of the sea, feeding on fish, crustaceans, and echinoderms. See Shark.

TOPE. In Buddhist architecture, a dome-shaped monument, solidly built, for the

preservation of relics. Topes have either a polygonal, round, or square base, and are generally crowned by a finial called a tee. Those in Ceylon are called dagobas; the Ambustella Dagoba, Mihintala, is one of the most famous. When a dagoba has a definite commemorative purpose, it is known as a stupa. They are generally enclosed within a stone railing or other barrier.

TOPHETH or **TOPHET.** Word allied in sense to the Heb. Sheol and the Gr. Gehenna and Hades. It is applied to the valley of Hinnom (2 Kings 23, 10), where idolatries were practised, and where later the refuse of Jerusalem and the bodies of animals and criminals were burned. An expression of abhorrence, it means literally spittle or spitting, and it is frequently employed as a synonym for Hell (q.v.).

TOPIARY (Lat. *topiarius*, landscape gardener). In horticulture, the practice of clipping and cutting trees and shrubs into regular forms, human figures, animals, cups and saucers, peacocks, etc. Modern custom confines topiary work to solitary specimens, often grown in tuhs, and specially trained; but at some country mansions, notably Levens Hall, in Westmorland, and Elvaston in Derbyshire, whole topiary gardens of mature trees, in some instances over a hundred years old, are maintained. The trees which lend themselves to clipping are box, yew, and holly.

TOPLADY, AUGUSTUS MONTAGUE (1740-78). English hymn writer. Born at Farnham, he was educated at Westminster School and Trinity College, Dublin. He was ordained in 1762, and in 1768 he exchanged the living of Harford with that of Broad Hembury, Devonshire. He is remembered for his hymns, these including Rock of Ages, first published in The Gospel Magazine in 1775. He died August 14, 1778.

TOR. Striking and sometimes fantastic tabular or pillow-shaped rocky elevation. Tors often occur in granite regions which have been long exposed to weathering. There are some 170 on Dartmoor, the highest being High Willhays and Yes Tor (over 2,000 ft.).

TOR BAY. Inlet on the S. coast of Devonshire. It is $4\frac{1}{2}$ m. across between Hope's Nose and Berry Head, and runs $3\frac{1}{2}$ m. inland. On its shores are Torquay, Paignton, and Brixham.

TORC or **TORQUE** (Lat. *torquis*, necklace). Personal ornament of one or more metal bars or bands, spirally twisted. Devised by the early Persians and Scythians, twisted necklets come sparingly from bronze age lake-dwellings; similar gold armlets occur in Scotland. In the early iron age they became a national ornament of the Celts. T. Manlius removed one from a Gaul, whence the family name Torquatus. The common Gaulish necklet was linged at the back, with ornamented terminals in front. The finest and most varied examples are Irish.

TORCELLO. Italian islet of the Adriatic Sea. It is 6 m. N.E. of Venice in the Venetian Lagoon. In the town is the former Byzantine cathedral of Santa Maria. Founded in the 7th century and rebuilt in the 9th century, it contains 12th century mosaics. Another interesting building is the 12th century church of S. Fosea, octagonal in shape, with colonnades. Pop. 223. See Venice.

TORMENTIL (*Potentilla erecta*). Perennial herb of the order Rosaceae. A native of Europe, West Siberia, and the Azores, it has a stout, almost tuberous root-stock, which is of an astringent quality and used for tanning. The stems are long, very slender, and hairy. The leaves are divided into three or rarely five oval wedge-shaped leaflets.

TORNADO. Destructive local whirlwind of great energy, usually developed within thunderstorms. A characteristic feature is the funnel-shaped cloud which hangs from the under-surface of the greater thunder cloud above. This funnel, which is created around the axis of a violent ascending vortex of whirling winds, advances with a deafening roar in an easterly direction at a rate varying from 20 to 40 m. an hour. The destructive activity of a tornado lasts from half an hour to an hour, its path varying in length from 5 to 30 m., and in breadth from a few hundred feet to a quarter of a mile or more. Tornadoes, like thunderstorms, almost invariably originate in the S. or S.E. part of a

Topiary. Clipped hedge and shrubs at Compton Wynates

cyclonic depression. Tornadoes are especially abundant in the Mississippi and Ohio basins, where the open plains in close association with the warm gulf of Mexico provide the physical conditions necessary for their formation. They are not found in arid countries. Over the ocean tornadoes are called waterspouts.

TORONTO. City of Canada, capital of Ontario. It stands on a bay of Lake Ontario, 333 m. by rly. from Montreal. It is served by the C.P.R. and C.N. Rlys., and from here steamers go regularly to various Canadian and American ports. Notable buildings include those of the government of Ontario, the city hall, Union Station, opened by the Prince of Wales in 1927, and the Royal York Hotel. The legislature has a fine block in Queen's Park. There are Roman Catholic and Protestant cathedrals. The educational institutions include the university of Toronto, which originated in 1827, and in 1887 was reorganized as a teaching university.

The business and older part of Toronto centres around Yonge Street, while suburbs have grown up on the slopes rising from the lake. The city is a banking and distributing centre. There is a harbour with a good deal of shipping, but almost all of it is import trade. For many of its industrial establishments power is obtained from the hydro-electric undertakings at Niagara Falls. There are several public parks. Centre Island is a pleasure resort.

Toronto, Canada. 1. Main Arts building of the University. 2. Buildings of the Provincial Legislature, which stand in Queen's Park. 3. Anglican cathedral of St. James, built in 1858

Toronto was founded in 1794, its first name being York, on the site of a fort erected by the French in 1749. Since 1797 it has been the capital of Ontario. Its population increased enormously between 1871 and 1930. Pop. 569,899. See Canada.

TORPEDO. Cigar-shaped vessel of steel or bronze carrying a charge of high explosive, and used as a weapon by aircraft and all naval warcraft. It was devised by Whitehead about 1870, and is a small submarine in itself, in three main sections: the head, which contains the charge and the firing gear; the main body, which contains a chamber for compressed air to drive the engines; and the engines astern. It is fired from a special kind of gun

Torpedo. Longitudinal section of a Whitehead torpedo

(torpedo tube), and travels under its own power in the water. The charge of T.N.T. or wet gun-cotton is exploded by a rod or trigger in the nose striking the target. The engines, two in number, drive two propellers which revolve in opposite directions. The steering is controlled by a gyroscope.

TORPEDO BOAT. This is a small vessel built to carry the torpedo. The earliest type, constructed in 1873, were small launches. Rapid increase in size and speed followed, but such craft were always defective in their sea-keeping qualities. The modern equivalent is the destroyer (q.v.).

TORPEDO TUBE. Type of gun from which a torpedo is discharged by means of compressed air or a charge of high explosive, just sufficient impulse being given to throw the torpedo well clear of the ship. These tubes are of two kinds: those mounted on deck, usually in pairs or in threes, as in destroyers, and so constructed that they can be trained; and those built into the hulls of ships, which usually do not admit of training.

TORPHICHEN. Colliery centre of Linlithgowshire, Scotland. It is 4 m. S.W. of Linlithgow, and grew round a hospital or preceptory of the Knights of S. John of Jerusalem. Pop. 4,000.

TORQUAY. Borough, seaport, and watering place of Devonshire. On the S. coast, it stands on hills above Tor Bay and is 26 m. from Exeter, on the G.W.R. Its mild climate attracts many visitors. There are theatres, gardens, and other attractions, as well as facilities for yachting, golfing, and bathing. Interesting ruins include those of Tor Abbey. In Kent's Cavern have been found remains of prehistoric man. There is trade in coal, stone, etc., and marble and terra-cotta are worked. Pop. 39,432.

TORQUEMADA, TOMÁS DE (1420-98). Spanish inquisitor. Born at Valladolid, he entered the order of S. Dominic, and became confessor to Isabella, afterwards queen, and later to her husband Ferdinand. Prior of the monastery at Segovia for 22 years, he obtained in 1478 the establishment of the Inquisition in Spain, and in 1483 was made inquisitor-general. The extreme severity of the regulations laid down by him led to murmurings, even among the clergy and in Rome itself, but he maintained his position until 1494. He was one of the chief instigators of the conquest of Granada and the expulsion of the Jews. Torquemada was in daily danger of his own life, but he died a natural death, Sept. 16, 1498, at Avila. See Inquisition.

TORRENS. Lake of S. Australia. It occupies the N. portion of the Great Valley of S. Australia, 90 m. N. of Spencer Gulf, and is 130 m. long, 20 broad, and 80 ft. above sea level. It was discovered by Eyre in 1840.

TORRENS, SIR ROBERT RICHARD (1814-84). Australian statesman. Born at Cork and educated at Trinity College, Dublin, he emigrated to South Australia in 1840. Collector of customs the following year and colonial treasurer in 1852, he was elected to the first parliament three years later, and became prime minister in 1857. He then introduced the Torrens Act, and spent the next few years travelling through Australia to explain its working. On retiring in 1863, Torrens returned to England and was M.P. for Cambridge, being knighted in 1872. He died at Falmouth, Aug. 31, 1884.

The Torrens Act provided for the conveyance of property by registration instead of the cumbersome methods then in vogue, the owner holding a certificate instead of deeds, and having his title guaranteed by the state.

TORRES STRAIT. Sea passage between Cape York Peninsula, Queensland, and New Guinea. It is about 90 m. in width, and contains numerous islands, chief of which is Thursday Island (q.v.). About 1890 the strait became celebrated as a pearling ground. It also yields *bêche de mer* (q.v.).

TORRES VEDRAS. Town of Portugal. It is 24 m. N.W. of Lisbon, is the centre of a vine-growing dist., and has hot sulphur baths and a Moorish castle. It was from here that Wellington's famous lines stretched to the Tagus. Pop. 8,413.

The threefold lines consisted of over 100 forts, linked together by entrenchments and inundations, covering some 500 sq. m. of mountainous country between the Tagus and the sea into a gigantic entrenched camp.

TORRIDGE. River of England, in Devonshire. It rises 4 m. S.E. of Hartland Point and flows S.E., E. and N.W. to join the Taw estuary at Barnstaple Bay. See Bideford.

Torquay, Devonshire. Town and harbour from Vane Hill, looking towards Tor Bay and Brixham

TORRIDON, LOCH. Fiord inlet on the W. coast of Scotland, in Ross and Cromarty. Torridon village is at the head of the loch, and near it is Torridon deer forest.

TORRINGTON, GREAT. Borough and market town of Devonshire. Standing on a hill above the Torridge, 7 m. S.S.E. of Bideford, it has a station on the Southern Rly. The ruins of the castle, built in 1340, were demolished in the 18th century, and near the spot stands a Waterloo column, erected in 1816. Glove making and agriculture are the principal industries. Market day, Sat. Pop. 3,011.

TORRINGTON, GEORGE BYNG, VISCOUNT (1663-1733). English sailor. Born Jan. 27, 1663, he entered the navy in 1678 and saw

considerable service before he sailed in 1684 to the East Indies. In 1688, as an agent of the prince of Orange, he won many of the senior captains of the fleet to the prince's cause. He commanded the naval operations at the capture of Gibraltar and took part in the battle of Malaga, 1704. In 1708 he dispersed the attempted invasion of England. He was sent to the Mediterranean to prevent a Spanish invasion of Italy, and totally destroyed the Spanish fleet off Cape Passaro, July 30, 1718. Returning to England in 1720, he was created Viscount Torrington, made first lord of the admiralty, 1727, and died Jan. 17, 1733.

Viscount Torrington, English sailor

TOR ROYAL. Royal residence situated near Princetown, Devonshire, under the tor of the same name. Once the residence of one of the agents of the duchy of Cornwall, it has been partly rebuilt and converted into a residence for the prince of Wales.

TORSION (Lat. *torquere*, to twist). In mechanics, the strain produced in a solid body when parallel planes are turned relatively to one another round an axis perpendicular to them. If one end of a cylindrical wire is kept fixed and the other end is twisted by a mechanical force, and if under this twisting stress the wire turns through an angle, then it is found that, so long as the angle is not too great, it is proportional to the applied force, e.g. if this applied force, or couple, is doubled, the angle through which the end of the wire is twisted is also doubled. The ability of substances to recover from torsion varies; quartz, steel, glass, etc., will suffer a considerable torsion and when it is removed regain their original forms. Copper or lead, on the other hand, will not recover from even small twists.

TORT (Fr. *tort*, wrong). Term in English law to express a wrongful act, other than a breach of contract or a crime, for which an action for damages will lie at the suit of the person wronged.

Torts may be classified in many ways, but it is most convenient, if not most scientific, to divide them into (1) wrongful acts which in themselves give rise to an action; (2) wrongful acts which are only actionable if actual pecuniary loss and damage are proved. In (1) damages are not, and in (2) damages are, of the essence of the cause of action. An infant is liable for his torts, though not on his contracts; and in England a husband is responsible for his wife's torts.

TORTOISE. Name given to the land species of the order Chelonina of the reptiles, the aquatic species being known as terrapins and turtles. The skeleton is partly external and forms a bony box or shell for the animal's protection. None of the tortoises has teeth, but the jaws are cased with horn to form a cutting beak. In most species the carapace is covered with bony plates, often finely mottled: the tortoiseshell of commerce is the production of the hawksbill turtle.

Tortoises are found in the warmer regions of the world, some six species occurring in S. Europe. They feed mainly on plants. In the cooler districts they hibernate in the ground during the winter. They are renowned for their longevity, especially the giant tortoises, now confined to the Galapagos Islands in the S. Pacific, and to certain islands in the Indian Ocean. These are sometimes between four and five feet long. The Greek tortoise of S. Europe (*Testudo graeca*) is from 6 to 10 ins. long, and has the carapace mottled with yellow and black. It is used for food in Italy and Sicily. See Terrapin; Turtle; also illus. p. 1342.

Tortoise. 1. Species in the London Zoological Garden, the giant being *Testudo elephantina*, from the Seychelles. 2. Common European tortoise. See p. 1341

TORTOISESHELL BUTTERFLY. Popular name for two species of butterfly, natives of Europe (including Britain) and Asia. The large tortoiseshell has scalloped wings, which are dull orange-brown, blotched and spotted with black and margined with black: on the hindwing five blue crescents unite with the black border. The small tortoiseshell (*Aglais urticae*) is a much more plentiful and a brighter insect, and the blue crescents margin all the wings. See Butterfly.

Tortoiseshell Butterfly. *Vanessa urticae*, a hibernating species
John J. Ward, F.E.S.

TORTURE (Lat. *tortura*, torture). Infliction of unduly severe bodily pain to force persons to confess, or to give some information. In early times torture was the recognized punishment meted out by the conqueror to his captives. In Greece and Rome slaves were tortured almost as a matter of course to obtain from them evidence in trials. In Europe during the 14th century and in England in the 15th torture was rampant in its worst forms. It became part of the common law of most European countries, but was never recognized by English common law, though made use of as a kind of royal prerogative. State prisoners in the Tower were often put to the torture, but in 1628 the English judges laid it down that torture as such was illegal. Torture methods in state trials existed till the 17th century in England, and later in France and Germany. The instruments of torture included the rack, the thumbcrew, the boot, and pincers. See Inquisition; Rack; Thumbcrew.

TORY. Name given in Great Britain to a political party. Although the word was used in the time of the Commonwealth, its present use dates from about 1678. The supporters of Charles I and II in Ireland were known as Tories, from an Irish word meaning "come, O king," and, during the debates on the Exclusion Bill, someone applied the term contemptuously to those who opposed that measure.

Like Whig, it soon became the designation of a party in the state. Under the influence of Peel and Disraeli the Tory party became the Conservative and then the Unionist. See Conservative; Unionist; Whig.

TOSTI, SIR FRANCESCO PAOLO (1846-1916). Italian-British composer. Born at Ortona, April 9, 1846, he studied music at Naples, and also taught

there until 1869. Encouraged in his early composition by Sgambati, he secured a court appointment in Rome, and in 1875 paid his first visit to England. In 1880 Tosti became singing teacher to the royal family, and settled in London. He became a naturalized British subject, and was knighted in 1908. He composed numerous songs which enjoyed great popularity, e.g., Good-Bye, Ask Me No More, and died in Rome, Dec. 2, 1916.

TOSTIG (d. 1066). Anglo-Saxon noble. A younger son of Earl Godwin, he was made earl of Northumbria in 1055. His unpopularity, largely due to severity, led to a revolt in 1065, and the earl was declared an outlaw his brother Harold concurring in this sentence. For some months he lived abroad, taking part in raids on the west of England. He joined Harold Hardrada in invading England, and was killed at Stamford Bridge, Sept. 25, 1066.

TOTALISATOR. Machine used for betting on horse races and other sporting events. In 1928 its use was legalised in Great Britain, and a number were then installed on the racecourses. They are worked by electricity, and automatically record the number of bets on a given horse with the amount of money due to the successful backers. They are controlled by the Betting Control Board. See Betting.

TOTEMISM. Term used in anthropology. It is employed in two senses, viz.: (1) A specific magical relation between a group of people, called a totem kin, or sept, and a species of animals, plants, or other objects, individual members of which are called by Europeans totems. (2) A form of social organization in which a tribe is divided into exogamous kins or clans, each believed to consist of blood relatives tracing their descent from a single ancestor.

Some features of totemism are (1) the totem must not be touched, killed, eaten, kept in captivity, or even looked at; (2) the kin claims that its ancestors were transformed totem animals, that its members are reincarnated totem animals, or that the totem has a claim on its gratitude; (3) carvings of totemic animals are set up, or their forms are tattooed on the body of the kinsman; (4) the totem is called a brother; (5) dead members of the animal species are solemnly buried; (6) captive members are bought and freed.

TOTHILL FIELDS. Formerly an open space of Westminster, part of which extended S. from Victoria Street towards the Thames. Its name derives from a mound or hill of outlook near Regency Street. Royal solemnities and jousts, fairs, markets, and duels took place here, and the fields served as a playground for the boys of Westminster School.

TOTNES. Borough and market town of Devonshire. On the Dart, 9 m. W. of Torquay, it is an old town, with a long High Street, many of the houses overhanging to form covered footways. The parish church contains a fine rood screen. There is a fine example of a ruined Norman castle, which retains its original battlements, and one of the old gates. In 1928 Mr. S. P. Adams, a stockbroker, left £100,000 to Totnes, his native town. Market days, Tues. and Fri. Pop. 3,982.

TOTTENHAM. Urban dist. of Middlesex. It has Upper Edmonton N., Finsbury Park and Stamford Hill S., Wood Green W., and the E. London waterworks E., and is served by

the L.M.S. and L.N.E. Rlys. The parish church of All Hallows has some notable memorials: one of its bells was taken at the siege of Quebec in 1759. The High Cross, mentioned in Walton's Compleat Angler, dates from about 1600-9. From seven elm trees which once stood on Tottenham Green is named Seven Sisters Road. Pop. 149,200.

The London thoroughfare Tottenham Court Road is a link between Charing Cross Road and Hampstead Road. It is named after the prebendal manor of Tothill, Totenhall, or Tottenham Court, once belonging to the dean and chapter of S. Paul's Cathedral.

TOTTENHAM HOTSPUR. English professional football club. It was founded in 1882 by boys associated with a Tottenham school, who first played on Tottenham Marshes, and later acquired an enclosed ground in the neighbourhood. In 1895 it became a professional organization. In 1901, and again in 1921, the Hotspur won the Association Cup. In 1909 the club was admitted to the Football League (Div. I). The ground is in High Road, Tottenham. Their colours are white shirts and dark blue knickers.

TOTTINGTON. Urban dist. of Lancashire. It is 2½ m. from Bury, on the L.M.S. Rly. The chief industries are calico printing and cotton spinning. Pop. 6,760.

TOUCAN. A family of birds (Rhamphastidae) of the sub-order Picidae or woodpeckers. Found in the forests of central and tropical S. America, they possess gaudily coloured beaks, which, though huge, are thin and light.

Toucan. Green billed species of the South American bird

There are over 60 species of toucans, and they are very common in the forests of Brazil, notwithstanding the diligence with which the natives kill them for food. They feed mainly on fruit.

TOUCH. One of the five senses. The special organs which convey impressions of touch to the brain are minute corpuscles and bulbs situated in the skin in close association with the fine filamentous terminations of nerves. These corpuscles are of several varieties, and it seems probable that different forms convey different sensations.

Tactile sensation is most acute over the tip of the tongue, and the points of a pair of compasses will be recognized as two points when applied to the tongue if they are only separated by 1-24th of an inch. On the tip of the forefinger the distance must not be less than 1-12th of an inch before two points are felt; on the palm of the hand 5-12ths; and on the back of the body and many parts of the limbs the separation must be as much as 1 to 2 ins. See Aesthesiometer.

TOUCH-ME-NOT. Popular name of a British plant (*Impatiens noli-tangere*), so called because at the slightest touch its seed-pods throw out their seeds. It belongs to the order Balsaminaceae. See Balsam.

TOUCHSTONE OR LYDIAN STONE. In mineralogy, a hard black variety of quartz. Gold rubbed across the stone leaves a streak, which is moistened with a mixture of nitric and hydrochloric acids. A comparison of the effect of the mixture on streaks made with alloys of known composition enables the expert to determine approximately the fineness of the gold being tested. The stones originally used were a bituminous quartz from Lydia.

Sir Paolo Tosti, Italian-British composer

By courtesy of Ricordi & Co.

TOUCHWOOD (*Fomes ignarius*). Woody fungus of the order Polyporiaceae. It is very destructive to forest and orchard trees. The visible portion is a hard, hoof-shaped bracket about 6 ins. across, with concentric zones above, ultimately black. The under side is convex and cinnamon coloured. New growths are added to the margin and underside each spring. Thin slices of the woody material, if ignited, will smoulder until completely consumed.

Touchwood growing on a beech trunk

TOUGGOURT. Town and territory of the Sahara, in S. Algeria. The town, which is about 120 m. S. of Biskra, has a trade in dates. Pop., town, 2,000; territory, 212,783.

TOUL. Town of France. It is 14 m. from Nancy, and stands near the Moselle. The church of S. Etienne, the former cathedral, is famous for its elaborate west front and its cloisters. The hôtel de ville was formerly the bishop's palace. In 1552 it was taken by the French and made into a strong fortress. It capitulated to the Germans in 1870, but was restored to France at the peace, after which the French fortified it anew. Pop. 11,633.

TOULON. Town and seaport of France. It stands on a bay of the Mediterranean, 42 m. from Marseilles. One of the chief naval stations of France, it is strongly fortified, has a good harbour, and its dockyards can accommodate the largest battleships. Connected with it are an arsenal and other naval establishments. The town has shipping and steamboat services. The buildings include the church of S. Marie Majeure, formerly the cathedral, and a fine building for the museum, art gallery, and library. Pop. 115,120.

TOULOUSE. City of France. It stands on the Garonne, 443 m. S.W. of Paris. It is a manufacturing and market town, being served by a network of rlys. and canals, including the Canal du Midi. Its industries include the making of silk and woollen goods, flour, tobacco, agricultural implements, and boots and shoes, and it is a market for the agricultural produce of Languedoc, and a banking and commercial centre. It has an archbishop. The cathedral, of various periods, has a choir with 17 chapels. The church of S. Sernin is one of the finest Romanesque basilicas in existence. The beautiful church of the Jacobins is notable, and so are Notre Dame de la Dalbade and Notre Dame de la Daurade. The city has a university which was founded about 1230 and was once famous as a school of law. In the Middle Ages Toulouse was a stronghold of the Albigenses. Pop. 180,800.

BATTLE OF TOULOUSE. The last action in the Peninsular War, fought April 10, 1814. Wellington crossed the Garonne and attacked Soult on the heights E. of Toulouse, winning a rather doubtful victory at a cost of some 8,000 men. The battle was fought in ignorance of the fact that Napoleon had already abdicated.

TOURCOING. Town of France. It is 2 m. from Ronbaix and 7 m. from Lille, being on the frontiers of Belgium. It is a centre for the manufacture of woollen goods and other textiles, including cotton. Carpets, machinery, hosiery, and soap are made, and there are dyeing establishments and sugar refineries. It was occupied by the Germans, 1914-18. Pop. 80,678.

TOURMALINE. In mineralogy, a complex aluminium borosilicate containing varying proportions of iron, magnesium, fluorine, chromium, etc. The mineral ranges from colourless through blue, green, red, and brown to black, with a glassy lustre. Many of the coloured varieties are highly prized as gem stones. Tourmaline is remarkable for being the most dichroic of all gem stones, making it of great value in the construction of optical apparatus and for optical purposes. See Gem.

TOURNAI (Flemish, Doornyk). City of Belgium. It lies on the Schelde, 52 m. by rly. W.S.W. of Brussels, and is a busy rly junction. There are carpet making ("Brussels" carpets), tanning, quarrying, and hosiery, chocolate, chalk, and cement industries, and busy river traffic, especially in coal from the Mons coalfield. It is the seat of a bishop and a military centre. The cathedral of Notre Dame dominates the city. Other churches of note are those of S. Quentin and S. Brice. The Pont des Troues dates from the 13th century.

In the Great War it was entered by Germans, Aug. 23, 1914. There was sharp fighting in the suburbs, Oct.-Nov., 1918, before its capture by the British on Nov. 8. Pop. 35,972.

TOURNAMENT. Medieval mock combat between mounted men. Named from the tournament, or quick turning of the horses, it appeared in Europe in the 11th century, and quickly grew in popularity, both in France and England, where, in the reign of Henry II, it became necessary to prohibit tournaments owing to extravagant indulgence in them. There is a graphic account of a tournament in Ivanhoe, and Froissart is a mine of information on the subject.

The essential feature was the single combat of knight with knight, each striving to unhorse or incapacitate his opponent, the usual weapon being the lance. Sometimes, however, one body of knights fought against another. They took place on occasions of rejoicing.

The royal tournament is an annual naval and military spectacle held in London. Formerly known as the Royal Naval and Military Tournament, it dates from 1879. Originally held in the Royal Agricultural Hall, it is now held at Olympia. In it officers and men of the navy, army, and air force take part.

TOURNIQUET. Instrument, the essential part of which consists of a band passing round a limb, by which the blood vessels can be compressed. It is used to stop bleeding or prevent haemorrhage during an operation. See First Aid.

Tours. View of the city from the bank of the Loire, showing bridges over the river and the twin towers of the beautiful 12th century cathedral

TOURS. Town of France. It stands in the valley of the Loire, 145 m. from Paris. The Gothic cathedral has a façade of great beauty, and towers crested by cupolas. In a garden behind the cathedral are Roman walls and remains of an amphitheatre. Conspicuous features of the town are two towers, relics of the abbey church, the rest perishing in 1790.

The city's association with S. Martin made it famous ecclesiastically. Its abbey was also notable, and the city thrived on the gifts of the pilgrims who came to the shrine of S. Martin. It was until the Revolution the capital of Touraine. Pop. 77,192.

TOUSSAINT L'OUVREURE (1746-1803). West Indian negro leader. He was born

a slave on a plantation in Haiti, May 30, 1746, his real name being François Dominique Toussaint, that of L'Ouvreure being added later, it is said on account of his bravery in making a breach (ouverture) in the enemy's ranks. In 1791, after having aided his master and his family to escape, he took part in the negro insurrection, and in 1794 joined the French republicans. Appointed commander-in-chief of the

Tournai. The Grand Place with the Belfry on the right and the towers of the cathedral showing on the left

island in 1797, he drove out the French royalists, the British, and the Spaniards, and brought the island into a state of tranquillity and prosperity. He was captured by the French, May 7, 1802, sent to France, and died in a dungeon in the Jura, April 27, 1803. He is subject of a sonnet by Wordsworth.

TOWCESTER. Market town of Northamptonshire. It is 8 m. from Northampton, on the L.M.S. Rly., and near Watling Street. The 11th century church of S. Laurence, with a fine Perpendicular tower, contains an altar tomb (1448), old brasses and monuments, and some chained black letter books. The Pomfret Arms is referred to in The Pickwick Papers as The Saracen's Head. Market day, Tues. Pop. 2,383.

TOWER. In its widest sense, any structure that is high in proportion to its lateral measurements; in the narrower, a structure standing on the ground, and rising therefrom without any serious break in its verticality.

The large Norman church had towers to mark the terminations of the aisles, and often another tower at the intersection of the cross. These were increased in height during the Early English period, the spire was added, and in the Perpendicular style tower and spire together achieve their limit of height. The highest tower in the world is the Eiffel Tower in Paris. See Babel, Tower of; Campanile; Eiffel Tower; Pagoda; Pisa; Round Tower.

TOWER HAMLETS. Name given to certain liberties near the Tower of London. They consist of districts in the boroughs of

Toussaint L'Ouvreure, West Indian negro leader

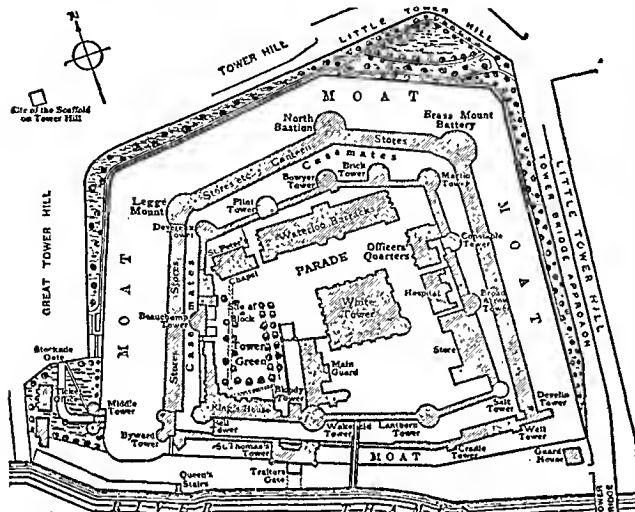

Toulouse. The Capitole or city hall, dating from the early 17th century

Poplar, Shoreditch, Stepney, and Bethnal Green. The name is remembered chiefly because, prior to the Act of 1918, they returned 7 members to Parliament, the Hamlets being divided into the divisions of Bow and Bromley, Limehouse, Mile End, Poplar, St. George's in the East, Stepney, and Whitechapel.

TOWER OF LONDON. Ancient fortress, palace, and prison on the left bank of the Thames. It covers 13 acres. Apart from a section of Roman wall, its oldest structure is the White Tower or keep, built in 1078-80. On the first floor is Queen Elizabeth's armoury, originally the sub-crypt of St John's Chapel, one of the finest Norman chapels in England. Underneath the S. staircase some bones found in Charles II's time were identified as remains of Edward V and his brother; they were removed to Westminster Abbey in 1678.

Tower of London from the air. The buildings constituting the Tower can be identified from the plan below. The narrow belt of trees beyond the drained moat is a public garden
Surrey Flying Services

Tower of London. Plan of the ancient buildings and modern barracks

The Tower is surrounded by a moat, drained in 1843, between which and Tower Hill are gardens, and has Tower Wharf on the river front. Waterloo Barracks, to the N. of the White Tower, serve for the garrison.

Near the Tower is Tower Hill. Here, on the site covered by Trinity Square Gardens, political prisoners were executed. These have included such famous men as Sir Thomas More, the duke of Somerset, Strafford, and Laud.

The Tower Bridge crosses the Thames near the Tower of London. It was opened in 1894 and carries a roadway 49 ft. in width. The central, or bascule, span consists of two cantilever arms which meet in the centre and are opened and closed by hydraulic machinery to admit the passage of ships.

TOWN (A.S. tun, hedge, enclosure). Originally the name given to the primitive settlement of the community surrounded by a hedge. As population grew and commerce developed, town became distinguished from village. In England the distinction was popular rather than precise and legal, except in the case of the boroughs and cities. It was based merely on size and importance, on the development of industries, and on the growth of markets. See Borough.

TOWN COUNCIL. This is an elected body for managing the affairs of a city or town. For the former the term city

Jan. 3, 1805, this valuable collection was bought by the British Museum.

TOWNELEY PLAYS. These are a collection of early dramatic pieces. Probably made about the close of the 14th century, they were preserved in the library of Towneley Hall, Lancashire. There are thirty-two pieces presenting the Bible story, from the Creation to Doomsday, in a familiar and sometimes broadly humorous fashion. At Sotheby's on Feb. 8, 1922, the MS went to Dr. Rosenbach, of Philadelphia, for £3,500.

TOWN PLANNING. Method for securing better housing by making definite plans for the

council is sometimes used, and in Scotland they are called hugh councils. In England, in their present form, they date from the Municipal Corporations Act of 1834; the town councils of earlier date were usually nominated and often corrupt.

TOWNELEY, CHARLES (1737-1805). British collector. Born at Towneley Hall, near Burnley, Oct. 1 1737, he studied ancient art in Rome and Florence, and with the assistance of Gavin Hamilton and others, amassed a fine collection of marbles and terra-cottas, drawings, MSS., bronzes, gems, and coins. After his death in London,

number of such had been prepared when the Great War broke out. Progress was renewed after the end of the struggle. In 1928 it was reported that 625 areas, covering over 3,000,000 acres, were being planned by 395 local authorities. See Garden City; Housing.

TOWNSHEND, CHARLES TOWNSHEND, 2ND VISCOUNT (1674-1738). British politician. The eldest son of Horatio, Viscount Townshend, he became viscount in 1687.

2nd Viscount Townshend. British politician After Eneller

After diplomatic experience in the Netherlands he was chosen, in 1714, a secretary of state, and became one of the leading ministers of George I. In Dec., 1716, he left office, but he returned in 1720 as president of the council. He was a secretary of state, 1721-30, his brother-in-law, Walpole, being his chief colleague. Townshend, who died at Raynham, June 21, 1738, was known as Turnip Townshend.

Townshend's grandson, Charles Townshend (1725-67), was the politician who, as chancellor of the exchequer, imposed taxes on the American colonists in 1766. George Townshend, the 4th viscount, was made a marquess in 1787. The 7th marquess (b. 1916) succeeded his father, 1921.

TOWNSHEND, SIR CHARLES VERE PEREGRINE (1861-1924). British soldier. Born Feb. 21, 1861, grandson of Lord George Townshend, he entered the Royal Marines, and saw service in the Suakin operations and the Nile expedition. Having joined the Indian army, he came into notice by his gallant defence of Chitral. He was at Aden and Khartoum, 1898, and served in the S. African war, 1899-1900. In the latter year he was transferred to the British Army, joining the Royal Fusiliers. He became major-general, 1911, and commander of a territorial division in 1912. Townshend returned to India in 1913.

Early in 1915 he was sent to Mesopotamia at the head of a division, and after gaining several victories had to retreat to Kut, which he defended for five months. Taken prisoner after the fall of Kut, Townshend was removed to Constantinople, and was interned in Prinkipo Island. In 1920 he was returned to parliament for the Wrekin division. He died May 18, 1924. See Kut.

TOWNSHIP OR VILL. Territorial division of Anglo-Saxon and medieval England. In pre-conquest times the township (A.S. tūnscipe) was the area occupied by the inhabitants of an enclosed homestead or village. The term was later applied to the community

Sir Charles Townshend, British soldier Bassano

Tower Bridge. Diagram showing construction. A, masonry towers enclosing steel piers; B, steel suspension plate chains holding C, the bridge, and D, overhead girders; E, bascules or cantilever roadway sections, shown raised; F, gearing for raising bascules; G, hydraulic operating motors; H, control and operating houses

of inhabitants of a manor or parish within a hundred (q.v.). In the U.S.A. a township is a sub-division of the county, with varying powers of local government.

TOWNSVILLE. Seaport of N. Queensland. It stands on Cleveland Bay, 748 m. N. of Brisbane. Its harbour serves as outlet for a sugar growing and grazing dist. Townsville is the seat of the Australian Institute of Tropical Medicine, founded in 1910. Pop. 30,700.

TOWTON. Parish of Yorkshire (W.R.). It is famous for the battle fought here, March 29, 1461, between the Yorkists and Lancastrians, which ended in the rout of the Lancastrians. 33,000 men are said to have fallen. See *Roses*, Wars of the.

TOWY. River of Wales. It rises among the hills that divide Cardiganshire from Radnorshire, and falls into Carmarthen Bay at Llanstephen. Its length is 66 m., and Carmarthen is on its banks.

TOWYN. Urban dist. and watering place of Merionethshire, Wales. It stands on Cardigan Bay, 12 m. N. of Aberystwith, and has a station on the G.W. Rly. Pop. 4,411.

TOYNBEE, ARNOLD (1852-83). British economist. Born in London, Aug. 23, 1852, son of Joseph Toynbee (1815-66), a surgeon, he was educated at Oxford. He became a vital influence in the social movement of his time. He made a special study of economics, charity organization, cooperation, and church reform, and was a close student of philosophy, history, and religion. He lectured to working class audiences in different parts of the country, and associated himself with the Rev. Samuel A. Barnett in work among the poor in the East End of London. He died at Wimbledon, March 9, 1883.

His nephew, Arnold J. Toynbee (b. 1889), had a brilliant career at Oxford and made himself an outstanding authority on international affairs. In 1925 he was made professor of international history in the university of London, and director of studies at the institution of international affairs.

TOYNBEE HALL. This university settlement in London was inspired by the work of Arnold Toynbee. It was opened in Commercial Street, Whitechapel, with the Rev. S. A. Barnett (q.v.) as warden, Dec., 1884, the first of its kind.

Trabzon. Alternative name of the town in Asia Minor better known as Trebizond (q.v.).

TRACERY (Fr. traier, to trace). In architecture, the ornamental stonework of a Gothic window which followed the grouping of lancet windows in twos and threes under a single arch. The term is also applied to the corresponding decoration of a wood panel. The earliest form of tracery was known as plate tracery. In the 12th century this was a circle or quatrefoil introduced into the tympanum below the covering arch. Geometrical tracery possessed symmetrical forms such as trefoils, cinquefoils, quatrefoils, and circles. Flowing tracery followed, and late in the 14th century began to give way to the more vertical and stronger bars of the Perpendicular period, and with the Renaissance tracery disappeared. See *Architecture*; *Perpendicular*.

TRACHEA or **WINDPIPE.** Nearly cylindrical tube which extends from the lower border of the larynx in man. It is about $4\frac{1}{2}$ ins. long and $\frac{3}{4}$ in. in diameter, and terminates by dividing into the two bronchi. The trachea consists of a series of from 16 to 20 stiff cartilages in the form of a U. Behind the trachea is the oesophagus or gullet. The word is the Gr. tracheia (rough), an epithet applied to the arteria (windpipe) to distinguish it from the smooth arteries and veins through which the blood flows. See *Throat*.

TRACHEOTOMY. Operation of opening the trachea in the neck to allow passage of air

to the lungs when breathing is difficult or arrested by some obstruction in the air passages above the trachea. The operation is most frequently required in oedema of the larynx, diphtheria, tumours, or foreign bodies obstructing the air passages. After the windpipe has been opened in the neck a metal tube is passed through for respiration purposes. This actually consists of an inner and an outer tube, the former of which can be removed and cleaned whenever necessary.

TRACHODON (Gr. trachys, rough; odous, tooth). Extinct fossil dinosaur found in the Upper Cretaceous deposits. It resembled an iguanodon (q.v.) in appearance, with a broad spatulate snout, and remains of the reptile have been found in Wyoming, Montana, and other states of the U.S.A.

Trachodon. Restoration of the extinct reptile which lived in N. America in the Cretaceous period
By courtesy of the American Museum of Natural History

TRACHOMA. Contagious disease of the conjunctiva or membrane covering the front of the eye and inner surface of the eyelids. See *Conjunctivitis*.

TRACTARIANISM. Alternative name for the Oxford Movement (q.v.). Its method of propaganda by means of a series of Tracts for the Times, 1833-41, gave its leaders and followers the name of Tractarians.

TRACTOR. Primarily a machine for drawing, and specifically a traction engine. The word is more particularly used for agricultural tractors used for ploughing, sowing, threshing, etc. See *Caterpillar Tractor*.

TRADE, BOARD OF. Department of the British government that looks after matters relating to trade and commerce. These include the supervision of railways, tramways, and shipping, of public companies, trade marks, and patents, and of bankruptcy proceedings, for which it has receivers in all the large towns. It also collects and distributes statistics and information about trade, and until 1917 managed the labour exchanges, the trade boards, and insurance against unemployment. The president is a member of the Cabinet, and the head offices are in Gt. George St., London, S.W.1. The Board issues the Board of Trade Journal, published weekly at 6d.

TRADE BOARD. In the United Kingdom, a board consisting of masters, men, and neutrals appointed to fix wages in certain industries. They were established by an Act of 1909, first in the four specified trades of tailoring, box making, lace finishing, and chain making, in which sweating was prevalent. In 1913 the Act was extended to include shirt making, confectionery-making, food preserving, hollowware making (tin boxes, etc.), embroidery manufacture, and certain kinds of laundry work. In 1919 an order extended the Act to those employed in distributing milk, and in 1930 its application to the catering trade was being considered.

Each board consists of an equal number of employers and employed, with a small number

of nominated members, and their duty is to fix minimum rates of wages, etc. They work usually by districts. The boards worked at first under the board of trade, but in 1917 they were transferred to the ministry of labour.

TRADE MARK. Name or distinctive device for an article, or in connexion with an article of production for sale, indicating that such are the goods of the proprietor of the device. In most countries trade marks are protected by Acts, under which it is a misdemeanour to forge or counterfeit any trade mark, or falsely to apply any such trade mark, with intent to defraud, to any article, or to any wrapper, etc., in which any commodity is sold.

In Britain a trade mark can be registered, the fees being fixed by the board of trade or other authority. It should contain at least one of the following essentials: (1) name of an individual or firm used in some distinctive way, (2) signature of the registering parties, (3) a distinctive device, (4) an invented word, (5) a word, not geographical and not having any connexion with the character or quality of the goods to which it is applied. Application should be made to the Registrar, Patent Office (Trade Marks Branch), 25, Southampton Buildings, London, W.C.2. See *Patent*.

TRADE UNION. Association of workers formed for the purpose of mutual help or protection and for the improvement of their conditions of employment. In Great Britain the laws forbidding combinations of workers were repealed in 1824. A great number of unions then came into existence, but it was not until 1875 that the principle of collective bargaining between employers and employed was sanctioned and peaceful picketing during a strike made legal.

In 1901 a judicial decision of the House of Lords caused consternation among trade unionists. This said that the funds of a union were liable for the consequences of illegal acts done by its officials, just as is the property of an individual or corporation. An agitation led to the passing of the Trade Disputes Act of 1906, which set aside this decision. It relieved the funds of the unions from liability in case of illegal actions by their members, and made wider and more explicit the permission given by the Act of 1875 for peaceful picketing.

In 1927, the year following the general strike, another Act dealt with the position. By the Trade Disputes Act a general strike was declared an illegal action, and peaceful picketing was again narrowed to the meaning given to it in 1875. It provided, too, that the political funds of a union must be kept distinct from its other funds, that no member need contribute to such political funds unless he expressly agrees to do so, and that the funds can only be used for political purposes with the consent of the members.

In addition to their extensive political work, the trade unions have many other activities. They receive weekly contributions from their members, and pay out considerable sums in unemployment benefit and during strikes.

The trade union movement has spread from England nearly all over the world, and in 1928 there were 44,190,525 trade unionists united in an international federation.

In Great Britain there is a general federation of trade unions, and a congress has been held each year since 1871. Scotland and Ireland also hold annual congresses. In Great Britain in 1927 the total membership was 4,908,037 and the number of unions 1,127. The annual income was just over £10,000,000.

TRADE WIND. Persistent wind blowing towards the equator from the N.E. in the northern hemisphere, and the S.E. in the southern hemisphere. The word trade, as here applied, originally meant winds in a trodden or beaten path, i.e. steady, reliable

winds, regularity or constancy being marked characteristics of trade winds. They occur in the Atlantic Ocean and in the Pacific Ocean near the W. coast of America. These winds are moving bodies of air, each about 1,000 m wide, which flow steadily for 2,000 m. and together cover about $\frac{1}{10}$ th of the earth's surface. The trade winds are of great value to sailing ships and are also of considerable climatic importance. See Wind.

TRAFALGAR, CAPE. Headland of S.W. Spain. It is about 30 m. S.W. of Tarifa at the W. end of the Strait of Gibraltar.

The battle of Trafalgar was fought between the British under Nelson and the French and Spanish fleets off Cape Trafalgar, on Oct. 21, 1805. The enemy was sighted in the early morning, steering due N. in a confused line ahead formation. Collingwood, leading the lee (or starboard) line of 15 ships in the Royal Sovereign, broke through ahead of the 15th ship from the enemy's rear, while Nelson, leading the weather-line in the Victory, made a second breach immediately astern of the Bucentaure, the hostile flagship. The Bucentaure opened on the Victory at a range of 1½ m., but no answer was returned until the latter was within 30 ft. of the French ship's stern. By 1.30 p.m. the action was at its height, and it was a few minutes before this that Nelson received his mortal wound. By 3 o'clock the issue was decided. Fifteen of the enemy's ships were taken or destroyed. No British ships were lost, and the casualties were only 449 killed and 1,242 wounded. See Nelson, Viscount; Sea Power.

TRAFALGAR SQUARE. London open space on the N. side of Charing Cross, S.W. A memorial of Nelson's last victory, it was begun and completed, 1829-67, modified from designs by Sir Charles Barry. Its central feature is the Nelson Column, 145 ft., surmounted by a statue, 18 ft., with bas-reliefs of Nelson's battles at the base, and four couchant bronze lions by Landseer. See Charing Cross, National Gallery; St Martin-in-the-Fields.

TRAFFIC (Ital. *trafficare*). Literally trade or commerce, i.e. exchange. It has come to be used mainly for the business done by railways and for the movements of vehicles along the roads and streets. Traffic in the streets is controlled by the local authorities and police. With the enormous increase in the number of vehicles using the roads the traffic problem in recent years, has become one of great magnitude and difficulty.

In 1928 the Government appointed a royal commission to consider the question. Its report was issued in 1929. The Road Traffic Act of 1930 embodies a number of the commission's recommendations. It does away with the county as the traffic authority, and substitutes 13 traffic areas, in each of which three commissioners act as the licensing authority. On ordinary passenger motor cars the speed limit is abolished, but maximum speeds are laid down for other types of motor vehicle. The Act authorises the preparation of a code (the "highway code") comprising directions for the guidance of persons using roads.

The Act empowers the Minister of Transport to specify the routes to be followed by vehicles, and to prohibit or restrict the use of specified roads. Public service vehicles are classified as stage carriages, express carriages, or contract carriages. A licence for such a vehicle will be issued only when the vehicle has been certified fit by an officer appointed under the Act. In the case of road services a special licence is necessary, and the applicant has to furnish particulars of the type of vehicle and of the time and fare tables. The commissioners will take into account the suitability of the routes, the needs of the area, and the co-ordination of all other forms of passenger transport. They will also consider representations made by persons already providing transport facilities.

Driving licences will no longer be issued indiscriminately, and an applicant will have to declare that his eyesight is up to a prescribed standard, and to state if he suffers from heart attacks, disabling fits, or mental disease. A person who makes an untrue statement or conceals his disability is liable to heavy penalties. The applicant must also produce evidence that he is insured against third-party risks; a certificate of insurance must be carried. The minimum age for obtaining a licence to drive a motor-cycle is 16; for driving a motor-car 17; and for driving a locomotive, motor tractor, or heavy motor-car, 21 years. See Road.

TRAFFORD PARK. District of Manchester. It is about 2 m. from the city proper, and has a station on the Cheshire Lines Rly. The hall here was long the seat of the De Trafford family. Bordering the Manchester Ship Canal, the estate, about 1,200 acres, was purchased by a company and cut up into sites for warehouses and factories. See Manchester.

TRAGACANTH. Gum-like exudation obtained by incision of a species of shrub *Astragalus*, growing in Asia Minor. It occurs in thin white or yellowish flakes, and is employed in medicine as a demulcent. See Gum.

TRAGEDY (Gr. *tragos*, goat; *ōdē*, song). Originally a hymn or choral ode sung at the festival held in honour of Dionysus among the ancient Greeks. The reason for the appellation remains uncertain. The most plausible explanation is that a goat, the destroyer of vines was sacrificed to the wine god during the singing of the ode.

As defined by Aristotle, tragedy is a representation of an action that is weighty, complete, and of a due magnitude, effecting through pity and terror a purgation of the like passions in the mind of the spectators.

TRAGOPAN OR HORNED

PHEASANT (*Cerionis*). Genus of game birds. They include five species, found only in India and China, and are noted for the brilliance and beauty of their plumage. They occur in bamboo plantations and in dense coverts on the hills; and the males indulge in elaborate displays in the breeding season.

TRAHERNE, THOMAS (c. 1636-74). English writer. The son of a Hereford shoemaker, he was educated at Brasenose College, Oxford, and in 1657 became rector of Credenhill, near Hereford. He published several theological works and left two MSS., one of poems, the other four prose Centuries of Meditations. Both MSS. were discovered on a bookstall about 1896, and were edited and published by Bertram Dobell in 1903 and 1908 respectively. Of the school of George Herbert, Traherne traces the influence of natural beauty on the formation of character.

TRAIN BAND. Body of English citizen soldiers. Train bands were first constituted under James I, partly on the old fyrd system, partly on a voluntary basis. They took a prominent part on the Parliamentary side in the Civil War, and in consequence were abolished by Charles II after the Restoration.

TRAIN FERRY. Service of vessels specially constructed for the transport of railway trains across water. Such vessels are known as train ferry ships or boats. The advantages of such a service are the great saving of time, labour and expense effected by running the trains on board and off again, thus avoiding the necessity of discharging their freight and loading it on to an ordinary vessel, and reversing the process at the end of the voyage. See Harwich; Richborough.

TRAJAN (c. A.D. 56-117). Roman emperor, 98-117. Marcus Ulpius Trajanus, a Spaniard of Italica, near Seville, achieved rapid distinction in the Roman armies, and was in command of the forces on the Rhine when the emperor Nerva wisely selected him as his colleague and successor, and with that end in view formally adopted him in 97. On Nerva's death in 98 he became emperor. His high character and great military talents were matched

by his administrative ability, and he was the first emperor who deliberately set himself to extend the Roman dominion. In 101-105 he thoroughly subjugated the territory of Dacia, and later he led an expedition to the east, but after taking the Parthian capital Ctesiphon in 115 he was forced to retreat. He died at Selinus in Cilicia. His deeds were commemorated on Trajan's Pillar in Rome. See Hadrian; Rome.

Trajan, Roman emperor
Vatican Museum

TRAJECTORY. Term applied in ballistics, and especially in gunnery, to the curve described by a projectile during its passage from the muzzle to the first point of impact. See Ballistics; Gun; Howitzer.

TRALEE. Seaport, urban district and county town of Co. Kerry, Irish Free State. It stands near the mouth of the river Lee, on Tralee Bay, with which it is also connected by a ship canal. It is a station and junction on the G.S. Rlys. 21 m. from Killarney. The trade consists chiefly in exporting butter and grain, and importing coal and timber. Pop. 10,533.

Tragopan. *Cerionis satyrus*, native of the Himalayas

TRAMMEL NET. Kind of fishing net. It consists of three nets, fixed to stand upright in the water parallel to each other. The innermost of the three is twice the

length and twice the height of the outer two, and is of a smaller mesh. Fish swimming through the larger meshes carry with them a fold of the inner net, and thus become enclosed in a pocket from which escape is impossible. This net is put down in the evening off a rocky coast and taken up the next day. Amongst the fish usually caught in the trammel net are red mullet and bass.

TRAMWAY. The earliest tramways were wooden tracks for the conveyance of coal in trucks or "trams" at collieries by horse power. Iron plate-ways were later introduced, and developed ultimately into the railroad (See Railway). In Great Britain horse-trams were first used for carrying passengers in the 'sixties of the 19th century. About 1882 steam locomotives were introduced in Birmingham, and remained in use on certain sections until 1905, while in Paris steam haulage was only being superseded in 1913.

ELECTRIC TRAMWAYS. There are two systems, the conduit, and the overhead or trolley system. The former includes an underground conduit with a continuous slot along the top of it. Inside are two steel rails, which convey the current to and from the generating station through a plough attached to the tramcar. The plough carries at its lower end two blocks of soft iron or bronze, which are pressed outwards against the conductor rails by springs. One block collects the electricity, which passes up the plough by copper strips to the motors on the car, the current being returned through the other block to the return conductor rail. In the overhead system

the electricity is collected by a wheel pressed up against the under side of an overhead conductor, and returns through the rails.

A tramcar consists of a body and a chassis or truck. The bogie type of car has a four-wheeled swivelling truck at each end. There are two motors, each of which drives one pair of wheels through reduction gear. Tramcars are usually arranged to run either way, and controlling apparatus is provided on both end platforms.

TRANCE. Condition of insensibility resembling sleep, from which, however, the individual cannot be roused, and which is not due to disease or injury of the brain. When associated with rigidity of the muscles, the term catalepsy (q.v.) is employed. Trance is a rare condition, and probably most instances are hysterical. It has been said that the condition may be mistaken for death, but the retention of the body warmth and the evidences of continuing circulation and respiration enable a correct diagnosis to be made.

TRANENT. Burgh of Haddingtonshire (East Lothian), Scotland. It is 10 m. from Edinburgh, on the L.N.E. Rly., and is the centre of a colliery district. Pop. 4,763.

TRANSCAUCASIA. Dist. S. of the Caucasus Mts. Before the Great War it formed a section of the Russian Empire. In 1919 confused hostilities went on between the Armenian and Azerbaijan governments, also prolonged disputes between the Tartars, Armenians, and Georgians respecting their distinctive boundaries. In 1922 Armenia, Azerbaijan, and Georgia acknowledged the authority of the Union of Soviet Republics, and formed themselves into the Transcaucasian Socialist Federated Soviet Republic. See Armenia; Azerbaijan; Caucasus; Georgia.

TRANSEPT (Lat. trans, across; septum, enclosure). In architecture, the transverse portion of any building lying across the main body of that building. The transept became common in the Middle Ages, and almost universal in the Gothic period. The crossing is often surmounted by a spire, tower, or dome. Single transepts are the more common, but double transepts are found in England and Germany. See Cathedral; Nave.

TRANSFIGURATION. Appearance of Christ described in Matt. 17, Mark 9, and Luke 9. According to the Scripture narratives, Christ appeared, revealed in His divine glory as Son of God, in the company of Moses and Elias (Elijah), before Peter, James, and John. The event (see also 2 Pet. 1) is supposed to have taken place at night on Mt. Hermon or Mt. Tabor, hence the name Feast of Tabor used in the Greek Church. The Feast of the Transfiguration is observed on Aug. 6.

TRANSFORMER. Apparatus for changing the energy of an electric current into the energy of another current differing from the first in pressure, volume, or kind.

In the case of direct or continuous current mechanical transformers are used (see illus. p. 553). The term is sometimes confined to the static apparatus (i.e. one without moving parts) used for altering the pressure and volume of alternating current. This is an induction coil, with an iron core on which are two windings, one having a small number of turns of coarse wire, the other a larger number of turns of finer wire. The nature of an alternating current supplies the fluctuations of energy essential to induction, without the need of a mechanical interruptor. The pressures in the two windings are theoretically

directly proportionate to the number of turns: and the volume of current inversely proportional. Thus, if the primary—i.e. the receiving

winding—has 100 turns, and the secondary 1,000 turns, the pressure will be increased (stepped up) ten times in the secondary. In the reverse case the pressure would be decreased (stepped down) to the same extent.

Transformers are used in one method of coupling the valves of a broadcast receiving set. Thus, in a set comprising a detector

Tramway. 1. The first tramcar used in England, introduced in Birkenhead in 1860. 2. Electric tramcar of the type used by the L.C.C.

and L.F. amplifier the anode circuit of the detector valve includes the primary winding of the inter-valve transformer, and the secondary winding forms part of the grid circuit of the second valve. See Induction; Wireless.

TRANSFUSION. Term applied to the transference of blood from one person to another, and sometimes held to include the introduction of saline solution into the blood vessels in cases of collapse. See Blood.

TRANSIT CIRCLE. In astronomy an instrument for ascertaining the time of star transits across the meridian. Invented by Olaus Römer in 1690, it consists essentially of a telescope movable in the plane of the meridian, and supported on two pillars which are respectively E. and W. of it. On one side of the telescope is fixed a circle which denotes its movement in the plane of the meridian, and which is read by microscopes fixed to one of the supporting pillars. On the other side of the telescope is a circle which is used for moving it. See Telescope.

TRANSITION. In architecture the passing from one style to another, and by extension, the style of building during the period of passing. The transition periods between Romanesque and Gothic, and Gothic and Renaissance, may be named. The Tudor style in England represents the transition from English Gothic to Renaissance. See Architecture; Renaissance Architecture.

TRANSITION SERIES. In geology, name given to rocks approximately of the Palaeozoic age which showed a transitional stage between the older crystalline rocks and the newer non-crystalline. See Mesozoic Era.

TRANSJORDAN OR TRANSJORDANIA. Independent state E. of Palestine. Governed by Gt. Britain under the same mandate as Palestine, its boundaries are only roughly known and its area is uncertain. Since 1921 it has been ruled by Abdullah, a brother of King Feisal of Iraq, and in 1923 Great Britain agreed to recognize him as an independent ruler. Order is maintained by the Transjordan Frontier Force and the Arab Legion. Amman, the capital, is the headquarters of the R.A.F. in Palestine and Transjordan. The country is mainly desert, except that to the W. of the Hejaz Rly. Pop. about 260,000. See Hejaz; Palestine.

Transkei. District in the Cape Province, S. Africa, also known as Kaffraria (q.v.).

TRANSMIGRATION. Doctrine of the passage of the soul from one body to another. According to this theory the soul, proceeding from God, passes through a succession of states before returning to God. Of ancient origin, the theory enters into much philosophy and poetry as well as theology, and is found in a crude state among savage races. See Incarnation.

TRANSOM (Lat. transtrum). In architecture, a beam or bar of wood, stone, or metal laid horizontally across a door or window; serving in the latter case to divide the upper and lower lights. See illus. below.

TRANSPORT. Science of moving persons and materials, whether by rail, road, water or through the air. In Great Britain there is a ministry of transport with offices at Whitehall Gardens, London, S.W.1. It was set up in 1919 to deal primarily with the railways, but to-day it is chiefly concerned with the problems of the roads. A section of the Science Museum at S. Kensington is devoted to transport. See Canal; Road; Shipping; Traffic, etc.

TRANSPORTATION. System of punishment for crime. By it criminals are removed to some penal settlement outside their own country for a period of years or life. Transportation to America ended with the War of Independence, and in Jan., 1788, the first batch of convicts landed at Botany Bay in New South Wales. The system worked well for a time, but in 1840 the sending of convicts to New South Wales was transferred to Van Diemen's Land (Tasmania), which already had penal settlements. It was finally abolished in 1853. The system is still in existence in other countries, e.g. France.

TRANSPORTER BRIDGE. Type of bridge in which a car, suspended from a trolley travelling upon an overhead bridge superstructure, conveys passengers, vehicles, etc., across a waterway. It usually comprises a tower on each shore supporting a suspension or girder bridge. The overhead trolley runs upon rails secured to the bridge girders. The overhead trolley may be self-propelling, but a more positive drive is obtained by securing it to a steel wire hauling rope passing round pulleys at each end of the bridge and round a winding drum in a machinery cabin, actuated by an electric motor or other means. Two well-known British transporter bridges are the one at Runcorn-Widnes, and the other across the river Usk at Newport, Monmouthshire. See Bridge.

Transom in architecture. See above

TRANSUBSTANTIATION (Lat. trans, over; substantia, substance). In theology, doctrine of the change of the substance of the bread and wine, by consecration at the celebration of the Holy Eucharist, into the true Body and Blood of Christ, only the appearances of the bread and wine remaining. The doctrine is a dogma of the Roman Catholic Church, and has its counterpart in the Greek Church, but is rejected by most Protestants. Article XXVIII of the Church of England, while rejecting the word, maintains that the Body and Blood of Christ are present "only after an heavenly and spiritual manner." See Communion, Holy; Consubstantiation; Eucharist.

TRANSVAAL. One of the provinces of the Union of South Africa. It lies between the rivers Vaal and Limpopo, the Vaal on the S. separating it from the Orange Free State,

and the Limpopo on the N. from Southern Rhodesia. It is also bounded by the Cape Province, Natal, Orange Free State, and on

Trapping. 1 Heavy deadfall, for large animals. 2. Sapling snare, for killing small game. 3. Box trap for catching alive, showing notched stick for bait. 4. Steel rabbit trap

the E. by Portuguese territory and Swaziland. Pretoria is the capital, but Johannesburg is the largest town. The two main industries are the mining of gold on the Witwatersrand and farming on the veld. The province contains rich coal mines, while diamonds, copper, and tin are also mined. Its area is 110,450 sq. m. Pop. (European) 608,622.

The province owes its origin to some Boer farmers, who, about 1836, left Cape Colony for the north. Passing over what was later the Orange Free State, they crossed the Vaal, the country N. of that river being therefore called the Transvaal. In 1852 Great Britain recognized the independence of this district, but in 1877 it was annexed. In 1880 the Boers rebelled, wishing to regain their independence.

After 1881, and still more from 1884, when the convention of 1881 was revised, the Transvaal was a republic free to manage its internal affairs, but with Great Britain responsible for its external ones. In 1902, after the South African War, the Boers recognized the sovereignty of Great Britain. As a crown colony the Transvaal was governed until 1906 by a governor assisted by two nominated councils. In 1906 responsible government on the accepted British model was granted to it, and in 1910 it joined the Union of South Africa; See Botha, Louis; Gold: Rand; Smuts, Jan C.; South Africa.

TRANSYLVANIA. Prov. of Rumania until the break up of the Dual Monarchy a dist. of the kingdom of Hungary. On Oct. 12, 1918, the Rumanians of Transylvania, the Banat, and other Hungarian districts proclaimed their independence of Hungary. Its area is 22,312 sq. m. Pop. about 2,700,000. The Transylvanian Alps are the S.E. section of the Carpathian Mts. (q.v.). See Rumania.

TRAPANI (anc. Drepanum). Coast town of N.W. Sicily. It is 3 m. W. of Monte San Giuliano, 45 m. direct and 121 m. by rly. W.S.W. of Palermo. The celebrated statue, the Madonna of Trapani, is in the old Annunziata pilgrim church near the town. Coral goods, shell cameos, salt, marble, and alabaster wares are produced, and macaroni, wine, fruits, and olive oil are exported. Pop. 83,766.

TRAPEZIUM. In astronomy, four bright stars grouped in a lozenge shape at the core of the Orion nebula. The stars are of the early helium variety and are intimately associated with the nebula surrounding them. They range from 4.7 to 8.0 in magnitude.

TRAPPING. Traps for catching animals comprise many varieties, from the ordinary steel trap with teeth for taking smaller quadrupeds, to the pits and heavy deadfalls for the killing or capturing of lions, tigers, and other big game. The steel trap for rabbits and such animals has been greatly improved and made to operate in a more humane manner than formerly. Another form of snare for small animals is the box-trap, the lid of which falls upon the intruder.

The pit, used for ensnaring larger animals such as lions, tigers, and bears, consists of a cavity some eight or ten feet deep, covered over the top with brushwood and other foliage so as to correspond with the surrounding ground.

This brushwood covering is arranged so as to collapse under the weight of the animal, which falls into the pit.

TRAPPIST. Branch of the Cistercian reform of the Benedictine order. It originated at the Cistercian Abbey of La Trappe in Normandy, whence it took its name. Armand Jean le Bouthillier de Rancé, elected abbot in 1664, found the community lax and disorganized. He introduced a system of unexampled austerity, the rules imposing strict enclosure, perpetual silence, and rigorous fasting. The Trappists employ themselves entirely with the choir offices and manual labour. They now have about 60 houses, including the Abbey of Mount St. Bernard, in Charnwood Forest. The nuns of this order keep an equally austere rule, and have now

Trappist monk in cowl and hood

about twenty convents. See La Trappe.

TRAQUAIR. Village of Peeblesshire. It is connected by bridge with Innerleithen, across the Tweed. At the junction of the Quair and Tweed stands Traquair House. Near is a grove immortalised in a ballad as The Bush abuno Traquair. Pop. 600.

TRASIMENO, LAGO, OR LAGO DI PERUGIA. Lake of Central Italy. It lies 12 m. W. of Perugia at an alt. of 844 ft., and is surrounded by hills. The lake, 10 m. long by 8 m. wide and 25 ft. deep, has no apparent natural outlet, but is regulated by an artificial channel. On the N. shore was fought the battle of Lako Trasimenus, between the Romans under C. Flaminius and the Carthaginians under Hannibal, 217 B.C., in which the Romans were utterly defeated.

TRAVANCORE. Native state of Madras. India. It comprises the W. portion of the S. end of the Deccan peninsula. The coast is low and marshy; the E. is mountainous, and its forests yield teak. The ruler is a maharaja with a salute of 19 guns. Its area is 7,625 sq. m. Pop. 4,006,062.

TRAVELLER'S JOY (*Clematis vitalba*) OR OLD MAN'S BEARD. Climbing shrub of the

order Ranunculaceae, a native of Europe W. Asia, and N. Africa. As a rule it scrambles over hedges and thickets, but often when it reaches up into a tree its rope-like stems are of great length. The flowers are slightly odorous and consist of four greenish-white sepals, downy on the under surface. The numerous styles develop long white feathery tails, which in autumn become the "old man's beard."

Traveller's Joy. Flowers of the British wild clematis

TRAVELLER'S TREE (*Ravenala madagascariensis*). Palm-like plant of the order Scitamineaceae. A native of Madagascar, the trunk is built up of the bases of former leaf-stalks which sheath the newer ones. The exceedingly large alternate leaves are arranged in two rows, with long stalks which hold about a quart of water. The seeds are edible, and the leaves are useful for thatching.

TRAVERTINE. In mineralogy, variety of limestone deposited by springs and rivers. The deposit is characteristic of volcanic regions, and its white to creamy colour makes it in great demand as a building stone. From the mode of its deposit the stone often contains fossil leaves and branches of trees.

TRAWLER (Old Fr. troller, to go hither and thither). Vessel engaged in trawling, so called because it uses large nets called trawls. The net consists of an immense bag which may be 80 feet long. If used by a sailing boat, the mouth is kept open by a pole of oak or elm wood, 40 ft. in length. When used by a steam trawler, the mouth of the trawl is opened by two boards (known as "otter-boards") which, owing to the movement through the water, are forced apart. In the process of trawling this net is dragged either by the sailing boat or the steam trawler for a given period of time over the bed of the portion of the ocean selected. The net is then hauled over the deck and a slipnet loosed, which allows the contents to be emptied out. The fish taken in this way are cod, plaice, turbot, whiting, sole, haddock, brill, skate, hake, gunnards, and ling.

During the Great War Great Britain organized a trawler section, which formed part of the royal naval reserve.

TREADMILL. Wheel turned by the weight of a person or persons treading on steps fixed on the periphery. Invented by the Chinese, who used it in drawing water for irrigation, it was formerly used in prisons as a means of

Treadmill in Pentonville prison, formerly used as a punishment

discipline or as a part of hard labour, the power being sometimes employed for the turning of machinery or grinding of corn.

TREASON. Term particularly applied to acts of betraying, or to the violation of allegiance to, the sovereign or chief authority of a state. In old English law, two forms of

treason were distinguished: high treason, where the act was directed against the crown or supreme authority, and petty or petit treason, where the allegiance violated was one towards some other superior authority.

TREASURE TROVE (Fr. *trouver*, to find). Name given to coins and other valuables made of gold or silver, found in the ground or some other hiding-place, whose owner is unknown. By English law such property belongs to the crown. Roman law regarded treasure trove as the property of the owner of the land and the finder, who had equal shares in it. This is the law of France, Germany, and other countries.

TREASURY. Department of the British Government responsible for collecting and expending the national revenue. It originated as the department of the lord high treasurer, an official who appeared at an early date in the royal household and ranked as the third great officer of state. It has been in commission without a break since 1714.

The commission of the treasury consists of a first lord, the chancellor of the exchequer, three or four junior lords, a parliamentary and a financial secretary, all members of the government. For some time the business was directed by the first lord of the treasury, but gradually it passed into the hands of the chancellor of the exchequer. The office of first lord is held by the prime minister, or the leader of the House of Commons. The financial secretary is the chief lieutenant of the chancellor. The permanent secretary ranks as the chief official of the civil service. The offices are in Whitehall, London, S.W.

Treasury bills are a form of British Government security, specially suited for temporary borrowing. They are usually repayable in three, six, nine, or twelve months, and are issued in multiples of £1,000.

Treasury bonds are a form of security issued by the British treasury. The money thus borrowed is for a definite term of years. See Budget; National Debt.

TREASURY NOTES Name sometimes given to the notes for £1 and 10s. issued by the British Treasury from 1914 to 1928, when their place was taken by notes issued by the Bank of England. See Bradbury, Baron; Currency.

TREATY (Fr. *traité*, ultimately from Lat. *tractare*, to handle). Formal agreement between two or more responsible governments, by whom the terms signed by commissioners are solemnly ratified, the treaty then becoming operative. See Berlin; London; Ryswick; Utrecht; Versailles; Westphalia, etc.

TREATY PORT This is a name specifically applied to certain ports of China after the Opium War of 1840-42. The terms of the peace treaty signed on the Cornwallis off Nanking included, in addition to the cession of Hong Kong, the opening to British trade of five ports, Canton, Amoy, Foochow, Ning-po, and Shanghai, which were therefore known as treaty ports. See Amoy; China.

TREBIZOND or **TRABZON** (anc. Trapezus). Town of Turkey. On the Black Sea, 570 m. E. of Istanbul, it is still enclosed within its Byzantine walls. Trebizond was a Greek colony founded from Sinōpē. In A.D. 1204 it became the capital of the empire of Trebizond.

Tree Frog. The European species, frequently kept in greenhouses.

W. S. Derridge, F.Z.S.

TREBLE. Term applied generally to the highest part in a piece of music, but in particular to the child's voice. When singing in parts first began to be practised, the melody was sustained by the tenor (q.v.) below which an additional part was placed. The next step was to add a second part above the melody, called the alto or high part. Then came the addition, still higher, of a third part, triplum, which has been corrupted into the term treble. See Harmony.

The treble clef is the G clef on the second line of the staff. Originally a small G, then later a capital G, the sign became conventionalised by engravers of music scores into its present form.

TREDEGAR. Urban dist. and market town of Monmouthshire, England. It stands on the Sirhowy river, 24 m. N. of Cardiff, on the G.W. Rly. It owes its prosperity to the opening of coal mines and ironworks. Market day, Sat. Pop. 25,105. Pron. Tredeegar.

The title of Baron Tredegar has been borne by the family of Morgan since 1859. The family seat is Tredegar Park, near Newport.

TREE, SIR HERBERT BEERBOHM (1853-1917). British actor. Born in London, Dec. 17, 1853. He made his professional debut in London at the old Park Theatre, Camden Town.

Sir Herbert Tree. British actor.

The next few years he took minor parts and was on tour, but in 1884 came his first great success as the Rev. Robert Spalding in *The Private Secretary*, at the new Prince of Wales's Theatre. Three years later he opened in management at the Comedy Theatre. A few months later he moved to The Haymarket, and began a long series of successes. After a tour to the U.S.A. he opened at Her Majesty's, which had been rebuilt, and began the series of successful productions with which his name is mostly associated. Tree produced in very lavish style, which, especially in the Shakespearean plays, was freely criticised by many who considered the beauty of the original lost in the gorgeous setting. In 1916 he lectured in America, and shortly after his return to England died, July 2, 1917. Tree was knighted in 1909.

TREE CREEPER (*Certhia familiaris*). Small British bird, it derives its name from the habit of creeping about the bark of trees. The wings are brown, barred with white and yellow and tipped with white; the tail is reddish brown, and the breast is whitish. The beak is long, curved, and slender, and is used for extracting small insects and their eggs from crevices in the bark. It is 5 ins. long.

TREE FROG. Family of frogs arboreal in habits. There are about 150 species. They have adhesive disks on the toes, which enable them to cling to the leaves and stems of trees. Usually green in colour, and difficult to distinguish when at rest among the foliage, they spend all their time in the trees, except in cold or very dry weather, when they hide

in mud or under stones, and in the breeding season, when most of them visit the water for spawning. One species (*Hyla arborea*) has become naturalised locally in the Isle of Wight. See Frog.

Tree Kangaroo. Black species of the arboreal kangaroo found in Australia and New Guinea.

TREE KANGAROO (*Dendrolagus*). Genus of arboreal kangaroos, found only in Australia and New Guinea. There are about seven species, black or dark grey in colour, with the front and hind limbs nearly equal in length, thus differing markedly from the ground kangaroos. They feed on fruit and ferns.

TREE MALLOW (*Lavatera arborea*). Shrub of the order Malvaceae, a native of the European

coasts. It forms a stout, erect, woody stem five or six feet high. The glossy, purple flowers, much like those of mallow and hollyhock, are 1½ ins. across.

TREE SHREW (*Tupaia*). Family of arboreal shrews, found only in India and Malaya. In general appearance they rather resemble small squirrels, but have the typically long muzzle of the shrews. They feed upon insects and fruit.

Trefoil (*Trifolium*). Genus of leguminous plants, the leaf of which consists of three leaflets. See Clover; Shamrock.

Treforest. Colliery centre of Glamorgan-shire, Wales. It is 12 m. from Cardiff, on the G.W. Rly. Pop. 12,365.

TREGARON. Parish of Cardiganshire. It is 10 m. from Lampeter, on the G.W. Rly. Formerly a borough, it is now the centre of a rural district. Pop. 1,400.

Treharris. Colliery centre of Glamorgan-shire, Wales. It is 14 m. N. of Cardiff, on the G.W. Rly. Pop. 8,787.

TREITSCHKE, HEINRICH VON (1834-96). German historian. Born at Dresden, Sept. 15, 1834, the son of an officer, he studied at Bonn and elsewhere. In 1857 he obtained an appointment at the university of Leipzig, but his zeal for union with Prussia forced him to leave Saxony in 1863. In 1874 he was made professor at the university at Berlin, where his ardent convictions gave his lectures unusual virility, and his narrow Germanism and disdain of England as sordid, and France as degenerate, suited the growing mood. He sat in the Reichstag from 1871 to 1888, and died in Berlin, April 28, 1896.

Treitschke's chief work is his *History of Germany*, in five volumes, Eng. trans. 1915-19; a severe, inartistic glorification of the development of modern Germany. In the same vein he wrote a *Life of Frederick the Great*, Eng. trans. 1914. But his ideas are best found in two volumes entitled *Politics*, Eng. trans. 1916. Treitschke's main theory is that the essence of the state is power, and individuals owe blind obedience to the autocratic state. War is a necessary discipline.

TRELAWNY, EDWARD JOHN (1792-1881). British adventurer. A member of an old Cornish family, he was born Nov. 13, 1792. He is remembered chiefly as the friend of Shelley and Byron, whom he met in Italy in 1822.

Tree Mallow. Leaves and flowers.

Tree Creeper seeking insects in the bark of a tree.

H. von Treitschke. German historian.

He superintended the cremation of Shelley and then went to Greece with Byron, but he left him to join a band of insurgents fighting for Greek independence. He died Aug. 13, 1881. Trelawny wrote *Adventures of a Younger Son*, 1835; and *Recollections of the Last Days of Shelley and Byron*, 1858.

Edward Trelawny,
British adventurer
After Severn

TRELOAR, SIR WILLIAM PURDIE (1843-1923). British philanthropist. Born in London, Jan. 13, 1843, he was educated at King's College School. He became a member of the corporation of the city of London in 1880, and alderman, 1892. He was sheriff, 1899-1900. In 1906 he was elected lord mayor, receiving a knighthood, 1900, and a baronetcy, 1907. Principal of the firm of Treloar & Sons, carpet merchants, he founded the Lord Mayor Treloar cripples' hospital and college, at Alton and Hayling Island. He died Sept. 6, 1923.

TREMOLITE. In mineralogy, the name of a variety of amphibole consisting of calcium and magnesium silicate. White to dark grey in colour, it is so named from Tremolo, the village in the Alps where it was discovered. See Amphibole.

TRENCH. In military engineering, an excavation used to protect troops from the enemy's fire. Fire trenches are so sited and arranged that the troops occupying them can fire on the enemy. Support trenches are farther to the rear, and provide cover for troops who are sufficiently close to the front line to be able to reinforce it during a hostile attack, sometimes being arranged so that the occupants can bring rifle fire to bear on the enemy over the front line trenches. Communication trenches provide a road along which troops may pass between the fire and support trenches and positions farther to the rear without being exposed to fire. It is usually necessary for these to pursue a zig-zag course to protect them from enfilade fire. If sufficient time is available, trenches are dug deep enough to accommodate a man standing.

A trench mortar or trench howitzer is a species of small cannon consisting of a cylinder of cast iron closed at one end, open at the other, and with a touch-hole at the closed end. They were used largely during the Great War for throwing bombs into the opposing trenches. The charge consisted of small packets of gunpowder tied up in paper in measured doses. The bomb was a tin can filled with a bursting charge and fragments of metal, and with an inch of fuse protruding. See Gun; Howitzer.

TRENCH, RICHARD CHENEVIX (1807-86). British divine. Born in Dublin, Sept. 9, 1807, he was educated at Harrow and Trinity College, Cambridge. Ordained, he was made professor of divinity at King's College, London, in 1846. In 1856 he was made dean of Westminster, and in 1864 archbishop of Dublin. He resigned in 1884, and died in London, March 28, 1886.

Richard Trench,
British divine

Trench won fame as a poet, but is better known by his books, *The Study of Words*, 1851, and *English Past and Present*, 1855. Consult *Letters and Memorials*, 1886.

TRENCHARD, HUGH MONTAGUE (TRENCHARD, 1ST BARON (b. 1873)). British airman. Born Feb. 3, 1873, he entered the army in 1893. In 1912 he took his pilot's certificate, and in 1914 he became

commandant of the military wing of the R.F.C. In July, 1915, he became chief of the air staff. He resigned in April, 1918, and was appointed to the command of the Independent Air Force in France. In 1919 he again became chief of the air staff, a post he held until 1929. Made a baronet and promoted air chief-marshal, 1919, he was created a peer, 1930.

TRENCK, FRIEDRICH, BARON VON DER (1726-94). German adventurer. Born Feb. 16, 1726, at Königsburg, he entered the army. In 1743 he was imprisoned in the fortress of Glatz for having a love affair with the Princess Amelia. He escaped in 1746, and entered the Austrian service, but returned to Prussia in 1754, and was again imprisoned for ten years. He was eventually released at the request of Maria Theresa. Having gone to Paris, he was accused in 1794 of being an agent of foreign powers, and was guillotined on July 25 of that year. His *Autobiography* was published in 1787.

A cousin, Francis, Baron von der Trenck, was condemned to death for plundering and other crimes, but instead was imprisoned until his death, probably by suicide, Oct. 14, 1749.

TRENT. River of England. It rises in Staffordshire on Biddulph Moor, and flows through Staffordshire, Derbyshire, Nottinghamshire, and Lincolnshire to the Humber, which it enters near Alkborough. Its length is about 180 m. The chief tributaries are the Sow, Penk, Tame, Dove, Soar, Erewash, Derwent, and Idle; towns on its banks are Stoke, Burton, Nottingham, and Newark. The Trent has a bore called the *aegir* (eagre). It is connected by the Trent and Mersey and Grand Union canals with the Lancashire and Birmingham districts, while other canals link it up with Derby, Lincoln, and Grantham.

Trent junction is a rly. station on the L.M.S., just outside Long Eaton, where the lines to Nottingham and Derby branch. Here is Trent College, a public school founded in 1866. See Humber; Nottingham.

TRENT. River of Ontario, Canada. It rises in Rice Lake and empties itself into the bay of Quinte, an arm of Lake Ontario. The course of the river is part of the route of the proposed Georgian Bay Canal.

TRENT (Ital. Trento; Ger. Trient). Town of Italy, formerly in Austria. It stands on the Adige, 76 m. N.W. of Venice. Prominent among the public buildings are the white marble cathedral and the palace of the prince bishops. Industries include marble quarrying and the making of pottery, playing cards, and wines. During the Napoleonic Wars the dist. was for a time in Italian occupation. In the Great War it was taken by the Italians, Nov. 3, 1918. Pop. 62,183.

COUNCIL OF TRENT. General council of the Roman Catholic Church, held at Trent between 1545-63. A comprehensive definition of dogma and strong internal reforms were needed to enable the Roman Church to show an undivided front against the growing strength of the Reformed doctrines. The popes generally had resisted appeals for general councils, but in 1530 the Protestant estates demanded a council of Christendom, and the emperor Charles V was strongly convinced of the necessity of reform. The council was summoned by Pope Paul III in 1545. Over 200 fathers attended, and the sittings continued with intervals until Dec., 1563.

Among the matters dealt with by the council (the Tridentine decrees), the most important were: the joint value of Scripture and the

tradition of the Church as standards of Divine revelation; the interpretative authority of the Church Fathers; original sin; the authority of the Vulgate, 1546; the Divine origin and forms of the sacraments of baptism and confirmation, 1547; the Eucharist and penance, 1551; communion in both kinds and the sacrifice of the Mass, 1562; orders and the regulation of the hierarchy; the sacrament of matrimony; veneration of saints, indulgences, index of prohibited books, 1563. The decrees were confirmed by Pius IV in 1564.

TRENT, JESSE BOOT, 1ST BARON (h. 1850). British merchant. Born June 2, 1850, he became a chemist and started in business in Nottingham. He opened one shop after another, and sold drugs cheaply. He began also to manufacture the various articles sold, added departments for fancy goods and stationery, and established a large lending library and bookselling organization. An active worker for Liberalism and a munificent benefactor to Nottingham (q.v.), he was knighted 1906, and made a baronet, 1916. In 1929 Boot was made a baron.

In 1920 Boots Cash Chemists, Ltd., amalgamated with the United Drug Co. of America (founded in 1902 by Louis K. Liggett), a new company being formed, with the title of Liggett's International Ltd.

TRENTE ET QUARANTE (Fr. thirty and forty). Game of chance, also known as *rouge et noir*, played with six packs of cards. It is so called from the card number totals of 30 and 40 being the deciding figures of the game. See *Rouge et Noir*.

TRENTHAM. Village of Staffordshire. It is 3 m. from Stoke-upon-Trent, on the L.M.S. Rly. Trentham Hall, built by Sir C. Barry about 1840, was a seat of the duke of Sutherland. The pollution of the Trent made it uninhabitable, and consequently it was pulled down in 1911 and the grounds made into a public park. Pop. 3,141.

TRENTINO. Dist. of N. Italy, formerly part of the Austrian prov. of Tirol. In its widest sense the name includes the whole of the area between Lake Garda and the Brenner Pass transferred from Austria to Italy by the treaty of St. Germain-en-Laye, 1919.

The territory given to Italy in 1919 was much more extensive than that demanded, and transferred the irredentist problem from Italy to Austria. The Italian population is between 350,000 and 400,000.

The Trentino was the scene of prolonged fighting between the Italians and the Austrians in the Great War. In May, 1915, the Italians undertook an offensive, and by the end of the month were moving in Austrian territory up the Adige valley. In May, 1916, the Austrians advanced on a front extending from the Brenna W. to the Adige, driving the Italians from the Upper Astico valley. Intermittent fighting went on until May, 1918, when the Italians assailed the Austrian trenches on the heights in the vicinity of the Tonale Pass, capturing many prisoners. The last considerable fighting in the Trentino was the Austrian offensive on June 15, 1919. See *Asiago*; *Isonzo*.

TRENTON. Capital of New Jersey, U.S.A. It stands on the Delaware river, 34 m. N.E. of Philadelphia. The falls supply water power for the various industries. A British force holding Trenton was captured by Washington in 1776. Pop. 132,020.

TRENTON BEDS. In geology the name is given to one of the divisions of the Ordovician system, typical near Trenton Falls, U.S.A. The rocks are chiefly limestones and black carbonaceous shales.

TRENTON FALLS. Summer resort of New York, U.S.A. It is 17 m. by rly. N.N.W. of Utica, and is noted for the magnificent falls here on the West Canada creek.

Trepang. Variant name for the sea cucumber or *bêche de mer*, applied also to its flesh dried for food. See Sea Cucumber.

TREPHINE (Gr. *trypanon*, a boring instrument). Surgical instrument. An improved trepan. It is a cylindrical saw, used in trephining (trepanning), or cutting out a piece of bone from the skull. This operation is most often done to remove a bullet or a fragment of bone which may be pressing on the brain as a result of fracture of the skull, or to open an abscess in the brain, or remove a blood clot or tumour, or to relieve pressure within the skull due to a tumour or other disease. See Surgery.

Trephine employed in surgical work

TRESCO. Second in size of the Scilly Isles. Lying 1 m. N.W. of St. Mary's, it contains the ruins of a Benedictine abbey. The residence of the proprietor of the islands is built on the site of the monastic buildings. At the N. end of Treseco stands the ruined Cromwell's Castle, to the E. of which is the cavern called Piper's Hole. Pop. 300. See Scilly Isles.

TRESPASS. In English law, a wilful injury to the person or property of another. There are three kinds of trespass, viz. trespass to land, to goods, and to the person. Trespass to land was in theory an act of violence. The plaintiff is entitled to recover the actual damage done by the defendant, and the court or jury may award exemplary damages in aggravated cases. Trespass to goods is any wrongful touching of, or damage to, or taking of the plaintiff's goods. Damages may be awarded on the same principles as above.

TREVELYAN, GEORGE MACAULAY (b. 1876). British historian. Born Feb. 10, 1876, a son of Sir George Trevelyan, he served in the Great War as commandant of the First British Ambulance Unit for Italy, 1915-18. Trevelyan won distinction as an authority on the growth of modern Italy. He wrote *England in the Age of Wycliffe*, 1899; *Garibaldi's Defence of the Roman Republic*, 1907; *Garibaldi and the Making of Modern Italy*, 1911; *Lord Grey of the Reform Bill*, 1920; *British History in the Nineteenth Century*, 1922; *England under Queen Anne: Blenheim*, 1930. In 1927 he became regius professor of modern history, Cambridge, and in 1930 was given the O.M.

George Trevelyan, British historian
Elliott & Fry

TREVELYAN, SIR GEORGE OTTO (1838-1928). British politician and author. A nephew of Lord Macaulay, he was born at Rothley Temple, Leicestershire, July 20, 1838. He entered Parliament in 1865 as Liberal M.P. for Tynemouth, afterwards representing the Hawick Burghs, 1868-86, and a Glasgow division, 1886-97. In 1880 Gladstone made him secretary to the admiralty, and in 1882 he became chief secretary for Ireland. In 1884-85 he was chancellor of the duchy, and for a month in 1886, in which year he succeeded to his father's baronetcy, was secretary for Scotland, and again in 1892-93. In 1897 he resigned his seat in Parliament.

Both a scholar and a wit, Trevelyan owes his reputation as a writer to his excellent *Life and Letters of Lord Macaulay*, 1876. He died Aug. 17, 1923. His eldest son, Sir Charles Phillips Trevelyan

Sir George Trevelyan, British politician
Elliott & Fry

(b. 1870), was in the Liberal ministry, 1908-14. In 1924 he was minister of education in the Labour ministry, and again in 1929.

TREVES (Ger. *Trier*). City of Prussia, in the Rhine Province. It is on the right bank of the Moselle, 69 m. S.W. of Coblenz. Among the many relics of Roman splendour are the Porta Nigra, the N. gate of the city, and the ruins of the imperial palace, the baths, and the amphitheatre. The cathedral, built in the 4th century, with medieval additions, contains monuments to the electors and the famous Holy Coat (q.v.). The industries include iron founding, dyeing, glass painting, and the making of pianos and furniture. There is an extensive trade in Moselle wines. Treves became an archbishopric in the 9th century. Pop. 58,140.

Treves, Germany. Porta Nigra, the Roman north gate of the city

TREVES, SIR FREDERICK (1853-1923). British surgeon. Born at Dorchester, Feb. 15, 1853, he was Hunterian professor of anatomy and Wilson professor of pathology at the Royal College of Surgeons, 1881-86. During the S. African War he was consulting surgeon to the army, and served with the Ladysmith relief column. In June, 1902, he operated upon King Edward VII, and was made a baronet the same year. He published many books of travel, including *Highways and Byways in Dorset*, 1906, and *The Country of the Ring and the Book*, 1913, war experiences, etc., as well as works on surgery, among them *Surgical Applied Anatomy*, 1883, and *System of Surgery*, 1895. He died Dec. 7, 1923.

Sir Frederick Treves, British surgeon
Russell

TREVISO (anc. *Tarvisium*). City of Italy. It is a rly. junction 18 m. N.N.W. of Venice. The cathedral of San Pietro, ornamented with five cupolas, was founded in 1141 and enlarged in the 15th century; it contains pictures by Titian and Paris Bordone, a native of the city. Silks, woollens, metal goods, machinery, chemicals, and paper are the principal manufactures. Treviso was an important city at the end of the Roman empire, a member of the Lombard League, and subject to Venice in the 14th cent. It was prominent in the Great War, being an important base of the Italian army in the campaigns of 1915-18. Pop. 57,948. See Piave.

TREVITHICK, RICHARD (1771-1833). British engineer. Born at Illogan, Cornwall, April 13, 1771, and trained as a mining engineer, in 1800 he invented a double-acting high-pressure engine, which came into wide use in the mining districts. In 1801 he brought out a steam road carriage, the first of its kind, and afterwards built locomotives for running on rails. In 1816 Trevithick went to Peru to superintend the installing of his engines in the silver mines, but lost everything he

possessed in the war of independence. He returned to England, 1827, and died April 22, 1833, in poverty. See Railway.

TRIAL. In law, the examination of a cause, or a prisoner, before a judge, with or without a jury. At common law, trial by judge and jury is the normal method. The counsel for the prosecution, or for the plaintiff, opens the case in a speech that is supposed to tell the jury what it is all about and what he proposes to prove. He then calls his witnesses, and examines the first witness, i.e. asks him questions in order to elicit the facts.

Richard Trevithick, British engineer

The witness is cross-examined by the opposite counsel, who tries to elicit facts in favour of his client, and to show that the witness is unreliable. After cross-examination the prosecuting, or plaintiff's, counsel re-examines. He can only ask questions on points raised by the defendant's cross-examination.

After all the witnesses on this side have been called, the defending counsel opens his case and calls his witnesses, who are examined, cross-examined, and re-examined. Then the defending counsel sums up in a speech, and after that the prosecuting, or plaintiff's, counsel replies on the whole case. The judge sums up. After the summing-up the jury give their verdict, and then the judge gives judgment on their findings. Questions of fact are for the jury to decide, and questions of law are for the judge alone. In Scotland, jury trials are conducted in the same way, but without opening speeches. See Evidence.

TRIAL BY BATTLE. In this the parties in a civil case or appeal of felony could decide the action by personal combat. In the first case men were usually hired to fight the duel, but in cases of felony or murder accuser and accused fought personally until one was slain. The last trial of this kind took place in 1639.

TRIANGLE (Lat. *tres*, three; *angulus*, angle). In geometry, any figure formed by three intersecting lines. When the lines are straight the triangle is a plane triangle. In spherical triangles the sides are arcs of great circles of a sphere. Triangles are called equilateral, isosceles, and scalene, according as all three sides are equal, two sides are equal, or all sides unequal.

TRIANGLE. In music a percussion instrument. It is a steel rod bent into triangular shape, with one open angle. Suspended by a cord, it is struck by another small steel rod of spindle form so as to allow of heavier or lighter strokes, as desired. Possessing a bright and silvery tone, it is useful for rhythmical effects, and is in general use in military bands.

TRIANON. Buildings in the park of the palace of Versailles. The Grand Trianon is a long, single-storey building built by Hardouin-Mansart, 1687, for Louis XIV. It contains interesting pictures, chiefly of the French 18th century schools. The Petit Trianon lies a little to the E. Originally built, 1762-63, by Louis XV, for Madame Dubarry, it was presented by Louis XVI, in 1774, to Marie Antoinette, who here established a miniature country village, farm, etc. At the Grand Trianon on June 4, 1920, the treaty between Hungary and the Allies was signed. See Hungary; Versailles.

TRIASSIC SYSTEM. In geology, system of rocks following the Carboniferous and preceding the Jurassic systems. The rocks are the oldest of the Mesozoic formations and, once known as New Red Sandstone, are now divided into three series: the Keuper, Muschelkalk, and Bunter. The rocks of the Triassic period are chiefly red or mottled sandstones or shales and limestones, and red marls. In the

midlands in England, and in Scotland and Ireland, Triassic rocks cover large areas. During the Triassic period cycads, conifers, and gigantic equisetums flourished, amphibian labyrinthodonts were common, and ichthyosaurs, dinosaurs, crocodiles, and plesiosaurs were numerous.

TRIBE. Social group having a common speech cultural level, and body of customs, and claiming a common ancestry. In ethnology the term denotes the simplest sociopolitical unit, based on endogamy, marriage outside the tribe being discouraged, but often comprising two or more exogamous phratries or clans.

Government is effected by means of tribal or customary law maintained either by public opinion expressed through the elders, or by headship elective or hereditary. In aboriginal America the tribal organization passed through every stage from the simplest (Iroquoians) to such complex unions as the Iroquois confederacy. Negro and Bantu Africa are essentially tribal, the latter having developed a high level of kingship for the direction of warfare. See Clan; Ethnology.

TRIBUNES (Lat. tribunus). Title of various military and civil officers of Rome. Military tribunes were originally commanders of the tribes. Six were appointed for each legion.

More important were the tribunes of the people or plebs. When Rome established the republic in 509 B.C., the plebeians shared in the comitia centuriata, or national assembly, but the magistracies were confined to the patricians. In 494 B.C. the plebeians obtained the right to appoint from among themselves two tribunes authorized to protect the plebeians against arbitrary action by the magistrates. The numbers were raised to five and then, in 457, to ten. In 287 the exclusively plebeian assembly, the comitia tributa, became an independent legislative body, while the tribunes individually had the power of initiating legislation, and of imposing a veto upon the enactment of proposed laws.

The Tribune was the title of a former London daily Liberal newspaper. It was founded by Franklin Thomason, Jan. 15, 1906, and stopped Feb. 7, 1908.

TRICERATOPS (Gr. treis, three; kera, horn; ops, face). Fossil horned dinosaur. The triceratops flourished in the Cretaceous epoch, and skeletons have been found in deposits of that period in N. America. It had a skull over 6 ft. in length, and the total length of the animal was 25 ft. It had three horns, a small one on the nose, and two just above the eye sockets. Triceratops was herbivorous, and in proportion to its size had a very small brain. See Dinosaur.

TRICHINOPOLY. Town of Madras Presidency, India. It lies S. of the Cauvery at the head of the delta, and is a rly. junction on the Madras-Tuticorin line. The temple of Mathubuthesvaram crowns a hill (273 ft.) ascended by stone steps. Pop. 120,422.

TRICOLOR. Term generally applied to the blue, white, and red national flag of France. It originated in the early days of the first Revolution, and was a blending of the colours of the National Guard of Paris, who bore cockades of the city colours, red and blue, and of the royalist troops, who bore white cockades. These were grouped in a flag of three perpendicular stripes

of equal width, the white being placed between the blue (against the pole) and the red. It was finally adopted as the national flag.

TRICYCLE. Three-wheeled machine used for riding. An adaptation of the velocipede, it was introduced about 1878 as a substitute for the high bicycle. Tricycles are worked on the same principle as the bicycle (q.v.), but are now little used, except in special forms, one of which is hand-propelled by persons unable to use their legs, and another, the carrier-tricycle, is furnished with a box for the delivery of goods from shops, etc.

TRIDENT. In Greek mythology, the three-pronged spear which Poseidon the Roman Neptune, god of the sea, bore as the symbol

Trieste, Italian port on the Adriatic. The Grand Canal and, in the distance, the church of S. Antonio

of his sovereignty. It has come to be generally regarded as the emblem of sea power, and as such is carried by Britannia (q.v.).

In gladiatorial combats in ancient Rome the trident was used by the class of gladiators called retiarii. The retiarius tried to entangle his opponent with a net, the trident being then used to dispatch him after being entangled. See Neptune.

TRIENNIAL ACT. There have been in English history two Acts bearing this name. In 1641 the Long Parliament passed an Act declaring that more than three years must not elapse without a parliament being called. The second Triennial Act, passed in 1694, ordained that no

Parliament should last longer than three years. The second Act was repealed by the Septennial Act of 1716.

TRIESTE. Seaport of Italy, formerly in Austria. It stands on the Adriatic at the head of the gulf of Trieste, 73 m. N.E. of Venice. The old town is built on the steep Castle Hill. The modern town borders on the sea. Between them runs the Corso, the principal thoroughfare. The cathedral of San Giusto was built in the 14th century on the site of a Roman temple, and the museums are rich in Roman antiquities. The famous

Trichinopoly, Madras Presidency. The famous Rock, 273 feet above the city. It is ascended by a covered stone staircase and on it are two Buddhist temples

Château Miramar, built for the emperor Maximilian of Mexico, is 5 m. away. Near the harbour are the town hall and the Exchange (Ter-gesteo). A university was founded in 1924.

Tricycle. Modern form of a machine first introduced about 1878

In the time of Pliny Trieste (Tergestē) was a Roman colony. In the Middle Ages it was the capital of an independent republic, which came under Austrian rule in 1382. Charles VI declared it a free port in 1719, and, its privileges being extended by Maria Theresa, the port

sprang into importance as the great emporium for Austrian trade in the Adriatic. The city and port were taken by the French and annexed to Illyria in 1809, but restored to Austria five years later. In 1867 the district was formed into an administrative crown land. After the Great War the port of Trieste was assigned to Italy.

Shipbuilding has long been one of its chief industries, and there is an extensive output of machinery. Among the industries are oil refining, dyeing, and the manufacture of musical instruments, pottery, wax lights, and liqueurs. The trade in wine and oil is very large. Tobacco, furs, wax, corn, and wool are exported. Pop. 255,480.

TRIFORIUM. In ecclesiastical architecture, an upper storey over the aisle of a cathedral or large church with a series of openings into the nave immediately above the crowns of the nave arcade. These openings were arcaded, and in Norman and Early English work were of considerable height. In the Christian basilica the triforium was used for the accommodation of women. Noteworthy examples are those of Westminster Abbey and Peterborough Cathedral.

TRIGLYPH (Gr. treis, three; glyphē, carving). In classic architecture, an ornament of the Doric frieze, consisting of a block grooved into three vertical sections and chamfered on the outside edges. One is placed over each column and, in the simple form, one between the columns.

Triforium above the north transept of Westminster Abbey, a fine example of Gothic tracery. See above

TRILOBITES (Gr. treis, three; lobos, lobe). Group of fossil marine animals belonging to a sub-class of Crustacea. The animals were extremely numerous in the Cambrian and Silurian periods, after which they disappeared. Trilobites were covered with a hard calcareous shell, oval in shape, and divided by two dorsal furrows into three longitudinal lobes giving the animal its name. Many were capable of rolling themselves up so that the soft lower parts of their bodies were protected from attack, a position in which many fossils are found. Little is known of the life of Trilobites, except that they were marine feeders living on the bottom of the sea. See illus. p. 1353.

TRILOGY. In drama, a term originally employed to denote a series of three separate plays on one continuing theme. A classic

example is found in the Agamemnon, Choephoroi, and Eumenides of Aeschylus. Shakespeare's three parts of Henry VI may be regarded as a trilogy, as also may Schiller's Piccolomini, Wallenstein's Camp, and Wallenstein's Death. The word has come to be employed of novels and other works, where a writer has given a continuity of theme to three separate books.

TRIM. Urb. dist. and eo. town of Meath, Irish Free State. On the Boyne, 30 m. N.W. of Dublin on the G.S. Rlys., it is the centre of an agricultural dist. There are ruins of King John's castle, founded in 1173, as well as, across the river, the remains of the abbey of S. Mary. Pop. 1,325.

Trimdon. Colliery centre of Durham. On the L.N.E. Rly., it is 4 m. N.E. of Sedgfield. Pop. 5,410.

TRIMETHYLAMINE. Liquid with a penetrating fishy odour, which forms salts by direct combination with acids, like ammonia. It is prepared from the vinasses or residues obtained in refining beet sugar. Trimethylamine is used for preparing pure potassium carbonate from potassium chloride, and it has also been employed in medicine for rheumatism and gout.

TRIMMER. Term applied to vacillating politicians, the allusion being to one who trims his sails to catch every favouring breeze. It was coined by the marquess of Halifax (1633-95), who in a work entitled *The Character of a Trimmer*, 1684, ably defended his policy as being well balanced and moderate. See Halifax, Marquess of.

TRINCOMALEE. Seaport of Ceylon. It stands on the N.E. coast, 99 m. N.E. of Kandy, and was a British naval and military station until 1905. The famous temple of a thousand columns was destroyed by the Portuguese in 1622, and from the materials Fort Frederick was built. Pop. 9,442.

TRING. Market town and urban dist. of Hertfordshire. At the base of the Chilterns, it is 32 m. from London by the L.M.S. Rly., and is also on the Grand Union Canal. There is a fine Perpendicular church. Tring Park, the seat of Lord Rothschild, has a collection of wild animals and a zoological museum. Market days, Mon. and Fri. Pop. 4,352.

TRINIDAD. Island of the British W. Indies. Separated from Venezuela by the gulf of Paria, it lies immediately N. of the mouths of the Orinoco. Port of Spain is the capital. Its area is 1,862 sq. m. Natural features include the Maracas Falls, N.E. of Port of Spain, which drop over a sheer precipice 312 ft. high, several mud volcanoes, and the famous pitch lake near Brea. The climate is tropical, and the products include petroleum, cocoa, and sugar. Large oil refineries have been erected. In 1889 Tobago was separated administratively from the Windward Islands and united with Trinidad. Pop., with Tobago, 397,093.

TRINITARIANS OR REDEMPTIONISTS. Religious order for men, founded in Paris, 1198, by S. John of Matha and S. Felix of Valois, with the object of redeeming Christians who were in slavery under the Moors. Members wore a white habit, with a red and blue cross on the breast. In England in 1244 they established 11 small houses.

The Trinitarian nuns were originally an association of women who raised funds for the Trinitarian order, and later became a religious congregation. They undertake the

education of children and the care of the sick poor. They have two establishments in England, at Bromley and Kidderminster.

Trilobites. Examples from the Cambrian system (left to right): Hypoparia, Agnostus princeps; Opisthoparia, Olenus catenatus; and Proparia, Stauroparia Murchisoni. See art. p. 1352

By courtesy of the Trustees, British Museum

use it has been mixed with a variety of substances, such as trinitroresol, trinitrotoluene, etc., to make it less sensitive and lower its melting point.

TRINITROTOLUENE, T.N.T., OR TROTYL. Important high explosive, formed by the substitution of three nitro (NO_2) groups in the benzene nucleus of the toluene molecule. In England it was only manufactured in small quantities for industrial use until the Great War, when large plants were installed to meet the military requirements. It is less powerful and brisant than trinitrophenol, but is less sensitive, is insoluble in water, is not acid, and does not form dangerous compounds like the picrates. It has a lower melting point, simplifying casting, and is less dangerous to manufacture and use. See Amatol; Ammunition.

TRINITY, HOLY. Theological term for the mystery of one God in three persons—the Father, the Son, and the Holy Ghost, co-equal in all things. The doctrine is derived from the O.T., is implied in the N.T., and is affirmed by the Athanasian, Apostles', and Nicene Creeds, and Article I of the Church of England. See Arianism; Unitarianism.

Trinity Sunday, in the Church calendar, is the Sunday after Whit Sunday. The octave of the Pentecost has long been regarded as specially dedicated to the worship of the Trinity. The festival was first authorised by Gregory IV in 828, and has been held on its present day since 1334.

TRINITY COLLEGE. Largest of the colleges of Cambridge University. It was founded by Henry VIII in 1546 by the amalgamation of nine earlier foundations. Much of the buildings was remodelled by Thomas Neville, master, 1593-1615. The hall, 1604-8, has much in common with that of Middle Temple, London. The library, designed by Wren, 1676-95, contains carvings by Grinling Gibbons. There are five courts. The mastership is a crown appointment.

Trinity College, Oxford, was founded in 1555 by Sir Thomas Pope, who obtained for the first buildings a house of Benedictine monks known as Durham College. The buildings face Broad Street and Parks Road, and are surrounded by beautiful grounds. They include some modern ones as well as remains of Durham College. The chapel, built about 1700 in the Classic style, contains the tomb of the founder. A new library was opened in 1928 as the college war memorial. Newman was a member.

TRINITY COLLEGE. Irish university in Dublin. Founded in 1591, it was for long confined to members of the Anglican Church. In 1873 religious tests were abolished, but it still remains in many respects a Protestant society. It consists of one college only, under a provost. Since 1903 women have been admitted to its degrees. The university sends three members to Dail Eireann.

The university buildings are a prominent feature in Dublin. Parliament Square and Library Square contain the chapel, the dining hall, the examination hall, and the library, with its priceless collection of Irish manuscripts. Elsewhere are the various laboratories, the museum, and medical school.

Trinity College of Music was founded in 1872 and incorporated in 1875 as Trinity College, London. The building is in Mandeville Place, Manchester Square, London, W.

TRINITY HALL. College of Cambridge University. It was founded in 1350 by William Bateman, bishop of Norwich, for a master, 13 fellows, and certain scholars, specially for the study of canon and civil law. The library, 1560, possesses a remarkable collection of law books.

TRINITY HOUSE. Corporation which has supervision over pilotage around the British coasts and over all lighthouses, lightships, and beacons. It dates from 1514. It maintains almshouses, and gives pensions to distressed mariners and their widows. The Elder Brethren of Trinity House are chosen from among members of the royal family, statesmen, retired naval officers of high rank, and prominent officers of the mercantile marine. The headquarters are at Trinity House, Tower Hill, London, E.C. There are Trinity Houses at Hull and Newcastle. See Pilot.

Triode. Thermionic valve with three electrodes. See Thermionic Valve.

TRIOLET. Verse form derived from the early French dance-songs and characterised by the refrain idea. It consists of eight lines, usually octosyllabic, though trimeters are common in English, of which the first, fourth, and seventh are the same, and the second is identical with the eighth.

TRIPHENYLMETHANE. Solid hydrocarbon obtained by the interaction of chloroform and benzene in the presence of aluminium chloride. The liquid thus obtained is distilled and yields benzene, diphenylmethane, and triphenylmethane. The latter is the source of the important series of rosaniline dyes.

Triplane. Aeroplane whose wings are arranged in three tiers, one above the other. See Aeroplane.

TRIPLE ALLIANCE. Name given to any alliance between three countries. There have been a number of these in and since the 17th century, but the most famous is the one made between Germany, Austria, and Italy in 1882. Renewed several times, it was broken when, in 1914, Italy refused to join in the war against the Allies.

The Triple Entente is the name given to various agreements or understandings made in

Trinity College, Cambridge. Great court and fountain; left of the main gateway are the rooms formerly occupied by Sir A. Newton, Macaulay, and Thackeray

the 20th century between Great Britain, France, and Russia. They were not formal enough to be called alliances. See Entente Cordiale.

TRIPOLI or **TARABULUS**. Town of Syria. About 40 m N N.E. of Beirut, it lies 2 m. from the Mediterranean, its port being El Mina. It trades in silks, wool, grain, oranges, and sponges. It figured in the Crusades. During the Great War it was occupied by the British, Oct. 13, 1918. Pop. 37,260.

TRIPOLI. Capital of Tripolitania. The name is sometimes applied to Tripolitania and also to Italian Libya generally. The city stands on a point of land jutting into the Mediterranean, and contains handsome mosques, a remarkable Spanish fortress, many beautiful gardens, and, since the Italian occupation, numerous government buildings. The most celebrated monument is the marble arch of Marcus Aurelius. The city stands on the site of the ancient Oea. From it caravan routes diverge to Lake Chad, Timbuktu, and Darfur, as well as three lines of rly. A fine port has been constructed by the Italians. Pop. about 60,000.

TRIPOLITANIA. Western portion of the Italian colony of Libya. It may be divided into four regions. The first, along the seaboard, is fertile, and contains palms and fruit trees. The second, the highland or Jebel region, is suitable for cereals and contains large fertile districts. Much of this region is covered with esparto grass. The third region contains a number of oases, while the fourth, extending into Fezzan, is mainly desert.

The principal caravan trade is between Benghazi, in Cyrenaica, and Wadai, and Tripoli and the Central Sudan, via the oases of Fezzan. Important centres of population include Tripoli, the capital, Gharyan, Homs, Misurata, and the oases of Ghadames, Ghat, and Murzuq. The area is about 300,000 sq. m. Pop., European, about 20,000; native, 650,000.

Tripolitania contains many remains of antiquity. The original settlements of the Phoenicians passed to the rulers of Barca (Cyrenaica) and afterwards to the Carthaginians. Subsequently the region was occupied by the Romans and the Arabs, and in the 16th century it fell under Turkish domination. In 1835 Tripoli was proclaimed a Turkish vilayet. War broke out between Turkey and Italy in Sept., 1911, and the Italians occupied Tripoli. In Nov. Italy issued a decree annexing Tripoli, but hostilities continued until Oct. 18, 1912, when by treaty Turkey renounced her sovereignty over Tripoli and Cyrenaica. See Cyrenaica; Italy; Libya.

TRIPOS (Gr. tripous, three-footed, tripod). In Cambridge University, name given to the honours degree examination in certain subjects. In the 16th century *tripos* was the name given to the three-legged stool on which the champion of the university sat when undergraduates were admitted to the degree of bachelor of arts. The term was then applied to his opening speech, and later to the Latin verses composed by the new B.A.'s. See Cambridge.

TRIPTOLEMUS. In Greek mythology, son of Celeus, king of Eleusis. In gratitude for the hospitality shown to her by Celeus when she was wandering over the earth in search of her daughter Persephonē (q.v.), the goddess Demeter gave Triptolemus a chariot with winged dragons with which to visit the whole world and give mankind seeds of corn. Pron. Trip-tol-ly-mus.

TRIPTYCH (Gr. triptychos, threefold). In ecclesiastical painting, a set of three upright panels, joined together by hinges, each one being painted with a distinct subject. The wings were usually painted on both sides, so that, when folded, a fresh picture was pre-

sented. The Van Eycks and nearly all the great religious painters of the early Renaissance used the triptych, which disappeared, however, in the 16th century. Pron. Triptik.

TRIEME (Lat. triremis, from tres, three; remus, oar). Warship of the ancient Greeks, and of the Romans under the republic, provided with three tiers of oars. The trieme was about 140 ft. long, usually carried two masts, and had a beak or ram. The complement was 200, of whom 170 were rowers, one to each oar. Ships were also built with four, five, or more banks of oars—quadrirèmes, quinquirèmes, etc. See Galley.

TRISTAN DA CUNHA. Island group in the S. Atlantic Ocean. It is some 1,500 m. S.S.W. of St. Helena, almost midway between Cape Town and Buenos Aires. The largest and only populated island is an extinct volcano 8,000 ft. high. The people are descended mainly from a garrison of British soldiers placed there during the captivity of Napoleon on St. Helena, and from settlers from whaling ships. Named after a Portuguese navigator, the islands became British in 1816. The area is 44 sq. m., of which about 12 are habitable. Pop. 130.

TRISTRAM or **TRISTAN**, Sir. Hero of a medieval legend of Welsh or Cornish origin, which was drawn into the Arthurian cycle. Nephew of Mark, king of Cornwall, Tristram is sent to Ireland to bring Iselt as his uncle's bride, but having unwittingly drunk a magic potion, they love each other. Discovered by Mark, he flees to Brittany, where he marries another Iselt, of the White Hand. Having summoned Iselt of Cornwall to heal him of a wound, he is falsely told by his wife that her rival refuses her aid, and the lovers die of grief. The legend figures in poems and an opera.

TRITON. In Greek mythology, a minor sea deity, son of Poseidon. According to later legends there were several Tritons attendant upon Poseidon, represented as part man, part fish, and blowing shells as trumpets.

Tritonia. Flower spike and sword-shaped leaves

TRITON. Name given to a large genus of marine gastropod molluscs, whose shells rather resemble gigantic whelks. The shells were used as trumpets in Roman days. The name is sometimes applied also to the newt. See Newt.

TRITONIA or **MONTBRETIA**. Genus of bulbous herbs of the order Iridaceae, natives of S. Africa. They have sword-shaped leaves in two rows, clasping at the base. The tubular flowers are borne on two-rowed spikes. The most generally cultivated species is the hardy *T. pottii* with orange flowers.

TRIUMPH (Lat. triumphus). In ancient Rome, the ceremonial entry into the city of a successful general. The honour could be granted only by the senate. The general was received at the gate by the senate and magistrates, who headed the procession. They were followed by the chief prisoners taken, and finally by the general in a chariot, with his troops marching behind. The procession passed along the Sacred Way to the Capitol, where a sacrifice was offered to Jupiter.

Triumphal arches were erected by the ancient Romans to commemorate victories. Of the 38 built in Rome, those of Titus, Septimius Severus, and Constantine still stand. Similar arches were built in honour of benefactors, or simply to decorate streets. See Berlin; Paris; Rimini.

TRIUMVIR. In ancient Rome, member of a commission of three charged with some

specific duty, such as repairing temples, coining money, or founding colonies. The most noted Triumvirate was that of Octavian, Antony, and Lepidus in 43 B.C. This was known as the Second Triumvirate, to distinguish it from the private combination of Caesar, Pompey, and Crassus in 60, popularly known as the First Triumvirate. See Rome.

TRIVANDRUM. Seaport and capital of Travancore, India. Situated 2 m. from the Malabar coast, it is the residence of the maharaja, and contains a venerated temple of Vishnu, the Maharaja's College, a museum, and an observatory. Pop. 72,784.

TROGLODYTE (Gr. troglē, cave; dyen, to creep into). Tribe of primitive cave dwellers located by classical writers on the outskirts of the ancient Greco-Roman world. The most renowned inhabited a region (Trogodytica) along the southern Red Sea coast of Egypt. They were cattle herdsmen, whose scanty clothing, use of shell necklaces, etc., indicate a culture derived from a remoter stone age. Their caves on the N. African coast are still occupied by Libyan communities.

TROGON. Family of tropical birds. Remarkable for their brilliant plumage and often having very long tail feathers, they occur in Africa, S. Asia, and Central and S. America, and include nine genera and many species. The S. American trogons are especially gorgeous, their plumage being mainly metallic green and blood red; their tail feathers are several times the length of the body.

TROJAN WAR. Name given to the semi-legendary ten years' war between the Greeks and Trojans. Originally caused by the abduction of Helen by Paris, it ended in the defeat of the Trojans and the capture and destruction of Troy. The story probably had its origin in the struggle for supremacy between Greek colonists and the non-Greek early inhabitants of the district. Homer's epic poem, the *Iliad*, deals with a phase of the war. See Helen; *Iliad*; Priam; Troy.

TROLL or **TROLD**. In Scandinavian folklore, a creature sometimes described as a mere unearthly spectre. Sometimes, however, trolls are giants or giantesses possessed of magical, and generally maleficent powers. In Icelandic legends the trolls are cannibalistic.

TROLLOPE, ANTHONY (1815-82) British novelist. Born in London, April 24, 1815, he entered the postal service in 1834. His duties involved much travelling, and afforded time for writing. He died Dec. 6, 1882.

Of Trollope's many novels the best are in the so-called Barchester series. This began with *The Warden*, 1855, and was followed by

Anthony Trollope, British novelist

Barchester Towers, *Framley Parsonage*, *Dr. Thorne*, and *The Last Chronicle of Barset*. They are perhaps unequalled for the pictures, often satirical, they give of life in and around an English cathedral city. Trollope also wrote many books of travel, *Lives of Thackeray* and

Triumphal Arch of the Emperor Titus on the Via Sacra, Rome

Cæsar, and contributed largely to the reviews and magazines. His Autobiography, edited by his son, H. M. Trollope, appeared in 1883.

TROLLOPE, FRANCES (1780-1863). British author. Born at Stapleton, Bristol, March 10, 1780, daughter of William Milton, she married, in 1809, Thomas Anthony Trollope (1774-1835), with whom she spent three years, 1827-30, in the U.S.A. She published, in 1832, *Domestic Manners of the Americans*, a book which gave a good deal of offence, especially in its references to slavery. Having returned to Europe, she wrote novels, including *The Vicar of Wrexhill*, 1837, and *Widow Barnaby*, 1838, until her death at Florence, Oct. 6, 1863.

TROMBONE. Wind instrument developed from the sackbut (q.v.). It consists of two lengths of cylindrical brass tube, bent so as to render it easy to handle, and having a mouthpiece at one end and a bell at the other. One length of the tube is the slide, by moving which the player is able to obtain different harmonic series. These variations, seven in number, are called positions; each successive position alters the pitch by a semitone. Correct intonation is not mechanical, but depends upon the efficiency of the performer. The trombone, used in the orchestra, is made in three or more sizes.

Martin van Tromp,
Dutch sailor
After Lievens

TROMP, MARTIN HAPPERTZON VAN (1597-1653). Dutch sailor. Born at Briel, he entered the navy, 1607, rising to admiral, 1637. He was defeated by Blake, May 19, 1652, off Dover, and Nov. 29 of the same year won over him the battle of Dungeness, after which, it is said, he sailed up the Channel with a broom tied to his masthead. In 1653 he encountered the English off Portland, the N. Foreland, and Scheveningen, being killed July 31. He was buried at Delft.

His son, Cornelius van Tromp (1629-91), served against the English in the Mediterranean, 1652-53. He was defeated at Southwold or Sole Bay, 1665, and in 1673 took part in the battle of Schooneveld. He died May, 1691.

TROMSÖ. Seaport of Norway. It is on an island of the same name, and is the chief port for Spitsbergen. Despite its lat., 69° 50' N., it has a relatively mild climate. The chief industry is fishing. Pop. 10,071.

TRONDHJEM. City of Norway, also known as Nidaros. It lies at the mouth of the river Nid, on Trondhjem Fiord, 350 m. by rly. N. of Oslo (Christiania). A fort crowns the hill of Christianssten, and a second is on the neighbouring islet of Munkholm. The cathedral dates partly from the 11th century, but mainly from the 12th and 13th centuries. Frequently damaged by fire, it has been rebuilt, added to, and restored. It is the place of coronation of the kings of Norway. Wood pulp and tobacco factories, saw mills, machine shops, shipyards, and fish curing factories are

Trondhjem. View of the Norwegian town showing the great bend of the Nid before it enters the fiord

the principal industrial establishments, and timber, copper ore, fish, train oil, wood pulp, and eordage the chief exports. In 1929 its name was changed to Nidaros. Pop. 55,030.

TROON. Burgh and seaport of Ayrshire, Scotland. Situated 9 m. S.W. of Kilmarnock, on the L.M.S. Rly., it is a popular resort with fine sands and several golf courses. The harbour, which is well sheltered and can accommodate large vessels, contains dry docks and shipbuilding and rope making yards. Coal is exported. Pop. 9,474.

TROOP (late Lat. *truppa*, *erowd.*) Literally, a crowd of people. In the plural it is a synonym for soldiers. More specially, a troop in the British army is a small unit of cavalry, forming part of a squadron. It numbers about 40 men and horses and is under a subaltern.

Trombone. Tenor instrument in B flat
By courtesy of Hawkes & Son

The term *trooping the colours* is used for the ceremony of carrying the king's colour along the front of a regiment, performed on the king's birthday. See *Cavalry: Squadron*.

TROPICS. Two parallels of latitude, one 23½° N. and the other 23½° S. of the equator. The name is also given to that part of the earth's surface lying between these lines. The most northerly limit of the sun's migration is reached on June 21, when it is seen overhead at the tropic of Cancer, the parallel of latitude 23½° N. of the equator. On Dec. 21 the southern limit, the tropic of Capricorn (23½° S.), is reached. The words *Cancer* and *Capricorn* are used because in June the sun appears to enter the constellation of Cancer, and in December that of Capricorn. See *Equator*.

TROSSACHS, THE (Gael. *bristling country*). District of Perthshire, Scotland. It is a mt. pass stretching W. from Loch Achray to Loch Katrine, dominated by Ben Venue, 2,393 ft., and Ben A'an, 1,850 ft. The rough steep sides of the hills are thickly wooded, and the winding road is traversed by tourists for the picturesque scenery of the defile. See *Achray*, *Loch*; *Ben Venue*; *Callander*; *Lomond*, *Loch*; *Perthshire*.

TROTSKY, LEV DAVIDOVITCH. Name assumed by the Russian Bolshevik leader Leiba Bronstein (b. 1877). Born near Elizavetgrad, the son of a Jewish chemist, he was banished to Siberia for four years as a revolutionary in 1899. During the attempted revolution in Leningrad, 1905, he was again banished to Siberia, for life. Within six months Trotsky escaped, and for some years lived in France, Switzerland, and elsewhere.

At Leningrad, during the revolution of 1917, he became a supporter of Lenin (q.v.). After a time the two formed the Bolshevik Revolutionary Committee, and on Nov. 8 he, with Lenin, seized the reins of government

and established the Council of the People's Commissioners, Lenin being its president and Trotsky commissary for foreign affairs. In 1918 he became commissary for war, and in 1924 resigned from all Soviet offices. In 1928 he was expelled from the country, being still in exile, 1930. See *Bolshevism*; *Russia*.

TROTTERING. Form of horse racing. In modern trotting races the horse is driven in a sulky having two bicycle wheels 28 ins. in diameter with pneumatic tires. This racing machine weighs only about 25 lb. The ideal trotting ground is an oblong-shaped track with rounded ends, either half a mile or a mile in circumference, and the record time is a little under two minutes for a mile.

TROUBADOUR (Prov. *trobador*, from *trobar*, to invent). Name given to a class of medieval poets, chiefly in Languedoc and Provence. They flourished from about 1090 to 1290, and composed lyrical poetry in the

Troubadour accompanying himself on a fiddle

From a 14th century sculpture, church of S. Denis, Paris

Trotting meeting at Parsloes Park, Barking, a leading English centre of this sport; close running between two competitors

langue d'oc, being thereby distinguished from the *trouvères*, who used the *langue d'oïl*. Their poetry exhibited an immense variety of complicated metrical forms, and became increasingly artificial. They usually accompanied themselves on the *fidel*, a five-stringed instrument played with a bow, somewhat resembling the later viol.

The troubadours exerted a remarkable social and political influence by developing the chivalrous and romantic conception of love and refining the relations of the sexes.

TROUBRIDGE, SIR ERNEST CHARLES THOMAS (1862-1926). British sailor. Born July 15, 1862, he entered the navy in 1878.

The Trossachs, Perthshire. Path by the waters of Loch Katrine

He was captain and chief of staff, Mediterranean 1907-8, and chief of the war staff at the admiralty. 1911-12. When the Great War broke out he was second in command to Admiral Sir Berkeley Milne in the Mediterranean and was much criticised over the escape of the Goeben (q.v.), was court-martialled, but fully and honourably acquitted. Rear-admiral 1911, vice-admiral, 1916, he became admiral in 1919, and was knighted in that year. He died Jan. 28, 1926.

TROUT (*Salmo trutta*). Fresh-water food fish of the family Salmonidae. It is a native of the rivers that flow into the N.E. Atlantic, the Mediterranean, Caspian, and Black Seas. It has a rather short and compressed body, a small well-shaped head with blunt conical snout, and is clothed with rounded scales. The colour is a greenish brown above, paling below to a dirty white. There is a small appendage (adipose fin) of fatty tissue between the dorsal and the tail fins. On the lower side there is a pair of pectoral fins just behind the gill covers, a ventral fin below the lower edge of the dorsal, and the anal fin is below the adipose. The head and the sides, as well as the back and tail fins, are dotted with round or X-shaped black spots.

The size and weight vary considerably. Its average length is a foot and the weight from $\frac{1}{2}$ lb. to 2 lb. Trout live in running, clear streams, or in the lakes from which such streams originate. Like salmon, they seek the shallow upper waters for spawning. Their food consists of crustaceans, insects, snails, worms, the eggs of salmon and other fishes, and small fishes. See *Sea Trout*.

TROUVILLE. Watering place of France. It lies at the mouth of the Touques, 10 m. S. of Havre, with Deauville (q.v.) on the opposite bank. It owes its popularity to the number of French artists and men of letters who frequented it. British hospitals were established here in the Great War. Pop. 6,000.

TROWBRIDGE. Urb. dist. and market town of Wiltshire. It is 11 m. S.W. of Devizes, has a station on the G.W.R., and is served by a canal. The fine Perpendicular church of S. James contains the tomb of George Crabbe the poet who was rector here. The town has various industries. The woollen industry was established here before the 16th century. Market day, Tues (alternate). Pop. 12,133.

TROY. Ancient city in Asia Minor. Immortalised in Homer's *Iliad* as Priam's citadel, whose capture was the objective of the Trojan War, its site was disputed even in antiquity. It was finally identified in 1893 by W. Dörpfeld's excavations, completing H. Schliemann's in 1870-82, on the ruin-mound of Hissarlik, 162 ft. high, and $3\frac{1}{2}$ m. from the Dardanelles mouth. The excavations ultimately revealed nine superimposed layers of debris. Of these the sixth, a substantial citadel, with massive gated walls of ashlar, wells, brick houses and painted pottery of the Mycenaean age, was the scene of Homer's Troy. See *Aegean Civilization*; *Archaeology*; *Homer*; *Iliad*; *Priam*; *Trojan War*.

TROY. City of New York State, U.S.A. It stands at the head of navigation of the Hudson river, 6 m. N. of Albany. The Rensselaer Polytechnic Institute is one of the finest institutions of its type in the U.S.A. Important manufactures are shirts, cuffs, collars, hosiery, etc. Pop. 72,223.

TROYES. City of France, capital of the dept. of Aube. It stands on the Seine, 103 m. S.E. of Paris. The cathedral, begun in the 13th century, has some good stained glass. Other fine old churches include those of S. Urban, S. John, S. Nicholas, and La Madeleine, each with

notable decorations, glass, or relics. The abbey of S. Loup is now a museum, while the buildings of another abbey are used by the municipality. Secular buildings include the hôtel de ville and the Hôtel Dieu. The chief industry is the manufacture of hosiery, and there is trade in wine. Troyes was made the seat of a bishop in the 4th century, and later became one of the richest cities in Champagne, famous for its fairs. Pop. 58,321.

TREATY OF TROYES. Name given to two treaties between England and France. By the first, concluded May 21, 1420, between Henry V of England, Charles VI of France, and the Burgundians, Henry V gave up the title of king of France, but was to marry Charles's daughter, Catherine, have the title of regent and heir of France, and succeed to the throne of France on Charles's death. The second treaty was signed in 1564, after the English surrender of Havre. By it

France undertook to pay England 120,000 crowns and allow free trade between the countries.

TROY WEIGHT. Measure of weight, introduced, probably from Troyes, France. By an Act of Henry VIII the weight of the pound troy was fixed at 5,760 grains. In 1878 troy weight was abolished with the sole exception of the troy ounce, its decimal parts and multiples, to be used for the sale of gold, silver, and precious stones. The ounce was divided into 20 pennyweights, each of 24 grains.

TRUCE (A.S. *træow*, compact). Term used for a suspension of hostilities, usually for a definite time. In the Middle Ages truces were frequently made for periods of years. A flag of truce is a flag carried by those who are sent to an enemy to ask for a cessation of hostilities.

In medieval times the term truce of God was applied to the prohibition by the Church of hostilities during certain specified times with sacred associations, e.g. feast days, and in Advent and Lent. See *Armistice*.

TRUCK (late Lat. *trochus*, wheel). Term used for a wheeled vehicle, such as those used on railways to carry coal and other heavy materials. It is used by seamen for a small circular piece of wood at the top of a mast.

In another sense truck is used for harter. The truck system is one by which workmen are paid for their services in kind, not in cash. In Great Britain, as elsewhere, employers took advantage of this, and it was made illegal by an Act of 1831, amended in 1887 and 1896.

TRUFFLE (*Tuber aestivum*). Underground edible fungus of the order Ascomycetaceae. The spore-bearing body is potato-like, with a blackish-brown exterior covered with hard warts. The interior flesh is at first white, then brown, with irregular cavities in which the large-netted spores are produced. Its taste is rather insipid, and the smell suggests yeast.

It occurs just below the surface of the ground in woody places. As there is no above-ground indication of its presence, pigs and dogs are trained to hunt for truffles by scent. The Perigord is a distinct species (*T. melanosporum*)

TRUMBULL, JONATHAN (1710-85). American patriot. Born at Lebanon, Connecticut, Oct. 12, 1710, he held various posts in the legislature of Connecticut, of which he was governor, 1769-83. He was the intimate friend of Washington, whose frequent remark, "Let us hear what brother Jonathan has to say," is supposed to have been the origin of the popular nickname for the American people. Trumbull died at Lebanon, Aug. 17, 1785.

TRUMPER, VICTOR THOMAS (1877-1915). Australian cricketer. Born at Sydney, Nov. 2, 1877, he played for New South Wales, and represented Australia in test matches with England and South Africa. During his career he scored upwards of 40 centuries, and during the 1902 Australian tour totalled 2,570 runs. Altogether in test match cricket he scored 2,263 runs for an average of 32.79 runs per innings, and six times exceeded the century. Trumper died June 28, 1915.

TRUMPET. Musical instrument which, in various forms, is of great antiquity. The modern trumpet consists of a cylindrical brass tube, which becomes conical as it widens out towards the bell. It is bent so as to make it convenient for holding. Originally it could only produce the notes in the harmonic series of the key in which it was pitched, necessitating the use by the player of different crooks whereby the length of the tube could be altered. These crooks gave the keys of F, E, E flat, and D, all of which sounded higher than the notation of C in which the part was written. Even with the crooks, however, there were inevitable lacunae in the scale. The first notable attempt to remedy this defect consisted of an adaptation of the slide principle (see *Trombone*), by which the pitch could be altered by a semitone or a tone without change of crook. The modern instrument, however, is fitted with valves (see *Coronet*; *Horn*), so that any note can be obtained within the compass. See *Lamaism*.

TRUMPETER (*Psophia*). Genus of S. American birds, nearly allied to the cranes. They resemble cranes with a shortish neck and the head of a domestic fowl. They occur in large companies in the forests, feeding on fruit, grain, and insects; and have a loud trumpeting note. The name is given to the American swan.

Jonathan Trumbull, American patriot. After John Trumbull

Trumpet used in military bands. Hawkes & Son

Trumpeter. Loud-voiced South American bird. W. S. Herridge, F.Z.S.

Truffle. The underground fungus eaten as a delicacy

Trout. Common or brook variety found in European streams and rivers

Troyes. Cathedral of S. Peter, which is chiefly 16th century work

Trumpet Flower. Popular name of climbing shrubs of the genus *Bignonia* (q.v.)

TRUMPET MAJOR. Non-commissioned officer in the British Army. Having been in disuse for many years, this title was revived in 1928, replacing sergeant-trumpeter.

TRUMPET TREE (*Cecropia peltata*). Evergreen tree of the order Moraceae. It is a native of tropical S. America and the West Indies. The branches are hollow, and are used as musical instruments.

TRURO. City and market town of Cornwall. On the Truro river, a branch of the Fal, it is 11 m. N. of Falmouth, with a station on the G.W. Rly. and a steamer service to Falmouth. Truro was made a bishopric in 1876. The cathedral was begun in 1880; in the fabric is incorporated the S. aisle of the old parish church of S. Mary. The building is in Early English style; the nave was completed in 1903, and by 1910 the central and W. towers were finished. The museum contains Phoenician and Cornish remains. There are tin and pottery works. Market days, Wed. and Sat. Pop 10,833

TRURO. Town of Nova Scotia. It is 2 m. from the sea and 62 from Halifax. An old town, founded in 1761, it is a rly. centre on the C.N. Rlys. and the C.P.R. Pop. 7,562.

TRUST. In English law, a confidence reposed in someone to whom property is transferred, to deal with it in a particular way. A trust may be declared verbally or in writing; and a person may declare himself to be the trustee of his own property for the benefit of another. In a will, a request to a legatee to hold his legacy for another's benefit is a trust.

In English law a trustee is one who has the legal ownership of property, but holds it for the benefit of others, who are called the "beneficiaries." If he is in doubt as to his duty in any special instance, he may take out a summons, asking a judge to direct him as to the course to be pursued. If he find himself with trust property in his hands, and does not know to whom to pay it, as where the beneficiaries or some of them cannot be found, he should transfer it to court for the court to deal with. The Trustee Act of 1925 altered the law to some slight extent. Trustees are not liable for breaches of trust if they act honestly and reasonably. (See Public Trustee.)

Trustee savings banks are savings banks managed by trustees. (See Savings Bank.)

The term trustee stocks is used for those securities in which, by English law, trustees may invest trust funds without being liable for depreciation therein.

TRYON, SIR GEORGE (1832-93). British sailor. Born Jan. 4, 1832, he entered the navy at the age of 16. He was commander-in-chief of the Australian station, 1884-87, being knighted in the latter year. Appointed commander of the Mediterranean fleet in 1891, he was engaged in manoeuvres off Tripoli when his flagship *Victoria* was rammed and sunk with loss of the entire crew, June 22, 1893.

TRYPANOSOMIASIS. Term denoting disease caused by infection with the parasites known as trypanosomes, transmitted by the tsetse fly (q.v.) and certain other insects. Nagana in horses and cattle, a disease prevalent in the African fly belt, is caused by *Trypanosoma brucei* and *T. congolense*, carried by the tsetse fly. Surra, a form attacking all domestic animals and occurring in the warmer parts of the Old World, is carried by horse or stable flies. Dourine, a similar affection, is transmitted directly from one animal to another, and does not attack cattle. Another form of animal trypanosomiasis is fairly prevalent in South America.

In man trypanosomes cause sleeping sickness and the S. American disease known as

Truro. Cathedral of S. Mary, built 1880-1910, incorporating part of the old parish church

Chagas' disease. The former disease is conveyed by the tsetse fly and the latter by a bug. See Parasite; Sleeping Sickness.

TSANA, TANA, OR DEMBEA. Lake of Abyssinia. It is on the plateau S. of Gondar, and is about 60 m. long by 40. From it issues the Blue Nile, and a few m. to the N. the river Atbara has its source. The floods on both cause the annual flooding of the Nile valley.

TSAR, TZAR, OR CZAR (Lat. caesar). Slav title, meaning emperor. It was used in the Middle Ages in the Balkans, the Bulgarian kings being early known as tsars, and later in Russia. Ivan the Terrible was the first tsar of all Russia. The feminine form is tsaritsa.

TSARITSYN. Town of the Union of Socialist Soviet Republics, also called Stalingrad, capital of the prov. of Stalingrad. It is one of the most important business places on the Volga, much trade being done in naphtha products, grain, timber, fish, salt, and wool. Here merchandise transported on the Volga is transhipped to the rly. for Black Sea ports. Pop. 148,392.

TSARSKOE SELO (Russ. imperial village). Town of the Union of Socialist Soviet Republics, now known as Detskoe Selo. It is in the Leningrad area, 15 m. S. of Leningrad. A former imperial residence, it contains two of the imperial palaces, one dating from the time of Catherine I, the other from that of Catherine II. The rly. to Leningrad was the first in Russia. Pop. 15,000.

TSAVO. River and settlement of Kenya Colony. The former flows E. from Mt. Kilimanjaro, and the latter is on the Uganda Rly., 133 m. from Mombasa.

TSCHAIKOVSKI, PIOTR ILYICH (1840-93). Russian composer. Born at Votkinsk, govt. of Vyatka, May 7, 1840, he studied law, but in 1863 turned finally to a musical career, entering the St. Petersburg conservatoire. Professor of harmony at Moscow conservatoire, 1866-77, he became known as a rising composer. He first conducted in public in Moscow, 1887, and in London, 1888-89. He died from cholera in St. Petersburg, Nov. 6, 1893.

His eight operas include *Eugene Onegin*, 1879; *Mazeppa*, 1884; and *The Queen of Spades*, 1890. His ballets include *The Sleeping Beauty*, 1890, revived in London in 1921, and *Casse-Noisette*, well known as a concert piece, 1892. Among many orchestral works, where his essentially Russian genius is seen to best advantage, are the six symphonies, and five symphonic poems and concerti for violin and pianoforte.

Piotr Tchaikovsky, Russian composer

TSETSE FLY (*Glossina*). Genus of two-winged brown and yellow flies (Diptera). Natives of tropical Africa, about 15 species being known, they vary from a quarter to half an inch in length, and with their wings closed present much of the appearance of the common housefly, but the mouth-parts are developed into a piercing and sucking organ longer than the head.

The flies affect cover near water afforded by reeds, bushes, or forest. Such fly belts were found impassable by the early explorers—carriers, buffaloes, oxen, and horses being stricken down by nagana or fly-sickness. The flies, sucking the blood of animals infected by low organisms known as trypanosomes, transmit the germs to the blood of domesticated animals. The parasite carried by *G. palpalis* and *G. morsitans* produces in man the condition known as sleeping sickness. See Sleeping Sickness; Trypanosomiasis.

Tsetse Fly, natural size

TSINAN. City of China, capital of Shantung prov. It is 4 m. S. of the Hwang-ho and 245 m. S.E. of Peking. It was opened for foreign trade in 1904. Close by are iron mines. Trade is chiefly in silk broadcades, precious stones, and glass. Pop. about 300,000.

Tsingtao or TSINGTAU. Town of the territory of Kiaochow (q.v.), situated in Shantung prov., China.

TSINGTAO, CAPTURE OF. British and Japanese operation in the Great War, Sept. 2-Nov. 7, 1914. The place was defended by about 5,000 Germans, and was heavily fortified. The Japanese land forces numbered 22,980 officers and men, and 142 guns. The British force arrived on Sept. 23, and consisted of the 2nd South Wales Borderers, about 900 strong, and about 450 of the 36th Sikhs. The final attack began on Nov. 6, the fortress surrendering the next day. See Kiaochow.

TSUSHIMA STRAIT. S. channel of the Strait of Korea. It separates the island of Tsushima from Kyushiu and Honshu. The N. channel is called Chosen Strait. At high water Tsushima Island is 40 miles in length, and is divided into two portions. Its area with adjacent islands is 274 sq. m.

The battle of Tsushima, between the Russians and Japanese, took place May 27-28, 1905. The Russian fleet, under Vice-Adm. Rozhdestvensky, left Libau on Oct. 18, 1904, and after a seven months' voyage was almost annihilated by an approximately equal force under Admiral Count Togo (q.v.).

Tuam, Ireland. West front of the R.C. Cathedral

TUAM. City of co. Galway, Irish Free State. Situated 20 m. N. of Galway, on the G.S. Rlys., the city grew up around the abbey, made a cathedral early in the 6th century. It is the seat of a Protestant bishop, the 12th century church of S. Mary having been rebuilt as the cathedral in 1861, and of an R.C. archbishop, Tuam Cross is one of the oldest and finest of the Irish crosses. Pop. 3,293.

TUBE FLOWER (*Clerodendron siphonanthus*). Shrub of the order Verbenaceae, native of India. It attains a height of about 6 ft., and has opposite undivided leaves and terminal clusters of white, funnel-shaped flowers. See illus. p. 1358.

TUBER. Fleishy enlargement of the stem or root of biennial or perennial plants. Tubers contain a store of food to enable the plant to survive periods of frost or drought when its above-ground parts are destroyed. Potato tubers are the swollen ends of underground stems, the eyes being buds which develop into new stems. See Root.

TUBERCULOSIS. Infectious disease of world-wide distribution caused by the tubercle bacillus. Modern research has proved that

the disease is never hereditary, and that it is frequently cured. Infected milk from tuberculous cows, taken into the body of children and young adults, causes enlarged glands in the neck, spinal disease, hip joint disease, abdominal tuberculosis,

etc. The human bacillus is the cause of pulmonary tuberculosis, commonly called consumption or phthisis, and is introduced into the lungs by inhalation. The symptoms of the disease are very variable and insidious. It generally occurs between the ages of 18 and 25, the sufferers becoming anaemic, with loss of appetite and energy, followed by cough and some expectoration. As the disease progresses the lungs are gradually destroyed, until the patient dies in the course of two or three years.

Treatment involves a long period of time, and should be undertaken in a sanatorium. Rest of the lungs and an outdoor life are important, and cod-liver oil is beneficial.

A substance called tuberculin, prepared by Koch in 1890 from cultures of the tubercle bacilli, has been used in the treatment and diagnosis of tuberculosis. See Notification.

TUBEROSE (*Pollanthes tuberosa*). Bulbous herb of the order Amaryllidaceae, a native of Mexico. It has narrow lance-shaped leaves and a tall flower stem ending in a spray of many creamy-white, funnel-shaped, highly fragrant flowers. Pearl is one of the best varieties. Pron. tu-ber-ose.

TÜBINGEN. Town of Württemberg, Germany. It stands on the Neckar, 22 m. S. of Stuttgart. The buildings include the town hall, built in the 15th century, and the Stiftskirche, also of the 15th century. The 16th century dual castle houses the observatory, library, and other parts of the university. Tübingen is noted for its university, founded in 1477. Its professors have included F. C. Baur and other critics of the Bible; hence the term Tübingen school applied to them and their followers. Tübingen has chemical works and is a publishing centre. Pop. 20,276.

TUDOR. Name of a family that gave five sovereigns to England (1485-1603). Its earliest members lived in Anglesey. Owen Tudor married Queen Catherine, widow of Henry V and mother of Henry VI. Their son, Edmund, was made earl of Richmond and married Margaret Beaufort, a descendant of Edward III through John of Gaunt. Their only child was Henry VII. The Tudors retained the throne until the death of Elizabeth

in 1603. From Henry VII, through his daughter Margaret, wife of James IV of Scotland, James I of Great Britain and the later Stuarts are descended. See England: Royal Family.

The name Tudor rose is given to the union of the red and white roses of Lancaster and York, which formed the royal badge of England in 1486.

The term Tudor style is applied to the late stage of Gothic architecture which prevailed in England 1485-1603. See Gothic Architecture.

TUGELA. River of Natal. Rising in the Mont-aux-Sources, where are the Tugela Falls, and running E to the sea between Unvoti and Port Durnford, it forms the boundary between Zululand and Natal proper. It is about 300 m. long.

The river is memorable for a series of actions fought in Dec., 1899, and Jan and Feb., 1900, to bring about the relief of Ladysmith. Several attacks were made on the Boer positions in the hills above the river, but it was not until Feb. 26 that Buller, after crossing the Tugela for the seventh time, was able to make his final advance on Ladysmith. See South African War.

TUILERIES. Former royal palace in Paris. It was so named from the tile yards (tuileries) once on the site. It stood between the Louvre and the Place de la Concorde. Designed by Philibert de l'Orme for Catherine de' Medici, and begun in 1564, the Tuileries long served as a pleasure house for the kings of France. When Louis XVI was brought back to Paris by the revolutionists, the palace became his regular residence; it was subsequently used by the Bonapartes and Bourbons until 1871, when it was burned by the Commune. Its garden, however, remains as a public park, and retains some remarkable statuary. See French Revolution: Paris.

TUKE, HENRY SCOTT (1853-1929). British artist. Born at York, June 12, 1853, the son of a doctor, he studied art at the Slade School and then in Italy and Paris. In 1879 he first exhibited at the Royal Academy. In 1900 he was elected A.R.A. and in 1914 R.A. Two of his paintings, *All Hands to the Pumps* and *August Blue*, were bought by the Chantry Trustees. Tuke died March 13, 1929.

TULIP (*Tulipa*). Genus of brilliantly flowering bulbous plants of the order Liliaceae. Garden tulips were introduced into Britain

Tulip. Brilliantly coloured flowers of the bulbous plant
Sutton & Sons

through Holland about 1550. They are of various heights, from 9 ins to over 2 ft., and the flowers are of all shades and colours and combinations of shades and colours, except blue, from whitest to very dark purple. The parent of the garden tulips is *T. gesneriana*, a rich deep crimson flower with a cup almost as large as a clenched fist, and from it have sprung, by hybridisation, hundreds of nursery-raised kinds. When the foliage has died down, tulip bulbs are lifted and stored in a dry place until the time for planting again arrives.

TULIP TREE (*Liriodendron*). Beautiful flowering, summer-leaving tree of the order Magnoliaceae. It is a native of North America, and was introduced into Britain in 1668.

Tudor rose, in heraldry

It frequently attains a height of 80 to 100 ft., and, when matured, bears in summer large green, lemon and orange-coloured flowers, shaped like the cups of a tulip.

TULLAMORE. Urban dist. and county town of Ossaly (King's County), Irish Free State. It is 58 m. from Dublin, on the G.S. Rlys. It has an agricultural trade. Pop. 4,930.

TULLUS HOSTILIUS. Third of the seven legendary kings of Rome. He was reputed to have reigned from 670-640 B.C. He was a warlike monarch, and conquered and utterly destroyed Alba, transporting the inhabitants to Rome. It was in this war that the famous incident of the Horatii (q.v.) and Curiatii occurred. He was killed by Jupiter for seeking more than mortal should know.

TULSA. City of Oklahoma, U.S.A. It stands on the Arkansas river, 121 m. N.E. of Oklahoma City. Bricks, glass, and cotton-seed oil are manufactured, and coal mining and oil refining carried on. The neighbourhood produces large quantities of natural gas and crude oil. Pop. 124,478.

TULSE HILL. Dist of S.W. London. In the bor. of Lambeth (q.v.), it lies E. of Brixton Hill and Streatham Hill, and includes Brockwell Park. It is on the Southern Rly.

Tumulus. Silbury Hill, a tumulus in Wilts, probably dating from Neolithic times. See below

TUMMEL. Name of a river and loch in Perthshire, Scotland. The river empties from the E. end of Loch Rannoch, flows E for 9½ m. and then broadens into the loch, ¼ m. wide and 3 m. long. The river thence flows 8 m. E to the falls of Tummel, where it turns S.E. to join the Tay, 7 m. N.N.W. of Dunkeld, receiving the Garry just below the falls.

TUMOUR. A swelling or morbid enlargement due to a mass of tissue which grows independently of the surrounding tissue. Tumours are described as "innocent" or "malignant." The former grow only in the spot on which they first appear; they do not spread to other parts of the body. From malignant tumours small pieces are carried in the blood stream to various parts of the body, where they set up secondary growths. The cause of tumours is unknown.

TUMULUS (Lat. hillock). Burial or memorial mound, especially one distinguished by size, form, or association. Such were Silbury Hill in the Kennet Valley, Wilts; the grave, 100 ft. across, of Patroclus at Troy; the mound, 30 ft. high, raised to Athenian warriors at Marathon, 490 B.C.; the Lydian tomb near Sardis, 200 ft. high, of Alyattes II, 560 B.C.; the Lion Mound at Waterloo. See Barrow; Mastaba; Stone Monuments; Stupa; Teocalli.

Tulip Tree. Showy flower of the N. American tree

TUN. Measure of liquid capacity, containing 252 wine gallons. As the name of a large barrel, the word is probably an older form of ton. A tun of sweet oil is 236 galls.

TUNBRIDGE WELLS. Borough and watering place of Kent. Picturesquely situated on the border of Sussex, it is 5 m. S. of Ton-

Tunbridge Wells. The Pantiles, once a fashionable promenade for visitors taking the waters
Dixon Scott

bridge, on the Southern Rly. At the end of the Parade, long famous as The Pantiles, are the mild chalybeate springs which, discovered in 1606 by Lord North, made the place a celebrated resort of fashion in the 18th century. The church of King Charles the Martyr dates from 1685. Near the town are Penshurst, Rusthall Common with the Toad Rock, Eridge, and other places of interest. A local industry is the manufacture of Tunbridge ware, toys, workboxes, etc. Tunbridge Wells has adopted Bouzincourt. Pop. 35,551.

TUNDRA. Extensive barren lowlands bordering the Arctic coastlands of N. America, Europe, and Asia. The mean temperature of the warmest month falls below 48° F., the winters are long and severe, and the total annual precipitation does not reach 10 ins. Therefore the tundra is a cold desert. The only plants are stunted berry-bearing shrubs, mosses, and lichens. The chief animals are reindeer, caribou, and musk oxen. In winter the tundra is a dreary wilderness of ice and snow. The tundra is sparsely inhabited by Eskimos (N. America), Lapps, etc.

TUNGCHOW. Port of Peking, China. It lies a few miles E. of the city, on the Peiho. There is another city of the same name on the left bank of the Yang-tze near its mouth, in the prov. of Kiangsu.

TUNGSTEN. Metallic element. Its chemical symbol is W; atomic weight 184; atomic number 74. It is a hard, grey, brittle metal with a melting point of 3,302° C. It is not found native, but occurs in wolfram and other minerals. It forms a number of compounds. Sodium tungstate is used as a mordant in dyeing and printing, and for fireproofing textiles. The metal increases the hardness of steels, and alloyed with nickel it is used for ballistic purposes. Drawn into fine wire, tungsten is used in the manufacture of incandescent lamp filaments. See Wolfram.

TUN-HUANG OR TUNG-HWANG. Town and oasis in outer Kansu, China. Its former importance arose from its propinquity to the high roads from China to the Roman Orient, and from Tibet to Mongolia. In 1907 Sir Aurel Stein explored its hundreds of cave shrines, and from a cella walled up in 1036 at the Caves of the Thousand Buddhas procured

for the British Museum many paintings on silk, linen, and paper, mostly of the Tang period. See Turkistan.

Tunicata or Urochorda. Group of lowly vertebrate marine animals comprising the ascidians etc See Urochorda.

TUNING FORK. Steel rod bent in the middle, and having at the fold a handle or foot. Owing to its permanence of tone and its almost complete lack of upper partials, it is used for indicating definite pitch.

Tuning fork used for indicating musical pitch
By courtesy of Harkes & Son

TUNIS. Capital of Tunisia. It lies on a lagoon near the S.W. end of the gulf of Tunis, in the N.E. of the country, and is connected by rail with Bizerta and the principal cities of Tunisia and Algeria, and with the sea by a channel dredged in the lagoon to the port at Goletta. The ancient Arab city is of great interest and contains many fine mosques. About three miles distant are the ruins of Carthage. Pop. 185,996. See Africa;

Carthage.

TUNISIA (Fr. La Tunisie). French Protectorate in N. Africa. It extends 550 m. along the Mediterranean between Algeria and Libya. Important cities are Tunis, the capital, Sfax, Susa, and Bizerta. The area is about 48,300 sq. m. Pop. 2,159,708.

Much of the country is occupied by hills, in the S. changing into desert steppes, and in the E. into low and sterile desert tracts; but portions are extremely fertile. Between the mountain chains of the interior are elevated valleys producing cereals, oranges, dates, figs, vines, almonds, and olives. The most important river is the Medjerda. There are several lakes. The chief industry is agriculture. There is considerable mineral wealth, while there is a large production of phosphates. Since the French occupation Tunisia has made rapid progress and is traversed by railways.

In the 7th century B.C. exiles from Tyre and Phoenicians founded the city of Carthage (q.v.). Subsequently passing under the Romans, Arabs, and, in 1575, the Turks, Tunisia contains many remains of antiquity. Under Turkish control it became practically independent. In 1881 a French expedition was sent to the country, and the treaty signed May 12, 1881, placed it under French protection.

TUNNEL (Fr. tonneau, cask). Arched passage cut through a hill, or under a river, to facilitate traffic. Tunnels are also made for mining and sewage purposes.

High-level tunnels through hills and mountains are lined with

masonry where they traverse loose material, and are inclined, so as to enable water to drain away by gravitation. In solid rock no lining is needed. Rock tunnelling has been revolutionised by the power drill. It is now customary to drive tunnels under rivers and cities with a shield, where loose or soft material is encountered, and to line them with rings of cast-iron segments, bolted together. Water is excluded from the workings by air at a suitable pressure. See Blackwall; Ceniz, Mont; Shield.

TUNNEY, GENE (b. 1898) American boxer. Born May 25, 1898, after serving with the U.S.A. forces he became prominent as a heavy-weight boxer. He challenged Jack Dempsey (q.v.), the world champion, and defeated him on Sept. 23, 1926, at Philadelphia. He again defeated Dempsey in 1927, and at the Yankee Stadium, New York, June 26, 1928. Tunney knocked out Heeney in the eleventh round, thus retaining the heavy-weight championship of the world. Shortly after he retired from the ring. In June, 1930, Schmeling, by defeating Sharkey, became champion. Tunney had the reputation of being a student.

Tunny. Large Mediterranean food fish, occasionally found in British waters

TUNNY (Thunnus thynnus). Large fish, belonging to the mackerel family. It is very common in the Mediterranean, and occasionally occurs round the British coasts. The fish frequently grows to a length of over 10 ft., sometimes weighs half a ton, and is a valuable food fish, with flesh which looks very much like beef. It is eaten both fresh and preserved in oil. See Bonito.

TUNSTALL. District of Staffordshire. In the heart of the Potteries, it forms part of the borough of Stoke-upon-Trent (q.v.). It has a station on the L.M.S. Rly.

TUPELO TREE OR OGECHIE LINE (Nyssa capitata). Small tree of the order Cornaceae, native of the southern U.S.A. It grows in swamps, and has alternate, oval leaves, cottony on the under side. The small greenish flowers have the sexes separate. The plum-like fruits are red.

TUPPER, SIR CHARLES (1821-1915). Canadian statesman. Born at Amherst, Nova Scotia, July 2, 1821, he entered the legislature of Nova Scotia in 1855. Secretary of the province, 1857-59, and its prime minister, 1864-67, he was one of the fathers of the confederation of 1867, by which the Dominion was created. Having been minister of inland revenue, customs, public works, and railways, in 1884 he came to London as high commissioner for Canada, but in 1887 returned home to become minister of finance. He returned to his former post in London in 1888, and remained there

Tupelo Tree. Flowering sprays. Inset, left, female flower; right, head of male flowers

Tunisia. Arab in characteristic dress

Sir Charles Tupper, Canadian statesman
Elliott & Fry

until 1896, when he became prime minister of the Dominion. He died Oct. 30, 1915. Tupper was knighted in 1879 and made a baronet in 1888.

His son, Sir Charles Hibbert Tupper (1855-1927), was minister of marine and fisheries, 1888-95; and minister of justice and attorney-general, 1895-96. He was a representative at the Paris tribunal of arbitration in 1892, being made a K.C.M.G. in 1893.

Martin Tupper,
British author

TUPPER, MARTIN FARQUHAR (1810-89). British author. Born in London, July 17, 1810, and educated at the Charterhouse and Christ Church, Oxford, his fame rests almost entirely on his *Proverbial Philosophy*, 1838, which eventually achieved extraordinary popularity; by 1881 a million copies of this commonplace production had been sold in America and 750,000 in Britain. Tupper also wrote mediocre verses, and, in addition, was an indefatigable inventor. He died at Albury, Surrey, Nov. 29, 1889.

Turban as worn
in N. Africa

Early in the 19th century the turban became fashionable among some European women. It is worn by some Indian army units.

TURBINE (Lat. turbo, whipping-top, reel). Machine for converting the kinetic energy of steam or of water directly into rotary motion. The earliest steam engine of which we have any record, the aeolipile of Hero of Alexandria (130 B.C.), was a turbine. It consisted of a hollow ball with two bent arms projecting, and was balanced on pivots. When partly filled with water and heated, steam issued from the arms and caused the vessel to rotate. This was the prototype of the reaction turbine. The other great class of turbine, known as impulse machines, is represented in its elementary form by a wheel having blades set round its periphery on which impinges a jet of steam. The simplest form of turbine is the single-expansion impulse turbine introduced by De Laval in 1888. Cupped buckets are mounted round the rim of a wheel, and into them is directed steam, which is expanded in a divergent conical nozzle, thereby gaining velocity while losing pressure.

The Parsons compound reaction turbine, introduced in 1884, is made up of a large number of elements or "stages," each consisting of a row of fixed guide blades and a row of moving blades, the latter being attached to a rotating drum and projecting outwards, while the former project inwards from the casing. In order to accommodate the increasing volume of the constantly expanding steam, these elements are made gradually larger from the high-pressure end of the turbine to the low-pressure or condenser

end. At each stage the steam undergoes a small drop of pressure with gain of velocity, and after impinging on the moving blades leaves them with a push-off or reaction effect.

The first use of the steam turbine was for driving electric generating machinery, and so suitable has it proved that turbo-generators are now generally employed in modern steam power stations. The application of the turbine to the propulsion of ships dates from 1897, when the *Turhinia*, a little vessel with the then almost incredible speed of over 32 knots, made her appearance. Within the next decade the turbine had been fitted in fast liners and in warships generally.

Hydraulic turbines are used for converting water power into mechanical—or more often electrical—energy. The two chief forms, the Pelton wheel and the Francis turbine, are described in the article *Hydro-electric Machinery*.

TURBOT (Rhombus maximus). British food fish. Next to the sole, it is the most highly esteemed of the flat fish for the firmness and delicacy of its flesh. It is greyish brown in colour, with darker spots, and the scales when present are small and inconspicuous. It feeds mainly on other fishes. The turbot fishery is largely carried on off the N.E. coast of England, chiefly by trawling. See Brill.

Turbot, the flat food fish caught off the British coasts

TURCO. Name given to Algerian riflemen. They belong to the regiments, each of six

Turbine. 1. Diagram of blading in reaction turbine. 2. De Laval impulse turbine. 3. Runner of a 10,000 h.p. Pelton wheel. 4. Diagram showing one-half vertical elevation and section of Francis inward-flow turbine. A. Fixed guide wheel; B. Runner; C. Regulator

Persian and Afghan frontiers. Hardy and predatory, they form nine tribes, mostly dwelling in winter villages and summer encampments. They number about 300,000. See Turkmenistan.

TURENNE, HENRI DE LA TOUR D'AUVERGNE, VICOMTE DE (1611-75). French soldier. A nephew of Maurice of Nassau, and

grandson of William the Silent, he was born Sept. 11, 1611, and joined the French army in 1630. In the civil wars of the Fronde, Turenne at first supported the rebels, but later joined Mazarin, and led the royal armies to victory. In the wars of Louis XIV he again proved himself the greatest living master of the art of war, especially in the brilliant campaign of 1674. He was killed July 27, 1675.

TURGENEV, IVAN SERGEIEVITCH (1818-83).

Russian novelist. Born at Orel, in Central Russia, he began his literary career by writing verses. In 1852 came his first volume of studies of peasant life, *A Sportsman's Sketches*, which contributed to the emancipation of the serfs in 1861. He left Russia in 1855, and passed the rest of his life abroad. Turgenev died at Bougival, near Paris, Sept. 4, 1883.

His novels include: *Rudin*, 1856; *A House of Gentlefolk*, 1859; *On the Eve*, 1860; *Fathers and Children*, 1862, which is generally accepted as the author's masterpiece; *Smoke*, 1867; and *Virgin Soil*, 1876. Most of Turgenev's works have appeared in English translations.

TURGOT, ANNE ROBERT JACQUES (1727-81). French statesman and economist. Born May 10, 1727, in 1761 he became intendant of Limoges, effecting remarkable economic reforms in that district. In Aug., 1774, he was entrusted by Louis XVI with the financial administration of France, taking office as comptroller-general. Turgot instituted drastic economies; established free trade in corn; and at the beginning of 1776 he attacked the virtual exemption from taxation of the privileged classes. Those classes united in an attack upon him, and he was dismissed in May, 1776. He died March 20, 1781.

TURIN or **TORINO** (anc. Augusta Taurinorum). City of Italy. It is situated at an alt. of 785 ft. on the Po, 80 m. N.W. of Genoa. It is a modern-looking, well-built city of rectangular plan with straight streets, in parts arcaded. The Piazza Castello in the N.E. is the focus of civic life; here are the Palazzo Madama, once a Roman gateway, the Porta Decumana, later a castle, and a 13th century fortress, enlarged at various dates. From the Piazza radiate important streets, the chief, the Via di Po, leading to one of the city bridges. N. of the Piazza is the Royal Palace. Near is the cathedral of S. John the Baptist (1492-98), with interesting frescoes and relics. The university was founded in 1405. Turin was the capital of the kingdom of Sardinia until 1860 and of Italy, 1861-65. Manufactures include motor cars and artificial silk. Pop. 591,316. See illus. p. 1361.

TURKEY (Meleagris gallopavo). Large bird of the pheasant family (Phasianidae). It is a native of N. America

from S. Canada to Mexico, but is now extinct in the wild state in the settled areas. On its introduction to England it was supposed to have come from the Moslem east, then loosely called Turkey. It is distinguished by its large size, heavy body, and almost bare neck and head, bluish with red warts.

Vicomte de Turenne,
French soldier
After Latouche

Ivan Turgenev,
Russian novelist

The plumage in general is coppery bronze colour marked with black. There is a broad band of white at the tip of the tail coverts and a similar band on the feathers of the tail proper. The male bears on the chest a hanging bunch of black bristles about 9 ins. long. It is omnivorous, and there are many domesticated breeds.

TURKEY. Republic of Europe and Asia, until 1921 the Ottoman Empire. In the 16th century the Turks occupied immense areas in S.E. Europe and N. Africa, but they were gradually deprived of all the latter and nearly all the former. When the Great War began they retained in Europe only about 10,000 sq. m. around and including Constantinople (Istanbul), their old capital, but in Asia they still held upwards of 600,000 sq. m., comprising Asia Minor, Armenia, Kurdistan, Mesopotamia, Syria, Palestine, and large tracts of Arabia, as well as some islands in the Mediterranean.

By the treaty of Lausanne, which in 1923 defined the European and to some extent the Asiatic frontiers of Turkey, the Turkish territories were considerably modified. A treaty of 1925 made further changes. In Asia she retains Asia Minor as far as Transcaucasia and Persia in the E., the S.E. boundaries being Syria and Iraq. Angora is the capital. The area is estimated at 294,416 sq. m. Pop. 13,648,270. In the W. the outstanding natural features are the straits which connect the Black Sea and the Aegean by the Bosphorus, the sea of Marmara and the Dardanelles. A range of hills skirts the sea of Marmara and continues into the Gallipoli peninsula. Around Istanbul the land is flat.

The soil is fertile, but agriculture is primitive. Crops include cereals, tobacco, figs, opium, olives, and cotton. Sheep, goats, and other live stock are reared. The minerals, which are little worked, include chrome ore, silver, zinc, manganese, copper, borax, coal, lignite, and arsenic. European Turkey is traversed

state of disorder, that it seemed as if it must collapse, but, chiefly through the mutual jealousies of the Powers, it survived.

In 1908 the general discontent, which resulted in the Young Turk movement, compelled Abdul Hamid II to restore the constitution and summon parliament. In the next year the Young Turks under Enver Pasha successfully revolted, and parliament voted the deposition of Abdul A. war with Italy in 1911 east Turkey Tripoli (q.v.) and Cyrenaica; the next year saw the outbreak of the Balkan Wars (q.v.), the outcome of which was that Turkey in Europe was reduced to Constantinople and other small districts.

In the Great War Turkey sided with the Central Powers, and after severe losses was granted an armistice, Oct. 30, 1918. In 1920 a government was set up at Angora, and under Mustafa Kemal Pasha (q.v.) this soon became the dominating power in the country. In Jan., 1921, the Angora government, through the

TURKISH BATH. Hot air bath. The temperature varies from 116° to 165° F., inducing copious perspiration, which clears the skin and eliminates noxious matter from the blood. The air bath is followed by soaping, washing, shampooing, massage, and cooling in rooms of suitable temperature before re-dressing. The first Turkish bath was introduced into London in 1860, by a Turk, and they are now found in all large towns. See Baths.

TURKISTAN (Pers. Turk-land). Term used at different times for an extensive region, variously defined, in Central Asia. Besides being applied to the northernmost prov. of Afghanistan, the name has been given to a former governor-generalship of Tsarist Russia and also to a part of Sinkiang, an outer territory of China. The population has always been a medley of Turanian and Iranian elements.

Turkey. Cock and hen of the North American bird now domesticated in Great Britain
Charles Reid

Turkey. Woman wearing the yashmak, now largely discarded

Turkey. Republic as determined by treaties of 1923 and 1925, by which territory lost in 1920 was regained

Grand National Assembly set up there by Kemal Pasha, declared all legislative and executive power to be vested in that body. The designation Ottoman Empire was abolished.

Kemal Pasha became president of the national assembly, and when in October, 1923, Turkey was declared a republic, president of the Turkish republic. On Mar. 3, 1924, the Grand National Assembly at Angora disestablished the Moslem religion in Turkey, abolished the Caliphate, and expelled the remaining members of the imperial family. The republic is governed by the president, with a council of ministers. Kemal Pasha was re-elected president, Nov. 1, 1927. See illus. pp. 741 and 790.

TURKEY BUZZARD (Cathartes aura). Vulture of the family of Cathartidae. It is found from Saskatchewan to Tierra del Fuego and the Falkland Isles. It is mainly black, with whitish bill and a tuft of bristles on front of the red eye. The head and upper neck are naked, the crimson skin smooth. There are two other species: *C. burrovianus*, from Mexico to Brazil; and *C. pernix*, of the Amazons.

In 1919 the Soviet government established its authority in Turkistan. In 1920 Soviet republics were set up in Khiva and Bokhara, and in 1921 the old governor-generalship was formed into an autonomous soviet republic. In 1924 it was decided to re-apportion the territories of Turkistan, Bokhara, and Khiva on a national basis, and, accordingly, in 1925 the new states of Turkmenistan, Uzbekistan, and Tajikistan, as well as various autonomous regions, were created.

Until the middle of the 19th century Turkistan was an unknown land to Europeans, save for the narrative of Marco Polo. In 1863 A. Vambéry crossed the Turcoman desert, penetrating to Khiva, Bokhara, and Samarkand. In 1868 Yarkand was reached, and in

by the Oriental Rly., which passes through Sofia, Belgrade, and other centres. In Asia the lines include the Bagdad, Anatolian and Smyrna Rlys.

The Ottoman Empire derived its name from Othman (1259-1326), who took the title of sultan in 1299. At the close of the 19th century the empire—"the sick man of Europe"—had shrunk so much, and was in such a

Turkey Buzzard, in Jamaica called John Crow, sunning itself with wings outspread
W. S. Berridge, F.Z.S.

1870 E Turkistan was mapped for the first time. Between 1890 and 1908 Sven Hedin made important additions to our knowledge of Gobi, E. Turkistan, and Tibet.

The greatest achievements of all were those of three British expeditions by Sir Aurel Stein in 1900-1, 1906-8, and 1913-16. The remains secured include pieces of stucco ornament, fresco panels, wood carvings and implements, metal objects, and woven fabrics. Paper, wood, and other materials bear inscriptions in Sanskrit, Chinese, and Tibetan, besides three vanished Indo-European dialects. See Kazak; Russia; Tajikistan; Uzbekistan.

TURKMENISTAN Republic of Soviet Central Asia. Mainly peopled by Turcomans, it is bounded N. by the autonomous Kazak republic, S. by Persia and Afghanistan, E. by Uzbekistan, and W. by the Caspian Sea. Agriculture is the chief occupation. The country is famed for its carpets. Ashgabad (Pol-taratsk) is the capital. The area is 189,603 sq. m. Pop. 1,030,549. See Turkistan.

TURKS ISLANDS. Group of islands in the British W. Indies, S.E. of the Bahamas. With the Caicos Islands they form a dependency of Jamaica. The area is about 165 sq. m. Pop. 5,612.

TURMERIC. Rhizome of *Curcuma longa*, a perennial reed-like plant of India. Turmeric, when powdered, has a bright yellow colour and a peppery taste. It is the most important constituent of curries, and is used in India and China for dyeing cotton and silk. A tincture is used for making turmeric paper, this being a test for alkalis and horic acid.

TURNBERRY CASTLE. Ruined castle in Ayrshire, Scotland. On the coast, 5 m. N. of Girvan, it was a stronghold of the earls of Carrick, one of whom was Robert the Bruce. Turnberry is now noted for its golf links.

TURNER, JOSEPH MALLOD WILLIAM (1775-1851). British painter. Son of a barber, he was born near Covent Garden, London, on April 23, 1775. In 1789 he entered the R.A. schools, being elected A.R.A. in 1799 and R.A. in 1802. In his first paintings the influence of Vandervelde, Claude, and Poussin is marked, but such pictures as *Ulysses Deriding Polyphemus*, 1829, *The Fighting Temeraire*, and *Modern Italy* 1838, showed his individual mastery of colour. In 1807 he began the *Liber Studiorum*, a collection of parts of five plates each, continued until 1819.

About 1840 came a remarkable change in his style. More and more he concentrated attention on the suggestive effects of colour, whether glowing and brilliant, as in the *Burial at Sea*, 1842, or the cold greys of *Snowstorm*, a seascape of 1842. He continued this tendency to leave behind him the form and composition of his earlier work, and some of his late painting almost seems to foreshadow certain impressionist painters. Among late work should be mentioned *Light and Colour*, 1844; *Rain, Steam, and Speed*, 1844; several Venetian pictures, 1844-45; and *Undine*, 1846. Turner died at Chelsea, Dec. 19, 1851. Most of his great works are in the Tate Gallery.

TURNHAM GREEN. Dist. of greater London. It adjoins Chiswick, W. of Hammer-smith, and has a station on the District Rly. In Nov., 1642, the royalist forces were checked here when on the way to London.

TURNIP (*Brassica campestris*) Biennial herb of the order. Cruciferae, native of Europe and N. Asia.

Turnip. Edible leaves and root-stocks of the white or garden variety
By courtesy of Sutton & Sons

A common British weed, it is erect in habit, from 1 ft. to 2 ft. high, with bristly leaves deeply cut in from the margins and yellow flowers. In the cultivated turnip the primary root and lower portion of the stem have become enlarged as a store for reserve material, and by selection and intercrossing this tendency has been increased until it has produced the juicy, white fleshed garden turnip and the larger and more solid-fleshed swede, used as a winter cattle food. As compared with the white turnip, the swede or field turnip yields a higher percentage of solids, greater nutritive value, and is less liable to disease. The yellow flesh of the root is often tunneled by the caterpillar of the turnip moth; and seedlings are ruined by the fungus *Plasmiodiophora*, which produces the malformation finger and toe. See Rape.

TURNSTONE (*Arenaria interpres*) Shore bird, belonging to the plover tribe. It is about 9 ins long, and the plumage is black and white on the head and neck, black and chestnut on the back, and white on the under parts, the breast banded with greyish black. It arrives in Great Britain about the beginning of Aug. and remains about the S. and W. coasts all through the winter, leaving in the month of May for the breeding grounds in the Arctic regions.

Turnstone, the British shore bird which breeds in the Arctic regions

TURNTABLE. Revolving platform by means of which wheeled vehicles may be turned so as to face in a different direction. Its most general application is to railway vehicles.

A locomotive turntable comprises a pair of girders carrying a railway track. The girders are suspended at their centre upon a steel cup and ball pivot resting on a pedestal in the middle of a circular pit. The girder ends are fitted with wheels which just clear a circular rail laid round the inside of the pit. An electric motor is sometimes substituted for hand power.

TURNUS. In Roman legend, king of the Rutuli, an Italian tribe, and betrothed to Lavinia, the daughter of Latinus, previous to the arrival of Aeneas. When Latinus promised his daughter to the latter, Turnus and his people took up arms, but he was killed outright in single combat with Aeneas.

TURPENTINE. Oleo-resin which exudes from various species of Coniferae and from which oil or spirit of turpentine is obtained by distillation. The term turpentine is, however, often applied to the distillate. European turpentine is obtained from *Pinus sylvestris* in Russia and Finland, from *Pinus laricio* in Austria and Corsica, and from

Pinus maritima in France. American turpentine is the product of *Pinus australis* and *Pinus taeda*. The chief use of oil of turpentine is as a solvent for making varnishes and as a diluent of paint. Canada turpentine, also known as Canada balsam (q.v.), is the produce of *Abies balsamea*.

TURPIN, RICHARD (1706-39). English highwayman. Born at Hempstead, Essex, the son of an innkeeper, he joined a gang of robbers, who, under his leadership, plundered many lonely farms. Traced, by the theft of a horse, to Whitechapel, Turpin there accidentally shot his companion, but escaped to York, where he became a horse dealer. He was hanged for horse stealing, April 7, 1739.

TURQUOISE (Fr. Turkish stone). A hydrated aluminium and copper phosphate. A precious stone, it is opaque and waxy in appearance; its colour varies from blue to green, the blue varieties being the most valuable. The finest turquoise are Persian in origin, and their importation into Europe via Turkey is commemorated in the name. Mexico also yields valuable stones. See Gem.

TURRET (Lat. *turris*, tower). Small tower, usually built for decorative purposes, on a large building.

In a battleship the turret is a circular armoured structure on the deck in which the heavy guns are mounted. By hydraulic or electrical power the turret can be moved round as required. Its under structure goes to the bottom of the ship, where are the magazines, and the gun ammunition is sent up inside the turret. See Battleship.

TURRIFF. Burgh of Aberdeenshire, Scotland. It is 11 miles from Banff, on the L.N.E.R. The trot of Turriff is the name given to a fight here, May 14, 1639, between a force of Covenanters under the Master of Forbes and a body of royalist Gordons. Pop. 2,152.

TURTLE. Name given to members of the tortoise tribe specialised for marine life. They differ from land tortoises in having the feet modified into paddles; the carapace is usually heart-shaped and somewhat flattened; and the head can be only partly retracted. In the breeding season they visit the shores to deposit their eggs in the sand. The green turtle (*Chelone mydas*) is used for turtle soup. The hawksbill turtle (*C. imbricata*) is the chief source of the best tortoiseshell. The loggerhead turtle is remarkable for the great size of the head. See Tortoise.

Turtle. Hawksbill turtle, whose carapace supplies tortoiseshell. Above, edible green species
H. S. Derridge, F.Z.S.

TURTLE DOVE (*Streptopelia turtur*). Species of small migratory pigeon which visits Great Britain in the summer. It has a reddish tinge on the head and neck, a black and white collar, rusty red wings with black spots, and a dusky tail. It is slightly under a foot in total length. It arrives in April. It lives in

J. M. W. Turner, British painter
After Charles Turner

the woods, where it usually nests in low trees and hedges, and is shy and wary. See Pigeon.

TURTON. Urb. dist. of Lancashire. With a station on the L.M.S. Rly., it is 4 m. N. of Bolton. The principal industries are cotton mills, etc. Pop. 12,157.

TUSCAN ORDER. In classic architecture, one of the orders used by the Romans. It was a modification of the Greek Doric with the mouldings bolder and fewer and the triglyph (q.v.) omitted. See Rome.

TUSCANY (Ital. Toscana). Territorial division and former grand duchy of Italy. The country is very fertile, producing wheat, maize, olives and wine. Important cities include Florence, Pisa, Lucca, Leghorn, and Siena. The area is 8,890 sq. m. Pop. 2,886,019.

Tuscany roughly corresponded to the ancient Etruria (q.v.). It was granted by Charlemagne to the Frankish Boniface, whose descendants ruled until 1114, when the last representative of the family, Matilda, bequeathed her estates to the Church. The emperor disputed the will, and the chief Tuscan cities proclaimed themselves republics. The rise of the great families was fatal to the republics of Italy; Florence became a principality under the Medici family, who in 1567 became grand dukes of Tuscany. Napoleon made Tuscany the core of the kingdom of Etruria. See Florence; Italy; Painting.

TUSCULUM. City of Latium. It lies among the Alban Hills, 15 m. S.E. of Rome. The city became a Roman ally in 497 B.C. Near the end of the Roman period Tusculum became a municipium and a favourite country residence of wealthy Roman citizens. In 1191 the ancient city was razed by the Romans. An amphitheatre, theatre, and city walls have been excavated. See Frascati.

TUSK. Name given to certain teeth of beasts, developed enormously in excess of the others in a set. These are always either incisors or canine teeth. Perhaps the most remarkable is the single tusk of the narwhal, which stands straight in front of the upper jaw to a length of ten feet. The Atlantic walrus has a pair of tusks in the upper jaw, which represent canines. In the pig tribe the lower canines of the wild boar develop into large curved tusks. The lower canines of the hippopotamus develop into enormous tusks.

TUSSAC or **TUSSOCK GRASS** (*Aira caespitosa*). Perennial grass of the order Gramineae, a native of the temperate, Arctic and mountain regions.

It has stout, smooth, leafy stems three or four feet in height, the leaves leathery. The flower cluster is plume-like, many-branched, bearing shining purplish spikelets.

TUSSAUD, MARIE (1760-1850). Swiss wax modeller. Born at Berne, daughter of Joseph Grosholtz, she was taught modelling by her uncle, J. C. Curtius, who established a wax cabinet in the Palais Royal, Paris. She married in 1794, and in 1802 transferred the waxwork museum to London, establishing it first in the Strand, then at Blackheath, and in 1833 in Baker Street, whence in 1884 it was transferred to the Marylebone Road. Madame Tussaud died in London, April 16, 1850. Burned down on March 18, 1925, Madame Tussaud's was re-opened in 1928.

Marie Tussaud, Swiss wax modeller

TUTANKHAMEN. Egyptian king of the XVIIIth dynasty. Though little is known of his life, the reign

Tutankhamen, Egyptian king; from a life-size wooden model painted and gilded.

On Nov. 5, 1922, the entrance to Tutankhamen's tomb was discovered by Howard Carter. On Feb. 16, 1923, he entered the sepulchral chamber, bringing to light an astonishing collection of art treasures, nearly

Tutankhamen. Above, diagram showing position of the king's tomb relative to that of Ramesses VI. Below, doorway leading from the ante-chamber, revealing the antechamber of the first shrine of the sepulchral chamber

It is situated on the Volga, 90 m. N.W. of Moscow. In the 13th century Tver was capital of an independent principality, annexed by Ivan the Terrible in 1582. Pop. 106,387.

TWAIN, MARK (1835-1910). Pen-name of Samuel Langhorne Clemens, American author and humorist. Born at Florida, Missouri, Nov. 30, 1835, in 1851 he became a steamboat pilot on the Mississippi, later taking his pen-name from the call of the leadman when reporting the soundings. His first story, *The Celebrated Jumping Frog of Calaveras County*, appeared in *The Californian*, 1867. His first book, *Innocents Abroad*, 1869, the result of his first visit to Europe, established his reputation as a humorist. Then came *The Adventures of Tom Sawyer*, 1876; *Life on the Mississippi*, 1883, full of vivid narrative; and *Huckleberry Finn*, 1885. Meanwhile, a second trip to Europe had produced *A Tramp Abroad*, 1880. Of his other works the most notable are *A Connecticut Yankee at the Court of King Arthur*, 1889, and *Personal Recollections of Joan of Arc*, 1896. Mark Twain died at Redding, Connecticut, April 21, 1910.

Mark Twain, American writer. H. W. Barnett

TWEED. River of Scotland and England. It rises in Peeblesshire, and flows across that county, Selkirkshire, and Roxburghshire. Beyond Kelso it forms the boundary between Berwickshire and Northumberland. Its length is 97 m. Among its tributaries are the Ettrick, Gala, Eden Water, Till, and Teviot. The Tweed is noted for its salmon and trout.

Tweed is the name of a soft, flexible twilled woollen fabric, which was first made of the famous Cheviot wool in the district along the river. Harris tweed is made in the Hebrides.

TWEED, JOHN. British sculptor. He studied under Rodin, and soon made a reputation. One of his finest pieces of work is the national memorial to Earl Kitchener in the Horse Guards Parade, London. He was also responsible for the equestrian statue of Sir G. White in Portland Place, London, the statue of Sir John Moore at Shorncliffe, and several war memorials. His busts include J. Chamberlain, Queen Victoria, and Cecil Rhodes.

TWEEDMOUTH. Seaport of Northumberland, part of Berwick-upon-Tweed. It has a little shipping; other industries are fishing and engineering. See Berwick-upon-Tweed.

TWEEDMOUTH, EDWARD MARJORIBANKS. 2ND BARON (1849-1909). British politician. Born July 5, 1849, he was the son of Dudley Coutts Marjoribanks, M.P. (1820-94), the 1st baron, whose title was conferred in 1881. He entered the House of Commons in 1880 as Liberal M.P. for Berwick, and remained there until he succeeded to the peerage in 1894. Having been chief liberal whip, he was chosen first lord of the admiralty in 1905. In that capacity, a letter he wrote to the German Emperor in March, 1908, aroused some criticism and he was transferred in 1908 to the office of lord president. Tweedmouth died Sept. 15, 1909, his son, Dudley Churchill (b. 1874), becoming the 3rd baron.

TWELFTH DAY. Day of the feast of the Epiphany, also called Old Christmas Day. The night of Jan. 6, Twelfth Night, was formerly a time of merry-making.

In the Middle Ages men representing the Three Kings or Magi used to take part in a ceremony in church on this day. Under the Stuart kings masques were performed on Twelfth Night. Shakespeare's comedy, *Twelfth Night*, or *What You Will*, was perhaps designed for Twelfth Night performances at court, 1600. See Epiphany.

all in splendid preservation. See Egypt; Tell-el-Amarna.

TUTBURY. Town of Staffordshire. It stands on the Dove, 4 m. from Burton-upon-Trent, on the L.M.S. Rly. St. Mary's church contains Norman work. The ruined castle was a prison of Mary, Queen of Scots. Pop. 2,062.

TUXFORD. Town of Nottinghamshire. It is situated 12 m. from Newark, has a station on the L.N.E. Rly., and is a market for the cattle of the dist. Pop. 1,191.

TVER. City of the Union of Socialist Soviet Republics, capital of the prov. of the same name.

TWELVE TABLES, THE. Oldest code of Roman law, according to tradition promulgated in 451 and 450 B.C. by a commission of ten Decemviri. The code, of which fragments are extant, was written in archaic Latin on copper tablets set up in the forum of Rome. It was in the main a summary recapitulation, under 12 heads, of the old criminal and civil law, but contained no constitutional enactments. The tables, which were venerated by the later Romans, are believed by some scholars to be a private compilation, perhaps of the 3rd century B.C. See Roman Law.

TWERTON-ON-AVON. Suburb of Bath, Somersetshire. It was one of the first places in England famous for its woollen and weaving industries, and is still notable for its cloth mills. Its ancient church, restored, has a Norman doorway. Fielding was living at Twerton when he wrote part of *Tom Jones*.

TWICKENHAM. Borough of Middlesex. It is 11½ m. from Waterloo on the Southern Rly, between Isleworth and Teddington. Alexander Pope (q.v.), who was buried here, is commemorated by a modern house on the site of his villa. Among other famous residents were Horace Walpole, Mrs. Fitzherbert, Lady Mary Wortley Montagu, and several members of the Orleans family. Twickenham Eyot, opposite York House, is popularly known as Eel Pie Island. The football ground of the Rugby Union, where international matches are played, is at Twickenham. Pop. 34,790.

TWILIGHT SLEEP. Name given to a method of relieving or preventing the pains of childbirth by the administration of scopolamine-morphine. It demands continuous skilled medical observation.

TWO-STEP. American dance. A modified polka, adapted to American rag-time music, it was introduced into Europe at the end of the 19th century. There are many variants, such as the Boston two-step, the Military two-step; it is also included in the Maxixe.

TWO THOUSAND GUINEAS. English horse race. It was inaugurated in 1809, and is run at Newmarket on the Wed. of the first spring meeting. It is run over the Rowley mile by three-year-old colts and fillies, and is one of the five so-called classic races. See Horse Racing.

TWYFORD. Common place name in England. One Twyford (pop. 2,214) is 3 m. S. of Winchester with a station, Shawford and Twyford, on the Southern Rly. Another (pop. 1,269) is in Berkshire, 31 m. from London. It is the junction on the G.W. Rly. for Henley. Twyford Abbey is a parish of Middlesex, on the Brent, between Alperton and Hanger Hill. It is 11½ m. from London, with a station (Twyford Abbey and Park Royal) on the Metropolitan Rly.

TYBURN. Name of a small stream now running underground from Hampstead through Regent's and Green Parks to the Thames at Westminster. It gave its name to the Middlesex galleys, which stood near the junction of the Edgware and Bayswater Roads from the 12th century until 1783, when it was transferred to Newgate.

TYLDESLEY, JOHN THOMAS (1873-1930). English cricketer. Born near Manchester, Nov. 22, 1873, he received his early training in Lancashire club cricket, and first played for Lancashire in 1895. In 1897 he made over 1,000 runs, and achieved that performance for London in successive seasons. He scored over 1,000 runs four times. His highest innings in Nov. 1904, was out against Kent at Old Trafford here when he was out against Nottinghamshire in 1904,

and 221 in 1901. In all he scored 37,803 runs in first-class matches, making 86 separate centuries. He took part in test match cricket, appearing for England in 16 games in this country, and went to Australia in 1901-02 and also two years later. His total runs in test matches was 1,452. He died suddenly in Manchester, Nov. 27, 1930. His elder brother, Ernest, was also a noted cricketer. See Cricket.

TYLDESLEY - WITH - SHAKERLEY. Urb. dist. of Lancashire. It is 5 m. S.W. of Bolton, on the L.M.S. Rly. The principal industry is the cotton trade, and there are collieries. Pop. 15,651.

TYLER, JOHN (1790-1862). American statesman. Born at Greenway, Charles City county, Virginia, March 29, 1790, he was elected vice-president of the U.S.A. in 1840. He succeeded Harrison as president in 1841. One of the leading Whigs, his veto of the tariff bill of 1842 led to the resignation of most of his cabinet and a public repudiation of him by his party. During his term Texas was annexed, and the Ashburton-Webster treaty with Great Britain concluded. He died at Richmond, Virginia, Jan. 18, 1862.

John Tyler,
American statesman

TYLER, WAT (d. 1381). English rebel. He appears to have been a tiler at Dartford, Kent, and came into notice when the poll tax of 1381 was being collected. The story goes that a tax-collector insulted his daughter and was killed by him. This brought the discontent to a head, and under Wat Tyler and Jack Straw, men from Kent and Essex marched to London. They met Richard II at Smithfield and there, June 15, 1381, Tyler was killed by the lord mayor.

TYLOR, SIR EDWARD BURNETT (1832-1917). British anthropologist. He was born at Camborwell, Oct. 2, 1832. A Mexican tour with Henry Christy, 1856, resulted in *Anahuac: or, Mexico and the Mexicans, 1861*, followed by his *Early History of Mankind, 1865*. His *Primitive Culture, 1871*, made him the leading anthropologist of the age. He became reader in anthropology at Oxford, 1884; and first professor, 1895. He was made F.R.S. in 1871, knighted in 1912, and he died at Wellington, Somerset, Jan. 2, 1917.

TYNAN, KATHARINE (b. 1861). Irish poet and novelist. She published her first book of verses, *Louise de la Vallière*, in 1885. Other volumes of verse include *Ballads and Lyrics, 1890*; *The Wind in the Trees, 1898*; *Collected Poems, 1901*; and *Flower of Youth, 1915*. In 1893 she married H. A. Hinkson (1865-1919), barrister and author. Among her many novels are *The Handsome Brandons, 1898*; *The Dear Irish Girl, 1899*; *A Midsummer Rose, 1913*; *John-a-Dreams, 1916*; *The Second Wife, 1920*; *Sally Victrix, 1921*; *Wives, 1924*; *The Infatuation of Peter, 1926*; and *A Fine Gentleman, 1929*. She published reminiscences of Irish and London literary life.

TYNDALE, WILLIAM (c. 1492-1536). English translator of the Bible. Born in Gloucestershire, he was ordained priest in 1521. Removing to London, 1523, he preached at the church of St. Dunstan's-in-the-West, and in the house of Humphrey Monmouth, a rich draper, began translating the Scriptures. Forced to leave England, he visited Luther at Wittenberg, began printing the N.T. at Cologne, 1525, and continued the work at Worms, whence several copies reached England. At the instigation of Henry VIII, Tyndale was strangled and burnt at Vil-

vorde, near Brussels, Oct. 6, 1536. There is a monument to him at Nibley, Glos. See Bible.

TYNDALL, JOHN (1820-93). British physicist. Born at Leighlin Bridge, co. Carlow, Ireland, August 2, 1820, he became an assistant in the ordnance survey of Ireland, 1839. Early showing a strong interest in mathematics and science, Tyndall went to the university of Marburg in 1848.

A lecture before the Royal Institution, 1853, on *The Influence of Material Aggregation upon the Manifestations of Force*, brought him into the front rank of physicists. In 1867 he succeeded Faraday as superintendent of the Institution. In 1866 he became scientific adviser to Trinity House, and carried out researches on sound. He retired from the Institution, 1887 and died Dec. 4, 1893.

John Tyndall,
British physicist

TYNDAREUS. In Greek mythology, king of Sparta. His wife Leda became by Zeus the mother of Castor and Pollux, and, according to some legends, of Clytemnestra and Helen.

Tyndareus was the name of a British steamer owned by the Ocean Steamship Co. While conveying a battalion of the Middlesex Regt. she struck a mine off Cape Agulhas, South Africa, Feb. 6, 1917. No lives were lost.

TYNE. River of England. The N. Tyne rises in the Cheviots and flows S.E. and S for 32 m.; the S. Tyne rises in the Pennines and flows N. and then E. for 33 m. to join the N. Tyne near Hexham, whence the united stream flows 30 m. E. to the North Sea. The lower reach, bordered by the Tyne ports, is a busy industrial region. See Newcastle-upon-Tyne.

TYNEMOUTH. County borough and seaport of Northumberland. At the mouth of the Tyne, 8½ m. from Newcastle, it has stations on the L.N.E. Rly. There are ruins of a Benedictine priory. The castle was the scene of fighting in the Civil War. The port has a considerable shipping trade. Pop. 63,770.

TYNWALD. Name for the old parliament of the Isle of Man. The Tynwald court to-day is composed of the two branches of the legislature when they meet together for executive business, which includes the control of the finances. Tynwald Hill is the hill where the laws of the island are promulgated after receiving the royal assent. In 1928 the king presented it to the island. See Keys, House of; Man, Isle of; also illus. p. 1365.

TYPE. In printing, piece of metal or wood containing a raised letter or figure, from which an impression is to be made. Type for books and newspapers is of metal, 1½ inch high, and rectangular in section, the letter on the type face being in a form reversed from that of its appearance in print. Movable type is cast in founts of varying sizes and styles, the chief of which in ordinary use are as follows, each having a distinctive name or being distinguished according to the American point system, a point being 0.0138 inch, 72 points to the inch. See Printing.

This line is set in 5 point (pearl)

This line is set in 6 point (nonpareil)

This line is set in 7 point (minion)

This line is set in 8 point (brevier)

This line is set in 9 point (bourgeois)

This line is set in 10 point (long primer)

This line is set in 11 point (small pica)

This line is set in 12 point (pica)

Types used for ordinary text are divided into Old Style and New Style Roman. with CAPITALS, SMALL CAPITALS, lower case, italic, figures, points (, ; : .), accented or other marks, signs, etc. For large poster work wooden letters are used. See Black Letter; Compositor; Linotype; Monotype.

TYPE FOUNDRY. Type is cast from type metal by means of a mould to which is fitted a copper matrix made by a stamping machine from a steel punch or die. The metal used is usually a mixture of lead and antimony, sometimes with the addition of tin, nickel, copper, or bismuth. Early printers made their own punches and cast their own type. Type founding as a distinct industry began at the close of the 16th century, but did not approach uniformity and general excellence in England until the time of Caslon in the first half of the 18th century. Type-casting machinery has been much improved, and British type foundries in particular have made remarkable progress. See Printing.

TYPEWRITER. Machine for writing in characters resembling print. The first machine to be put to practical use was invented by Charles Thurber in 1843. It was followed in 1856 by that of A. E. Bech for printing embossed letters for the blind, and, about the same time, by an invention of Sir Charles Wheatstone. Then, after several years of experiment, Charles Latham Sholes produced a machine, which was embodied in the American Remington put on the market in 1874.

1 and 29, Shift keys. 2, Shift lock. 3, Back spacer key. 4, Ribbon indicator. 5, Stencil lever. 6 and 24, Marginal stops. 7, Line space and carriage return lever. 8 and 22, Carriage release keys. 9 and 21, Thumb wheels. 10, Line space gauge. 11, Paper side guide. 12, Paper table. 13, Paper fingers. 14, Pointer. 15, Line gauge. 16, Type guide. 17, Tabulator stop scale. 18, Cylinder. 19, Feed roll release lever. 20, Paper finger release arm. 23, Ribbon spool crank. 25, Marginal stop bar. 26, Ribbon spool door knob. 28, Tabulator key. 30, Space bar.

Typewriter. Diagram showing principal parts of Remington visible machine, No. 12

By courtesy of the Remington Typewriter Co., Ltd.

tamination of the water supply is undoubtedly the commonest cause; but infection may also be conveyed by milk or food, and some outbreaks have been traced to infected shellfish.

The period of incubation ranges from 8 to 14 days or more. Early symptoms are headache, shivering attacks, diarrhoea, nose bleeding, and abdominal pain. The temperature during the first week rises steadily. Towards the end of the week there is an eruption of rose-coloured spots on the abdomen. During the second week the fever remains high and the

symptoms become aggravated. Death may occur at this stage. In the third week in a hopeful case the temperature gradually begins to decline, accompanied by a general improvement.

TYPHOON OR **TYPHOEUS** In Greek mythology, a monstrous, fire-breathing giant with 100 heads. He was the son of Gé, the Earth, and was the father of the three-headed dog Cerberus, the Chimæra, and other monsters. Having revolted against Zeus, he was slain with a thunderbolt, buried under Mt. Etna, and seems to have personified earthquakes and volcanoes.

Violent revolving cyclone experienced mainly in August, Sept., and Oct. in the Philippines and along the margins of Eastern Asia. Typhoons possess all the characteristics of European cyclones, but in an intensified form. Typhoons appear to originate over the S. China sea, the necessary conditions being calm and intense heat.

In advancing they produce enormous and, in many cases, destructive waves. See Cyclone, Tornado.

TYPHUS FEVER (Gr. typhos, smoke, stupor). Acute infectious disease, also known as hospital fever, spotted fever, gaol fever, and camp fever.

The organism responsible for the disease has not been isolated, but infection is conveyed by lice, and typhus is closely associated with filth and overcrowding.

The incubation period is about 12 days. The onset is usually abrupt, with chills or shivering fever, headache, and pains in the back and legs. The temperature rises rapidly, the tongue is white, the face flushed, and vomiting severe. An eruption appears on the skin from the third to the fifth day. In severe cases coma supervenes, the action of the heart becomes feeble, and death occurs from exhaustion. Cold sponging or cold packs are of value when the temperature is high. Mild aperients are necessary.

TÝR (Old Norse týr, god). Scandinavian name of the old Teutonic god of war, called in Anglo-Saxon Tiw, and in Old High German Ziu. His name is cognate with Lat. deus, Sanskrit devas, god, and Greek Zeus. The son of Odin, Týr was identified with the Roman Mars, whence the third day of the week. Martis dies, was called Tiwes daeg or Tuesday.

TYRANNOSAURUS OR **ALLOSAURUS**. Genus of carnivorous dinosaurs whose remains are found in the Cretaceous and Jurassic formations of North America. Specimens range in length from 30 to 40 ft., and are up to 20 ft. high. The fore limbs, relatively small, are fitted for grasping, and have five toes. The large and powerful hind limbs bore three toes with sharp claws. The skull was about 4 ft. long, and the huge jaws were furnished with sabre teeth.

TYRANT (Gr. tyrannos). In Greek history, a name applied to a despot who ruled without constitutional sanction. In the 7th and 6th centuries B.C. oligarchies of nobles, which had replaced the old kings, ruled most of the city states of the Greek world, and were overthrown by able leaders of the unprivileged classes, wealthy or poor. These leaders were often vigorous rulers, who increased the power of the state, erected splendid buildings, and encouraged literature and the arts. See Dionysius; Hiero I.

TYRCONNEL, **RICHARD TALBOT**, Earl of (1630-91). Irish soldier. The son of Sir William Talbot, an Irish politician, he left Ireland on the defeat of the royalist cause to serve the royal family. In 1660 he returned to England and was attached to James, duke of York, serving with the fleet. When James became king, Talbot was made commander-in-chief in Ireland, and was created earl of Tyrconnel. As lord deputy after 1687 he worked to secure Ireland for James. Tyrconnel died at Limerick, Aug. 12, 1691.

Earl of Tyrconnel, Irish soldier
After S. Harding

TYRE (anc. Tyros; mod. Sur, rock). City of ancient Phoenicia. The city itself was built partly on the mainland, partly on two small islands. Its greatness dates from the 10th century B.C.

In ancient times it was frequently besieged, finally coming under Roman rule. Its extensive trade and manufacture of metal and glass wares, of woven stuffs, and especially of purple dyes, made it extremely prosperous. In 638 it fell into the hands of the Arabs. It was taken by the crusaders, but in 1291 was recovered and occupied by the Mahomedans.

The modern town, about 50 m. S of Beirut, has some 5,000 inhabitants; it is the seat of a Greek archbishopric. The harbour is now choked up with sand, and trade has been diverted to Beirut. See Phoenicia.

Tyrol. Alternative name for the district better known as Tirol (q.v.).

TYRONE. County of Northern Ireland. It has an area of 1,218 sq. m. It is mainly hilly, herein being the Sperrin Mts. and other ranges, but in the east is a level tract. The rivers include the Derg, Blackwater, and Foyle. On the E. boundary is Lough Neagh. Omagh is the co. town; other places are Strabane, Dungannon, Newtown Stewart, Clogher and Dromore. Oats, potatoes, and flax are grown. The G.N. of Ireland, Rly. serves the county. Pop. 132,792. See map, p. 1366.

The Irish title of earl of Tyrone was conferred on Conn O'Neill in 1542. His grandson,

2nd Earl of Tyrone, Irish patriot

Hugh, the 2nd earl, was the leader of the Irish in their rising against Elizabeth and James I. Having been attainted in 1614, he died in Spain, July 20, 1617. In 1673 Richard Power was made earl of Tyrone, but in 1704 the title became extinct. One of his descendants

Tynwald Hill (left) and the church of S. John. See p. 1364

This machine had the type bars pivoted about a horizontal ring, the arms being connected by vertical rods to the levers leading to the keyboard. A rubber cylinder moved the paper, and the impression of the type was supplied by an inked ribbon which unwound from a spool. The pressing down and release of each key in turn moved the paper-carrying cylinder along one space by means of a spring.

The Remington machine was followed by others embodying new ideas and improvements. The keyboard has become standardised, and various standard improvements have been introduced. Further developments are specialised machines for typing into books, tabulating, adding, subtracting, etc. By means of carbon papers duplicates can simultaneously be made of the original typescript, and by the use of the stencil sheet of waxed paper a large number of impressions may be obtained by a copying machine.

TYPHOID OR **ENTERIC FEVER**. Infectious disease caused by the bacillus typhosus. Con-

married Sir Marcus Beresford, Bart., who, in 1746, was made earl of Tyrone. His son was made a peer of the U.K. in 1786, and in 1789 marquess of Waterford (q.v.).

TYRRELL GEORGE (1861-1909). British theologian. Born in Dublin, Feb. 6, 1861, he was educated at Rathmines, and in 1879 joined the Roman Catholic communion. After being admitted to the Society of Jesus and attracting notice as a fervent Thomist, he acted for a time as schoolmaster at Malta. He was ordained priest in 1891, and for two years engaged in mission work, which he left for literary work. Then began a period of controversy, aroused by a paper on hell which Tyrrell contributed to *The Weekly Register*, Dec. 16, 1899. Tyrrell left the Society of Jesus in 1906, and died at Storrington, Sussex, July 15, 1909.

George Tyrrell,
British theologian
Edward Arnold

contributed to *The Weekly Register*, Dec. 16, 1899. Tyrrell left the Society of Jesus in 1906, and died at Storrington, Sussex, July 15, 1909.

TYRRELL, WILLIAM GEORGE, 1ST BARON (b. 1866). British diplomatist. Born Aug. 17, 1866, in 1889 he entered the Foreign Office, where he remained, except for a short period in Rome, until 1928. From 1907 to 1915 he was a senior clerk and private secretary to Sir Edward Grey. He then became assistant under-secretary and was under-secretary from 1925 to 1928, when he went to Paris as ambassador. In 1929 he was made a peer as Baron Tyrrell.

TYRWHITT, SIR REGINALD YORKE (b. 1870). British sailor. Born May 10, 1870, he entered the navy in 1886. He commanded the destroyer flotillas in the battle of Heligoland, Aug. 28, 1914, led the destroyer flotillas at the battle of the Dogger Bank, Jan. 24, 1915, for his services in which he was awarded the D.S.O. and C.B., and was in command of the *Arethusa* when she was wrecked in Feb., 1916. Promoted rear-admiral, Dec., 1919, he was made a knight, 1917, a baronet, 1919, and an admiral, 1929.

Sir R. Y. Tyrwhitt,
British sailor

Tyrone. Map of the Ulster county, since 1921 under the parliament of Northern Ireland. See p. 1365

U. Twenty-first letter and fifth vowel of the English and Latin alphabets, if it be regarded as distinct from V in the latter. It has various sounds, whether used alone or in combination with other vowels. It equals a long oo in truth, short oo in bull, pull, short u in nut, iu (yu) in duke, funeral, short i in busy, business, and short e in bury. See Alphabet: Phonetics.

UAKARI. Genus Uacaria of small American monkeys, distinguished by their short tails. There are three species, whose names—the bald uakari, the red-faced uakari, and the black-headed uakari—indicate their distinctive points. The two former have brilliant scarlet faces. The third species has yellowish back and sides, reddish-brown loins, and black head and feet. The nakaris occur in companies in the tops of the trees in forests, living on fruit and flowers.

UBANGI. River of Africa. It rises as the Welle near the Sudan frontier of the Belgian Congo, and flows W as far as Fort de Possel and thence almost due S. to its junction with the river Congo. The Ubangi and its N tributary the Bomu (Abomu) form part of the boundary of the Belgian Congo.

U-BOAT. Name given to the German submarine (unterseeboot) in the Great War. These vessels had the prefix U, followed by a number, e.g. U 28, or were named U A, U B, U C, followed by a number. They numbered about 810. It is definitely established that 210 were lost in action or foundered. The largest was the U 142 type. These were 320 ft. in length, with a surface displacement of 2,160 tons. They carried a crew of 53, and their radius was 20,000 m. at 6 knots. See Submarine; Tirpitz, A. F.

UDAPUR. Native state and city of Rajputana, India. The state, also known as Mewar, lies S. of Ajmer-Merwara. The N. contains the wildest portion of the Aravalli Hills. Maize and tobacco are grown. Its area is 12,691 sq. m. Pop. 1,380,000. The city is one of the most picturesque in India. It was founded in 1568, and contains the Jagannath temple (c.1640) and a beautiful palace. Pop. 34,789. See illus. above.

UDINE. City of Italy. It is 54 m. by rly. N.E. of Venice on the Roja Canal. The

Romanesque cathedral, a fine archiepiscopal palace, the Palazzo Bartolini, with a museum of antiquities, and a large library are the chief buildings of interest. Udine figured prominently in the Great War, being until Oct., 1917, an important base of the Italian army on the Isonzo front. Pop. 67,000.

UFA. Town of Russia, capital of the Bashkir autonomous republic. It is near the

Udaipur, India. The Jagnewas palace, built on an island. See below

confluence of the Ufa and Bictlaia, 200 m. N. of Orenburg and on the Trans-Siberian Rly. Pop. 97,444. See Bashkir.

UFFIZI GALLERY. Art gallery in Florence. Designed originally by Giorgio Vasari as government offices (uffizi) for the dukes of Tuscany, it became the home of the art treasures of the Medici family. In 1860 it passed into the hands of the Italian government. Among the world-famous masterpieces in the gallery are Botticelli's *Veus Rising from the Sea* and *Adoration of the Magi*, Sodoma's *S. Sebastian*, Filippino Lippi's *Adoration of the Magi*, Michelangelo's *Holy Family*, Fra Angelico's *Coronation of the Virgin*, Sebastiano del Piombo's *Fornarina*, and Titian's *Flora*. See Vasari, G.

UGANDA. British protectorate in Central Africa. It lies between the Anglo-Egyptian Sudan and Kenya Colony, and between Abyssinia and the Belgian Congo. Of its area of 94,200 sq. m., about 15,000 sq. m. are water comprising parts of Lakes Victoria, Edward and Albert, and the whole of Lakes George, Kioga, and Salisbury. The population is something over 3,000,000.

The Uganda Rly. runs from Mombasa on the coast to ports on Lake Victoria. This and other railways, with steamers on Lakes Victoria, Kioga, and Albert, and numerous roads, afford means of communication. The British headquarters are at Entebbe, which with Jinja and Port Bell are the chief ports on Lake Victoria. Kampala is the chief native capital and commercial centre. By the Anglo-German agreement of 1890 Uganda became British.

Various parts of the country are still ruled by native kings, the chief of these being Buganda. The whole, however, is controlled by the British governor, who is assisted by an executive and a legislative council. The standard coin is the shilling, which has replaced the rupee. It is divided into 100 cents. There is a common customs tariff for Uganda, Kenya, and Tanganyika, which it is proposed to unite more closely. Uganda is a noted centre for big game hunting. Elephants, buffalo, lions, leopards, and wild pigs haunt the tall elephant grass of the savanna; hippopotamus and water fowl abound. See Africa.

UHLAN (Turk. oghlan, a youth). Word used by the Tartars for a certain type of soldier. It was adopted by the Poles for mounted men armed with the lance. Later the Prussians gave the name to regiments of cavalry, these being armed with lance and used chiefly for scouting purposes.

UHLAND, JOHANN LUDWIG (1787-1862). German poet. He was born April 26, 1787, at Tübingen, and studied law at the university

there. He published his Poems in 1815, and added many fresh pieces to the new editions which were constantly demanded. His ballad *The Luck of Edenhall* is familiar in Longfellow's translation. He was professor of literature at Tübingen, 1829-33, and in 1848 was a prominent member of the German National Assembly. Uhland died at Tübingen, Nov. 13, 1862.

UIST. Two islands, north and south, of the Outer Hebrides, in the co. of Inverness. North Uist is about 18 m. long and in average width about 6½ m. At the head of Loch Maddy, a good natural harbour, stands Lochmaddy, the principal village. Pop. 3,223.

South Uist lies 7 m. S of North Uist, Benbecula lying between the two. Its greatest length is 22 m. Pop. 4,844. Pron Wist.

UITENHAGE. Town of Cape Province, South Africa. It is 21 m. by rly N.W of Port Elizabeth, lies in the valley of the Zwartkops river, and is an important agricultural centre. On irrigated land there are fruit and flower nurseries. Pop. 8,121 (Europeans).

UITLANDER (Dutch, foreigner). Term applied in the Transvaal to white men of other than Boer nationality. On the formation of the South African Republic, the burghers refused civil rights to all aliens, though much of their revenue was obtained from the taxation of Uitlanders. The attempts of the latter to redress their grievances gave rise to the Jameson raid and culminated in the South African War (q.v.). The word is sometimes translated into English as Outlander.

UJJI. Town of Tanganyika Territory. Formerly the terminus of the great caravan route to Lake Tanganyika, the town is on the E. side of the lake, 4 m. from Kigoma. It was an important slave centre. Occupied by the Germans in 1900, it was captured by the Belgians in 1916. In 1921 it was handed over to Great Britain. Pop. 25,000.

UKRAINE. Soviet republic of S.W. Russia, and a member of the union of Soviet Republics. On disputed authority it has been asserted that a Ukraine state was established in the 9th century with a capital at Kiev. This state passed under Polish, and later Austrian and Russian suzerainty, and disappeared as a sovereign state in the 17th century.

In Nov., 1917, the Ukrainian people's republic was established as a member of the Russian federal republic; and in 1919 the Russian Ukraine joined the Austrian Ukraine (E. Galicia). In 1920 a Soviet government was set up, and by the treaty of Riga, March 19, 1921, Poland and Russia agreed to recognize the independence of the Ukraine. In 1923 it was one of the states that formed the Union of Soviet Socialist republics.

The Ukraine covers an area of 166,368 sq. m. and its pop. is about 29,000,000. Kharkov is the capital. Other places of importance include Kiev, Odessa, Dnepropetrovsk, Stalingrad, and Nikolaev. Quantities of coal and iron ore are produced and steel and iron goods are manufactured. The produce comes down the Dnieper and the Dniester for shipment from Odessa and other ports on the Black Sea.

A branch of the Russian race, numbering about 35,000,000, the Ukrainians mainly inhabit the Ukraine proper, while about 3,000,000, known as Ruthenians, Russianians, or Red Russians, live in Poland (E. Galicia), Czechoslovakia, and Rumania (Bukovina). See Russia; Ruthenes.

ULCER. Open sore other than a wound. An ulcer may be due to a simple localised infection of the skin or mucous membrane, or to constitutional disease such as syphilis or tuberculosis, or may arise in the course of malignant disease, or may be due to

sluggishness of the circulation in the veins. Chronic ulcers require local treatment, and resting the limb affected is important.

Ullswater. The southern reach of the lake from Place Fell, looking across to Glenridding Frith

ULLSWATER. Lake in Cumberland and Westmorland. It has a total length of 7½ m. and an average width of ½ m. The lake is divided into three reaches, of which the southern is set in some of the most beautiful of the Lake scenery. See Lake District.

ULLSWATER, JAMES WILLIAM LOWTHER, 1st Viscount (b. 1855) British politician. Born April 1, 1855, a grandson of the second earl of Lonsdale, he was educated at Eton and Trinity College, Cambridge. In 1883 he became M.P. for Rutland, and after a short absence was returned as a Conservative member for a Cumberland division in 1886. He was under-secretary for foreign affairs, 1891-92, and in 1895 was made chairman of committees and deputy speaker. In 1905 he succeeded W. C. Gully as Speaker, and he held the office until 1921, when he retired and was made a viscount. He presided over the parliamentary conference that drew up the scheme of electoral reform introduced in 1918.

Viscount Ullswater, British politician Russell

ULM. City of Württemberg. It stands on the Danube, 46 m. S.E. of Stuttgart, and is joined with New Ulm by bridges across the Danube, which here becomes navigable. The cathedral, founded in 1377, is famous for its size and high tower. The town hall dates from the 16th century. Brass founding, bleaching, brewing, and the manufacture of leather, hats, and tobacco are the chief industries. Ulm was a free imperial city in the 14th and 15th centuries, was annexed to Bavaria in 1803, and to Württemberg in 1819. Pop. 59,357.

Ulm, Germany. West front and tower of the Gothic cathedral

CAMPAIGN OF ULM. French success over Austria. In August, 1805, the adhesion of Francis I to the third coalition involved Napoleon in war with Austria. The Austrian forces under General Mack had taken up a position between Ulm and Memmingen. Napoleon passed his armies, aggregating 190,000 men, swiftly through Han-

over and the smaller German states, and reached the Danube in rear of Mack. Napoleon succeeded in hemming in Mack with 60,000 men at Ulm, the investment being completed on Oct. 14, and Mack was forced to capitulate three days later.

ULSTER. Most northerly of the four provs of Ireland. It consists of the cos. of Donegal, Londonderry, Antrim, Tyrone, Cavan, Fermanagh, Monaghan, Armagh, and Down. Six of the Ulster counties, all save Donegal, Cavan and Monaghan, form the district known since 1920 as Northern Ireland. The total area is 8,329 sq. m. Pop. 1,556,652.

When in 1921 two states were set up in Ireland, Ulster was divided between the two, and consequently ceased to have any but an historic interest. (See Belfast; Ireland; Northern Ireland.)

The Ulster king of arms is the registrar of the order of S. Patrick and the chief heraldic official in Ireland.

Ulster Rifles: Badge of the Regiment

ULSTER RIFLES, ROYAL. British regt. known until Jan., 1921, as the Royal Irish Rifles. Formerly the 83rd and 86th Foot, this regiment dates from 1793, and in the following year shared in the war in San Domingo. It was present at the capture of Cairo, 1801; in 1802-4 it saw service in the Maratha War in India, and in 1806 assisted at the capture of the Cape of Good Hope. In the Peninsular War the regt. served in Picton's "Fighting Division," and in the Indian Mutiny the 2nd battalion distinguished itself. In the Great War nine battalions of the regt. were in the Ulster division. The depot is at Belfast.

ULTIMATUM (Lat. ultimus, last). Final terms or conditions presented, after inconclusive negotiations, by one state to another, usually with a time limit for acceptance or rejection. An ultimatum may be given in order to put an end to delaying tactics on the part of an opponent, or may offer terms impossible of acceptance, and so lead to war.

ULTRAMARINE (Lat. ultra, beyond; mare, sea). Blue pigment originally obtained by grinding up lapis lazuli. This method made the cost excessively high, and attempts were made to manufacture it artificially. It was first so produced commercially in 1828.

ULTRAMONTANE (Lat. ultra, beyond; montanus, pertaining to mountains). In general, term applicable to things on the farther side of mts., and in practice referring to the Alps; it is thus a term relative to the geographical position of those using it. In common usage Ultramontane designates that element in the R.C. Church which lays special stress on the absolute supremacy of the pope in matters of faith and ecclesiastical discipline. In France, Germany, and Austria the Ultramontanes have played important parts in politics, for example, the German Centre Party.

ULUNDI. Village of Zululand, S. Africa. It is situated 115 m. from Durban, and was the headquarters of Cetshwayo and other Zulu kings, the word meaning the high place. Here on July 4, 1879, the Zulus were decisively defeated by a British force under Lord Chelmsford. The Zulus lost about 1,500, the British casualties being about 100.

ULVERSTON. Urban district, seaport, and market town of Lancashire. On Morecambe Bay, near the mouth of the Leven, 26 m. N.W. of Lancaster. It has a station on the L.M.S. Rly. It is the centre of a mining district, with ironworks and foundries. Market day, Thurs. Pop. 10,121.

ULVERSTONE. Town of Tasmania. It stands on the river Leven, in the midst of a fertile, arable district, 94 m. by rly. from Launceston. Pop. 2,750.

Ulysses. Latin form of the name of the Greek Odysseus (q.v.).

UMBEL. Form of inflorescence in which all the footstalks of a cluster of flowers radiate from a common point at the top of the flower stem. See Flower; Inflorescence.

UMBRA (Lat. shadow). In astronomy, word used in two senses: (1) The darkest portion of the shadow cast by the earth on the moon or the moon on the earth. It is surrounded by the penumbra. (2) The darker, but not the darkest, portion of a sunspot.

UMBRELLA (Lat. umbra, shade). Instrument carried for protection against rain or sun; when used for the latter purpose it is commonly termed a sunshade or parasol. It is made of silk, cotton, paper, etc., stretched on a steel or wooden radiating, folding frame, supported on a rod. In England Jonas Hanway (q.v.) was one of the first to make a habit of carrying one.

By the invention of the Paragon ribs, Samuel Fox improved upon the old umbrellas with wooden ribs and did much to stimulate the trade of umbrella making. In the East umbrellas were used as symbols of royalty and power from early times. In ancient Egypt and Nineveh sculptured remains show them carried in procession, and they are found pictured on Greek vases.

UMBRELLA TREE (*Magnolia umbrellata*). Small tree of the order Magnoliaceae, native of N. America. The oval-lance-shaped leaves are 1 ft. to 2 ft. long, crowded at the summit of the flowering branches in an umbrella-like circle. The flowers are slightly scented.

UMBRIA. Dept. of central Italy coterminous with the prov. of Perugia. The ancient Umbria extended more to the E., and touched the Adriatic coast. The people were akin to the Oscans and Latins. They were defeated by Rome in 308 B.C., and finally conquered at the battle of Sentinum in 295 B.C. After the Social War their history merged into that of Rome. See Rome.

UMTALI. Mining and agricultural centre of Southern Rhodesia, 171 m. by rly. from Salisbury. Here are the workshops of the Beira-Mashonaland rly. Gold, silver, lead, and copper are mined. European pop. 2,299.

UNCIAL (Lat. uncia, an inch). Ancient style of writing in capital letters. Derived from an expression of S. Jerome's, the term denotes the rounder and less regular characters resulting from the adaptation of stone-incised capitals to vellum writing. See Alphabet; Palaeography; Writing.

UNDERCLIFF. Name given to the coast of the Isle of Wight between Ventnor and St. Catherine's Point. It has a very mild climate. See Wight; Isle of.

UNDERWRITER. Originally one who insured ships and their cargoes against loss and damage, but now most underwriters undertake almost every kind of risk. The name is due to the fact that such write their names under the wording of the policy. It is also used for those who underwrite, i.e. insure, appeals to the public for capital, whether such are made by states, municipalities, or business houses. The underwriter, in return for a commission, undertakes to take up all that the public does not subscribe for. Risks of almost every other kind can be insured. The association of underwriters in London is known as Lloyd's (q.v.).

UNDSET, SIGRID (b. 1882). Norwegian novelist. Born May 20, 1882, the daughter of a professor of archaeology, she worked for a time in an office. Her early stories won popularity, but wider and European recognition came in 1912 with *Jenny* (Eng. trans. 1920). Later she wrote *Kristin Lavransdatter*, a story of Norway in the Middle Ages, and in 1928 she received a Nobel prize.

UNEMPLOYMENT. Condition of being without work. It was at first treated as a subject for charitable effort, and when it became unusually acute funds were raised by public subscriptions for the sufferers. The trade unions gave subsistence allowances to their unemployed members, but this left much unemployment untouched, while state schemes for providing employment usually failed.

In 1911 a national scheme of insurance against unemployment was introduced, while, as a subsidiary method of dealing with the problem, labour, or employment, exchanges were opened throughout the country. The insurance scheme greatly mitigated the hardships attendant on unemployment, but did little to lessen its volume, and after the Great War it attained great proportions. In Great Britain the number of unemployed on the register was hardly ever below 1,000,000, and in 1930 it rose to over 2,300,000.

UNEMPLOYMENT INSURANCE. At first this was confined to certain specified classes of workers, but in 1916 many munition workers were brought in. In 1920 there was a large extension, and the scheme now applies to all employees who receive less than £250 a year, certain classes only being exempted. The chief classes of these are agricultural labourers and domestic servants.

The contributions to this scheme are paid in the same way as contributions to the national health insurance scheme. Every week the employer must stamp a card for each employee insured. Part of the cost of this stamp falls on himself, but part he can deduct from the wages of the employee. The weekly contribution is as follows:

	Employer.	Employee.	Total.
Men (18 to 21) ..	8d.	7d.	1s. 3d.
Boys (16 to 17) ..	7d.	6d.	1s. 1d.
Women (18 to 21) ..	7d.	6d.	1s. 1d.
Girls (16 to 17) ..	6d.	5d.	11d.
Boys ..	4d.	3d.	7d.
Girls ..	3d.	3d.	6d.

Contributions cease to be payable when the employee reaches the age of 65, as he or she is then qualified for an old age pension. If, however, the employee continues to remain at work, the employer must pay his share of the joint contribution.

The benefits are at the following rates:

	s.	d.
Men (18 to 21) ..	17	0 a week
Boys (17 to 18) ..	14	0 "
Women (16 to 17) ..	9	0 "
Girls (18 to 21) ..	6	0 "
Boys (17 to 18) ..	15	0 "
Girls (16 to 17) ..	12	0 "
	7	6 "
	5	0 "

In addition there are allowances for dependants, these being 9s. for an adult and 2s. for a child. Thus an unemployed man with a wife and three dependent children will draw 32s. a week. No contributions are required during periods of unemployment.

UNGAVA. Dist. of Canada, formerly a territory of the Dominion and now part of Quebec. It is the northern part of the Labrador peninsula and its area is 351,780 sq. m. The climate is too cold for most agricultural pursuits. There are rich deposits of iron, lead, and copper, and quantities of fur-bearing animals. A good deal of the land is covered with forests. Ungava was originally part of Rupert's Land, and as such belonged to the Hudson's Bay Company. In 1869 it was purchased by the Dominion, and in 1895 the territory of Ungava was created out of it. In 1912 this was added to the province of Quebec.

Ungava Bay extends S. from Hudson Strait and receives the waters of the Leaf, Koksoak, Whale, and George rivers. It is about 175 m. wide, extends inland for about the same distance, and contains the island of Akpatok.

UNGULATA OR UNGULATES. Order of mammals which includes all the hoofed forms, as the cattle, sheep, antelopes, giraffes, deer, camels, llamas, pigs, hippopotami, rhinoceroses, horses, hyraxes, and elephants. In these the limbs have lost the power of grasping, and the feet are adapted for running only, the toes being protected by an external casing of horny substance known as a hoof. The ungulates are divided into two groups. The odd-toed ungulates include the horse, elephant, etc.; while the Artiodactyla, or even-toed ungulates, include the cattle, deer, sheep, etc. See Ruminant.

UNIAT (Russ. *uniyat*, from Lat. unus, one).

Oriental church which has been brought into communion with the Church of Rome, but retains its ancient rites, liturgies, and customs. Their clergy are allowed to be married; they communicate in both kinds, and they use leavened bread in the Eucharist. They originated in Poland in 1596, when part of the Lithuanian Church submitted to the pope, but in the 18th and 19th centuries, under Russian pressure, many of their congregations rejoined the Greek Church. This Ruthenian Church, as it is called, is still by far the largest of the Uniat Churches.

UNICORN (Lat. unum, one; cornu, horn).

Fabulous quadruped, resembling a horse, with a single long, forward slanting horn on its forehead. Ctesias mentions it as inhabiting India, but at a later date it was placed in Africa. It is probably derived mainly from the rhinoceros, perhaps also from the oryx, depicted on ancient monuments in profile, but its spirally twisted horn is the tusk of the narwhal (q.v.). The unicorn, it was believed, was fierce and swift, but could be immediately tamed by a virgin. Cups of its supposed horn, really rhinoceros horn, were thought to make poison harmless. Represented with cloven hoofs and a tufted tail, it is used as a device and supporter in heraldry. The supporters of the royal arms of Scotland are two unicorns argent, crined and gorged or.

UNIFORM. Dress of one pattern (una forma) or colour distinguishing those belonging to one service, e.g. naval, military, court, diplomatic, police, nursing, and boy scout, or one class, e.g. occupants of a convict prison. See Army; Fire Brigade; Grenadier; Police; Sergeant-at-Arms.

Umbrella or 750 B.C., from an Assyrian bas-relief. Above, Nigerian state umbrella

Umbrella Tree. Flower and cluster of leaves

UNIFORMITY. Condition of similarity or agreement. In England the Acts of Uniformity, four in number, were statutes passed to secure general uniformity in the doctrines, services, and observances of the Church of England. The first accompanied the issue of the first book of common prayer in 1549. The second accompanied the issue of the second prayer book in 1552.

The third came on the accession of Elizabeth, with the issue of the third prayer book in 1559. The fourth Act of Uniformity followed the Stuart restoration (1660), and the accompanying revision of the liturgy, in May, 1662. It ordered the use of the revised liturgy in every church and chapel, the regular ordination according to the Anglican rite of all incumbents before St. Bartholomew's Day following, and a formal declaration from all of their entire acceptance of the service book. The result was the resignation of over 1,200 incumbents. See Nonconformity: Prayer Book.

UNIGENITUS (Lat. unus, one; genitus, begotten). Name given to the papal bull issued to suppress the Jansenist heresy, 1713. After many years of controversy and attempts on the part of the Church to convert the Jansenists from their errors, Clement XI issued the bull which condemned 101 propositions of heretical doctrine taken from the works of Pasquier Quesnel. The French high ecclesiastics and universities declared against the bull and formed a new party. See Jansenism.

UNION. 1. local government, the combination of two or more contiguous parishes for poor law purposes. Unions were first formed in 1782, and later under the Act of 1834. The term is popularly applied, like "Housc," to a union workhouse. See Poor Law.

Union Day. Day on which the union of the S. African states was established, May 31, 1910. It is observed as a general holiday.

UNIONIST. Name of a political party in the United Kingdom. It was created in 1885, when, rather than accept Home Rule, a number of Liberals under Lord Hartington, afterwards Duke of Devonshire, and Joseph Chamberlain, left the party. In 1895 some Liberal Unionists entered the ministry of Lord Salisbury, and gradually the coalition of Conservatives and Liberal Unionists became known as the Unionist Party. The party organizations, however, remained distinct until 1912. In 1915 the Unionist leaders joined the coalition government, and the party supported the ministries of Asquith and Lloyd George.

In Oct., 1922, the Unionists broke up the Coalition govt., and from then until Jan., 1924, and again from Oct., 1924, to May, 1929, were in power as a separate party. The party organization is the National Unionist Association, 1, Palace Chambers, Bridge Street, Westminster, S.W.

UNION JACK. British national flag. It is composed of the banner of S. George, white with a red cross, for England; the banner of S. Andrew, blue with a white saltire or diagonal cross, for Scotland; and the banner of S. Patrick, white with a red diagonal cross, for Ireland. The first Union flag showed the blending of the banners of England and Scotland at the union in 1603, and was confirmed in 1707. This blending was done by placing the cross of S. George fimbriated argent, i.e. with a narrow border of white, over the Scottish saltire. At the union with Ireland in 1801 the banner of S. Patrick was added, this being done by placing the red saltire fimbriated as the

cross of S. George, combined with the white saltire of S. Andrew, but, not to give undue preference, the two saltires were "counter-charged" in such a way that in the first and third quarters the white saltire, and in the second and fourth the red saltire is uppermost.

The Union Jack Club is a British institution for sailors, soldiers and airmen. It is in Waterloo Road and was opened in 1907. See Flag.

UNITARIANISM. System of theology, a belief that God exists in one Person. It has no creed, and is opposed to dogma. Its modern position in Great Britain has been defined as a belief in the unity of God, in the humanity of Jesus, who is regarded as a prophet superhumanly endowed: in progressive revelation: and in the immortal hope for all mankind. While believing in the fatherhood of God and the brotherhood of man, Unitarians deny the doctrine of the Trinity; the verbal infallibility of the Bible, and eternal torment.

The first Unitarian church in London was founded by Theophilus Lindsey (1723-1808) in Essex Street, Strand, W.C., where, at Essex Hall, are the British headquarters. The British and Foreign Unitarian Association was founded in 1825; a national Unitarian conference was organized at Liverpool in 1882. There are training colleges at Manchester and Oxford. In the United Kingdom are 350 ministers and 345 places of worship.

UNITED FREE CHURCH. In Scotland a presbyterian church, now part of the Church of Scotland (q.v.). It was formed in 1900 by the union of the Free Church of Scotland and the United Presbyterian Church.

No doctrinal difference existed between the Free Church and the United Presbyterians, and their church organization had much in common, so that it had long been apparent that there was no valid reason for their separate existence. But a small section of the Free Church—commonly known as the Wee Frees—held out, and when the union of the two bodies was accomplished in 1900 they held aloof, and claimed that they were now the Free Church of Scotland, and entitled to its property (see Free Church of Scotland). In 1929 negotiations for the union of the U.F.C. with the Church of Scotland were completed.

UNITED IRISHMEN. Society of disaffected Irishmen first formed in Dublin in 1790 by Hamilton Rowan and Wolfe Tone. It was a product of the French Revolution in Ireland and there was much discontent among the Roman Catholics on account of their political disabilities, and among the peasantry generally on account of the impoverished state of agriculture. The necessity for parliamentary reforms provided common ground for a combination of Protestants and Roman Catholics in the new society—hence the name—but with the progress of the French armies a programme of Irish independence emerged.

Risings were arranged and expeditions sent from France. In Dublin the rebel leaders were taken, and the only serious fighting took place on Vinegar Hill, where the rebels were defeated by British troops on June 26, 1798.

UNITED KINGDOM. Short name for the kingdom long known as the United Kingdom of Great Britain and Ireland, and since 1923 as the United Kingdom of Great Britain and Northern Ireland. It may be said to date from 1707, when the parliaments of England and Scotland were united, but the name was not actually taken until 1800, when the parliament of Ireland was incorporated.

At this time the British sovereign was Queen Anne, but seven years later (1714) she died childless, and the arrangement made by the Act of Settlement of 1701 came into force. George I became king and the Hanoverian dynasty was on the throne. From this time is usually dated the beginning of the system of government by party, although it was some years before it was firmly established. Just before the reign began the peace of Utrecht had ended the war with France and secured colonies in America and other advantages for Britain.

The thirteen years of George I's rule were troubled by the first rising of the Jacobites in 1715 and by the South Sea Bubble, but these dangers were

overcome, and the king was able to leave a fairly contented country to his son George II. This was partly due to Sir Robert Walpole, who in 1721 had begun his long spell of office as Britain's first prime minister. His main consideration was peace, and until 1739 he kept the country from war, with consequent advantage to her finances and her trade.

Walpole left office in 1742, and for the next 40 years none of his successors enjoyed very long spells of power, Lord North perhaps being an exception. The greatest of them was William Pitt, afterwards earl of Chatham, but before he rose to high place the second rising of the Jacobites had been crushed at Culloden. In the Seven Years' War, which broke out in 1756, after a peace lasting for eight years, Pitt put new life into the naval and military operations, and by this and his policy of subsidising Frederick the Great and other allies contributed greatly to the very substantial gains, notably Canada and India, made by Britain at the peace of 1763.

By this time George III was on the throne. Young and ambitious, he was anxious to take a controlling part in the affairs of state. His first attempt, made through Lord Bute, was a failure, but he was more successful when he had Lord North for his prime minister. King and premier must bear some part of the responsibility for the policy which led to the loss of the American colonies. These revolted in 1776, and in 1783 their independence was recognized by Great Britain.

Compensation for the loss of the American colonies was found in the wealth created by the industrial revolution, which in 1783 was in full swing. In that year William Pitt became prime minister. During the early years of his long tenure of power he was able to put the national finances on a sound footing, but his schemes of reform were stopped by the outbreak of war with France in 1793.

The conduct of the French war occupied Pitt for the rest of his days, except for a short period of peace in 1802, and when he died in 1806 it was still raging. In addition he had to deal with a rebellion in Ireland in 1798, which was followed by the union of 1800. In the war against France, Great Britain was the financial mainstay of the several alliances, her fleets won some resounding victories, Trafalgar especially, and her army contributed to the final overthrow of Napoleon.

United Kingdom. Arms borne by the sovereign

Union Jack.

1. S. George, red cross on white.
2. S. Andrew, white cross on blue.
3. S. Patrick, red cross on white.
4. First Union flag.
5. Union Jack.

The new era which began after Waterloo was at first marked by a good deal of privation and consequent unrest, the result of a long and costly struggle. Gradually, however, conditions improved, but with the improvement came, more strongly than ever, the demand for political and social reforms long overdue.

George III, who died in 1820, was succeeded in turn by his sons, George IV and William IV, but neither reigned long. When, in 1837, William died without legitimate issue the crown passed to his niece Victoria, daughter of another son of George III, Edward, duke of Kent Hanover, where the law did not permit a woman to succeed, was separated from Great Britain after a union of 123 years.

The accession of Victoria was the beginning of an era of unprecedented material progress. Never before did wealth and population increase as rapidly as they did in the first 40 or 50 years of the queen's reign. Many causes contributed to this, but the most potent was the creation of new means of communication in the shape of railway engines and steamships and the use of the same power, steam, to produce goods on an enormous scale. Equally momentous were the political and social changes which made the country into a real democracy, controlling its own destinies, and the centre of the group of countries and colonies that make up the British Empire.

During the queen's early years her leading ministers were Lord Melbourne and Sir Robert Peel, leaders of the Whigs and Tories respectively. The next prominent pair were Lord Palmerston and Lord John Russell, occasionally rivals, but of the same Whig creed, who dominated the country at a time when the Tories were broken by the split over the corn laws. They were followed by Gladstone and Disraeli, and during their time the Liberals and Tories were more evenly matched than before. After the Liberal split over home rule in 1885 came a period of Conservative, or rather Unionist, dominance, and Disraeli's successor, Lord Salisbury, was prime minister when Queen Victoria died in 1901.

In domestic affairs there was a constant stream of legislation, directed in the main to improving the condition of the people, to which writers and thinkers, like Carlyle and Ruskin, paid a good deal of attention, if the employers of labour did not. The reform bills of 1867 and 1884, following the lines laid down in 1832, gave the vote practically to all male adults and more representatives to the large towns. Other reforms were economic. These began with the abolition of the corn laws, by which bread was freed from taxation. Gladstone removed the taxes from other articles in common use, and a free trade system was established.

Other outstanding political events were the disestablishment of the church in Ireland and the introduction of compulsory, and later free, education. Ireland was a constant source of anxiety, sometimes, as in the period 1880-84, very serious anxiety indeed, but Gladstone's attempt to settle the difficulty by the grant of home rule in 1885 only succeeded in splitting his party. During the last 25 years of the queen's reign much was heard of Imperialism.

This may be dated, perhaps, from 1876 when the queen was made empress of India, or 1878, when her ministers took a leading part in settling the affairs of Europe in Berlin. It was marked by a belief that the extension of Britain's authority was beneficial for all concerned. In 1890, by agreement with Germany, much of Africa was partitioned between these and other powers, and Britain's intervention in Egypt, a decade earlier, led to large tracts of the Sudan passing under her control. At the other end of the continent the war with the Boers, a legacy of misfortunes and mistakes on both sides, was still raging when Queen Victoria died in Jan., 1901.

Victoria's successor, Edward VII, only reigned for nine years, but he exercised a good deal of influence on foreign affairs, chiefly in the direction of friendship with France. In 1905 the long period of Unionist rule came to an end and a general election in 1906 put the Liberals in power. Social reforms, such as old age pensions and insurance, were introduced, and over the Budget of 1909 there broke out the oft threatened quarrel with the House of Lords. In 1910 there were two general elections, and after the second the Parliament Act, limiting the powers of the Lords, was passed. In the midst of the crisis, in May 1910, King Edward died.

With George V on the throne the Liberals made use of the Parliament Act to pass measures for home rule for Ireland and the disestablishment of the Welsh Church. The former led to serious trouble in Ulster, which was at its height when the Great War was threatened. Its outbreak on Aug. 4, 1914, composed this and other differences and the operation of the measures was postponed. The war was begun by the Liberals, but after April, 1915, was carried on by a coalition government, first under Asquith, and from Dec., 1916, under Lloyd George.

Lloyd George and the coalition remained in power until 1922, being responsible for the conduct of the peace negotiations and the granting of the parliamentary vote to women. After his fall the Unionists and the Labour party had each brief spells of office, the latter forming a government for the first time in 1924. At the end of that year a Unionist ministry took office and remained in power until 1929, when the second Labour government was formed. The cost of the war and the new social services pressed heavily on the country's resources, involving taxation on an enormous scale. The redeeming virtue was that Britain paid her way without recourse to dubious financial experiments. See England; France; Ireland; George, Lloyd; Pitt, W.; Scotland; Victoria; Walos; Walpole, R.; War, World; Waterloo. Campaign of; etc.

UNITED METHODIST CHURCH. The Religious denomination now forming one branch of the Wesleyan Methodist Church. It was constituted in 1907 as the result of the amalgamation of three Methodist churches—the Methodist New Connexion, the Bible Christian Church (q.v.) and the United Methodist Free Ch. ch.

According to recent statistics for Great Britain the United Methodist Church had 2,216 churches, with a membership of 153,757, and 713 ministers. It has 4,735 lay preachers and 242,886 Sunday scholars. See Methodism; Wesleyan Methodist Church.

UNITED PROVINCES. Province of India. It is composed of Agra and Oudh, and is bounded by Tibet and Nepal N., the Punjab and Rajputana W., Central India S., and Bihar and Orissa E. It comprises the plains of the Upper Ganges, the Jumna, and their tributaries and adjacent hill tracts N. toward the Himalayas and S. toward the scarp of the Deccan. Important cities include Benares, Lucknow, Agra, Cawnpore, and Allahabad. The area is 112,562 sq. m. Pop. about 45,500,000.

UNITED STATES OF AMERICA. Federal republic occupying the whole of the S. part of the N. American continent, excepting Mexico. It extends from the Atlantic Ocean to the Pacific, and from the Canadian frontier to Mexico and the Gulf of Mexico. Outlying territories comprise Alaska, Hawaii, Porto Rico, the Philippine Islands, Guam, and some islands in the W. Indian and Samoan archipelagoes. Washington is the capital, and New York City the chief financial and commercial centre. The area of continental U.S.A. is 3,026,789 sq. m. Pop. 120,000,000, of whom only 355,500 are Indians.

The surface is roughly made up of two great mountain ranges, the Appalachians and the Rockies, with vast plains between. E. of the Appalachians are the Atlantic coast lowlands, including Dismal Swamp and other marshland. E. of the Rocky Mts., the main watershed of the country, lie the Bad Lands, great tracts useless for agriculture, and the Prairie Belt. The Coast Range, with the parallel inland range formed by the Cascade Mts and Sierra Nevada, is separated from the W. coast by the narrow Pacific Slope, a fertile region with a genial climate. The broad zone between the Rocky Mts. and the Sierra Nevada is a high plateau, broken by depressions. It contains the Great Basin, chiefly in Utah and Nevada, a large area of internal drainage.

The Mississippi river system is the most important in the U.S.A.: many of the rivers included in it have a navigable length of hundreds of miles. Few of the rivers discharging into the Atlantic, such as the Hudson, Delaware, and Potomac, are navigable for any great distance. Among the rivers draining towards the Pacific are the Columbia, Sacramento, and Colorado. In the N.E., close to the Canadian border, are the Great Lakes (q.v.). Between Lakes Erie and Ontario are the Niagara Falls. The chief lake of the Great Basin is Great Salt Lake.

In Yellowstone Park, a national reserve in Wyoming, many animals that were in danger of becoming extinct are kept as far as possible at liberty. Here, too, are numerous geysers and hot springs, and a Grand Canyon, though in grandeur it cannot compare with the Grand Canyon of Arizona. The Yosemite Valley, in California, unites the sublime with the beautiful in its cliffs and crags and waterfalls. Broadly, the E. is the mixed farming region; the centre the wheat-growing belt; between the Mississippi and the Rockies the grass-land area, where cattle are raised in enormous numbers; the S. is a cotton growing area.

Proceeding from E. to W., and grouping the 48 states under convenient headings, we have first the New England states: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut. Next come three Atlantic states: New York, New Jersey, and Pennsylvania, all highly industrialised. The S. states are Delaware, Maryland, Virginia, W. Virginia, N. Carolina, S. Carolina, Georgia, Florida, Kentucky, Tennessee, Mississippi, Alabama, Louisiana. The middle west includes Ohio, Indiana, Illinois, Missouri, Iowa. The N. central states are Michigan, Wisconsin, Minnesota, N. Dakota, S. Dakota. Then come some which may all be considered western: Arkansas, Oklahoma, Kansas, Texas, Nebraska, Wyoming, Montana, Colorado, New Mexico, Arizona, Utah, Idaho, Nevada. Lastly come the Pacific states: Washington, Oregon, and California.

There are over 262,000 m. of railways. The country is well supplied with ports. New York has a magnificent harbour and extensive accommodation. Other important ports include Boston, New Orleans, Philadelphia, Baltimore, San Francisco, Savannah, and Galveston.

The country has a written constitution. The executive power is vested in the president, who, as well as the vice-president, is elected every four years. The president chooses the heads of the departments who comprise the cabinet. The vice-president presides over the senate, and, in the event of the president's death, fills out his term. The legislative power is vested in Congress, which consists of the Senate and the House of Representatives. The Senate consists of two members from each state chosen by popular vote for six years. The House of Representatives is elected every second year by the votes of qualified citizens, their numbers being determined by the census. In 1929 there were 435 members.

HISTORY. The first white settlers in the United States were Spaniards, who made their home in Florida. In 1607 some Englishmen settled at Jamestown, and around it the colony of Virginia grew. In 1620 others landed at Plymouth Rock, and the colony of Massachusetts took its rise. Other colonies were then founded. One group, inhabited chiefly by Puritans, was in what was called New England. In the south was another group, inhabited by men less narrow in their religious opinions, including the Roman Catholic colony of Maryland. Between these two groups were Dutch settlements and Pennsylvania, the Quaker colony founded by William Penn.

The Dutch settlements became English after a war in 1664 and the name of the chief town was changed to New York. A temporary union of the New England colonies was founded in 1643 and external danger forced other unions upon them, but they were still independent of each other when George III and his ministers decided to tax them. The Boston riots and the answering repressive measures of the British government put the match to the fire, and in 1775 war broke out.

In 1776 the colonists declared that they no longer recognized the royal authority, and in the Declaration of Independence proclaimed themselves free and independent states. In 1778 the French government openly recognized the new nation and made an alliance with it. It was not until 1782, however, that peace was made. The treaty gave independence to the 13 colonies and ceded to them the land as far as the Mississippi.

Now came the difficulty of framing a constitution, and the even greater difficulty of finding money with which to carry on the government of the new republic. Thanks largely to Alexander Hamilton, a federal form of union was adopted; the constitution then framed has remained in force ever since. In 1789 Washington took office as first president, and the new congress set to work. The first political contests occurred between the Federalists, who were for firmly exerting the authority of the central government over the states, and those who would have interpreted the constitution more liberally. The latter called themselves Democratic Republicans, and so the Democratic Party came into being.

The republic soon turned its attention to extending the area under its control. In 1803 Louisiana was purchased from France, and in 1819 Florida was bought from Spain. Between these dates the U.S.A., as a neutral, had difficulties with both Great Britain and France, who were at war, and from 1812-14, owing to this and other reasons, there was an inconclusive war with the former power. In 1846-48 there was a war with Mexico. The American troops won a series of victories, and as the result part of California, as well as New Mexico and Texas, were given up by Mexico. In 1853 further territory was acquired from Mexico, this time by purchase. In 1867 Alaska was bought from Russia.

The civil war opened in 1861 and lasted for four years. Under Lincoln the northerners, or federalists, opposed the right to secede

demanded by the southerners, and in the end their cause proved victorious. The main result of the war, however, was to end slavery, as by a proclamation issued in 1862 all slaves were emancipated. The war over, the country set itself to the work of reconstruction, and began to make enormous advances in wealth and prosperity. Its vast natural wealth was revealed, and immigrants from Europe provided the necessary labour to work it. Except for the short war with Spain, the country was at peace until it intervened in the Great War in 1917.

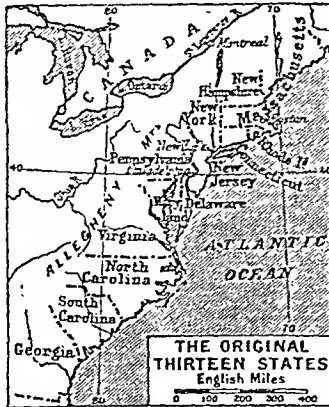

The years after the Great War proved that America was more determined than ever to keep clear of European entanglements. The country refused to join the League of Nations, although this was largely the idea of President Wilson. Conferences on disarmament were initiated by her leaders, who showed the less idealistic side of American politics in their arrangements for the payment of the large debts owing by the European allies.

UNIVERSALIST. Name given to those who believe that all men will ultimately be saved. This view was held, with some limitations, by the followers of Origen (q.v.). The first sect to make it a distinctive feature was founded in London in the 18th century.

The American Universalists were founded at Gloucester, Mass., 1779, by John Murray, and held its first convention at Boston in 1785. The sect has become subdivided at various times, notably by the secession of the Restorationists in 1840.

UNIVERSAL LANGUAGE. Means of communicating ideas to all the inhabitants of the civilized world by universally understood sounds or written signs. During the Middle Ages Latin filled this want. The chief modern attempts are Schleyer's Volapük (q.v.) and Zamenhof's Esperanto (q.v.).

UNIVERSE. All created things viewed as constituting one system or whole. The term is often particularised in such expressions as the stellar universe, the universe of man, the invisible universe, etc.

United States of America. Map of the states which declared their independence of Britain, July 4, 1776

United States of America. Map showing the boundaries of the states, with their capitals underlined, and the main rivers and railways

UNIVERSITY (Lat. universitas) Name given to a national institution for advanced teaching and study, recognized for that purpose by a charter from the state. A university is empowered to confer degrees upon its students. Entrance to the university is called matriculation. From the time of matriculation to that of taking the degree, the student is called an undergraduate, and after conferment of the degree, a graduate. Degrees are of different grades, usually bachelor, master, and doctor. They can be taken in various groups of subjects, known as faculties. In England each university has a chancellor as its ceremonial head and a vice-chancellor who is the acting head. Each Scottish one has a rector.

Of the English universities Oxford and Cambridge are the oldest and occupy in some ways a unique position. There, and also at Durham, the next oldest, founded in 1832, students are required to reside in a college, or in lodgings licensed by the authorities. At the other universities residence is not obligatory, although there are hostels for those who come from distant places.

Scotland has four universities, St. Andrews, Aberdeen, Edinburgh, and Glasgow, but no new ones. There is a university college at Dundee. Wales has one university, with colleges at Aberystwith, Cardiff, Bangor, and Swansea. In Ireland the oldest is Trinity

University College, London. Front of the college, part of London University, in Gower Street

College, Dublin, long confined to Protestants. There is also the National University of Ireland for the Irish Free State and Queen's University, Belfast, for Northern Ireland. All these universities, either severally or jointly, send members to Parliament.

The University Extension movement originated at Cambridge in 1873. By means of lectures and classes it seeks to bring university teaching within the reach of the public.

University Settlements are centres of social work in poor districts. They are usually conducted by members of the universities. The first was Toynbee Hall (q.v.).

UNIVERSITY COLLEGE. College of Oxford University. It ranks first on the official list of colleges. Its head is the master. The buildings, which front the High Street, date partly from the 17th century.

University College, London, the buildings of which are in Gower St., was opened as the university of London in 1828. In 1836 the university became a distinct institution, but a connexion was kept between the two. Its head is the provost, and it has its own staff of professors. University College, Durham, dates from 1837, and there are university colleges in Nottingham, Leicester, Southampton, and elsewhere. See Cambridge; London; Oxford.

University College Hospital is situated in Gower Street, London. It was founded in 1833, and rebuilt and enlarged, 1897-1905.

UNKNOWN WARRIOR. Name given to a man, regarded as a type, who fell in the Great War. The idea originated in Britain, and took the form of selecting from a war cemetery in France the body of a soldier, whose identity was unknown, to be buried in Westminster Abbey as a symbol of the nation's homage to

the fallen. The body was interred in the Abbey on Armistice Day, Nov. 11, 1920.

Canada, America, France, Italy, Belgium and Portugal have also interred unknown warriors.

UNLEAVENED BREAD. Flat cakes or biscuits (Heb. mazzoth), made without yeast, and eaten ritually by the Jews. According to the Mosaic law (Ex. 12), the feast of unleavened bread, during which all leaven is removed from the house, is celebrated for seven days after the Passover, at which feast also unleavened bread is eaten. In the R.C. and Monophysite Churches unleavened bread is used in the Eucharist. See Leaven; Passover.

UNST. One of the Shetland Islands, about 28 m. N. by E. of Lerwick. It lies almost N. and S., being 12 m. long and averaging 4 m. in breadth. Balta Sound and Uyea Sound furnish anchorage for vessels of medium draught. Pop. 2,100. See Shetland Isles.

UPAS TREE (*Antiaris toxicaria*). Tree of the order Urticaceae, a native of Java. When the bark of the tree is incised, a milky juice exudes that is extremely virulent and is used for poisoning arrows. Its principle is known as antiarin, and is allied to strychnia. On the basis of this single fact a mass of legend was built up, as, for example, the story that nothing could continue to live within a considerable radius—10 or 12 m.—of it so virulent and deadly was its effluvia.

Upas Tree. Leaves and fruit of the Javan tree

UPAVON. Village of Wiltshire. It stands on Salisbury Plain, near the Avon, 10 m. from Devizes. In the 20th century the central flying school for the British air forces was located here. Pop. 767.

UPHOLLAND. Urban dist. of Lancashire. It is 4 m. from Wigan, and is a centre of coal mining and quarrying. A Benedictine priory was founded here in 1318. Pop. 5,532.

UPINGTON. Town of the Cape Province, S. Africa. On the Orange river, 2,800 ft. above sea level and 258 m. by rly. from De Aar, it is the centre of an agricultural district. Upington was held by the rebels during the S. African rebellion, and later in 1914 was connected by rly. with Prieska. The line was then carried across the Orange to the German frontier at Kalkfontein to facilitate the conquest of German S.W. Africa. Pop. 2,500.

UPPINGHAM. Market town of Rutland. It is 7 m. from Oakham, on the L.M.S. Rly. There is a trade in agricultural produce. Market day, Wed. Pop. 2,453.

Uppingham

School was founded in 1584. In 1853 Edward Thring was appointed headmaster, and under him it became a great public school. It has accommodation for 500 boys. See Thring, E.

UPPSALA or **UPPSALA.** City and metropolitan see of Sweden. It is 41 m. by rly. N.N.W. of Stockholm, and is chiefly renowned for its university, founded in 1477.

Uppsala. The Gothic cathedral, dating from the 13th century. In the foreground is the municipal fish market

and munificently endowed by Gustavus Adolphus. The cathedral, dating from the 13th century, contains the burial chapel of Gustavus Vasa, who built the castle on a hill S. of the city. Pop. 30,208.

UPSET PRICE. In sales by auction, lowest price at which a vendor is willing to sell his property. It thus forms a start for any bidding. See Auctioneer.

UR. Sumerian city. Now represented by the ruins of Al Mugheir, U. stood on the Euphrates, 140 m. S.E. of Babylon. About 3100 B.C. Mes-annipadda founded the first dynasty of Ur, which lasted for five generations. Under the Sargons (see Sargon) Ur remained the centre for the worship of the moon-god Nannar. About 2450 B.C. Ur-Nammu (Ur-Engur) founded the third dynasty, and there ensued the time of Ur's greatest prosperity. The city was practically rebuilt on a magnificent scale, the Ziggurat, or staged tower, a sister structure to the Tower of Babel at Babylon, being one of the most striking ruins in Iraq. Abraham lived at Ur between 2000 and 1900 B.C., the region being mentioned in the Bible as Ur of the Chaldees (Gen. 11).

About 1900 B.C. Hammurabi of Babylon conquered Ur, but it long retained its religious importance. Subsequent kings of Babylon repaired the temples, Nebuchadnezzar being busy in the work of restoration about 600 B.C. By 300 B.C. the city was a heap of ruins. Valuable archaeological discoveries were made at Ur in 1918 and 1922 by the British Museum and the Pennsylvania University expeditions. See Assyria; Babylonia; also illus. p. 1373.

URÆMIA. Form of toxæmia, or blood poisoning, which may develop in the course of nephritis or Bright's disease. Early symptoms are foul breath, coated tongue, headache, palpitation, and sometimes cramp. Treatment consists in active purgation and promoting sweating. See Blood Poisoning.

URAL (Russian Zennoi Poias, girdle of the world). Mountain range in Russia. It extends from the Arctic Ocean to the Caspian Sea, about 1,600 m. The highest point, Teipos (Toll-pos-iz) is 5,433 ft.

The system is rather a broad, low plateau 200 m. wide in the S., with a number of ridges and dome-shaped masses.

It contains rich gold, silver, platinum, copper, iron, coal, and salt mines. The dist. is equally celebrated for precious stones, such as emerald, topaz, diamond, and jasper.

The river Ural rises in the E. slope, runs S.W. and S., and discharges into the Caspian Sea. Its length is about 1,500 m.

Ur. Headdress of a Sumerian queen, about 3000 B.C., from a stone tomb at Ur. Courtesy of Joint Expedition to Ur

URAL-ALTAIC. Term denoting a family of agglutinating languages. The simpler term Altaic is to be preferred, comprising the W. Altaic sub-families, Samoyedic and Finno-Ugric, including Hungarian; and the E. Altaic sub-families, Turkic, Mongolic, and Tungusic. In these, unlike inflexional Indo-European, the root is unchangeable, suffixes being added, the vowels of which are assimilated to the chief root-vowel by vowel harmony. See Altai Mtns.

URANIUM. Metallic element. Its chemical symbol is U, atomic weight 238.17; atomic number 92. Uranium is a hard white metal with a melting point of 1,600° C. and a sp gravity of 18.7. It was discovered by Klaproth in 1789, but not isolated until 1840. It is not found native, but occurs in pitchblende as uranous

URE. River of Yorkshire, a head-stream of the Yorkshire Ouse. It rises in the Pennines in the N. Riding and flows E. and S.E. through Wensleydale, past Askrigg, Masham, Ripon, and Boroughbridge, to join the Swale, the two streams forming the Ouse.

URFA. Town of Turkey. It is 78 m. S.W. of Diarbekir, and has trade in cotton and wheat. It occupies the site of the ancient city of Edessa (q.v.) Pop. 29,918

Ur. Aerial view of Ur and the temple Ziggurat. Above, relief of the god Imig in copper, reconstructed from fragments found at Tell el-Obeid. See p. 1372. Courtesy of the Joint Expedition to Ur

uranate, in Cornwall, Joachimsthal in Bohemia, Norway, the U.S.A., etc. The metal forms a number of compounds, including five distinct oxides. See Radio-activity: Radium.

URANUS (G. heaven). In Greek mythology, the first king of the gods. He was the son of Ge, the Earth, and by her he became the father of Oceanus, Hyperion, Themis, Cronos, and other gods and giants. These children he confined in Tartarus, and eventually they rose in revolt against him. Pron. Yoora-nus.

URANUS. Outermost planet but one of the solar system. It was discovered, March 13, 1781, by Sir William Herschel, who also detected, Jan. 11, 1787, two of the Uranian satellites, Oberon and Titania. The mean distance of the planet from the sun is 1,782,000,000 m., its period of revolution round the sun 84 years, its diameter 31,700 m. Its period of rotation on its own axis is uncertain. Two further satellites have been discovered, Ariel and Umbriel, both by Lassell in 1851. See Astronomy: Planet.

URBAN DISTRICT. In England and Ireland, a unit for local government purposes. These districts were created by an Act of 1894, populous areas which were not municipalities being made urban districts. Each has an elected council, presided over by a chairman, the election taking place every three years. They are the sanitary authorities for their districts and look after the streets, while the larger ones, those with over 20,000 inhabitants, are responsible for elementary education. See County Council

URGA. Town of Outer Mongolia. It is 170 m. S. of Kiakhia, and trades in wool, hides, furs, and horns. It is the seat of the Bogdo Khan, the chief Lama of the Mongols. Near Urga, in 1925, was discovered a Mongolian burial ground, probably of the 2nd century B.C. Pop. about 30,000.

URIAL (Ovis vignei). Species of wild sheep, found in the Punjab, Tibet, Afghanistan, and Baluchistan. It stands about 3 ft. high, and has greyish brown hair on the upper parts, with whitish under parts. The horns measure about 27 ins. along the curve. Uria are found both in the valleys and on the hills, and usually occur in flocks.

URIM AND THUMMIM. Sacred objects which the ancient Hebrews employed as oracles. They were probably two small stones, representing "yes" and "no," one of which was shaken out of some receptacle. The meaning of the words, which have been translated as Lights and Perfections, or as Light and Darkness, being uncertain.

URINE. Fluid containing waste material abstracted from the blood. Urine is secreted by the kidneys, from which it is passed through the ureters to the bladder, and thence is voided at intervals through the urethra. Normal urine is of a yellow colour, which may vary in tint to a considerable degree. The reaction of the urine in man is usually acid, but less acid in vegetarians, and alkaline

Urial. Big-horned, wild sheep of central Asia

in herbivorous animals. An increase in the amount of urine passed occurs in diabetes, certain forms of nephritis, or Bright's disease, and occasionally in hysterical attacks.

URMIA, URMIEH, or URMIEH. Town of Persia. It is 12 m. W. of the lake of the same name, and has a local trade and exports raisins. During the Great War the surrounding region was the scene of much fighting between the Turks and the Russians. Pop. 20,000.

The lake lies at an alt. of 4,000 ft., has no outlet, and is very shallow. Owing to its saltiness, fish cannot live in it. Its area is 1,795 sq. m.

URMSTON. Urban dist. of Lancashire. It stands on the Mersey, 5 m. from Manchester, of which it is practically an industrial suburb, on the Cheshire Lines Rly. Pop. 8,600.

URN (Lat. urna). Vase of clay, glass, stone, or metal, especially one with an egg-shaped body on a pedestalled base. In ancient Rome they were used for drawing lots, storing water, or depositing before tombs. Ruder sepulchral wares were placed in neolithic, bronze-age, and late-Celtic graves in Britain and elsewhere. See Canopus.

Urn burial is the name given to the interment of human remains in a jar-shaped receptacle, usually of clay.

UROCHORDA or UROCHORDATA. Class of lowly vertebrate marine animals comprising the ascidians or sea squirts. Sometimes termed the Tunicata or Tunicates, many of them assume the form of a tubular bag of leathery tissue attached by the base to a rock, etc. In the larval stage the animal is a free swimming tadpole-like organism with a well-developed notochord and a central nerve tube ending in an expansion which is the forerunner of the brain in higher vertebrates. These features disappear when the animal becomes adult. See Ascidian; Animal

URQUHART or URCHARD, SIR THOMAS (c. 1611-c. 1660). Scottish author and translator. Eldest son of Thomas Urquhart of Cromarty, he was educated at King's College, Aberdeen. As an opponent of the Covenant, he took part in the abortive movement in the north in 1639, and then took refuge at the English court, where he was knighted in 1641. In 1649 he joined the Royalists, and was taken prisoner, but was released in 1652. Urquhart's reputation rests on his fine translation of Rabelais. Little is known of his later years.

Urn-depicted in bas-relief on a Greek stela of the 5th century B.C.

Sir Thomas Urquhart, Scottish author

URSA MAJOR or THE GREAT BEAR. One of the northern constellations. It is also known as the Plough or Charles's Wain, and is a familiar constellation in the N. sky. It consists of seven bright stars denoted by the first seven letters of the Greek alphabet and a number of fainter stars. α and β Ursae Majoris are called the pointers from the fact that the line joining them points approximately to the pole star.

Ursa Minor, or the Lesser Bear, is a constellation between Ursa Major and the north pole.

URSULA. Virgin martyr, the patron saint of maidens. She is said to have been the daughter of a Cornish prince in the 5th century, and to have fled to Gaul to escape the Saxon invaders of Britain. After a visit to Rome she is reported to have been slain with many others by the Huns about 453, and to have been buried at Cologne. She is commemorated with her fellow virgin martyrs on Oct. 21.

Ursulines. Habit of the Order

URSULINES. R.C. religious order for women. It was founded at Brescia in N. Italy in 1537 by S. Angela di Merici (1470-1540). The original institution was an association of young ladies, living at home, who should devote their spare time to works of piety. In 1544 the association was changed to a religious congregation by Pope Paul III, and it was made an enclosed religious order under the rule of S. Augustine by Gregory XIII in 1572. The Order is famed for its schools.

The Company of S. Ursula was founded at Dôle in 1606. It has many houses on the Continent and a convent at Oxford.

URUGUAY. River of S. America. With the Paraná it forms the Plate river. (See La Plata.) It rises in S. Brazil and flows W.N.W. as the Pelotas. Most of its course of 1,000 m. is over the plateau. For the lowest 100 m. it is a broad stream, 6 to 9 m. across. Sea-going vessels reach Paysandú, 150 m. upstream, smaller vessels are stopped by rapids at Salto, 50 m. farther: above the rapids barges traverse the next 300 m. The chief affluent is the Rio Negro. For the lowest 400 m. it separates Uruguay from Argentina. See Argentina, map p. 121.

URUGUAY. S. American republic. It is wholly within the S. temperate zone, on the Atlantic coast, S. of Brazil, separated from Argentina by the Uruguay on the W. and by the estuary of the Plata on the S.W. The old name of the country, still in local use, is La Banda Oriental. Important towns are Montevideo, the capital; Paysandú, Salto, and Mercedes. The area is 72,153 sq. m. Pop. 1,808,286.

The country is an extension of the treeless grassy plain of the Argentine Pampa, though the Uruguayan open country is less flat and uniform. Six considerable rivers flow into the River Plate system, and three others into the Lago Merim. The Rio Negro divides the republic into two unequal parts. Important among the products and exports are meat, wool, and hides, and there are large establishments for making meat extracts and freezing meat. Gold, silver, copper, lead, manganese, and lignite occur. There are over 1,700 m. of rlys.

Formerly part of the Spanish viceroyalty of Rio de la Plata, and later a prov. of Brazil, Uruguay declared its independence in 1825. During the Great War Uruguay broke off diplomatic relations with Germany and gave the Allies large credits for the purchase of the Uruguayan harvests. A new constitution was adopted in 1919. See Argentina, map p. 121; Rosas, J. M.; South America.

Urundi. Dist. of the Belgian Congo, formerly in German East Africa. See Ruanda.

USEDOM. Prussian island in the Baltic Sea. With the island of Wollin it forms the N. side of the Stettiner Haff. It has an area of 158 sq. m. The people engage in cattle

rearing, farming, and fishing. There are sea-bathing resorts along the coast. Swinemünde and Usedom are the chief towns.

USHANT. English name for the island of Ouessant, France. The westernmost of the islands of Brittany, it lies 26 m. W. by N. of Brest. Of granite formation, baro and treeless, it covers about 20 sq. m. On July 27, 1778, an indecisive naval engagement took place off Ushant between the English fleet, under Keppel (q.v.), and a French fleet, under d'Orvilliers. On June 1, 1794, Lord Howe defeated the French off Ushant. Pop. 3,000. Pron. ush-ant.

USHAW. Village of Durham. It is 4 m. from Durham. Here is the Roman Catholic College, founded in 1808, the successor of the one at Donai, closed in 1794.

USK. River of S. Wales and Monmouthshire. An affluent of the Severn, it rises on the border of Carmarthenshire and Brecknockshire, cuts between the Brecknock Beacons and the Black Mts., continues S.E., and reaches the lowlands at Abergavenny, whence it flows S. to the Bristol Channel.

USK. Urban dist. and market town of Monmouthshire. It stands on the river Usk, 11 m. from Monmouth. There are ruins of a 13th century castle, and the chief building is S. Mary's church. In 1928 a new bridge across the Usk was opened. Market day, Mon. (alternate). Pop. 1,496.

ÜSKÜB or **SKOPJAE.** Town of Yugoslavia. It is 130 m. N.W. of Salonica, with which it has rly. connexion. Leather and dyes are made, and there is trade in tobacco, grain, agricultural products, fruit, and opium. Near are chrome mines. Üsküb was taken from the Serbians by the Turks in the Balkan War in 1912, and by the Bulgarian army during the Great War in 1915. Pop. 72,000.

USSHER or **USHER, JAMES** (1581-1656). Irish prelate. Born in Dublin, Jan. 4, 1581. He was educated at Trinity College there, and was ordained in 1601. He became chancellor of S. Patrick's Cathedral, Dublin, in 1603, regius professor of divinity at Trinity College in 1607, was consecrated bishop of Meath in 1621, and was translated to Armagh four years later. During his closing years he was preacher at Lincoln's Inn, London, and he died at Reigate, March 21, 1656. Ussher calculated the chronology found in old editions of the Bible and wrote several books.

James Ussher, Irish prelate

USURY (ultimately from Lat. *uti*, to use). Originally, any interest payable for the loan, i.e. use, of money. The taking of usury or interest from the Hebrews was expressly forbidden by the Mosaic Law, and the practice was regarded by the Christian Church as a form of robbery down to the 16th century. In England, from the reign of Henry VIII onwards many statutes were passed regulating the rates of interest. All these were repealed in 1854. See Moneylender; Pawnbroker.

USWORTH. Colliery district of Durham. It is 5 m. from Gateshead and consists of Great and Little Usworth. It is served by the L.N.E. Rly. Pop. 8,114.

UTAH. State of the U.S.A. In the Rocky Mts. area, it covers 84,990 sq. m. The Wasatch Mts. traverse the central part of the state from N. to S. To the E. are the Uintah Mts., and farther S. broken groups occur, while the area W. of the Wasatch Mts. forms part of the Great Basin and has a consistent elevation of about 5,000 ft. The Colorado, with its tributaries, drains the E.; the rivers of the W

discharge into the Great Salt, Utah, and other lakes. The chief crops are wheat, oats, and potatoes. Stock raising is important. The mines yield gold, silver, copper, lead, and coal. Utah university provides higher instruction. The rlys. have a total length of over 2,500 m. Salt Lake City is the capital. Mormons settled in the state in 1847, and form over 75 per cent. of the church membership of the state. Pop. 531,000. See Mormons.

UTERUS or **WOMB.** Organ in which the foetus or immature offspring develops and is nourished before birth. The uterus in the human species is a pear-shaped body about 3 ins. long, situated in the pelvis. During pregnancy the uterus expands very largely, contracting again after delivery.

The commonest tumour is known as a fibroid. This is non-malignant, and is usually curable by an operation. Cancer of the uterus is much more frequent in women who have had children. The first symptom is generally haemorrhage from the vagina, having no relation to the menstrual periods. If the disease is diagnosed early there is very good prospect of complete removal of the growth by operation.

UTICA. Ancient city of N. Africa. Founded by the Phoenicians, it was the greatest city of ancient Africa after Carthage, and was situated 20 m. N.W. of that city. It was generally the ally of Carthage, but in the Third Punic War sided with the Romans, and on the fall of Carthage was granted the greater part of that territory. Its remains include the amphitheatre, an aqueduct, and ruins of the harbour.

UTICA. City of New York, U.S.A. It stands on the Mohawk river, 94 m. W.N.W. of Albany, and is served by the New York Central and other rlys. and by the State Barge Canal. It is noted for the number of its charitable institutions. Its manufactures include hosiery and knitted goods. Pop. 101,604.

UTILITARIANISM (Lat. *utilis*, useful). System of ethics which sets up as the rule of conduct the best interests either of the individual or of the community. It began in the more selfish form, in the hedonist schools of the Cyrenaics and Epicureans.

A scientific system was first formulated by Jeremy Bentham, whose objective was the greatest happiness of the greatest number. His theories took no account of the quality of pleasure, a defect remedied by John Stuart Mill, who introduced the view that certain pleasures possessed an intrinsic value which rendered them superior to others. Herbert Spencer introduced a further modification in the form of evolutionary influences.

UTOPIA (Gr. *ou topos*, nowhere). Romance written by Sir Thomas More. It describes an imaginary island commonwealth where community of goods is the rule. It was written in Latin and first published in 1516, and gave rise to the epithet Utopian for any desirable but impracticable reform.

UTRAQUIST. Name applied to those followers of John Hus (q.v.) who demanded the reception of communion in both kinds (Lat. *sub utraque specie*). The Utraquists are also known as the Calixtines.

UTRECHT.

City of the Netherlands. It is on the Kromme Rhyn (Crooked Rhine), 21½ m. by rly. N.E. of Rotterdam. It is an important railway junction and has many manufacturing industries.

Utrecht. 14th cent. tower separated from the rest of the cathedral

The canals known as the Oude Graecht and the Nieuwe Graecht run through the centre of the town, the main part of which is surrounded by the Buiten Graecht. These, with their bridges and old houses, are a picturesque feature. The Gothic cathedral of S. Martin has a tower (338 ft.) with a carillon of 42 bells. Close by is the main building of the university, which has a fine library and geological and zoological museums. Pop. 151,600.

A small town in Natal, 28 m from Newcastle, is called Utrecht. It is a coal mining centre and is on a branch railway.

TREATY OF UTRECHT. This was signed in 1713 and put an end to the War of the Spanish Succession (q.v.). France gave up to Great Britain Nova Scotia, the Hudson Bay district and St. Kitts. Spain gave up Gibraltar and Minorca. Spain and her colonies in America were given to Philip V, a grandson of Louis XIV, while the Spanish possessions in Italy and the Netherlands went to his rival, Charles of Austria, as did Naples, Milan, and Sardinia.

UTTOXETER. Urban dist. and market town of Staffordshire. It is 15 m. from Stafford, near the river Dove, and is served by the L.M.S. and L.N.E. Rlys. The chief building is S. Mary's church, modern save for the tower. The place has associations with Johnson. Uttoxeter had fairs, and its markets were important until about 1800. Market day, Wed. Pop. 5,361.

UXBRIDGE. Urban dist. of Middlesex. It is about 16 m. W. of London on the G.W. and Met. Rlys., and has tramway connexion with Shepherd's Bush. The Grand Union Canal runs here between two branches of the Colne. The 15th century church of S. Margaret was restored by Sir G. Scott in 1872. Other buildings include the market house, town hall, corn exchange, and assembly rooms. At the Crown, or Old Treaty House, in 1645, the abortive conference between 16 commissioners of Charles I and representatives of the Parliament took place. Pop. 12,919.

UXMAL. Ruined city of Mexico, in the N.W. of Yucatan. Situated 37 m. S. by W. of Mérida, it has many magnificent ruins, including one called the governor's palace, containing fine sculptures. See Maya.

UZBEGISTAN. Soviet republic of Central Asia. It was founded in 1924, and in 1925 joined the union of socialist soviet republics. It covers 131,400 sq. m. and has a pop. of 5,270,000. Samarkand is the capital. Other places of importance are Bokhara, Khiva, Kokand, and Tashkent. The name comes from the Uzbeks or Uzhegs, a people of Turkic stock.

UZZIAH OR **AZAR'AH.** King of Judah. Son of Amaziah (q.v.), whom he succeeded at the age of 16 years, he is said to have reigned 52 years. Uzziah restored the town of Elath, and when he became a leper his son Jotham acted as his representative (2 Kings 14 and 15; 2 Chron. 26).

V. Twenty-second letter of the English and Latin alphabets, if it be regarded as distinct from U in the latter. It is a soft labial or lip-sound, corresponding to the hard F. In form it is a variant of U. In the Latin alphabet it fulfilled the double function of vowel and consonant in early times, but in a later age u became exclusively used as a vowel. Its sound is invariable, as in vat, love. See Alphabet: Phonetics.

VAAL, KAI GARIEP, OR **YELLOW RIVER.** River of S. Africa. It rises in the Drakensberg Mts. in the S.E. Transvaal and flows some 500 m. W. to the Orange river, of which it is the chief tributary. It forms the boundary between the Orange Free State and Transvaal.

VACCINATION (Lat. vacca, cow). Term popularly applied to protective inoculation against small pox. The human system having

once survived an attack of small pox, contains for some years an excess of protective substances rendering it immune from further attacks.

In 1721 Lady Mary Montagu introduced from Turkey the practice of inoculating into healthy individuals lymph from the rash in mild cases of actual small pox. In 1796 the modern vaccination was discovered. It was, before that time, well known among farmers and dairymen in the west of England that, through a scratch on the hand, cow pox was contracted while milking an infected animal. They found also that the eruption produced upon the hands and arms protected the milkers afterwards against small pox.

Suction opening.
Vacuum Cleaner. Phantom view of electric cleaner showing suction fan, agitator or beater, and brush
Courtesy of Hoover, Ltd.

Edward Jenner, having learned this fact, deliberately inoculated a boy with lymph from a case of cow pox and found, six weeks later, when he tried to inoculate him with virulent small pox, that the disease would not develop. This new vaccination became rapidly and widely popular. As a result, not only was the incidence of small pox remarkably reduced, but its severity also.

LEGISLATION. The first English legislation dates from the Vaccination Act of 1840, which prohibited variolation and recommended vaccination. A law of 1853 ordered that every child should be inoculated before reaching the age of three months. Acts of 1867 and 1887 amended and superseded these, and the age limit was raised to six months.

This legislation gave birth to the anti-vaccination movement, which, after 1867, especially in the Midlands, attained large proportions, many parents being prosecuted for failing to comply. In 1898 an Act relieved parents who declared they had a conscientious objection to vaccination from the necessity of having their children vaccinated. The relief was extended by an Act of 1907, but neither of these applies to Scotland or Northern Ireland. In the United Kingdom the National Anti-Vaccination League exists to promote the movement against vaccination. Its offices are at 25, Denison House, Vauxhall Bridge Road, London, S.W.

VACCINE. Emulsion of dead bacilli intended to be injected into the system for the treatment or prevention of disease. This method of treatment has now been applied to many infectious diseases, often with highly satisfactory results, one of the most striking instances being the immunity against typhoid acquired by this method. See Bacillus; Inoculation; Vaccination.

VACHELL, HORACE ANNESLEY (b. 1861). British novelist and dramatist. Born Oct. 30, 1861, he became an officer in the Rifle Brigade, but later took to literature. His novels include *The Shadowy Third*, 1902; *Brothers*, 1904; *The Hill*, 1905; *The Waters of Jordan*, 1908; *Quinney's*, 1914; *The Fourth Dimension*, 1920; *Quinney's Adventures*, 1924; *A Woman in Exile*, 1926; *Miss Torrobin's Experiment*, 1927; and *The Enchanted Garden*, 1929. A dramatised version of Quinney's was presented in 1915, and he has written a number of other plays, including *Plus Fours*.

VACUUM (Lat. empty). Strictly, a contained space that has been completely emptied of ponderable matter. It is not possible completely to empty such a space, and the term is applied in practice to the more or less exhausted state produced by the air pump. The piston air pump can only go on working while the air remaining in the vessel that is being exhausted has enough elasticity to lift the valves of the pump. Consequently the vacuum thus produced must always be incomplete. Mercurial air pumps, used in exhausting the bulbs of filament lamps, etc., can be made to produce a much more nearly perfect vacuum. Still higher degrees of exhaustion have been produced by the use of the molecular pump, in which a stream of mercury vapour carries away the particles of air or other gas.

The measurement of a vacuum is made by observation of the character of the electric discharge in it, or by the McLeod gauge. The latter measures the pressure of the vacuum by allowing mercury to enter. An electric discharge is ribbon-like at first, followed by a luminous glow, and a fluorescent appearance of the glass container, as the exhaustion becomes more complete. In a more perfect vacuum no discharge takes place.

VACUUM CLEANER. Mechanical device for the removal of dust and dirt from floors, walls, furniture, etc., by air suction. The three essentials of a vacuum cleaner are the apparatus for producing the vacuum, i.e. some form of air pump (usually worked by an electric motor), the separator, where the dust and dirt are retained from the sucked air; and the nozzle, which passes over the surface.

VACUUM FLASK. Glass vessel having a storage chamber or receptacle surrounded by a vacuum space. It is used for containing liquids for more or less lengthy periods without heat or cold being transmitted to them from their surroundings, or heat being dissipated by conduction and radiation.

VACUUM TUBE. Glass tube made in various shapes, and filled with air or gases at pressures below that of the atmosphere. Wires fused through the ends project into the interior. If these wires be connected with the terminals of an induction coil, and charges of high-tension electricity be passed through the tube, the interior becomes luminous. The character and colour of the glow vary with the nature of the contents, the degree of rarefaction, and the shape and composition of the tube. Sir William Crookes, using very high vacua, discovered that rays from the cathode terminal of a tube, though invisible themselves, rendered the walls of the tube phosphorescent. Lenard subsequently proved that the rays could affect objects outside the tube. Röntgen in 1895 announced the discovery of cathode rays different from those observed by Crookes, as they could not be deflected by a magnet or prism. These are called X-rays (q.v.).

VAIR. In heraldry, fur, represented by small cup-like white and blue shields. These are placed in rows, the bases of the white resting on the bases of the blue. In a variant, known as counter-vair, the bases of one tincture are placed base to base. See Heraldry.

VALDES LEAL, JUAN DE (1630-91). Spanish painter. Born at Seville or Córdoba, in 1638 he went to Seville, and in 1663 became president of the new academy founded by Murillo. Valdes practised sculpture, engraving, and architecture with indifferent success. In the museum at Seville is a series of scenes by him from the Life of S. Ignatius. He died at Seville, Oct. 14, 1691.

Vacuum Tube. Typical Crookes electric tube

Valencia. Left, archiepiscopal palace, containing a famous library. Right, Cathedral of Our Lady

VALENCIA. City and seaport of Spain. It is 2½ m. from the mouth of the Guadalaviar, 185 m. E.S.E. of Madrid. Its outpost, El Grao, at the mouth of the river, is one of the best harbours of the east coast of Spain.

The cathedral of Our Lady, with a fine octagonal tower, El Miguelete, was commenced in 1262 on the site of a Roman temple. The churches of San Andrés and Corpus Christi are adorned with fine frescoes and paintings. The provincial museum of paintings occupies the former Convento del Carmen. The silk exchange, erected on the site of the Moorish Alcázar, is a glorious Gothic edifice. The Aduana, once a custom house, is now a tobacco factory. The bull ring is reputed the finest in Spain. There are several magnificent squares. The walls have been replaced by boulevards, but the watch towers are specimens of medieval fortifications. The university was founded in 1411. According to tradition the first printing press in Spain was established in Valencia in 1474. Pop. 269,700.

Valencia was at one time the capital of a small Moorish kingdom. This came into existence about 1020, and lasted until 1238, when it was conquered by the king of Aragon. Later it was incorporated with Castile.

VALENCIENNES. Town of France. It lies on the Scheldo, here joined by the Rhônelle, 20 m. by rly. E. of Douai, and is a rly. junction. The hôtel de ville has a fine façade, rebuilt 1867-68. The chief churches are Notre Dame de S. Cordon, 1850-64, and S. Géry, with modern restorations and tower. The 16th century Jesuit college is now a lycée. The museum has a collection of Flemish paintings and tapestries. Occupied by the Germans during the Great War, the town was retaken by Canadian troops, Nov. 4, 1918. Pop. 34,425.

The town gives its name to a variety of pillow lace. Originally made by hand at Valenciennes, it is now largely manufactured by machines in Nottingham.

VALENCY. Maximum combining power of a chemical element. The valency is expressed in relation to the number of hydrogen atoms with which one atom of another element can combine. For example, chlorine, bromine, and iodine combine with one and can replace one atom of hydrogen, these elements being called univalent or monads. When an element such as oxygen combines with two atoms of hydrogen it is termed bivalent or dyad, when with three atoms (e.g. nitrogen), trivalent or triad, and with four (e.g. carbon), quadrivalent or tetrad.

Other elements show higher valencies, the terms used being quinquivalent or pentad, sexivalent or hexad, septivalent or heptad, and octavalent or octad. Where an element such as argon does not combine with another element it is said to be non-valent.

VALENS, FLAVIUS (c. 328-378). Roman emperor of the East, 364-378. He was the younger brother of Valentinian I, who assigned to Valens the government of the

Eastern provinces. His reign was marked by fighting with the Persians and with the Goths. Valens let the Goths settle in Thrace, but at Adrianople, Aug. 9, 378, the Roman arms were completely defeated, and Valens disappeared. During his reign the Arian controversy raged fiercely. The emperor supported the Arians and persecuted orthodox Christians.

VALENTIA. Island of eo. Kerry, Irish Free State. Lying 3 m. S.W. of Cahirciveen, it is 7 m. in length and 3½ m. in breadth, more than half being uncultivated. It is separated from the mainland by Valentia Harbour, which is landlocked. Valentia is a terminus of the Anglo-American Telegraph Co.'s cable service. Pop. 1,600.

The Irish title of Viscount Valentia has been borne by the family of Annesley since 1621. Arthur, the 11th viscount (1843-1927), was a Unionist M.P., 1895-1917, and controller of the royal household, 1898-1905. In 1917 he was made a peer of the U.K. as Baron Annesley. His seat is Blethington Park, Oxford.

VALENTINE (Lat. Valentinus). Name of several saints. Two of the name, a priest and a bishop, are said to have been martyred near Rome on the same day, Feb. 14, about 270. The practice of sending love tokens on their festival, Feb. 14, seems to have been a survival of the Roman custom of boys drawing the names of girls by lot in honour of Juno Februalis at the Lupercalia about the same date. See St. Valentine's Day.

Valenciennes, France. The modern façade of the 17th century Hôtel de Ville in the Grand Place

VALENTINIAN Name of three Roman emperors. Valentinian I (321-375) was born at Pannonia, and rose to high rank in the Roman army. On his election by the troops as emperor he associated his brother Valens with himself in the government. The rebellion of Procopius was crushed in 366. Fighting against the Alamanni on the Rhine frontier kept Valentinian in Gaul for a great part of his reign. A ruler of considerable ability, he endeavoured to alleviate the condition of his subjects. He died Nov. 17, 375.

Valentinian II became joint emperor in 383, when only a child. His uneventful reign ended with his murder in 392. Valentinian III succeeded Honorius in 425. He reigned until he was killed in 455.

VALERIAN (Valeriana officinalis). Perennial herb of the order Valerianaceae, a native of Europe and Asia. The leaves are deeply cut into two rows of lance-shaped segments. The stem, from three to five feet in height, terminates in many clusters of small, pale pink, funnel-shaped flowers. The root-stock is used in medicine as an antispasmodic. In drying it develops a fetid odour, attractive alike to cats and rats.

Spur valerian, or red valerian (*Kentranthus ruber*) is a herb of the same order, native of Europe, W. Asia, and N. Africa. The lower part of the stem is woody, and from it erect, round, hollow branches are produced, with opposite lance-shaped, thick grey-green, undivided leaves.

VALERIAN (c. 190-266). Roman emperor. His full name was Publius Licinius Valerianus. A senator, and censor in 251, he was sent by the emperor Gallus against the upstart emperor Aemilianus on the Danube. But both Gallus and Aemilianus were murdered, and Valerian, who had been proclaimed emperor in Rhætia, was acknowledged by the senate. A good soldier and administrator, he deputed his son Gallienus to rule the west, and, after defeating the Goths, 257, he recovered Antioch from the invading Persians and pursued their king, Shapur I, to the Euphrates, but was captured near Edessa, 260, and spent the rest of his life in captivity.

VALERIUS FLACCUUS, GAIUS. Roman poet. Little is known of him, except that he was one of the 15 officials to whom the keeping of the Sibylline books was entrusted, and that he died young, about A.D. 90. He was the author of the *Argonautica*, an account of the voyage of the Argonauts (q.v.), in eight books, dedicated to the emperor Vespasian.

VALETTE, JEAN, PARISOT DE LA (1498-1568). Grand master of the knights of S. John of Jerusalem. A native of Toulouse, he entered the order as a young man, becoming grand master in 1557. His naval operations against the Turks led to their investment of Malta with a fleet of 150 vessels. De la Valette, with a force of 9,000 men, kept them at bay for five months, and when they withdrew their losses were over 20,000 men. He died Aug. 15, 1568. The name is sometimes spelled Vallette, and Valletta is named after him. See Valletta.

VALHALLA (Old Norse valhöll, hall of the slain). Odin's Hall in Asgard on the top of Bifröst. It was thatched with shields, hung with mailcoats, and lit with swords, and had 540 doors through each of which eight hundred champions marched to the last fight. In Valhalla Odin received dead warriors, who there refought their battles by day and feasted by night. See Odin.

Valhalla is the alternative name for the German hall of worthies near Ratisbon; it is also spelt Walhalla (q.v.).

VALKYRIE (Old Norse valkyrja, chooser of the slain). In Norse mythology, name for Odin's warrior maids, half human, half unearthly, who rode to battle over sea and through the air to choose the slain for Valhalla. They belong to the Viking age. The names of thirteen who lived in Vingolf, part of Valhalla, and carried the mead round at Odin's feasts, are recorded.

Valkyrie is the name given to three British yachts, owned by Lord Dunraven, who tried with them to win the America Cup, 1893-95. Valkyrie I competed in 1893, being beaten by the Vigilant. In 1894 she was sunk in the Firth of Clyde after colliding with another vessel. Valkyrie II visited the U.S.A. in 1894, and was also beaten by the Vigilant. Valkyrie III competed unsuccessfully in 1895.

Valerian. Leaves and flower clusters

VALLADOLID. City of Spain. Situated on the left bank of the Pisuerga river, 102 m. direct N.W. of Madrid, it is an important rly. junction, 150 m. by rly. from the capital. Beside the Plaza de Portugalte is the incomplete Renaissance cathedral, begun in 1585. The most interesting church is the Gothic Santa Maria la Antigua. Cardinal Torquemada remodelled in the 15th century the 13th century church of San Pablo, and the duke of Lerma

remodelled it two centuries later; in it the Cortes met frequently. The university, which dates from 1346, replaced an earlier foundation. The palace is now used by the provincial authorities. Valladolid was at one time the capital of Castile, and after the union of the kingdoms was the capital of Spain until 1560. Pop 78,819.

Valladolid, Spain. Façade of the former church of St. Gregory, built in 1466, now the municipal offices

VALLETTA OR VALETTA Capital of Malta. On a promontory on the N.E. coast of the island, it has a commodious harbour on each side, and the lighthouse and fort of St. Elmo at the extremity. Fortified as the chief British naval and coaling station in the Mediterranean Sea, and equipped with docks for naval and other vessels, it is a port of call on the Suez route to the Orient. The governor's residence (1573-77) was formerly the palace of the Knights Hospitallers of St. John. Other notable buildings are the palaces of the Maltese nobility, the university, library, and museum. Pop. 48,240. See Malta.

VALLEY. Depression in the earth's crust. Longitudinal valleys are the hollows between the upfolded mountain ranges, parallel to the mts., and they usually contain a large river. Similar valleys occur between upfolded mts. and the crustal plateau which has resisted upheaval. The Indo-Gangetic valley between the upfolded Himalayas and the Deccan plateau is the largest example of this type. Denudation modifies longitudinal valleys and loads the floor with alluvium; it also carves out valleys down mountain slopes and across plateaux. In S. England the valleys of the Severn and the Thames show the results of denudation, which has carved away the softer rocks and left the more resistant ridges of the Cotswolds, Downs, and Chilterns, which confine the drainage system.

VALLEYFIELD. Town of Quebec, Canada. It is near the head of Beauharnois Canal, and is served by the C.N. Ry. It has textile factories, paper and flour mills. Pop. 9,215.

VALLEY FORGE. Village of Pennsylvania, U.S.A. It stands on the Schuylkill river, 20 m. from Philadelphia. In its neighbourhood Washington and his army passed the winter of 1777-78, suffering greatly from cold, sickness, and starvation. The tract so occupied is now a public park containing relics of the camp and several memorials.

VALLOMBROSA. Pleasure resort of Italy. It is 21 m. from Florence, and stands amid the forests of the Apennines, at an alt. of 3,140 ft., and is reached by a cable rly. Here, about 1030, was founded a Benedictine abbey, which was destroyed in 1527. It was rebuilt, but was suppressed, and in 1870 the buildings were taken for a school of forestry. Here is a meteorological station, founded in 1654. The beauty of the valley inspired Milton's lines.

VALMY. Village of France. In the dept. of Marne, it is 6 m. W. of Ste. Menesbould, on the main road to Châlons, and is the scene of the battle between the French and the Prussians, Sept. 20, 1792. The latter entered French territory on Aug. 12, and on Sept. 20 attacked the French under Kellermann at Valmy, and were defeated.

VALOIS. Name of a famous French family, members of which were kings from 1328 to 1589. The name comes from Vez, a town in the dept. of the Oise, the dist. around which was called Valois. It became crown property under Philip Augustus. In 1285 it was given to Charles, son of Philip III, and a later Philip, the son of Charles, became king of France as Philip VI in 1328. He and his successors are therefore known as the Valois kings. The direct line ruled until 1498, when the branch of Orléans in the person of Louis XII succeeded. The extinction of the royal house of Valois came with the death of Henry III in 1589. See Bourbon.

VALONIA. Acorn cup of *Quercus acgilops*, the Turkish or Greek oak. It contains a high percentage of tannic acid, and is extensively used in the preparation of leather, especially the higher grades. The name is derived from Valona, where the acorns are prepared.

VALPARAISO. City and seaport of Chile. The principal seaport on the W. coast of S. America, it stands on the Bay of Valparaíso, 116 m. by rly. W.N.W. of Santiago. The bay is sheltered on three sides, but is open to the N., and the town is built on the slopes of a range of hills about 1,500 ft. alt. On the S. side of the bay is the finest thoroughfare in the town, the Avenida de las Delicias.

Valletta, Malta. Grand harbour and quays, looking towards Fort Ricasoli; on the left are the old town walls Cribb, Southsea

The western part contains the port, where there are a large number of public buildings and warehouses bordering the docks and quays. Among the principal buildings are the custom house, government house, post office, city hall, exchange, prisons, hospitals, theatres, and police barracks. There are a natural history museum, a naval school and other naval establishments. In the city are several fine squares adorned with monuments. Valparaíso is a port of call for several steamship lines, and there is rly. communication with Buenos Aires through a tunnel in the Andes. Founded in 1536 by Juan de Saavedra, Valparaíso was captured by Drake in 1578 and by Hawkins in 1596. Pop. 286,947.

VALUER. One who appraises for another property or estate, real or personal, generally land or houses for purposes of letting, selling, or mortgaging, for compensation for dilapidation, or compulsory acquisition, or assessing for taxes, rates, etc. A valuer is responsible for loss caused by his ignorance or negligence. He is sometimes called an appraiser, and must take out a licence, which costs £2 a year. See Auctioneer.

VALVE. Device for controlling the passage of liquids and gases through pipes and other channels. Automatic valves, operated by the fluid itself, include pump valves of all

kinds, safety valves, and reducing valves. Mechanically operated valves, the movements of which have a definite time-relation to the movements of other parts, independently of the fluid, are used in hydraulic, steam, gas, and oil engines to govern the admission of the working fluid to the cylinders and its expulsion therefrom. Stop valves, regulating valves, etc., are worked, directly or indirectly, by hand. Large water passages are closed by sluice valves. See Pump; Safety Valve; Steam Engine; Thermionic Valve.

Applied to music, a valve is a piston applied to certain wind instruments, whereby the speaking length is increased, and consequently the range of available sounds extended. Used separately, the first valve lowers the pitch by a tone, the second by a semitone, the third by a tone and a half, and the fourth by two tones and a half. See Cornet; Horn, etc.

VAMPIRE (Serh. vampir). Nocturnal demon of the folklore of Slavonic and other peoples. It is manifested in various forms, the most usual being that of the spirit of the recently dead, or a demon occupying the dead body, returning to suck the blood of the living. The ways of destroying the vampire were either to drive a stake through the body, or to decapitate and burn it. Bram Stoker's *Dracula*, 1897, is a rendering of the legend.

VAMPIRE BAT. Name given to the members of a family of bats (Desmodidae).

Found in Central and S. America, they live by sucking the blood of animals. There are two genera, *Desmodus* and *Diphylla*, with one species each. Both the arrangement of their teeth and the structure of the stomach have been specialised for blood sucking. By a bite with their sharp teeth these small bats remove a very thin slice of skin from their victim and then suck the blood. The large vampyrus, or phyllostoma, of Brazil, and several other bats, formerly thought to be blood suckers, are harmless. See Bat.

VAN. City of Turkey. Standing on the E. shore of Lake Van, it is one of the chief centres of E. Asia Minor. One of its most interesting features is a hill, on the rock face of which

Valparaíso, Chile. Plaza de la Victoria and one of the principal churches

are cuneiform inscriptions of the Urartu (Ararat) kings, who were strong enough to contend with the Assyrians. Pop. 30,000.

In 1895 and 1896 Van was the scene of Armenian massacres, and during the Great War it suffered terribly, being taken and retaken by the Turks and the Russians.

Lake Van is a sheet of salt water, without visible outlet. Its length is about 75 m. from E. to W., its width from N. to S. varying from 20 to 40 m. Its elevation is 5,200 ft.

VANADIUM. Metallic element. Its chemical symbol is V, atomic weight 50.96, atomic number 23. It is a light grey or white metal with a melting point about 1,750° C. The metal was discovered by Del Rio in 1801 and occurs only in combination in a number of rare minerals, including vanadinite, mottamite, etc. Vanadinite, the commonest, is found in Spain and South America. Vanadium forms a number of oxides, a suboxide, monoxide, dioxide, trioxide, and a pentoxide. The lower oxides are metallic powders. The metal has been extensively used in the manufacture of certain high tensile steels.

Irene Vanbrugh,
British actress

VANBRUGH, IRENE (h. 1872). British actress. Daughter of Prebendary Barnes of Exeter, she was born Dec. 2, 1872, and made her first London appearance as the White Queen in Alice in Wonderland at the Gaiety Theatre, 1888. In 1899 she scored her first great success as Sophie Fulgarney in The Gay Lord Quex. Later she appeared on the variety stage as Kate in Barrie's The Twelve Pound Look, and subsequently in short plays and sketches with her husband, Dion Boucicault, whom she had married in 1901.

Her elder sister, Violet, was born June 11, 1867, and first appeared at Toole's Theatre in 1886. In 1891 she was engaged by Irving and scored a success as Anne Boleyn in Henry VIII. In 1893 she joined Daly's company, and in 1894 appeared at the Royalty Theatre. She was especially successful in the part of Queen Katharine in Tree's production of Henry VIII, 1910. Pron. Van-bra.

VANBRUGH, SIR JOHN (1664-1726). English dramatist and architect. Born in London, he studied architecture in France, became a captain in the army, and was arrested as a spy in France and imprisoned in the Bastille. He wrote ten comedies, as grossly indecent as other dramatic productions of the period, but undeniably witty. In his later years Vanbrugh rose to fame as an architect. His finest work is Castle Howard, and his largest mansion

Sir John Vanbrugh,
English dramatist

is Blenheim (q.v.). He designed the Haymarket Theatre, 1705, and was its first lessee and manager. He was knighted in 1714, and held the appointment of controller of the royal works. He died March 26, 1726.

VAN BUREN, MARTIN (1782-1862). American president. Born at Kinderhook, New York, Dec. 5, 1782, of Dutch parentage, he became a lawyer, practicing successfully at Hudson and later at Albany. From 1815-19 he was attorney-general of the state, and in 1821 he was elected to the senate, and in

1829 he became governor of New York, being almost immediately made secretary of state by Andrew Jackson. For a few months in 1831-32 he was minister to Great Britain, but in 1832 he was chosen vice-president. For four years he acted as Jackson's lieutenant, and in 1836 he became president. He only held office for one term, four years, as he was defeated in 1840, but he remained a figure in public life until his death, July 24, 1862.

VANCE, ALFRED GLENVILLE (c. 1838-88). British comedian, known as the Great Vance. Born in London, his real name being Alfred Peck Stevens, he became a touring actor, and later opened a dancing school at Liverpool. He again toured as a character singer before appearing on the variety stage at the Metropolitan and South London music halls, where his humorous cockney songs soon became popular. He died Dec. 26, 1888.

VANCOUVER. Canadian island in the Pacific Ocean, part of the province of British Columbia. Off the W. coast of British Columbia.

It has an area of about 13,500 sq. m. It is separated from the U.S.A. by the Strait of Juan de Fuca, and from the mainland of British Columbia by Queen Charlotte Sound and the Strait of Georgia. Victoria and Esquimalt are ports, Nanaimo and Wellington centres of coal mining. Vancouver surveyed the coast in 1792, and Victoria, the first settlement in British Columbia, was staked out in 1842. Pop. 130,000.

VANCOUVER. City and seaport of British Columbia, Canada. It stands on a magnificent harbour on the southern side of Burrard Inlet, on the mainland of British Columbia, 1,480 m. from Winnipeg. The buildings have nearly all been erected since a fire in 1886. The chief industry is shipping, for which there are spacious docks. From here vessels go to the Pacific ports and across to China, Japan, and Australia. It is also the terminus of the C.P. Rly. and is served by the national system. Other industries are sugar refineries, flour mills, saw mills, and shipbuilding. Owing largely to the opening of the Panama Canal, the trade has increased enormously. Improvements include more shipping facilities and elevators for the grain shipped here. Cheap and abundant power has attracted new industries. At Point Grey are the buildings of the university of British Columbia. Pop. 344,000.

North Vancouver, a separate municipality, stands on Burrard Inlet, just opposite Vancouver city, with which it is connected by a ferry. It is surrounded by beautiful scenery, and this, with its position on the coast and facilities for shooting and fishing, makes it a popular place. Pop. 13,492.

Martin Van Buren,
American statesman

VANDAL. Teutonic people of the E. Germanic stock. Having moved from the shores of the Baltic to the middle Danube, they migrated W. At the

beginning of the 5th century they poured into Gaul, and in 409 made their way into Spain. Thither they were soon followed by the Visigoths, who destroyed half of them and penned the rest into the district known as Andalusia. About 428 they left Spain for N. Africa, where they established a powerful dominion, and ruled for a hundred years. Gaiseric carried out the conquest between 429 and 439, and sacked Rome in 455. Their pirate fleets terrorised the Mediterranean, but in 533 Justinian dispatched Belisarius (q.v.) against them, and the Vandal race was blotted out.

Cornelius Vanderbilt,
American capitalist

VANDERBILT. Name of an American family. Its founder, Cornelius Vanderbilt, was born at Staten Island, May 27, 1794. He began a ferry to New York, and in a few years was the owner of a large fleet of harbour craft, among which was the first steamboat to run between New York and New Brunswick, 1817. His interests were organized in 1824 into a company.

Vancouver. 1. Burrard Inlet, looking towards N. Vancouver. 2. Hastings St., with Dominion Bank Building on right

1. Canadian Pacific Rly.
2. Agent General for British Columbia

He died Jan. 4, 1877, leaving a fortune of over £20,000,000. By his will the Vanderbilt University was founded in Nashville.

His son, William H. Vanderbilt (1821-85), joined him in business and left an enormous fortune. He had four sons, of whom the best known were Cornelius and William Kissam.

VANDERVELDE, ÉMILE (h. 1866). Belgian politician. Born in a suburb of Brussels, Jan. 25, 1866, he studied law at the university there. He early joined the socialist movement, was a conspicuous member of the International, and entered the Belgian Chamber in 1894, soon becoming chairman of the socialist group in parliament. Along with his party he took up a patriotic attitude in the Great War, going into exile with the parliament during 1914-18. He

Émile Vandervelde,
Belgian socialist leader

was a representative of Belgium at the Peace Conference in Paris, 1919, and in 1920 became minister of justice. In 1925-26 he was minister of foreign affairs. He was made professor of political economy at Brussels in 1924.

VAN DER WEYDEN, ROGER (1400-64) Flemish painter. Born at Tournai, he studied under his father, a sculptor, and Robert Campin, and worked at Tournai and Brussels, visiting Italy and Germany. His painting is ascetic in character: one may cite his Deposition, in the Eusebian, the Last Judgement at Beaune, and the Mater Dolorosa and Ecce Homo in the National Gallery, London. He died in Brussels, June 18, 1464. See Charles the Bold.

VAN DE VELDE, ADRIAN (1639-72) Dutch painter. Born at Amsterdam, the son of Willem Van de Velde the elder, he studied under his father, and under Wynants, Wouverman, and Paul Potter. He excelled in landscapes and coast scenes. There are examples of his art in the Rijks Museum, Amsterdam, and the National Gallery, London. He died Jan. 21, 1672.

His brother, Willem Van de Velde (1633-1707), studied under his father and de Vlieger. He settled at Greenwich about 1676, and established the highest reputation as a painter of sea battles and other marine subjects. He died at Greenwich, April 6, 1707.

VAN DIEMEN'S LAND. Island off S.E. Australia, since 1853 known as Tasmania (q.v.). Discovered by A. J. Tasman, 1642, it was named by him after Anton van Diemen (d. 1645), governor of the Dutch East Indies.

VAN DYCK, SIR ANTHONY (1599-1641). Flemish painter. Born at Antwerp, March 22, 1599, he studied under Hendrik van Balen, and about 1618 entered Rubens' studio as an assistant. He had embarked on portraiture with considerable success before his first visit to England in 1620.

The artist returned to Antwerp early in 1621, and later in the same year went to Genoa, thence to Rome, Mantua, Palermo, and Brescia, and back to Genoa, where he remained till 1627. After working at Antwerp and The Hague, he was induced by the offer of a pension to settle in England.

In 1640, Rubens having died, Van Dyck hurried to Antwerp in order to secure the patronage of the Spanish king. His demands, however, were too high, and he went on to Paris, only to find that his objective, the decoration of the Louvre, had been given to Nicholas Poussin. He returned to London, seriously ill, died Dec. 9, 1641, and was buried in St. Paul's.

Van Dyck's paintings are distributed throughout Europe, but most of his English portraits are at Windsor Castle and mansions in England. His output was enormous. He painted Charles I, so it is said, 36 times. See illus. pp. 360, 361, 391, 507, 587, 690, 699, 721, 752, 800, 847, 863, 1007, 1178, 1274, 1287, etc.

VANE. Originally a flag or banner. It was then used for a slip of wood or metal placed at the top of a spire or other elevation to show how the wind blows. It is thus used for a weathercock, and for one of the blades that turn a windmill. See Weathercock.

VANE, SIR HENRY (1613-62). English politician, known as the younger Vane. He was born in May, 1613, and was educated at Westminster School and Magdalen Hall, Oxford. In 1635, having adopted the religious views of the Puritans, he went to Massachusetts, of which colony he was made governor. Returning to England in 1637, Vane entered Parliament, and was knighted in 1640; as one of the parliamentary chiefs he was concerned in the political moves of the next few years,

succeeding Pym as leader in 1643. About 1648, however, he separated himself from his colleagues, and consequently had no part in the king's death, but after it he returned to active political life. In 1662 he was tried for treason, and on June 14 was executed.

His father, Sir Henry Vane (1589-1654), was secretary of state in 1640-41, and until that time was one of the leading advisers of Charles I. A grandson was made Baron Barnard. See Cleveland, Duchess of.

VANGUARD. British battleship. She was lost as the result of an internal explosion, on the night of July 9, 1917, at Scapa Flow. Her nominal complement was 724, and there were only 97 survivors. The Vanguard was launched in 1909, being one of the three battleships of the St. Vincent class. She was 500 ft. long and displaced 19,250 tons. The first Vanguard carried the flag of Sir W. Wynter against the Spanish Armada. Another Vanguard was the flagship of General Monk in 1653, and a Vanguard carried Nelson's flag at the battle of the Nile.

VANILLA (*Vanilla planifolia*) Perennial climbing herb of the order Orchidaceae. A native of Central America, it has large, fleshy, oblong leaves, and green or white and green flowers, succeeded by slender seed-pods, about six inches long, which are utilised for flavouring chocolate, liqueurs, etc. Several allied species are used for the same purpose, but are not equal to *V. planifolia*.

Vanilla. Flowers and leaves of the herb

VANLOO, JEAN BAPTISTE (1684-1745). French painter. Born at Aix, Provence, Jan. 14, 1684, he went to Paris in 1719, becoming an Academician in 1731. He visited England in 1738, where he became a fashionable portrait painter, executing, among others, portraits of Colley Cibber and Sir Robert Walpole. He died at Aix, Dec. 19, 1745. (See Cibber, C.)

His brother, Charles André Vanloo (1705-65), was born at Nice, Feb. 15, 1705, and after studying in Rome, settled in Paris, 1734. He became a member of the Academy, 1735, and died July 15, 1765. His Marriage of the Virgin is in the Louvre. See illus. pp. 411, 624.

VARANGIAN (Gr. Barangoi, from Old Norse vaeringjar, followers, retainers). Name applied to the bands of Norsemen who organized the Russian state in the 9th century, and were gradually absorbed by the Slavs.

The Varangian guard, a mercenary force containing many Englishmen, was maintained at Constantinople by the East Roman emperors. It originated with a body of troops obtained in 988 by Basil II from Vladimir, prince of Kiev. See Russia.

VARDAR. River of the Balkans. It rises in the S. of Serbia, and flows N.E. to the watershed on the other side of which the S. Morava has its source. It then bends S.E. towards Uskub (Skoplje), and, after a S.E. course, falls into the gulf of Salonica, about 10 m. W. of the city of that name. Its length is 200 m. With its tributaries, the Bregalnitsa and the Tehera, it figured in the first and second Balkan Wars and in the Great War. In the last mentioned the river gave its name to two battles fought Oct.-Dec., 1915, and Sept. 15-30, 1918.

Sir Henry Vane, English politician. After Lely

VARDON, HARRY (b. 1870) Professional golfer. Born in Jersey, Vardon was the winner of the Open Championship in 1896, 1898, 1903, and 1911, and won the American championship in 1900. He played for England v. Scotland in 1903-7, 1909, and 1910, and won The News of the World tournament in 1912. With J. H. Taylor as partner, Vardon defeated J. Braid and A. Herd in international foursomes at St. Andrews, Troon, St. Anne's, and Deal in 1905. He is the author of *The Complete Golfer*, 1905, and *How to Play Golf*, 1912. See Golf.

Harry Vardon. Professional golfer

VARIATION. Biological term signifying any departure from the usual fixed characters of a species of plant or animal. Certain variations may occur as the result of the action of environment, but these are almost always the result of injuries or disease, and do not affect the offspring of the next generation. Natural or spontaneous variations, on the other hand, occur all round the specific average, and form the material upon which natural selection works. They take their origin in the protoplasm of germ-cells, which is capable of originating variations in different directions. If these confer an advantage upon the fully developed individual in his struggle for existence, he is naturally selected for survival. See Evolution; Heredity; Mendelism.

MUSICAL VARIATIONS. These are the ornamentation and development of a given theme. In the 16th century composers began to evince a desire to elaborate their music by devices of figuration and imitation, which reached its culmination in such forms as the ground bass, the chaconne, and the passacaglia. In these the theme was either untouched, or was so little altered as to be readily recognizable throughout, but the variations of Beethoven, Mendelssohn, and others subsequently displayed a tendency to regard the theme as affording opportunities of development, so that the interest should be cumulative.

Varicose (Lat. varix, dilated). Word meaning something dilated or enlarged. It is used for veins of this kind in the leg. See Vein.

VARIOMETER. Type of variable inductance used to tune the aerial of a broadcast receiving apparatus. It consists of two coils in series, one free to rotate within the other. By revolving the inner coil the amount of inductance is varied. See Inductance.

VARNISH TREE (*Melanorrhoea usitatissima*). Evergreen tree of the order Anacardiaceae. A native of the East Indies, it grows to a height of 100 ft., and has thick, oval, alternate leaves.

The red flowers are produced in clusters from the base of the leaves. The timber is hard, heavy, and dark-coloured, one of several kinds known as lignum vitae. The sap of the varnish tree is used as a lacquer for various domestic articles. See Lacquer.

Varnish Tree. Spray of leaves. Inset, flower cluster and, top, single flower

VARUS, PUBLIUS QUINTILIUS (d. A.D. 9). Roman general. Appointed to the chief command in Germany, by his vexatious administration he roused the Germans to revolt. Under the leadership of Arminius the Germans caught the Romans in the swamps of the Teutoburger Wald, three legions were annihilated, and Varus committed suicide.

VASARI, GIORGIO (1511-74). Italian author and architect. Born at Arezzo, July 30, 1511, he studied under Andrea del Sarto and Baccio Bandinelli at Florence. He was architect of the Palazzo Vecchio and the enlarged Magistrati of the Uffizi Gallery (q.v.), at Florence, and the painter of several large mural paintings at Florence and Rome, and is famous for his *Lives of the Painters*, 1550. He died at Florence, June 27, 1574.

VASCO DA GAMA (c. 1460-1524). Portuguese navigator. Born at Sines, of an ancient noble family, he took to the sea, and was given command of the expedition sent by Emanuel I to discover a sea route to India, round the S. coast of Africa. His fleet of four ships sailed from the Tagus, July 9, 1497, rounded the Cape, and erept up the E. shores of Africa as far as Malindi, whence, going E., they sighted the Malabar coast at Calicut, May 20, 1498. In 1502 he sailed again to the East with ten vessels, being commissioned to take vengeance for the murder of the crews left at Calicut by P. A. Cabral. Da Gama sacked the town, explored the coast as far as Cochin, and returned home with much merchandise. Appointed viceroy of India, he died of fever three months later, at Cochin, Dec. 24, 1524. See Belem.

Da Gama sacked the town, explored the coast as far as Cochin, and returned home with much merchandise. Appointed viceroy of India, he died of fever three months later, at Cochin, Dec. 24, 1524. See Belem.

VATICAN. State of Europe ruled by the pope and also the palace in which that potentate lives. The state was created by treaty with Italy in 1929 and is thus the successor of the state, called the States of the Church, over which the popes ruled before 1870. It covers 108 acres in Rome, and in addition 13 buildings in the city are regarded as belonging to it. Foreign powers have their representatives at the Vatican, which has its own officials, railway station, stamps, flag, etc.

The buildings are on a low hill in Rome, immediately to the N. of S. Peter's. They consist of a vast irregular group of palaces, courts, chapels, and offices, covering 134 acres, with a large private garden. The existing buildings were begun about 1450 by Nicholas V, who reconstructed the older palace on a grand scale. Additions were made by later popes, the last important building, the Braccio Nuovo, having been erected under Pius VII. The Vatican palace is said to contain about 7,000 rooms.

The Apostolic Residence is a lofty building surrounding a quadrangle and overlooking the piazza of S. Peter. It contains the private apartments of the pope. E. of it are the barracks of the Swiss Guards. The great N. wing of the Vatican, a quarter of a mile long, consists of the Belvedere, a villa built by

Innocent VIII, and two parallel galleries connecting it with the old palace. This wing houses the library and most of the art collections. The library contains some 34,000 MSS. and about 250,000 printed books. See Rome; St. Peter's: Sistine Chapel.

THE VATICAN COUNCIL. This was summoned by Pius IX in 1868. There were over 700 prelates present, including 49 cardinals, 121 archbishops, and 479 bishops. Several sessions were devoted to restating theological points before the real subject of the council was reached, but on July 18, 1870, the definition was made of papal infallibility (q.v.).

VAUBAN, SEBASTIEN LE PRESTRE DE (1633-1707). French soldier and engineer. Born in a Burgundian village, now in the dept. of Yonne, he entered the army about 1650. In charge of various siege operations during the war with Spain, after the peace of 1659 he turned his attention to fortress work in France.

Vauban's fame rests on the work he did for France during the wars of Louis XIV. About forty fortresses were taken under his direction, while he was responsible for the defences of almost every fortress on the French borders, the number being put at over 100. He was a marshal when he died, March 30, 1707.

Sebastien de Vauban,
French soldier
After Lebrun

Vatican. Great Hall of the library, which contains priceless MSS. and books

VAUDEVILLE. In drama, a light and amusing play in which dialogue is intermingled with songs, and almost identical with musical comedy. The term originated in the 15th century with Olivier Basselin of the valleys of the Vire, in Normandy, the author of a number of drinking and love songs, which he circulated under the title *Lais des Vaux de Vire*, of which Vaudeville is a corruption.

The Vaudeville Theatre, on the N. side of the Strand, London, was opened in 1870.

VAUGHAN, CHARLES JOHN (1816-97). British divine. Born at Leicester, he was educated at Rugby and Trinity College, Cambridge, where he was bracketed senior classic. In 1841, being a fellow of Trinity, he was ordained in the Church of England and passed three years as vicar of S. Martin's, Leicester, where his father, Rev. E. T. Vaughan, had preceded him. From 1844-59 Vaughan was headmaster of Harrow, and from 1860-69 was vicar of Doncaster. In 1869 he was chosen master of the Temple, and in 1879 dean of Llandaff. He died Oct. 16, 1897.

VAUGHAN, HENRY (1622-95). Welsh poet, called the Silurist from his native district, the country of the Silures. Born at Newton-on-Usk, April 17, 1622, he studied law, and became a physician at Brecon. A poet of the metaphysical school, he was influenced by Donne, Carew, and Herbert, whose work, *The*

Temple, inspired his volume of devotional poems, *Silex Scintillans*, 1650, which in turn influenced Wordsworth. He died April 23, 1695.

VAUGHAN, HERBERT ALFRED (1832-1903). British cardinal. Born at Gloucester, April 15, 1832, he was the eldest of eight sons of John F. Vaughan of Courtfield, Herefordshire. He was educated for the priesthood at Stonyhurst College, and then in Belgium, Paris, and Rome. Ordained in 1854, he became vice-principal of S. Edmund's College, Ware, and was from 1869 head of a missionary college at Mill Hill before becoming bishop of Salford in 1872. In 1892 he became archbishop of Westminster, and in 1893 a cardinal. He died June 19, 1903. His great work was the erection of the cathedral at Westminster (q.v.).

Vaughan's brother, Bernard Vaughan (1847-1922), joined the Society of Jesus and made a reputation as a preacher in Salford and then in London. He died Oct. 31, 1922.

VAUGHAN, KATE (1852-1903). British actress, whose real name was Catherine Candelon. Born in London, she made her debut as a dancer in 1870, first appearing on the stage as an actress in 1872. From 1876-83 she was acting in burlesque at The Gaiety, and in 1886 organized, with H. B. Conway, the Vaughan-Conway comedy company. On account of her failing health she went to Australia, 1896, and then to South Africa, 1902. She died at Johannesburg, Feb. 21, 1903.

Kate Vaughan,
British actress
Downey

VAULT (Lat. *volvere*, to roll). Literally, an arched roof. It is used also for a chamber with such a roof and, as these are often underground, it has come to be used for cellars where wine is stored.

Architecturally, the earliest form was the barrel vault, shaped like the upper section of a rly. tunnel. This was invented by the Persians, and employed later by the Romans, who discovered how to construct the groined vaults by intersecting two barrel vaults at right angles to each other, the groin being the angle formed by the meeting of the two surfaces. The groined vault was used in Norman building until the introduction of the ribbed vault. See Architecture; Fan Tracery; Gothic Architecture.

VAUXHALL. District of London. On the Surrey side of the Thames, W. and S.W. of Kennington Oval, with a station on the Southern Rly., it is in the bor. of Lambeth. Vauxhall became famous for its gardens, a popular resort. Laid out in Charles II's time, they were finally closed July 25, 1859. Vauxhall Bridge, connecting with Millbank, was rebuilt in 1906.

VEDAS (Skt. *veda*, knowledge, cf. Eng. wit). Oldest sacred literature of the Hindus. Written in Sanskrit, they are regarded as having been the work of poets who lived between 2000 and 1000 B.C. They are divided into the Rig-Veda, Yajur-Veda, a collection of prayers, Sama-Veda, hymns for sacrificial occasions, and Atharva-Veda. See Hinduism; Rig-Veda; Sanskrit.

VEDDA. Primitive people in Ceylon. They are scattered over an area E. of the Mahawale Ganga river. Of Caucasoid stock, they are dark-brown, wavy-haired, long-limbed and long-headed. They consist of forest Veddas, still preserving the primitive

Vatican. Plan of the new European state under the rule of the Pope since 1929

culture. villag. Veddas, who have intermarried with the Sinhalese and practise rude agriculture: and coast Veddas.

VEDRENNE, JOHN EUGENE (1867-1930) British stage manager. He was born July 13, 1867, and, leaving a commercial career, became business manager to various London theatres. In 1904 he took the Court Theatre and, in partnership with Granville Barker (q.v.), made many striking productions, including plays of Euripides, and modern writers, such as G. B. Shaw. The partnership ended in 1907, and Vedrenne became associated with Lewis Waller at The Lyric. He was with Dennis Eadie at The Royalty, 1911-19, and then became lessee of the Little Theatre. He died Feb 12, 1930.

VEDRINES, JULES (1882-1919). French airman. Born at St. Denis, near Épinay-sur-Seine, he became a telegraph boy, then turned his attention to mechanics.

In 1910 he obtained a post as mechanic to Robert Loraine (q.v.), learnt to fly, and within a year was France's best known airman. Among his early remarkable achievements were his winning £2,000 in the circuit of Europe and £4,000 for a flight from Paris to Madrid, May, 1911. Védérines was killed when flying, April 21, 1919.

Jules Védérines,
French airman

VEGETABLE. In its narrow, everyday use, word indicating any herb that is cultivated specially for table use in whole or part, such as turnip (root), cabbage (leaves), broccoli (flowers), peas and beans (fruit). In its widest sense it includes all living things that are not animals—trees, shrubs, herbs, ferns, mosses, seaweeds, fungi, and the microscopic diatoms. See Botany; Plant; Potato. etc.

VEGETABLE MARROW (Cucurbita pepo). Annual creeping and trailing plant bearing edible fruits, of the order Cucurbitaceae. It grows in any ordinary rich soil. The flowers, in which the sexes are separate, are best fertilised by means of a camel-hair brush. Marrows are raised from seed sown in a greenhouse temperature in spring and planted out in the summer. See Gourd.

Vegetable Marrow. Large edible gourds for which the trailing plant is cultivated

By courtesy of Sutton & Sons

VEGETARIANISM. Name given to the movement which aims at making vegetable foods the sole diet of human beings. It began about 1850, and its followers abstain from eating the flesh of animals and birds. Some cat fish, but others do not, while strict vegetarians abstain from all food which comes from animals, such as eggs, milk, butter, and cheese.

One reason for vegetarianism is the dislike of inflicting pain, but it is also advocated as providing a more nourishing and economical diet. It is also claimed that a vegetarian diet makes persons less liable to certain diseases, e.g. cancer. Akin to the vegetarians are the fruitarians, who maintain life solely on fruit.

VEIL (Old Fr. voile, from Lat. velum, cloth). Article of feminine dress, used as a covering for the head, especially the face. In most Mahomedan countries, but not among the nomadic Arabs, custom requires the veiling of women in public or in the presence of men.

The Turkish yashmak, when worn, veils the face from below the eyes.

In the R.C. Church a woman admitted to a religious order takes the white veil of reception on entering her novitiate. When she is fully professed and takes the life vows, she receives the veil of profession, usually black, though in some orders it is white. See Nun.

VEIN Vessel by which venous blood—i.e. blood which has parted with its oxygen, passed through the capillaries, and picked up waste material from the tissues—is conveyed back to the heart. The walls of veins are thinner than those of the arteries, but, like the latter, consist of three coats. They differ also from the arteries in possessing valves, which are so disposed as to prevent the blood from flowing in the reverse direction. The veins from the legs and lower part of the body all pass eventually into a main trunk, the inferior vena cava, and those from the arms, head, and upper part of the body into another main trunk, the superior vena cava, both of which open into the right auricle of the heart.

VARICOSE VEINS. Varicose veins is a condition in which the vessels become lengthened, dilated, and tortuous. The superficial veins of the leg are those most often affected. The affection is due to weakness in the vessel wall, associated with any condition which throws stress on the vein or impedes the circulation, such as the prolonged standing of shop assistants, severe exertion, as in athletic exercises, or the pressure of tight garters.

VEIN. In geology, a mineral deposit in fissures and cracks of rocks. Such mineral ores have usually been deposited from solutions, and may be metallic or non-metallic; as a general rule, the two kinds are found in veins together. The non-valuable mineral deposit in a vein is known as the gangue. Veins are sources of many of the valuable metals, and vary in size from the almost invisible to several hundred feet in thickness.

VELAZQUEZ, DIEGO RODRIGUEZ DE SILVA Y (1599-1660). Spanish painter. Born at Seville, June 6, 1599, he passed his early days as an artist with Francisco Herrera. Settling in Madrid in 1623, he there painted a portrait which introduced him to the notice of the king. In the same year he painted a portrait of Philip IV, the first of a very long series which he painted of that king at every period of his life. In 1629 he visited Italy, and he was there again in 1649, when his main object was to collect pictures and casts from the antique. On this occasion he painted his celebrated portrait of Pope Innocent X. He died in Madrid, Aug. 6, 1660.

The work of Velazquez can only be properly studied in the collections in Madrid, where there are at least 46 undoubted pictures. Other fine works are in London, in the National Gallery, notably his only important nude, Venus and Cupid (the Rokeby Venus), and at Apsley House, the Wallace Collection, and Dulwich Gallery. Several of his finest portraits

D. R. de Silva y Velazquez,
Spanish painter
Self-portrait in the
Uffizi Gallery, Florence

are in Vienna, the Louvre, in Russia, Holland, and Germany, but without proper study of his subject groups, especially the Surrender of Breda, The Maids of Honour, and The Tapestry Weavers at Madrid, the greatness of Velazquez cannot be completely understood. See Philip IV; Seville; Wallace Collection.

VELOCITY. Rate at which a point or particle changes its position. The change in the position of a particle must have both magnitude and direction. It may vary both in regard to its magnitude and to its direction, and its magnitude may be constant while its direction continually varies. If a particle moves in a straight line and so preserves a constant direction, and passes over equal spaces in successive equal times, its linear velocity is said to be constant. Angular velocity is angular speed round an axis. See p 156.

VENDETTA (Lat. vindicta, vengeance). Form of blood feud by which the privilege and duty of avenging the death of a murdered person rests primarily upon the next of kin. The term is specifically applied to the practice in the southern districts of Italy, and still more particularly to the Corsican vendetta. This last was at its climax during the closing decades of the 18th century, when about 7,000 murders are said to have been committed in the island.

VENDÔME. Town of France. It lies on the Loir, 42 m. by rly. N.E. of Tours, and is a rly. junction. There is trade in agricultural produce, and gloves and paper are made. The church of the Trinity, formerly an abbey church, dates from the 12-15th centuries. There are remains of a 10th century château. Pop. 9,000.

The county of Vendôme was raised to a duchy by Francis I in 1515 in favour of Charles de Bourbon (d. 1536). The duchy has been held, among others, by César de Bourbon (1594-1665), natural son of Henry IV, known as a general in the Huguenot wars, 1621, and by his grandson, Louis Joseph. The line became extinct in 1727.

VENDÔME, LOUIS JOSEPH, DUC DE (1654-1712). French soldier. Born in Paris, July 1, 1654, he was descended from Henry IV and Gabrielle d'Estrees. His military career began in the Dutch campaign of 1672, and he subsequently fought in Germany, Alsace, the Low Countries, and Italy. In 1695 he commanded the army in Catalonia, and captured Barcelona in 1697. During the War of the Spanish Succession he was first employed in Italy, and in 1706 defeated the Austrians at Calcinato. He was transferred to the Low Countries in the same year, but after losing the battle of Oudenarde, 1708, was relieved of his command. He retrieved his reputation in Spain, where he was sent in 1710 to assist Philip V against the British and the Austrians, defeating the former at Brihuega and Starhenberg and the latter at Villa Viciosa. He died June 11, 1712.

Duc de Vendôme,
French soldier

VENEREAL DISEASES. Group of diseases which are almost always conveyed from one person to another during sexual intercourse. They comprise gonorrhoea, syphilis, and the much less serious soft chancre. Innocent wives may suffer, and children may be born with the disease already present. In the United Kingdom methods for prevention and treatment are advocated by the Society for the Prevention of Venereal Disease, 143, Harley Street, London, W.1. Free treatment and advice, under strict secrecy, can now be obtained at certain medical centres in most large towns. See Gonorrhoea; Syphilis.

VENETIAN GLASS. Fine variety of glassware made in Venice. It appears to have been first made in the city craftsmen by their skill produced articles of great beauty, and Venetian glass took on its characteristic elegance and lightness. The island of Murano became the headquarters of the industry, and there it still flourishes, having been revived in the 19th century. See Glass.

VENEZUELA. Republic of S. America, a member of the League of Nations. It borders the Caribbean Sea, with Colombia on the W., Brazil on the S., British Guiana and the Atlantic Ocean on the E. Important towns include Caracás, the capital, Maracaibo, and Valencia. The area is 393,874 sq. m. Pop. 3,053,497.

The chief physical features of the republic are the chain of the Andes and its E. extension in mountainous and hilly country along the Caribbean Sea, and the river Orinoco, with its many tributaries. South of the mountains to the Orinoco, and also over the whole S.W. of the republic, stretch the llanos, vast grassy plains, resembling in their general formation the Argentine Pampa. S. of the Orinoco up to the borders of Brazil and British Guiana, and through part of the Amazon river system, stretches a vast region of tropical forest which covers more than half the entire country. Of the many lakes Maracaibo is the largest.

The chief agricultural products are coffee, cocoa, sugar cane, maize, cotton, and beans. Rubber, balata, tonka beans, vanilla, and other tropical products are worked in the forest area. Cattle, sheep, and other livestock are reared. The mineral resources include petroleum, asphalt, gold, copper, and coal. The pearl fisheries off Margarita and other islands are valuable. Exports include coffee, petroleum, cocoa, sugar, hides, gold, asphalt, and pearls. There are some 650 m. of rly.

Venezuela became an independent republic in 1830, when it seceded from Colombia. It remained neutral in the Great War. By the federal constitution, amended in 1929, the United States of Venezuela consist of 20 autonomous and politically equal states, each with its president and legislature, besides the

federal district and two territories administered by the central executive. The central or federal government consists of a president holding office for seven years, with his cabinet ministers, a senate in which the states are equally represented, and a chamber of deputies elected according to the population. See Bolivar, S.

VENICE (Ital. Venezia). City, seaport, and naval station of Italy. Situated at the head of the Adriatic, built mainly on piles, it is in the Venetian Lagoon. The city is connected with the mainland by a rly. viaduct across the lagoon. The Victor Emmanuel canal of approach was opened in 1922. Pop. 258,381.

The three main thoroughfares are waterways the Canale della Giudecca, separating the main town from the island of Giudecca; the open stretch of the Canale di San Marco, dividing the island of S. Giorgio Maggiore from the public gardens, arsenal, doge's palace, etc.; and the Grand Canal, issuing from the junction of these two at the point occupied by

destroying in its fall the exquisite Loggetta dei Cavalieri, now repaired. At the E. end is grouped the most wonderful mingling of Byzantine and Gothic architecture in Europe, the blue-dialled clock tower, built 1499, the cathedral of S. Mark, and the doge's palace. The Bridge of Sighs connects the judgement halls of the palace with the prisons for ordinary criminals.

Venice was one of a dozen settlements on the marshy islands which stretch along the N.W. shores of the Adriatic from the Piave to the Adige. Protected by tortuous channels through dangerous shoals, she became the great mart for exchange of goods between the East and N.W. Europe, a republic whose maritime supremacy endured for centuries.

Owing allegiance to the Eastern empire, Venice obtained commercial concessions there. She supplied goods and transport to the Crusaders and pilgrims, and the doge, Enrico Dandolo, diverted the fourth Crusade to the conquest of Constantinople, 1204. Out of her share of the spoil Venice obtained the Morea, many islands of the Aegean, and much of the mainland. She purchased Crete and Salonica, and held fast to Zara and other Dalmatian towns. In 1508 the European powers com-

Venice. The city from S. Giorgio Maggiore, showing the piazzetta of S. Mark, the campanile and library on one side and the Doge's palace on the other. Above, Rialto Bridge across the Grand Canal.

the custom house and the 17th century church of S. Maria della Salute. Winding in the shape of an S, the Grand Canal divides the city into two almost equal parts. Over 150 smaller canals intersect the city. The canals are navigated by gondolas. Steamboats ply through the Grand Canal to the Lido, the popular bathing station, and to the neighbouring islands, Murano, Burano, Chioggia, Torcello, etc. The Merceria, connecting the Piazza with the Rialto, is the main street.

The heart of modern Venice is the Piazza of S. Mark. Approached from the network of bridged canals behind it, this marble-paved square opens out into a blaze of light and life and colour. The approach from the water is through the Piazzetta, which is flanked W. by the royal palace, begun in 1582, and the old library, a beautiful building by Sansovino, 1536, and E. by the doge's palace. At the entrance to the Piazza rises the Campanile, reconstructed after the original watch-tower of the republic collapsed in 1902,

hined against Venice in the league of Cambrai; yet at the treaty of Noyon, 1516, she emerged with little loss of territory. She had now reached the zenith of her power. But the wars with Genoa and the European powers had sapped her vigour, and she was paralysed by the discovery of the Cape route to the Indies, which diverted the E. trade to Lisbon. The capture of Constantinople by the Ottoman Turks, 1453, struck her another deadly blow. Venice was cut off from her trade with the Levant and through Egypt. Her decline was very gradual and very brilliant. During the 16th and 17th centuries Venetian art reached its greatest perfection, and the republic was almost the sole bulwark of Europe against the Turks. But in spite of such brilliant episodes as Lepanto, 1571, she was gradually stripped by Turkey of all her possessions in the Archipelago and the Morea.

In 1797 the republic fell before Napoleon, who assigned it first to Austria and then to his kingdom of Italy, 1805. Austrian rule was restored by the congress of Vienna, 1815. The hated oppressor was expelled in 1848, when the republic of S. Mark was proclaimed. The Austrian Radetzky reduced it in 1848-49, and Austria ruled it until compelled to cede Venetia to Italy in 1866. The gulf of Venice is the N. portion of the Adriatic Sea between Istria and the Venetian lagoons; its N.E. corner forms the gulf of Trieste. See Arcade; Campanile; Doge; Gondola; St. Mark's.

VENIZELOS, ELEUTHERIOS (b. 1864). Greek politician. Born in Crete, Aug. 23, 1864, he was educated at the university of Athens,

E. Venizelos,
Greek statesman
Henri Manuel

after which he returned home and practised as a lawyer. In 1897 he was elected a member of the legislature, and he took a leading part in the rising of 1896-97. In 1898 he became head of the executive, and in 1906 he led the movement that ended in the withdrawal of the high commissioner, Prince George, from the island.

In 1907, invited to Athens by the military league, he began his connexion with Greek politics. He was made prime minister in 1910, and as such he led the country through the two Balkan wars.

On the outbreak of the Great War Venizelos wished Greece to join the Allies, but the king decided otherwise, and in 1915 the premier was dismissed. He went to Crete and then set up, in the interests of the Allies, a government at Salonica. In 1917 he returned to Greece and forced Constantine to abdicate in favour of his son Alexander. Again prime minister, he brought Greece into the war on the side of the Allies and represented her at the peace conference at Versailles. He resigned in November, 1920, but was again premier for a few weeks in 1924. He was then exiled and went to Paris, but was soon allowed to return. In 1928 he again became prime minister, and he was still holding that position in 1930.

VENNACHAR. Loch of Perthshire, Scotland. About 4 m. long, it is formed by the river Teith, and lies 2 m. W. of Callander, amid beautiful scenery. Ben Ledi overlooks it, and it figures in Scott's *The Lady of the Lake*.

VENTILATION. Maintenance of a sufficient air renewal within confined spaces to meet the needs of health, efficiency, and comfort.

Carbonic acid gas (CO_2) renders air less fit for respiration by hindering the combination of oxygen with the carbon of the blood. Moreover, carbonic acid produced by respiration is accompanied by other injurious impurities. Ordinarily pure air contains about 4 parts in 10,000 of CO_2 . If more than 10 parts be present, discomfort may be caused. Ventilation aims at keeping the proportion of CO_2 down to 6 or 8 parts, by introducing a continuous supply of fresh air to dilute the contaminated air. A human adult expires enough CO_2 to add about 2 parts in 10,000 to 3,000 c. ft. of air. Therefore if this quantity of fresh air be introduced per hour into the room in which a person is, vitiation will not exceed 6 parts in 10,000.

In Great Britain the ventilation of ordinary living rooms depends mainly upon open windows and the draught induced by open fires and stoves. Large buildings require special provision for the introduction of fresh air in adequate quantities. The best results are obtained with mechanically driven fans. See p.588.

VENTNOR. Watery place and urban dist. of the Isle of Wight. Situated 12 m. from Ryde, the town is built in the sides of a cliff. Its mild climate attracts many invalids, and here is the royal national hospital for consumptives. Near are St. Boniface Down and Bonchurch. The latter has a Norman church; in the churchyard of its new church A. C. Swinburne is buried. Steephill Castle is also adjacent to Ventnor, as is the Undercliff. In Sept., 1928, there was a great landslide between Ventnor and Blackgang. Pop. 6,063.

VENTRILOQUISM (Lat. *venter*, stomach; *loqui*, to speak). Art of making the human voice appear to proceed from a distance, or from some person or object other than the actual speaker. Ventriloquism has often been described as speaking in the stomach. This

is not the fact, but some contraction of the stomach muscles does take place in speaking with closed lips. Making a voice appear to proceed from a distance or from images was a trick practised at ancient oracles, especially in Egypt. While much skill and practice are required in the control of the voice by a clever ventriloquist, a great portion of the illusion is brought about by suggestion, the performer subtly indicating to his audience the direction or position whence the voice is supposed to come. See *Acoustics*; *Sound*; *Voice*.

VENUS. In Roman mythology, originally the goddess of gardens, and subsequently identified by the Romans with the Greek

Venus of Milo, in the Louvre, Paris. The statue dates from the 2nd cent., and was discovered at Melos in 1820

those of the moon, and is the brightest of all the planets at times. It is in size and density similar to the earth, and probably has an atmosphere of similar constitution. The transits of Venus across the surface of the sun take place in June and December. The June transits run in pairs separated by eight-year intervals, as do the December transits. The period from one pair of transits to the next is over 100 years. The first recorded transit of Venus was in 1639, observed by J. Horrocks. See *Astronomy*; *Planet*.

VENUS'S FLY-TRAP (*Dionaea muscipula*). Perennial insectivorous herb of the order Droseraceae. A native of N. Carolina and Florida, it has a somewhat bulbous root-stock, from which all the leaves proceed direct. Each leaf has a long stalk which is winged on each side, the blade of the leaf forming two nearly half-circular lobes, whose outer margins are fringed with sharp, rigid spikes. In the centre of each lobe stand three sensitive filaments, and when either of these is touched by an insect, the lobes immediately shut together, the fringe of spikes interlocking like the teeth of a rat gin, thus entrapping the insect.

VENUS'S LOOKING GLASS (*Legousia hybrida*). Annual herb of the order Campanulaceae, a native of Europe and N. Africa. It has small, oval or spoon-shaped leaves, and tubular flowers, blue inside and lilac outside.

VERA CRUZ. Port of Mexico. On the bay of Campeche, 265 m. E.S.E. of Mexico City, it has a spacious and secure harbour. Coffee, ores, tobacco, sugar, and rubber are the leading exports. Pop. 54,225.

Verbena. Leaves and flower spikes

Enrope, N. Africa, and W. Asia, growing in dry, waste ground. It is a downy perennial.

VERDI, GIUSEPPE (1813-1901). Italian composer. Born at Roncole, Parma, Oct. 9, 1813, he began his studies at the Milan conservatory. In 1839 his first opera, *Oberto*, was produced, and was followed three years later by *Nabucco*. With the production of *I Lombardi*, 1843, Verdi's reputation as the leading Italian composer was established, and his fame became world-wide with the appearance of *Rigoletto*, 1851, and *Il Trovatore* and *La Traviata*, both in 1852. *Un Ballo in Maschera*, 1859, and *La Forza del Destino*, 1862, enhanced his fame, and in *Aida*, 1871, written for the khedive Ismail Pasha, he produced another masterpiece. In 1887, *Otello*, technically one of his best works, was produced, and with *Falstaff*, 1893, Verdi closed his active career. In 1898 he was endowed, at Milan, a home for old and invalid musicians, devoting £40,000 to that purpose. He died at Milan, Jan. 27, 1901.

Giuseppe Verdi,
Italian composer

VERDICT (Lat. *vere*, truly; *dictum*, spoken). In law, the finding of a jury as declared to a judge. A verdict is either general or special. A general verdict is where the jury determines the case in favour of one party or the other. If there be more than one issue to be tried, the jury may find some of them in favour of one, and some of the other party.

A special verdict is one in which the jury finds certain facts, generally in answer to written questions put by the judge. These questions and answers constitute a special verdict, and on them the judge must apply the law, and give judgement for plaintiff or defendant accordingly. Special verdicts are of rare occurrence in criminal cases.

In Scotland a verdict goes by the majority, but in England it must be unanimous. In Scotland, also, in a criminal case, a jury may find not proven, meaning thereby that they are not satisfied of the innocence of the prisoner, but neither are they convinced of his guilt. See *Jury*; *Trial*.

Venus. Diagram showing the relative position of the planet's axis to its plane or orbit to the sun, according to W. H. Pickering

From a drawing by Serrien Bolton, F.R.A.S.

VERDIGRIS. Mixture of the three basic acetates of copper used as a pigment, and in dyeing and calico printing. Verdigris is prepared at Grenoble and Montpellier in France, by acting on sheets of copper with the residues from the wine factories. In from ten to twenty days the copper plates become covered with green crystals of verdigris, the variety prepared in this way being known as blue verdigris. Green verdigris is made in England by placing cloths moistened with acetic acid on copper plates. Pron. verdigreece.

Verdun. General view of the town and the cathedral from the right bank of the Meuse

VERDUN. Town of France. It lies on the hilly banks of the Meuse, 30 m. N.N.E. of Bar-le-Duc. It is the seat of a bishop, and after 1870 became a fortress, one of the main defences of the French E. frontier.

Verdun suffered severely in the Great War. The roof of the cathedral of Notre Dame, a building markedly Rhenish in character, was destroyed during a bombardment in 1917. The Porte Chaussée, a bridge gate dating from the 15th century, was little damaged. The citadel, occupying the site of the abbey of S. Vanne, founded in the 10th century, was a favourite target of the German artillery. Many of the old houses rising steeply from the river bank were demolished, 1916-17, and the hôtel de ville also suffered. The town received the cross of the Legion of Honour, the Croix de Guerre, the British Military Cross, and other Allied war decorations, and has been adopted by London. Near Fort Douaumont (q.v.) is a memorial erected over the "Trench of Bayonets," marking the place where a French regiment died in defence of Verdun, being buried alive when the trench gave way. Pop. 14,700.

VERDUN, BATTLES OF, 1916-17. The Germans attacked at Verdun to anticipate the Allied offensive of 1916. On the morning of Feb. 21, 1916, the German artillery heavily shelled the French front east of the Meuse and from the river to Ornes, and German infantry captured Haumont Wood. Next day the French had to yield the village of Haumont and Caures Wood, and on the 23rd Herbebois Wood, and their troops E. and S.E. of Verdun, on the Woivre front, were withdrawn. On Feb. 25 Pétain took command at Verdun, on which day alarm was caused by the fall of

Fort Douaumont and the strong work of Hardaumont. French reserves were rushed to the scene, and, after desperate fighting, the front N. of Verdun was temporarily secured by the French on a line from Vacherauville, S. of Douaumont, to Damloup. The Germans had gained about 5 m. in depth, but they were still $\frac{3}{4}$ m. from Verdun.

On Mar. 4 a great German attack opened W. of the Meuse, and on Mar. 6 the French lost Forges and Regnéville. On Mar. 9 a powerful German attack was delivered on both sides of the Meuse, but was broken by Pétain, except at Vaux village, which the Germans carried, and on the Mort Homme, where they established themselves. On the 10th the French were forced off the summit of the Mort Homme. Early in May the Germans began a terrific offensive to clear the latter and to gain its chief height, Hill 304. After days of fierce fighting they established themselves on Hill 304, were flung off it by the French on May 7, and in the end recovered it. Fort Vaux fell to the Germans on June 8, after a memorable defence by the French.

On June 23 the Germans began an attack, the object of which was to seize Fort Souville and break in on Verdun. Advancing with 50 battalions they took Thiaumont redoubt and entered Fleury, but failed to carry Fort Souville. By this time the guns had opened on the Somme and the German pressure at Verdun slackened. Nivelle, who was now in command, held the Germans as tightly as possible, in that way assisting the Allies at the Somme. On Oct. 24 Mangin struck a tremendous blow in the Douaumont region, Fort Douaumont being stormed by Moroccan troops. This great French success caused the Germans to evacuate Fort Vaux, and on Nov. 5 the French re-occupied Damloup and its fort. By Dec. 18 the battle closed with the re-establishment of the French front E. of the Meuse almost as it stood in Feb. before the opening of the offensive. During the fighting in this year the German loss was 328,500 and the French loss 348,300.

In Aug., 1917, the French renewed operations on both sides of the Meuse for the clearance of the Mort Homme, Côte de l'Oie, and Côte du Talou, with complete success. Hill 304 was finally secured, with nearly 8,000 prisoners. In all, in this battle, which closed on Sept. 2, the French took over 10,000 prisoners and more than 100 guns. No fighting of importance took place in the Verdun section until the final Allied offensives in the autumn of 1918. See Mangin; Nivelle; Pétain; Somme.

VERDUN. City of Quebec, Canada. It stands on the island of Montreal, adjoining the city of that name, of which it is a residential suburb. Pop. 46,477

VERE. Famous English family. They came from Ver, in Normandy, and in the 12th century, in England, one of them secured the hereditary office of lord great chamberlain and another the earldom of Oxford. With occasional intervals, due to political troubles, they

held the office until the death of the 18th earl in 1625, and the title until the death of the last male of the line, Aubrey, the 20th earl, in 1703. Their chief seat was Castle Hedingham, in Essex, and they had large estates in that county. Two members of the family, Sir Francis Vere (1560-1609) and Sir Horace Vere (1565-1635), distinguished themselves as soldiers. Sir Francis commanded the English forces in the Netherlands and then wrote his Commentaries. Sir Horace succeeded his brother in 1604 as leader in the Netherlands, and in 1630 took a force into Germany to aid Frederick, elector palatine.

VERE, SIR AUBREY DE (1788-1846). Irish poet. Born Aug. 28, 1788, eldest son of Sir Vere Hunt, of Curragh Chase, co. Limerick, a collateral descendant of the 15th earl of Oxford, he was educated at Harrow, succeeded to his father's baronetcy in 1818, and assumed the name of De Vere in 1832. His first literary work was a dramatic poem on Julian the Apostate, 1822. It was followed by Irish and other poems, a volume of sonnets, and a drama with Mary Tudor as its central figure, published posthumously in 1847. He died July 5, 1846.

His son, Aubrey Thomas Hunt de Vere (1814-1902), was educated at Trinity College, Dublin, and in 1857 became a Roman Catholic. Among his poems are *The Search after Prosperine*, 1843; *The Sisters*, 1861; *St. Peter's Chains*, 1888; and two poetical dramas, *Alexander the Great*, 1874, and *St. Thomas of Canterbury*, 1876. He died Jan. 20, 1902.

VEREENING. Town of the Transvaal. It stands on the Vaal river, 49 m. by rail S. of Johannesburg. A barrage holds up the river water, which is used for irrigation. Coal is mined, and there are electric power works, iron smelters, and brick and tile works. Pop. (white) 703.

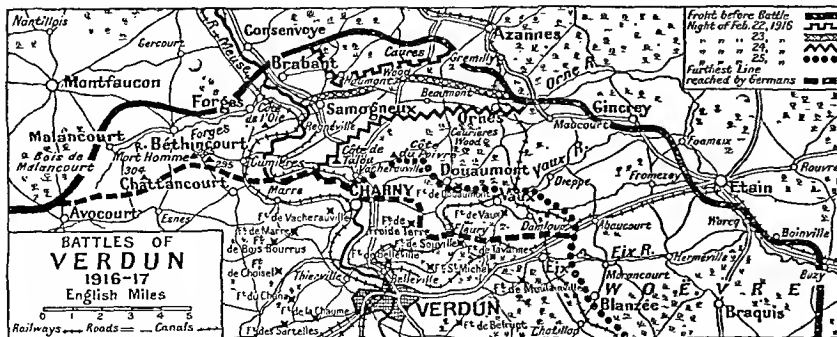

The treaty of Vereeniging was signed between Great Britain and the representatives of the two Boer republics, the Transvaal and Orange Free State, May 31, 1902. The terms included the annexation of the republics; all in arms to surrender; and all who took an oath of allegiance to the king to be returned to their homes. £3,000,000 was given to the Boers as compensation for the destruction of their farms, and the Dutch language was allowed in the schools and law courts. Great Britain undertook to grant a civil administration to the two colonies at an early date, and to respect the liberty and property of the Dutch. See South African War.

VERESHCHAGIN, VASILII (1842-1904). Russian painter. Born at Liubets (Novgorod), he studied for the navy, but in 1860 he entered the St. Petersburg Academy. In 1867 he accompanied Kauffmann in his expedition to Turkistan, and was present at the defence of Samarkand, and in 1877 he took part in the Russo-Turkish War. He also visited India, Syria, Palestine, and China. During the Russo-Japanese War he was killed on board Makaroff's flagship, when the latter was destroyed by the Japanese on April 13, 1904. Pron. Veresh-chagin.

Vasilii Vereshchagin, Russian painter

VERHAEREN, ÉMILE (1855-1916). Belgian poet. Born at St. Amand, near Antwerp, May 21, 1855, he was educated at Ghent, and studied law at Louvain University. There, as founder of the review, *La Semaine*, he showed his poetic gifts, and he was a leader of the literary revival in Belgium centring in *La Jeune Belgique*. He published his first book of verse, *Les Flamandes*, 1883. Other volumes include *Les Moines*, 1886; *Les Soirs*, 1888; *Les Villes Tentaculaires*, 1896; *Toute la*

Verdun. Map of the area over which the battles of 1916-17 took place, notable for some of the most determined fighting of the World War

Flandre, 1904-11; *Les Rhythmes Souverains*, 1910; and poems inspired by the Great War. Verhaeren was accidentally killed in Rouen rly. station, Nov. 27, 1916. He was in many ways the most distinctive and powerful of modern Belgian writers, excelling in his pictures of his native Flanders.

Émile Verhaeren,
Belgian poet

VERLAINE, PAUL (1844-96). French poet. He was born at Metz, March 30, 1844. After a short period as a clerk, he began publishing poems influenced by Baudelaire, which won him fame among those who came to be known as the Decadents. Owing to the part taken by him during the Commune, 1871, he went into exile in England. In 1874 he published his *Romanesques sans Paroles*. He went to Belgium, where he was in prison for two years, became a Roman Catholic, and earned a living as a teacher in London.

In 1881 Verlaine published a volume of tender religious poems, reflecting his new spirit, *La Sagesse*; this was followed, in 1884, by a volume of prose criticism. Later works included *Amour*, 1888; *Parallèlement*, typifying the duality of the poet in strange alternations of verses on sin and repentance, 1889; *Bonheur*, 1891; *Dédicaces*, 1894; and *Confessions*, 1895. He died Jan. 8, 1896.

Paul Verlaine,
French poet

VERMEER OR VAN DER MEER, JOHANNES (1632-75). Dutch painter. Born at Delft, he studied under Carel Fabritius, joined the Delft guild of painters in 1653, and died at Delft. His few extant works include *The Proposal*, in the Dresden Gallery; *A Young Lady at the Virginals*, in the National Gallery, London; and *The Letter Reader*, in the Rijks Museum, Amsterdam.

VERMICELLI (Ital. little worms). Italian food manufactured from a wheaten paste such as is used for macaroni, and pressed out into thin threads resembling worms. It is used chiefly in soups and puddings.

VERMILION. Variety of mercuric sulphide used as a pigment. It is prepared by subliming the black sulphide, which is obtained by heating sulphur with mercury in an iron pan. The sublimation process is usually carried out in clay retorts. Another process, the wet process, is more economical, and is becoming more widely used in consequence. Vermilion is one of the permanent pigments, a brilliant scarlet in colour, and possessing great body and weight.

VERMONT. State of the U.S.A. One of the New England states, its area is 9,564 sq. m. Vermont derives its name from the Green Mts., which extend throughout its length. The Connecticut, the boundary with New Hampshire, is the only river of importance. Part of the W. frontier is marked by Lake Champlain, in which are several islands belonging to the state. Vermont is noted for its butter, cheese, and maple sugar, and produces about one-half the marble of the U.S.A., besides slate and granite. The forests provide much lumber. Higher education is provided at the university of Vermont and elsewhere. There are some 1,500 m. of rlys. Montpelier is the capital. Burlington and Rutland are other towns. Pop. 352,428.

VERMOUTH. Liqueur manufactured in or near Turin and in France. It is made from alcoholised white wine, aromatised with wormwood (Ger. *Wermuth*), gentian, oranges,

angelica, etc., and then sweetened. French vermouth, made by a complicated process of fortification from White Herault wines, is "dry," and contains some 17 p.c. of alcohol. Italian vermouth has slightly more alcohol, and in Italy is usually drunk with aerated water. Vermouth is one of the lighter liqueurs. Pron. Vair-moot.

VERNAL GRASS (*Anthoxanthum odoratum*). Perennial pasture grass of the order Gramineae. A native of Europe, N. Asia, and N. Africa, it has a creeping root-stock and many erect stems. The leaves are flat and hairy. The flower cluster is oval and spike-like. There are two stamens in each flower, with large yellow or purple anthers. The plant gives off the characteristic odour of new-mown hay. The name is due to its early flowering, April to June.

VERNE, JULES (1828-1905). French author. Born at Nantes, Feb. 8, 1828, he early turned to literary work, and soon found his special vein in the romance based on marvellous adventure. He made good use of scientific knowledge, invented extensions of it, and was successful in giving an appearance of verisimilitude to the wildest flights of his fancy. Nearly all of his books have been translated into English, some of the more notable of them being *Five Weeks in a Balloon*, 1870; *The English at the North Pole*, 1870; *Twenty Thousand Leagues Under the Sea*, 1870; *Around the World in Eighty Days*, 1873; *The Mysterious Island*, 1875; and *From the Earth to the Moon*. Died March 24, 1905.

Jules Verne,
French author

VERNET, ANTOINE CHARLES HORACE (1758-1835). French painter, usually known as Carle Vernet. Born at Bordeaux, Aug. 14, 1758, he studied the art of painting under his father and Lépicié. After a visit to Italy he settled in Paris, and in 1788 was admitted to the Academy. He was an exceptional painter of horses, and his subjects included contemporary battle pictures, portraits, humorous genre, and landscapes. He died in Paris, Nov. 17, 1835.

Vernet's father, Claude Joseph Vernet (1714-89), was best known for his series of paintings of the seaports of France, and the family tradition was carried on by Emile Jean Horace Vernet (1789-1863), a son of Carle Vernet, who made his name as a painter of military subjects.

VERNEY, SIR EDMUND (1590-1642). English courtier. Member of an old Buckinghamshire family, he was educated at Oxford, served in the Netherlands, and travelled in France and Italy. Attached to the household of Prince Charles in 1613, he accompanied him to Madrid, and sat in the Short and the Long Parliaments. Verney bore the royal standard at the battle of Edgehill, where he was killed, Oct. 23, 1642. A baronetcy was conferred on the head of the family in 1818. See Edgehill.

Sir Edmund Verney,
English courtier
After Van Dyck

VERNIER. Device applied to a scale to give accurate readings in fractions of the smallest division of the scale. It is used on micrometers and other scientific instruments.

A sliding caliper vernier is illustrated, as engraved on the sliding jaw. The scale on the shaft gives measurements in tenths of inches. The vernier scale has ten divisions, together equal to nine divisions of the scale, each therefore representing $\frac{1}{10}$ of $\frac{1}{10}$ of an inch. In the illustration the zero mark of the vernier has passed the inch mark of the scale, but

has not reached the next $\frac{1}{10}$ inch mark. To decide the value of the fraction the vernier is consulted, and its 7 line is found to correspond exactly with a scale mark. It is evident that the 6 line of the vernier is $\frac{1}{10}$ of $\frac{1}{10}$ inch to the right of the nearest scale mark on its left; the 5 line, $\frac{2}{10}$ of $\frac{1}{10}$ inch; and so on to the zero mark, which is $\frac{7}{10}$ of $\frac{1}{10}$ inch beyond one inch. The reading therefore is 1.07 inch. It is named from Pierre Vernier (d. 1637).

VERNON, EDWARD (1684-1757). British sailor. Born Nov. 12, 1684, he joined the navy in 1701, served in the W Indies and Mediterranean, and became rear-admiral. He was M.P. for Penryn, 1727-34, and in 1739 commanded a fleet to the Antilles and captured Porto Bello. He died Oct. 30, 1757. Vernon introduced the use of rum and water to the sailors, and this was therefore called grog, the admiral's nickname being "Old Grog."

VERONA. City of Italy. It stands on the Adige, 72 m. by rly. W. of Venice. One of the fortresses of the quadrilateral, it is an important rly. junction. The ruined amphitheatre dates from the time of Diocletian. The Palazzo del Consiglio is a fine Renaissance building. The cathedral dates from 1187. The Castel Vecchio (1355) is at one end of an ancient pinnacled bridge. Notable churches include the magnificent Romanesque basilica, San Zeno Maggiore (1139), San Fermo Maggiore, with a fine façade, Santo Stefano, probably of the 11th century, and the Dominican church of Sant' Anastasia, a treasure house of pictures and sculptures. Pop. 151,707. See Amphitheatre.

Verona. The Old Bridge, with the Castel Vecchio, built in the 14th century

The Congress of Verona was a meeting of plenipotentiaries of France, Russia, Austria, Prussia, and Britain at Verona in 1822. Britain was represented by the duke of Wellington. Among points discussed were the relations of Greece, Turkey, and Russia; the slave trade; the recognition of the new South American republics; and the question of interference in Spain, where France was desirous of checking a democratic movement against the monarchy. On this Wellington took an independent line. See Europe.

VERONAL OR DIETHYLBARBITURIC ACID, $C_8H_{12}N_2O_3$. White crystalline powder. It is an hypnotic, but is not much given now, as it has been responsible for a number of cases of fatal poisoning. The symptoms of poisoning are headache, drowsiness followed by deep coma, and often a rise of temperature. A rash on the skin may be present, and death may occur in from one to three days. Treatment is to wash out the stomach.

Vernier. Diagram of portion of a scale, reduced, showing a measurement of 1.07 in.

VERONESE, PAOLO (1528-88). Italian painter, whose real name was Paolo Cagliari. Born at Verona, he was a son of Piero di Gabriele Cagliari, a decorative sculptor. He soon achieved a reputation in historical painting, and in 1555 was welcomed by Titian in Venice, where he became the favourite decorative painter of the day. In 1560-62 he was in Rome, and his grandest works were painted in Venice, 1562-70. He died in Venice, of pleurisy, April 19, 1588.

Paolo Veronese,
Italian painter
Self-portrait

His popular works include the Marriage at Cana, in the Louvre; the two great mural paintings of the martyrdom of S. Sebastian, in the church of that saint in Venice; The Family of Darius, in the National Gallery London; and The Supper at Emmaus, in the Louvre, Paris.

VERONICA. Genus of shrubs and herbs of the order Scrophulariaceae. They are natives of the N temperate regions, including Britain, and of New Zealand, Australia, and Chile, ranging from a few inches to three feet in height, with white, pink, or blue flowers.

VERONICA. Legendary saint. It is said that, having been healed by Christ, she wiped His face when carrying the cross, and that an image of His features was miraculously imprinted on her kerchief. By its means she is said to have cured and converted the emperor Tiberius. The alleged kerchief is preserved in Rome, though Milan and Jaén also claim the honour. The name Veronica is a corruption of Berenice, the saint's name in early forms of the legend.

VERRES, GAIUS (c 120-43 B.C.). Roman governor. His government of Sicily, 73-71, was marked by such a degree of extortion that the inhabitants had him prosecuted at the end of his term of office. The prosecution was entrusted to Cicero, and the speech which he delivered at the trial, 70 B.C., established his reputation as the most promising forensic orator of the day. So overwhelming was the evidence brought forward that Hortensius, the counsel of Verres, threw up his brief.

VERROCCHIO, ANDREA DEL (1435-88). Italian sculptor and painter. Born in Florence, he studied under Donatello, and developed into one of the finest craftsmen of the Renaissance. He was the master of Leonardo da Vinci, Lorenzo di Credi, and Pietro Perugino. He died in Venice. His best known works are the heroic equestrian statue of Colleoni in Venice, and the bronze David, now in the Bargello, Florence. See Colleoni, B.

VERSAILLES. Town of France, 10 m. W.S.W. of Paris. It is famed chiefly for the palace and park, though the cathedral and the church of Notre Dame are noteworthy.

The palace and park lie to the N.W., three main avenues crossing the town to the Place

d'Armes in front of the palace. A modest château, built by Louis XIII in 1627, was the centre round which Louis XIV built the enormous structure which, begun in 1661, became in 1683 the chief royal residence in France. It consists of a great central court, the Cour Royale, from which depend lateral wings. Among features of the interior are the Galerie des Glaces, in which William I was proclaimed German emperor and the peace treaty of 1919 was signed. The park is notable especially for its ornamental waters and fountains, the Trianons (q.v.), the Orangery, and the alleys leading up to the Étoile Royale.

The treaty of Versailles, 1783, which ended the War of American Independence, the meetings of the States General, 1789, and the National Assembly, the peace of 1871, the voting of the present republican constitution, 1875, and the treaty of 1919 are among the town's most historic landmarks. Pop. 68,575. See Fountain · Paris.

VERSAILLES, TREATY OF. International treaty made between the British Empire, the United States, France, Italy, Japan, Belgium, Bolivia, Brazil, Cuba, Ecuador, Greece, Guatemala, Haiti, Hejaz, Honduras, Liberia, Nicaragua, Panama, Peru, Poland, Portugal, Rumania, Yugoslavia, Czechoslovakia, Siam, and Uruguay on the one part, and Germany on the other. It was signed at Versailles on June 28, 1919, and ratified on Jan. 10, 1920, on which day its clauses came into force. China declined to sign, and the United States Senate rejected the treaty, so that the U.S.A. was not in the end a participant.

The first 26 articles established the League of Nations (q.v.). Important territorial changes were made in the political clauses.

Germany definitely surrendered Alsace-Lorraine to France; and Posen and W. Prussia, with an area of 18,000 sq. m., to Poland. The treaty also provided for a plebiscite in certain areas of mixed population.

The military and naval terms were complicated. The Allies were to occupy German territory W. of the Rhine, together with the bridgeheads of Cologne, Coblenz, Mainz, and Kehl, for 15 years; but provision was made for earlier evacuation of parts of this territory if the terms were faithfully fulfilled by Germany. Germany was forbidden to possess submarines, or any military or naval air force, or to manufacture tanks, armoured cars, or poison gas. Compulsory military service was to be abolished. The army was to be reduced to 100,000 men. The fortifications of Heligoland and of points commanding routes between the North Sea and the Baltic were to be demolished, and all the German fleet surrendered, except 6 small battleships, 6 light cruisers, 12 destroyers, and 12 torpedo boats.

The reparation clauses were of extreme importance. Germany accepted responsibility for all loss and damage caused to the Allies by the war. The Allies required a payment of £1,000,000,000 in gold, goods, or ships before May, 1921, with large subsequent payments to be completed in 30 years. Germany was to restore the devastated area in France and Belgium. She was to surrender all her merchant ships of 1,600 tons and over, and half her ships between 1,600 and 1,000 tons; she was to surrender all her transmarine cables. She was to deliver animals and plant to make good what she had destroyed or taken in the invaded zone, and to hand over pictures, manuscripts, and early printed books equivalent to those destroyed at Louvain. There were other provisions, including those dealing with the status of Allied citizens in Germany, etc. See Europe: Germany; Reparations.

Versailles Council. Allied military committee in the Great War which met at Versailles, usually called the supreme council (q.v.).

VERSE (Lat. versus, a furrow, from *vertere*, to turn). Universal medium of poetry. It denotes a series of syllables or sounds, ordered and measured in a particular way. The unit of measurement for this flowing or rhythmic movement is usually called a foot, since by the arrangement of these syllabic groups, as in dancing, with which primitive poetry was associated, by the beat of the foot, the character of the rhythm is determined.

In the classical languages the unit or foot varied according to the quantity, i.e. the distribution within it of the long and short syllables, but in modern languages the number of syllables and the incidence of the stress or accent determine the nature of the foot and so govern the metre. It is usual, however, in describing English verse to employ the classical terms, and, regarding stressed syllables as long and unstressed as short, to speak of iambic, trochaic, dactylic, or anapaestic verse.

VERTEBRAE (Lat. *vertebra*, a joint). Component bones of the spinal column. In man, the vertebrae are originally 33 in number. Of these 24 remain movable, while five at the lower part of the limb unite to form the sacrum, and four small terminal bones constitute the coccyx. Each vertebra consists of a short cylindrical part or body, which is connected with the vertebrae above and below by an intervertebral cartilaginous disk. The vertebrae are divided into five groups—namely, cervical, dorsal, lumbar, sacral, and coccygeal. The cervical vertebrae are the first seven. They are the smallest of the movable vertebrae. The dorsal or thoracic vertebrae are twelve in number and support the ribs. The five lumbar vertebrae are the largest of the movable vertebrae. See Anatomy.

Versailles. 1. Main entrance, looking towards the principal courtyard. 2. Galerie des Glaces, where William I was crowned German emperor in 1871, and where the treaty of Versailles was signed, 1919.

VERTEBRATE. Class of the animal kingdom which includes all those animals that possess a backbone. It comprises the fishes, amphibians, reptiles, birds, and mammals, and includes about 32,000 recognized species. The term chordates is preferred by some zoologists, as certain of the lowest forms included in the phylum have a smooth elastic rod, called the notochord, instead of a jointed vertebral column. See Animal.

Vertigo. Sense of instability and rotatory movement of the body. See Fainting.

VERULAM. Town of Natal. It is 19 m. by rly. N.N.E. of Durban and about 7 m. from the coast, and is the centre of sugar, fruit, and tobacco plantations. Pop. (white) 320.

The English title of earl of Verulam has been held since 1815 by the family of Grimston. His eldest son is known as Viscount Grimston, and his seat, Gorhambury, St. Albans, was offered for sale in 1930.

VERULAMIUM. Name of an ancient Roman city in Hertfordshire. It stood to the W. of St. Albans (q.v.), and was partially destroyed by Boadicea in 61.

Vervain. Perennial herb of the order Verbenaceae. See Verhena.

VERY LIGHT. Type of firework used for military, aerial, and naval signalling by showing a coloured light. The signals, fired from a special large-bore pistol, are made up in paper-lined brass cartridges, which contain a charge of black powder as the propellant and above that a coloured star, which is a package of composition similar to that used for flares. A piece of quick-match and priming of mealed powder enable the star to be ignited from the propellant. See Fireworks.

VESPASIAN (A.D. 9-79). Roman emperor 69-79, whose full name was Titus Flavius Sabinus Vespasianus. A man of obscure family, he rose to high military commands in Germany and Britain, and was in charge of the war against the Jews during the confusion

Vespasian, Roman emperor
Ny Carlsberg Museum
Copenhagen

which followed the death of Nero in 68. On July 1, 69, he was proclaimed emperor by his troops, and, his general Primus defeating in Italy the forces of the reigning emperor Vitellius, Vespasian came to Rome in 70, leaving his son Titus to continue the war against the Jews. He devoted himself largely to settling in order the finances of the empire,

which had suffered grievously under his extravagant predecessors. His economies, however, did not prevent him from erecting numerous public buildings. He was above all a soldier, and his reign was marked by extension of the Roman Empire in Britain and elsewhere. He died June 23, 79. See Colosseum; Rome; Sesterc.

VESPER. Sixth canonical hour of the divine office as given in the breviary of the R.C. Church. It consists of psalms, lessons, hymns, etc., varying day by day through the year, and is recited daily by all clergy and religious of both sexes. The term is also loosely applied to any evening service.

VESPUCCI, AMERIGO (1451-1512). Italian navigator. Born in Florence, March 9, 1451, he was employed in the business house of the Medici. In 1492 he set up for himself at Seville, Spain, and entered into the commerce then beginning with the New World. He made several voyages thither, sailing in Spanish and Portuguese vessels, and gained acquaintance with the little-known coasts of S. America. He spent the remainder of his life in making charts and maps of the New World.

During his voyages Vespucci appears to have explored the N.W. coast of the S. American continent. On the publication of his travels, in 1507, the claim was made that Vespucci had discovered the mainland, which was accordingly named after him, and though the matter was long in dispute and has latterly been decided against him, Amerigo's name, originally given to a small strip of land on the gulf of Mexico, was eventually given to the whole of the New World. Vespucci died at Seville Feb. 23, 1512. Pron. Vespuotchee.

VESTA. In Roman mythology, Italian goddess of the hearth. She was later identified by the Romans with the Greek goddess Hestia, whose attributes were similar. The worship of Vesta was a recognition of the supreme importance of fire in primitive communities. A temple, the Atrium Vestae, was maintained in her honour in the Forum. According to tradition, this sacred fire was brought from Troy by Aeneas. See Rome.

Vesta is also the name of one of the asteroids. Fourth in order to be found, and the brightest known of the asteroids, it can occasionally be seen by the naked eye, and has an approximate diameter of 350 m. It revolves round the sun in about 1,326 days. See Asteroid.

VESTAL VIRGIN. Priestess of the temple of Vesta in Rome. They were six in number, entered the service of Vesta at from six to ten years of age, and were either offered by their parents or chosen by lot from families selected by the Pontifex Maximus. Service lasted for thirty years in all, after which period they were free to return to civil life. During their service they were vowed to chastity, and breaking this vow, they could be buried alive by the Pontifex Maximus. Their chief duty was the maintenance of the sacred fire in the temple. They were abolished in A.D. 394.

VESTMENT (Lat. vestire, to clothe). In an ecclesiastical sense, garments worn by clergy, choir, and their assistants over ordinary dress during divine service. Vestments worn by officiating clergy are sometimes called canonicals, because prescribed by canon law. The idea that clerical vestments were derived from Jewish practice has given way to the view that they had their origin in the ordinary dress of the Roman empire. See Alb; Chasuble; Cope; Mitre, etc.

VESTIS, MADAME (1797-1856). British actress and singer. Daughter of Gaetano Stefano Bartolozzi (1757-1821), engraver, she was born in London and christened Lucia Elizabeth. In 1813 she married the Italian dancer Auguste Armand Vestris (1787-1825), from whom she separated in 1816. A year earlier she made her first appearance in opera. She acted in Paris, 1816, at Drury Lane, 1820, and won popularity in light comedy and burlesque in London and the provinces. In 1831, with Maria Foote, she opened the Olympic Theatre, London, and in 1838 married Charles James Mathews. She retired in 1854, and died Aug. 8, 1856.

VESTRY (Lat. restiarium, wardrobe). Room attached to a church in which the vestments are kept. Qualified parishioners used

Vestal Virgin. Statue of Flavia Publicia, high priestess, A.D. 247-286
Temple of Vesta, Rome

Lucia Vestris, British actress

to meet in vestry to consider parish affairs, and the name was applied to the meeting itself. The vestry meeting is still held each Easter, but for church affairs, such as the election of churchwardens, only.

Vesuvius. The active cone of the volcano during a slight eruption

VESUVIUS. Volcano in Italy. It rises to a height of about 4,000 ft., 10 miles E.S.E. of Naples, on the shore of the Bay of Naples. There are two summits, the nearly perfect cone of Vesuvius and the old crater of Somma, which encloses the central cone. Before A.D. 79 the mountain was regarded as a truncated peak. Its crater formed a deep depression, and its slopes were obscured by thick forests. Its vicinity was thickly peopled, as its volcanic nature was probably not suspected. On Aug. 24, 79, a tremendous eruption took place, and Pompeii and other towns were buried under ashes, while Herculaneum was overwhelmed by a torrent of mud. Among subsequent explosions are those of 472, 1631, 1794, 1861, 1872, and 1906. A wire rope rly. connects the summit with the base, and an observatory is maintained near the cone. Grapes are grown on the slopes for wine. See illus. pp. 442; 724.

VETCH OR TARE (Vicia sativa). Annual herb of the order Leguminosae, a native of the Mediterranean region. Widely cultivated as a fodder plant, it has several stems, with alternate leaves divided into five or six pairs of oval or oblong leaflets, and ending in tendrils by means of which the plant climbs up grass stems, etc. The pale purple stalkless flowers are either solitary or in pairs, and the long pods are hairy. See Kidney Vetch.

Vetch. Spray of flowers and leaves, showing tendrils

VETERINARY SCIENCE. Science of treating the diseases of domestic animals. It is usually confined to those of the horse, cattle, sheep, pig, and dog, although others, e.g. cats and goats, are sometimes entrusted to veterinary surgeons.

The main infectious diseases from which the five animals suffer, and which form the staple of veterinary science, are rabies and distemper, peculiar to dogs; swine fever and swine erysipelas, peculiar to the pig; braxy and louping ill, peculiar to the sheep; rinderpest and bovine pleuro-pneumonia, that affect only cattle; and strangles and S. African horse sickness, that affect only horses. Others, which attack more than one species, are quarter ill, glanders, actinomycosis, tetanus, foot and mouth disease, tuberculosis, and anthrax. Six of these, actinomycosis, anthrax,

foot and mouth disease, glanders, tetanus, and tuberculosis, are communicable to man.

Examinations in veterinary science are conducted in Great Britain by the Royal College of Veterinary Surgeons at 10, Red Lion Square, London, W.C.1, an institution chartered in 1844, and possessing the sole right of granting veterinary diplomas. The Royal Veterinary College, Camden Town, London, was founded 1791, and like other veterinary colleges in Edinburgh, Glasgow, Dublin, and Liverpool, is affiliated to the parent institution. In the army there is a Royal Army Veterinary Corps.

VETO (Lat. I forbid) Term for the power of checking proposed legislation possessed by a king or body of men. In Great Britain the sovereign has not used his right of veto since 1707. In parliaments of two houses one usually possesses the right of vetoing legislation passed by the other, and this was the case in the United Kingdom until 1911. The Parliament Act of that year, however, reduced the power of the veto possessed by the Lords to a maximum period of two years. The president of the

U.S.A. has a veto on all legislation, but if the two houses jointly then pass a vetoed measure by a majority of two-thirds it becomes law.

VEVEY. Town of Switzerland. It stands on the Lake of Geneva, 11 m. by rly. E.S.E. of Lausanne. Steamers go from here to other places on the lake, and there is a funicular rly. that goes up Mont Pélérin. Pop. 12,825.

Vevey. The town and Lake of Geneva from Mont Pélérin

VIATICUM (Lat. provision for a journey). Administration of the Holy Communion to the dangerously sick or dying. The Roman Catholic Church has a special formulary for this office, which is provided for in the Church of England by directions for the Communion of the Sick. In the ancient Church, baptism and the Eucharist were called Viaticum.

VIBORG or **VIBURJ.** Town of Finland. It is situated on a bay of the gulf of Finland, at the mouth of the Saima Canal, about 75 m. N.W. of Leningrad. It is an important rly. junction and trading centre. Founded by the Swedes in 1293, it was formerly the capital of Karelia. Pop. 54,120.

VICAR (Lat. vicarius, deputy). In the Church of England, any incumbent of a parish, not a rector, entitled to solemnise marriages and keep the fees. Theoretically, the owner of the tithes is the rector, and the vicar is his deputy. Vicars choral are the assistants of the canons or prebendaries of collegiate churches, especially in connexion with the musical parts of divine service.

One of the titles of the pope is Vicar of Jesus Christ.

A vicar general is a lay legal officer who acts as deputy of the archbishops of Canterbury and York in granting marriage licences, the institution to benefices, and the confirmation of bishops. His office is 3, Creed Lane, London, E.C.

In the Roman Catholic Church a bishop may appoint two or more vicars general to assist him, and may assign to each jurisdiction over a particular district, or commit to one charge of contentious matters, to another voluntary jurisdiction, or give them all joint and full jurisdiction over the whole diocese, apart from offices coming under pontificalia.

VICARS, HEDLEY SHAFTO JOHNSTONE (1826-55). British soldier. Born in the Mauritius, Dec. 7, 1826, he served in Corfu, Malta, Jamaica, and Nova Scotia. He was killed in the Crimean War when repulsing a Russian attack on the trenches before Sevastopol, March 22, 1855. Vicars was admired by thousands as the ideal of a Christian soldier, constant in his practical care for the moral and spiritual welfare of the troops.

VICE on **VISE.** Name for various tools having two jaws for clamping between them material to be worked. They are used in filing or planing operations in which both hands are required to be free. A hand-vice, which strictly is not a vice, has a tang which is held in one hand, the other hand being free to hold a tool. Vices may have two movable jaws, although those in common use have one jaw fixed: the jaws are actuated by screw, cam, lever, or equivalent mechanism.

Vice. Carpenter's bench vice with wooden jaws

Vice-Admiral. Officer in the British Navy ranking between admiral and rear-admiral. See Admiral.

VICE-CHANCELLOR. Deputy of a chancellor. In the English legal system, the vice-chancellors, originally assistants to the lord chancellor, became prominent equity officials. The title was discontinued in 1873, and the last vice-chancellor was Sir James Bacon (1798-1895). The judge of the court of the duchy of Lancaster is called the vice-chancellor.

The office is an important one in the English universities, where the vice-chancellor, as representing the chancellor, is the acting head of the university. See Chancellor.

VICENTE, GIL (c. 1470-1540). Portuguese dramatist. A native of Guimarães, he became attached successively to the courts of Manoel I and John III, for whom he provided dramatic entertainments. He wrote 44 plays, some in Spanish, some in Portuguese, and others in both. His work included the famous *Auto of the Soul*, 1508, tragi-comedies for the court, and popular comedies and farces, such as *Ignéz Pereira*, 1523.

VICENZA. City of Italy, 41 m. by rly. W.N.W. of Venice. The old city is girdled by half-ruined walls. Many of its buildings were designed by Palladio, a native; the Basilica Palladiana surrounding the Palazzo della Ragione has a slender campanile, the Rotonda Palladiana has Greek colonnades, the Teatro Olimpico has curious permanent scenery on the stage. Silk and silk goods are the chief products; straw hats, woollens, leather, and musical instruments are also made. There is trade in wine, wheat, etc. Pop. 66,967.

VICEROY (Lat. vice, in place of; Fr. roi, king). Term used for one who governs on behalf of a sovereign. The governor-general of India is usually called the viceroy, as was the lord-lieutenant of Ireland until 1922. The Spanish king's representatives in Naples and America were officially styled viceroys. The feminine is vicereine.

VICHY. Health resort of France. It stands on the Allier, 75 m. W.N.W. of Lyons. Its popularity is due to its agreeable climate and thermal springs. There is a large export of the waters, which are efficacious for digestive ailments, gout, liver, and certain anaemic complaints. The waters were known to the Romans, whose name for the town was *Vicus Calidus*. Pop. 17,500.

VICKERS. Name of a British engineering firm. It originated as a steel making business in Sheffield, and began to construct guns when Sir Hiram Maxim (q.v.) joined it in 1883. The firm gives its name to certain types of machine guns and also to a series of aeroplanes, which Vickers began to build in 1911. The first aeroplane designed to carry a machine gun was the Vickers plane of 1913. Their most famous product is the Vickers Vimy, a two-engine machine designed in 1918 for bombing work, which later achieved both the first non-stop cross-Atlantic flight and the first flight from England to Australia. See Aeroplane.

VICKERSTOWN. District of Walney Island, Lancashire, part of Barrow-in-Furness. It was built early in the 20th century by the firm of Vickers for the accommodation of their employees. See Walney.

VICTOR EMMANUEL I (1759-1824). King of Sardinia, 1802-21. Born at Turin, July 24, 1759, the second son of Victor Amadeus II, he came to the throne on the abdication of his brother Charles Emmanuel II, 1802, although the French occupied all his territory except Sardinia. He regained his kingdom, with the addition of Genoa, in 1815. He abdicated in favour of his brother Charles Felix, March 13, 1821, and retired to Nice, where he died, Jan. 10, 1824.

VICTOR EMMANUEL II (1820-78). First king of Italy. Son of Charles Albert, king of Sardinia, he was born at Turin, March 14, 1820, and became king on his father's abdication in March, 1849. He participated in the Crimean War, and the alliance with France in 1859 enabled him to wage war on Austria and to liberate Lombardy. The following year Tuscany, Modena, and Parma united themselves together, while Garibaldi's conquest of Sicily and Naples

Victor Emmanuel II, King of Italy

added the whole peninsula, save Rome and Venetia, to Italy, of which Victor Emmanuel was declared king, Feb. 26, 1861. The inclusion of Venetia, 1866, and Rome, 1870, completed his realms. The *Re galantuomo*, or gallant king, as he was universally called, died Jan. 9, 1878.

VICTOR EMMANUEL III (b. 1869). King of Italy. Son of Humbert I, he was born at Naples, Nov. 11, 1869. In 1896 he married Princess Elena of Montenegro. His family consists of a son and four daughters. The son, Humbert, prince of Piedmont (b. 1904), was married in 1930 to Princess Marie José of Belgium. The third daughter, Giovanna, was married in 1930 to Boris, king of Bulgaria. Victor Emmanuel ascended the throne on the assassination of his father, July 29, 1900. A wise and tactful monarch, he skillfully guided his country during the Great War on the side of the Allies. He was noted for his wide culture.

Victor Emmanuel III, King of Italy

VICTORIA. Four-wheeled carriage, having a low seat for two, a raised seat in front for the driver, and a calash top. It is named after Queen Victoria, in whose reign it was introduced. Before the advent of the motor car it was a very popular vehicle. See *illus.* p. 1389.

VICTORIA. British battleship. Launched in 1897, she carried two 16.25-in. and one 10-in. guns on a displacement of 10,470 tons. She

was rammed and sunk during manoeuvres in the Mediterranean by the battleship Camperdown on June 22, 1893, 321 officers and men being lost. The fleet was steaming in two parallel columns, the Victoria and Camperdown leading. The admiral, Sir George Tryon (q.v.), in the Victoria, tried to turn the columns inwards in an insufficient space. Tryon went down with his ship.

VICTORIA. One of the great freshwater lakes in Central Africa, also known as Victoria Nyanza. From it issues the Nile. Known to the natives as Ukerewe, it was first discovered in 1858 by Speke. It is situated at an alt. of 3,726 ft., has an area of about 27,000 sq. m., and is surrounded by the Uganda protectorate, Kenya Colony, and Tanganyika Territory. Among its principal feeders are the Katonga, Kagera, and Mara rivers. Ports on the banks include Kisumu, Jinja, Port Bell, Entebbe, Bukoba, Mwanza, and Shirati. See Africa; Nile; Ripon Falls; Uganda.

VICTORIA. River of North Australia. It flows into Queen's Channel near the border of W. Australia. It drains an area of 90,000 sq. m., most of which is splendid grass country.

VICTORIA. State of the Commonwealth of Australia, in the S.E. of the continent. It adjoins New South Wales on the N. and South Australia on the W., and is separated by Bass Strait on the S. from Tasmania. Originally part of New South Wales, Victoria was made a separate colony in 1851, and obtained self-government in 1855. A sudden access of population followed the opening of the gold mines round Ballarat in 1852, but Victoria owes most to the steady development of sheep rearing, dairy farming, and wheat growing. Melbourne is the capital and largest city.

The state comprises three areas, the great valley of which Port Phillip is a submerged portion, the central highlands, and the S. portion of the basin of the Murray river. Victoria has a low rainfall. N. of the highlands irrigation is essential; the scrub area contains artesian bores. Mildura, on the Murray, is a famous irrigation colony; the Goulburn, Loddon, and Campaspe have been dammed, and other schemes are in progress for conserving the N. rivers. The chief mineral is gold. Copper also is mined and coal obtained. Four railway lines connect with New South Wales lines across the Murray, and two with South Australia. The area is 87,884 sq. m. Pop. 1,766,378. See Australia.

VICTORIA. Island of Canada. It is 420 m. by 320 m., and is separated from the mainland by Queen Maud Gulf, Dease Strait, Coronation Gulf, and Dolphin and Union Strait. It lies S.E. of Banks Island, S. of Melville Sound, and W. of McClintock Channel and Victoria Strait, and comprises Prince Albert Land and Wollaston Land. The W. coast is mountainous and deeply indented.

VICTORIA. Capital of British Columbia. It stands at the S.E. end of Vancouver Island, overlooking the Strait of San Juan de Fuca. The buildings include a fine pile erected for the provincial legislature and the Anglican cathedral, opened in 1929. Near is the Dominion observatory. It has steamship connections with Vancouver on the

mainland, San Francisco, and places in Mexico and Alaska, and is a port of call for steamers from Vancouver to Australia, China, and Japan.

Victoria. Low four-wheeled carriage, seating two. See p. 1388

Apart from shipping, the industries include the making of furniture, boots, clothing, and soap, as well as ship-building, lumbering, and canning. It is served by the C.P. and C.N. Rlys. The city includes the naval station of Esquimalt, with its fine harbour, situated about 3 m. away. Pop. 60,000.

VICTORIA (1819-1901). Queen of Great Britain and Ireland and empress of India. The only child of Edward, duke of Kent, the fourth son of George III, her mother being Mary Louise Victoria of Saxe-Coburg-Gotha, she was born at Kensington Palace, May 24, 1819. She succeeded her uncle, William IV, June 20, 1837, and in 1840 was married to her cousin, Albert of Saxe-Coburg-Gotha. At the outset of her reign the queen was under the experienced political tuition of the premier, Lord Melbourne. Later she acted with the guidance of the Prince Consort. After his death in 1861 she withdrew from

Queen Victoria. A portrait taken in the year of her Diamond Jubilee

social life and passed much time at her Highland residence, Balmoral, and at Osborne, in the Isle of Wight. She refused, however, to depute any of her constitutional duties to another, and to the last kept in close touch with her ministers.

Her reign covered an extraordinarily eventful period, but personally she had little to do with the change which developed in the status of the colonies and their relations with the mother country. She had a more direct claim to something of a personal share in the development of the idea of the imperial relations between the British and the natives of India, and in 1876 Disraeli procured her assumption of the new title empress of India.

Victoria, British Columbia. Parliament Buildings, opened in 1897

Still more direct was the influence of Victoria's personality upon the relations between the crown, the ministers, and the British

Queen Victoria Memorial in front of Buckingham Palace, designed by Sir Aston Webb, with sculptures by Sir Thomas Brock. It was unveiled in 1911

people. The constitutional practice, established under the rulership of a single monarch exercised continuously for 64 years, virtually withdrew from the Crown the power of veto, and even the power of dismissing a ministry without a preliminary appeal to the country.

On June 20, 1887, the fiftieth anniversary of her accession, Victoria's jubilee was celebrated by a thanksgiving service in Westminster Abbey. Ten years later, a second festival, popularly known as the diamond jubilee, celebrated the longest reign of any British sovereign. Victoria died at Osborne House (q.v.), Jan. 22, 1901, and was buried at Frogmore.

The queen and Prince Albert had nine children. The four sons were Edward, prince of Wales, who succeeded his mother; the duke of Edinburgh, who succeeded his father as duke of Saxe-Coburg; the duke of Connaught, and the duke of Albany. The daughters were Victoria, who married Frederick, who became emperor of Germany in 1888; Alice, grand duchess of Hesse, Helena, Princess Christian, Louise, duchess of Argyll, and Beatrice, princess of Battenberg.

The Queen Victoria Memorial includes an elaborate monument, the new E. façade to Buckingham Palace, widening of The Mall, and Admiralty Arch, and was designed by Sir Aston Webb, with sculptures by Sir Thomas Brock. The memorial proper occupies a garden space in front of the palace, and was unveiled May 16, 1911, by George V. There is an All-India Victoria Memorial in Calcutta, opened in 1921. Several volumes of her letters have been published. See Brock, Sir T.

VICTORIA AND ALBERT. British order. Conferred on ladies only, it was instituted in 1862, but appointments to it are no longer made. In four classes, the badge of the first three is a medallion of diamonds and pearls with portraits of the queen and Prince Albert; for the fourth class it is the royal eiphers interlaced. The ribbon is white moire; members use the letters V.A.

VICTORIA AND ALBERT MUSEUM. British museum of applied art, under the control of the Board of Education. Its nucleus was the museum of ornamental art established at Marlborough House in 1852. Five years later it was transferred to temporary buildings at South Kensington, being generally known as the South Kensington Museum. New buildings, designed by Sir Aston Webb, were completed in 1909. The museum contains one of the finest collections of decorative and ornamental art in the world. The Indian section, in Imperial Institute Road, and Bethnal Green Museum, opened in 1872, are branches. See Kensington.

Victoria and Albert. Badge of the order

VICTORIA CROSS. Decoration for valour, the highest of its kind open to officers and men of the British Navy, Army, and Air Force. It is a Maltese cross of bronze, with underneath a scroll bearing the words "For Valour." It is worn suspended from the left breast by a red ribbon. The decoration was instituted by Queen Victoria in 1856. It is given for "conspicuous bravery or devotion to the country in the presence of the enemy," and it is awarded very sparingly. The honour was originally confined to white troops in the service of the crown, but since 1911 it has been open also to Indian soldiers, and from 1920 to women or civilians of either sex, when under the direction of military, naval, or air forces.

Victoria Cross.
Awarded for valour

VICTORIA FALLS. Falls on the Zambezi river in Southern Rhodesia. Situated 7 m. from Livingstone, they were discovered by Livingstone in 1855, and are about 357 ft. deep and about one mile long. The Zambezi is crossed a little below the falls by a rly. bridge, on the main line northwards from Cape Town to the Congo. A hydro-electric station has been established to make electricity for use on the railways and on the Rand. See Zambezi.

Victoria Falls. The magnificent cascades of the Zambezi river

VICTORIA HALL. London place of amusement known as the Old Vic. In Waterloo Road, S.E., it was opened May 11, 1818, as The Royal Coburg Theatre, and in 1833 changed its name to The Royal Victoria Theatre. In Dec., 1880, it became known as The Royal Victoria Coffee Music Hall, under the management of Emma Cons (1838-1912), whose niece, Lillian Baylis (q.v.), became acting manager in 1898. The Old Vic has been famous since 1880 as a home of classic English drama and good music. In 1922 its management, after an appeal, raised the necessary funds for structural alterations, and it was reopened in 1923.

VICTORIAN ORDER. ROYAL. British order of knighthood. It dates from 1896. There are five grades, grand cross (G.C.V.O.), knight commander (K.C.V.O.), commander (C.V.O.), and two classes of members (M.V.O.). The badge is a white Maltese cross with a crimson oval centre bearing the royal and imperial cipher, surrounded by a blue circle in which is inscribed in gold Victoria, and surmounted by the imperial crown. The ribbon is dark blue with a narrow edge of red and white. The chancellor of the order is the lord chamberlain. See Knighthood.

Victorian Order. Insignia of the British order of knighthood

VICTORIA PARK. London recreation ground. Situated at the N.E. of Bethnal Green and covering 217 acres, it was formed in 1842-45, the first cost being provided by the sale of York (later Sutherland) House, St. James's, and enlarged in 1872. All forms of popular pastimes are provided for; here are lakes for boating, bathing, and open-air swimming, several gymnasia, flower gardens, palm house, shrubberies, hand stand, aviaries, enclosures for deer, goats, and other animals, and spaces for public meetings.

VICTORIA REGIA. Giant aquatic herb of the order Nymphaeaceae. Also called royal water lily and water maize, it is a native of the Amazon, Guiana, and La Plata. It grows only in still, shallow (4 to 6 ft. deep) waters, and has a thick perennial root-stock. The floating leaves are round, with edges turned up for several inches. The flower is 15 to 18 ins. across, and lies on the surface of the water. The top-shaped calyx has purple-brown segments, and the numerous petals are in several series, the outer ones white and much broader than the purple or rose-coloured inner ones, surrounding the fleshy awl-shaped stamens and the large ovary with its cup-shaped depression. This develops into a large green, prickly berry, containing numerous dark brown oval seeds, which are roasted and eaten in Guiana.

Victoria Regia. Floating leaves of the giant S. American water lily

VICTORY. British ship of the line. She was designed by Sir Thomas Slade, and launched at Chatham dockyard, May 7, 1765, but not commissioned until March, 1778. She was 226 ft. 6 ins. long from figure-head to taffrail, 186 ft. on the gun-deck, and 52 ft. in beam, the tonnage being 2,162; and her armament on first commissioning was 12 short and 32 long 12-pounders, 30 24-pounders, and 30 32-pounders. Nelson selected her as his flagship when appointed commander-in-chief in the Mediterranean, 1803, and in her he won the battle of Trafalgar. She was paid off from active service in Nov., 1812. By 1928 she was restored to appear as she was at Trafalgar. See p. 229.

VICTORY MEDAL. Allied medal of the Great War. Instituted in March, 1919, it was awarded to all officers and men in the army who entered a theatre of war on the strength of any military unit, and in the navy to all officers and men who had been afloat on duty, Jan., 1914-Nov., 1918. It was also awarded to airmen,

Dominion, Colonial, and Indian forces, and also to women's formations.

The medal is of bronze. On the obverse is a winged figure of Victory full length, in the middle of the medal. On the reverse is the inscription, The Great War for Civilization, translated into the different languages. The ribbon, which is red in the centre, is identical for all countries. See Medal, and illus. below.

Vicuña. Small wild llama of Peru
W. S. Berridge, F.Z.S.

VICTUALLING (Lat. vivere; to live). Provision of food. Victuals is a synonym for food and drink. A licensed victualler is an innkeeper. A victualling yard is an Admiralty depot from which vessels of the British navy can be supplied with stores of various kinds, including food supplies.

VICUÑA (Lama vicuña). Small wild species of llama. Found in Peru and the surrounding district, it belongs to the camel family, but is of smaller size and more graceful in form than the true camels. Its hair is light brown, with plover markings on the face. During the hot weather it is found in the valleys, but in the rainy season it frequents the higher ranges of the hills. From its wool a soft fabric, used for clothing, is made. See Llama.

VIDOCCQ, EUGÈNE FRANÇOIS (1776-1857). French detective. He was born at Arras, and in 1809 offered his services to the police, at whose instigation he served a term in prison, and was allowed to mix freely with the inmates, thus gaining their confidences and betraying them to the police. So successful was the police spy that in 1817 he was authorised to establish a regular body of detectives, of which he was the head.

Victory Medal.
Awarded in 1919

VIENNA (Ger. Wien). Capital of the Austrian republic. It is on the right bank of the Danube, where the great plain meets the Wiener Wald. An arm of the river, converted into the Danube Canal in 1876, flows through the city, receiving the Wien, a small stream now built over. The city, which is an autonomous federal prov. of the republic, covers 107 sq. m. Pop. 1,855,362. The inner city, or Altstadt, contains the Hofburg, formerly the principal imperial residence, the embassies, government offices, and banks. It is encircled by the Ringstrasse, with Renaissance buildings, parks, and squares. In the heart of the old city is the cathedral of S. Stephen, mainly of the 14th and 15th centuries, though the oldest part dates from the 12th century. The S. tower is 450 ft. high. The art history museum contains a priceless collection of old masters, chiefly Rubens, Dürer, and the Venetian school.

H.M.S. Victory, the old flagship of Keppel, Jervis, and Nelson, at her moorings in Portsmouth Harbour

Among other buildings in and near the Ringstrasse are the Gothic city hall, the university, exchange, academy of art, and conservatory of music. The Liechtenstein gallery has canvases by Rubens and Van Dyck. Some of the best shops are in the two fashionable thoroughfares, the Kärntnerstrasse and the Graben. Among the numerous parks and public gardens, the principal resort of all classes is the Prater. In 1928 work was begun on a stadium capable of holding 60,000 people.

Vienna has long been an important commercial centre. The principal grain and cattle markets of Austria are held here, and the industries include iron and steel working and the manufacture of gold and silver ornaments, scientific instruments, cloth, linen, carpets, furniture, and leather goods. Film making is also an important industry. The Vienna fairs are famous. See Danube; Schönbrunn.

CONGRESS OF VIENNA. This was a meeting of plenipotentiaries of the European powers at Vienna in 1814-15 after the defeat of Napoleon and the entry of the allies into Paris. It began Sept. 20, 1814, and the final settlement was signed June 9, 1815.

The chief results were: France reverted to her frontiers of 1792; Austria gave up the Netherlands, but received other territory; Prussia got Posen and part of Saxony; Russia got part of Poland and Finland; Norway was joined to Sweden; the Austrian Netherlands (the modern Belgium) were joined with the Dutch provinces to form the kingdom of the Netherlands; the Spanish monarchy was restored; the German confederation was reconstructed; while Britain secured Malta and the Ionian Islands, the Cape, Ceylon, some West Indian islands, and Mauritius. See Europe.

Vienna. Plan of the central area of the Austrian capital

Vienna. Opera House, seating over 2,000 persons. Above, left, City Hall, built 1872-82; right, Church of St. Charles and the Elizabeth bridge. Below, right, Cathedral of St. Stephen

VIENNE. Town of France. It stands on a hill above the confluence of the Gère with the Rhône, 19½ m. by rly. S. of Lyons. The cathedral is of the 12-16th centuries. Roman remains include the Temple of Augustus. A bridge crosses the Rhône here. Vienne was for a time capital of Burgundy. Pop. 23,732.

The council of Vienne, the fifteenth oecumenical council of the Church, convoked by Clement V., was held Oct. 16, 1311-May 6, 1312. It met under the pope's presidency to consider the charges against the Templars. That no influence should be lacking, Philip IV of France went to Avignon, and on March 22, 1312, the bull Vox Clamantis was issued, suppressing the order. Disciplinary measures concerning other religious orders were taken. See Knights Templars

VIGIL (Lat. vigile, to watch). Ecclesiastical term for the day of fasting before certain feasts. Originally the night was spent in watching and prayer. In the R.C. Church matins and lauds and the midnight Mass before Christmas are the only survivals of the ancient custom. At the present day the term is applied to the practice of watching the bodies of the dead before burial. See Knight-hood; Wake.

VIGNETTE (Fr. little vine). Term used in the decorative arts in several senses. In the 16th century the

word, often spelt vinet, meant a trailing border of grapes, leaves, branches, and tendrils of the vine, used in architecture, as borders for book pages, or adornment for dresses. In book decoration, a vignette is the group of ornamental flourishes round a capital letter, as in a MS., the engraved illustration on a title page, head and tail pieces, and, in modern use, any illustration of which the background fades away to the tint of the paper. In a sense similar to the last, the term is also used in photography.

VIGNOLA, GIACOMO BAROZZIO DA (1507-73). Italian architect and writer on architecture, also known as Barocchio. Born at Vignola, near Modena, Oct. 1, 1507, from 1550 he practised architecture in Rome, and in 1564 became architect of S. Peter's in succession to Michelangelo. His best design was the palace of Caprarola, near Viterbo, built for Cardinal Alexander Farnese; but his treatise on the laws of the five orders of architecture, 1563, is perhaps his most noteworthy work. He died in Rome, July 7, 1573. Pron. Veen-yola.

VIGNY, ALFRED VICTOR, COMTE DE (1797-1863). French poet, dramatist, and novelist. He was born at Loches, March 27 1797. One of the earliest leaders of Romanticism, he published his first poems in 1822. His verse ranks with the finest philosophical poetry in modern literature. His prose fiction comprises an historical romance, Cinq-Mars, 1826; Stello, 1832; and three fine nouvelles collected under the title Grandeur et Servitude Militaires, 1835.

In the drama he produced, besides translations from Shakespeare (Shylock, Othello) and a short comedy, two prose tragedies, La Maréchale d'Anere, 1830, and Chatterton, 1835. He died Sept. 17, 1863.

VIGO. Seaport of Spain. It stands on Vigo Bay, 72 m. N. of Oporto. The fine harbour is a port of call for large steamers. The tunny and sardine fisheries, building of small steamers, and manufacture of cordage are important. There are foundries, machine shops, paper and saw mills, petroleum and sugar refineries, chocolate and soap factories, tanneries and distilleries. Wines, fish, cattle, and agricultural produce are exported. The port was attacked by Drake, 1585 and 1589, and by an English and Dutch fleet in 1702, when immense treasure was taken. Pop. 53,091.

VILAYET (Turk. province). Name given to the chief administrative divisions of Turkey. Each vilayet is governed by a vali and has an elective council. In the present republic of Turkey there are 62 vilayets, and each is divided into cazas.

VILJOEN, BENJAMIN JOHN (1868-1917). South African soldier. He came to the front in the S. African War, 1899-1902, as a daring guerrilla fighter. One of the military leaders in the operations against Ladysmith, 1899-1901, he was taken prisoner by the British in the latter year. He was a member of the second Volksraad of the S. African republic previous to the Union. After the war he undertook a lecturing tour in the British Isles. He died at Lamesa, New Mexico, Jan. 14, 1917. See South African War.

Alfred de Vigny, French writer

VILLA. Latin word meaning a country house, but now used in England for a residence of moderate size, usually a suburban one. Most wealthy Romans had their villas, and the name and idea were carried by the Romans into France, Britain, and elsewhere. The normal type enclosed an open court, access to the dwelling apartments and offices being gained by a covered corridor. Outstanding remains in Britain are at Woodchester, Winchcombe, Chedworth, Gloucestershire, Bignor, Sussex, and Brading, Isle of Wight.

VILLA, FRANCISCO PANCHO (1877-1923). Mexican soldier. Born at Las Nieves, he was originally known as Doroteo Arango, but changed his name to Villa. He became notorious for his robberies. Pardonned by Madero on the outbreak of revolution in 1910, in return for his services, Villa speedily gained fame as a guerrilla general. In 1914 he sided with Carranza against Huerta, then revolted against the former, and when, in 1916, the Carranzist government was recognized by the U.S. government, Villa continued a guerrilla warfare against it. He was murdered, July 20, 1923. See Mexico.

Francisco Villa,
Mexican soldier

The Carranzist government was recognized by the U.S. government, Villa continued a guerrilla warfare against it. He was murdered, July 20, 1923. See Mexico.

VILLAGE (Lat. villa). Name given to a small settlement, one smaller than a town. The typical village, found all over England, consists of a number of houses grouped round a church. The hall or manor house stands near, and around are a number of farms.

The term village community is applied to a group of settlers who built their houses close together and cultivated the surrounding land in common. It is practically certain that something of this kind was found at an early date over a good part of Europe.

Village centres for disabled ex-service men came into existence following the Great War. By means of medical treatment, coupled with a course of re-education both of mind and muscle, the men are enabled to earn their own living. The first village centre was established at Enham (q.v.), Hants. The offices are 10, Upper Woburn Place, London, W.C.1.

VILLARS, CLAUDE LOUIS HECTOR, DUO DE (1653-1734). French soldier. Born at Moulins, May 8, 1653, he entered the army in 1671. His reputation made, he was given a cavalry command in 1690, and during the next 25 years was almost constantly in the field. One of France's chief generals in the War of the Spanish Succession, he won victories at Friedlingen, Denain, and elsewhere, and was in command at Malplaquet. He died at Turin, June 17, 1734. A marshal in 1702, Villars was prominent as a politician after 1715.

VILLEGAS, José (1848-1921). Spanish painter. Born at Seville, Aug. 26, 1848, he studied art in Spain and Italy. He excelled in genre subjects, his best known works being Columbus at La Rabida, Palm Sunday in Venice, A Spanish Christening, and A Cairo Slipper Market. Villegas was for many years director of the Prado Museum, Madrid. He died Nov. 10, 1921.

VILLEINAGE. State of being a villein. In England, while the manorial system prevailed, i.e. roughly from the 11th to the 15th century, a large proportion of the population were in this condition. They formed a class intermediate between the freemen and the serfs. Their position as defined by the lawyers was quite servile. They could not leave the land to which they were bound. They were obliged to perform certain services to the lord of the manor, and they had to pay him fines of various kinds.

In practice the position of the villeins was somewhat better. They had by custom

certain rights, and gradually the courts of law began to recognize these. Residence for a year and a day in a chartered town made a villein into a freeman. The end of the system was due mainly to economic causes. See Manor; consult also P. Vinogradoff, Villeinage in England, 1892.

VILLENEUVE, PIERRE CHARLES JEAN BAPTISTE SILVESTRE (1763-1806). French sailor. Born Dec. 31, 1763, he was a naval officer when the Revolution broke out, and rose to be admiral in the republican navy, 1796. Saving his vessel at the battle of the Nile, he made his way to Malta. A favourite of Napoleon, he was given command of the Toulon squadron in 1804, but was defeated in 1805 at Trafalgar. Taken prisoner by the English, he was released in 1806, and committed suicide at Rennes, April 22, 1806.

VILLEROI, FRANÇOIS DE NEUVILLE, DUC DE (1644-1730). French soldier. Son of the marquis of Villeroi, a marshal of France, he spent much of his boyhood as the companion of the young Louis XIV. He became a soldier, and succeeded Luxembourg as commander of the army in the Netherlands in 1695. In the early days of the War of the Spanish Succession he served in Italy, but at Cremona he was taken prisoner. He led the French at Ramillies, but after this defeat was dismissed. He died July 18, 1730.

VILLERS-COTTERETS. Town of France, 14 m. S.W. of Soissons. The castle, built by Francis I, is used as a home for the aged. The industries include carriage building and biscuit making. Entered by the Germans at the end of Aug., 1914, during the Great War it was the scene of a rearguard action between the Germans and British in the retreat from Mons, Sept. 1. Pop. 4,466. See Aisne; Marne; Mons.

VILLIERS DE L'ISLE ADAM, PHILIPPE AUGUSTE MATHIAS, COMTE DE (1839-89). French poet. A Breton count, he was born at St. Briec. He claimed descent from a grand master of the Knights of Malta, and on the death of King Otto wanted to be a candidate for the throne of Greece. Impecunious, imaginative, influenced by Poe, Hegel, Wagner, and occultism, he lived for a time with the monks of Solesmes, and died of cancer in a Paris hospital. He wrote dramas, poems, and philosophical romances.

VILLON, FRANÇOIS (1431-c. 1485). French poet. He was humbly born in Paris. His own patronymic was Montcorbier, and he called himself Villon after a priest who became his benefactor. After some irregular attendance at the university of Paris, he became associated with a company of reckless young gallants, and in 1455 he was sentenced to be hanged for killing a priest in a brawl. Through the influence of the Paris parlement he was respited.

François Villon,
French poet

After a fitfully feverish career he found a quiet sanctuary in the house of the abbé of St. Maixent in Poitou, and there he presumably died.

His first considerable work was *Le Petit Testament*, a mocking list of bequests to his graceless companions. His masterpiece, *Le Grand Testament*, written in 1461, is a treasury of ballades and rondeaux charged to the brim with purest poetry.

VILNA or WILNO. City of Poland. It lies at the confluence of the Vileika and Vilia and is an important rly. centre. The cathedral of S. Stanislaus contains the silver coffin of S. Casimir. The trade in grain and timber products is extensive. Tobacco, candles,

leather, knitted goods, and gloves are manufactured. It has long been an important centre of Jewish interests.

Vilna figured prominently in the Great War, the Germans capturing it from the Russians, Sept. 18, 1915. On Oct. 10, 1920, Zeligowski, at the head of a Polish force acting independently of the Polish government, seized the town, proclaiming it and part of the former government of Vilna a republic. In 1923 the council of ambassadors decided that the town and district should belong to Poland. The Lithuanians still regard the city as their capital. Pop. 189,000. See Lithuania; Poland.

Vilna. Cathedral of S. Stanislaus, built in 1387 and restored in 1801

a republic. In 1923 the council of ambassadors decided that the town and district should belong to Poland. The Lithuanians still regard the city as their capital. Pop. 189,000. See Lithuania; Poland.

VIMEIRO. Village of Portugal. It is 7 m. from Torres Vedras and 31 from Lisbon. Here on Aug. 21, 1808, was fought the first important battle of the Peninsular War. Wellington, with 20,000 men, had pushed forward to Vimeiro, when he was attacked by the French, with somewhat fewer numbers. The French fell back in disorder, but Sir Henry Burrard, in supreme command, refused to pursue.

Viminal or VIMINALIS. One of the seven hills of Rome, E. of the Quirinal. It was so called from the osiers (viminalis) on it. See Rome.

VIMY RIDGE. Upland of France. It is 5 m. N. by E. of Arras and 476 ft. high, and is an E. spur of the Notre Dame de Lorette. In the Great War the village here was captured with

Petit-Vimy by the British, April 13, 1917. The ridge, dominating the Arras sector, passed to the Germans early in the war. Unsuccessfully attacked by the French under Foch in June and Sept., 1915, it was stormed by Canadian troops, April 9-10, 1917, in the third battle of Arras, and thenceforth was held by the British. Canadian war memorials are here, and the ridge has been planted with maples. See Arras.

Vimy Ridge. The Canadian Corps Artillery monument

VINCENNES. Town of France. It lies outside the fortifications of Paris, with which it is connected by rly. and tram. There are distilleries, metal and engineering works, chemical, piano and organ, rubber, and fancy goods manufactures. Market gardening is carried on. The château was begun by Louis VII in 1164. Louis XI converted the keep into a state prison; among famous prisoners have been Henry of Navarre, the Condés, Cardinal de Retz, Diderot, and Mirabeau. Vincennes was the scene of the execution of the duke of Enghien, 1804, and of various spies and traitors during the Great War. The Bois de Vincennes is a park between the fortifications and the right bank of the Marne. Pop. 41,527.

VINCENT (d 304). Spanish saint and martyr. Ordained deacon at Osea (Huesca), he was apprehended during the persecution of Diocletian and taken to Valencia (Valencia), where he died after tortures inflicted by the governor Dacianus. His day is Jan. 22.

VINCENT DE PAUL (1576-1660). French priest and saint. Born at Gascony, April 24, 1576, the son of a small farmer, in 1600 he was ordained priest. After a visit to Rome he made his way to Paris. Here he founded the Order of Mission Priests, which was later established at St. Lazare, Paris, and became known as the Lazarist Fathers. He founded the Daughters of Charity, the first order of unclioistered women devoting their lives to works of charity among the poor, established the Foundling Hospital in Paris, and worked on behalf of the galley slaves. In 1649 he established the first mission to the natives of Madagascar, and he died in Paris, Sept. 27, 1660. He was canonised 1737.

Vincent de Paul,
French saint

united above and free below, so that the expansion of the stamens throws them off entire. They are succeeded by berries (grapes) containing two or four hard seeds. Many varieties have been produced, with fruit varying in colour from purple to whitish green.

The grape vine is believed to have been introduced to Britain by the Romans, and in Saxon times vineyards were numerous. But the climate of Britain is more conducive to the production of foliage than to the ripening of the fruit. The genus *Vitis* includes about 400 species. See Grape; Phylloxera.

VINEGAR (Lat. vinum, wine; acer, sharp). Sour liquid obtained by the acetic fermentation of alcoholic liquors. The acid in vinegar is acetic acid, 5 to 7 p.c. being the best proportion, the rest of the liquid being made of esters and extractive and mineral matters. The flavour and constituents of vinegar depend largely upon the liquor from which it is made. Table vinegars are often flavoured with pepper, capers, garlic, etc., and aromatic vinegars contain volatile oils and are used as cooling lotions.

VINEGAR HILL. Eminence in eo. Wexford, Irish Free State, just outside Ennisceorthy. In May, 1798, a force of rebels 15,000 strong formed a camp on Vinegar Hill, whence they carried on outrages on the Protestant royalists. They were defeated by a force under General Lake. See Ireland.

VINEGAR PLANT. Name given to a tough layer of a slimy character found on the surface of fluids, originally saccharine, which have become alcoholic through the breaking up of the sugar by the action of the yeast. Where this appears the alcohol is converted into acetic acid. The mass consists of numerous layers of minute threads of fungi and bacteria.

VINTNER. Dealer in wine. The Vintners' Company is one of the 12 great London livery companies. Incorporated in 1437 and called originally the Merchant Wine-Tonnors of Gascoyne, it had two classes, wine importers and innkeepers, and exercised powers over the imports and sale of wines and the licensing of taverns. That part of the city known as the Vintry was once a centre where the vintners chiefly resided. The hall in Upper Thames Street was rebuilt in 1930.

Vintners' Com-
pany arms

VIOL. Name of a family of bowed instruments, dating from the 11th century. In general appearance it somewhat resembled the violin type, but there were really important differences. The back of the viol was flatter and its ribs deeper, while the shoulders, instead of being round and meeting the neck at right angles, were sloping and met it at a tangent.

The sound-holes were usually e- instead of f-shaped, and the strings were five to seven in number instead of four, the tuning being in fourths and one third. There were several sizes, the chief being the treble, but the violone (or double bass viol) is the only one still in use.

VIOLA. Bowed instrument of the violin type. It is about one-seventh larger in size, and has its four strings a fifth lower in pitch. The size of the viola being inadequate to the deeper pitch, the tone, though sympathetic, is less brilliant than that of the violin (q.v.).

Viol, tenor 6-stringed
instrument

VIOLET (*Viola*). Large genus of low herbs, mostly perennial, of the order violaceae, natives of all the temperate regions. Eleven species are recognized as British, including such well-known forms as the sweet violet (*V. odorata*), the dog violet (*V. canina*), and the heartsease (*V. tricolor*)—the last an annual. The flowers are irregular, and the five petals form two pairs of different size and an odd petal. In many species, as in the sweet violet, the odd petal is lengthened behind to form a hollow tube in which nectar is produced. See Heartsease; Pansy.

Violet. The British wild
violet, *Viola canina*

VIOLIN. Bowed instrument of great importance in modern music. It dates back for some three and a half centuries, and since the early 18th century its form, as settled by the great Italian luthiers, has undergone no radical change. Its size, shape, and proportions are based (a) on the manner of holding and bowing the instrument; and (b) on the production of a full, powerful, and brilliant tone. The principal parts that make up a violin are: (1) a resonant body, consisting of an arched belly and back, united by ribs; (2), a finger-board; (3), a neck, terminating in a head or scroll; and (4) four strings carried from a tailpiece over a bridge on the belly to tuning-pegs in the end of the neck.

The strings are set in vibration by a horse-hair bow held in the performer's right hand, the fingers of the left hand being pressed upon them as required. To reach the higher notes, seven positions are used. See Stradivari.

VIOLONCELLO. Bass violin tuned an octave below the viola (q.v.), but held between the legs of the performer as was the viola da gamba. It generally plays the bass part in orchestral music, but it is also valuable for melodic purposes.

VIPER. Large tribe of poisonous snakes. They are usually characterised by thick bodies, flat and triangular heads, vertical pupils to the eyes, and short tails. All are venomous, and most viviparous. The true vipers (*Vipera*) include some ten species, found in Africa, Europe, and part of Asia. The sand viper is found in S. Europe, where it preys upon small birds and mammals, lizards, and snakes. Russell's viper occurs in India, Ceylon, and Siam; its bite is almost as deadly as that of the cobra. The common viper or adder (*V. berus*) is common in Europe and Asia, and is the only venomous reptile occurring in Great Britain. See Adder; Horned Viper; Snake.

Violoncello, bass
stringed instrument

VIPER'S BUGLOSS (*Echium vulgare*). Biennial bristly herb of the order Boraginaceae, a native of Europe, W. Siberia, and N. Africa. The stout stem is three or four feet in height, the lower part clothed with lance-shaped or oblong leaves, the upper crowded with short lateral sprays of flowers. The flowers are funnel-shaped, red-purple before they open, then a bright blue—occasionally white. The fruit consists of four wrinkled, angular nutlets. See illus. p. 1394.

Vindictive. The battered cruiser in port after her action at Zeebrugge Mole on April 23, 1918
Imperial War Museum

VINDHYA. Hill range of India. It forms part of the N. edge of the Deccan plateau, with a steep slope S. to the Narbada valley and a gentler one N. to the Malwa Plateau.

VINDICTIVE. British cruiser. She was of 5,700 tons and carried ten 6-in. guns. Then obsolete, she was fitted up to take part in the attack on Zeebrugge, April 23, 1918. The Vindictive went alongside the mole and landed a party of men in the face of heavy enemy fire. The Vindictive got safely away from Zeebrugge, and on May 10 of the same year was run into Ostend Harbour and sunk to block the channels. She lay there until raised and berthed in Ostend Harbour in Aug., 1920. A new Vindictive, a light cruiser of 9,750 tons, was subsequently added to the navy. See Ostend; Zeebrugge.

VINE (*Vitis vinifera*). Climbing shrub of the order Vitaceae. It is believed to be a native of Asia Minor, and has been cultivated from the earliest times. It has slender woody stems of great length, which cling to trees by means of tendrils. The large, lobed leaves have toothed edges, and the small green flowers are clustered in racemes. The five petals are

Vine in the gardens of Hampton
Court, planted in 1768

VIRCHOW, RUDOLF (1821-1902). German scientist. Born at Schivelbein, Pomerania, Oct. 13, 1821, he had a medical training in Berlin, and in 1847 was appointed lecturer at the university. The same year he was appointed to study the causes and cure of typhus. He was appointed professor of pathological anatomy in Würzburg, and in 1856 to the similar chair in Berlin. He was elected to the Prussian diet, 1862, and became leader of the opposition.

Rudolf Virchow,
German scientist

In 1858 he published his Cellular Pathology, which stamped him at once as one of the most original thinkers of his profession. He died in Berlin, Sept. 5, 1902.

VIRGIL OR **VERGIL** (70-19 B.C.). Roman poet, whose full name was Publius Vergilius Maro. Born Oct. 15, 70 B.C., at Pietole, near Mantua, the son of a small landowner, he was educated at Cremona, Milan, Naples, where he learned Greek, and Rome, where he studied rhetoric and philosophy. After the battle of Philippi his father's estate was made over to the veterans who had fought for Octavian against Brutus and Cassius.

On the advice of his friend, Asinius Pollio, Virgil journeyed to Rome, and made a personal appeal to Octavian. There is some obscurity as to the result, but, if Virgil did not finally recover his property, he received compensation in the form of an estate in Campania. His visits to Rome secured him the patronage of Maecenas and the friendship of Horace. Relieved from financial anxiety by the generosity of Maecenas, he was able to devote himself undisturbed to literary work. From 37 onwards his life was spent alternately in Rome and Naples. In 19 he visited Greece. He died Sept. 21, and was buried at Naples.

The poems universally recognized as the work of Virgil are: (1) Ten Eclogues (selections) or Bucolics (pastoral poems), written 42-37 B.C.; (2) The Georgics (37-30), or Treatise on Agriculture, a didactic poem in four books, dedicated to Maecenas; (3) The Aeneid, an epic poem in 12 books. Inspired from Homer—the first six based on the Odyssey, the last six on the Iliad—its purpose was the glorification of the Julian house represented by Augustus, the reputed founder of which was Ascanius, the son of Aeneas (q.v.).

In 1930 the 2000th anniversary of the poet's birth was celebrated in Italy and England. There are memorials to him at his birthplace near Mantua and near Naples, where he died. The former takes the form of a grove in which are

Virgil, Roman poet, from a bust in the Capitol, Rome

all the flowers mentioned in the Georgics. His tomb at Naples was also restored.

VIRGINAL. Name applied to the spinet and harpsichord in the 16th century, probably on account of their being the favorite instruments of ladies, whereas gentlemen preferred the lute. See Harpsichord; Spinet.

VIRGIN BIRTH, THE. Term for the doctrine that Jesus Christ, alone of all the human race, was born of one human parent, that by the miraculous conception of the Virgin no birth-sin was passed on to Him, and that He was thus born perfect Man. See Immaculate Conception; Incarnation.

VIRGINIA. State of the U.S.A. With an area of 42,627 sq. m., it is situated on the Atlantic coastline. The coast is low and marshy and comprises part of the Dismal Swamp. In the W. the Allegheny Range and the Blue Ridge enclose the fertile valley of Virginia. Chesapeake Bay, Hampton Roads, and the broad river estuaries contain excellent harbours. The rivers include the Potomac, Rappahannock, York, James, and Roanoke. Much tobacco is grown, other crops including maize, wheat, and oats. Coal, pig iron, and slate are worked. There are upwards of 5,000 m. of rlys. Richmond is the capital.

Virginia, named after Elizabeth, was the first permanent English settlement in America. The colony grew greatly in population and wealth owing to the tobacco industry. The Virginians, among them Washington, joined, for the most part, in the struggle for independence, and Virginia was one of the 13 original states. In 1928 a Virginian society put up a tablet at Blackwall, on the Thames, to mark the spot from which, on Dec. 19, 1606, the first permanent settlers embarked for America. Pop. 2,575,000.

VIRGINIA. Heroine of ancient Roman legend. Daughter of the centurion Lucius Virginus, her beauty inflamed the decemvir Appius Claudius, who suborned one of his supporters to claim her as his slave, and when the case came before him in his judicial capacity, declared her to be the man's property. Thereupon her father seized a knife and slew his daughter. A popular revolution broke out against the tyrannical decemvirs, and Appius Claudius committed suicide. The story is the subject of one of Macaulay's Lays of Ancient Rome.

VIRGINIA CREEPER (*Vitis quinquefolia*). Climbing shrub of the order Vitaceae, a native of North America. It has large digitate leaves and inconspicuous green flowers much like those of the grape vine. It climbs with the aid of branching tendrils, the branches ending in adhesive disks which cling to brick or woodwork. Veitch's creeper (*V. inconstans*), with small glossy leaves and short leafstalks, is a native of Japan. Both species are remarkable for their foliage, which assumes glowing red tints in the autumn. See Vine.

VIRGINIAN DEER (*Odocoileus virginianus*). Species of deer found in Canada, the U.S.A., and in parts of S. America. It is about 3 ft. high at the shoulder, and the coat is reddish brown in the summer and greyish in the winter. The antlers are comparatively large and well branched,

and the bushy white tail, held erect when the animal is running, is characteristic.

VIRGINIAN STOCK (*Maleolmia maritima*). Annual herb of the order Cruciferae. A native of the Mediterranean region. It was introduced to British gardens in 1713. It has erect, branching stems, 6-12 ins. in height, with alternate elliptical leaves and bright flowers ranging in tint from white to rose. It is a favourite edging plant in gardens.

Virginian Stock. Leaves and flowers of the edging plant

VIRGINIA WATER. Artificial lake in Windsor Great Park, on the borders of Surrey and Berkshire. About a mile from Virginia Water station on the Southern Rly., it is 1½ m. long and about ½ m. across at its widest part. The original marshland was drained and the lake created in 1746 by the duke of Cumberland with the aid of Paul Sandby. Notable features are the cascade, cavern, and a colonnade brought by George IV from the ruins of Leptis Magna, in Tripoli. Near is Belvedere Fort, a residence of the prince of Wales.

VIRGIN ISLANDS. Group of the Leeward Islands. Anegada, Virgin Gorda, Tortola and others belong to Great Britain; and Crab or Vieques, Culebra, St. Thomas, Ste. Croix, St. John and others belong to the U.S.A. The American group were purchased from Denmark in 1917 for £5,000,000. The British Virgin Islands have an area of 58 sq. m., and the U.S. islands cover 132 sq. m. Road Town, on Tortola, is the port of entry and the capital of the British islands, which are under a nominated executive council. Pop. Brit., 5,082; U.S., about 20,000. See West Indies.

VIRGO (Lat. the virgin). Sixth sign of the Zodiac. It is one of the constellations known to the ancients. Gamma Virginis is a celebrated double star. Alpha Virginis is the star Spica, a double star of the first magnitude. See Constellation.

VIROCONIUM OR **URICONIUM**. Romano-British town on the site of Wroxeter, Shropshire. It was established as a military fort by Claudius for the XIV legion about A.D. 45; when the legion withdrew in 70 a municipal town quickly developed. Within its walled enclosure were a town hall, public baths, and fine houses of Italian design. The junction of Watling Street and of roads from Caerleon and Chester, it attained much opulence. Excavations have revealed rows of colonnaded shops, a temple, bronze foundry, etc.

VIRTON. Town of Belgium. It is in the extreme S.W. close to the French border, slightly S. of Arlon and E. of Montmédy. Pop. 3,600. The name is given to the battle fought Aug. 21-25, 1914. The French plan was to advance N. on a front of 60 m. from the French frontier between the Meuse and German Lorraine. They found themselves confronted with superior German forces, and after incurring heavy losses were forced to retreat. In one division of the colonial corps the French loss was 8,000 out of 12,000 infantry. The Germans captured numerous guns.

VISCACHA (*Agouti*). Genus of small rodents. They belong to the chinchilla group, which occurs in S. America. The animal is

Virginia Creeper.
Hanging sprays of leaves

Viscacha. Small nocturnal rodent of South America, allied to the chinchilla

W. S. Berridge, F.Z.S.

Viper's Beggloss.
Flower spike of the British plant.
See p. 1393

about 20 ins long, and has grey fur mottled with black on the upper parts and white beneath, and black and white stripes on the face. It is found in warrens, is nocturnal in habit, and feeds upon grass and roots.

VISCHER, PETER (1455-1529). German sculptor. Born at Nuremberg, he studied in Italy. His most famous work was the monument of S. Sebald in the church of that name at Nuremberg. In this work, which occupied him 13 years (1506-19), he was assisted by his five sons. The tomb of Archbishop Ernest at Magdeburg may also be cited. He died at Nuremberg.

VISCONTI. Name of a noble Lombard family, lords of Milan, 1277-1447. The first member of importance was Ottone (1215-95), archbishop of Milan in 1262. After his death the temporal power was assumed by his grand-nephew Matteo (1255-1322), who became lord of Milan. Involved in a quarrel with the pope, shortly before his death he abdicated in favour of his son Galeazzo (1277-1328), who married Beatrice d'Este, and was succeeded by his son Azzo (1302-39). In 1349 the lordship of Milan passed to Galeazzo's brother Giovanni, archbishop of Milan, and a patron of learning and letters, and on his death was divided between his three nephews, Matteo, Galeazzo, and Bernabo. The next of importance was Giangaleazzo (1347-1402). He extended his rule over Verona, Padua, and elsewhere, and was granted the title of duke in 1395. He died of the plague, Sept. 3, 1402. The family died out in the male line in 1447, when its power passed to Francesco Sforza, who had married one of the Viscontis.

VISCONTI-VENOSTA, EMILIO MARCHESE (1829-1914). Italian statesman. Born at Milan, Jan. 22, 1829, he was one of Mazzini's most active followers until 1853, when he realised that the salvation of Italy lay rather with Cavour than with the republican party. In 1859 he was nominated royal commissioner with Garibaldi's army. Foreign minister, 1863-64, 1866-67, 1869-70, 1896-98, and 1899-1901, his terms of office were marked by wisdom and tact, especially during the difficult situations created by the war with Austria, 1866, the Franco-Prussian War, 1870, the occupation of Rome, 1870, the Abyssinian disaster of 1896, and the Balkan troubles of 1897-98. He died in Rome, Nov. 28, 1914.

VISCOSE. Name given to artificial silk prepared from wood pulp or cotton by digesting with caustic soda and treating with carbon bisulphide. See Artificial Silk.

VISCOSITY (Lat. viscus, bird-lime). Internal friction, or resistance, to the motion of molecules of a fluid body among themselves. If a liquid flows over a horizontal surface, the layer of liquid next to the surface tends to adhere to it by cohesion, and the velocity of the fluid particles above this layer becomes greater the more distant they are from the bottom. Different liquids have different degrees or coefficients of viscosity, and these may vary at different temperatures.

Viscount. Coronet of English viscount

VISCOUNT (Lat. vicecomes). Title of nobility. In the British peerage it ranks fourth, being between earl and baron. The feminine is viscountess. A viscount's children are entitled to the prefix "hon."

The title came to England from France, where the viscount was at first simply the deputy of the comte or count. The first creation in England dates from 1446. The oldest existing viscounties are, in Ireland, that of Gormanston (1478), and in England, that of Hereford (1550). See Coronet; Count; Peerage.

VISHNU (Skt. worker). One of the three chief gods of Hinduism. Originally of minor importance, and perhaps a sun-god, he came to be regarded by his worshippers as the supreme Deity, and hence was associated with Brahma and Siva in the Trimurti or triad, in which his character was that of the preserver. He is the genial, kindly patron of the prosperous classes, and his rites though often licentious, are free from bloodshed. Vishnu is represented as a man, painted black, with four arms, riding on the Garuda, half-man and half-bird. See Hinduism; Trichinopoly.

VISIGOTH. Branch of the Gothic people which in the 3rd century A.D. lived W. of the river Pruth. It separated from the Ostrogoths about A.D. 250, and at that time occupied a region approximately corresponding to the modern Rumania. The later history of the Visigoths, which closed with the overthrow of their Spanish kingdom by the Mahomedans in 711, is part of that of the Goths (q.v.).

VISION. Act or sense of seeing. The duration of any stimulus necessary to produce a visual sensation may be exceedingly short, and depends upon the intensity of the exciting source. An image persists for some time after the stimulus has been removed. Among the many different theories accounting for the perception of colour, that most favoured is Koenig's, which is that there are three separate cones for distinguishing red, green, and violet. Animals, e.g. the earthworm, which are eyeless respond to light through the skin. See Eye Sight.

VISITATION. Ecclesiastical term for the office of inquiry performed at intervals by bishops and archdeacons in dioceses and parish churches. The episcopal inquiry is made concerning the state of religion in the diocese, and the office includes the administration of confirmation and the delivery of an address which is called a charge. Archidiaconal visitations are directed more particularly to temporal matters, e.g. the repair of churches, etc. In England diocesan visitation was instituted by Grosseteste (1175-1253).

The order of the Visitation is a religious order for women. Founded by S. Francis de Sales and S. Jane Frances de Chantal, in 1610, at Annecy in Savoy, it was designed for the care of the sick and the relief of the poor, but is now a strictly enclosed order of nuns devoted to a life of contemplation. The Sisters of the Visitation are a separate congregation.

The Visitation of the Blessed Virgin Mary is a feast instituted by Pope Urban VI in 1389 in commemoration of the visit paid by the Blessed Virgin to her kinswoman Elizabeth (Luke 1). In 1441 the council of Basel directed that it should be observed in all Christian churches. In the Church of England calendar it is fixed for July 2. See Magnificat; Mary.

VISITOR. Literally, one who visits. In a special sense it is used for an inspecting officer. All charitable corporations, including colleges at universities and certain schools (in law, charitable corporations), have a visitor, who makes a periodical examination to ensure the execution of the founder's wishes. In the case of hospitals and similar institutions the visitor's functions now mainly devolve upon the charity commissioners. In the last resort the sovereign is the visitor.

VISTULA. River of Central Europe, almost entirely in Poland. It rises in the W. Beskids, about 20 m. S.E. of Teschen, and flows N., then N.E. past Cracow, turns N. again past Warsaw, Plock, and Thorn (Torun), and enters the Baltic by several mouths at the

free city of Danzig (q.v.), after a course of 630 m. Its chief affluents are the San, Wieprz, Bug, and Pilica. Since the Great War the control of the Vistula has caused certain difficulties and the amount of trade on it has declined.

VITAMINE. Term for substances found in recent years to be present in natural foods in very small amount, but which exercise an important influence upon nutrition. Their chemical nature is not known, and they have not yet been isolated in pure form. Three vitamins have been recognized. The first is anti-scorbutic vitamin, and when this is completely absent from the diet scurvy rapidly ensues. It is present in fresh meat and fresh vegetables. The second is a vitamin soluble in water, the absence of which from the diet causes the disease beri-beri to supervene. It is present in the seeds of plants, eggs, and fish-roe. In cereals the largest quantity of this vitamin is contained in the embryo or germ. The third vitamin is associated with fats, and is known as fat-soluble vitamin. When absent from food, general nutrition fails. This vitamin is present in butter, and is absolutely essential to growth. Vitamins in food are destroyed or reduced in amount by cooking or by processes of preservation.

VITELLIUS, AULUS (d. A.D. 69). Roman emperor from Jan. 2 to Dec. 22, A.D. 69. He was in command of the legions of Lower Germany when the news of Galba's accession reached these parts. His own troops and those of Upper Germany refused to acknowledge the new emperor, and Vitellius was proclaimed emperor at Cologne. In July Vitellius reached Rome and gave himself up to gluttony. The legions of Illyricum declared Vespasian as emperor, and, advancing into Italy, they entered Rome and put Vitellius to death.

VITERBO. City of Italy. It is 54 m. by rly. N.N.W. of Rome. With its well-preserved walls and numerous medieval buildings, it maintains its ancient aspect. The cathedral and the church of San Francesco contains the tombs of popes. The Palazzo Municipale has a museum of Etruscan antiquities. Pop. 35,794.

Vitrina fasciata, a typical species of the small glass snail

VITRINA. Genus of small snails, nearly related to the slugs. The shell is very thin and transparent, and the animals are often known as glass snails. They have the peculiarity of being about in the winter when other species are hibernating. Two species occur in the United Kingdom, *Vitrina pellucida* and *V. pyrenaica*.

VITRUVIUS POLLIO, MARCUS (fl. 10 B.C.). Roman architect and author. A North Italian, he was probably employed by Julius Caesar as a military engineer in the African war, 46 B.C., and worked as an architect under the patronage of Augustus, to whom he dedicated his work in ten books, *On Architecture*, about 16-13 B.C. The work of Vitruvius has a peculiar interest, as it is practically the only surviving original authority on classical architecture. As such it exercised enormous influence when classical architecture was revived.

VITTORIA OR VITORIA. City of Spain. It is 30 m. S. of Bilbao. The cathedral of Santa Maria and the church of San Vicente are medieval fortress churches which have been restored. Pop. 36,762.

The battle of Vittoria was fought June 21, 1813, between the British and Portuguese under Wellington and the French. Wellington made a successful frontal attack and cut off the French from the Vittoria-Bayonne road.

VITTORIO VENETO, BATTLE OF. Fought between the Allies and the Austrians, Oct., 1918. This is the official Italian name of the

great offensive which opened on Oct. 23 and ended in the complete military collapse of Austria on Oct. 31, but it is also described as the third battle of the Piave (q.v.)

VITUS. Christian martyr and saint of the 4th century. He is said to have been born in Sicily, of a noble family, and to have been converted to Christianity by his nurse, Crescentia. Enraged by this, his father handed the boy over to Valerian, the governor, who tried in vain to change his faith. He then escaped to Italy, and was martyred. He is the patron saint of dancers, and was formerly invoked against various complaints, notably chorea (q.v.) or St. Vitus's dance. He is the patron saint of Saxony. His festival is June 15.

VIVARINI. Name of a family of Italian painters belonging to Murano, near Venice. Antonio Vivarini (c. 1420-70) was the founder of the Muranese school. Bartolommeo (c. 1423-99), was a younger brother of Antonio, and probably studied under him. He is said to have been the first Venetian to use the new oil medium, though his most successful works are frescoes. Alvise or Luigi (c. 1446-c. 1502) was the son of Antonio, and probably the pupil of Bartolommeo. See p. 416.

VIVIANI, RENÉ (1863-1925). French statesman. Born in Algeria, Nov. 8, 1863, he was educated for the law, but soon turned to politics. As a socialist he entered the chamber in 1893. In 1906 he accepted office as minister of labour, and he retained that post until Oct., 1910. In Dec., 1913, he was minister of public instruction. In June, 1914, he became prime minister. He re-organized his cabinet after the outbreak of the Great War as a war ministry, and until his resignation in Oct., 1915, he was one of France's most powerful forces. He accepted office under Briand as minister of justice in 1915, but resigned in March, 1917. In 1920 he was one of France's representatives at the first assembly of the League of Nations, and later became her permanent representative. He died Sept. 7, 1925.

VIVIANITE. In mineralogy, a hydrated ferrous phosphate. The mineral, usually associated with iron, copper, or tin ores, is blue to green in colour with a pearly lustre. Alternatively known as blue iron earth, it is named after J. H. Vivian, the mineralogist.

VIVISECTION (Lat. vivus, alive; secare, to cut). Operation on a living subject for the purpose of advancing the science of medicine. The vast majority of experiments, however, are not operations but inoculations, blood tests, feeding experiments, etc. First practised by Herophilus about 300 B.C., in the 19th century vivisection was taken up on a much larger scale, one of those who made great use of it being Pasteur. The development of vivisection led to an agitation against it, especially in Great Britain, and societies were founded to check it, the supporters of vivisection replying in 1908 by establishing the Research Defence Society. In the United Kingdom experiments performed on animals are strictly controlled by a system of licensing.

VIZIER (Arab. wazir, from wazara, to support). Oriental title held by the minister of the Abbasside caliphs. In Turkey, the head of each department of the council was styled vizier, and the sultan's chief minister was the grand vizier. The title was held by the chief officer of the Mogul emperors.

VLACH OR **WALLACH.** People of mixed stock, mostly in the Balkan peninsula. The name, applied by their neighbours, is some-

times considered a variant of Welsh, foreigner. Estimated at 10,000,000, they call themselves Ruman, and apparently represent the neolithic long-headed Balkan population, affected by pastoral nomads immigrant from the E., possibly by the romanised Dacian stock, and by Greek and Slav infiltration.

Vladivostok. The harbour; in winter a channel is kept open by ice-breakers

VLADIVOSTOK. Town and harbour of Soviet Asia, in the Far Eastern area. On Peter the Great Bay, in the sea of Japan, it is the Pacific terminus of the Trans-Siberian Rly and the largest Soviet port on the Pacific. The town was founded in 1860. There is a fine harbour, but ice-breakers are required to keep open a channel during the winter.

During the Russo-Japanese War a Russian squadron was based on the port, but in Aug., 1904, in an attempt to unite with the Port Arthur fleet, it was defeated and took no further part. After the Russian revolution, 1917 and the formation of the Bolshevik government, Vladivostok became of great importance for the Allies as the only base for the Czechoslovak army, and was occupied by them. Pop. 107,977.

VOCALION. Harmonium invented in the last quarter of the 19th century by James Baillie-Hamilton. Its broad free reeds were acted upon by high wind pressure, and it possessed great purity and variety of tone, but notwithstanding its merits it never became a commercial success.

VODKA. Russian alcoholic beverage. A spirituous liquor, it is distilled from rye, barley, oats, potatoes, or maize. A crude, strong spirit, it contains up to 95 per cent. of alcohol, although for consumption this percentage is diluted down to 50 or thereabouts. Its consumption was forbidden in Russia during the Great War. Its sale as a state monopoly was permitted again in 1922.

VOGLER, GEORG JOSEPH (1749-1814). German musician. Born at Würzburg, June 15, 1749, he studied music and theology in Italy, and, ordained priest in Rome, 1773, was generally known as Abbé Vogler. His life was spent in almost continuous travel all over Europe, with sojourns of some duration at Mannheim and at Stockholm, where he established music schools. In 1790 he visited London, where he gave organ recitals. In 1807 he became court master of the chapel at Darmstadt, where he opened another music school. He died there, May 6, 1814.

VOICE (Lat. vox; Fr. voix; O. Fr. vois). Sound produced by the vibration of the vocal cords in the larynx by a current of air driven against them from the lungs. The tones of the voice are lower in men than in women and children, because of the greater length of their vocal cords. In the falsetto voice, part of the cords are held rigid, and only part allowed to vibrate. Loss of voice may be due to hysteria or paralysis of the larynx, or to cancer and other diseases of the vocal cords or adjacent structures. See Larynx; Speech

VOICE CULTURE. The art of developing the latent possibilities of a voice and of training it in such a manner as to produce a full and resonant quality of tone, and to attain ease and certainty of execution.

VOIL. Lake or loch of Perthshire. It lies 8 m. S. by W. of Killin. Its maximum length is 3½ m. It is linked with Loch Doine.

VOLAPÜK (corrupted from English world-speak). Name given to a system of universal language, invented in 1879 by J. M. Schleyer, a priest of Constance, Baden. The alphabet consists of 26 letters, 8 long vowels, and 18 consonants.

There is one declension and one conjugation, subject to no exceptions. Adjectives are derived from substantives. All words are accented on the last syllable. The vocabulary consists of some 15,000 words, mostly monosyllabic. About a third of the words are of English origin. See Esperanto.

VOLCANO. Vent in the earth's crust through which molten rock reaches the surface. A volcano is not necessarily a mountain, although in process of time the ash or lava from the eruptions forms an ash cone like Vesuvius, 4,013 ft. in height, or a lava cone like Mauna Loa in Hawaii, which rises to 13,760 ft. above sea level or 30,500 ft. above the ocean floor. Nor is a volcano a furnace, as the cone does not burn, although the lightning flashes and the reflected red glow of the crater from the under surface of steam clouds gave the ancients the idea of combustion. Etna, Fujiyama, and Mt. Egmont are beautifully symmetrical cones slightly truncated by the crater at the top. Other volcanoes are disfigured by the appearance of parasitic cones due to minor eruptions at weak spots on the sides, or by the results of later eruptions, like that of Krakatoa, which blew away half the former cone. See Cone; Cotopaxi; Egmont; Etna; Krakatoa; Lava; Popocatepetl; Tenerife; Vesuvius.

VOLE. Genus of small rodents. They are commonly confused with rats and mice, from which they are distinguished by their short tails, blunt heads, and comparatively bulky bodies. Three species occur in England and Scotland. The field vole (*Microtus agrestis*), commonly called the field mouse, is a little larger than a house mouse and has brown fur on the back and greyish white beneath. The bank vole (*Evotomys glareolus*) is slightly smaller. The water vole, commonly known as the water rat, has soft yellowish brown fur, and is 8 ins. long in body.

Vole. Small aquatic rodent, often called a water rat, on a stone

VOLGA (ancient Rha). River of European Russia. It rises in a small lake in the Valdai plateau in the prov. of Tver, flows E. as far as Kazan, where it turns S., finally entering the Caspian Sea through a delta with many mouths. It is from 2,000 to 2,500 m. long, and is navigable for nearly the whole of its course. Its waters abound in fish, especially salmon and sturgeon. Canals, uniting its tributaries to those of the Neva, form a medium of communication between the Caspian and the Baltic, and others with the Black and White Seas. Its tributaries include the Oka, Sura, Kama, and Samara. Important towns on its banks are Tver, Yaroslavl, Kostroma, Nijni-Novgorod, Kazan, Ulianovsk (Simbirsk), Saratov, and Astrakhan.

The republic of the Volga is an autonomous republic of the Socialist Soviet Union, created in 1923. It is largely peopled by Germans, who were introduced in the 18th century. Pokrovsk is the capital. The area is 9,627 sq. m. Pop. 571,089.

VOLSTEAD ACT. Name of the Act of Congress that declared the sale of liquor illegal in the United States. It is the 18th amendment to the constitution and was passed on Jan. 29, 1919. The name is that of one of its promoters. See Prohibition.

VOLT. In electricity, the unit of electromotive force, pressure, tension, or potential difference. One volt is the electrical pressure which, if steadily applied to a conductor whose resistance is 1 ohm, will produce a current of 1 ampere. It is so named from Alessandro Volta (1745-1827), the Italian physicist, who made many discoveries in electricity. It is an instrument to measure potential difference in volts. It is usually a sensitive graduated galvanometer.

VOLTAIC CELL. Primary cell in which chemical energy is converted into electrical energy. The standard voltaic cell is Clark's, which, at 15° C., gives an electromotive force of 1.434 volts.

VOLTA. River of W. Africa. It rises in the French Sudan in two headstreams, the Black and White Volta, and flows through the jungle forest of the Gold Coast Colony S.E. and S. to the Bight of Benin at Adda. Its total length is about 900 m.

The colony of the Upper Volta is a part of French W. Africa, formed in 1919 from the S. section of the Upper Senegal Niger Colony (French Sudan). Ouagadougou is the capital. The area is about 142,000 sq. m. Pop. about 3,000,000, including some 450 Europeans.

VOLTAIRE. Assumed name of the French writer, François Marie Arouet (1694-1778). He was born in Paris, Nov. 21, 1694, the son of a notary, and was educated by the Jesuits. He reluctantly studied law for a while, but subsequently lived on an allowance, dabbling in literature and making his way in society by his wit and manners. He made his mark as a dramatist with his *Oedipe*, produced in 1718.

In 1725 Voltaire's talent for epigram gave offence to the *Chevalier de Rohan-Chabot*, whose lackeys chastised him in their master's presence. In vain he sought redress, and when it became known that he was taking lessons from a fencing master with a view to a duel, he was sent to the Bastille, and on his release obtained permission to go to England, where he remained from May, 1726, until early in 1729. While in England he published his epic, the *Henriade*, and wrote his *History of Charles XII* and his *Letters on the English*. Soon after his return to France Voltaire amassed a fortune by speculation. In 1734 the French government, enraged by the appearance of his *Letters on the English*, issued an order for his arrest, but left him unmolested when he took refuge in the country house of Mme. du Châtelet, at Cirey. This friendship, though punctuated by frequent quarrels, continued until her death in 1749. Works written during those years include the plays *Méropé* and *Mahomet*, *Dialogues on Philosophy*, the scandalous *La Pucelle*, and *The Age of Louis XIV*. In 1746 he was elected a member of the French Academy of Letters.

After the death of Mme. du Châtelet Voltaire was persuaded to take up his residence at the court of

Voltaire,
French writer
After Largillière

Frederick the Great, who had conceived a boundless admiration for his talents. He was received almost as a demigod, but his relations with his royal patron gradually became strained. Voltaire, after some wanderings in Alsace and Switzerland, finally settled at Ferney, on French soil, but close to Geneva. He established important industries on his estate; he wrote books of all kinds, including his brilliant satirical tale, *Candide*, 1759; and conducted a voluminous correspondence. Voltaire died May 30, 1778, and his remains were transferred to the Panthéon in 1791.

VOLTERRA. City of Italy. It stands at an elevation of 1,800 ft. on a hill, encircled by its massive ancient walls, 51 m. by rly. S.E. of the city of Pisa. The cathedral (1120), the Palazzo Municipio (1208), and the Palazzo Tagassi, with a national museum, and the citadel, now a prison, are the principal edifices. Volterra, the Etruscan Velathri, was one of the 12 cities of the Etruscan League. Pop. 17,000.

Volterra, Italy. West front of the cathedral, consecrated in 1120 and enlarged in 1254

VOLTURNO. River of Italy. It rises in the Apennines, and flows S.E., then W. past Capua to the gulf of Gaeta in the Tyrrhenian Sea. It has a length of about 105 m. On its banks Garibaldi defeated the army of Naples.

VOLUNTARY AID DETACHMENT. Bodies of civilians, some of men and some of women, numbered and registered at the War Office. They were organized in every county of the United Kingdom to render first aid in case of invasion. Previous to the Great War, the detachments of the British Red Cross and Order of St. John were organized to be ready at a moment's notice, and in Oct., 1914, the women decided to work together as a joint committee known as the Voluntary Aid Detachments, popularly known as V.A.D.'s.

In 1918 those attached to the brigade of the Order of St. John numbered 65,000 (44,000 men and 21,000 women), with 10,000 overseas, while the Red Cross Society had over 3,000 detachments with a personnel of over 90,000 (24,000 men and 66,000 women). See Nursing; Red Cross.

VOLUNTEER (Lat. *voluntarius*, of free will). Term applied in a special sense to those who offer to serve the state in a military capacity. In Great Britain voluntary training for home defence on a national scale dates from the Napoleonic wars, though the train bands of Stuart times were largely a volunteer force. In 1859 the renewed fear of invasion brought about the formation of volunteer rifle corps, and the National Rifle Association was founded in the same year. An Act of 1863 defined the conditions of service of the new force, and authorised a capitation grant of 30s. a year in respect of each efficient volunteer.

Battalions of infantry were raised in the towns and counties, and each was attached to the regiment of the line which had a connexion with the locality. An officer of the regular army was appointed as adjutant, and he

supervised the training. The yeomanry, also raised on a county basis, were in reality mounted volunteers. This force lasted until 1907, when the army was reorganized and the volunteers became the Territorial Force (q.v.).

On the outbreak of the Great War volunteer units were formed, but the force was not officially recognized until April, 1916. It rendered good service in various ways until disbanded in Nov., 1919.

IRISH VOLUNTEERS. The first units of this force were raised in 1779 for home defence. The example of Ulster in raising volunteers in 1914 was promptly followed by the Nationalists in the rest of Ireland, and after the Dublin rebellion, 1916, the Irish volunteers developed into the guerrilla force known as the "I.R.A." See Ireland; Sinn Féin.

VOLUTE. In architecture the spiral scroll forming the principal feature of the Ionic capital and of the Roman composite capital. See Composite Order; Ionic Order.

VOLVOX. Genus of small flagellate protozoa, common in many ponds. It lies so nearly on the border line between the animal and vegetable kingdoms that most botanists class it as a green alga. It consists of a hollow sphere of unicellular individuals, each possessing two flagellae, and the whole united together by a gelatinous envelope. In the common pond species, *Volvox globator*, there may be as many as 10,000 individuals in the colony, which progresses by rolling along in the water. Like the plants, the cells contain chlorophyll, and build up starch granules. Reproduction is both sexual and asexual.

VOODOO or *Vaudoux*. Superstitious cult current in some W. Indian islands, especially Haiti. Introduced by early slaves recruited from Dahomé, its secret rites, performed by a priest and priestess, are based upon the worship of the green snake.

VORARLBERG. Province of the republic of Austria, formerly of the empire of Austria-Hungary. The name, meaning the land beyond the Arlberg Pass, was given to it in the 18th century, when certain small areas were united under this name. It adjoins Bavaria, Switzerland, Liechtenstein, and Tirol; parts of its boundary are formed by the Rhine and Lake Constance. It is drained by the Ill, and is almost wholly mountainous. The inhabitants are nearly all German Roman Catholics. Its area is 1,005 sq. m. Pop. 139,999.

VORONOFF, SERGE (b. 1866). Russian surgeon. Born July 10, 1866, and educated for the medical profession in Paris, Voronoff became a surgeon there. Later he was made director of a biological laboratory and then director of experimental surgery in the Collège de France.

Voronoff's name is prominently associated with attempts at rejuvenation by the transplantation of the sexual glands of young animals. In the lower animals those of an animal of the same species are used; in man those of one of the higher apes. Numbers of these experiments have been successful, the animal or man into whose body the vigorous gland is transplanted losing to a large extent the characteristics of senility and manifesting the vigour of a much younger individual.

VORTICELLA or *BELL ANIMALCULE*. Small protozoan, common in ponds. It resembles a bell with a ciliated mouth, and is

Volute in
architecture

Serge Voronoff,
Russian surgeon

attached to water plants and other objects by a slender stem. The minute organisms which serve as its food are swept into the gullet by the action of the cilia. The vorticella occurs in colonies, and the stem can be contracted.

VORTICISM. Name adopted in the early 20th century to describe an artistic movement on Futurist lines, and, like Futurism, including literature. The word vortex is used by the Italian C. D. Carra to denote the emotional condition of the Futurist artist, but actual vorticism seems to have originated in Great Britain. It insists upon the imaginative reconstruction of nature in formal designs, regarding the question of representation as irrelevant. Vorticist designs are in straight lines and angular patterns. See Futurism.

VORTIGERN (fl. 450). British king. Reigning in the S. and E. of England when Hengist and Horsa came to Britain, he enlisted the Saxons against the ravaging Picts and Scots, and granted them part of Kent as the price of their service; but eventually he waged war against them and was compelled to cede large portions of territory in Essex and Sussex.

VOS, MARTEN DE (1532-1603). Flemish painter. Born at Antwerp, he studied under Frans Floris and in Rome and Venice. He became a fine and facile colourist, painted portraits of the Medici family and other illustrious Italians, and executed important decorations for the churches of Antwerp, where he was dean of the S. Luke's Guild in 1572. He died at Antwerp, Dec. 17, 1603.

VOSGES. Mountain range of France. It forms the W. edge of the basin of the middle Rhine opposite the Black Forest, and is separated at its S. end from the Jura Mts. by the Gate of Burgundy. The lower slopes are vine-clad, up to 3,600 ft. they are forested with pine and beech, and above 3,600 ft. they are pasture land. There are summits exceeding 4,000 ft. Lead, silver, copper, rock salt, and coal are mined. See Alsace-Lorraine.

A department of France is called the Vosges. One of the most picturesque districts of the country, this includes the southern part of the Vosges Mts. and some beautiful river valleys. Épinal is the capital and the area is 2,300 sq. m. There was intermittent fighting in this area throughout the Great War.

VOTE (Lat. *vovere*, to vow). Act of indicating a preference at elections for representatives to parliament and other bodies. It is usually done to-day by ballot, i.e. marking a paper, a method which has the advantage of secrecy, although voting by show of hands, with the right of claiming a ballot, is still usual at company meetings and for other purposes. Voting is also the usual way of deciding in legislative and other assemblies the fate of a proposal, but here it is usually open voting, not voting by ballot.

In 1929 there were 29,850,776 persons entitled to vote at the general election of that year in Great Britain and Northern Ireland. Of this number 22,657,164 actually voted.

An instrument called a voting machine has been invented for recording votes and used to some extent in the United States. A separate key is provided for each candidate, the keys being arranged in rows and numbered.

A vote of credit is a sum of money voted by the House of Commons in a time of emergency, such, for instance, as during the early days of the Great War. See Ballot; Election; Franchise; Proportional Representation; Representation; Suffrage.

VOW (Lat. *votum*). Generally, any solemn promise; in a religious sense, any voluntary and solemn promise made to God which may be physically but not morally violated. As the Christian Church developed two classes of vows were recognized (1) concerning gifts; (2) affecting conduct, as of chastity, pilgrimage, and vows of the religious orders. The Roman Catholic Church recognizes temporal, perpetual, conditional, absolute, simple, and solemn vows, and holds that the pope alone has the supreme authority to dispense from any but minor vows. The Church of England formally recognizes only the baptismal and marriage vows, though those of brotherhoods and sisterhoods are recognized by bishops at their discretion.

VRYHEID. Town o. Natal, S. Africa. It is 53 m. from Dundee and 290 m. from Durban, being connected by rly. with both. It stands at an alt. of about 4,000 ft. and is the centre of a district in which coal, iron, and gold are mined. After being in Zululand, Vryheid was given in 1884 to a group of Boers, who made it into a little republic. This he came part of the Transvaal in 1888. In 1902 it was transferred to Natal. Pop. (white) 2,127.

Vulcan. In Roman mythology, an old Italian deity, the god of fire. He was identified with the Greek Hephaestus (q.v.).

VULCAN. Hypothetical planet supposed to exist between Mercury and the sun. The French mathematician Leverrier calculated from perturbations of Mercury the position of the supposed planet. The general consensus of astronomical opinion is that Vulcan does not exist.

Vulcanite. Form of rubber made by mixing with sulphur. It is also known as ebonite (q.v.).

VULGATE (Lat. *vulgatus*, common). Name sometimes applied to the Septuagint (q.v.), but specifically to the Latin version of the Bible prepared by Jerome in the 5th century. Jerome's version was revised by order of Sixtus V. and issued in Rome in 1590, and revised again by order of Gregory XIV and issued in 1592. Contributions towards a revised text were made by Robert Étienne, 1528. In 1907 Pope Pius X appointed a commission, of which Cardinal Gasquet was president, to prepare the way for another official version. See Bible.

VULTURE. Family (Vulturidae) of large birds of prey. They differ from the eagles and hawks in having the head and neck—except in one genus—more or less bare of feathers. They all have long, hooked beaks; the plumage is often loose and untidy, and the claws are long and curved. They feed chiefly on dead animals and carrion.

The griffon vulture (*Gyps fulvus*), common in S. Europe, Asia, and N. Africa, is about 40 ins. long, and has grey and brown plumage with a large white ruff round the throat.

The Egyptian vulture (*Neophron percnopterus*) is about 2 ft. long, and has white plum-

age with a little brown and black. The cinereous or black vulture (*Vultur monachus*) is a larger bird; it has black plumage. The head and neck are partly covered with white down, the bare skin of the rest being dull red.

The American vultures are classed in a separate family—Cathartidae. The nostrils are connected and the contour feathers have no after-shaft. The bill is not so well fitted for attack; the claws are less curved and not so sharp. They include the condor, the king vulture and the Californian vulture. See Condor; Lämmergeier; Secretary Bird.

Vyrnwy. Reservoir for the water supply of Liverpool, formed by a dam across the Llanwydyan valley.

VYRNWY. River and artificial lake of Montgomeryshire, Wales. The river rises in Montgomeryshire and flows to the Severn. Its upper valley has been made into a lake to supply Liverpool with water. The work was begun in 1880, and the water is conveyed by pipes to the destination, 68 m. away. The length of the lake is nearly 5 m. and it covers nearly 2 sq. m. Its capacity is over 12,000 million gallons.

W. Twenty-third letter of the English alphabet. It has the value of both a vowel and a consonant. It is called double u, being in form VV (UU). Its phonetic relation to u is the same as that of y to i. At the beginning of its utterance it resembles a vowel, but when the sound is being completed it inclines more to the consonantal value. It is sometimes mute, as in two, sword, and always before r, as in wrath, wrong. Before h its articulation is reversed, what, which being more correctly, though not universally, pronounced as if written hwat, hwich; or it is mute, as in who, whole. It never has a consonantal value when final, in which case it is always combined with another vowel. See Alphabet; Phonetics.

WAAL. River of the Netherlands, a branch of the Rhine (q.v.). Not far from Nijmegen, the Rhine divides into the Neder Rijn and the Waal, the latter flowing W. until, 2 m. E. of Gorinchem (Gorkum), it is met by the Maas or Meuse and becomes the Mervede.

WADDESDON. Village of Buckinghamshire. It has a station 43 m. from London on the L.N.E. and Met. Rlys. Waddesdon Manor was built for Baron Ferdinand de Rothschild in 1880. Pop. 1,439.

WADDON. District of Croydon. It is 1 m. W. of the thorough proper, and has a station on the Southern Rly. During the Great War it was made an aircraft centre, and, considerably enlarged, afterwards became the terminus of the air lines to the Continent. See Croydon.

WADE, GEORGE (1673 - 1748). British soldier. Born in Westmeath, Ireland, he served in Flanders, 1692 and 1702-3, and in Spain, 1704-10, distinguishing himself at the battles of Almanza, 1707, and Saragossa, 1710.

Vulture. 1. Black vulture. 2. Griffon vulture. Both occur around the Mediterranean. W. S. Herridge, F.Z.S.

George Wade, British soldier.

After the Jacobite rebellion of 1715 he held the command in the Highlands, and from 1726-37 was engaged in the construction of military roads. Made a field-marshal in 1743, he commanded the British troops in Flanders in 1744. He died March 14, 1748.

WADEBRIDGE. Market town and urban dist. of Cornwall. It is 7 m. from Bodmin, with stations on the G.W. and Southern Rlys. A bridge of 17 arches, dating from about 1485, crosses the Camel estuary. The town has a trade in agricultural produce. Market day, Mon. (alternate). Pop. 2,319.

WADHURST. Parish of Sussex. It is 6 m. from Tunbridge Wells, with a station on the Southern Rly. The church has some interesting features, including a collection of local ironwork, and there are some old houses. In the grounds of Wadhurst Hall is a lake famous for the shooting it affords. Pop. 3,674.

WADY HALFA OR HALFA. Frontier town of Egypt. It is on the E. bank of the Nile, 949 m. by rly. N. of Khartoum and 811 m. S. of Cairo. A few miles S. is the second cataract.

WADY MUSA OR RIVER OF MOSES. Stream of Transjordan. It is said to have originated when Moses struck the rock (Num. 20, 7-13). On it are the ruins of Petra (q.v.).

WAFD. Name given to the nationalist party in Egypt. It arose about the end of the war period, when the Egyptians were agitating for independence. Its first leader was Zaglul Pasha. The party continued to exist after Egypt received its independence in 1922, its aim being to extend the authority of Egypt at the expense of that of Great Britain. The Wafdists won a sweeping victory at the general election of 1929. After the death of Zaglul in 1929 Nahas Pasha became their leader.

WAGES. In economics, the reward of labour, as opposed to interest, the reward of capital, and rent. In ordinary speech an artificial distinction has grown up between wages and salaries, the former being paid to manual workers and as a rule weekly.

The older economists held the doctrine of the wage fund, this being a certain sum out of which wages were paid. It could only, they held, be increased gradually, and consequently any considerable increase in the number of workers decreased the individual shares. The modern theory is that wages are paid from the total product and can increase almost indefinitely with an increase in that product.

In general their amount is decided by the relation between the supply of labour and the demand for it, but they will not as a rule rise beyond the amount which the particular industries can pay and remain solvent, or fall below the standard of living set up by the workers. History shows that rising wages invariably lead to an increase in the birth rate, which thus tends in time to lower them again. An important distinction is that between real wages, i.e. the amount of commodities the wages will purchase, and monetary wages. See Capital; Labour; Political Economy; Trade Union; Wealth.

WAGGA WAGGA. Town of New South Wales, Australia. It stands on the Murrumbidgee, 310 m. by rly. from Sydney. It is the centre of a pastoral and mining district. Pop. 8,930.

WAGNER, WILHELM RICHARD (1813-83). German composer. Born at Leipzig, May 22, 1813, he studied music there. In 1833 he was appointed chorus master at the theatre of Würzburg. In 1839 he went to Paris, where he stayed till 1842, when he removed to Dresden. Driven from Germany by the political upheavals of 1849, he passed the next twelve years in exile in Switzerland, England, Italy, and France; from 1861 to 1864 he was mainly in Vienna and Mainz, in increasing financial

distress, from which he was relieved by the gift of a pension from the king of Bavaria. From 1864-65 he was at Munich, and subsequently in Switzerland till 1872, when he removed to Baireuth, which remained his home till his death, at Venice, Feb. 13, 1883.

Richard Wagner,
German composer
After Lenbach
Photo: Bruckmann

The great bulk of Wagner's music was written for the stage. His operas are *Die Feen*, 1833; *Das Liebesverbot*, 1835-36—these two were not published during his lifetime; *Rienzi*, 1838-40; *Der fliegende Holländer*, 1840-41; *Tannhäuser*, 1844-45; *Lohengrin*, 1846-48; *Der Ring des Nibelungen*, a tetralogy consisting of *Das Rheingold*, 1853-54; *Die Walküre*, 1854-56, *Siegfried* (begun in 1857, abandoned for some years, and completed 1869), and *Götterdämmerung*, 1870-74, *Tristan und Isolde*, 1857-59; *Die Meistersinger von Nürnberg*, 1862-67; and *Parsifal*, 1877-82. He also composed some orchestral music, of which only a *Faust* overture and the *Siegfried-Idyll*, a serenade to his second wife, are of great importance; a handful of pianoforte and choral pieces of slight value; and some songs to French and German words. See Baireuth.

WAGRAM. Village of Austria, 11 m. from Vienna. Here a battle was fought between the French under Napoleon and the Austrians under the archduke Charles, July 5 and 6, 1809. The first French attack was repulsed, and the Austrians took the offensive. They succeeded in forcing back the French for some distance, but in a counter-attack the French caused the Austrians to withdraw. The French lost about 30,000 out of 180,000 troops engaged, and the Austrians 25,000 out of 130,000.

WAGTAIL (*Motacilla*). Genus of insectivorous birds. It is allied to the pipits. Wagtails are restricted to the Old World, except that the blue-headed species has been found in Alaska. They run instead of hopping. Three species breed regularly in the British Islands: the pied wagtail (*M. lugubris*), the grey wagtail (*M. boarula*), and the yellow wagtail (*M. Rallii*). In addition, the white wagtail (*M. alba*) and the blue-headed wagtail (*M. flava*) are visitors to Britain. The pied wagtail is a sprightly black and white bird. The white wagtail is similar, but its upper parts are grey instead of black. The grey wagtail, which haunts watersides in hilly districts, is blue-grey above.

WAHABI OR WAHHABI. Name of the members of a Mahomedan sect, founded early in the 18th century. Its adherents sought to recapture the simplicity of early Islam. They deprecated pilgrimage to holy places, invocation of saints, luxury in dress, and sepulture, and prohibited tobacco. In 1811 Mehemet Ali, viceroy of Egypt, organized an expedition which, after desperate struggles, broke the Wahabite power.

Early in the 20th century the power of the Wahabis was revived by Abdul Aziz. He founded settlements of them, and these furnished him with soldiers. The sect took a prominent part in the fighting in Arabia both during and after the Great War.

WAIHI. Town of North Island, New Zealand. It has rly. connexions with Thames and Auckland, and is the centre of a gold-mining area. Pop. 7,000.

WAIKATO. River of North Island, New Zealand. Rising in Ruapahu, it flows through Lake Taupo, N. through Auckland prov. into the Tasman Sea, 25 m. S. of Manukau harbour. Its length is 170 m.

WAINFLEET. Market town of Lincolnshire. It is 18 m. from Boston, on the L.N.E. Rly. Magdalen College, Oxford, was founded by William of Waynflete, who was born here. Market day, Sat. Pop. 1,375.

WAINSCOT. In joinery, a special quality of oak used for panels to cover the whole or part of a wall surface, hence the panels themselves used for this purpose. The term is derived from the Dutch *wagensehot*, the name of an oak species grown in Germany, and at one time exported in large quantity to Holland for re-export.

WAKE. Annual church vigil, also the all-night watching by a corpse before burial. The church wake was an all-night service commemorating the completion or dedication of a church, and was usually held on the patron saint's day, or on the Sunday after the day of dedication. Booths were erected in the churchyard for the supply of food and drink on the following day, which was a holiday, and the wakes soon became little more than uproarious fairs. Lancashire was long noted for its wakes, and the Bradford wakes were known as tides. The corpse wake survives

in Ireland. The annual holidays of Lancashire workers are called wakes. See Vigil.

WAKEFIELD. City, co. borough and market town of Yorkshire (W.R.). It stands on the Calder, 9 m. from Leeds, on the L.M.S. and L.N.E. railways. The cathedral is the former parish church of All Saints, a 15th century building with a fine spire. Other buildings include the town hall, corn exchange, and county buildings. On a bridge over the Calder is a beautiful Decorated chapel, restored in the 19th century. Six Chimneys is one of several old houses. The city is an agricultural centre. Manufactures include worsted, chemicals, soap, flour, and beer. Wakefield was a place of some importance in the Middle Ages. In the 16th century it became a centre of the cloth trade. In 1888 Wakefield became the county town of the west riding and the seat of a bishop. Market days, Fri. and Sat. Pop. 53,052.

The battle of Wakefield was fought between the Yorkists and Lancastrians, Dec. 30, 1460. In it Richard, duke of York, was attacked by a host gathered by Margaret of Anjou, being defeated and killed. See Roses, Wars of the.

Wagtail. Black and white, pied wagtail, a sprightly, insectivorous bird

Wakefield, Yorkshire. Cathedral church of All Saints, enlarged from the 15th cent. parish church

WAKEFIELD, EDWARD GIBBON (1796-1862). British statesman. Born in London, May 20, 1796, he was for a time in the diplomatic service. For abducting an heiress in 1826 he was imprisoned, 1827-29. In 1830 he wrote a book on capital punishment, which had an appreciable influence on the amelioration of the English criminal law. He made a close study of colonisation; assisted in the colonisation of South Australia, 1836; was secretary to the 1st earl of Durham in Canada, 1838; and helped forward the settlement of Canterbury, New Zealand. He died at Wellington, N.Z., May 18, 1862.

WAKE ROBIN, CUCKOO PINT, OR LORDS AND LADIES (*Arum maculatum*). Perennial herb of the order Araceae. A native of Europe

Wake Robin. Flowers and leaves of *Arum maculatum*

and N. Africa, it has a tuberous root-stock and large, spear-shaped leaves, often blotched with purple-black. The short flowering stem is surmounted by a large cowl-like spathe, yellow-green with a purple edge. Within this is the thick dull purple spadix, around the lower

half of which are clustered the simple flowers. The lowest of these are pistils, the upper stamens. The pistils develop into fleshy, scarlet berries, conspicuous in autumn when the spathe has withered. The plant is acrid and poisonous.

WAKKERSTROOM. Town and dist. of the Transvaal, S. Africa. The town lies 43 m. by rly from Volksrust, near the frontier of Natal, at an alt. of 5,900 ft., and is an agricultural and administrative centre. Pop. 1,490.

WAKLEY, THOMAS (1795-1862). British surgeon. Born July 11, 1795, he was apprenticed to an apothecary. Establishing a practice in Regent Street, London, in 1823 he founded *The Lancet* and set himself to remedy various abuses in the medical world. He died May 16, 1862.

Thomas Wakley, British surgeon
After K. Meadows

WALCHEREN. Island of the Netherlands, in the prov. of Zeeland. About 13 m. long and 10 m. broad, it lies in the Schelde estuary, W. of the islands of N. and S. Beveland, across which a rly. runs to the mainland near Bergen-op-Zoom. The surface is protected by dykes. Cereals are grown and cattle bred. Some fishing is carried on. Among the towns are Middelburg and Flushing.

In 1809 a British expedition under Lord Chatham was sent to attack Walcheren, then an important point in the French defences. After the landing on July 30, Flushing was invested and fell on Aug. 16. Fever broke out, and the island was evacuated, Nov.-Dec., 1809.

WALDECK OR **WALDECK PYRMONT**. Former republic of Germany, now part of Prussia. Covering 433 sq. m., it consisted of two detached portions, Waldeck, lying between Westphalia and Hesse-Nassau, and Pyrmont, farther to the N.E. Arolsen was the capital. Until 1918 it was ruled by a prince, who after 1868 was but a vassal of Prussia. In Nov., 1918, a republic was proclaimed, but in 1929 the little state was included in the Prussian prov. of Hesse-Nassau.

WALDECK-ROUSSEAU, PIERRE MARIE RENÉ ERNEST (1846-1904). French statesman. Born at Nantes, Dec. 2, 1846, he became a

barrister and mayor of Nantes, 1870. Entering the chamber of deputies in 1879, he was minister of the interior under Gambetta, 1881-82, and under Ferry, 1882-85. Having been an unsuccessful candidate for the presidency in 1894, he became premier in 1899, his administration being marked by the revision of the Dreyfus trial, 1899, and measures against the religious orders, 1901. He resigned in 1902, and died at Corbeil, Seine-et-Oise, Aug. 10, 1904.

WALDENSES OR **VAUDOIS**. Religious sect founded by Peter Waldo of Lyons in the 12th century. Their doctrines were based upon a literal interpretation of the moral precepts of the Bible. The sect was widespread in Provence, in Piedmont, and in the intervening mountain districts. They were subjected to periodical persecutions, and in the 16th century became attached to the Calvinistic branch of the reformers. Active persecution ceased in the 18th century, but the Waldenses continued to be excluded from civil rights till 1848.

A recognized Protestant Church, the Waldenses are still vigorous. Their church government is similar to the Presbyterian, and the latter church in England aids them financially.

WALES. Peninsula in the W. of Great Britain. In the N.W., separated from the mainland by the Menai Strait, is the Welsh island county of Anglesey.

The principality has a long irregular coastline, being bounded N., W. and S. by the sea. It is mainly a land of mountains. Snowdon, in the N., reaching 3,560 ft. The rivers include the Severn, Wye, Usk, Dee, Towy and Teifi. Bala, the chief source of the Dee, is the largest lake. The area is 7,466 sq. m. Pop. 2,205,680.

The chief industrial area is in the S., where coal mining, iron ore production, the tinplate industry, and shipping are the main activities. Oil refining is an important industry, and slate is quarried. There is railway communication with London and other centres by the G.W. and L.M.S. Rlys. Holyhead, the terminus of a steam packet service to Kingstown (Dun Laoghaire) and Dublin, is served by the latter system, and the Fishguard-Rosslare route is worked by the G.W. Rly. In general the government of Wales is associated with that of England, but there is a Welsh board of health and also a distinct organization for education.

Wales is divided into twelve counties, six in North Wales and six in South Wales, while for certain purposes Monmouthshire is regarded as part of Wales. Cardiff and Swansea are the largest towns. There is no recognized capital, but Cardiff is the headquarters of government. Aberystwith and Carmarvon are also national centres. The Church of Wales, which is now separated from the Church of England, consists of six dioceses under an archbishop. The university of Wales consists of four colleges, at Aberystwith, Bangor, Cardiff, and Swansea. It sends one member to Parliament. In Wales and Monmouthshire there were, in 1921, 190,292 persons who could speak only Welsh. A further 787,074 could speak both Welsh and English.

HISTORY. The Welsh, a term applied by the Teutons to Romanised foreigners, call themselves Cymry, that is, fellow countrymen. After the Roman evacuation, Cunedda Wledig, a British prince from S. Scotland, established himself in the N.W. district of Gwynedd, and founded a dynasty. Harassed by Norsemen and English, and frequently at war among themselves, the Welsh princes at length acknowledged the overlordship of powerful English kings. The Norman conquest of England was quickly followed by attacks on Wales, and the marches were the scene of constant warfare. With the greatest Welsh monarch, Llewelyn (q.v.), or Llywelyn the Great (1194-1239),

the house of Gwynedd became supreme, and Wales seemed at last to have become a stable political state under English suzerainty. But Llywelyn ap Gruffydd (1246-82) foolishly intrigued against Edward I, who forced him to submit. Wales was annexed, 1284, and Edward's infant son, born at Carnarvon, was made prince of Wales. Welsh law was allowed to remain in the country parts, but boroughs were formed, and settled with English.

The Welsh supported Henry VII, who was of Welsh descent, and the Tudors favoured the principality. The Act of Union in 1536 made English law general, and admitted representatives of Wales to Parliament. The Reformation was quietly accepted, but the people were gradually alienated from an Anglicised, apathetic, and often corrupt Church. Religious and educational reform was carried on, with remarkable results. There was a great secession from the established Church in 1811, that of the Calvinistic Methodists, while the Congregationalists and Baptists became powerful bodies. With the development of the great industrial district of S. Wales, socialism spread among the workers. See Aberystwith; England, map.

WALEWSKI, ALEXANDRE FLORIAN JOSEPH COLONNA, COMTE (1810-68). French diplomatist. Born in Poland, May 4, 1810, he was a son

of Napoleon I by Marie, countess Walewski. As a boy he went to France and for some years served in the army. Under Napoleon III he was French ambassador in London: from 1855-60 he was minister of foreign affairs, and from 1860 to 1863 was minister of state. From 1865-67 he was president of the chamber of deputies, and for ten years previously he was a senator. He died at Strasbourg, Oct. 27, 1868.

Comte Walewski, French diplomatist

WALHALLA (Ger. form of Valhalla). Temple of fame commemorating eminent Germans, near Ratisbon, Germany. It stands on a hill on the N. bank of the Danube, near Donaustauf, 6 m. E. of Ratisbon. Designed by L. von Klenze, it was built, 1830-42, by King Louis I of Bavaria. The fine hall contains over 100 busts of distinguished Germans. See Valhalla; also illus. below.

WALHAM GREEN. District of London. It is in the met. bor. of Fulham, with a station on the District Rly. between West Brompton and Parsons Green, and was known as Wendon Green, from the manor of that name.

WALKER. District of Newcastle-upon-Tyne. It is on the N. bank of the Tyne, and has a station on the L.N.E. Rly. It was incorporated with Newcastle in 1904.

WALLABY. Name given to several of the smaller species of kangaroos. They are smaller in size and brighter in colour than the typical kangaroos. They occur in the dense scrub of Australia, Tasmania, and New Guinea. See Kangaroo; also illus. p. 1401.

Walhalla. Interior of the German Temple of Fame near Ratisbon, containing busts of eminent men

WALLACE, ALFRED RUSSEL (1823-1913). British scientist. Born at Usk, Jan. 8, 1823, he spent 1848-52 collecting in the Amazon region, and 1854-62 in the Malay Archipelago, publishing valuable accounts of the expeditions. While in Borneo he wrote his famous essay on the law which has regulated the introduction of new species, in which he independently formulated Darwin's theory. He died Nov. 7, 1913. His many books include *Miracles and Modern Spiritualism*, 1874; *Man's Place in the Universe*, 1903. See Darwin, C. R.

A. Russel Wallace,
British scientist

WALLACE, EDGAR (b. 1875). British novelist. After education in an elementary school, he joined the army and served in South Africa. There he became a war correspondent, and helped to found *The Daily Mail of Johannesburg*. He had then written one or two volumes, and after his return to England he began a literary output which reached enormous proportions. Some were detective stories, and nearly all were full of thrills and excitement. He was almost equally successful with his plays, among them *The Ringer*, and found time to write for the press on the drama and horse-racing and to work for the films.

Wallaby. Bennett's Wallaby, typical of the marsupial order. See p. 1400
Cambier Bolton. F.Z.S.

WALLACE, LEWIS (1827-1905). American soldier and novelist. Born in Indiana, April 10, 1827, he served in the Mexican war. He took part in the Civil War, and was governor of New Mexico, 1878-81, and minister to Turkey, 1881-85. He died Feb. 17, 1905. As a novelist he is best known by his *Ben Hur*, 1880, a story of Palestine and of Rome in the time of Christ. This was an extraordinary success when adapted for the films.

WALLACE, SIR RICHARD (1818-90). British art collector. Born in London, July 26, 1818, in 1870 he inherited Hertford House, together with its pictures and other works of art. During the siege of Paris he spent large sums on the organization of ambulances and the endowment of a British hospital, being rewarded with a baronetcy, 1871. He was M.P. for Lisburn, 1873-85. He died July 20, 1890. See Hertford House.

Sir Richard Wallace,
British art collector
After W. R. Symonds

WALLACE, SIR WILLIAM (c. 1270-1305). Scottish national leader. He was a son of Sir William Wallace of Elderslie, Renfrewshire. At Dundee he killed an Englishman in a quarrel, was outlawed, and commanded a body of malcontents in a kind of guerrilla war with the English. In command of a considerable army, Wallace totally defeated an English army of 50,000 men at Stirling, Sept. 11, 1297, thus driving the English from Scotland. Edward I, however, pursued Wallace as far as Falkirk, where, on July 22, 1298, he

routed the Scots army. The beaten leader fled, and little more is known of him until his betrayal to the English, near Glasgow, by Sir John Menzies, Aug. 5, 1305. Condemned as a traitor and rebel, Wallace was executed, Aug. 23, 1305. See Dumbarton.

WALLACE COLLECTION. Gallery of works of art in London. The collection was bequeathed by Lady Wallace (d. 1897), widow of Sir Richard Wallace (q.v.), to the English nation. Hertford House, Manchester Square, was bought, and the gallery was opened to the public, June, 1900. There is a collection of French masters of the 18th century, while the Italian and Spanish works include fine examples of Titian, Luini, Velazquez, and Murillo. The armoury and the collection of 18th century French furniture are unique. The collection was made by the 3rd and 4th marquesses of Hertford and Sir Richard Wallace. See Hertford House.

WALLACHIA OR WALACHIA. Division of Rumania. Formerly one of the Danubian principalities, it became, 1859-1861, the W. division of Rumania between Hungary and Bulgaria. After the dismemberment of Austria-Hungary, Rumania extended beyond Wallachia to include Transylvania on the N. and the E. Banat on the W. Wallachia lies between the Transylvanian Alps and the Danube, which separates it from Yugoslavia and Bulgaria. See Rumania.

WALLAROO. Seaport in South Australia. It stands on the E. side of Spencer Gulf, 85 m. N. of Adelaide by rly. It is the port for the Wallaroo and Moonta copper mines, and has extensive smelting works. Copper, lead, and wheat are exported. Pop. 3,147.

WALLASEY. County bor. of Cheshire. It lies on a peninsula at the mouth of the Mersey and is separated from Birkenhead by a channel called the Great Float. The bor. comprises New Brighton, Egremont, Seacombe, Liscard, Poulton, Leasowe, and Moreton. It is served by the L.M.S., which has five stations in the borough, and the Cheshire Lines Rly., an electrified line. Ferry boats also connect it with Liverpool. The buildings include a town hall, a fine modern building, and there are several parks. Pop. 101,100.

WALLENSTEIN OR WALDSTEIN, ALBRECHT WENZEL EUSEBIUS VON (1583-1634). Bohemian soldier and statesman. Born Sept. 14, 1583, at Hermanitz, in Bohemia, at the outbreak of the Thirty Years' War in 1618 he joined the emperor Ferdinand II. In 1625 he was appointed general of the imperial armies, and was very successful in ensuing campaigns. But the antagonism of the Catholic princes compelled Ferdinand to remove him from the command in 1630, but the victories of Gustavus Adolphus and the fall of Tilly, 1632, necessitated his recall. When Gustavus was killed at Lützen, Nov. 16, 1632, Wallenstein was left the greatest

Sir William Wallace. Statue of the Scottish hero at Aberdeen

figure on the stage. For his own ends he intrigued alike with the Swedes, the German Protestants, and with German Catholics. Ferdinand was alarmed, and in Jan., 1634, announced the dismissal of Wallenstein. Wallenstein would probably have turned upon the emperor had he not himself been assassinated, Feb. 25, 1634.

WALLER, EDMUND (1606-87). English poet and politician. Related to both Oliver Cromwell and William Hampden, he was born March 9, 1606, at Coleshill, Hertfordshire (Bucks since 1832), and sat in Parliament from 1624-87. Involved in a plot to secure London for Charles I in 1643, he was fined £10,000 and banished, but was pardoned by Cromwell, 1651. He died Oct. 21, 1687. As a poet, remembered by the lyric, *Go, lovely rose, he remodelled the heroic couplet.*

Edmund Waller,
English poet

WALLER, LEWIS (1860-1915). British actor. Born at Bilbao, Spain, Nov. 3, 1860, he first appeared at Toole's Theatre in 1883. He played leading Shakespearean parts under Sir Herbert Tree's and his own management, and became the popular romantic hero of the day in such costume plays as *The Three Musketeers*, *Robin Hood*, and *Monsieur Beaucaire*. He was manager successively of the Haymarket, Shaftesbury, Imperial, and Lyric Theatres, London. He died Nov. 1, 1915.

Lewis Waller,
British actor
Downey

WALLFLOWER (*Cheiranthus cheiri*) Perennial herb of the order Cruciferae, native of N. and C. Europe. It forms a small bush from 1 ft. to 2 ft. in height, with alternate lance-shaped leaves and racemes of fragrant flowers, which in the natural state are orange-yellow, but under cultivation vary from a clear yellow through blood-red to dark brown. The plant was introduced to British gardens in the latter half of the 16th century. In many places it has become naturalised on ancient walls, and these escapes have reverted to the natural yellow of the flowers.

WALLINGFORD.

Borough and market town of Berkshire. It lies on the Thames, 15 m. N.W. of Reading, on the G.W. Rly. In S. Peter's church is buried Sir W. Blackstone. The castle was the scene of a siege by Parliamentary forces during the Civil War, 1646, and was mostly demolished a few years later. The town occupies the site of a Roman camp. The treaty of Wallingford is the name of the peace made here in 1153 between Stephen and Matilda. Market day, Fri. Pop. 2,721.

Wallflower. Leaves, pods, and flowers

WALLINGTON. District of Surrey. It is 2½ m. from Croydon, with a station on the Southern Rly. With Beddington it forms an urban district. Pop. 21,770.

WALLOON (akin to Welsh, foreigner). Dominant ethnic stock in S.E. Belgium, including the restored Malmédy and Eupen dists. They number nearly 3,000,000. Their Romance dialect is in colloquial use by a fraction of the Walloons, who commonly speak modern French. For many years there has been

friction between the two language groups in Belgium, the Walloons, who speak French, and the Flemings.

In Elizabeth's reign, and in Stuart times, Walloon Protestant refugees settled at Canterbury, and elsewhere in England, practising silk weaving and cloth manufacture, and in Canterbury Cathedral crypt they have maintained their separate worship since 1561. See Belgium.

WALL PENNYWORT, NAVELEWORT, OR PENNY PIES (*Cotyledon umbilicus*). Perennial herb of the order Crassulaceae, a native of Europe, W. Asia, and Africa. It has a fleshy root-stock, from which spring the round fleshy leaves, 1 in. to 3 ins. across, depressed in the centre and with the leaf-stalk attached to the middle of the under side. On the flowering stem they are spoon-shaped and wedge-shaped. The stem, which varies from 6 to 18 ins., is covered with drooping, greenish-white cylindric flowers.

WALLSEND. Borough of Northumberland. On the N. bank of the Tyne, 4 m. E. of Newcastle, it stands on the site of a Roman camp, and is named from being the E. end of Hadrian's Wall (q.v.). Its growth is due to the collieries, opened in the late 18th century. It has a station on the L.N.E. Rly. Pop. 45,480.

WALL STREET, Thoroughfare in New York City containing the Stock Exchange. The name is used as a synonym for the American stock market. See New York.

WALL TREE. Horticultural term for a tree prepared and grafted for culture against a wall; and specifically for fruit trees which have undergone training in one or other of the various desirable forms. All pip or stone fruits may be grown against walls, but such protection is an absolute necessity for the ripening of peaches, nectarines, or apricots grown in the open air in Great Britain. See Espalier Garden.

Walmer Castle. Official residence of the lord warden of the Cinque Ports

WALMER CASTLE. Official residence of the lord warden of the Cinque Ports (q.v.). About 3 m. to the S. of Deal, the original building was erected in 1539 by Henry VIII as a coast block house, but it has been much altered and enlarged.

WALNEY. Island of Lancashire. A long strip of land lying in front of Barrow-in-Furness (q.v.), of which borough it is part, Walney is connected by a bridge and steam ferry with the mainland. On it is Vickerstown.

WALNUT (*Juglans regia*). Large timber tree of the order Juglandaceae. It is a native of Asia, and reached Britain in the 15th century. It grows to 40 ft. or 60 ft. high, with a broad, spreading head and a short bole

covered with yellow-grey bark. The long leaves are broken into 5-9 lance-shaped leaflets, which give off a spicy aroma. It bears numerous male blossoms in long, hanging green catkins, and small spikes of one to four female flowers at the tip of a shoot, which develop into the single-seeded fruits (walnuts) enclosed in a wrinkled, bony shell and invested in a green, fleshy coat. The tough, light wood, when mature, is of a rich brown colour, and is used for cabinet making.

WALPOLE, HORACE OR HORATIO (1717-97). English author and letter writer. Born in London, Sept. 24, 1717, 4th son of Sir Robert Walpole, 1st Earl of Orford, he was made inspector of imports and exports, 1737-38, and usher of the exchequer, controller of the pipe, and clerk of the estreats, 1738. M.P. for Callington, 1741-54; Castle Rising, 1754-57; King's Lynn, 1757-68; he succeeded to the earldom of Orford, Dec., 1791; and, dying in London, March 2, 1797, was buried at Houghton, Norfolk.

Horace Walpole, British author

WALPOLE, HUGH SEYMOUR (b. 1884). British novelist. Son of George Walpole, bishop of Edinburgh, he was for a time a schoolmaster. During the Great War he served, 1914-16, with the Russian Red Cross. His works include *The Wooden Horse*, 1909; *Mr. Perrin and Mr. Traill*, 1911; *Fortitude*, 1913; *The Dark Forest*, 1916; *The Green Mirror*, 1918; *The Secret City*, 1919; *The Cathedral*, 1922; *Harmer John*, 1926; *Wintersmoon*, 1926; *Hans Frost*, 1929; and *Rogue Herries*, 1930.

WALPOLE, SIR ROBERT (1676-1745). English statesman. Born Aug. 26, 1676, he inherited his father's estates in Norfolk, and entered Parliament in 1701, soon making his mark in the House of Commons. He held office in the Whig administration, was condemned for corruption by a partisan vote in 1712, but returned to office with the Whigs on the accession of George I in 1714.

The Whig group to which Walpole belonged was practically in opposition from 1717-21, when the collapse of the South Sea Bubble and Walpole's reputation as a financier brought back Walpole and his brother-in-law, Townshend, as the heads of the government, from which Townshend retired in 1730. Walpole virtually ruled the nation from 1721 to 1739, directing his policy to the one supreme object of advancing the material prosperity of England, developing her commerce, and keeping her at peace.

Sir Robert Walpole, English statesman After Jarvis

Walpole employed the system of parliamentary corruption more methodically than his predecessors, though less profusely than his successors. In 1739 a storm of popular sentiment forced him to declare war with Spain, yet he held on to office although he was wholly unfitted to be war minister, until resignation was forced upon him in 1742, when he received the title of earl of Orford. He died March 18, 1745.

Walnut Leaflets. Top, left, male flowers; right, fruit

WALPURGA (d. 779). English missionary and saint. Daughter of Richard, king of the West Saxons, who was sent to Germany to help her cousin, S. Boniface, in his missionary work, and became abbess of Heidenheim. She died in 779. Her festival is on Feb. 25.

The Eve of S. Walpurga's Day, celebrated in Germany on May 1, is known as Walpurgis Night. It coincided with the old pagan May festival, when witches were believed to assemble on mountains, especially the Blocksberg or Brocken (q.v.), to worship the devil.

WALRUS (*Trichechus*). Large, fin-footed, carnivorous aquatic mammal. It is related to the sea-lion, from which it differs in its dentition, larger size, heavier and bulkier body, and the absence of external ears. When adult, the walrus is distinguished by the pair of huge tusks growing from the upper jaw. These are used both in fighting and for digging molluscs out of the bed of the sea.

Walrus. Young specimen, before the appearance of the tusks

A full-grown male walrus is 10 to 12 ft long, and may weigh 3,000 lb. There are two rather distinct races. The Atlantic walrus (*T. rosmarus*) occurs in Spitsbergen and other islands off the extreme N. of Europe. In America it occurs on the islands about Baffin Bay. The Pacific walrus (*T. obesus*) is found about Alaska and the N.E. coasts of Siberia. Formerly much more abundant, it has been exterminated in many districts by relentless hunting.

WALSALL. County bor. and market town of Staffordshire. It is 8 m. N.W. of Birmingham, and is served by the L.M.S. line and by canals. The buildings include several churches, the modern town hall, free library, museum, and institute of science and art. There is a memorial to Sister Dora. The principal trade is the making of saddlery and hardware, and there are also iron foundries and leather works. It sends one member to Parliament. Market days, Tues. and Sat. Pop. 96,964.

W. J. Walsh, Irish prelate Lafajette

WALSH, WILLIAM JOHN (1841-1921). Irish prelate. Born in Dublin, Jan. 30, 1841, he became professor of theology at Maynooth in 1867, vice-president in 1878, and president in 1881. In 1885 he was made Roman Catholic archbishop of Dublin, remaining there until his death, April 9, 1921. Walsh, who was

first chancellor of the national university of Ireland, 1908, wrote a number of books.

WALSINGHAM. Town of Norfolk. It is 5 m. S.E. of Wells, on the L.N.E. Rly. The ruined Augustinian priory of Our Lady of Walsingham was a famous pilgrim resort of the Middle Ages. Pop. 1,083. See Pilgrim.

The title of Baron Walsingham has been held by the family of de Grey since 1780. The founder of the family was Sir William de Grey (d. 1781), solicitor-general and chief justice of the common pleas, created a baron in 1780. John, 7th baron, was a metropolitan magistrate, 1905-19, when he succeeded to the title. He died March 21, 1929, and was succeeded by his son George, the 8th baron.

WALSINGHAM, SIR FRANCIS (c. 1530-90). English statesman. Born at Chislehurst, Kent, he acted as agent for Burghley, was chief of the secret service in London. 1569, ambassador in France, 1570-73, and secretary of state, 1573-90, being knighted in 1577. He was instrumental in bringing about the trial and execution of Mary Queen of Scots. He was made chancellor of the duchy of Lancaster in 1587. A Puritan, he did much to encourage American colonization. He died poor, April 6, 1590, and was buried in St. Paul's Cathedral.

Sir F. Walsingham,
English statesman

WALTER, JOHN (1739-1812). Founder of The Times. Son of a London coal-merchant, he bought Printing House Square in 1784. There he started a printing business and, Jan. 1, 1785, started The Daily Universal Register, the name of which was altered, Jan. 1, 1788, to The Times or Daily Universal Register, and on March 18, 1788, to The Times (q.v.). He died Nov. 16, 1812.

John Walter,
Founder of The Times

John Walter II (1776-1847), son of the above-named, was born Feb. 23, 1776, and became joint manager of The Times about 1797; sole manager, 1803; and editor, 1803-10. He bought Bear Wood, Berkshire, for which co. he was M.P., 1832-37; was M.P. for Nottingham, 1841; and died July 28, 1847.

John Walter III (1818-94), eldest son of the last-named, became sole manager of The Times in 1847. He introduced the Walter press, 1869; was M.P. for Nottingham, 1847-59, and Berkshire, 1859-65 and 1868-85; and died Nov. 3, 1894. His eldest son, John Balston Walter, was accidentally drowned in 1870, and the chief proprietary interest in The Times passed to a younger son, Arthur Fraser Walter (1846-1910). In 1908 the control of The Times passed to Viscount Northcliffe, and after his death in 1922 to Hon. J. J. Astor, with whom John Walter, a son of A. F. Walter, was associated.

WALTER, LUCY (c. 1630-58). Mistress of Charles II. Daughter of a South Wales squire, she went to The Hague, where she became the mistress of the prince of Wales (Charles II) in 1648. She lived with Charles until 1650, and after many disreputable adventures died in Paris. She bore Charles a son, James, whom he created duke of Monmouth (q.v.).

WALTHAM ABBEY. Historic church in the urban district of Waltham Holy Cross (Waltham Abbey), Essex. It was founded in 1060 on an earlier foundation, by King Harold. Henry II converted it into a priory, and it became an abbey in 1184. It was surrendered to Henry VIII in 1540. The W. tower was built in 1556.

WALTHAM CROSS. Dist. of Hertfordshire. Part of the urban dist. of Cheshunt, it lies on the S.E. border of the co., 12½ m. from London, on the L.N.E. Rly. The Eleanor Cross erected by Edward I has been restored.

WALTHAM HOLY CROSS. Urban dist. of Essex, also called Waltham Abbey. It lies 3 m. S. of Cheshunt, in the valley of the Lea. Its chief industries are the government powder mills, flour mills, and heweries; its most notable feature is the abbey church of Holy Cross (see Waltham Abbey). Pop. 6,847.

WALTHAMSTOW. Borough of Essex, part of Greater London. It is served by the L.N.E. and L.M.S. Rlys. The parish church of S. Mary, partly rebuilt in 1537, has been enlarged and restored. William Morris was born at Walthamstow, which was made a borough in 1929. Pop. 131,100.

Izaak Walton,
English angler
and biographer
After J. Huysman

WALTON, IZAAK (1593-1683). English poet, biographer, and angler. Born at Stafford, Aug. 9, 1593, the son of a yeoman, after a successful business life in Fleet Street and Chancery Lane he retired to Shallowford, Staffordshire, about 1644. He returned to London in 1650, lived with Bishop Morley at Farnham Castle, Surrey, and then with his son-in-law, Canon Hawkins, at Winchester, where he died Dec. 15, 1683, being buried in the cathedral.

Walton's Lives of Donne, 1640; Wotton, 1651; Hooker, 1662; Herbert, 1670; and Sanderson, 1678, are among the most delightful of English biographies. His Compleat Angler: or the Contemplative Man's Recreation, 1653, is still one of the most popular of English nature hooks. The second part was added by his friend Charles Cotton (q.v.) in 1676.

WALTON HEATH. Village in Surrey, 5 m. from Reigate. The station, on the Southern Rly., is Tadworth and Walton. The old village, sometimes called Walton-on-the-Hill, has an ancient church. In the 20th century the golf course laid out on the heath began to attract residents, and numerous villas were built around it. Pop. 1,795.

WALTON-LE-DALE. Urban dist. of Lancashire. On the Ribble, 2 m. S.E. of Preston, it is served by the L.M.S. Rly. The chief industries are cotton spinning, iron-founding, and market gardening. Pop. 12,153.

WALTON-ON-THAMES. Urban dist. of Surrey. On the S. bank of the Thames, 5 m. S.W. of Kingston, it is largely a residential suburb of London, with a station on the Southern Rly. The Norman church of S. Mary contains interesting monuments. In the parish are the waterworks of the W. Surrey and Chelsea Water Companies. Near is Walton Manor. Pop. 14,647.

Waltham Abbey. West tower added to the remains of the ancient church of Holy Cross in 1556

WALTON-ON-THE-NAZE. Urban dist. and watering place of Essex. It is 7½ m. S. of Harwich, on the L.N.E. Rly. Standing on the Naze, and almost surrounded by the sea, it has excellent bathing and boating. The encroachment of the sea has reduced it considerably. Pop. 3,666.

Waltham Cross, Heris.
Eleanor Cross, erected by
Edward I

WALTZ (Ger. walzen, to revolve). A dance, the music to which is written in 3/4 time, though, as two bars are necessary to complete the movement, the time really is not simple treble, but compound duple. Its origin is somewhat obscure, but it probably came from Southern Germany, or from Bohemia. It first appeared in the 18th century, and although fiercely attacked in various quarters it soon conquered the dancing world. The form has been utilised by Chopin and other composers as a medium for instrumental music. See Dancing.

WALVIS BAY. Port in South-West Africa. It is 21 m. S. of Swakopmund, which it has now superseded. It was retained by Great Britain when the Germans assumed a protectorate over the adjacent hinterland, and from 1878 until the Great War it was a detached part of the Cape of Good Hope. There is a wireless station. The area of the district is 374 sq. m. Pop. 1,180.

WALWORTH. Dist. of London. It is in the bor. of Southwark (q.v.), S. of Newington, and S. and S.W. of Bermondsey. In Browning Street is the Browning Settlement. The Walworth Road runs S. from the Elephant and Castle (q.v.) to the Camberwell Road.

WAMPUM (Algonquian wamp, white). Shell beads strung for ornament, currency, and tribal records by some North American Indian peoples.

Wampum. Two strings of shell beads used as money, and an ornamental wampum belt, made by Iroquois Indians
By courtesy of the Trustees, British Museum

Made of the perforated central column of several kinds of marine shells, they became the recognized medium of exchange with the early white settlers. The Iroquois preserved treaty records and the like mnemonically on wampum belts up to 5 ins. wide.

WANAMAKER, JOHN (1838-1922). American merchant. Born in Philadelphia, July 11, 1838, he became a bookseller's errand boy, and in 1856 became a retail clothier, this business developing into a huge concern with a branch in New York. Wanamaker founded the Bethany Sunday School in 1856, the Christian Commission during the Civil War, and was president of the Philadelphia Y.M.C.A., 1870-83. He also founded colleges and Y.M.C.A. branches in the Far East. In politics a Republican, he was postmaster-general 1889-93. During the Great War he sent relief to Belgium. Wanamaker died in Philadelphia, Dec. 11, 1922.

John Wanamaker,
American merchant

WANDERING JEW. THE. Legendary character condemned to wander about the earth until the second coming of Jesus Christ. According to the story told by Matthew Paris (d. 1259), the Jew, doorkeeper to Pilate, told Jesus to go faster when He was led out to be crucified, whereupon Jesus replied, "I go, but thou shalt wait until I return." The story reappears in the Chronique Rimée of Philippe Mouskos (d. 1283), bishop of Tournai, and there are other versions of the legend, which has Greek and Teutonic parallels. A play of this name, by E. Temple Thurston, with Matheson Lang in the title rôle, was produced at the New Theatre, London, Sept. 9, 1920.

Wandle. River of Surrey. Rising in the hills above Carshalton, it flows through Beddington and Miteham to the Thames

WANDSWORTH. Metropolitan borough of London. Named after a Thames tributary, the Wandle, and covering an area of 14½ sq. m., it includes the dists. of Wandsworth proper, Putney, Tooting, Balham, Streatham, and part of Clapham. Part of Wandsworth Common, which covers 175 acres, is in Battersea (q.v.). Wandsworth park occupies 20 acres on the right bank of the Thames. Wandsworth Bridge, 1873, connects with Fulham. Pop. 354,178

WANGANUI. Town of New Zealand, in North Island. On the Wanganui river, 134 m. by rly. from Wellington, it is the centre of an agricultural and pastoral dist., and exports cattle, sheep, grain, and wool. Pop. 27,630.

WANGARATTA. Town of Victoria, Australia. At the confluence of the Ovens and King rivers, it is an agricultural centre, 146 m. by rly. from Melbourne. Pop. 4,020.

WANKIE. Settlement of Southern Rhodesia. It is 212 m. N.W. of Bulawayo by the Cape to Cairo rly., and is the centre for the Wankie coalfields.

WANSTEAD. Urban dist. of Essex. It is on the borders of Epping Forest (q.v.), with stations, Snaresbrook and Wanstead Park, on the L.N.E. and L.M.S. Rlys. Wanstead park, 200 acres, the property of the City Corporation, contains several lakes and a heronry. Here, 1715-1822, stood Wanstead House, built by the 1st Earl Tylney, and for a time the residence of Louis XVIII and the Prince de Condé. Wanstead Flats extend S. towards Forest Gate. The church of S. Mary was rebuilt in 1790. Pop. 15,297.

WANTAGE. Market town and urban dist. of Berkshire, 26 m. from Reading. Wantage Road, 3 m. distant, has a station on the G.W. Rly. The church of SS. Peter and Paul is mainly Perpendicular, but retains some Early English parts. The town has a gallery containing pictures of deeds that won the V.C., presented by Lord Wantage, who himself won the V.C. in the Crimean War. Wantage is famous as the birthplace of Alfred the Great. Near is the Vale of the White Horse. Market day, Wed. Pop. 3,886.

The town gave the title of haron to Robert James Loyd Lindsay (1832-1901), Conservative M.P. for Berkshire, 1865-85, and financial secretary to the war office, 1877-80. Made a haron in 1885, he died without sons, June 10, 1901.

WAPENTAKE (Old Norse vápnatak, touching of weapons). Name given to a division of certain English counties. It corresponds to the hundred elsewhere, and occurs in the shires of York, Lincoln, Leicester, Nottingham, Derby, and Rutland. The theory is that wapentake is the Danish equivalent for the hundred, as the word is only found in parts settled by this people. It originated in the ceremony of touching the chief's spear as a sign of homage. See County; Hundred.

WAPITI (*Cervus canadensis*). Species of large deer. Allied to the British red deer, but

larger in size, it occurs in N. America, though rarely now outside reservations, and in Central and N.E. Asia. The body is a light reddish brown, the head and limbs darker. It is distinguished by the fine development of its antlers. See Antler; Deer.

WAPPING. London dist. Part of the bor. of Stepney (q.v.); it lies between the London docks and The Pool, being connected with Rotherhithe by the Thames Tunnel. Near the High Street are the Old Stairs of Charles Dibdin's ballad. See Thames.

WAR, THE WORLD. The occasion of the Great War was the determination of Austria, supported therein by Germany, to act as accuser, judge, and executioner in regard to charges brought by her against Serbia. Russia could hardly avoid action on behalf of Serbia; France was bound to aid Russia if Germany joined against her, but no other country was under actual treaty obligation to either group. On Aug. 2nd, 1914, all these countries had declared war. Belgium was pledged to neutrality. Germany's resolve to attack France via Belgium met with resistance from her, and caused Britain to declare war on Aug. 4th.

Germany's aim was to drive into France—unprotected by fortresses on the Belgian line—swoop on Paris, and finish the war in the west in a few weeks or, at most months, by prostrating her, while on her own eastern frontier Russia, moving slowly, would be unable to come into play. With France off the board, Russia would soon be brought to terms, and the British fleet alone would remain to be dealt with—if it did remain.

The plan, it would seem, missed success by the narrowest margin. The Belgian resistance gave bare time for the British expeditionary force to take station on the French left. The allied line, hinging on Verdun, was swung back on Paris, but was neither pierced nor outflanked; fresh French troops were mustering behind the line. The sixth week opened with a French counter-attack; the Germans in turn swung back on their hinge, fighting the continuous series of engagements known as the battles of the Marne and the Aisne till both combatants were stabilised in a long, continuous line of entrenchments facing each other, in French or Belgian territory, from the Belgian coast to the Swiss border, though for two months more it was only by desperate fighting that the British were able to hold their ground in the Ypres salient.

Meanwhile the British fleet confined the German to its ports except for occasional raiding operations, while Japan joined the allies, ejected the Germans from Asia, and patrolled the Pacific; the Union of South Africa set about the like task in South Africa;

and the other Dominions of the British Empire were hastening to take part in the struggle.

In Europe on the eastern front the Russians had flung an invading force into East Prussia, very useful to their allies in the west at a critical hour, but were disastrously driven out by the battle of Tannenberg. This, however, did not prevent them from making a vigorous advance in Galicia against the Austrians, whose invasion of Serbia met with no success, while Hindenburg's counter-invasion of Poland was thrown back.

At this stage, however, Turkey dropped the mask of neutrality and threw in her lot with the Central Powers. Her entry was aimed at the two European powers which were also great Asiatic powers, Great Britain and Russia, which were in consequence forced to organize war against Turkey in Asia; hence the opening of the Russian campaigns in Caucasus and the British in Mesopotamia. It also, however, suggested a flank attack on the Central Powers through Turkey by seizing the Dardanelles.

In 1915 the stabilised lines of the western front were on both sides so strongly entrenched that the sole hope of early victory lay in the chance of a sudden overwhelming blow at some point which would pierce the enemy line and roll it up to right or left. On that front both sides during 1915 confined themselves to a series of such efforts, each of which ended in failure; in one of them, at Ypres, poison gas was first brought into action. In Asia, Russia drove through the Caucasus, and the British pushed their difficult way towards Bagdad, but ultimately had to fall back to Kut-el-Amara.

On the sea Germany began and continuously developed the submarine campaign—her fleet having ceased to be practically operative on the surface—for sinking non-combatant enemy ships at sight, the British responding by tightening the blockade, to the detriment of neutral commerce with Germany. Italy embarrassed Austria by declaring war on her, with a view to the recovery of what still remained in her hands of Italia Irredenta. It was not till October that Bulgaria became convinced that the Central Powers were the winning side, and attacked Serbia, while French and British troops, with the assent of the technically neutral Greek government, occupied Salonica. This change was the result of the British failure in the Dardanelles and of the sweeping German successes on the Russian front, where the stabilisation of the western front had led them to seek their main objective.

The British had opened the year with a naval attack on the Dardanelles, unsupported by troops, which could not be spared from the west. Then followed the glorious tragedy of Gallipoli, in which the impossible was all but achieved; but the great adventure failed as the German rush on Paris had failed, from the exhaustion of the force of the attack at the moment of the decisive crisis. After the Suvla Bay episode the last hope of success in that quarter was dead. Such allied forces as could be spared from the west for Salonica were wholly inadequate for striking a victorious blow, and were sufficiently occupied in preventing the Balkan peninsula from passing wholly over to the Central Powers.

For at the beginning of the year the Germans had twice thrust into Poland, only to be held up on the line of the Vistula and forced to retire; while the Russians were rolling the Austrians back in Galicia and threatening to pierce into Hungary through the Carpathians. But Mackensen, superseding the Austrian commanders, was preparing a hurricane onslaught which the Russian generals, paralysed by the bureaucracy, could not hold up. Before Mackensen's wedge and his storm of artillery the Russian line reeled back over Galicia and Poland past the Vistula, past Warsaw, but was never pierced, till it was sundered by the Pripiet marshes.

Wapiti. Large Californian deer, showing the characteristic branching antlers and heavily built body
Gambier Bolton, F.Z.S.

The World War. Map showing French and Belgian territory recovered by the Allies, July-Nov., 1918; also their respective zones in the occupied areas of Germany

There the German advance was stayed, but in the last three months of the year Serbia was undergoing her martyrdom, Greece was rocking in the balance, a double Italian front had developed, the British were shut up in Kut and had evacuated Gallipoli, and the Germans were preparing another effort in the west.

In February, 1916, the storm broke. The immediate objective was Verdun, and before Verdun the battle continued to rage until June. On both sides, French and German, indomitable valour and hideous carnage were its leading features. But when the onslaught was at last exhausted, Verdun still stood and the French line still held. Once more the blow which might have been decisive had failed, and the counter-blow was in preparation. Almost at the same moment Austria was compelled to abandon her advance into Italy through the Trentino. And meanwhile the German fleet had emerged to fight the great naval battle of Jutland, in which the approach of the main British fleet forced upon it a skilful retreat to its mine-defended ports, whence it never again ventured out. In the East, Kut had fallen and the campaign in Mesopotamia was in suspense.

At the opening of 1916 it appeared that the Germans had carried their offensive in the east to the limit of safety, since the precedent of Napoleon had proved the folly of attempting the penetration of Russia herself. The accession of Bulgaria and devastation of Serbia had added to the strength of the Central powers in the Balkan regions. Germany had thus been enabled to concentrate on the Verdun thrust, still keeping the British on the Allied left too fully in play to relieve the pressure on Verdun, while the Austrians had felt themselves free for the Trentino adventure. But the result was that the new Russian attack on the Bukovina, conducted with unexpected vigour and success, called both Germans and Austrians to the Eastern front;

a movement which had hardly begun when the British opened the offensive that developed as the battle of the Somme.

For four months the British line hammered its way forward without anywhere effecting anything in the nature of a breakthrough, gradually absorbing shattered entrenchments, which the Germans only evacuated to occupy others ready prepared in the rear; when the advance had been carried to a depth of some seven miles on a short front, weather conditions set in which made farther progress practically impossible. It was at this time that those new and formidable instruments of war, the "tanks," made their first startling appearance.

Meanwhile the Russian successes in the Bukovina and the generally more promising aspect of the war (incidentally Arabia had revolted against the Turkish sovereignty) induced Rumania to join the Allies and strike through the Carpathians at Transylvania. But after the first dash her effort, otherwise unsupported, since the Russians now had their own hands full, proved disastrous to herself and useful to the Central Powers. The German command was able to stem the attack, hurl it back, cross the Danube, and invade Rumania under the leadership of Mackensen. The retreating troops fought valiantly, but could not save Bukarest and the invaluable oil-fields of Wallachia from falling into the hands of the invaders before the year was over. The capture of Monastir by the French and Serbians, and of Gorizia by the Italians on the Isonzo front were no very adequate compensations for the Allied cause.

Thus, at the beginning of 1917, the position as a whole pointed to something like a stalemate, though neither side was ready to make peace except on terms which would be a practical acknowledgement that it had won the war. A basis of negotiation through the President of the U.S.A. was rejected by the Allies, and on both sides preparations were

being made for increased activity as soon as weather conditions should permit.

In the farther East, then, the British renewed their thrust in Mesopotamia, recovered Kut, and swung on to Bagdad; while a move on Palestine from Egypt was held up at Gaza. On the Western front their forward push, supported by the French on their right, threatened St. Quentin. But at this moment two events occurred, not on the battlefields, which vitally affected the whole subsequent course of the war—the Russian revolution and the declaration of war by the U.S.A.

The former began as a constitutionalist revolution which at the moment did not seem likely to affect the national Russian attitude towards the war beyond creating some temporary confusion; the constitutionalists were at least as zealous as the Tsarists. It was when the constitutionalists were undermined and overwhelmed by the communist movement, to be known later as Bolshevism, that the development of a veritable portent, affecting not only the Russians, became apparent. It meant the collapse of Russia as a factor in the war. The action of the U.S.A., on the other hand, meant that the Central Powers must strain every effort to force an unqualified decision before the new armies from across the Atlantic should be ready to take the field.

On the Western front, then, the Allied attack was intensified, extending northward and southward of the line won before St. Quentin. The Germans were forced back, but always into new entrenchments awaiting them immediately in rear of those they abandoned. The "impregnable" Vimy Ridge was stormed by the Canadians; the Messines Ridge was blown up by the most spectacular and terrific mining operation on record. The French gained, but were unable to retain, a footing on the Chemin des Dames. The slaughter was tremendous, while each side claimed that the enemy had been the greater sufferers, and the

effective gains were almost inappreciable. On the Isonzo front Trieste could still defy the Italian approach. The Rumanians were still maintaining their unaided struggle against Mackensen, but could do no more. What should have been the simultaneous Russian offensive was held up by the political confusion and the growing disaffection of the troops.

Then, shortly after midsummer, Brusiloff made his desperate and brilliant attempt to retrieve the position on the Russian front; but his swift and startling successes were only the prelude to utter disaster. The revolutionary virus had permeated the troops, and they failed their dauntless chief. From that moment such prospect as there had been of a Russian recovery vanished; the only question was how soon Russia would be off the board altogether, though time must still elapse before the Germans could be set free to join their comrades in the west. The British carried their campaign into the flats of Flanders, which were rapidly becoming an impassable sea of mud where tanks could not operate. In the southern sector, where Pétain had taken Nivelle's place, the French were encouraged by the recovery of ground lost before Verdun, and actually regaining the Chemin des Dames.

And then there came a shock which was in some sort of a by-product of the Russian revolution which was undermining the morale of some sections of the Italian forces on the Isonzo. Reinforced by Germans, the Austrians smashed through the Italian line at Caporetto, not only splitting it and raising the siege of Trieste, but flinging it back in a retreat so compulsorily hasty as to be hardly distinguished from a flight, till it was able to reform and make a stubborn stand on the Piave.

At about the same time, little was actually gained by the British capture of Passchendaele, while the strength of the German position was shown by the saving of Cambrai from a brilliantly planned and executed British attack. In the east some relief was given by the abdication of King Constantine and the definite association of the new Greek government with the allies, and by the stubbornly continued resistance of the Rumanians; whereas in Russia the establishment of Lenin's ascendancy ensured an early transfer of German forces to the west. There was, however, something of a triumph in the Palestine campaign, where Allenby took Gaza in flank and advanced on Jerusalem, which he occupied on December 9, 1917.

Long before the Germans, in March, 1918, concluded their treaty of Brest-Litovsk with Trotsky, reinforcements had been pouring in behind the German lines in the west. The great offensive which was to smash the allies before the Americans could join them was in preparation. It opened on March 21, at the weak point where the British right were taking over from the French, who were expecting the attack elsewhere on their own line. The British were hurled reeling back over all the ground they had won in the last twenty months, but with the flank never quite uncovered, the line never quite pierced, till the weight of the onslaught was exhausted and they were able to stand at bay on the Ancre. A second blow on the British left towards Calais drove it back in a deep curve, but was then held up. And in May, when American troops were already arriving behind the lines, the Germans began their final desperate drive towards Paris; while the supreme command and the complete co-ordination of the entire allied line had just been entrusted to the right man, who had at last been found—Marshal Foch. Also British squadrons had just succeeded in sealing up the German submarine bases at Zeebrugge and Ostend.

At the end of May, then, came the crash; this time against the French, who were hurled back out of the ground won by Pétain in the

previous year, to the Marne. Would the Germans be able to hurt through and rush on Paris, or would they be held up? It was the last chance, for even now American battalions were beginning to enter the French line. For six weeks their effort was concentrated on the Marne "pocket"; it was the advance of the Old Guard at Waterloo; on July 15 they made a lodgement across the Marne, but no more. The blow had expended itself. On July 18 the pocket had become a trap from which they could only extricate themselves with the utmost difficulty, and the extrication was only the first step of a compulsory retreat along the whole line.

The last Austrian thrust on the Piave had already failed when the French delivered their first counter-attack (as it appeared to the un-instructed world) on the withdrawing Germans about the pocket, developing it to right and left. Where was Ludendorff's next thunderbolt to crash? The next thrust, however, was made by the British left. Always it was either British or French who made the next attack in a new quarter, and every attack was an advance; while the Americans were now formed as a separate army on the extreme right of the allies; till the whole line was pressing back the whole German line and striking co-ordinated blows always at their own choice, rolling it off French soil.

Elsewhere, in September, the allies from Salonica struck at the Bulgars and drove them to surrender; Allenby swept the Turks out of Palestine by the battle of Megiddo, and invaded Syria. In October the Austrians were smashed back from the Piave, and the remaining Turkish armies in the East were shattered. When November opened Germany stood alone, but still in occupation of Belgian and Alsatian territory. The battle of the Sambre and the capture of Sedan by the Americans were almost the finishing strokes. Revolt broke out in Berlin; the Kaiser fled to Holland; and it remained for a provisional government to accept the armistice terms dictated by the allied command, and signed just as the Canadians drove into Mons on the morning of November 11. See Aisne; Arras; Foch; Gallipoli; Haig; Kut; Marne; Neuve Chapelle; Tannenberg; Versailles, Treaty of, etc.

CASUALTIES. An authoritative statement was made in the House of Commons in May, 1921, as follows:

BRITISH EMPIRE			
		DEAD	WOUNDED
Great Britain	743,702	1,693,262

WARATAH OR **WARATAU** (*Telopia speciosissima*). Shrub of the order Proteaceae. A native of Australia, it has dense tufts of long oval leaves, from which spring sprays of brilliant crimson tubular flowers. It shares with the wattle (*Acacia*) the distinction of being the national flower of Australia.

WARATAH. Town of New South Wales, Australia. Four m. N.W. of Newcastle, of which it is a suburb, it has coal and copper mines.

Another Waratah is a mining centre of Tasmania, 82 m from Launceston. It is noted for its tin mines especially the rich Mt. Bischoff mine.

WARBECK, PERKIN (c 1474-99). Pretender to the English throne. Son of a Fleming named Werbecque, he went to Cork in 1491, and in 1492 proclaimed himself duke of York, son of Edward IV. The Yorkist faction pressed his claim, and he was acknowledged by the French, Imperial, and Scottish courts. Landing at Whitesand Bay, Cornwall, Warbeck proclaimed himself Richard IV, Sept. 7, 1497. He marched inland, but was defeated at Exeter, surrendered, and was hanged at Tyburn, Nov. 23, 1499.

WARBLER. Popular name for insectivorous birds of several genera in the family Sylviidae. Eleven species breed in Britain,

Warbler. *Phylloscopus sibilatrix*, the wood-warbler
W. S. Berridge, F.Z.S.

and nine others are occasional visitors. In general structure they resemble the thrushes. The true warblers of the genus Sylvia are represented in Britain by the whitethroat (*S. communis*), lesser whitethroat (*S. curruca*), blackcap (*S. atricapilla*), and garden warbler (*S. hortensis*).

The Dartford warbler (*Melospiza undatus*) is resident in the S. counties wherever there are heaths. The genus *Phylloscopus* includes the chiffchaff (*P. rufus*), the willow-warbler (*P. trochilus*), and the wood-warbler (*P. sibilatrix*). The genus *Acrocephalus* has two British representatives, the sedge-warbler (*A. phragmitis*) and the reed-warbler (*A. streperus*), waterside birds that nest among the reeds and sing through the night. The grasshopper warbler (*Locustella naevia*) is more a bird of the hedgerow, whose song has suggested its name. A second species, Savi's warbler (*L. luscinoides*) bred regularly in the reed-beds of the East Anglian fens before their drainage. See Blackcap.

WARBURTON, WILLIAM (1698-1779). British divine. Born at Newark, Dec. 24, 1698, he was educated at the grammar school there. After a few years as a lawyer, he was ordained in 1723. Chosen rector of Braut Broughton in 1728, he was made preacher at Lincoln's Inn in 1746, dean of Bristol in 1757, and held other appointments. In 1759 he was made bishop of Gloucester, and he remained there until his death, June 11, 1779.

Waratah. Crimson blooms of the national flower of Australia

William Warburton, British divine
After Hoare

WARD. In English law, a child under wardship or guardianship. In certain circumstances an infant (in the legal sense) becomes a ward of court, i.e. under the protection of the high court. See Guardian; Infant, etc.

WARD. In English local government, an electoral division of a municipal borough or parish. In boroughs divided into wards the burgesses whose names are inscribed in the ward rolls elect the councillors for that ward. See Borough.

WARD, ARTEMUS (1834-67). Pseudonym of Charles Farrar Browne, American humorist. Born at Watford, Maine, April 26, 1834, as Artemus Ward, Showman, he contributed to The Cleveland Plain Dealer a series of letters describing the humours of an imaginary travelling menagerie. In 1861 Artemus Ward began a career as lecturer, visiting England in 1866. He died at Southampton (England), March 6, 1867.

Artemus Ward,
American humorist

His best known books are Artemus Ward: His Book, 1862; Artemus Ward: His Travels, 1865; and Artemus Ward in London, 1867.

WARD, DAME GENEVIÈVE (1837-1922). British actress. Born in New York, March 27, 1837, she began her career as an operatic singer, but in 1862 lost her voice after an attack of diphtheria. In 1873 she made her first appearance at Manchester as Lady Macbeth. Her success as a tragic actress was immediate and lasting. In the part of Stephanie in Forget-Me-Not, 1879, she rose to the highest point of her art. In 1893 she joined Henry Irving's, and in 1910 F. R. Benson's company. In 1855 Geneviève Ward married Count C. de Guerbel. In 1921 she was created D.B.E. She died Aug. 18, 1922.

WARD, JOHN (b. 1866). British labour leader. After serving in the army he worked as a navy, and became interested in labour questions, joining the Social Democratic Federation in 1885. He founded the Navvies' Union in 1899, and in 1906 was elected Labour M.P. for Stoke-on-Trent. In the Great War he raised five labour battalions, and became colonel of the 25th Middlesex Regiment, which he led against the Bolsheviks in Siberia. He was with this battalion on board the Tyndareus (q.v.) when it was mined. He wrote With the Die-hards in Siberia, 1920.

WARD, SIR JOSEPH GEORGE (1857-1930). New Zealand statesman. Born April 26, 1857, he entered politics and became minister of railways, commerce, finance, postmaster-general, minister of defence and of lands. He was prime minister, 1906-12, and represented New Zealand at the Imperial Conferences in London, 1907, 1909, and 1911. A warm supporter of imperial unity, he was a member of the imperial war cabinet, 1917-18, and one of New Zealand's representatives at the peace conference, 1919. He was created a baronet in 1911. In Dec., 1928, he again became premier, but retired in May, 1930. He died July 7, 1930.

Sir Joseph Ward,
New Zealand statesman
Bassano

WARD, SIR LESLIE (1851-1922). British artist, known by his pseudonym Spy. Born in London, Nov. 21, 1851, he studied architecture under S. Smirke and at the R.A., but later developed a gift for caricature. He became famous in connexion with Vanity Fair, which he served 1873-1909, and for which he produced a remarkable series of caricatures. Knighted in 1918, he wrote Forty Years of Spy, 1915. He died May 15, 1922.

WARD, MARY AUGUSTA (1851-1920). British novelist, better known as Mrs. Humphry Ward. Born June 11, 1851, at Hobart,

Tasmania, she married T. Humphry Ward in 1872, and in 1881 published her first novel, Milly and Olly. Her other novels include

Mrs. Humphry Ward,
British novelist
Lafayette

Robert Elsmere, 1888; David Grieve, 1892; Marcella, 1894; Lady Rose's Daughter, 1903; The Marriage of William Ashe, 1905; Missing, 1917; and Fields of Victory, 1919. She was keenly interested in social work, and founded the Passmore Edwards Settlement. She died March 24, 1920.

Thomas Humphry Ward (1845-1926) is chiefly known by his edition of The English Poets, 1881-1918. For many years he was on the staff of The Times.

WARD, THOMAS (1810-58) British adventurer, known as Baron Ward. Born at York, Oct. 9, 1810, and trained as a jockey, in 1827 he entered the stables of Charles Louis, duke of Lucca, becoming his valet and confidential servant. In 1846 he was created a baron and made minister of finance. Upon Charles Louis's accession to the duchy of Parma, Ward became his prime minister. He negotiated the abdication of Charles Louis, and installed his son as Charles III, going to Vienna as minister plenipotentiary. On the assassination of Charles III in 1854, Ward was dismissed. He died Oct. 5, 1858.

WARD, WILLIAM GEORGE (1812-82). British theologian. Born March 21, 1812, in London, he was educated at Winchester and Christ Church, Oxford. Fellow and tutor of Balliol College, he became one of the leaders of the Tractarians. His book, The Ideal of a Christian Church, 1844, brought him into disfavour with the university authorities, and in 1845 he joined the Church of Rome. From 1851-58 he was lecturer at S. Edmund's College, Ware, and from 1863-78 editor of The Dublin Review. Known as Ideal Ward, he died July 6, 1882.

WARDEN. Defender, head, or high official. In England the guardians of the Scottish and Welsh borders were known as lords wardens of the marches. The lord warden of the stannaries is the head officer of the stannaries of Cornwall. Warden is the title of the heads of some colleges at Oxford.

WARDMOTE. Court or moot formerly held in each ward of an English town. Such are still held in the wards of the city of London. The court's powers include the supervision of the police, of ale and beer houses, and of beggars, vagrants, etc. See Moot.

WARD ROOM. In British warships, a common mess shared by the commander, unless he is in command, when he messes in his own cabin, and all other officers down to and including the rank of lieutenant. Junior officers mess in the gun room.

WARE.

Urban dist. and market town of Hertfordshire. It is on the Lea, 2 m. from Hertford, on the L.N.E. Rly. S. Edmund's Roman Catholic college is at Old Hall. At the Saracen's Head Inn

Ware. The Great Bed of Ware,
mentioned by Shakespeare
From a drawing by C. C. Harper

was preserved the Great Bed of Ware, 12 ft. square, now at Rye House. Malting and brick making are carried on. Market day, Tues. Pop. 5,949.

WAREHAM. Market town and borough of Dorset. It is about 2 m. from Poole Harbour, on the Southern Rly. The church of S. Mary contains the coffin of King Edward the Martyr. There are remains of British earthworks, called the walls. Market day, Thurs. Pop. 1,997.

War Grave. Term used for the graves of those who fell in the Great War and were buried in the war areas. See Grave.

WARHAM, WILLIAM (c. 1450-1532) English prelate. He entered the Church, and in 1494, being also a lawyer, he was made master of the rolls. In 1492

William Warham,
English prelate
After Holbein

Henry VII made him bishop of London and keeper of the great seal. He was translated to Canterbury in 1504 and was lord chancellor from then until 1515. Although he objected strongly to certain measures of Henry VIII's ecclesiastical policy, he remained archbishop and also chancellor of Oxford University until his death, which took place on Aug. 22, 1532.

WARKWORTH. Village of Northumberland. Near the mouth of the Coquet, 32 m. from Newcastle-upon-Tyne, on the L.N.E. Rly., it is famous for its Norman church, its castle founded about 1200, and the hermitage of Bishop Percy's ballad The Hermit of Warkworth. The castle, which came to the Percys in 1332, was presented to the nation by the duke of Northumberland in 1922. At the mouth of the Coquet is the port of Amble (q.v.). Pop. 1,042.

WARMBAD. Settlement in the South-West Africa Protectorate. It lies between Kalkfontein and Raman's Drift, on the Orange river, at an alt. of 2,361 ft. Pop. (white) 1,696.

WAR MEDAL, BRITISH. Decoration granted to those who left their native shores in any part of the British Empire for service overseas, whether they eventually entered a theatre of war or not, between Aug. 5, 1914 and Nov. 11, 1918. It was awarded in 1919, and is of silver. The medal in bronze was granted to all British subjects who were enrolled in native labour corps units and who served in theatres of war. The ribbon is: Centre orange, watered, with stripes of white and black on each side and with borders of royal blue.

War Medal. Reverse
of the British
decoration

WARMINSTER. Urban district and market town of Wiltshire. It is 20 m. N.W. of Salisbury, on the G.W. Rly., on the edge of Salisbury Plain, and has a 14th century church. It is a market for agricultural produce, has machinery works, and malting is carried on. Market day, Mon. (alternate). Pop. 5,451.

Warmsley. Colliery centre of Gloucestershire. It is 5 m. E. of Bristol, on the L.M.S. Rly. Pop. 2,600.

WARNEFORD, REGINALD ALEXANDER JOHN (1892-1915) British airman. Born in Cooch Behar, India, he entered the merchant service. On the outbreak of the Great War he joined the Sportsmen's Battalion, but transferred to the air service. Attached to the R.F.C. in France, on June 7, 1915, he attacked and destroyed a Zeppelin near Brussels. For this feat he was awarded

the V.C. On June 17, while flying at the Buc acrodrome, Versailles, his aeroplane crashed and he was killed.

WARNER, CHARLES (1846-1909). Stage name of Charles John Lickford, British actor. Born in London, Oct. 10, 1846. He was early associated with Samuel Phelps. He made his London debut at the Princess's Theatre, April 25, 1864, as Benvolio in *Romeo and Juliet*, and created the part of Charles Middlewick in *Our Boys*, at The Vandeville, Jan. 16, 1875. He achieved success in melodrama, especially as Concan, in *Drink*; Tom Robinson, in *It's Never Too Late to Mend*; and the title part in *Michael Strogoff*. He committed suicide in New York, Feb. 11, 1909.

WARNER, PELHAM FRANCIS (h. 1873). English cricketer. Born in Trinidad, Oct. 2, 1873, he was educated at Rugby and Oriel

College, Oxford, and became a harrister. Having played cricket for his school, he was in the university eleven in 1895-96, and also played for Middlesex. He was captain of the M.C.C. team that went to Australia in 1903, and was victorious in three out of five of the test matches; and of the one sent to S. Africa in 1905.

P. F. Warner, English cricketer

In 1911 he again took a team to Australia. He was captain of Middlesex, 1907-20, when he retired. His books include *How We Recovered the Ashes*, 1904, *My Cricketing Life*, 1921, and *The Fight for the Ashes*, 1930. He is editor of *The Cricketer*.

WAR OFFICE. British department of state. At its head is the secretary of state for war, who is ex officio president of the army council, which regulates the affairs of the whole British as distinct from the Indian army. Its constitution is liable to change, but it has always hitherto contained four military and several civilian members, the latter now including the parliamentary under-secretary, the financial secretary of the war office, and the permanent under-secretary, who, as secretary of the war office, also exercises general control. The four military members consist of the chief of the imperial general staff, the adjutant-general, the quartermaster-general, and the master-general of the ordnance.

The headquarters of the war office are housed in an imposing structure between Whitehall Place and Horse Guards Avenue, designed by William Young and built in 1899-1906, at a cost of over £1,000,000. See *Whitehall*.

WARP. Those threads of a fabric, running lengthwise throughout the piece, across which the transverse or weft threads are woven. Normally they have to take the greater part of the strain in wear, and to withstand an appreciable strain in course of weaving.

Weaving can be so arranged that warp threads predominate upon the face of the fabric, which is then known as warp faced. The warp is held taut in ordinary weaving, but it can be formed into loops, as upon the surface of Turkish towelling or Brussels carpet. It may be constituted of different materials or colourings, which appear in the fabric as stripes. The warp threads near the edges are commonly distinct from the rest in thickness, material, or colour, to make the lists or selvages. See *Loom: Weaving*.

WARPING. Process of reclaiming or improving low-lying, swampy ground by inundating it with alluvial deposit. It is possible only near the mouths of rivers like the Nile or the English Humber, whose waters are at all times heavily charged with silt. Some of the finest wheat crops in the world are grown upon warped land around the Wash.

Warracknabeal. Town of Victoria, Australia. It is 217 m. N.W. of Melbourne by rly. on the line to Hopetonn. Pop. 2,500.

Warragul. Town of Victoria, Australia. It is 62 m. by rly. S.E. of Melbourne on the main line to Orbost. Pop. 2,300.

WARRANT. Name given to a document that authorises or assures. In English law it is a written order, given by a person in authority, to do some act. Warrants are issued for the arrest of alleged criminals and for searching premises. A distress warrant is one authorising the sheriff's officer to seize goods for arrears of rent. Ordinary warrants are signed by magistrates, sheriffs, or other legal officials. Warrants of other kinds are issued by the sovereign. The term is also used for documents authorising the payment of dividends or the delivery of goods out of bond. See *Arrest*; *Distrain*.

WARRANT OFFICER. In the British navy, a rank between commissioned officer and petty officers and men. Each branch of the navy's personnel now has its quota of warrant officers. They are promoted from the lower deck, and may obtain further promotion until they reach the rank of lieutenant.

In the British army, warrant officer is a rank intermediate between that of commissioned and non-commissioned officer. In each of the departmental corps, such as the R.A.S.C., R.A.O.C., and R.A.M.C., there are a stated number of warrant officers, and in each regiment of cavalry and battalion of infantry there are nominally two, the regimental sergeant-major and the handmaster.

WARRE, EDMOND (1837-1920). British schoolmaster. Born in London, Feb. 12, 1837, he became fellow of All Souls College in 1859, and rowed in the Oxford eight, 1857-59. Returning to his old school, Eton, as assistant master in 1860, he was ordained and made headmaster in 1884. He retired in 1905 and in 1909 was elected provost. One of Eton's most notable headmasters, Warre wrote on rowing. He died Jan. 22, 1920.

WARREN. Breeding place for rabbits. In artificial enclosures one acre, covered with good grass and planted frequently with furze and juniper, is sufficient to support about twenty rabbits. The word is also used for ground enclosed for the preservation and breeding of game, or for a fish preserve in a river. In legal terminology, free warren, or right of warren, is a franchise, obtained by prescription or grant of the crown, for the right of property in heasts and fowls of warren.

WARREN, SIR CHARLES (1840-1927). British soldier. Born Feb. 7, 1840, he entered the R.E. in 1857 and for a time was engaged on surveying work in Palestine. He commanded troops against the Bechuanas, 1875, and 1884-85, when he was knighted. In command in the Suakin campaign, 1886, he was commissioner of the metropolitan police, 1886-88, and commander-in-chief of the Straits Settlements, 1889-94. In the S. African War, when in command of the 5th division, 1899-1900, he incurred much criticism through his operations at Spion Kop. He died Jan. 21, 1927.

WARREN, SAMUEL (1807-77). British novelist. Born near Wrexham. May 23, 1807,

1859, and died July 29, 1877. Warren's fame rests upon his novel, *Ten Thousand a Year*. Great popularity was also achieved by his melodramatic *Passages from the Diary of a Late Physician*.

Samuel Warren, British novelist

WARRENPOINT. Seaport and urb. dist. of co. Down, Northern Ireland. At the head of Carlingford Lough, 6 m. S.E. of Newry, it is served by the G.N. of I. Rly. Pop. 1,900.

Warri or Warl. Port of Nigeria. It stands 80 m. S. of Sapele by creek. on the Forcados branch of the Niger estuary. See *Nigeria*.

WARRINGTON. Co. hor. and market town of Lancashire. On the Mersey, between Liverpool and Manchester, it is served by the L.M.S. and the Cheshire Lines Rlys., and has rail and canal communication with all parts of industrial Lancashire and Cheshire. The parish church of S. Elphin, on the site of a 12th century building, contains monuments of the Boteler family. Other buildings are the grammar school, founded in 1526, and the blue coat school, 1665. There are a town hall, technical institute, and market hall. The town is a busy industrial centre, manufacturing wire, pins, tools, cotton, leather, glass, and soap. Oliver Cromwell gained a victory here over the Scots in 1648. Market days, Wed. and Sat. Pop. 77,280.

WAR SAVINGS CERTIFICATE. Form of British Government security first issued in 1916 during the Great War. The small investor was attracted by the issue of certificates through the post office to be sold for 15s. 6d. each, £1 to be repaid at the end of five years. This meant compound interest at something over 5 p.c. per annum, and, moreover, complete freedom from income tax. The only restraint was that no one person could hold more than 500. The price was raised to 16s. on April 1, 1922. From Feb., 1916, to Sept. 20, 1930, the number of certificates sold was 983,530,294, of a value of £772,433,985. The amount standing to the credit of the holders at the same date was £483,000,000.

WARSAW (Polish Warszawa). Capital of Poland. It stands on the left bank of the Vistula, 404 m. from Berlin, at the junction of railways communicating with Leningrad, Moscow, Vienna, and elsewhere. On the right bank, with bridge connexion, is the suburb of Praga, chiefly inhabited by Jews. Warsaw was formerly the residence of the Russian military and civil governors. The religious metropolis of Poland, it is the see of a Roman Catholic and a Greek archbishop. The university, founded in 1861, was suppressed in 1832, reopened in 1869, and re-founded after the Great War. It has a magnificent library.

Warsaw. 1. Part of the city, looking towards Praga. The twin spires belong to the R.C. Church of S. Florian. 2. The Greek Orthodox Cathedral of S. Alexander Nevski

The city, which is surrounded by walls pierced by eleven gates has boulevards on the model of those of Paris. Notable buildings include the cathedral of S. John (R.C.), the churches of the Holy Cross and S. Andrew, and a beautiful Lutheran church. The Alexander Nevski cathedral was demolished after the Great War. There are several palaces, some converted into municipal buildings.

Warsaw became the capital of Poland in 1609, taking the place of Cracow. After the third partition of Poland, it remained in possession of Prussia till 1806. In that year it was entered by the French, and by the treaty of Tilsit (July 7, 1807) it became the capital of the grand-duchy of Warsaw, which lasted six years. It was occupied by the Russians in 1813, and by the treaty of Vienna became the capital of the new kingdom of Poland. Warsaw figured prominently in the Great War, being captured by the Germans in Aug., 1915. In 1920 it was the objective of the Bolshevik armies, and in Oct. they approached near it, but the subsequent Polish victories removed the danger of its fall. Pop. 936,713.

WARSPITE. British battleship of the Queen Elizabeth (q.v.) class. She displaces 27,500 tons and carries eight 15-in., twelve 6-in., and two 3-in. guns. At the battle of Jutland the Warspite was hit eighteen times and had one turret gun put out of action.

A training ship called the Warspite, which lay off Greenhithe, was destroyed by fire, Jan. 20, 1918. It was replaced by another ship of the same name, moored off Grays, Essex.

WART. Overgrowth of the horny layer of the skin, occurring chiefly on the fingers and hands. A wart may be removed by the frequent application of caustics, glacial acetic acid being the one commonly employed. Solid carbon dioxide has given good results.

WARTEBURG. Peak of Thuringia, Germany. It is near Eisenach, in the Thuringian Forest, and is chiefly known from the castle built here by a ruler of Thuringia about 1100. It became a resort of the Minnesingers, and here in 1207 took place the competition between them mentioned in Wagner's Tannhäuser. The castle passed to the elector of Saxony, and to it Luther was taken by order of the elector Frederick III in May, 1521, when his life was in danger. See Luther.

WART DISEASE (Synchytrium endobioticum). Tumorous fungus-like growth which affects potatoes both upon stem and tuber. It obtains access to the potato through the eyes, and continues to expand in the form of a globular protoplasmic mass. The cells die, leaving only the cell wall, but the growth continues indefinitely. There is no remedy for this fungoid disease, and all infected tubers should be dug up and burnt. All occupiers of land upon which the disease occurs must at once report its appearance to the ministry of agriculture and fisheries. See Potato.

WART HOG (Phacochoerus). Genus of two species of African swine (Suidæ). Generally resembling the wild boar, they are distinguished by the large head, the four huge tusks, and the three flexible pads on each side of the long face. The pads or "warts" are believed to serve as shields for the rather prominent eyes during the contests of the boars. Both species (*P. aethiopicus* and *P. africanus*) are much alike, and have a long mane of coarse, bristly hair on the neck and back.

WARTON THOMAS (1718-90). British poet and critic. Born at Basingstoke, Jan. 9, 1728, he became

professor of poetry at Oxford in 1757. In 1785 he became Camden professor of history, and in the same year was made poet laureate. His fame rests on his scholarly *Observations on the Faerie Queene*, 1754, and still more on his uncompleted *History of English Poetry, 1774-81*, which is a landmark in English literature, inasmuch as it provoked reaction from 18th century classicism, and was thus a considerable factor in the romantic revival. He died at Oxford. May 21, 1790

Warwick. Double gateway of the 14th century castle showing, left, Caesar's tower

WARWICK. Borough, county town and market town of Warwickshire. On the Avon, it is 21 m. S.E. of Birmingham and is served by the G.W. and L.M.S. Rlys. The town became of importance with the erection, about 915, of the castle, founded by Ethelfleda, daughter of Alfred the Great. The present castle is a good example of 14th century fortification. In 1871 much of the interior was destroyed by fire. The principal church is S. Mary's, largely rebuilt after a fire in 1694. Parts of the older building remain in the chancel and the Beauchamp Chapel, which contains tombs of the earls of Warwick. Two of the old town gates remain. Near West Gate is the fine 14th century, half-timbered Leicester's Hospital, an almshouse. Market days, Wed. and Sat. (alternate). Pop. 12,362.

WARWICK, EARL OF. English title held by various families since the 12th century. The 1st earl was the Norman, Henry de Newburgh (d. 1123). On the death, in 1297, of Thomas, 6th earl, the title passed through two female descents to William de Beauchamp, 9th earl. On the death of Henry, the 14th earl, 1445, the title was granted to his daughter Anne's husband, Richard Neville, the king-maker. The title passed to Anne's grandson, Edward Plantagenet, who was deprived of his title and executed in 1499.

The family of Dudley held the title, 1547-90, and that of Rich, 1618-1759. In 1759 the earldom was granted to Francis Greville. From him was descended Francis (1853-1924), 5th earl of the new creation. He married Frances Evelyn, heiress of the Maynard family, who is known as a socialist. The chief seat of the earl is Warwick Castle.

WARWICK, RICHARD NEVILLE, EARL OF (1428-71). English statesman, called the king-maker. He was born Nov. 22, 1428, the son of Richard Neville, earl of Salisbury. Young Richard became earl of Warwick by his marriage with the heiress to the earldom. He helped his cousin, Edward of York, to crush the Lancastrians

and secure the throne. The king left the government to Warwick, but paralysed his policy by secret negotiations. Warwick rose in arms, captured the king, and in effect himself assumed the supreme authority. But the king suddenly turned the tables upon him; Warwick had to fly the country, but in Aug., 1470, he reappeared in England in arms. Edward fled the country, and Warwick restored the imprisoned Henry VI. But in March Edward once more landed in Yorkshire, and Warwick was killed at Barnet April 14, 1471. See Roses, Wars of the.

WARWICKSHIRE. Midland county of England. Its area is 945 sq. m. It contains in the S. spurs of the Cotswold Hills, Edge Hill rising to 826 ft., and in the N. is the forest of Arden, but the greater part is undulating. The Avon, Tame, and Leam are the chief rivers. The county has a large industrial area, including Birmingham and neighbourhood, as well as Coventry. Elsewhere agriculture is carried on, chiefly dairy farming and the growing of oats and wheat, and there are orchards and market gardening. The county is served by the G.W., L.M.S. and L.N.E. Rlys., and by several canals. Warwick is the county town. Others include Leamington, Rugby, Stratford-on-Avon, Nuncaton, Sutton Coldfield, and Bedworth, as well as the greater part of Birmingham; also Kenilworth, Maxstoke, and other places of historic or antiquarian interest. The county's literary associations primarily centre in Stratford-on-Avon (q.v.). Pop. 1,390,092. See map p. 1410.

WARWICKSHIRE REGIMENT, ROYAL. Regiment of the British army. The 6th of the line, it was raised in 1674 to help the Dutch in their fight against France, and remained in Holland until 1688, when it landed with William of Orange. It went with William III to Flanders, and at the battle of Steinkirk was all but annihilated. In 1705 the regiment was sent to Spain, and at the battle of Almanza it won the Antelope, which is now its badge, by seizing a standard with this emblem thereon. The Warwicks won further honours at the capture of Minorca, in the Peninsular War, in the defence of Canada, and in S. Africa. The distinction of being a royal regiment dates from 1832. Numerous territorial and service battalions, in addition to its regular battalions, did splendid service during the Great War. The regimental depot is at Warwick.

Warwickshire Regiment badge

WASH, THE. Opening on the E. coast of England. It indents the coasts of Norfolk and Lincolnshire and is 22 m. long and 15 m. broad. It receives the rivers Ouse, Nen, Welland, and Witham, and is very shallow, being the submerged extension of the Fens. By the channels known as Boston and Lynn Deepes ships of moderate size can reach Boston and King's Lynn. The Wash was formerly far more extensive than it is to-day, much land having been reclaimed from the sea. See Fens.

WASHINGTON. Urban district of Durham. Near the Wear, 6 m. W. of Sunderland, it has a station on the L.N.E. Rly. and is a busy colliery centre. Pop 17,230.

WASHINGTON. State of the U.S.A. Lying along the Pacific coast, its area is 69,127 sq. m. It is crossed centrally from N. to S. by the Cascade Range, in and near which are several volcanic peaks, including Mt. Rainier (14,526), and in the W. the Coast Range follows a similar direction with Mt. Olympus (8,150 ft.). Between lies a broad depression, deeply cut into by Puget Sound, and E. the surface belongs in part to the great

Wart Hog. Boar of the Ethiopian species, *Phacochoerus aethiopicus*

Warwickshire. Map of the industrial and agricultural county. See article p. 1409. The plain of the Columbia river, but is mountainous in the N. and S. Wheat, barley, oats, maize, and fruit are the largest crops. Lumbering and mining, especially of coal, and fishing are important industries. Higher education is provided at the university of Washington and elsewhere. Olympia is the capital, but Seattle, Tacoma, Spokane, and other towns are of greater importance. Pop. 1,587,000.

WASHINGTON. Capital of the U.S.A., the official residence of the president, and the seat of the Federal Government and Congress.

The Corecoran Gallery has a fine collection of American paintings. Pop. 552,000.

WASHINGTON, BOOKER TALLAFERRO (1858-1915). American educator. A plantation slave, he was born near Hale's Ford, Franklin co., Virginia, and after the Civil War removed to Malden, West Virginia, where he earned a living first in a salt furnace and then in a coal mine. He studied at the Hampton Normal and Agricultural Institute, 1872-75, and later took a course at the Wayland Seminary in Washington. From 1879-81 he directed the work of Red Indians at the

venues cross. circles have been designed.

The Capitol dominates Washington. It stands on an eminence in a park, its dome crowned by the statue of Liberty. On either flank are the office buildings of the Senate and the House of Representatives. Across the park facing it is the Congressional Library.

At one end of Pennsylvania Avenue stands the famous White House, the official home of the president. It is an unpretentious two-storied building, resembling a country house rather than a state residence. Close to the White House are the principal departmental offices, as well as the headquarters of the U.S. Chamber of Commerce, a magnificent building. Washington is rich in statues and memorials of the past.

The Washington Monument stands in its own grounds on the Potomac. Universities comprise George Washington, Catholic University of America, Georgetown, Howard, and American (Methodist) University.

February 22, 1732, at Bridges Creek, Westmoreland co., Virginia, the son of a prosperous planter. At 16 he was appointed public surveyor of Culpeper co., and a little later adjutant-general, with the rank of major. In 1755 he was appointed to the staff of General Braddock, who was sent to evict the French, and earned a high reputation. In 1759 Washington married Martha Curtis, a rich widow, and devoted himself to the administration of her estates.

At the outbreak of the War of Independence in 1775 Washington was appointed to the chief command. He won a brilliant victory at Trenton, Dec. 26, 1776—a stroke that practically saved America. At Monmouth he converted, by his personal magnetism, an inglorious defeat into an important victory, June 28, 1778. The struggle remained uncertain until decided by the interposition of the French and the surrender of Cornwallis.

Washington, now almost a broken man, was prevailed on to assume the office of president, April 30, 1789, and with great difficulty arranged a compromise between the two parties into which the U.S.A. was now divided. The American constitution was the result of the president's exertions. Washington was re-elected president, being in office seven years altogether, during which he laid the foundation of the Monroe Doctrine (q.v.). He declined the third term of presidency, and retired in 1796 to his estate at Mount Vernon, where he lived until his death, Dec. 14, 1799. See Mount Vernon; Sulgrave; United States.

WASHINGTON CONFERENCE. Meeting convened by the U.S.A., Nov. 1921, to consider political conditions in the Pacific, the avoidance of naval rivalry, and the future of China. The chief powers participating were the British Empire, the U.S.A., France, Japan, and China; representatives of Italy, Holland, Belgium, and Portugal also attended. The British Empire, U.S.A., Japan, France, and Italy adopted

a five-power naval treaty, which was signed on Feb. 1, 1922. In addition, the same five powers signed a treaty against the use of submarines as commerce destroyers and against the employment of asphyxiating gases.

The problem of Japan was dealt with in a four-power treaty, signed by the British Empire, the U.S.A., France, and Japan on Dec. 13, 1921, to supersede the Anglo-

educator

It is continuous with the district of Columbia, and stands on the left bank of the river Potomac. Through the influence of George Washington a site was selected in 1790 on the borders of Maryland and Virginia. It was named after the first president, and laid out by Major L'Enfant, a French engineer officer. The city has the usual rectangular American streets, but intersecting them is a system of diagonal avenues, generally lined with trees and 160 feet wide. Where streets and

Hampton Institute, and was principal of Tuskegee Institute, Alabama. He died Nov. 15, 1915. His books include his autobiography, *Up from Slavery*, 1901.

WASHINGTON, GEORGE (1732-1799). American soldier and statesman. He was born.

Washington. 1. The White House, official residence of the President, completed in 1800. 2. The Library of Congress, completed in 1897. 3. The Capitol, from the N.W.

Japanese treaty A series of negotiations resulted in the restoration to China of much of the independence she had lost See London Naval Treaty Navy

WASHINGTON POST. Dance. It was invented and adapted to ballroom dancing during the Victorian era The music composed for it by J. P. Sousa (q.v.) and having the same name, was later found suitable for the two-step (q.v.)

WASP. Popular name for several families of hymenopterous insects, covering social wasps (Vespidae), solitary wasps (Eumenidae), wood wasps (Pompilidae), and sand wasps (Ammophila, etc.) In ordinary usage it refers to the social wasps of the genus *Vespa*, of which there are seven British species. Unlike the other groups of the Hymenoptera, the

wasps when at rest fold the wings longitudinally. The females are provided with a sting, and are much larger than the males, which in turn are larger than the workers. The species is continued through the winter by autumn-emerged females called queens. The queen in spring constructs a few connected six-sided cells of paper, prepared by pulping wood fibres shaved from the nearest post or fence. In each cell an egg is laid, and, while waiting for these to hatch, other cells are built and eggs deposited See Hornet; Insect.

Wasp. Solitary wasp, *Eumenes coarctata*, on its nest. Above, left, queen of *Vespa vulgaris*

WASTWATER. Lake of Cumberland, in the S.W. of the Lake District. It is about 3 m. long and less than ½ m. broad. On one side the scree forms an almost perpendicular wall of rock. Wasdale Head is a climbing centre.

Wastwater, Cumberland, situated among the wildest scenery of the Lake District

WATCH. One set to keep watch, usually over a building or the streets of a town during the night. Watch committee is the name given to the committee of a town council which looks after the police. See Police.

Watch as a naval term is applied both to men and to time. In a commissioned ship the seamen are divided into two watches, starboard and port, and each watch is divided into two parts (1st and 2nd), and each part into two subdivisions. As regards time, the naval day is divided into seven watches, viz. 1st watch, 8 p.m. to midnight; middle watch, midnight to 4 a.m.; morning watch, 4 a.m. to 8 a.m.; forenoon watch, 8 a.m. to noon; afternoon watch, noon to 4 p.m.; first dog watch, 4 p.m. to 6 p.m.; second dog watch, 6 p.m. to 8 p.m.

WATCH. Small portable machine for measuring time. Its invention is due to Peter Hele, of Nuremberg, about 1500, who devised the mainspring. The latter was improved by Jacob Zech of Prague in 1525, by the invention of the fusee. In 1658 Hooke discovered the balance spring, for rendering the vibrations of the balance isochronous. Later Hooke introduced the anchor escapement, and about 1695 Tompion patented a cylinder escapement, and Graham brought out his dead-beat escapement. In the 18th century compensation balances appeared. In 1820 Thomas Prest patented a keyless watch.

The working of an ordinary watch is as follows. The centre pinion rotates once in an hour. On this pinion is fixed the centre wheel, which drives the third wheel pinion. This in turn has fixed on it the third wheel, which drives the fourth wheel pinion. On the latter is mounted the fourth wheel, which drives the escape pinion, and on the latter is mounted the escape wheel. As the centre wheel makes one rotation, the fourth pinion makes sixty, and the escape wheel six hundred. The pivots of the various wheels and pinions are mounted between two plates kept apart by pillars. The centre wheel has connected with it wheels driving the hour and minute hands. The seconds hand is mounted on the fourth pinion See Chronometer; Clock

WATCHET. Urban dist. and port of Somerset. It stands on the Bristol Channel, 17 m. from Taunton, on the G.W. Rly. It has a harbour. Pop. 1884.

WATER. Chemical compound (H_2O) of hydrogen and oxygen. It consists, by volume, of one part of oxygen to two of hydrogen. At normal temperatures it is a tasteless, chemically neutral liquid. In small quantities it is colourless; in large quantities it has a bluish tinge. The varying colours of water in the mass, as in lakes, seas, etc., are due to impurities, sky reflection, etc. Pure water freezes at standard pressure at 0° C. (32° F.), increasing in density as the temperature is lowered from boiling point, 100° C., to 4° C. From the latter temperature to freezing the density of water decreases. Under pressure the temperature of freezing may be raised considerably, and with decrease of pressure, as on mountain tops, the boiling point of water is lowered.

Water is highly incompressible, and expands when solidified. It has a greater specific heat than any known substance except hydrogen. It is used as a standard for the measurements of specific gravity, specific heat, etc. It is a bad conductor of heat and electricity, a powerful solvent, and plays an important part in chemical action. See Hydraulics; Ice.

WATER BATH. Apparatus used for heating at constant temperature to digest, evaporate, or dry preparations or solutions. It consists of an inner vessel separated from an outer one by a chamber containing water constantly heated, so that the temperature does not exceed that of boiling water.

WATER BED. Large bag, shaped like a mattress, filled with water. It is used to distribute pressure over as large a surface as possible, in the treatment of invalids who are liable to develop bed sores.

WATER BUCK (*Cobus ellipsiprymnus*). Species of antelope, occurring in E. and S. Africa. It stands about 4 ft. high at shoulder, and has a greyish-brown coat with white muzzle and a white ring on the buttocks. It is found in swampy places. See illus. p. 96.

WATER BUG. Aquatic insect of the order Hemiptera, comprising several families, of which many species inhabit ponds in Britain.

Among these are the pond-skaters (Hymetrididae), with slender bodies and long, thin legs. The Nepidae are represented by the water scorpion and the water stick-insect, while the chief British member of the

Notonectidae is the well-known boatman, which rows its boat-shaped body under water. See Water Scorpion.

WATERBURY. City of Connecticut, U.S.A. It stands on the Naugatuck river, 34 m. S.W. of Hartford. It is an important centre of the brassware industry, and is noted for the manufacture of watches and clocks. Pop. 109,821

WATER COLOUR. Art and process of painting with colours compounded with an adhesive substance, such as gum or size and mixed

with water. Water colour pigments are supplied either in dry cakes or in moist form, in metal tubes, the moisture being preserved by glycerin or a similar compound. Paintings in this medium are executed either in transparent washes, or in opaque colours, or in a combination of the two; and owing to the quick drying of the pigments, the medium is the favourite one for rapid sketching.

Originally used to tint engravings and fill in outline drawings, mainly in monochrome, water colour painting in full colour was developed in England by Paul Sandby, and fully established by Thomas Girtin and J. M. W. Turner at the beginning of the 19th century. In 1805 the first exhibition of the Water Colour Society was held, and within the next half-century David Cox, Peter de Wint, Cotley Fielding, J. S. C. Aman, R. P. Bonington, W. H. Hunt, and others had made their great reputations in water colour landscape. There is a Royal Society of Painters in Water Colours whose headquarters are at 5a, Pall Mall East, S.W.1. See Art; Painting.

Watercress. Edible leaves and roots. See below

WATERCRESS (*Ranunculus nasturtium-aquaticum*). Perennial aquatic herb of the order Cruciferae. A native of Europe, W. Asia, and N. Africa, it has stout, firm, hollow, creeping stems, which root in the mud. The alternate leaves are divided into three to six pairs of somewhat heart-shaped leaflets, often of an olive tint. The small, white flowers are clustered in short sprays. The fruit is a small pod.

Water Buck. Long-horned antelope that herds in swampy places in S. Africa. W. S. Berridge, F.Z.S.

It has a hot biting flavour, and has been esteemed from ancient times as a salad herb and antiscorbutic.

WATER DROPWORT OR **HEMLOCK DROPWORT** (*Oenanthe crocata*). Perennial marsh herb of the order Umbelliferae, native of Europe. It has parsnip-like root-fibres an inch

Water Dropwort. Flowers of the marsh herb

thick; a grooved, stout, hollow stem 2-5 ft. high; and large, wedge-shaped leaves, several times divided into small wedge-shaped segments. The minute white flowers are clustered in numerous little umbels which are associated in compound

umbels. They give off a winc-like odour and the juice turns yellow on exposure. It is a very poisonous plant, and accidents have been caused by its being mistaken for celery.

WATERFALL. Fall or perpendicular descent of the water of a river or a stream. Waterfalls are usually found in the upper or mountain courses of rivers, but they may be found at any point where the river flows from hard to soft layers of rock, or where hard layers cover soft. Waterfalls are of economic value. They provide power, especially electrical, by means of which work can be accomplished at factories situated at a considerable distance from the falls themselves. See Niagara: Victoria Falls; Water Power.

Waterford. Map of the county of the Irish Free State

WATERFORD. County of Munster, Irish Free State. In the S. of the country, it has an area of 708 sq. m. and a coastline of 50 m., thereon being the harbours of Waterford, Dungarvan, and Youghal, and Tramore Bay. The surface is mainly hilly. Along the N. border are the Comeragh and Knockmealdown Mts.; in the S.W. are the Drum Hills. The chief rivers are the Suir, along the N. boundary, and the Blackwater. Agriculture is prosperous, especially dairy farming, and the fisheries are important. There are copper mines, and marble is quarried. The G.S. Rlys. serve the county. Waterford is the county town; others include Dungarvan, Lismore, and Cappoquin. There are remains of several castles and of barrows. Pop. 51,915.

WATERFORD. County bor. and capital city of co. Waterford, Irish Free State. Near the confluence of the Suir and Barrow, 94 m. S.W. of Dublin, it is an important junction on the G.S. Rlys., a shipping port, and has steamer connexion with Fishguard, Bristol, and other ports. A bridge across the Suir

connects with Ferrybank. Tramore, close by, is a popular seaside resort. Butter, bacon, and cattle are exported. The industries include bacon curing, brewing, flour milling, shipbuilding, and ironworking. There are Protestant and R.C. cathedrals. Pop. 26,647.

WATERFORD, MARQUESS OF Irish title held by the family of Beresford since 1789. The family was founded by Sir Tristram Beresford (d. 1673), who was M.P. for Londonderry, and whose great-grandson, Sir Marcus, was created Baron Beresford, and, in 1746, earl of Tyrone. His son George, who succeeded as 2nd earl in 1763, was created marquess of Waterford in 1789. From him the descent has been in direct male line to John Charles (b. 1901), the 7th marquess. The family seat is Curraghmore, Waterford.

WATER GAS. Gas produced when steam is passed through red-hot coke or anthracite. The steam is decomposed and hydrogen and carbon monoxide formed, and the mixture is known as water gas or blue gas. When mixed with hydrocarbon vapour it is called carburetted water gas, and in this form is employed for mixing with coal gas. Water gas is more poisonous than coal gas on account of the carbon monoxide it contains. See Gas.

WATER GLASS. Sodium silicate. It is known as water glass or soluble glass, because it resembles glass in appearance, but by the prolonged action of water it can be dissolved. As found in commerce sodium silicate is a thick liquid, which can be thinned by means of water. Among its many industrial uses are in preserving stone; in soap making to confer hardness; in the salt glazing of earthenware; in dyeing and calico printing, and for the preparation of unflammable wood and paper. A common household use is as a preservative of eggs. See Silicon; Sodium.

Water Hemlock (*Cicuta virosa*). Perennial marsh herb of the order Umbelliferae, also known as cowbane (q.v.).

WATER HEN (*Gallinula chloropus*). British water fowl, also known as moor hen. Its plumage is dark olive brown on the upper parts, and dark grey on the head, neck, and under parts. Distinguished by the red frontal plate above the beak, it is common about water in most parts of the British Islands, and is an expert swimmer and diver. It nests among the reeds, and its food consists mainly of slugs, worms, and insects.

WATERHOUSE, ALFRED (1830-1905). British architect. Born in Liverpool, July 19, 1830, he began to practise in Manchester, but in 1865 removed to London. In 1878 he was made A.R.A., becoming R.A. in 1885, and he died Aug. 22, 1905. Waterhouse made his reputation by designing the assize courts and town hall in Manchester. He was also responsible for Eaton Hall and other residences, and in London the Natural History Museum, New University Club, National Liberal Club, etc. He designed Girtton College, Cambridge, S. Paul's School, London, and University College, Liverpool. See Girtton.

WATERHOUSE, JOHN WILLIAM (1849-1917). British painter. The son of an artist,

he first exhibited at the Royal Academy in 1874. He became A.R.A. in 1885, R.A. in 1895, and died Feb. 10, 1917. Among his paintings, executed after the style of Burne-Jones, are *The Martyrdom of St. Eulalia*, 1885 (Tate Gallery); *The Magic Circle*, 1886, purchased by the Chantrey Bequest; and *Hylas and the Nymphs*, 1897.

WATER HYACINTH (*Eichhornia crassipes*). Perennial aquatic herb of the order Pontederiaceae. A native of S. America, it has a thick root-stock

Water Hyacinth. Leaves and cluster of flowers

and large, round, fleshy leaves whose stalks are swollen. The large violet flowers are clustered. The plants often float on the surface and propagate to such an extent that they block the rivers.

WATER LILY (*Nymphaeaceae*). Natural order of about 60 perennial aquatic herbs, natives of temperate and tropical regions. The flowers are white, pink, red, and yellow. The commonest water lily is the British

Nymphaea lutea, and the finest the S. American *Victoria regia* (q.v.). The cultivation of the tropical species requires specially prepared tanks, in which the temperature of the water is never allowed to fall below 65° F.

WATERLOO. Manufacturing centre of New South Wales, Australia, practically an industrial suburb of Sydney. There are glass and soap works, breweries, and paper mills. See Sydney.

WATERLOO, CAMPAIGN OF. Military operations between the British and their German and Dutch allies and the French that culminated in the battle of June 18, 1815. Waterloo is a village 11 m. S. of Brussels. Near it is Mont St. Jean, after which the French name the battle. Memorials mark its site.

On June 12 Napoleon had over 120,000 men on the Belgian frontier. Around Namur was a Prussian army under Blücher, about equal in strength. Wellington, at Brussels, in command of 90,000 men, of whom about 30,000 were British, expected Napoleon to march upon that city. The first fighting took place on the 16th. The French attacked the Prussians at Ligny and St. Armand. The allies, too, were engaged at Quatre Bras, 6 m. away. There some Dutch and Belgian troops withstood furious French attacks until a British detachment arrived. Both of these battles were indecisive.

On the 17th, while Napoleon hesitated, the British concentrated at Waterloo, save 17,000 men at Hal and elsewhere. Napoleon, who had detached 33,000 men under Grouchy to follow the road he thought the Prussians would take, hurried with the remainder of both armies after the British. At Gemappe there was a skirmish,

Water Lily. Opening flower of *Nymphaea alba* S. Leonard Bastin

Water Hen. British diving bird that nests among the reeds

after which the two armies spent the night, a wet one, on the morrow's battlefield. Wellington had now 67,000 men under him; Napoleon had 74,000 and was stronger in both cavalry and artillery. Before the British were the farmhouses of La Haye Sainte and Hougoumont. The divisions of infantry composed the line, with reserves and cavalry behind.

The French, at 11.30, opened the battle. On the British right a fierce struggle took place for Hougoumont; on the left, after a long cannonade, the Dutch and Belgians gave way, but the position was saved by a charge of British infantry. The French strove hard around La Haye Sainte in the centre, but here, too, their efforts to pierce the British front were unavailing until about 6 p.m., when they seized the farmhouse, which, however, they were soon forced to abandon. Meanwhile, the French cavalry were making their memorable series of charges upon the British squares. These failed, although the defenders paid a heavy price for their steadiness and valour.

The emperor then made his final attempt at victory. The Imperial guard were ordered forward, and under Ney the veterans advanced, as did the remnants of the other troops. They were close when Wellington gave the word and the British guards, having fired, dashed forward with the bayonet. An advance of the whole line followed. The British cavalry dashed forward to complete the victory, and soon the French were in flight, pursued by the Prussians. The losses of the British and their auxiliaries were 30,000. See *Belle Alliance*.

WATERLOO BRIDGE. London bridge across the Thames between Wellington Street, Strand, and Lambeth. Designed by George Dodd, it was built by a company, the engineer being John Rennie. The first stone was laid, Oct. 11, 1811, and the bridge was opened on June 18, 1817, the anniversary of the battle of Waterloo. Of granite, it consists of nine elliptical arches, the roadway on which is level with that of the Strand, and is carried by a gentle declivity, on brick arches, to the level of the roads near the Surrey Theatre. The reconstruction of the bridge was begun in 1925, as in 1924 structural defects in the arches had appeared. A temporary bridge was erected alongside. See *Somerset House*.

WATERLOO CUP. Coursing competition, the chief of its kind. It is held every year early in Feb., at Altcar, near Liverpool. It originated in 1836, and owes its name to the fact that its leading promoter was landlord of the Waterloo Hotel, Liverpool. See *Coursing*. Since 1922 the winners of this cup have been:

- 1922 Guards Brigade (Lord Tweedmouth).
- 1923 Latto (Earl of Lonsdale).
- 1924 Cusby Job (Thomas Cook).
- 1925 Pentonville (A. Pilkington).
- 1926 Jovial Judge (J. Jarvis).
- 1927 Golden Seal (A. Gordon Smith).
- 1928 White Collar (Mrs. Sofer Whitburn).
- 1929 Golden Surprise (A. Gordon Smith).
- 1930 Church Street (G. Smith).

WATERLOO STATION. Chief London terminus of the Southern Rly., formerly the terminus of the L. & S.W. line. Since the amalgamation of 1921 it has been the head-

quarters of the Southern Rly. system. It forms a sort of triangle between the Waterloo, York, and Westminster Bridge Roads, and is connected with the Waterloo and City (Tube) Rly., opened 1898, and the Bakerloo (q.v.) Rly. The new station, opened in 1922, has two main entrances, that nearest York Road forming a memorial to the company's employees who fell in the War. The station covers a total area of 24½ acres.

WATERLOO-WITH-SEAFORTH. Urban dist. and watering place of Lancashire.

A popular bathing resort for Liverpool, from which it is 4 m. distant, it is near the mouth of the Mersey, on the L.M.S. Rly. Pop. 29,626.

WATERLOW, SIR ERNEST ALBERT (1850-1919). British painter. Born in London, May 24, 1850, in 1872 he entered the R.A. schools, gaining the Turner gold medal in 1873. Member of the Royal Society of Painters in Water Colours, 1880, and later president, he was elected A.R.A. in 1890, and R.A. in 1903. He was knighted in 1902.

His *Galway Gossips* was bought by the Chantrey trustees. Popular among his pictures were *A Sussex Homestead*, *Green Pastures*, *A Moorland Road*, *Warkworth Castle*, and *Hemingford Mill*. He died on Oct. 25, 1919.

WATERLOW, SIR SYDNEY HEDLEY (1822-1906). British merchant. Born in London, Nov. 1, 1822, in 1864 he started a printing department in connexion with his father's stationery business. In 1857 Waterlow became a member of the city corporation. He

Waterloo Bridge, London. The up-stream side of the Thames bridge before its reconstruction

was sheriff in 1866-67 and lord mayor in 1872-73. Knighted in 1867, he was made a baronet in 1873. He sat in Parliament as a Liberal 1868-69, 1874-80, 1880-85, and died Aug. 3, 1906, having presented to the public his house at Highgate and the grounds which now form Waterlow Park.

Another member of this family, Sir William Alfred Waterlow (b. 1871), was lord mayor of London 1929-30.

WATER MARK. Device produced in the manufacture of paper. It is made by pressure of a projecting design on the dandy roll, in the mould, so making the paper thinner where it comes in contact with the design.

Water Melon. Trailing perennial plant of the order Cucurbitaceae. See *Gourd*; *Melon*.

WATER MITE. (Hydrachna). Minute aquatic creature. Belonging to the order Acari of the class Arachnida, it is somewhat similar in appearance to the allied spider. The larvae possess six legs and a large sucking apparatus,

Water Moccasin. Venomous snake that haunts shallow waters of the southern U.S.A.

W. S. Berridge, F.Z.S.

by means of which they live parasitically upon larger aquatic animals.

WATER MOCCASIN (Aneistronodon piscivorus). Venomous aquatic snake of the southern U.S.A., also called cotton-mouth. It is a yard or more in length, with a thick body and tapering tail, the colour being dark ruddy brown above with darker bands, and black below with whitish markings. It feeds on fishes and frogs, but often attacks humans.

WATER MOSS (Fontinalis antipyretica). Aquatic plant of the order Bryaceae. It is attached to stones, chiefly in running water. It has very long, branching stems, with their leaves arranged in three series.

WATER OUZEL OR **DIPPER** (Cinclus aquaticus). A bird common in Devonshire, where it is often seen about the streams, feeding on aquatic insects. It is brown in colour, with white under parts, and is able to walk about under water by gripping the stones with its feet. Its nest is made of grass, skilfully concealed by a covering of moss.

Water Ouzel or dipper

WATER POLO. Aquatic ball game. It is played with a football not less than 27 inches and not more than 28 inches in circumference. A team is composed of 7 players, generally divided into three forwards, one half-back, two backs, and a goalkeeper. The distance between goals varies from 19 to 30 yards. The width is not more than 20 yards. Only one hand may be used, and it is a foul to touch the ball with both hands at the same time. The duration of play is 14 minutes. See *Polo*; *Swimming*.

WATER POWER. The use of some form of water wheel is very ancient. Owing to the invention of the steam engine, the development of water power lagged during the 19th century, and the types of water wheel in use were clumsy, heavy devices, poor in efficiency, and unsuitable for high falls. In recent years the Pelton wheel and the larger water turbine have been evolved, and the development of the dynamo and of high-voltage electric transmission has restored water power to its former relative importance.

In all civilized regions where a natural fall is available or an artificial head of water can be procured, hydro-electric plants generate the tremendous supplies of current needed for electro-chemical and electro-physical processes of manufacture, to say nothing of the distribution of energy for power and lighting.

It has been estimated that the available water power of the world is 200,000,000 horse power, of which only about one-eighth has been harnessed. In Europe water power is being extensively used by France, Italy, Norway, Spain, Sweden, and Switzerland; in

America by Canada and the U.S.A.—especially the latter country, where about one-third of the available power is utilised; and in Asia by Japan, where great strides have been made in the last decade. See Hydraulics; Hydro-electric Machinery; Shannon (p. 756); Tide: Turbine: Water Wheel.

WATERPROOFING. Coating of various substances to render them impervious to water. Fabrics are generally coated with rubber for this purpose. The rubber is worked up with naphtha into a sticky dough consistency, and an even layer is spread on the fabric by means of rollers. Fabrics are also waterproofed by impregnating with soap and afterwards dipping with a solution of alum. Wood, leather, etc., may be waterproofed with paraffin while varnishes and waterglass are both excellent waterproofing substances.

Water Rat. Popular but erroneous name for the water vole. See Vole.

WATER SCORPION. Family of water bugs, some of which are common in the ponds of Great Britain. The curved forelegs and the tail-like appendage to the abdomen give this insect something of the appearance of a scorpion. The tail is really a breathing tube, and is raised above the surface when the insect comes up for air. See Water Bug.

Water Scorpion.
Nepa cinerea,
about nat. size

WATER SPIDER (*Argyroneta aquatica*). Aquatic arachnid, a native of the British Isles. It lives almost entirely in fresh-water streams. The long hairs which cover the abdomen retain a bubble of air when the spider swims below the surface, thus enabling it to breathe. It constructs a dome-shaped, watertight cocoon on the submerged stems of water-weeds, and into it discharges the air that it brings down. It spends the winter in a torpid state in the nest so constructed, and there lays its eggs. See Spider.

WATERSPOUT. Phenomenon equivalent to a tornado at sea. It is a violent whirlwind which produces a dark, funnel-shaped cloud tapering downwards towards the sea, so that it resembles a spout or trunk joining the sea to the cloud. See Tornado.

WATER THYME (*Elodea canadensis*). Perennial aquatic herb of the order Hydrocharitaceae. It is a native of N. America, but is naturalised in Europe. It has slender, brittle, jointed stems, as much as four feet long, which root at the joints. The plant made its appearance in Ireland in 1836, and in England seven years later. It spread rapidly all over the country, and choked many canals and streams.

Water Thyme.
Leaves and long-stalked
flowers

WATER VIOLET (*Hottonia palustris*). Perennial aquatic herb of the order Primulaceae; a native of Europe and W. Siberia. It is a floating plant, the thick succulent branches rooting on the surface. The erect flower stem stands out of the water to the height of a foot or more. On it are borne the flowers, which are lilac in colour and salver-shaped.

WATER WHEEL. Wheel turned by water caught in vanes parallel to the axis. Water wheels are the oldest means of utilising water power. The overshot wheel receives the water at the top, the water acting by gravity. Water enters a breast wheel below the top, and turns it by weight entirely if caught in buckets, or partly by its velocity if vanes are used. The undershot wheel receives water at the bottom, and makes use of its momentum.

In hydro-electric plants handling water at high heads the Pelton wheel is usually employed. This has a series of cup-shaped buckets placed around its periphery, and the water is delivered through a nozzle at high velocity. Speed is controlled by a needle valve, which regulates the volume of water. The Francis turbine, used in plants where there is a medium or low fall, consists of a wheel, usually set horizontally on a vertical axis, having a number of curved vanes or buckets set around it. The water is delivered through a series of guide vanes surrounding the runner. See Hydraulics; Turbine: Water Power.

WATFORD. Borough and market town of Hertfordshire. It stands in the valley of the Colne, near Bushey, and has stations on the L.M.S., and is also served by the Bakerloo and Met. Rlys. The Perpendicular church of S. Mary, restored 1870-71, has interesting monuments. Other buildings include the London Orphan Asylum and Salters' almshouses. Park of Cassiobury Park is now the property of the town. Industries established during the 20th century include printing works and factories for foodstuffs. Brewing and milling are older industries. Market days, Tues. and Sat. Pop. 52,000.

WATH-UPON-DEARNE. Urban dist. and market town of Yorkshire (W.R.). It is 6 m. N. of Rotherham on the L.N.E. Rly., and near the Dearne and Dove canal. There are iron and coal mines in the vicinity. Market day, Sat. Pop. 13,830.

Waterspout in the Black Sea. Left, in full stream; right, breaking up

way director. Born in Manchester, Sept. 26, 1819, he became secretary of the Trent Valley Rly. in 1845, and was next employed by the Manchester and Sheffield Co., of which he became chairman. He was also chairman of the South Eastern and Metropolitan rlys. for many years. Watkin converted the Manchester, Sheffield, and Lincoln into a great trunk line, the Great Central. He began a tower at Wembley on the lines of the Eiffel tower, which was later pulled down. Liberal M.P. for Stockport, 1864-68, and for Hythe, 1874-95. Watkin was knighted, 1868, and created a baronet, 1880. He died April 13, 1901.

WATLING OR WATLING'S ISLAND. British island in the Bahamas. It is 47 m. E.S.E. of Cat Island, and is usually regarded as the first landing place of Columbus in 1492. Pop. 686. The name San Salvador is variously applied to Watling and Cat islands.

WATLING STREET. Early English name for a Roman road from Dover to Wroster. It utilised an older British track along the watersheds. Its reconstruction on Roman lines is shown by its 11 straight sections with angular junctions. It ran through Canterbury, London, St. Albans, Dunstable, and Towcester to Wroster. See Britain.

WATSON, SIR WILLIAM (b. 1858) British poet. Born at Burley-in-Wharfedale, Yorkshire, Aug. 2, 1858, he published his first

Sir William Watson.
British poet
Russell

poems, *The Prince's Quest*, 1880, and his *Epigrams of Art, Life, and Nature*, 1884. His dignified Wordsworth's *Grave*, 1890, and *Lacrymae Musarum*, 1892, together with *Lyrical Love*, 1892, and *The Father of the Forest*, 1895, are characteristic of his eloquent and sonorous verse. Other volumes include *Collected Poems*, 1906, *The Muse in Exile*, 1913, *Retrospection*, 1917, and *The Superhuman Antagonists*, 1919, and also *Excursions in Criticism*, 1893, and *Pencraft*, 1917. In 1925 he published *Poems, Brief and New*. He was knighted in 1917, and in 1930 a fund was raised for him.

WATT. Unit of electrical power, named after James Watt. It is the equivalent of a current of one ampère at a pressure of one volt. A larger unit is the kilowatt, equal to 1,000 watts. See Electricity.

A wattmeter is an instrument for measuring the power and rate of doing work electrically. It consists usually of a form of galvanometer.

James Watt,
British engineer
After Sir W. Beechey

WATT, JAMES (1736-1819). British engineer. Born at Greenock, Jan. 19, 1736, he was extremely delicate in youth. At eighteen he went to London as assistant to an instrument maker. Ill health compelled a return to Glasgow. In 1764 he repaired the model of the Newcomen steam engine, and turned his attention to the efficiency of such engines. In 1769 he patented the separate condenser. In 1774, in partnership with Matthew Boulton, an experimental engine was completed embodying the essential features of the modern steam engine.

Watt had a prolific mind. To him we owe the contrivance of the centrifugal governor as applied to the steam engine, and the water gauge; his parallel motion is one of the most useful of all. He died Aug. 25, 1819. A memorial fund was started in 1919. See Steam Engine.

WATT, SIR THOMAS (b. 1857). South African statesman. Born at Glasgow, he went to Natal in 1883, where from 1885 he practised as an attorney and advocate. He entered the Natal parliament, and after serving in the S. African War, 1899-1902, was minister of justice and education, 1903-6. He was a delegate from Natal to the South African convention for drafting the act of union, and represented Dundee in the Union parliament. Minister of public works, 1912, he was minister of the interior, 1916-21, and again of public works, 1922. He left office in 1924. He was created K.C.M.G. in 1912.

WATTEAU, JEAN ANTOINE (1684-1721). French painter. Born at Valenciennes, he studied in Paris under Claude Gillot, a decorative painter, and then became assistant keeper of the Luxembourg. He set up for himself under the patronage of Joseph Antoine Crozat (Marquis du Tugny), the collector. In 1717

Sir Edward Watkin,
British rly. director

he was received at the Academy under the style of Painter of Fêtes Galantes, his reception picture being the famous Embarkation for Cythera, now in the Louvre. Always a sufferer from chest weakness, he visited England in 1719 to obtain medical advice, but his malady developed rapidly after his return, and he died at Nogent-sur-Marne, July 18, 1721. The greatest of all painters of Fêtes Galantes, Watteau also immortalised the strolling Italian comedians of his time.

WATTLE (A.S. watel, twig). Term used in architecture to denote one of the earliest materials employed in erecting human dwellings. In its most primitive form it occurs as a leafy wind-screen, as in aboriginal Australia and Tierra del Fuego. In neolithic Europe huts of interlaced osiers were clay-daubed or turfed. Similar structural methods occurred in oldest Crete, Mesopotamia, and Vedic India; they survive in Africa, especially among the Nilotic peoples. Wattle-and-daub survived throughout Roman Britain, as at Silchester, into Anglo-Saxon England.

The name wattle is also applied to various Australian species of acacia (q.v.). Wattle day is the name given to the day (Jan. 26) on which Sydney was founded in 1788. It is kept as an anniversary.

WATTLE BIRD (Anthochaera carunculata). Species of honey eater, found only in Australasia. These birds are notable for their long tongue, which resembles a brush at the tip, and is used for extracting nectar.

WATTS, GEORGE FREDERIC (1817-1904). British painter. Born in London, Feb. 23, 1817, in 1835 he entered the R.A. schools. His portrait of Mrs. Ionides, exhibited in 1840, first drew public notice to his work. From 1844-47 he was in Italy. Becoming one of the best-known portrait painters in England, he enriched the National Portrait Gallery with a series, including Cardinal Manning, John Stuart Mill, Tennyson, Browning, Carlyle, Gladstone, and Rossetti. Notable among his famous symbolic pictures are Time, Death and Judgment, Love and Life, Mammon, Faith, Hope, etc. He also attained considerable eminence as a sculptor.

He died at Compton, July 1, 1904, having received the O.M. in 1902. He was married, first to Ellen Terry, from whom he afterwards separated, and then to Miss Fraser-Tyler, whom he married in 1886, and who survived him. See illus. p. 131; 312; 1157.

WATTS, ISAAC (1674-1748). British hymn writer. Born at Southampton, July 17, 1674, he became a minister. In 1697 he was chosen assistant pastor of an Independent church in Mark Lane, London, becoming sole pastor in 1702. He died Nov. 25, 1748. He lives by his hymns, which figured largely in the older

hymnals. A few remain popular, among them being O God our help in ages past. An edition of his works appeared in 1822.

WATTS-DUNTON, WALTER THEODORE (1832-1914). British critic and poet. Born Oct. 12, 1832, at St. Ives. Hunts, he became a solicitor, but soon abandoned that profession for literary work and made the acquaintance of Rossetti, Morris, Swinburne, and other celebrities. Another intimate friend was Borrow, whose Lavengro and Romany Rye he edited. For nearly thirty years Swinburne shared his home. His contributions to The Athenaeum between 1875 and 1898 established his leading literary critic of the time. His first published book was a volume of poems, The Coming of Love, 1897. In 1898 appeared Aylwin, a long prose romance of Romany life. He died June 6, 1914.

WAUGH, ALEC. Pen-name of Alexander Raban Waugh (b. 1898). British novelist. A son of Arthur Waugh (b. 1866), managing director of Chapman & Hall, Ltd., and the author of several volumes of criticism and biography, he was born July 8, 1898. Educated at Sherborne School, he passed from Sandhurst into the Dorset Regiment. Serving on the Western front, he was taken prisoner by the Germans in 1917. Waugh made his reputation by The Loom of Youth, 1917, a novel revealing school life in a somewhat realistic fashion. His later books include Love in These Days, 1929, Three Score and Ten, and The Coloured Countries, 1930. His brother Evelyn also made a reputation as a writer.

WAUGH, EDWIN (1817-90). Lancashire poet. Born at Rochdale, Jan. 29, 1817, son of a shoemaker, he received little education except what he picked up while employed by a bookseller and printer. His first sketches of Lancashire life attracted the notice of Carlyle. Even greater success awaited his first lyric, Come whom to the childer an' me. This was followed by a long succession of poems and sketches that earned for him the title of the Lancashire Burns. He died April 30, 1890.

WAUTERS, EMILE (b. 1846). Belgian painter. Born in Brussels, he studied art there and in Paris. He made his reputation by his historical paintings. His Cairo and the Banks of the Nile, and Mary of Burgundy before the Magistrates of Ghent, may be mentioned. Wauters has also painted over 200 portraits.

WAVE. Type of vibrational disturbance in an elastic medium. Wave motion may in general be divided into two broad types, one the motion through the medium and the other the motion on the surface of the medium. The latter is familiarised by the waves on water, the former by the propagation of sound.

The conception of a wave, as a means of conveying energy, is at the foundation of the theory of wave motion through the ether. Light, heat, electricity, etc., travel between the sun, the planets, and the distant stars by waves in the ether. Electro-magnetic waves, of whatever wave length, travel at the same rate, e.g. 300,000,000

metres per second. A wireless wave which may have a wave length of half a mile or more will travel at the same velocity as an electric wave which is less than a millionth of an inch in length.

In a wave motion each particle of the medium makes the same movement in a regular sequence. The distance between two particles which are making exactly similar movements at the same moment is called a wave length. The distance between the adjacent crests of two waves is such a wave length. The wave velocity is the velocity of the particles in the direction of the wave motion. The number of times any particle moves up and down in a given time is called the wave frequency, and the extreme distance it moves from its mean position is called the amplitude of the motion. The connexion between wave velocity, wave length and wave frequency is expressed by the equation Wave velocity = wave length \times wave frequency. The period of a wave is the time a particle takes to complete a movement. See Light; Matter: Sound; Wireless.

WAVENEY. River of England. It flows past Diss, Bungay, and Beccles until, 4 m. from Yarmouth, it joins the Yare. In almost all its course of 50 m. it forms the boundary between Norfolk and Suffolk.

WAVERLEY ABBEY. Ruined Cistercian monastery near Farnham, Surrey. Founded by the banks of the Wey by William Giffard, bishop of Winchester, in 1128, it was the first Cistercian house in England.

WAX. Solid fatty substance of animal or vegetable origin, allied to fixed oils and fats. Waxes are distinguished from oils and fats in that they contain no glycerin. In general, waxes are lighter than water, melt at a comparatively low heat, are insoluble in water, and are readily combustible. The chief animal waxes are spermaceti, beeswax, serum wax, and wool wax; and the chief vegetable waxes carnauba, or Brazilian wax, Chinese wax, myrtle wax, and cotton seed wax. Paraffin wax is a product of crude mineral oils.

Waxes are used in the manufacture of candles, as insulators in electricity, in the making of furniture polishes, ointments, etc.

WAXBILL. Group of small finch-like birds (Istridinae) occurring in Africa, S. Asia, and Australia. They are related to the weaver birds, and have rather long tails and glossy curved beaks.

WAX FLOWER OR **HONEY PLANT** (Hoya carnosa). Climbing shrub of the order Asclepiadaceae, a native of Australia. The fleshy opposite leaves are oblong-oval. The pinkish, waxy-looking flowers are in umbels, whose common stalk starts from a lateral shoot.

WAX PALM (Ceroxylon andicola). Tree of the order Palmae. A native of Colombia, it grows to a height of about 50 ft., and has a spreading crown of leaves which may be 12 ft. in length. These are cut from the edges to the midrib into segments that are a couple of feet in length and about an inch and a half wide. The trunk is coated with a mixture of resin and wax, and the natives scrape this off after cutting down the tree, each trunk yielding about 25 lb. of the highly inflammable wax.

WAX PLANT (Cerinthe major). Annual herb of the natural order Boraginaceae. A native of Central Europe, it has smooth, stem-clasping, heart-shaped, glaucous leaves, with white dots. The tubular flowers are yellow at the base and purple above.

T. Watts-Dunton,
British critic
After H. B. Norris

Wattle Bird, the Australasian
honey eater

Edwin Waugh,
Lancashire poet

G. F. Watts,
British painter
Self-portrait in the
Official Gallery, Florence

Isaac Watts,
British hymn writer

Wax Palm. Crown of leaves
and flower clusters

WAX TREE, AMERICAN GAMBOGE, OR GUTTA-UM TREE (*Vismia guianensis*). Shrub of the order Hypericaceae. A native of tropical America, it has four-sided stems and opposite, oval lance-shaped leaves. The yellow flowers are clustered at the ends of the branches. Its yellow resinous juice yields a substance similar to true gamboge (*Garcinia*) and possessing similar purgative properties.

Wax Tree, a shrub yielding a resia resembling gamboge

WAXWING, SILETAH, OR BOHEMIAN CHAT-TERER (*Ampeelis garrulus*). Fruit-eating bird of the family Ampelidae. It is a native of N. Europe, and at rare intervals a winter visitor in Hocks to Britain. It is vinous brown, relieved by black and white markings. Its distinctive characters are furnished by a handsome crest on the head and by curious red, wax-like appendages to the tips of the secondary wing-feathers and those of the tail. In Britain it affects hedgerows.

Waxwing. Crested bird, occasionally found in Britain
W. S. Berridge, P.Z.S.

WAXWORK. Use of wax for the modelling of figures, medallions, and other objects. The wax used is generally beeswax. The ancient Egyptians fashioned figures of their deities in wax for funeral purposes, while the Greeks and Romans modelled wax figures for a variety of purposes. During the Middle Ages effigies of saints in wax, some beautifully coloured, became common. From the 17th century onwards wax models for anatomical and other scientific work were much used. Wax figures are much used by drapers and costumiers to display dresses, mantles, lingerie, etc.

The first waxworks show, depicting famous and notorious personages, appeared early in the 18th century. The most famous modern waxwork show is Madame Tussaud's, in London. See Effigy; Tussaud.

WAYFARING TREE (*Viburnum lantana*). Small tree or shrub of the order Caprifoliaceae, a native of Europe, N. and W. Asia, and N. Africa. The unripe wood and also the leaves are rough with stellate hairs. The large, opposite leaves are oblong-heart-shaped, with toothed edges. The white funnel-shaped flowers are in large clusters at the ends of the branches. The bark has acrid, blistering properties.

Wayfaring Tree. Leaves and flower clusters

WAYLAND THE SMITH (Old Low Ger *weland*, craftsman). In Teutonic mythology, a wonder-working smith, lord of the elves. The Old Norse *Völundarkvitha* relates the story of his capture of a swan-maiden and his fight with the smith Amilias. Wayland Smith's forge is a cave in the Vale of the White Horse, near Ashbury, Berkshire. His deeds are represented on the Franks casket in the British Museum.

WAXLEAVE. Term used in law for permission granted by an owner of property to enter for some specified purpose, such as to mine coal, at reasonable hours. See Easement.

WAYZGOOSE. Name given to the annual outing and dinner once general in connexion with English printing offices. The word means stubble-goose, or young goose suitable for a feast.

WAZIRISTAN. District of India, in the N.W. Frontier Province. It lies in the mountainous S.W., adjacent to the frontier of Afghanistan, has an area of some 5,000 sq. m., and is peopled mainly by Waziris, a Pathan tribe. The chief valley of the N., drained by the Tochi, is inhabited by industrious Dhaurs. The fighting and troublesome Mahsuds, who can muster a force 10,000 strong, and have given trouble to the British, inhabit the arid district of the S.

WEALD (A.S. a forest tract). District in Kent, Surrey, and Sussex between the N. and S. Downs, extending from the borders of Hampshire to the English Channel. It is about 120 m. long and 30 wide. Formerly covered with forests, of which there are remains in Ashdown and St. Leonards Forests, and known as Andredsweald, it was the chief centre of the iron industry, wood being used for smelting the ore.

The Wealden Deposits are a series of deposits of the Lower Cretaceous, so named from their typical appearance in the Weald. The series consists of the Hastings Sand and the Weald Clay, and is over 2,000 ft. thick.

WEALDSTONE. District of Middlesex, forming with Edgware the urban district of Wealdstone and Edgware. It is 1 m. from Harrow, and has a station on the L.M.S. Rly. The urban dist. of Wealdstone (pop. 13,439) was formed out of the parishes of Harrow and Pinner, and in 1928 was enlarged to include the parishes of Edgware, Harrow Weald, and Great and Little Stanmore.

WEALTH (O.H.G. *welitha*). Term employed to denote riches or material possessions, which may be the property of individuals, groups, associations, corporations, of small and large communities, of states, and ultimately of nations.

Various estimates of the national wealth of Great Britain have been made from time to time. In 1914 the country's capital was estimated at about £14,500,000,000. In 1930 Sir Josiah Stamp put forward a revised estimate, which is as follows:

Real property—Buildings ..	£ 4,500,000,000
Real property—Land ..	950,000,000
Farmers' capital ..	450,000,000
Business profits and interest ..	16,645,000,000
Furniture and movable property ..	1,500,000,000
Government and local property ..	900,000,000
	<hr/>
	24,945,000,000
Less belonging to people abroad ..	500,000,000
	<hr/>
Gross wealth ..	24,445,000,000
Deduct debt ..	6,400,000,000
	<hr/>
	£18,045,000,000

This gives an average of about £450 for each person, or £600 if the debt is included as capital.

In 1914 the national income was estimated at £2,250,000,000, or about £55 a head. Today it is probably in the neighbourhood of £4,000 millions, or £100 a head. In 1927 the incomes of those liable to the payment of income tax totalled £2,337,000,000. See Income Tax; National Debt.

WEAR. River of England, in the co. of Durham. It rises near the Cumberland border, and flows about 65 m. by a S. curve to the North Sea at Sunderland. Its basin of 456 sq. m. contains the S. portion of the Durham coalfield. Important places on its banks include Durham, Bishop Auckland, and Chester-le-Street. See Durham; Sunderland.

WEASEL (*Mustela nivalis*). Small carnivorous mammal. It is found throughout Europe, N. and Central Asia, and in parts of N. America, being common in England and Wales and S. Scotland, but is absent from Ireland. About 9 ins. long, it has bright reddish-brown fur on the upper parts, with white beneath. In cold regions it turns white in winter, but this seldom occurs in Great Britain. It makes its home in holes in banks. Predacious in habit, it kills large numbers of rats, mice, voles, rabbits, game birds, poultry, etc. The weasel hunts its prey by scent. See *Illus.* p. 661; 1092.

Weasel. Small predacious mammal, common to most countries of the Northern hemisphere

WEATHER. Current condition of temperature, wind, clouds, rain, etc. The average result of weather changes is termed climate.

A weather forecast is a considered prediction about the nature of the weather in the near future. The meteorologist receives at headquarters daily reports from carefully selected stations, whose weather conditions are likely to aid him in his task. These give him the local temperature; pressure, winds, rainfall, state of the atmosphere, etc., and having entered these on a map, he is able to draw the isotherms, isobars, and show by signs the direction and strength of the wind, etc.

Weather forecasts, besides being of great value to the general public, are used for many technical purposes. See Climate; Meteorology.

WEATHERBOARD. Board used to form the outsides of wooden buildings. The boards are overlapped to avoid the open joints which would sooner or later result from shrinkage of the wood if the boards were merely "buted," i.e. set edge to edge. To give the boards a better slope and set, they are planed to a feather-edge, the top inner edge being reduced to about half the thickness of the bottom edge. In laying the boards the thick lower edge of the upper board is lapped about an inch or an inch and a half over the thin edge of the board below it, the boards being nailed together where they overlap.

WEATHERCOCK. Vane for showing which way the wind blows. It is a thin vertical plate of metal or wood, pivoted on a vertical rod, and is generally gilded and made in some decorative or fanciful form, especially that of a cock, the emblem of vigilance. Weathercocks are placed on a staff, or above a spire, steeple, or roof.

WEATHERLY, **FREDERICK EDWARD** (1848-1929). British song writer. Born at Portishead, Somerset, Oct. 4, 1848, he was called to the bar in 1887. He became known as a writer of numerous popular songs and ballads, among them *Nancy Lee*, *The Deathless Army*, *Up from Somerset*, *Roses of Picardy*, etc. He also wrote *Muriel and Other Poems*, 1870; *The Rudiments of Logic*, 1879; many children's books; English versions of *Cavalleria Rusticana*, 1892, and *Pagliacci*, 1893; and some reminiscences as *Piano and Gown* (1926). Weatherly died Sept. 7, 1929.

Weathercock. Above, vane at Eitchingham, the oldest in England. Below, ship vane on Rochester Town Hall

WEAVER. River of Cheshire. It rises in the S.W. of the county, and flows mainly N. past Nantwich and Northwich into the Mersey near Frodsham. Below Northwich, for the lowest 20 m. of its course,

the embanked river becomes the Weaver Navigation, used by steamers and barges connected with the trade in chemicals and salt. It is connected with the Trent and Mersey canal, vessels being raised by a lift. Its length is about 50 m. See Lift.

WEAVER BIRD.

Popular name applied to several genera of small birds whose nests are covered by grass-woven bags. Of bottle or flask shape, the nest is entered at the bottom or low down at the side. The Baya sparrow or weaver bird (*Ploceus baya*), of India and Ceylon, attaches its hour-glass or retort-shaped nest to the fronds of palms, weighting them with clay to prevent inordinate swaying. The social weaver birds (*Philetaerus socius*) of S. Africa combine to load an acacia tree with bushman grass, weaving some of it into a roof. In hollows of the interior dozens of pairs of the birds construct their nests.

Weaver Bird. Left, Jackson's Whydah Bird, one of the weavers. Right, typical bag, woven of long grasses, to protect the nest

Weaver Bird. Left, Jackson's Whydah Bird, one of the weavers. Right, typical bag, woven of long grasses, to protect the nest

WEAVING. Conversion of threads into fabrics. The device or machine used is the loom (q.v.). The power loom is substantially the hand loom adapted to rotary driving. The weaver, freed from supplying power, has only to supply weft to the shuttle and watch for breakages of thread and for defects, and may be able to supervise several looms, according to their kind and to the class of work in progress.

Looms for fancy weaving have parts additional to those of the plain loom. Stripes of colour are arranged for in warping, but the crossing stripes to form cheeks have to be formed in weaving. Small geometrical figures can be woven with the dobby, a modification of the Jacquard. This machine provides a means of lifting individual warp threads without reference to their neighbours, and is an addendum to the ordinary loom. Perforated cards and the needles of a cylinder select the required thread or group of threads, which are then lifted by the agency of hooks.

For purposes of weaving, designs are made upon point or squared paper, each square representing the position of one thread, and dots are made in the appropriate squares indicating that at this place the warp must come uppermost. A complete unit of the design (the "repeat") is then plotted upon paper to show the position of the threads. Its diagonal or other character can be seen, and the loom can be set to follow the round of movements indicated. See Lace; Loom.

WEBB, SIR ASTON (1849-1930). British architect. Born May 22, 1849, the son of Edward Webb, a painter, he became an architect. He designed the Victoria and Albert Museum, the College of Science and Technology, S. Kensington, the Admiralty Arch, and the new front of Buckingham Palace. In ecclesiastical design his best achievement was the restoration of S. Bartholomew the Great. Elected A.R.A. in 1899, he was chosen R.A. in 1903. From 1919 to 1924 he was president of the R.A., and he was also president of the architectural association. In 1904 Webb was knighted, and he died Aug. 1, 1930. See Admiralty; Victoria.

WEBB, MARY (d. 1927). British novelist. The daughter of G. E. Meredith, a schoolmaster, she was born in a village in Shropshire. Her first writings were poems, but soon she had published several novels. In

1924 her *Precious Bane* won praise, but a wider fame only came after her death in Oct., 1927. Mr. Baldwin, the premier, then drew attention to the excellence of her work, and a collected edition appeared in 1928. In 1912 she married H. B. L. Webb, a schoolmaster.

WEBB, MATTHEW (1848-83). English swimmer popularly known as Captain Webb.

He was born at Dawley, Shropshire, Jan. 18, 1848, and when a boy saved his brother from drowning in the Severn. He served in the mercantile marine and was awarded the first Stanhope gold medal by the Royal Humane Society in 1874. On Aug. 24-25, 1875, he swam across the English Channel from Dover to Calais in 21½ hours. He lost his life in an attempt to swim the whirlpool and rapids below the Niagara Falls, July 24, 1883.

WEBB, SIDNEY JAMES. Name of the British sociologist created Baron Passfield (q.v.). His wife, Beatrice Potter (b. 1858), continued to be known as Mrs. Sidney Webb.

WEBER, CARL MARIA FRIEDRICH ERNST VON (1786-1826). German composer. He was born at Eutin, Oldenburg, Dec. 18, 1786, his father, Franz Anton, being an able musician; his mother had been a Viennese singer. On her death in 1798 the family moved to Vienna, where his *Six Fughettas* were published. In 1803 he studied under G. J. Vogler (q.v.) and became director of the Breslau Opera. He left there in 1806 for a court appointment in Stuttgart, but became involved in trouble which necessitated his removal to Darmstadt, where he wrote his opera, *Abu Hassan*. From 1813-16 Weber was director of the Opera at Prague, and wrote much excellent piano music. His masterpiece, *Der Freischütz*, was produced in Berlin, June 18, 1821. He died in London, June 5, 1826.

WEBSTER, DANIEL (1782-1852). American statesman. Born in New Hampshire, Jan. 18, 1782, he was called to the bar in 1803. He was member of Congress, 1813-17 and 1823-27, and senator 1827-41 and 1845-50. In 1816 he set up practice as a lawyer in Boston. Refusing the vice-presidency, he accepted the secretaryship of state, which he held 1841-43 and 1850-52. Although opposed to the war with Mexico and the extension of slavery, he regarded the latter as preferable to endangering the Union. He died Oct. 24, 1852. It is on his oratory that Webster's reputation chiefly rests.

WEBSTER, JOHN (c. 1580-1625) English dramatist. The son of a London tailor, he became a freeman of the Merchant Taylors' Company. He wrote for Philip Henslowe, and collaborated with Drayton, Munday, Middleton, Dekker, Heywood, and others. His independent work includes a romantic comedy, *The Devil's Law Case*, and three tragedies, *Appius and Virginia*, *The White Devil*, and *The Duchess of Malfi*.

WEBSTER, NOAH (1758-1843). American lexicographer. Born at Hartford, Conn., Oct. 16, 1758, he was educated at Harvard. He became a teacher, but also found time to study law and write books. The success of a spelling book written by him led him to project a dictionary, the first edition of which appeared in 1828. He died May 2, 1843.

WEBSTER, TOM (b. 1888). British cartoonist. He was born and educated at Wolverhampton. His first work appeared in *The Birmingham Weekly Post*, which offered a weekly prize for a humorous drawing. After four years as sporting cartoonist on a provincial paper, Webster moved to London and joined *The Daily Citizen* as political cartoonist. During the Great War he served in the Royal Fusiliers, was wounded on the Somme, and in 1917 was invalided. In Nov., 1918, *The Evening News* accepted one of his drawings, and in 1919 Webster signed a contract with *The Daily Mail*, in which most of his later drawings appeared. See Caricature.

WEDDELL SEA. Bay of Antarctica, between W. Antarctica and Coats Land. Bruce, Morrell, Filchner, Weddell, and Shackleton have contributed to the knowledge of its coasts and waters. In 1915 the *Endurance* was crushed and sunk in it.

WEDDING. Ceremony of marriage. It is usually an occasion of feasting and rejoicing, and in most countries includes a religious rite. Each country has its own wedding customs. In Britain these include, apart from the actual religious or civil ceremony, the cutting of the wedding cake and the distribution of pieces among friends. The 25th anniversary of a wedding is a silver wedding; the 50th a golden wedding; and the 60th a diamond one.

WEDDING RITES. These often embody survivals of primitive custom. There may be meal communion, mutual feeding with rice, mutual drinking of clam broth or saki, breast-sprinkling with bullock blood, head-sprinkling with coconut milk, hand-sprinkling with water, and forehead-marking with blood, or symbolically with vermilion. The bridegroom may wear a hat woven from ancestral hair, as in Korea. The rite may be preceded by an exhibition of prowess.

The bride may wash the bridegroom's feet, or be carried across the bridegroom's threshold, or carry fire to her husband's hut, or have her ears boxed by the bridegroom. The bridal pair may walk round the family altar, the custom in ancient Rome, or round the house pillar; the bride may pass thrice round the hearth. See Marriage.

WEDGWOOD, JOSIAH (1730-95). British potter. Born at Burslem, July 12, 1730, he was apprenticed to his brother Thomas, and as partner of Thomas Whieldon of Fenton produced the melon and cabbage patterns of earthenware. He became a master potter at Burslem, 1759, and opened the Etruria works in 1769. He raised ornamental pottery to the status of a fine art and introduced many technical improvements. He died Jan. 3, 1795. See Burslem.

WEDGWOOD WARE. At Burslem, Wedgwood made green glaze and cream-coloured ware with fine and light body and brilliant glaze, known as Queen's ware, and still produced. At Etruria, he imitated Greek and Etruscan vases, employing Flaxman and other artists to design the figures. He made black basalt as well as cream ware, and invented the beautiful jasper ware, by which he is best known. Other kinds were pierced cream-coloured basket ware, fine red pottery, and silvery lustre ware. Lavender ware was made in 1850, and later decorated with white slip. Golden and red copper lustres have been employed. See Etruria; Majolica; Pottery; Toby Jug.

WEDGWOOD, JOSIAH CLEMENT (b. 1872). British politician. Born March 16, 1872, he was a member of the Staffordshire family.

Daniel Webster, American orator

Josiah Wedgwood, British potter. From a bust by J. Flaxman

He was assistant-constructor in Portsmouth dockyard 1895-96, and architect in Elswick shipyard, 1896-1900. He served in the S. African War, and was a resident magistrate in the Transvaal, 1902-4. He entered Parliament as Liberal M.P. for Newcastle-under-Lyme in 1906. On the outbreak of the Great War he was appointed a sub-lieut. in the R.N.D. In 1919 he joined the Labour Party, and was chancellor of the duely in 1924. In 1927 he wrote *The Seventh Dominion*.

WEDMORE. Village of Somerset. It is 8 m. from Wells, and gives its name to a treaty made between Alfred the Great and the Danes in 878. Pop. 2,385.

WEDNESBURY. Borough and market town of Staffordshire. It is 8 m. N.E. of Birmingham, on the G.W. and L.M.S. Rlys. According to tradition the Perpendicular church of S. Bartholomew occupies the site of a temple of Woden (Odin), from whom the town is supposed to take its name. Manufactures include rails, boiler plates, steel, iron, and steelwork for rlys., tools, and wrought iron. There are potteries and coal mines. Market days, Fri and Sat. Pop. 30,390.

WEDNESFIELD. Urban dist. of Staffordshire. It is the site of a battle fought in 910, when Edward the Elder drove back the Danish invaders. It is a centre of the lock and key industry and has a station on the L.M.S. Rly. Pop. 7,446.

WEED. Name given by the farmer or gardener to a plant which interferes with cultivated crops. They are plants out of place. The losses caused to agriculture by weeds are very heavy. Yellow mustard, charlock, and runc may eat wheat crops by 30 to 50 p.e. Garlic-mustard and chamomile affect stock giving milk and butter an unpleasant taste. Meadow saffron is poisonous, and kills outright animals that browse upon it.

WEEDON. Village of Northamptonshire. It is 8 m. W. of Northampton on the L.M.S. Rly. Here are the Army Equitation School and the Royal Army Ordnance Corps small arms establishment. Pop. 2,020.

WEEK. Period of seven days, a subdivision of the month. Probably based on the four phases of the moon, each of which approximates seven days, the week has not always been universal; five, six and eight day weeks exist in Africa. See Sunday.

WEENEN. Village of Natal, 29 m. by rail from Estcourt. In the vicinity many Boers and their families were massacred by the Zulus under Dingaan, hence the name, which means weeping. The village was settled in 1839.

Weetslade. Urban dist. of Northumberland. It is in a mining area, 5 m. from Newcastle. Pop. 7,500.

WEEVER (Trachinus). Genus of marine fish, of which two species occur around the British coasts. The greater weever (*T. traco*) is about a foot long, while the lesser weever (*T. vipera*) is just half as large. They are popularly known as Sting Bulls, from the numerous spines on the back, which are capable of inflicting a poisoned wound.

WEEVIL. Large family of small beetles (Rhynchophora), of which many species occur in Great Britain. The head is prolonged to form a snout or beak with the mouth at the extremity. They are vegetable feeders, and many of them in their larval stage are serious pests to the farmer and gardener. Examples are the corn weevil (*Calandra granaria*), the rice weevil (*C. oryzae*), the apple-blossom weevil (*Anthonomus pomorum*), and the cabbage-gall weevil (*Ceuthorrhynchus rapae*), and their popular names indicate the plants they attack. The Mexican boll weevil is highly destructive in the cotton belt of the U.S.A. See Beetle.

WEIGHTS AND MEASURES. Standards of magnitude, weight, and value. Early weights and measures were based upon natural measures of length, e.g. the cubit, the length from the elbow to the tip of the longest finger, and varied within very wide limits. In the 12th century in England a grain of wheat or barley was taken as a standard of weight.

All the weights and measures which have become slowly standardised through centuries suffer from having subdivisions or multiples which do not lend themselves to easy calculation, e.g. 12 ins. to a foot, 112 lb. in a hundredweight, etc. The introduction of the metric system (q.v.) has simplified calculations and connected linear, square, and cubic measures in a logical way.

In Great Britain the legal unit of length is the yard; of weight, the pound; and of volume, the gallon. From these all other divisions and multiples in use, e.g. the inch, ounce, pint, etc., are derived. Avoirdupois (q.v.) weight is used for ordinary commodities; troy weight for precious metals, and apothecaries' weight and liquid measure for drugs. The oz. and lb. of apothecaries' weight are

Saxe-Weimar-Eisenach. On the Ilm, 13 m. from Erfurt, it is a rly. junction and a centre of the publishing trade. It owes its fame to its connexion with Goethe, Schiller, Herder, and other great Germans. The church of SS. Peter and Paul contains the tombs of the ducal family and a fine altarpiece by Lucas Cranach. Goethe's house is now a museum dedicated to the poet. The Goethe-Schiller Archives building was opened in 1896. The town has a park laid out by Goethe and some picturesque old houses. Pop. 46,028.

Weimar. Goethe's house, now a Museum dedicated to the poet

WEISSMANN, AUGUST (1834-1914). German scientist. Born at Frankfurt-on-Main, Jan. 17, 1834, he became a doctor at Frankfurt, but abandoned practice for the study of zoology, and in 1871 was made professor of zoology at Freiburg. He remained there until 1912, and died in Berlin, Nov. 6, 1914. Weissmann accepted Darwin's teachings at once, and on them built up the theory that heredity is a question of the continuity of the germ-plasm, that external changes in the life of an individual cannot be transmitted to descendants. See Darwin, C.; Heredity.

WEISSBURG or **WISSEMBOURG.** Town of Lower Alsace (Bas-Rhin), France. It stands on the Lauter, 42 m. from Strasbourg. There is a beautiful 13th century church, once belonging to a Benedictine abbey founded in the 7th century. Weissenburg, which became a free city in 1305, is chiefly famous for its battles. Here, in Oct., 1793, the Prussians stormed the Weissenburg lines, defended by the French. On Aug. 4, 1870, the Germans, under the crown prince, gained their first victory in the war against France. Pop. 5,000.

WEISSHORN. Peak of the Pennine Alps, Switzerland. It rises to 14,804 ft., 5 m. N.W. of Zermatt. Other Alpine peaks of the same name are the Arosar W. (8,710 ft.), the W. (10,130) N. of the Flüela Pass, both in Grisons, and the W. (9,875 ft.) in the Bernese Alps S. of Lenk. See Alps, map.

WELBECK ABBEY. Seat of the duke of Portland, in Nottinghamshire. It is 4 m. S.W. of Worksop, and includes 25 acres of fruit and flower gardens and a park, once part of Sherwood Forest, about 10 m. in circumference. Built on the site of an abbey, founded in 1154, the house dates for the most part from the 17th century, but the Oxford wing was rebuilt after a fire in 1900. The underground rooms and tunnels, in all about 1½ m. long, were constructed in the time of the 5th duke of Portland, into whose family the estate passed in 1734. See Dukeries; Portland, Duke of.

WELCH, JAMES (1865-1917). British actor. Born at Liverpool, Nov. 6, 1865, he made his first appearance on the London stage in 1887. His success was established in a few years, and he was in the original cast of several of G. B. Shaw's plays. Welch developed as a comedian and made his greatest hit as Sir Guy de Vere in *When Knights Were Bold*, which he brought to London from Nottingham in 1906. With this play he toured the country, acting in it continuously until 1911 and frequently reviving it. He died April 11, 1917.

WELCH FUSILIERS, ROYAL. Regiment of the British army. It was raised in Wales in 1689, its number on the roll being the 23rd. The Fusiliers began their career of foreign

Welbeck Abbey, Nottinghamshire. Country seat of the Duke of Portland, built on the site of an ancient abbey
—By courtesy of Country Life, Ltd.

now obsolete, however, and are replaced by the avoirdupois oz. and lb. For jewels the carat is used, with varying local values. Length is measured by long measure, area by square measure, and capacity by cubic measure. Grain, etc., are measured by dry measure, and there are special measures for beer and wine. British weights and measures are governed under various Acts. The Weights and Measures Act, 1878, bases all legal measures on the standard yard and pound, the gallon being based in turn on the latter. Under the Act the divisions of the inch by the Birmingham gauge became standard after Nov. 1, 1914.

WEIHAIWEI. Port and territory in Shantung province, China. Leased to Great Britain by China in 1898, it comprised, besides the port and bay, the island of Liukung, all the islands in the bay, together with a belt of land 10 m. wide along the coastline of the bay. The total area was about 285 sq. m. In addition to the leased territory there was a sphere of influence of 1,500 sq. m. The bay was used as a naval base, depot, exercising ground and sanatorium for the China squadron. At the Washington Conference (q.v.) Great Britain offered to restore the territory, and Weihaiwei was eventually handed back to China in 1930. Pop. about 170,000.

WEIMAR. Town of Germany, since 1919 capital of the republic of Thuringia. Before then it was the capital of the grand duchy of

Weever. The larger species of the British fish, *Trachinus draco*

service in Flanders under William of Orange and Marlborough. They fought at Dettingen, Fontenoy, and Minden. After serving all through the war in America, they were compelled to surrender at Yorktown in 1782. After serving in the Crimea the Fusiliers went to India and fought at Lucknow, and later in the Ashanti, Burmese, and S. African wars. Apart from its regular battalions, the regiment had six territorial and twelve service battalions in the Great War. The name Welsh in its title was amended to read Welch in March, 1920. The regimental depot

Welch Fusiliers badge is at Wrexham. See Flash.

WELCH REGIMENT. Regiment of the British army. The first battalion of this, known as the "regiment of invalids" since 1719, became the 41st Foot in 1787. The second battalion became the 69th Foot in 1760, and in 1881 the two were united as the Welsh Regiment, a title borne by the 41st since 1831. One battalion was present at Waterloo, and took part in the Maratha war in 1817; the other saw active service in Burma, Afghanistan, and elsewhere, 1820-50. The Welsh were in the Crimea. The regiment had over twelve service and five territorial battalions, in addition to its regular battalions, in the Great War. In March, 1920, the spelling Welsh was amended to read Welch. The regimental depot is at Cardiff.

Welch Regiment badge

WELD, DYER'S WEED, OR DYER'S ROCKET (*Reseda luteola*). Annual or biennial herb of the order Resedaceae, a native of Europe, W. Asia, and N. Africa. It has an erect, smooth, branched stem, two or three feet in height, with slender lance-shaped leaves, and ends in a long, spike-like spray of yellow-green flowers. The fruit is a capsule, open before the black seeds are ripe. It was formerly used by dyers to obtain a yellow dye, which is the source of the artists' colour known as Dutch Pink.

WELDING. Property of uniting possessed by certain metals, when pressure is applied during the transition from the solid to the molten state. In ordinary practice the surfaces to be welded are cleaned and, by means of a smith's forge, an electric arc or oxy-acetylene flame, the metal is brought to a white heat, and then hammered to make a homogeneous joint. Fluxes are sprinkled on the joint.

WELL. Artificial boring made in order to obtain water from the earth. This method of getting water is a very ancient one, and there are many references to wells in the Bible and in other early literature. The waters of many wells were believed to possess miraculous properties; hence the many holy wells in various countries. Other wells were wishing wells, while others were believed to possess powers of other kinds. See Artesian Well; Irrigation; also illus. p. 134.

WELLAND. River of England. It rises in Northamptonshire and flows mainly N.E., forming the boundary between that county and Leicestershire and then Rutland. Near Crowland it enters Lincolnshire, and flows to the Wash. It is about 70 m. long.

WELLAND. Town of Ontario, Canada. It is on the Welland river and Welland Canal, 22 m. from Buffalo, and has stations on the C.P.R. and C.N. Rlys. Its industries are chiefly connected with the canal. Pop. 8,654.

WELLAND CANAL. Canadian waterway connecting lakes Erie and Ontario. It is named from the Welland river, and runs from

Port Dalhousie on Lake Ontario to Port Colborne on Lake Erie. It is 26½ m long, and before the alterations had 26 locks. After extensive alterations and improvements, to enable it to carry larger vessels, it was reopened in 1930.

WELLDON, JAMES EDWARD COWELL (b. 1851). British schoolmaster and divine. Born at Tonbridge, Kent, the son of a schoolmaster, he was educated at Eton and King's College, Cambridge. Having graduated as senior classic, he was fellow and tutor of King's before being appointed, in 1883, headmaster of Dulwich College. From 1885-98 he was headmaster of Harrow, and from 1898-1902 bishop of Calcutta. In 1902 Welldon was chosen canon of Westminster, in 1906 dean of Manchester, and in 1918 dean of Durham.

WELLESLEY, RICHARD COLLEY WELLESLEY or **WESLEY, MARQUESS** (1760-1842). British administrator. Born at Dangan Castle, co. Meath, June 20, 1760, he was a son of the earl of Mornington and elder brother of the duke of Wellington. He succeeded to his father's Irish title in 1781, and in 1784 was elected an English M.P. In 1797, having held minor offices under Pitt, he went out to India as governor-general, and there he remained until 1805. As a Tory politician and a marquess, created in 1799, Wellesley was foreign secretary 1809-12, and lord-lieutenant of Ireland 1821-28. He died without sons, Sept. 26, 1842.

Wellesley Province. Mainland portion of the British possession of Penang (q.v.).

WELLINGBOROUGH. Market town and urban dist. of Northamptonshire. It stands near the Nene, 10 m. from Northampton, on the L.M.S. Rly. The principal churches are All Hallows, Perpendicular, and S. Mary's, modern. The town is an important rly. centre in an agricultural area. The chief industries are the manufacture of boots and shoes and clothing. The school, dating from 1595, has accommodation for 350 boys. Market day, Wed. Pop. 20,365.

WELLINGTON. Market town and urban dist. of Shropshire. It is 10 m. from Shrewsbury, on the L.M.S. and G.W. Rlys. It is also on a canal leading to the Severn. The industries include the making of agricultural implements and malting. Market day, Thursday. Pop. 8,148.

WELLINGTON. Market town and urban dist. of Somerset. It stands near the river Tone, 7 m. S.W. of Taunton, on the G.W. Rly. S. John's church is a fine Perpendicular building. Woollens and bricks are made. On the Blackdowns there is a monument to the duke of Wellington. Market days, Tues. and Thurs. Pop. 7,221.

WELLINGTON. Town of New South Wales, Australia. A gold mining centre at the junction of the Bell and Macquarie rivers, it is 255 m. by rly. from Sydney. The surrounding area is a progressive farming and pastoral dist. Near are fine limestone caves. Pop. 4,400.

Marquess Wellesley, British administrator After Sir T. Lawrence

WELLINGTON. Capital of New Zealand, in N. Island. It stands on Cook Strait on the W. shore of Port Nicholson, being built on hills, on the slopes of which the houses rise in terraces. Government House, the Houses of Parliament, and other public buildings are notable. Victoria College is a constituent college of the university of New Zealand. The parks include Robertson and Keith Izard, and the municipality owns Williams Bay, a seaside resort near In 1931 a war memorial in the form of a carillon was erected here; it had been temporarily set up in Hyde Park, London. Freezing works, soap and candle factories, rope works, and woolen mills are some of the industrial establishments. Pop. 133,770.

WELLINGTON, DUKE OF Title borne by the Wellesley family since 1814. Arthur Wellesley was created duke of Wellington in 1814. On his death, in 1852, he was followed by his son Arthur, who, in 1863, succeeded to the earldom of Mornington. He died without issue, in 1884, and was succeeded in turn by his nephew Henry (d. 1900), and Arthur Charles (b. 1849), 4th duke. The eldest son bears the courtesy title of marquess of Douro. His seat is Strathfieldsaye, in Hampshire.

WELLINGTON, ARTHUR WELLESLEY, 1st DUKE OF (1769-1852). British soldier and politician. A younger son of the 1st earl of Mornington, an Irish peer, he was born, probably in Dublin, April 29 or May 1, 1769. Educated at Eton, Arthur went afterwards to a military school at Angers. In 1794 he saw active service in the Netherlands and in 1796 went to India, where his elder brother soon became governor-general. He was made commander-in-chief in Mysore, and in 1803 conducted with marked success a campaign against the Marathas, his greatest exploit being the victory at Assaye. From 1805, when he left India, to 1808 he was fighting in Hanover and Denmark, while he was also M.P. for Rye and secretary for Ireland. In 1808 he went to Portugal in command of a division. He won

Wellington, New Zealand. Colonnaded facade of the new Houses of Parliament on the hill slopes above the capital. The old building is seen on the left Courtesy of the New Zealand Government

the battle of Vimero, but was ordered back to England. In 1809 he returned to Portugal, this time in chief command, and until 1814 he conducted, with conspicuous success, the campaign against France. In 1814 Wellington was sent to Paris as ambassador, and he was at the congress of Vienna when the news of Napoleon's escape from Elba arrived. At once he took command of the British army and its allies, and won the battle of Waterloo. From 1815 to 1818 he was in France in command of the international army of occupation. During this time Wellington's popularity in France waned, and attempts were even made to assassinate him.

In 1818 the duke started his career as a Tory politician, as master-general of the ordnance under Lord Liverpool. In Jan., 1828.

he became prime minister. He was responsible for the emancipation of the Roman Catholics, but he would not assent to the proposed extension of the franchise, and in Nov., 1830, he resigned. In 1834-35 he was foreign secretary under Peel, and from 1841-46 he was in the Cabinet, minister without portfolio. He died at Walmer Castle, Sept. 14, 1852. He was buried in St. Paul's Cathedral.

1st Duke of Wellington, British soldier and politician
After J. Jackson, National Portrait Gallery

WELLINGTON COLLEGE. English public school. It was founded as a memorial to the duke of Wellington, public subscriptions being obtained to establish a school for the education of the sons of officers. A site was secured near Wokingham, and the buildings were opened in 1853. It consists of a college proper and four houses, altogether holding about 600 boys, ninety sons of officers being received on the foundation at reduced fees.

WELLS. City of Somerset. It lies encircled by the Mendips, 20 m. from Bristol, on the G.W. Rly. The magnificent cathedral dates mainly from the 12th and 13th centuries. The west front is adorned with some 350 sculptured figures, and there is some beautiful stained glass. Close by is the bishop's palace, surrounded by a moat. St. Cuthbert's church has a fine Perpendicular tower. Wells has a theological college for the Anglican ministry. The city owes its origin and name to some springs dedicated to St. Andrew. It was made the seat of a bishop about 900, and in 1139 the see was given the name of Bath and Wells. Pop. 4,372.

WELLS, HERBERT GEORGE (b. 1866). British novelist. He was born Sept. 21, 1866, at Bromley, Kent, son of Joseph Wells, a Kentish bricklayer. As a boy he was employed in the drapery trade at Windsor and Southsea and at the age of sixteen secured a mastership at Midhurst Grammar School. In 1888 he graduated in zoology at London University.

Wells revealed first a prophetic insight into the possible developments of scientific progress, as in *The Time Machine*, 1895, *The Invisible Man*, 1897, and *The War of the Worlds*, 1898. In *Love and Mr. Lewisbam*, 1900, *Kipps*, 1905, and *Mr. Polly*, 1910, he displayed equal genius in realistic analysis of the soul of the lower middle class. Later, he turned prophet and philosopher in *Tono-Bungay*, 1909, *Ann Veronica*, 1909,

Marriage, 1912, and *Secret Places of the Heart*, 1922, and likewise theologian in *The New Machiavelli*, 1911, *God the Invisible King*, 1917, and *The Undying Fire*, 1919. Socialism was one of his interests, and this was reflected in *Anticipations*, 1901, *Mankind in the Making*, 1903, *A Modern Utopia*, 1905, and *New Worlds for Old*, 1908. He produced a subtle record of war impressions at home in *Mr. Britling Sees it Through*, 1916, followed by *The Soul of a Bishop*, 1917, and *Joan and Peter*, 1918. In 1919-20 he published, in parts, his *Outline of History*. His later works include *Men Like Gods*, 1923, *Christina Alberta's Father*, 1925, *The World of William Clissold*, 1927, *Mr. Bletts' worthy on Rampole Island*, 1928, and *The Autocracy of Mr. Parham*, 1930.

WELLS, WILLIAM (b. 1889). British boxer, known as Bombardier Wells. Born in London Aug. 31, 1889, he enlisted in the army and went to India, where he won the All India championship. He won the heavyweight championship of England by defeating Iron Hague in six rounds at the National Sporting Club, London, April 24, 1911, but was twice knocked out by the French boxer, Georges Carpentier (q.v.), at Ghent and at the National Sporting Club in the same year. On

Bombardier Wells, British boxer

Wells, Somerset. West front of the cathedral, one of the best examples of Early English ecclesiastical architecture. It is ornamented with over 300 statues
Frith

Feb. 27, 1919, he lost the English heavyweight championship to Joseph Beckett.

WELSH, FREDERICK (1886-1927). British boxer. Born at Pontypridd, Wales, March 5, 1886, he won the English lightweight championship in 1909 by defeating Johnny Summers. Beaten by Matt Wells in 1911, he regained the title from him the following year. He beat Hughie Mehegan for the championship of the British Empire at the National Sporting Club, London, Dec. 16, 1912; and won the lightweight championship of the world by defeating Willie Ritebie at Olympia, London, July 7, 1914. He lost it to Benny Leonard, U.S.A., in 1917. He died July 28, 1927.

WELSH GUARDS. Regiment of the British army. It was raised during the Great War, in Feb., 1915. With a nucleus from the Grenadier Guards, a battalion was quickly formed, and in the following Sept. it fought at Loos, entered

Welsh Guards badge

the ruins of that town, and later held the Hohenzollern redoubt. In the winter of 1915-16 it was stationed in the Ypres sector, and fought in the battle of the Somme, 1916. In 1918 it took part in the critical battles of March-April, and in the final Allied victories in the autumn.

WELSH HARP. Harp having three rows of strings. The two exterior rows were tuned in unison diatonically, and there was an inner row to supply the extra sounds necessary to complete the chromatic scale. It was unique in that the strings were on the right hand of the comb, for which reason it was held on the left shoulder, the left hand playing the treble and the right hand playing the bass strings.

WELSH HARP. Name of two inns, The Old Welsh Harp and The New (or Upper) Welsh Harp. Places of popular resort, they are in the Edgware Road, in a fork of the Brent Reservoir, now known as the Welsh Harp, W. of Golder's Green and Hendon.

WELSHPOOL. Borough and market town of Montgomeryshire, Wales. It is 15 m. S. of Oswestry, on the Severn and Montgomery canal, and has a station on the G.W. Rly. The Gothic church of St. Mary was restored in 1871. Other buildings include the town hall and the Powysland Museum of antiquities. There is trade in agricultural produce, also some tanning. Market day, Mon. Pop. 5,682. See Powis.

WELSH POPPY (*Meconopsis cambrica*). Perennial herb of the order Papaveraceae. A native of W. Europe, it has a stout root-stock, branching to form a tuft. The long, pale-green leaves are cut in from the sides into lance-shaped segments. The large, four-petaled, long-stalked flowers are pale yellow, and the fruit is a capsule.

Welsh Poppy. Pale yellow flower and leaves

WELSH RABBIT. Savoury made of cheese. The cheese is grated, melted with butter and a little milk, seasoned, and spread on buttered toast. It should then be toasted. The word was originally rarebit, but it has become popularised as rabbit.

WELWYN. Market town of Hertfordshire. It is in the valley of the Maran or Mimram, a tributary of the Lea, on the L.N.E. Rly., 22 m. from London. Edward Young, author of *Night Thoughts*, was rector 1730-65, and is buried in the parish church. Market day, Thurs. Pop. 1,762.

Between Welwyn and Hatfield is Welwyn Garden City, planned in 1920. It has become a centre of the film industry, and large studios have been built. Urban powers were obtained in 1927. Pop. 6,000. Pron. Wellin.

WEM. Market town and urban dist. of Shropshire. It is 11 m. from Shrewsbury, on the L.M.S. Rly. It has cattle markets and other trade in the produce of the surrounding dist., while flour milling and tanning are carried on. The church of SS. Peter and Paul has a Norman tower. Near is Hawkstone Hall. Market day, Thurs. Pop. 2,172.

WEMBLEY. Urban dist. of Middlesex. Situated 3 m. E. of Harrow and 8 m. N.W. of London, it is served by the L.M.S. and Bakerloo Rlys. Wembley Hill has a station on the L.N.E. Rly. The parish church of St. John was designed by Sir Gilbert Scott. In the neighbourhood is Wembley Park, on the Met. Rly., purchased for development as a pleasure ground. The neighbourhood has been developed as a residential suburb of London. The British Empire Exhibition was held in grounds at Wembley, 1924 and 1925. Since

H. G. Wells, British novelist
Russell

1923 the final of the Association Cup has been played in the stadium. In 1926 the site and buildings were sold. Pop. 28,600.

WEMYSS. Name of two localities in Fifeshire, Scotland. West Wemyss stands on the Firth of Forth, 2 m. from Dysart. It has a station on the L.N.E. Rly and a good harbour from which coal is exported. In the neighbourhood is Wemyss Castle. Pop. 2,660. East Wemyss is 1 m. from Buckhaven, also on the L.N.E. Rly. Wemyss Bay is a watering place of Renfrewshire. It is 31 m. from Glasgow, on the L.M.S. Rly. Near is Castle Wemyss, the seat of Lord Inverclyde (q.v.).

The earl of Wemyss is a Scottish title held by the Charteris family since 1633, except during a period of attainder. The heir bears the courtesy title of Lord Elcho. Pron. Weems.

Wemyss, Fifeshire. The ancient castle associated with many events of Scottish history

WEN. Popular name for a sebaceous cyst or tumour containing a greasy material, which tends to grow most frequently on the scalp in adults and old persons. A wen is not dangerous and no harm results if it is left alone, but it can be excised by a simple operation.

WENCESLAUS, VENCESLAS, OR VÁCLAV (d. 935). Bohemian saint and prince. Converted to Christianity, he received the tonsure in the church at Levy Hradec, founded 871. Renowned for his piety, Wenceslaus founded many churches in Prague and elsewhere in the principality. He was assassinated by his ambitious brother, Boleslav, on Sept. 28, 935, at Stará Boreslav. In 939 his body was removed to the church of S. Vitus in Prague. He was later canonised, and, being regarded as the patron saint of Bohemia, the anniversary of his death is still a festival.

WENCESLAUS (1361-1419). German king. Son of the emperor Charles IV, he was born Feb. 26, 1361. His father was also king of Bohemia, and made him king of that country before he was three years old. Wenceslaus was chosen German king in 1376, and two years later, when Charles died, he became the ruler of Germany and Bohemia. His indifference to serious public business caused an outcry from his neglected subjects, and in 1400 four of the German electors declared him deposed. He recovered his throne in 1404, and remained king until his death at Prague, Aug. 16, 1419.

WENDOVER. Town of Buckinghamshire. Picturesquely situated among the Chiltern Hills, it is 5 m. S.E. of Aylesbury, on the L.N.E. Rly. The 14th century parish church of S. Mary contains interesting monuments. Among former M.P.s was John Hampden. Near is Chequers (q.v.). Pop. 2,366.

WENLOCK. Borough of Shropshire. It stands on the Severn, 14 m. from Shrewsbury, on the G.W. Rly. The borough includes the market towns of Much Wenlock and Madeley and the parish of Broseley. The guildhall is a fine half-timbered structure. There is an agricultural trade. The barony of Wenlock has been held by the family of Lawley since 1839. Pop. 13,712.

In geology the Wenlock Series is the middle division of the Silurian rocks of Great Britain. The rocks, typically developed in the W. of

England, consist of limestones and shales, and are important sources of lime and flagstones. See Silurian.

WENSUM. River of Norfolk. It rises not far from Tattersett, in the N. of the co., and joins the Yare below Norwich, through which city it flows. Its course is mainly S.E., and its length is 30 m.

WENTLETRAP (Ger. wendeltreppe, winding stairs). Popular name for marine snails of the large genus *Scalaria*, of which five species are found on the British coasts. The molluscs are cylindrical with a short squarish foot, the head with a retractile proboscis and slender tentacles, at the bases of which are the small eyes. When molested they pour out a purple fluid from the mouth. They feed upon seaweeds, and are found chiefly in the warmer seas. See Mollusc; Snail.

WENTWORTH. Name of a famous English family, whose most distinguished member was the earl of Strafford (q.v.). Its founder was William Wentworth (d. 1308), of Wentworth Woodhouse, Yorkshire. One of his descendants, Thomas (d. 1551), was made a baron in 1529. Thomas, the 4th baron, was made earl of Cleveland in 1626, but on his death in 1667 the earldom became extinct.

After Cleveland's death the barony of Wentworth passed from one female to another. One of these was Anne, the wife of Lord Byron Byron's daughter, who became countess of Lovelace, inherited the title, and from her death until 1906 it was held by the earls of Lovelace. In 1906, on the death of the 2nd earl, the barony, separated from the earldom, passed to his daughter. She died in 1917, when Anne, daughter of the 1st earl and wife of Wilfred S. Blunt, became baroness; dying later in the year, she left the title to her daughter Judith, the wife of N. S. Lytton.

WENTWORTH WOODHOUSE. Country mansion of Earl Fitzwilliam, in the W. Riding of Yorkshire. Situated in the parish of Wentworth, 3½ m. N.W. of Parkgate station on the L.M.S. Rly., the mansion is in the Classic style, and stands in an extensive deer park. The building was designed by Flitcroft for the 1st marquess of Rockingham, and was erected on the site of an older house which once belonged to the Straffords. See Strafford, Earl of.

WEOBLEY. Parish of Herefordshire. It is 8 m. S.W. of Leominster and 3 m. from the Moorhampton station of the L.M.S. There are many half-timbered houses. The parish church of SS. Peter and Paul is partly Norman. Pop. 625.

WEPENER. Town of the Orange Free State. Close to the border of Basutoland, it is 80 m. by rail from Bloemfontein. In 1900 it was defended against the Boers. Pop. 1,366.

WEREWOLF (A.-S. werewolf, manwolf). Person supposed to have the power of transforming himself into a wolf, and as such of preying on human beings. Virgil describes a werewolf in Eclogue 8. The belief is very widespread. See Lycanthropy.

WERGILD (A.-S. wer, man; gild, payment). In Anglo-Saxon law a fine inflicted as a penalty for murder or maiming. The amount, which had to be paid to the next-of-kin or gild brethren, in case of death, varied according to status, ranging from 7,200 shillings in the case of a king to 200 shillings in the case of a ceorl. The wergild of a thane (q.v.) was six times that of a ceorl.

WERNHER, SIR JULIUS CHARLES (1850-1912). Anglo-Jewish financier. Born at Darmstadt, he spent some time as a clerk in London, served in the Franco-Prussian War, and later went to South Africa, where he became associated with Alfred Beit in the diamond business. In 1884 Wernher settled in London as resident partner of the firm afterwards known as Wernher, Beit & Co. He was associated with Rhodes in the management of the De Beers mines. Having been naturalised as a British subject, he was made a baronet in 1905. He died May 21, 1912.

WESER. River of Germany. The Fulda and Werra unite at Münden, Hanover, and the joint stream, the Weser, flows tortuously for about 300 m. N., to enter the North Sea by a large estuary. The lower course is canalised. The tributaries include the Aller and Hunte.

Charles Wesley
English poet

WESLEY, CHARLES (1707-88). English poet. A younger brother of John Wesley, he was educated at Westminster School and Christ Church, Oxford. At Oxford he gathered round him a few undergraduates who were the first Methodists. Ordained in 1735, in 1735-36 he was in Georgia, serving Oglethorpe as secretary. Soon after his return to England, Wesley began to preach in various parts of the country, but, like his brother, he remained in the Church of England. He is better known, however, for his hymns, of which he wrote over a thousand, including *Jesu, Lover of my Soul*. He died in London, March 29, 1788.

WESLEY, JOHN (1703-1791). Founder of Methodism. He was born at Epworth Rectory, June 17 (O.S.), 1703, fifteenth of the Rev. Samuel Wesley's nineteen children. In 1714 John entered Charterhouse School, in 1720 he was elected scholar at Christ Church,

Wentworth Woodhouse.

East front of the Yorkshire mansion, built for the 1st Marquess of Rockingham

Oxford, and in 1726 fellow of Lincoln College. In 1725 he decided to take orders, and was ordained deacon in 1725 and priest in 1728. For some time he was his father's curate in Lincolnshire, but he was called back to Oxford to serve as tutor, and Lincoln College was his home till 1735. His brother Charles had gathered round him at Christ Church a little society of earnest students, and when John came into residence he was recognized as the father of the Holy Club, or the Methodists, as they were called. In 1735 John and Charles went to Georgia, returning in 1737.

In 1739 John began to preach in the open air at Bristol. His converts were gathered into societies, and the work grew rapidly in London and Bristol. In 1742 Wesley found his way to Yorkshire and Newcastle-upon-Tyne, and his teaching took root everywhere. He generally travelled about 5,000 miles a year, and his itinerancy only ceased with his death. He is said to have delivered more than 40,000 sermons. He had a genius for organization and was quick to avail

John Wesley,
Founder of Methodism
After W. Hamilton
Nat. Port. Gall.

himself on every suggestion which might strengthen Methodism. Wesley preached his last sermon at Leatherhead on February 23, 1791, and died in his own house in City Road, London, March 2 of that year. See Epworth: Methodism; Whitefield, G.: consult also Life J. Tellord. 1906.

WESLEY SAMUEL SEBASTIAN (1810-76). British organist and composer. Son of Samuel Wesley (1766-1837), he was born in London, August 14, 1810.

Samuel S. Wesley
British organist

He acted as organist in several London churches, 1825-32, and became organist at Hereford cathedral in 1832. Later he was organist at Exeter cathedral, Leeds parish church, Winchester cathedral and Gloucester cathedral. His compositions include five church services, various anthems, glees, and organ pieces. He died at Gloucester, April 19, 1876.

WESLEYAN METHODIST CHURCH. Official title of the church founded by John Wesley in 1739. The original name was "the people called Methodists," and when other branches of Methodism arose it came to be distinguished as Wesleyan Methodism. In 1891 the conference expressed approval of the use of the term Wesleyan Methodist Church.

The church really came into existence on Wesley's death. In 1783 he had drawn up a deed of declaration, in which 100 ministers were named as a governing body, and this deed, which was enrolled in the court of chancery, was then put into operation, and is still the foundation of the church.

The conference which directs the affairs of the church—the first met in 1744—long consisted of ministers only. They made decisions, which were confirmed by the legal hundred, and so became binding. In 1878, however, laymen were introduced, and the conference now consists of two sessions, a pastoral, in which the ministers discuss affairs pertaining to that branch of the work, and a representative, in which both ministers and laymen discuss more general matters—financial and the like. Each year a minister is elected president. Following out Wesley's ideas, the chapels are grouped into circuits, each with a superintendent and stewards, and the circuits into districts. Ministers are appointed by conference to the various circuits, remaining, save in exceptional cases, only three years.

Wesleyan Methodism made rapid progress after its founder's death. Its General Missionary Society was formed in 1817. An institution for training ministers was established at Hoxton in 1834. This was afterwards closed, but provision for the training of ministers was made by opening colleges at Didsbury (1842), Richmond (1843), Handsworth (1868), and Headingley (1881). In 1921 one was founded at Cambridge.

About 1885 the church began a forward movement. Halls were obtained in populous centres and services of a bright type held. Many of these missions, e.g. in Manchester and Birmingham, became centres for social work of every kind. In 1898 a 20th century fund was opened, and by it a million guineas, the sum aimed at, was raised. The Royal Aquarium was bought, and on the site new buildings, known as the Central Hall, were erected.

In 1928 the Wesleyan conference of Great Britain voted in favour of union with the other Methodist churches and in favour of opening the ministry to women. The suggested union was soon also approved by the other bodies concerned, and in 1931 the work of amalgamation was in progress. In 1930 the Wesleyan Methodists in Great Britain and

Ireland numbered 499,014 members, with 8,648 chapels, 2,562 ministers, and 15,870 lay preachers. Wesley's Chapel, City Road, London, E.C., is the chief church.

The Wesleyan Reform Union is a smaller Wesleyan church. It dates from 1849 and its adherents are chiefly in the Midlands. The headquarters are in Sheffield. It has 11,104 members and 227 chapels. See Methodism.

WESSEX. Kingdom of the West Saxons. It covered the country between the Thames valley and the S coast, except the kingdoms of Kent and Sussex. About A.D. 560 Ceawlin carried his arms as far as the Bristol Channel, and by the victory of Deorham in 577 severed the Britons on the S.W. from the Britons in Wales. Egbert became king of Wessex in 802, and was recognized as Bretwalda, high king or overlord of the other English kings, in 829.

By 870 the Danes, or Northmen, had practically mastered the northern kingdoms and East Anglia, and then began the struggle for Wessex, in which Alfred the Great proved victorious. At his death the king of Wessex was de facto lord of England on the W. and S. of a line drawn roughly from Chester to London, with a vague sovereignty over the rest of the country, called the Danelagh. Alfred's son, Edward the Elder, made the king of Wessex de facto king of England. The use of the word was revived by Thomas Hardy. See England: Hardy, Thomas.

Wesley's Chapel, London, and the statue of John Wesley, by J. A. Acton, erected in 1891

WEST, BENJAMIN (1738-1820). Anglo-American painter. Born at Springfield, Pennsylvania, of Quaker parentage, Oct. 10, 1738, he practised portrait painting in America, and after three years in Italy, settled in England in 1763. In 1772 he was appointed historical painter to George III. One of the four artists selected to draw up the scheme of the Royal Academy in 1768, he succeeded Reynolds as president in 1792. His Death of Wolfe did much to establish the realistic treatment of historical episodes. He died in London, March 11, 1820. See illus. p. 1062.

WEST AFRICA, BRITISH. Term applied to the British possessions in West Africa, viz. Gambia, Sierra Leone, Gold Coast, and Nigeria, as well as to the parts of Togoland and Cameroons under British mandate. French West Africa consists of Senegal, French Guinea, the Ivory Coast, Dahomé, French Sudan, Upper Volta, Mauritania, and the Niger Colony, the whole under a governor-general. Portuguese West Africa is more usually called Angola. See Africa. Angola.

WESTBOURNE PARK. Dist. of W. London. Part of the bor. of Paddington, it gives its name to a station on the G.W.R., and, with Westbourne Grove, is named after the stream which, rising N. of Paddington, flowed by Bayswater, the E. end of the Serpentine, through Belgravia to the Thames at Chelsea.

WEST BRIDGFORD. Urban dist. of Nottinghamshire. It stands on the S. side of

the Trent and is a residential suburb of Nottingham, with which it is connected by Trent Bridge, from which tramways lead to the centre of the city. Pop. 17,000. East Bridgeford is a village 7 m. farther down the Trent.

WEST BROMWICH. Co. bor. and market town of Staffordshire. Situated 6 m. N.W. of Birmingham, with a station on the G.W. Rly., it is the centre of a busy mining and manufacturing district, and is well served by rlys. and canals. The parish church of All Saints was rebuilt in 1872. Other buildings are the town hall, 1874-75, with a clock tower 130 ft. high; the Institute; and the 16th century half-timbered Oak House. The principal trade is in hardware, in connexion with which there are smelting furnaces and foundries. Market day, Sat. Pop. 73,761.

West Bromwich Albion is a famous professional football club. Founded in 1879 under the name of West Bromwich Strollers, they originally played in Dartmouth Park, their present ground being the Hawthorns in Birmingham Road, West Bromwich. In 1920 they won the first division championship, and in 1888 and 1892 they won the Association Cup.

WESTBURY. Urban dist. of Wiltshire. It stands on the Biss, about 12 m. S.E. of Bath, and is a junction on the G.W. Rly. The chief building is the fine Perpendicular church of All Saints. Westbury is supposed to have been a residence of the kings of Wessex, the site of their palace being still shown. There are manufactures of cloth and gloves. Pop. 3,712.

WESTBURY, RICHARD BETHELL, 1st BARON (1800-73). British lawyer. Born at Bradford-on-Avon, June 30, 1800, and educated at Bristol and Wadham College, Oxford, he was called to the bar in 1823. In 1851 Bethell entered the House of Commons as M.P. for Aylesbury, and in 1852 he was made solicitor-general in the Liberal ministry. Having been attorney-general, 1856-58 and 1859-61; he became lord chancellor in 1861, and was made a baron. He died July 20, 1873. The title is still held by a descendant.

WESTCLIFF. Watering place of Essex, between Southend-on-Sea and Leigh. It has a station on the L.M.S. Rly., and is part of the borough of Southend (q.v.).

WESTCOTT, BROOKE FOSS (1825-1901). British divine. Born near Birmingham, Jan. 12, 1825, he was educated at King Edward's School there and at Trinity College, Cambridge, of which he became a fellow. Ordained in 1849, he was a master at Harrow from 1852 to 1869, when he was appointed canon of Peterborough. In 1870 Westcott became professor of divinity at Cambridge, in 1883 canon of Westminster, and in 1890 bishop of Durham. He died July 27, 1901. Westcott was one of the greatest Biblical scholars of his time, and, in addition, was also very successful as a bishop.

B. F. Westcott,
British prelate
Elliot & Fry

WEST DRAYTON. Parish of Middlesex. It is 2½ m. S. of Uxbridge, and is the junction for Uxbridge and Staines on the main line of the G.W.R., 13½ m. from London. Pop. 2,060.

WESTERHAM. Village of Kent. It is 5 m. W. of Sevenoaks, on the Southern Rly. The Perpendicular church of S. Mary contains interesting monuments. Below the church is Quebec House, where James Wolfe (q.v.), who was born at the vicarage, spent his early years. On Westerham Green is a statue to the famous soldier. Near is Westerham Hill, the highest ground in Kent. Pop. 3,162.

WESTERN AUSTRALIA. State of the Australian Commonwealth, comprising the W. portion of the island. Except for a narrow

coastal margin, the state is a plateau, with desert in the middle. Perth is the capital and the seat of the state university. The area is estimated at 975,920 sq. m. Pop. 412,092.

Gold mining, which dates from 1886, has declined. The chief fields include Pilbara, Ashburton, and Kalgoorlie. The forests produce excellent hardwoods, notably karri and jarrah, as well as sandalwood. Sheep and cattle rearing are important, and dairy and fruit farming are growing industries. Wheat is the chief crop. The pearl shell fishery has its headquarters at Shark Bay. Rly. mileage exceeds 4,500. The governor is assisted by a cabinet of responsible ministers. The legislative council consists of 30 members and the legislative assembly of 50. In 1930 there was a movement in favour of seceding from the Commonwealth. See Australia.

WESTER-WEMYSS, ROSSLYN ERSKINE WEMYSS, 1st BARON (b. 1864). British sailor. He was born April 12, 1864, and entered the navy in 1877. He was commander of the Ophir, in which King George and Queen Mary visited the Dominions in 1901; commodore R.N. barracks, 1911-12; and commander of the second battle squadron, 1912-13. In the Great War he commanded the squadron at the landing in Gallipoli, April, 1915, and at the evacuation, and in 1916-17 was commander-in-chief East Indies and Egypt. He was first sea lord, 1917-19, and in 1919 was raised to the peerage. Pron. Wester-Weems.

1st Baron Wester-Wemyss, British sailor Russell

in-chief East Indies and Egypt. He was first sea lord, 1917-19, and in 1919 was raised to the peerage. Pron. Wester-Weems.

WESTGATE-ON-SEA. Watering place of Kent. It is 2 m. W. of Margate, on the Southern Rly. It is built on the two sides of a promontory and is noted for its braising air. Promenades have been built on each side of the town. Pop. 5,096.

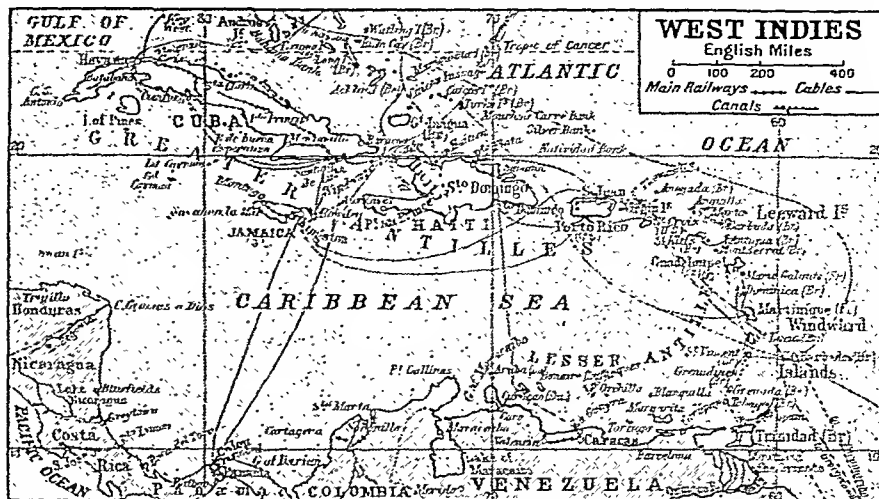

WEST HAM. Co. borough of Essex, part of Greater London. Extending to the Thames with the Lea for its E. boundary, it includes Stratford, Forest Gate, Plaistow, and Canning Town. It is inhabited largely by employees in the shops of the L.N.E. Rly. at Stratford, at the docks, and in soap, sugar, and other manufacturing establishments. West Ham Park covers 80 acres. Pop. 306,900.

West Ham United is a famous Association football club. It was founded in 1895, and in 1923 reached the final of the Association Cup. The ground is situated at Upton Park, East Ham.

WESTHOUGHTON. Urban dist. of Lancashire. Lying 5 m. E. of Wigan, it has a station on the L.M.S. Rly. There are silk and cotton factories, a trade in agricultural produce, and collieries. Pop. 17,240.

WEST INDIES. Archipelago between N. and S. America. It separates the Atlantic Ocean from the Caribbean Sea and the Gulf of Mexico, and is divided into the Greater and the Lesser Antilles (q.v.).

The British West Indies comprise the

West Indies. Map of the American archipelago which separates the Atlantic Ocean from the Caribbean Sea

Bahamas, Barbados, Jamaica, Leeward Islands, Trinidad, Tobago, and the Windward Islands. Martinique, Guadeloupe, S. Pierre and Miquelon are French, Curaçao is Dutch. Margarita belongs to Venezuela. Cuba is an independent state. Porto Rico was annexed by the U.S.A. in 1898; Santo Domingo and Haiti are under American military or financial supervision, and the Virgin Islands were purchased by the U.S.A. in 1917. Details concerning the several islands will be found in articles under their names.

WESTINGHOUSE, GEORGE (1846-1914). American engineer and inventor. Born Oct. 6, 1846, at Central Bridge, New York, he entered his father's machine manufacturing business. In 1864 he became assistant engineer in the U.S. navy, and after graduating at Union College, Schenectady, turned his attention to inventing railway appliances. He also invented a number of improvements in the system of signalling. In 1868 he brought out the air brake known by his name. He inaugurated the use on a large scale of the alternating current for lighting and power, and the transmission of electric power current over long distances. Westinghouse died March 12, 1914.

WEST KENT REGIMENT. Regiment of the British army. It was officially known as The Royal West Kent Regiment (Queen's Own) until April, 1921, when the title was changed to The Queen's Own Royal West Kent Regiment. First raised in 1756, the regiment

participated in the siege of Copenhagen in 1807, and was in Portugal the following year. They distinguished themselves fighting against the Sikhs, especially at Sobraon. The West Kents in the Crimea fought at the Alma and at Inkerman, and led the assault on the Redan. Later they assisted in putting down the Mutiny in India. They went to the relief of Gordon, were on the Indian frontier in 1897-98, and then in South Africa. The first battalion is the old 50th Foot and the 2nd battalion the 97th. In the Great War about 40,000 officers and men served. The 2nd battalion was in Mesopotamia in 1915, gaining distinction at Nasiriyeh. The regimental depot is at Maidstone.

West Kent Regiment badge

WEST KIRBY. Watering place of Cheshire. It stands on the estuary of the Dee, in the Wirral peninsula, 8 m. from Birkenhead, on the L.M.S. Rly. There is a large marine lake. With Hoylake it forms an urban dist. Pop. dist., 19,000.

WESTMACOTT, SIR RICHARD (1775-1856). British sculptor. Born in London, he studied in Rome, under Canova, returning to London in 1797. He became A.R.A. in 1805, R.A. in 1811, and was knighted in 1837. The reliefs on the Marble Arch, London, are his work, and he executed the colossal Achilles in Hyde Park. He died in London, Sept. 1, 1856.

WESTMEATH. County of Leinster, Irish Free State. With an area of 709 sq. m., it is wholly inland. It lies chiefly in the basin of the Shannon, which river, with Lough Ree, forms its W. boundary. Other rivers are the Brosna and Dale. Among the many lakes are Derravaragh, Owel, Lene, Ennell, and Gloire. The surface is varied between hill and valley, and is in parts boggy. The pasturing of sheep, cows, horses, and other animals forms the chief industry. The county is served by the G.S. Rlys., and by the Royal and Grand Canals. Mullingar is the county town; others are Athlone, Castlepollard, and Moate. Pop. 56,818. The title of earl of Westmeath has been held by the Nugent family since 1621.

WESTMINSTER. City and met. bor. of the county of London. The name, West Minster, first occurs in a charter of 875, endowing the already established monastery, which was on Thornéa, an island formed by two outlets of the Tyburn and a cross-ditch, the E. boundary being the Thames. The establishment of a royal palace at Westminster in the reign of Canute, or possibly earlier, contributed, with Edward the Confessor's new church and monastery, to the early growth of

Westmeath, Irish Free State. Map of the pastoral inland county of Leinster

Westminster Bridge and Houses of Parliament, with Big Ben on the right from the London County Hall

the town. The first church of S. Margaret was built about 1100, to be followed by larger buildings. A court of justice was established at Westminster, and this continued after the king had moved his residence elsewhere.

Before the dissolution of the monastery Westminster was governed by the abbot as lord of the manor. In 1547 the city and liberty of Westminster was created a borough to return two members to Parliament. The city has adopted Gavrelle. Pop 141,578

Westminster Bridge crosses the Thames from the Houses of Parliament to S. Thomas's hospital. Replacing a stone structure of 1739-50, it was designed by T. Page and built 1856-62. Its total length is 1,160 ft.; width, 85 ft. It consists of seven iron arches on granite piers.

Westminster Cathedral is the seat of the R.C. archbishop of Westminster. It stands near Victoria Street, a building of red brick in early Christian Byzantine style, with a domed campanile, 283 ft. in height, designed by John Francis Bentley (1839-1902). Its foundation stone was laid June 29, 1895, and it was consecrated in 1910.

Westminster Cathedral. West front and campanile of the principal Roman Catholic church in England

Westminster Hall is the most notable remaining part of the old palace of Westminster. The original structure was completed in 1097 for William Rufus. In 1394-99 Richard II raised the walls, provided the oaken hammer-beam roof, and added the N. porch and towers. Notable discoveries of Norman stonework were made during the repairs to the roof begun in 1914. From a date slightly later than 1225 until 1882 the chief English courts were held, first in the hall, and then in buildings erected for the purpose on the W. side. Here Richard II was deposed, Charles I condemned, Oliver Cromwell in-

stalled lord protector, and here, among others, Sir William Wallace, Sir Thomas More, Anno Boleyn, Strafford, the Seven Bishops, and Warren Hastings stood their trial. The hall is 290 ft. long, 68 ft. wide, and 92 ft. high. South of the members' entrance on the E. side entry is gained to the cloisters and to S. Stephen's Crypt.

Westminster hospital was established in 1719, was moved to its present site, adjoining the Middlesex Guildhall, in 1834, and was enlarged in 1900-1. There is a medical school.

WESTMINSTER, DUKE of British title held by the family of Grosvenor (q.v.)

Sir Richard Grosvenor (1731-1802) was made Earl Grosvenor in 1784, and his son, the 2nd earl, who held political office under Pitt, was made marquess of Westminster in 1831. The 2nd marquess was also a minor politician, and the 3rd, Hugh Lupus Grosvenor (1825-99), was made a duke in 1874. When he died his grandson, Hugh (b. 1879), became the 2nd duke. The duke owes his great wealth to the London property acquired in 1676 by Sir Thomas Grosvenor, Bart., by his marriage with the daughter of a certain Alexander Davies. His chief residence is Eaton Hall (q.v.), near Chester, and Earl Grosvenor is the courtesy title of his eldest son.

WESTMINSTER ABBEY. Officially, the Collegiate Church of S. Peter in Westmin-

ster. The first church of which record exists stood in the 8th century to the W. of the present structure, and was dedicated to S. Peter. It was rebuilt in Norman style, 1050-65, by Edward the Confessor; of this structure a few fragments exist in the Chapel of the Pyx and the Undercroft beneath the Islip Chapel. Henry III added a Lady Chapel, rebuilt by Henry VII, and began a reconstruction that continued until the time of Wren and Hawksmoor, who repaired and raised the W. towers, 1713-40. The design of the N. transept was remodelled in 1890. In 1921 an extensive restoration of the decaying stonework was inaugurated, and several interesting discoveries were made during the evacuations. In 1927 an anonymous donor offered to build a sacristy for the Abbey, but the offer was eventually withdrawn.

The work of five centuries, Westminster Abbey displays several styles; apart from the Perpendicular glories of

Henry VII's chapel, it is claimed as one of the best examples of Early English architecture in existence. It has been the burial place of many sovereigns and other illustrious dead and the scene of the coronations of kings and queens since Harold. In the chapter house the House of Commons met from about 1299-1547. There are, in addition to Henry VII's, 11 chapels. The E. angle of the S. transept has been known as Poets' Corner since about 1766. The abbey was lighted by electricity in 1913. See Belfry; Fan Tracery; Font; London; also illus. pp. 1352, 1425.

Westminster Hall, showing the magnificent hammer-beam roof

WESTMINSTER ASSEMBLY. Body of lay and clerical members appointed by the English Long Parliament in 1643 to decide upon the form of Church government and the doctrine to be adopted in England and Scotland. The assembly held its first session on July 1, 1643, and sat until Feb. 22, 1649. The result of the deliberations of the assembly was to supersede the Prayer Book by the Directory of Public Worship, to formulate a Presbyterian system of Church government, and to draw up the Westminster Confession.

WESTMINSTER SCHOOL. English public school. Originating in a school attached to Westminster Abbey, whence its name of S. Peter's College, Westminster, it was refounded in 1560 by Elizabeth, and is built

Westminster Abbey. West front of England's noblest shrine. At the foot of the S. tower, right, is the 14th century Jerusalem Chamber, now the chapter room

Westminster Abbey. Ground plan showing position of the chapels and other ecclesiastical buildings. See page 1424

around Little Dean's Yard. The scholars were accommodated in the old granary of the abbey, and their dining hall, or College Hall, was the refectory of the abbot. The great school room was once the monks' dormitory. Boys who gain scholarships are known as King's Scholars. Most of these live in college. There is a memorial window in the Great School to the 220 Old Westminsters who fell in the Great War.

The schoolboys enjoy privileges in connexion with the Abbey and the Houses of Parliament. Notable customs are the tossing of the pancake on Shrove Tuesday and the performance of a Latin play at Christmas, the epilogue and prologue of which are topical.

WESTMORLAND. Northern county of England. With an area of 789 sq. m., it is inland save for a strip of coast at the mouth of the Kent on Morecambe Bay, and is almost wholly mountainous, with several heights over 2,000 ft., among them one, Helvellyn, over 3,000 ft. The W. portion forms part of the Lake District. The chief rivers are the Eden, Lowther, Kent, and Lune, and the lakes include Grasmere, Hawes Water, Rydal Water, and parts of Ullswater and Windermere. In the valleys the soil is fertile, but much of the land is only suitable for sheep. Marble, graphite, lead, and slate are worked. The L.M.S. and L.N.E. Rlys. serve the county. Appleby is the county town. Pop. 65,746. See Lake District.

The title of earl of Westmorland has been held by the families of Neville and Fane. The first grant of the title, 1397, was to Ralph (1364-1425), 4th Baron Neville of Raby. In 1624 it was granted to Sir Francis Fane. The eldest son bears the courtesy title of Lord Burghersh.

WESTON. Village of Somerset. Situated on the Avon, 2 m. N.W. of Bath, it has a station on the L.M.S. Rly. It was the scene of a battle which took place in the Civil War, 1643. Pop. 1,549.

Another Weston is a village in Shropshire, situated 5 m. from Shifnal. The hall here is the seat of the earl of Bradford.

WESTON, DAME AGNES E. (1840-1918). British philanthropist, known as the Sailors' Friend. She was born in London, but removed to Bath, and in 1868 began her philanthropic work, visiting hospitals, etc. Later she started a series of monthly letters to seamen, the Bluebacks. Active superintendent of the Royal Naval Temperance Society, in 1876, with Miss Wintz she opened a Sailors' Rest at Devon-

Pier runs out to the island of Birnbeck. Pop. 31,643. Pron. Weston-super-mary.

WESTPHALIA. Prov. of Prussia. It lies N. of the Rhine Province, S.E. of Holland and S.W. of Hanover. Its area is 7,803 sq. m. The N.E. is hilly, rising on the border to the Teutoburger Wald; the W. includes the lowland of the Rhine valley. Here is one of the richest coalfields in Europe. Zinc, copper, iron, and pyrites are mined. The iron industry based on Essen is one of the largest in the world. Münster, Essen, Düsseldorf, and Dortmund are important towns. Pop. 4,811,219.

The kingdom of Westphalia was a Napoleonic creation, and included much that is outside the present province. It lasted from 1807-13, its ruler being Jerome Buonaparte.

The Treaty of Westphalia was the general peace that closed the Thirty Years' War (q.v.), Oct. 24, 1648. The principle of religious toleration was formally established except in the Hapsburg territories. Sweden received W. Pomerania, parts of Mecklenburg, the archbishopric of Bremen, the bishopric of Verden, and representation in the diet. France was confirmed in her possession of Metz, Toul, and Verdun, and obtained the sovereignty of most of Alsace. Saxony received Lusatia. But the chief gainers were Brandenburg and Bavaria,

port, and later a branch at Portsmouth. Created G.B.E., June, 1918, she died Oct. 23, 1918. Her publications include *My Life Among the Bluejackets*, 1909.

WESTON-SUPER-MARE. Urban dist. and watering place of Somerset. Facing the Bristol Channel, 20 m. N. of Bridgwater, on the G.W. Rly., the town has grown from a small fishing village into a popular resort. There are fine marine parades and winter gardens. Birnbeck

the elector of which was confirmed in his dignity and in the possession of the Upper Palatinate. The independence of Switzerland and the United Provinces, or Dutch Netherlands, was recognized.

WEST POINT. U.S. military academy. It stands on the right bank of the Hudson river, in Orange co., New York state, about 50 m. from the city of New York. It was established in 1802.

WESTPORT. Urban dist. and seaport of co. Mayo, Irish Free State. In Clew Bay, it is 10 m. S.W. of Castlebar, and has a station on the G.S. Rlys. Pop. 3,488.

West Riding Regiment badge

WESTPORT. Port of South Island, New Zealand. It stands at the mouth of Buller river, and is the terminus of a rly. line serving the adjacent coalfield. Pop. 4,100.

WEST RIDING REGIMENT. Regiment of the British army. Known as the Duke of Wellington's, this was formerly the 33rd and 76th Foot. It dates from 1702, and saw active service in the same year. Its meritorious deeds in the Maratha War, 1803-5; earned for it a special set of colours, the badge of the elephant with the word Hindoostan. It fought in the Peninsular War, at Quatre Bras and Waterloo, and in the Crimea; also in the South African War. The regular and auxiliary battalions all distinguished themselves in the Great War. Until Dec., 1920, its official title was The Duke of Wellington's (West Riding Regiment), but it was then altered to The Duke of Wellington's Regiment (West Riding). The regimental depot is at Halifax, Yorks.

West Surrey Regiment badge

WEST SURREY REGIMENT, ROYAL. Regiment of the British army. Its official title of The Queen's (Royal West Surrey Regiment) was altered to The Queen's Royal Regiment (West Surrey) in Dec., 1920. This regiment, whose prefix Queen's dates from 1684, was formerly the 2nd Foot, and is one of the oldest regiments in the army. It was raised in 1661 to defend Tangier. Under William III its heroism at Tongres in 1695 gained it the distinction of "royal." As Marines the Queen's shared in Lord Howe's victory of June 1, 1794, and fought under Abercromby in Egypt, and in the Peninsular War. Later it saw service in Afghanistan, 1838-39, in the Kafir War, 1851-53, the China War, 1860; Burma, 1855-56; and South Africa. This regiment had about twelve battalions in the Great War, greatly distinguishing itself.

Both the 1st and 2nd battalions fought in the early battles of 1914. One of the regiment's two territorial battalions, the 4th, rendered splendid service in the third battle of Ypres, 1917. The 7th, a service battalion, was conspicuous on the Somme in 1916. The regimental depot is at Guildford.

WEST VIRGINIA. State of the U.S.A. One of the S. Atlantic group, it covers 24,170 sq. m. Nearly three-fourths of the surface is forest-clad, and lumbering ranks high among the state's industries. The fertile soil yields

Westmorland. Map of the mountainous county

Wexford, Ireland. Map of the south-eastern agricultural county of Leinster

excellent crops, and dairy farming is a thriving pursuit. Fruit is increasingly grown. There is an enormous coal area, and the output of petroleum and natural gas is also large. West Virginia University and other institutions provide higher education, and communication is afforded by over 7,000 m. of rlys. Charleston is the capital. Formerly part of Virginia, West Virginia became a separate state in 1863. Pop. 1,724,000.

WESTWARD HO. Watering place of Devonshire. On Bideford Bay, in the urban dist. of Northam, 3 m. from Bideford, it takes its name from Charles Kingsley's novel. It has golf links, while here was the United Services College, at which Kipling was educated, and which he pictures in *Stalky & Co.*

WEST YORKSHIRE REGIMENT. Regiment of the British army. Known as the Prince of Wales's Own, this was raised in 1685, and was numbered the 14th of the line. Under William III it saw active service in Flanders, 1692-95, and assisted in the defence of Gibraltar. 1727, and the campaign against the Jacobites, 1745-46. It fought in America during the War of Independence, and then in Europe in the struggle against France. In the Crimean War, the New Zealand War, 1861-63, and the Afghan War, 1879-80, the regiment gained further honours, and in the S. African War it helped to relieve Ladysmith. In the Great War there were, besides its regular battalions, four territorial and twelve service battalions. It was officially known as The Prince of Wales's Own (West Yorkshire Regiment) until Dec., 1920, when its title was changed to The West Yorkshire Regiment (The Prince of Wales's Own). The depot is at York.

West Yorkshire Regiment badge

WETHERBY. Market town of Yorkshire (W.R.). It stands on the Wharfe, 3 m. S.E. of Spofforth, on the L.N.E. Rly. Brewing

fishing is a thriving industry. The G.S. Rlys. serve the county. Wexford is the county town; others include New Ross and Enniscorthy. The area is 900 sq. m. Pop. 95,848.

WEXFORD. Bor., port, and co. town of co. Wexford, Irish Free State. It lies on a hill above the estuary of the Slaney. The shallowness and bar of the harbour led to the construction of a new harbour at Rosslare (q.v.), with which the town is connected by rly. The industries include herring, oyster, and salmon fisheries, distilling, brewing, lime and cement works, and iron foundries. Features are the ruins of the 12th century Selskar Abbey, or priory of SS. Peter and Paul, and ruins of S. Mary's, a priory of the Knights Hospitallers. Pop. 11,879.

WEY. River of Surrey and Hampshire. It rises near Alton and, entering Surrey, cuts through the hills near Guildford, and flows mainly N. until it joins the Thames near Weybridge. On its banks are Guildford and Woking. Its length is 35 m., and the Tillingbourne is the main tributary. There is a Wey in Dorset. It rises near Upway and falls into the English Channel at Weymouth.

WEYBRIDGE. Urban dist. of Surrey. It stands on the Wey, near its union with the Thames, and is 19 m. from London by the Southern Rly. Oatlands (q.v.) is in the neighbourhood. St. George's Hill, on which is a large prehistoric camp, is a tract of pine forest and heather open to the public. On it is a golf course. Pop. 6,688. See Brooklands.

and a trade in agricultural produce are the principal occupations. Market day, Thurs. Pop. 2,126.

WETTERHORN. Mountain in the Bernese Oberland. It rises to 12,166 ft., near Grindelwald, as the Mittelhorn. The other two summits are the Rosenhorn, 12,110 ft., and Hash Jungfrau, 12,150 ft. It was first ascended in 1844 and 1845.

WEXFORD. County of Leinster, Irish Free State. It has 90 m. of irregular and dangerous coastline indented by Wexford Harbour, Ballyteige Bay, Bannow Bay, and Waterford Harbour. The surface is mainly a succession of low hills, but becomes mountainous in the N. and N.E. (Mt. Leinster, 2,610 ft.). The Slaney and Barrow are the chief rivers. Agriculture is pursued, and

industry. The G.S. Rlys. serve the county. Wexford is the county town; others include New Ross and Enniscorthy. The area is 900 sq. m. Pop. 95,848.

WEYGAND, MAXIME (b. 1867) French soldier. He joined the army as an artillery lieutenant in 1887, and was appointed chief of staff to General Foch in Oct., 1914. He participated in the Ypres and Yser operations in Oct.-Dec., 1914, in Artois, 1915, and on the Somme, 1916. His work in the critical battles of March-Oct., 1918, was brilliant. In 1920 he went to Poland to advise on military matters, and later was high commissioner for Syria. He left Syria in 1926, and in 1930 he was made chief of the general staff.

WEYMAN, STANLEY JOHN (1855-1928). British novelist. Born at Ludlow, Aug. 7, 1855, he became a barrister but made his fame as a writer, achieving his first great success with *A Gentleman of France*, 1893. This was followed by a number of other romances. Among them were *Under the Red Robe*, 1894; *Memoirs of a Minister of France*, 1895; *The Red Cockade*, 1895; *Count Hannibal*, 1901; *Star-crow Farm*, 1905; and *The Wild Geese*, 1908. In 1919 appeared his novel *The Great House*. Weyman died April 12, 1928.

Stanley Weyman, British novelist
Elliott & Fry

WEYMOUTH. Borough, watering place, and market town of Dorsetshire. On the Wey, 8 m. S. of Dorchester, with stations on the G.W. and Southern Rlys., the bor. includes the town of Melcombe Regis on the N. side of the river. Weymouth proper lies round the bay and to the S. of the river. Its popularity as a holiday resort dates from the time of George III, who frequently resided at Gloucester House (later a hotel). The port has a regular service in connexion with the G.W. Rly. to the Channel Islands. There is trade in Portland stone and tiles. Market days, Tues. and Fri. Pop. 24,570.

WHALE (Cetacea). Order of large mammals of fish-like form adapted to life in the oceans. To maintain the high temperature of the blood, there is a thick layer of fat (blubber) under the smooth skin. There is no neck, no external ears, and the nostrils (blow-holes) open on the upper surface. The fore-limbs are converted into paddles, and the hind-limbs are absent, or represented by a few vestigial bones in the skeleton. The body ends behind in a large horizontal expansion that constitutes a tail fin.

The order is divided into two groups, the toothed whales (Odontoceti) and the whalebone

Whale. Above, sperm whale, which yields the most valuable of the whale oils. Below, Greenland right whale, which furnishes whalebone

whales (Mystacoceti); the former including the sperm whale, the dolphins, porpoises, and narwhal, the latter comprising the right whales and the rorquals. All whales breathe atmospheric air, for which they have to come to the surface at intervals.

The largest and most important of the toothed whales is the cachalot or sperm whale (*Physeter macrocephalus*). It yields the most valuable of the whale oils, in addition to spermaceti and ambergris. Another toothed whale, the bottle-nosed whale, occasionally visits British waters. The white whale is found chiefly off Labrador and Canada.

Of the whalebone or right whales the most important formerly were the Greenland whale (*Balaena mysticetus*) and the Biscayan whale or Nordkaper (*B. glacialis*). The latter is almost extinct, a few still being caught in the N. Atlantic. The Greenland or right whale is also nearly extinct. In the 18th and 19th centuries it was very plentiful, but the demand for its baleen, or whalebone, for garments, and its oil for lighting led to a great reduction in its numbers.

WHALING. The chief object of the whale fishery to-day is the rorqual or finback. Its blubber furnishes a large quantity of oil, and its flesh and residues are used partly to mix with cattle foods and the remainder as guano. The industry is carried on, mainly by Norwegians, around Iceland, Newfoundland, the Faroe Islands and S. Africa; also off S. Georgia. See Ambergris; Ca'ing; Dolphin; Grampus; Narwhal; Porpoise; Spermaceti.

Whale Island. Island on the E. side of Portsmouth Harbour. Thereon is the school of naval gunnery. See Portsmouth.

WHALLEY. Village of Lancashire. It stands on the river Calder, on the road from Blackburn to Clitheroe. Here, in 1296, an abbey was founded for the Cistercians. In 1928 it was bought by the diocese of Blackburn to be used as a retreat. Pop. 1,378.

WHANGEE CANE (*Phyllostachys nigra*). Bamboo-like perennial of the natural order Gramineae. It is a native of China and Japan. Its slender, almost solid culms are 4-25 ft. long, and are exported for making into walking-canes, chairs, etc.

WHARFE. River of Yorkshire (W.R.). Rising 7 m. S. of Hawes, it flows through Langstrothdale and Wharfedale, past Grassington and Bolton Abbey, to Ilkley. It here bends E. to Wetherby and then flows S. to Cawood, where it flows into the Ouse. The total length of the river is 60 m.

WHARNCLIFFE, EARL OF. British title borne by the family of Stuart-Wortley. James Stuart, a younger son of the 3rd earl of Bute, inherited from his mother the barony of Mountstuart and the estates of the Wortley family in Yorkshire. His son, James Archibald Stuart-Wortley (1776-1845), the name taken by the family, was an M.P., 1798-1826. In 1826 he was made Baron Wharncliffe of Wortley. His grandson Edward, the third baron (1827-99), was made an earl in 1876. He gave his name to the Wharncliffe Rooms, Marylebone.

WHARTON, THOMAS WHARTON, 1ST MARQUESS OF (1648-1715). English statesman. Son of the 4th Baron Wharton, he was born at Woburn. A staunch Whig, he entered the House of Commons in 1673, and opposed the policy of James II. He boasted that the song Lilliburlero, which he wrote in 1687, had "sung a king out of three kingdoms." Created an earl in 1706, he was made lord-lieutenant of Ireland in 1708. For his advocacy of the Protestant succession he became lord privy seal and marquess of Wharton in 1714. He died April 12, 1715.

His son Philip was made duke of Wharton, but, having attached himself to the Old Pretender, he was declared a traitor. He died May 31, 1731, when his titles became extinct.

WHATELY, RICHARD (1787-1863). British divine. Born in London, Feb. 1, 1787, in 1814 he was ordained. In 1825, after two years passed as a vicar in Suffolk, he was made principal of S Alban Hall, Oxford, and in

Richard Whately,
British divine
After C. Green

1829 professor of political economy. In 1831 he was chosen archbishop of Dublin, and was there until his death, which took place Oct. 8, 1863.

Whately's fame rests upon his *Manual of Logic*. He exerted himself to reconcile Ireland to English government, and to heal the breach between Protestant and Catholic.

WHEAT. Cereal crop, forming the principal food of mankind. It is a grass of the order Gramineae and the genus *Triticum*.

The wheat plant consists of stems supporting spikes, in which flowers and kernels are formed. The kernels are enclosed in scale-like coverings called glumes or chaff. The principal parts of the kernel are the coatings, the embryo, and the starchy interior or endosperm. The last, from which flour is milled, is about 76 p.c. of the whole weight of the grain. The coatings which, when ground, form the bran and pollard of commerce, are about 10 p.c. of the weight, while 15 p.c. is moisture.

Wheat grows to a height of three to five feet, according to variety, climatic conditions, etc., and its roots penetrate the soil to a depth of from four to seven feet. From one seed four to eight stems usually spring, but this number may be increased to fifty or more. More than one thousand different varieties are known. Common wheat (*Triticum vulgare*) comprises the vast majority of wheats grown for bread making. Geographically speaking, the range of wheat is very wide. It thrives in southern Brazil, in Cuba, in many parts of India, and in Rhodesia.

Up to the end of the 18th century the wheat grown in the United Kingdom did not differ perceptibly from that raised in ancient Egypt. The first great improvement was due to a Scottish farmer, P. Shirreff, who in 1819 observed in one of his fields a wheat plant which produced an unusually large yield. Saving the seed, he sowed it the following season in garden ground, and by selective cultivation of the progeny he ultimately produced wheats with a greatly improved yield of grain. Other experimenters since that day have carried on the work.

The principal diseases from which wheat suffers are smut, bunt, and rust. The attacks of the smut fungus can be reduced by steeping the grain before sowing in a solution of sulphate of copper or formalin. Rust is uncontrollable, and takes yearly 5 to 10 p.c. of the entire wheat crop of temperate countries. In 1929 the world's wheat crop was

Wheat. Ears of the principal varieties of the cereal. 1. Small spelt. *Triticum monococcum*. 2. Emmer, *T. dicoccum*. 3. Common spelt, *T. spelta*. 4. Club wheat, *T. compactum*. 5. Common wheat, *T. vulgare*

estimated at 518,000,000 quarters. The Soviet Union produced the greatest amount, followed by the U.S.A., Canada, and Argentina. See Agriculture; Bread; Bunt; Crops; Rust.

WHEATEAR (*Saxicola oenanthe*). British migratory bird. It arrives about the beginning

of March. It is 6 ins. long, and has grey plumage on the upper parts, black on the wings, black and white on the tail, and white on the breast and under parts. In the autumn the plumage assumes a reddish-brown hue. The wheatear feeds chiefly on insects.

Wheatear an early migrant to Great Britain
W. S. Berridge, F.Z.S.

WHEATLEY. Urban dist. of Oxfordshire. Adjoining Cuddesdon and 7½ m. E. of Oxford, it has a station on the G.W. Rly. Pop. 918.

WHEATLEY, FRANCIS (1747-1801). British artist. Born in London, son of a master tailor, he first exhibited at the Royal Academy, 1778, was elected associate, 1790, and R.A., 1791. He died June 28, 1801. Wheatley is best known for his popular series *The Cries of London*. See illus. p. 675.

WHEATSTONE, SIR CHARLES (1802-75). British electrician and inventor. Born at Gloucester, he early took an interest in science, contributing important papers on light and optics to the *Transactions of the Royal Society*, etc. Professor of experimental physics at King's College, London, 1834, he carried out experiments on the transmission of electric signals over wires, developing, with Cooke, the type printing telegraph, magneto-electric dial telegraph, and automatic transmitting and receiving instruments. Wheat-

Sir C. Wheatstone,
British inventor

stone invented the rheostat, the stereoscope, electrical clocks, etc. He was knighted in 1868, and died Oct. 19, 1875. See Telegraph.

WHEATSTONE'S BRIDGE. This is a device for measuring an unknown electrical resistance by means of a known resistance, from which the resistance required can be calculated. See Potentiometer; Rheostat.

WHEEL. Disk, circular framework, or body capable of turning on a central axis and used for facilitating motion. Early wheels were solid disks of wood, or made from pieces of wood fastened together and cut into a circular shape afterwards. Later they were made of a central hub connected by radial spokes to the felloes, or segmented rim, on which is shrunk the iron tire. The modern disk wheel of modern motor vehicles has spokes with removable disks of thin metal.

Wheels whose rims are provided with teeth, as in machinery, etc., are known as gear, spur, and cog wheels. A fly wheel is a metal wheel used for regulating a steam engine. (See Gear.)

In military and naval terminology, a movement of troops or vessels in line by changing direction while keeping alignment is known as a wheeling movement.

Breaking on the wheel was an ancient form of capital punishment. The victim was tied spread-eagled either to a wheel or to a cross, and his limbs successively broken by blows from an iron bar.

WHEEL LOCK. Mechanical device for firing early forms of guns without the use of light. It was invented at Nuremberg in 1515. The cock is pivoted forward of the lock, and the jaws, which point towards the butt, hold a piece of pyrites, a spring tending to force the latter on to the hase of the flash pan, through the bottom of which projects the serrated

edge of a steel disk. The latter is connected by a short link of chain to a drum containing a spring, which can be wound up with a key. In early models the lid of the flash pan had to be opened by hand and the cock lowered before the trigger was pulled, but in later guns these operations were effected mechanically when the trigger was pulled. The wheel lock made it possible to take a steady aim. See Matchlock.

WHELK (*Buccinum undatum*). Large marine snail. It has a thick, stony shell of a few swollen whorls with curved, broad ribs crossed by spiral lines of growth. The animal has a broad, muscular foot, with a horny operculum behind for closing the shell. The head bears a pair of pointed tentacles with eyes at their base, and the extensible muzzle is furnished with a lingual ribbon capable of boring holes through the hard shells of other molluscs. The whelk is carnivorous. There is a regular

Whelk. Edible sea snail, showing whorled shell

"fishery" for them for bait and for food. They are taken by the dredge, or by sinking baskets containing carrion and weighted by stones. See Mollusc.

WHERNSIDE. Mountain of Yorkshire. One of the highest peaks of the Pennine range, 2,414 ft., it rises above the moors where Yorkshire, Lancashire, and Westmorland meet.

WHETSTONE. District of Middlesex. It has a station, Totteridge and Whetstone, on the L.N.E. Rly 9½ m. from King's Cross. There is a place of the same name in Leicestershire, 93½ m. from Marylebone, on the L.N.E. Rly. Whetstone Park is a thoroughfare in London, between Holborn and Lincoln's Inn Fields. Here stood Spenser House, the early home of the author of *The Faerie Queene*.

WHEWELL, WILLIAM (1794-1866). British scholar. Born at Lancaster, May 24, 1794, the son of a carpenter, he was educated at Trinity College, Cambridge, being second wrangler in 1816, and fellow and tutor of Trinity. From 1828-32 he was professor of mineralogy, and from 1838-55 professor of moral philosophy, while from 1841-66 he was master of Trinity. He died March 6, 1866.

Whevell was one of the greatest intellects of all time. He did much to revive the standard of education in Cambridge, and it was owing to his efforts that the moral and natural sciences triposes were instituted. In philosophy he was influenced by Kant; his ethical standpoint was intuitionist. Pron. 'Hewel.

WHICKHAM. Urban dist. of Durham, 3 m. W. of Gateshead. The church of S. Mary contains some Norman work. There are steel and chemical works. Pop. 19,141.

WHIG. Name used for a political party in England. It is an abbreviation of Whigmore, an opprobrious name of doubtful etymology. The term was originally applied to extreme Scottish Covenanters. During the struggle over the passing of the Exclusion Bill the term came to be applied to the advocates of the bill.

The Revolution of 1688 established the Whigs as the party which stood for opposition to encroachments by the crown, and for the Protestant Succession. It was much strengthened by the accession of the Hanoverian dynasty in 1714, and thenceforward

the Whig party enjoyed undisputed supremacy for some 60 years. Eventually it broke up into factions. During the French Revolution the more progressive elements headed by Fox assumed the title of New Whigs. See Liberal; Tory.

Winchat. Hen of the small bird that nests on the ground
W. S. Berridge, F.Z.S.

WHIP. In British politics, an official whose duty it is to see that the members of his party vote as they should. He acts as the intermediary between the leaders and the rank and file, and helps in the organization of the party. The government whips are members of the ministry, the patronage secretary to the treasury being the chief whip, and the junior lords of the treasury and the officers of the household his assistants. Two of the whips act as tellers when divisions take place on party lines. The chief whip is the guardian of the party funds.

The term whip is also applied to messages circulated to members warning them to be in their places at a certain time.

WHIPPET. Breed of dog produced by crossing the fox terrier with the greyhound and the Italian greyhound. It resembles a small greyhound with fox terrier markings, and the best type of animal weighs between 16 lb. and 24 lb. Developing great speed, it is bred for rabbit coursing and for racing.

WHIPPINGHAM. Parish of the Isle of Wight. On the Medina, 1 m. S. of Osborne House, it has a station on the Southern Rly. The church of S. Mildred contains memorials of the royal family. Pop. 2,645. See Osborne House.

WHIP-POOR-WILL (*Antrostomus vociferus*). Species of nightjar, occurring in N. America. The name is derived from the peculiar cry that the bird utters in the night. The whip-poor-will is about 10 ins. long, and has mottled brown plumage with a white band on the throat. There are conspicuous stiff bristles at the base of the beak.

WHIP SCORPION. Member of the order Pedipalpi, of the class Arachnida. It derives its name from the modification of its first pair of legs into whip-like organs of touch. The tailed whip-scorpions found in N.E. India, W. Indies, and Central and S. America, have a jointed, thread-like tail attached to the last segment of the abdomen. See Scorpion.

WHIPNADE. District of Hertfordshire. It is 3 m. from Dunstable and formed part of the Ashridge estate. In 1927 Hall Farm here was bought by the Zoological Society and laid out as open air zoological gardens. The first animals

were taken there in 1930. It is reached by the L.M.S. Rly.

WHIP SNAKE. Popular name for snakes of the genus *Dryophis*. They occur in India and Malaya, and are remarkable for the length and slenderness of the body and tail. They are arboreal in habit, and feed upon lizards and small birds.

WHIRLWIND. Air eddies whose heights are much greater than their diameters, and which rotate rapidly round a more or less vertical axis. Whirlwinds seldom last more than a minute, but during that time there may be violent changes in wind direction. They often originate in the tropics during a hot season, and give rise to the so-called dust whirlwinds. In the Sahara, such whirlwinds will lift and deposit enough sand in a minute to cover a caravan. See Tornado.

WHISKY. Intoxicating spirit. Its former name was usquebaugh, meaning in Gaelic water of life. A spirit like whisky has probably been distilled from grain in northern latitudes from very early times, just as brandy has been distilled from wine in the south. Most distilleries in Scotland use malted barley mixed with a proportion of unmalted barley, but in Ireland the whisky is made from a mixed mash of malted and unmalted grain, generally consisting of about 75 p.c. or 80 p.c. barley, and the remainder oats, rye, or wheat. The latter is added to the malt to give it a distinctive flavour.

Newly distilled whisky has a harsh acid flavour; consequently, it is matured in wooden casks for three years or longer, during which time certain changes take place in the constituents, with the result that the others develop, which gives whisky its distinctive flavour. See Distillation.

WHIST. Card game. It originated from that of trump or triumph played in the time of Henry VIII. The whole pack of 52 cards is used, the ace counting highest, and the other twelve of each suit bearing their usual face value. The last card dealt, which falls to the dealer, is laid faced on the table and shows the trump suit, but sometimes, instead of turning up the last card, a second pack is cut for trumps. The cards of the trump suit are superior in value to any others.

The object of the game is to make tricks, the highest card of any suit played during a round taking the trick; or in the event of a player being without a card of the suit played, he can play one of the trump suit and so take the trick, or he can discard. The winner of any trick has the next lead. The side taking the most tricks wins, scoring one for every trick over six; the six tricks are known as the hook. The rubber is the best of three games.

WHISTLER, JAMES ABBOTT MCNEILL (1834-1903). Anglo-American painter. He was born at Lowell, Mass., July 10, 1834, and in 1855 went to Paris and entered Gleyre's atelier. Etchings—The French Set—first occupied him. His first painting, *At the Piano*, was refused by the Salon in 1859, and the rejection of *The White Girl* in 1863 determined the artist to migrate to London. Meanwhile he had begun *The Thames Set* of Etchings, and had exhibited *The Thames in Ice*, 1862, at the R.A. About the same time he became

Whippet. Watford Maisie, a champion dog of the coursing breed

Whip-poor-will. North American species of nightjar

strongly influenced by Japanese art, a phase represented by the large *Princesse du Pays de la Porcelaine*, 1865. In 1872 came his famous *Portrait of the Painter's Mother*. This was exhibited at the R.A. and was bought for the Luxembourg.

James Whistler,
Anglo-American
painter
Self-portrait

o'clock Lecture 1885, and *The Gentle Art of Making Enemies*, 1890. Other works are portraits of Miss Alexander, Thomas Carlyle, and Sarasate; *The Blue Wave*, Biarritz, and *Old Battersea Bridge* (Tate Gallery). He died at Chelsea, July 17, 1903. Consult the *Life*, J. and E. R. Pennell, 1908; and *The Whistler Journal*, J. and E. R. Pennell, 1921.

WHITBREAD, SAMUEL (1758-1815). British politician. Born at Cardington, Bedfordshire, he was Whig M.P. for Bedford from 1790. A vigorous opponent of Pitt and friend of Fox, he was an advocate of peace, poor law reform, popular education, and national economy; opposed the slave trade, conducted the impeachment of Henry Dundas, 1st Viscount Melville, for alleged malversation while treasurer of the navy, and took a fearless part in the inquiry into the conduct of the duke of York. He killed himself, July 6, 1815.

WHITBY. Urban dist., seaport, watering place and market town of Yorkshire (N.R.). On the Esk, 20 m. N.W. of Scarborough. It is served by the L.N.E. Rly. In S. Mary's churchyard is a cross commemorating Caedmon (q.v.), who was a monk at the abbey. Shipbuilding is an ancient industry, but the making of jet ornaments is the principal trade. On the W. cliff a residential quarter has sprung up, with a spa and promenade, on which is a statue to Captain Cook. The most famous object in the town is the ruined abbey, founded in 657. The original building was destroyed by the Danes in 867, but it was restored as a Benedictine abbey in the 11th century. Standing exposed to the weather, it has fallen to pieces until only portions of the shell exist. Its ruins were transferred to the nation in 1920. The town was shelled by a German squadron on Dec. 16, 1914. Market day, Sat. Pop. 12,513

WHITCHURCH. Village of Middlesex. Known also as Stanmore Parva and Little Stanmore, it lies $\frac{1}{2}$ m. W. of Edgware (q.v.). It passed eventually to the duke of Chandos, who here built the grandiose mansion known as Canons (q.v.) and rebuilt, in 1715-20, the body of the church of S. Lawrence, of which Handel was organist, 1718-21. In the churchyard is the grave of William Powell (d. 1780), the "harmonious blacksmith," who was parish clerk in Handel's time.

WHITCHURCH. Tinplate and ironworking centre of Glamorganshire, Wales. It is $\frac{1}{2}$ m. N. of Llandaff, and stands on the site of an ancient Roman camp. Pop. 9,100.

WHITCHURCH. Urban dist. and market town of Shropshire. It is 19 m. N. of Shrewsbury on the border of Cheshire, on the L.M.S.

and G.W. Rlys. The church of S. Alkmund, rebuilt in 1713, contains the tomb of John Talbot, 1st earl of Shrewsbury (1388-1453). The principal industries are brewing and cheese making. Market day, Friday. Pop. 5,656.

WHITE, SIR GEORGE STUART (1835-1912). British soldier. Born in co. Antrim and educated at Sandhurst, he first saw active service during the Indian Mutiny in 1857. Afterwards he took part in the second Afghan War, 1878-80, in which he won the Victoria Cross, in the Nile Expedition, 1884-85, and in the Burmese War, 1885-87. In 1893 he became commander-in-chief in India. In the S. African War he made a memorable defence of Ladysmith until relieved by Buller on March 1, 1900. He was governor of Gibraltar, 1900-4. In 1903 he was made a field-marshal, and he died June 24, 1912.

Sir G. S. White,
British soldier

WHITE, GILBERT (1720-93). British naturalist. Born at Selborne, Hampshire, July 18, 1720, he held curacies at Selborne and elsewhere, and devoted himself to the study of the natural history and antiquities of his native parish. He was little known until, in 1789, he published his letters to Pennant and Barrington in the form of a volume, *The Natural History and Antiquities of Selborne*. White died June 26, 1793.

H. Kirke White
British poet
After Hoppner

WHITE, HENRY KIRKE (1785-1806). British poet. Born in Nottingham, March 21, 1785, he published in 1803 a volume of poems

Whitby, Yorkshire. Ruins of the ancient Benedictine abbey, from the south
Valentine

entitled *Clifton Grove*, which won the praise of Southey. Deceiving to take orders, White proceeded to S. John's College, Cambridge, where the promise of a brilliant career was cut short by his death from consumption, Oct. 19, 1806. His hymn *Off in Danger, Off in Woe*, is well known.

WHITE, JOSEPH BLANCO (1775-1841). British author. Born at Seville of an Irish family, July 11, 1775, he was ordained a priest in 1800. Gravitating towards free thought, he came to England in 1810, and finally, under the influence of Dr. Martineau, embraced Unitarianism. He is best remembered by his fine sonnet on *Night and Death*. His works include *Second Travels of an Irish Gentleman in Search of Religion*, 1833. He died May 20, 1841.

White Ant. Popular name for the termite (q.v.).

WHITE ARUM, ARUM LILY, OR TRUMPET LILY (*Richardia africana*). Perennial marsh herb of the order Araceae, native of South Africa. It has a thick rootstock from which all the large arrow-shaped leaves arise on long stalks. The small yellow flowers are crowded round a spadix as in wake rolin, surrounded by the lower part of the large pure white spathe. See *Wake Robin*.

WHITEBAIT. Young of herrings and sprats, a table delicacy. The fishery is carried on about river estuaries—notably that of the Thames—and usually lasts from March till August. The early catches consist almost entirely of young sprats, herring fry appearing later in the season.

WHITE BEAM OR CHESSE APPLE (*Pyrus aria*). Small tree of the order Rosaceae, a native of Europe, N. and W. Asia, and N. Africa. The trunk has smooth bark, which remains without longitudinal fissures until maturity. The thick leaves are very variable, broad oval or lobed with toothed edges. The white flowers are in flat clusters, and the fruits are as big as holly berries. The wood is hard and fine-grained.

WHITEBOY. Term applied to Irish desperadoes who came into prominence during the agricultural depression which set in during the latter half of the 18th century in Ireland.

They were particularly numerous in Tipperary and Limerick about 1765, in Munster in 1786, and then were scarcely heard of until 1821-23, when there was a reemergence of crime. Their name is perpetuated in enactments made between 1775 and 1831, giving powers for the suppression of dangerous associations in Ireland.

WHITECHAPEL. Dist. of London. Part of the met. bor. of Stepney (q.v.), it lies E. of Aldgate. The old parish church of S. Mary has been rebuilt. Adjoining S. Jude's, associated with the work of Canon Barnett (q.v.), and containing a mosaic by G. F. Watts, is Toynbee Hall (q.v.). In the High Street is Whitechapel Art Gallery, 1901, adjoining which are a free library and museum. In the Whitechapel Road is the great London Hospital, founded in 1759, with accommodation for nearly 1,000 in-patients. The district is largely a Jewish quarter. See London.

WHITE CITY. THE London exhibition. Founded in 1908 by Imre Kiralfy at Shepherd's Bush, it was utilised for a number of important exhibitions, as the Franco-British, 1908; Empire, etc. The White City was taken over by the government in the Great War and used to billet troops, for munitions, etc. The stadium, erected for the Olympic Games of 1908, is now used for dog racing.

WHITEFIELD. Urban dist. of Lancashire. Also known as Stand, it is $\frac{5}{2}$ m. N. of Manchester and adjacent to Prestwich, with a station on the L.M.S. Rly. It is in an industrial area. Pop. 7,030.

WHITEFIELD, GEORGE (1714-70). English preacher. Born at Gloucester, Dec. 16, 1714, he was educated at Pembroke College,

White Arum. Spadix of flowers surrounded by spathe. Left, unopened spathe

Oxford, where he became friendly with John and Charles Wesley, and in 1736 he was ordained in the Church of England. In 1737 he followed the Wesleys to Georgia, where he founded an orphanage, but he was soon in England again, and became widely known as a preacher.

On his return from another visit to America (1739-41) Whitefield's stern Calvinism led to a break with the Wesleys, and in 1741 a tabernacle was built for him in Moorfields, London. In 1748 he became chaplain to the countess of Huntingdon, and was provided with a centre in Tottenham Court Road, London, where the present Whitefield's Tabernacle stands. He died at Newburyport, Massachusetts, Sept. 30, 1770. The type of Methodism preached by

George Whitefield
British preacher

Whitefield developed into the Calvinistic Methodist Church. His many writings include a Journal. See Calvinistic Methodists; Huntingdon, Countess of; Methodism.

WHITEFISH. Popular name used chiefly in N. America for fishes of the genus *Coregonus* of the salmon family. They mostly occur in

large fresh-water lakes, but a few species are anadromous and migrate to the sea. They are found also in the cold and temperate parts of Europe and Asia, and three species occur in the British Isles. The vendace (*C. vandesius*), is found in Bassenthwaite and Windermere, Lochmaben, and the Solway. Its flavour suggests that of the smelt. The pollan (*C. pollan*) is known only from Lough Neagh and other Irish lakes, where it occurs in vast schools.

WHITE FLAG. Emblem exhibited by a belligerent who wishes to parley. The usual agent in intercourse of this kind is officially called a parlementaire; he is accompanied by a flag-bearer, an interpreter, and a trumpeter. In military circles the party is often called a flag of truce.

WHITEFRIARS. Dist. of London. It lies S. of Fleet Street (q.v.), between the Temple and New Bridge Street, and contains the City of London School, Sion College, S. Bride's Church, Guildhall School of Music, many printing works and newspaper offices, Metropolitan Asylums Board, and Reuters. A crypt of the Carmelite priory was discovered in Britton's Court. See Alsatia.

The Whitefriars Club is a London club, founded in 1868, for journalists and authors.

Whitehall, London, showing the War Office on the right and the portico of the Scottish office on the left

WHITEHALL. London thoroughfare. It connects Charing Cross with Parliament Street, S.W. On the E. side are the War Office, the banqueting hall built by Inigo Jones, from a window of which Charles I stepped out on to the scaffold, and the Royal United Service Institution and Museum; on the W. are the old Admiralty, the Horse Guards, government buildings, and Downing

Street. The Cenotaph stands in the roadway. Whitehall takes its name from the palace built by Henry VIII and destroyed by fire in 1698. Of a new palace contemplated by James I, only the banqueting hall was erected, 1622. See Cenotaph; Home Office; Horse Guards.

WHITEHAVEN. Borough, seaport, and market town of Cumberland. It is the centre of a coal and iron mining dist., 12 m. S.S.W. of Maryport, on the L.M.S. Rly. Coal, iron, stone, and lime are exported. Some of the mines run beneath the sea. The principal manufactures are bricks, tiles, drain pipes, and cabinet ware. Paul Jones landed here in 1778. The town was bombarded by the Germans in 1915. Market day, Thurs. Pop. 19,536.

WHITEHEAD, ROBERT (1823-1905) British inventor. Born at Bolton-le-Moors, Lancashire, Jan. 3, 1823, and apprenticed to a Manchester engineering firm, he went in 1844 to Marscilles and in 1847 to Milan, where he invented improvements in silk weaving machinery. In 1856 he settled in Fiume as the

Whitefish. The pollan, a small fish found only in the Irish lakes

designer of engines for warships, and in 1866 he brought out the invention which made him famous, the Whitehead torpedo. He died Nov. 14, 1905. See Torpedo.

WHITE HELLEBORE (*Veratrum album*). Perennial herb of the order Liliaceae. A native of Europe and Siberia, it has a thick, creeping root-stock that yields a poison, protoveratrine. The lower leaves are oblong, the upper ones progressively narrower. The whitish flowers are clustered around the upper part of the downy stem.

WHITE HORSE. Design of a horse formed by removing the turf from chalk downs. The most famous are at Uffington, Berks, 355 ft. long; and at Bratton, Wilts, 180 ft. There are later imitations elsewhere.

The Vale of the White Horse is a district of Berkshire, England, so called because on one of its hills, White Horse Hill (856 ft.), is the figure mentioned above. It is supposed to have been cut in the turf by early Britons, or by Alfred, to celebrate his victory over the Danes in 871.

WHITE HOUSE, THE. Official residence, in Washington (q.v.), of the president of the U.S.A. It is in English Renaissance style, of freestone, painted white. Its foundation stone was laid by George Washington, and it was first occupied, in 1800, by John Adams.

WHITELADIES. Ruined nunnery in Worcestershire, England. It is near Shifnal and was founded towards the close of the 12th century by the Cistercians. It was called Whiteladies to distinguish it from the Dominican convent in Staffordshire called Blackladies.

WHITE LEAD. Hydrated basic carbonate of lead. It is largely used in the manufacture of paints. White lead is a soft, heavy amorphous powder, and is mixed with oil for use. Pure white lead is expensive, and a large part of that in use is either heavily adulterated or consists of sublimed white lead, a sulphate of the metal which has the advantage of being non-poisonous. Barium sulphate and chalk are the two chief adulterants

WHITELEG (*Phlegmasia dolens*). Disease occurring during pregnancy or shortly after delivery. It is characterised by pain, swelling, hardness, and whiteness of the surface of one or both legs. It is due to obstruction of the veins and lymphatic vessels, and probably results from septic absorption or blood-poisoning. Treatment consists in keeping the leg absolutely at rest in an elevated position.

White Rot. Alternative name for the marsh pennywort (*Hydrocotyle vulgaris*). See Pennywort.

WHITE SEA (Russ. Bieloye More). Part of the Arctic Ocean. It lies between Cape Kanin, the most N. point of the Kanin peninsula, and the peninsula of Kola, and is 330 m. long and 150 wide. It is icebound from September to June. Salmon, herring, and a kind of cod are caught. The chief port is Archangel (q.v.). There is connexion with the Black and Caspian Seas by a system of canals.

White Slave Traffic. Popular term for the criminal practice of prostitution (q.v.).

WHITETHROAT. Migratory bird, of which two species occur in Britain. The greater whitethroat (*Sylvia cinerea*) is common everywhere in the country, and has reddish brown plumage on the upper parts, with pinkish white below. It is generally found in thickets and hedges, and is often known as the nettle creeper. The lesser whitethroat (*S. curruca*) is slightly smaller, and has a grey tinge in its plumage. It is rare in England and Scotland, and is absent from Ireland.

WHITGIFT, JOHN (c. 1530-1604). English prelate. Son of a Grimsby merchant, he took orders at Cambridge in 1560 and held a number of offices, including that of vice-chancellor. Bishop of Worcester, 1577-83, he was archbishop of Canterbury, 1583-1604, enjoying the favour and support of Elizabeth. Fearless, incorruptible, personally pious, full of reforming zeal, and doctrinally Puritanic, he opposed the Calvinists and Presbyterians, and was a devoted Churchman. He erected and endowed a school and almshouses bearing his name at Croydon, and died at Lambeth, Feb. 29, 1604. See Croydon.

WHITHORN. Burgh and seaport of Wigtownshire, Scotland. On the Irish Channel, 11 m. S. of Wigtown, on the L.M.S. Rly., it is one of the most ancient burghs in Scotland, having been created a royal burgh by Robert I. S. Ninian is supposed to have built the first stone church in Britain either here or on the Isle of Whithorn, some 3 m. distant. The ruined priory church, founded in the 12th century on the site of the chancel of an older church, was used as the parish church until 1822. Pop. 1,033.

WHITING (*Gadus merlangus*). Fish belonging to the cod family. Very nearly related to the haddock. It may be distinguished by the absence of the chin barbel and of the black patch above the pectoral fin. It usually weighs rather less than 2 lb., and is much in demand for the table. It occurs in shoals, usually about sandy shores, and feeds chiefly on the fry of other fish. See Point.

Whitethroat
Greater species found in hedgerows

White Hellebore,
cluster of flowers

John Whitgift,
English prelate

Whiting. British edible fish, valued for the delicacy of its flesh

WHITLEY, JOHN HENRY (b 1866) British politician. Born in Halifax, he became in 1900 Liberal M.P. for that town. Junior lord of the treasury and a government whip, 1907-10, he was deputy-speaker and chairman of committees, 1911-21, when he succeeded J. W. Lowther as speaker. He resigned in 1928, when he declined the customary honour of a peerage. In 1930 Whitley was appointed chairman of the Broadcasting Corporation.

Whitley Council is the popular name given to the joint industrial councils set up in Great Britain to deal with trade disputes, J. H. Whitley having presided over the committee appointed in 1917 to consider the relations between employers and employed. The report of this committee was issued in five parts in 1917-19 and is known as the Whitley Report.

WHITLEY BAY. Watering place of Northumberland, part of the urban dist. of Whitley and Monkseaton. It is on the E coast, 2 m. N. of Tynemouth, with a station on the L.N.E. Rly. Pop. 27,000.

WHITLOW. Inflammation and suppuration of the terminal phalanx of the finger, due to infection by a micro-organism. Treatment consists in applying hot fomentations of boracic acid, and dressing the inflamed surface with dilute nitrate of mercury ointment.

WHITMAN, WALT (1819-92) American poet. Of English and Dutch descent, he was born at West Hills, Long Island, New York May 31, 1819, and worked at carpentry, building, printing, teaching, and journalism. He served as an army nurse through the Civil War, wrecking his robust constitution thereby. He then became a government clerk, and after a paralytic stroke in 1873 lived in comparative poverty at Camden, New Jersey, where he died March 26, 1892.

Whitman's chief work, *Leaves of Grass*, first appeared as a slender volume, 1855, but the final revised edition, 1881, incorporated most of his poetry. The irregular, unrhymed lines in which most of it is written are often uncouth, but at their best have a noble music and cadence of their own. Contemptuous of tradition, Whitman regarded himself as the prophet of America, which he believed would give the world a free society existing for the mass production of great personalities. His meditations on death (*Drum-taps*, 1865; and *Passage to India*, 1870) include some of his finest work.

WHITNEY, WILLIAM DWIGHT (1827-94). American philologist and Sanskrit scholar. Born at Northampton, Mass., Feb. 9, 1827, he studied Sanskrit at Yale, Berlin, and Tübingen, and in 1854 was appointed professor of Sanskrit at Yale. His works include *Language and the Study of Language*; *Life and Growth of Language*. He superintended the publication of the great *Century Dictionary*, and helped to revise Webster's Dictionary. He died June 7, 1894. See Webster, N.

WHITSTABLE. Seaport, watering place, and urban dist. of Kent. Situated 6 m. from Canterbury on the Southern Rly., it has a small harbour and carries on a coasting trade, but is noted chiefly for oysters. Pop. 13,000.

WHITSUNDAY (A.-S. *hwita Sunnandæg*, White Sunday). Name given in the English Church calendar to the festival which com-

memorates the gift of the Holy Ghost to the disciples (Acts 2). Observed in the Christian Church from very early times, it is the Christian Pentecost, as Easter is the Christian Passover, and is regarded as celebrating the ingathering of the first-fruits of the spiritual harvest. The name is usually derived from the white garments or ebriosis worn on this day by the newly baptized.

WHITTIER, JOHN GREENLEAF (1807-92). American poet. He was born at Haverhill, Massachusetts, Dec. 17, 1807, the son of a Quaker farmer. Whittier's earliest work for the anti-slavery movement was done as a journalist between 1828 and 1832. In 1833 he wrote *Justice and Expediency*, an anti-slavery manifesto, and attended at Philadelphia the first meeting of the American Anti-Slavery Society. In 1835 and 1836 he represented his district in the Massachusetts legislature. From 1847-60 he contributed leaders and poems to *The National Era* of Washington, and from 1857 to *The Atlantic Monthly*. He died at Hampton Falls, New Hampshire, Sept. 7, 1892.

J. G. Whittier,
American poet

Whittier will be remembered as a poet by some of his anti-slavery lyrics, by the genuine charm of such ballads as *Maud Muller* and *Barbara Frietchie*, and by his vivid picture of New England rural life in *Snow-Bound*.

WHITTINGTON. Iron and steel centre of Derbyshire. On the Rother, 2½ m. N. of Chesterfield, it has a station on the L.M.S. Rly. In the parish is Revolution House, where the earls of Devonshire and Danby and John Darcy met in 1688, to arrange the invitation to William of Orange. Pop. 11,617.

WHITTINGTON, RICHARD (d. 1423). Lord Mayor of London. The son of Sir William Whittington, a Gloucestershire knight, he became a mercer with a prosperous business in London. After holding many municipal offices he was appointed lord mayor by the king, June, 1397, being re-elected the following year, and in 1406 and 1419. He died in early March, 1423. The popular tale woven about his name appears to have originated in 1605.

WHITTLESEA OR WHITTLESEY. Market town and urban dist. of the Isle of Ely. It is 5 m. from Peterborough on the L.N.E. Rly. The land around is drained by artificial channels. Market day, Fri. Pop. 7,623.

WHITWOOD. Urban dist. and colliery centre of Yorkshire (W.R.). It is on the Calder, 4½ m. N.W. of Pontefract, and is served by the L.M.S. Rly. Pop. 6,000.

WHITWORTH. Urban dist. of Lancashire. It is 3 m. N. of Rochdale on the L.M.S. Rly. The principal industries are mining and quarrying. Pop. 8,782.

WHITWORTH, SIR JOSEPH (1803-87). British engineer. Born Dec. 21, 1803, at Stockport, he set up in business in Manchester in 1833 as a tool maker. He invented a large number of improvements in the manufacture of machine tools, and by micrometric methods obtained absolutely plane metal surfaces which made him famous. He standardised the measurements of screw threads and gauges, one of the greatest steps in mechanical progress. In 1869 he was made a baronet. He endowed 30 scholarships in mechanics, and left nearly £600,000 for education and charitable purposes on his death, Jan. 22, 1887. The engineering firm he founded in Man-

Sir J. Whitworth,
British engineer

chester was amalgamated with that of Sir William Armstrong at Elswick in 1897.

WHOOPING COUGH OR PERTUSSIS. Acute infectious disease characterised by catarrh of the air-passages and a spasmodic cough or "whoop." The organism responsible has not been identified with certainty. Infants and children are specially liable to attack. The early symptoms are those of an ordinary cold. In about a fortnight the characteristic "whoop" begins. Bleeding from the nose is common. This stage may continue for from four weeks to two or three months.

The medical treatment of whooping cough is limited to relieving the severity of the cough by sedative drugs. Whooping cough is rarely fatal among children.

WHORL. In botany, a cluster of leaves or flowers that grow in a circle around the stem. Plants of the order Labiatae are examples of this method of growth. The term is also employed in zoology to describe the volutions of the spire of a univalve shell.

Whortleberry. Alternative name for the shrub better known as bilberry (q.v.).

WHYMPER, EDWARD (1840-1911). British artist and mountaineer. Born in London, April 27, 1840, and educated as a wood engraver, he went in 1860 to the Alps to make sketches of mountain scenery. There he gained a reputation as an intrepid mountaineer, and in 1865 was the first to ascend the Matterhorn (q.v.). In his visits to Greenland, 1867 and 1872, he made valuable collections of fossils, doing the same during his visit to the Andes of Ecuador, 1879-80. In the latter year he made two ascents of Chimborazo. His last expedition of note was to the mountains of the Great Divide, Canada, 1901-5. He died Sept. 16, 1911. He wrote and lectured on mountaineering.

Edward Whymper,
British traveller

WHYTE, ALEXANDER (1837-1921). Scottish divine and author. Born at Kirriemuir, Jan. 13, 1837, the son of a shoemaker, he studied for the Free Church ministry at New College, Edinburgh, and became minister at Free St. John's, Glasgow, in 1866. He removed to Free St. George's, Edinburgh, in 1870, as colleague to Dr. Candlish, and on the latter's death, in 1873, became sole minister. He was appointed principal of New College in 1909, resigning in 1918. He died Jan. 6, 1921. Whyte was the author of numerous biographical and critical works.

His son, Sir Alexander Frederic Whyte (b. 1883), was a Liberal M.P., 1910-18. From 1920-25 he was president of the Indian legislative assembly, and in 1929 he became political adviser to the government of China.

WHYTE-MELVILLE, GEORGE JOHN (1821-78). British novelist. Born in Fifeshire, June 19, 1821, he entered the Coldstream Guards, retiring with the rank of major in 1849. In the Crimean War he served as an officer in the Turkish cavalry. At his home at Tetbury, Gloucestershire, he wrote many novels dealing largely with the hunting field and country life. Among the best known of these are *Digby*

G. J. Whyte-Melville,
British novelist

Alexander Whyte,
Scottish divine

Grand, 1853; Holmby House, 1860; Market Harborough, 1861; and The Gladiators, 1863. He met his death from a fall in the hunting field, Dec. 5, 1878.

WICK. Burgh, seaport, and county town of Caithness, Scotland. One of the chief centres of the Scottish herring fishery, it is on the E. coast, 20 m. S.E. of Thurso, on the L.M.S. Rly. In the herring season, when workers come in from the neighbouring district to gut and cure the herrings, Wick is one of the busiest fishing ports of Britain. In the vicinity are the ruins of Wick Castle, popularly known as the Old Man of Wick. Pop. 8,115.

WICKEN FEN. Nature reserve in Cambridgeshire. An area of 640 acres, it was acquired in 1928 by the National Trust. It is a haunt of the swallow-tail butterfly. The village is 7 miles from Ely, and has a fine old church.

WICKLOW. Eastern maritime co. of the Irish Free State, in the prov. of Leinster. It has about 36 m. of coastline, obstructed by sandbanks; and its deep glens, valleys, and lakes have won it the name of the garden of Ireland. The vales of Glendalough and Avoca are specially beautiful. From N.E. to S.W. run the Wicklow Mts (Lugnaquilla, 3,040 ft.). Sheep are pastured, and lead, copper, and other minerals are worked. The G.S. Rlys. serve the co. The chief towns are Wicklow, the county town, Bray, and Arklow. The area is 781 sq. m. Pop. 57,591.

Wicklow. Map of the beautiful Leinster county

WICKLOW. Co. town and seaside resort of co. Wicklow, Irish Free State. It lies on a hillside overlooking the mouth of the Vartry river, 28½ m. S.E. of Dublin. Here are remains of Black Castle, rebuilt in the 14th century, and of a Franciscan friary. There are chemical works. Pop. 3,025.

The earldom of Wicklow is an Irish peerage held by the Howard family since 1793. The family seat is at Arklow, and the eldest son bears the courtesy title of Lord Clonmore.

WIDECOMBE-IN-THE-MOOR. Village of Devonshire. It is 5 m. from Ashburton, on the E. border of Dartmoor, and is famous for its church, known as the cathedral of the moor, and for its connexion with the Devon song of Widecombe Fair. Pop. 673.

WIDGEON (Mareca penelopē). British wild duck. It is about 18 ins. long; and the plumage is white on the forehead, chestnut speckled with green on the cheeks and neck, greyish on the back, brown on the wings and tail, and grey beneath; the beak is blue. It occurs in winter about the shores and on inland waters, and breeds in a few localities in Scotland and Ireland.

WIDNES. Borough of Lancashire. On the Mersey, 12 m. S.E. of Liverpool, it is served by the L.M.S. Rly. and the Cheshire Lines Rly., and is connected with Runcorn by a transporter bridge across the river. The town is the chief producer of alkali in Britain. There are also foundries and copper smelting works. Pop. 38,879. See Runcorn.

WIDOW. One who has lost her husband. In 1925, as part of an extension of the scheme of national health insurance, the Government introduced a scheme of pensions for widows and orphans in Great Britain. The widow of an insured man received 10s. a week for herself, 5s. for the first child and 3s. for each other child under 14. In 1929 the scope of the measure was extended. See Pension.

WIELAND, CHRISTOPH MARTIN (1733-1813). German poet. Born Sept. 5, 1733, at Oberholzheim, Württemberg, he studied law at Tübingen, but later devoted himself to literary work. Wieland translated 22 plays of Shakespeare into German, 1762-66. In 1766-67 he wrote a novel, *Agathon*. In 1769 he became a professor at Erfurt, and three years later tutor to the sons of the grand duchess of Saxe-Weimar at Weimar.

Wieland was the first of the literary group that was to render Weimar famous. He started *Der Teutsche Mercur* (The German Mercury), 1773, a literary periodical which had considerable influence, became the friend of Goethe and Herder, and wrote his best known work, the epic *Oberon*, 1780, besides many further stories and poems. He died at Weimar, Jan. 20, 1813.

WIESBADEN. Town and watering place of Prussia. It is 6 m. from Mainz, in a hollow of the Taunus, 3 m. from the Rhine amid beautiful scenery. The buildings include the Gothic market church, the Kurhaus, the court theatre, the palace, until 1918 a residence of the German emperor and before 1866 of the dukes of Nassau, modern town hall and museum picture gallery and library. There are some 30 hot springs. Pop. 151,961.

WIG (shortened form of periwig, from Fr. perruque). Artificial head of hair. Wigs were worn by Persians, Greeks, and Romans, and were commonly used by actors. Gentlemen's wigs became popular in France under Louis XII, who wore them to conceal his baldness. Under Louis XIV they flowed over the shoulders in curls tied with ribbons. In England after 1660 they gradually became general among gentlemen, the full-bottomed wig being later replaced by the smaller peruke or tie-wig, originally used in travelling and campaigning. The wearing of wigs gradually declined in the latter half of the 18th century.

Widgeon. Male bird of the species of British wild duck

Wig. Principal fashions in men's wigs. 1. Full-bottomed, 17th century. 2. Early Georgian, c. 1730. 3. Bob wig, c. 1750. 4. Clerical wig, c. 1850. 5. English judge's and 6 barrister's wigs. See below

WIGAN. County borough and market town of Lancashire. It is 18 m. N.W. of Manchester, on the L.M.S. Rly., and is the centre of a rich coal field. There are cotton mills and metal works. The church has some old and interesting features. Market day, Fri. Pop. 91,200.

WIGHT, ISLE OF. Island off the S. coast of England. Separated from the mainland by the Solent and Spithead, it covers 147 sq. m. It is included in the geographical county of Hampshire, but has its own county council. Newport on the Medina, is the capital.

The island is noted for its mild climate, and round the coast are watering places, Shanklin, Sandown, Ventnor, Ryde, Cowes, and Freshwater. Stretching W from Ventnor is the Undercliff. Chineses, ravines running into the land add to the beauty of the coast. Chalk downs traverse the island from E. to W., culminating in St. Boniface Down, 787 ft.

Roman remains have been found at Carisbrooke and elsewhere, and there is a Roman villa at Brading. Carisbrooke is noted for its castle. At Quarr Abbey are remains of a Benedictine house. The island is served by the Southern Rly. A

service of steamers is maintained between Portsmouth and Ryde, Southampton and Cowes, and Lynington and Yarmouth. Agriculture is the chief industry, and there is some fishing. In 1928 a scheme for supplying the whole island with electricity was launched. Pop. 94,666. See Carisbrooke; Cowes; Hampshire; Osborne House.

WIGMORE. Village of Herefordshire. It is 8 m. S.W. of Ludlow, and contains the ruins of a 12-14th century castle and vestiges of an Augustinian priory. Pop. 400.

WIGSTON MAGNA. Urban dist. of Leicestershire. It is 4 m. S. of Leicester, on the L.M.S. Rly. From its two fine church steeples it is sometimes called Wigston Two Steeples. Pop. 10,000.

WIGTON. Urban dist. and market town of Cumberland. It is 11 m. S.W. of Carlisle, on the L.M.S. Rly. The town has a trade in timber, and breweries and tanneries. Market day, Tues. Pop. 3,656.

WIGTOWN. Burgh, seaport, and co. town of Wigtownshire, Scotland. On Wigtown Bay, 8 m. S. of Newton Stewart, it is served by the L.M.S. Rly. In the parish churchyard are the graves of the Wigtown Martyrs, a young girl and an old woman who, for refusing to take the oath of abjuration, were tied to a stake at the mouth of the little river Bladenoch and left to drown. Pop. 1,299.

WIGTOWNSHIRE. County of Scotland. With an area of 487 sq. m., it lies in the extreme S.W. forming part of the district of Galloway. The coast is indented by Loch Ryan, Luce Bay, and Wigtown Bay. The double peninsula on the W is known as the Rhinns of Galloway: the S.E. projection as the Machers, and the upper district as the Moors. The coast is bold and rocky, the headlands including the Mull of Galloway. The chief industries are the rearing of sheep and cattle, and the growing of oats and other crops. Dairy farming is carried on. The county is served by the L.M.S. Rly. Wigtown

Wigtownshire. Map of the Galloway county

is the county town, others including Portpatrick, Stranraer, and Newton Stewart. Pop. 30,783. See Galloway.

WIGWAM. Name in popular use for various types of American Indian dwelling. It denotes primarily the permanent Algonquian hut, conical or beehive-shaped. See *illus.* below.

WILBERFORCE, SAMUEL (1805-73). British prelate. Born at Clapham, Sept. 7, 1805, a son of William Wilberforce, he was ordained in 1828. In 1830 he was made rector of Brightstone, Isle of Wight, and in 1840 rector of Alverstoke. In 1845 he became dean of Westminster, but in the same year was chosen bishop of Oxford. Translated to Winchester in 1869, he was accidentally killed near Dorking, July 19, 1873.

Samuel Wilberforce.
British prelate

A speaker of great eloquence and remarkable for his ready wit, he excelled in reconciling or attempting to reconcile men of diverse opinions; hence his nickname of Soapy Sam.

WILBERFORCE, WILLIAM (1759-1833). British reformer. Born at Hull, Aug. 24, 1759, of an old Yorkshire family, he became M.P. for Hull in 1780, and was soon prominent both in society and in the House. In 1784 he was returned as M.P. for Yorkshire, and later represented Bramber. In 1788 he threw his whole energy into the cause of liberating the slaves. With Clarkson and others he carried on a vigorous agitation, and saw some of the fruits of his labours in the Act of the slave trade, and that

William Wilberforce
British reformer
After Lawrence

1807 which ended for emancipating the slaves. He died in London, July 29, 1833.

WILCOX, ELLA WHEELER (1855-1919). American poet and essayist. She had a talent for writing the acceptable commonplace. Her output of verse was enormous, and her volumes extremely popular in Britain no less than in the U.S.A. She died at Shortbeach, Conn., Oct. 30, 1919.

WILD, SIR ERNEST EDWARD (b. 1869). British lawyer. Born Jan. 1, 1869, at Norwich, in 1893 he became a barrister and built up a reputation as an advocate, especially in criminal cases. He was returned in 1918 as Unionist M.P.

for the Upton division of West Ham, and in 1921-22 actively supported the Coalition government. Made K.C. in 1912, he was knighted in 1918. In 1922 he was appointed recorder of London.

WILD, JONATHAN (c. 1662-1725). English criminal. He became one of the most notorious receivers of stolen goods in London, and blackmailed all those who came to him. He organized one of the largest bands of thieves, pickpockets, burglars, etc., ever known. A riot which he provoked was the beginning of his downfall. He was found guilty of being concerned in stealing lace, sentenced to death, and hanged at Tyburn, May 24, 1725. Fielding wrote a satire, *History of the Life of the late Mr. Jonathan Wild*, 1743.

WILDE, JAMES OR JIMMY (b. 1892). British boxer. Born at Tylorstown, Wales, he worked in the coal mines. A skilled boxer, he soon came to the front as a fly-weight. On Feb. 14, 1916, he defeated Joe Symonds in 12 rounds for the Lonsdale belt for fly-weights, and the following year retained the title in a contest with Taney Lee, whom he beat in 11 rounds. On March 12, 1917, he won the belt outright, and retained the title until 1924.

Oscar Wilde,
Irish author
Downey

WILDE, OSCAR FINCILL O'FLAHERTY WILLS (1856-1900). Irish author and dramatist. Born in Dublin, Oct. 15, 1856, he was educated at Trinity College, Dublin, and at Magdalen College, Oxford, where he won the Newdigate with his poem, *Ravenna*. A man of brilliant wit and exuberant fancy, he founded the aesthetic cult satirised in Gilbert and Sullivan's opera, *Patience*, 1881, and R. S. Hichens' novel, *The Green Carnation*, 1894; and the theories of which he set forth in *Intentions*, 1891. In 1895 he was sentenced to two years' hard labour under the Criminal Law Amendment Act, and died amid squalid conditions in Paris, Nov. 30, 1900.

His chief works include a novel, *The Picture of Dorian Gray*, 1891; five plays, *Lady Windermere's Fan*, 1892; *A Woman of No Importance*, 1893; *Salomé* (in French), 1894; *An Ideal Husband*, 1899; and *The Importance of Being Earnest*, 1899; *The Ballad of Reading Gaol*, published in 1898 as by C. 3. 3.; and *De Profundis*, 1905.

WILDER, THORNTON NIVEN (b. 1897). American novelist. Born at Madison, Wisconsin, April 17, 1897, he passed through Yale and Princeton universities and was for five years a schoolmaster in New Jersey. In 1926 he published a novel, *The Cabala*, and in 1927 *The Bridge of San Luis Rey*, which gave him an international reputation.

WILDERNESS. Any wild and desolate region. The term is specially applied to a district in N.E. Virginia, extending along the S. bank of the Rapidan from Mine Run to Chancellorsville. Famous in the American Civil War, it was here that the battle of Chancellorsville was fought in May, 1863, and a year later Grant conducted a campaign known as the Wilderness campaign against Lee.

Wigwam of the Blackfeet Indians,
in the Glacier National Park, Montana.
See above

WILHELMINA (b. 1880). Queen of the Netherlands. Daughter of William III, of the family of Orange-Nassau, she was born at The Hague, Aug. 31, 1880, and succeeded to the throne in Nov., 1890. For eight years her mother acted as

regent, and Wilhelmina was crowned Sept. 6, 1898. In Feb., 1901, she married Henry, duke of Mecklenburg-Schwerin, by whom she had a daughter, Juliana (h. 1909).

WILHELMSHAVEN. Seaport of Germany. It stands on Jade Bay, an opening of the North Sea, 41 m. from Bremen. The port was founded on land purchased in 1853 by Prussia from Oldenburg and was named after King William I. The harbour was opened in 1869 and became Germany's chief naval base on the North Sea. Until 1918 it was strongly fortified. Pop. 30,000.

WILKES, JOHN (1727-97). British politician. Born at Clerkenwell, he became M.P. for Aylesbury, 1757. He founded *The North Briton*, June 5, 1762; and was committed to the Tower for libel in No. 45 of that paper, in which he had virulently attacked Bute and Bute's successor in the premiership. Released on the ground of privilege, he became a popular hero with the cry, *Wilkes and Liberty!* But the libel and publication of his *Essay on Woman* led later to his expulsion from the House of Commons, a sentence of 22 months' imprisonment, and a fine of £1,000, 1768. He was four times re-elected, as each time the House refused to let him take his seat. He was sheriff of London and Middlesex, 1771, lord mayor of London, 1774, M.P. for Middlesex, 1774-90, and city chamberlain, 1779-97. Wilkes died Dec. 26, 1797.

John Wilkes,
British politician

WILKIE, SIR DAVID (1785-1841) Scottish painter. Born at Cults, Fifeshire, Nov. 18, 1785, he began to study art at the Trustees' Academy, Edinburgh, and later moved to London and entered the R.A. schools. His success was rapid and great. *The Village Politicians* was followed by *The Blind Fiddler*, 1807; *The Rent Day*, 1807; *Blind Man's Buff*, 1813; *The Letter of Introduction* 1814; *Distraint for Rent*, 1816; *The Penny Wedding*, 1819; and *Reading a Will*, 1821. He was elected A.R.A. in 1809, and R.A. in 1811. He died June 1, 1841. The most popular of Wilkie's many works are those of homely Scottish life.

WILKINS, SIR GEORGE HUBERT (b. 1888). Australian explorer. Born Oct. 31, 1888, he was photographic correspondent with the Turkish troops in the Balkan War, 1912-13, and in 1913-17 was second in command of Stefansson's Canadian Arctic Expedition. He was second in command of the British Imperial Antarctic Expedition, 1920-21, naturalist with the Shackleton-Rowett Quest Expedition, 1921-23, and leader of the Wilkins Australia and Islands Expedition for the British Museum (Natural History), 1926-27. Later he commanded Arctic and Antarctic expeditions, flying over the North Pole in an aeroplane from Port Barrow in Alaska to Spitsbergen, in April, 1928. See *Antarctic Exploration*; *Arctic Exploration*; *Shackleton*; *Stefansson*.

WILL. In law, the legal instrument whereby a man declares what is to be done with his property after his death. By English law every will, except that of a sailor at sea, or a soldier or sailor on active service, must be in writing. It must be signed by the testator in the presence of two witnesses, both present at the same time. In Scotland, and most other countries, a will signed by the testator, and written entirely by him with his

own hand, is good without witnesses. A will made by a British subject abroad is valid in the United Kingdom if it is made according to English form (by an Englishman) or Scottish form (by a Scotsman). A will made abroad by a foreigner will not be recognized in England unless validly made according to the law of the country where it was executed. See Administration; Executor; Intestacy.

WILLARD EDWARD SMITH (1853-1915) British actor. Born Jan. 9, 1853, he won his earliest London successes as Spider in *The Silver King*, at *The Princess's*, 1882, and James Ralston in *Jim the Penman*, at *The Haymarket*, 1886. He was manager of the Shaftesbury Theatre, 1889-90, his season being memorable for his impersonation of Cyrus Blenkarn in H. A. Jones's drama *The Middleman*, and of Judah Llewellyn in *Judah*, by the same author. Willard died Nov. 9, 1915.

WILLENHALL. Urban dist. of Staffordshire. It is 3 m. E. of Wolverhampton, on the L.M.S. Rly. Its manufactures include locks, keys, and bolts. Pop. 19,665.

WILLESDEN. Urban dist. of Middlesex, and a N.W. suburb of London. The largest urban dist. in the country, it includes Brondesbury, Harlesden, Kensal Rise, and Cricklewood, and is an important junction of the L.M.S. Rly. The parish church contains remains of Norman work. Pop. 165,669.

WILLETT, WILLIAM (1857-1915). British builder and promoter of daylight saving. Born at Colchester, he founded the firm bearing his name, with headquarters at Sloane Square, London, S.W. Willett was, however, best known as the promoter of the idea of daylight saving. He died March 4, 1915. Pett's Wood, Chislehurst, has been acquired as a memorial to him. See Daylight Saving.

WILLIAM I (1027-87). King of England (1066-87), known as the Conqueror. He was the illegitimate son of Robert, duke of Normandy, called the Devil, by Arletta, daughter of a tanner of Falaise (q.v.). He obtained from Edward the Confessor and Harold Godwinson promises that he should succeed Edward on the throne of England. When Harold himself accepted the crown in Jan., 1066, in violation of an oath, William landed at Pevensey, and defeated him at the battle of Hastings, Oct. 14, 1066.

William was crowned in Westminster Abbey on Christmas Day, 1066. In 1068 insurrections in the N. and W. provided excuse for huge forfeitures, while stone castles, with royal garrisons, rose at strategic points all over the country. An insurrection in the N., supported by a fleet from Denmark in 1069, was ruthlessly quelled. After 1072 William spent most of his time in Normandy, dying at Rouen Sept. 9, 1087.

WILLIAM II (c. 1056-1100). King of England, called Rufus or the Red King. The second surviving son of William the Conqueror, he was nominated to the English succession by his father in priority to his elder brother, Robert, who succeeded to Normandy when he became king in 1087 the Norman barons revolted in favour of Robert, but were crushed by William, who received ready aid from the English. William proved himself an unscrupulous tyrant. He was killed by an arrow in the New Forest, Aug. 2, 1100.

William I
King of Great Britain
and Ireland
After Netscher

WILLIAM III (1650-1702). King of Great Britain and Ireland, and stadtholder of Holland. He was born at The Hague, Nov. 4, 1650, the son of William II, prince of Orange and stadtholder,

and Mary, daughter of Charles I. The Republicans secured ascendancy in the Netherlands, and the house of Orange was set aside, but on the sudden invasion of Holland by France in 1672, William was called to the office of stadtholder.

In 1688 the English invited William and Mary, the daughter of James II, whom he had married in 1677, to deliver them from the Stuarts, and England and Scotland offered their crowns to them jointly. William accepted, that he might add England to the coalition against France. Half his life was spent at the head of the armies in the Netherlands, where he rarely achieved a victory, but he held the coalition together until Louis was obliged to accept the peace of Ryswick in 1697. His last year was given to forming the Grand Alliance. He died March 8, 1702.

William IV. King
of Great Britain
and Ireland
From a miniature

secure its passage through the House of Lords. He died June 20, 1837.

WILLIAM I (1797-1888). German emperor and king of Prussia. He was born March 22, 1797, the second son of Frederick William III of Prussia, and was a soldier from his youth. He became regent during the illness of his brother, Frederick William IV, in 1858, and succeeded to the throne Jan. 2, 1861. From 1862 Bismarck virtually controlled the state, the king being his instrument in the complications which issued in the Franco-Prussian War and the proclamation of the king of Prussia as German emperor, Jan. 18, 1871. He married Augusta of Saxe-Weimar, and died March 9, 1888.

WILLIAM II (b. 1859). German emperor and king of Prussia, 1888-1918. Born in Berlin, Jan. 27, 1859, he was the elder son of Frederick, afterwards German emperor, and

William II.
Ex-German emperor and
King of Prussia

his wife Victoria, daughter of Queen Victoria. In June, 1888, William succeeded his father as king and emperor, and for 30 years was one of the foremost figures in Europe, especially after 1890, when he dismissed Bismarck and became himself the director of Germany's policy. Autocratic and of a restless and unbalanced temperament, he was nevertheless consistent in his efforts to give Germany a "place in the sun," to maintain her army, extend her colonial empire, foster her trade, and make her heard on all questions of international politics. He firmly believed that he ruled by divine right.

In July, 1914, convinced that he possessed an invincible army, the kaiser decided on war. During its course, as nominal commander-in-chief, he flitted from place to place in the battle areas, refused to read the signs pointing to Germany's downfall in the autumn of 1918, reluctantly abdicated on Nov. 9, and on

Nov. 10 fled into Holland, where the castle of Amerongen (q.v.) was granted for his residence. The treaty of peace declared the ex-kaiser a criminal, and arrangements were made for his trial in London. On Jan. 16, 1920, his extradition was formally demanded, but it was refused by the Dutch government and he continued to live in Holland. The ex-kaiser's defence of his career and policy was translated into English as *Comparative Historical Tabulations* from 1878 to the Outbreak of War in 1914. See Bismarck; Gernany; Hohenzollern; Versailles.

WILLIAM, PRINCE OF ORANGE (1533-84). Dutch soldier and statesman. Known as William the Silent, owing to his conduct when on diplomatic errands. A son of William, prince of Nassau, he was born at Dillenburg, April 25, 1533, and in 1544 inherited the title of prince of Orange. He was brought up in the Roman Catholic faith at the court of Charles V at Brussels. After 1555, when Philip II became ruler of the Netherlands, William took his stand among the nobles who protested against the tyranny of Alva, while about the same time his religious opinions became Calvinistic. When the revolt began in 1572 he was its leader, and acted as such until he was assassinated, July 10, 1584.

WILLIAM OF WYKEHAM (1324-1404). English prelate. Born at Wickham, near Fareham, Hants, he attracted the notice of Edward III, who in 1356 appointed him surveyor of his works at Windsor. From 1359-61 he held no fewer than 19 canonries and other ecclesiastical offices, culminating in the bishopric of Winchester and the lord chancellorship, both in 1367. Forced to resign the chancellorship in 1371, he was impeached on charges of misapplication of the revenues, and deprived of his emoluments. On the accession of Richard II 1377, Wykeham received a full pardon, was reinstated in his bishopric, and was again lord chancellor, 1380-91. He died Sept. 27, 1404. William of Wykeham will always be remembered as the founder of colleges at Winchester and Oxford. See Winchester College; Windsor Castle.

WILLIAMS, BRANSBY (b. 1870). British actor. Born Aug. 14, 1870, he made his name as an impersonator of popular actors. He appeared at the principal London music halls, where his studies of characters from Dickens, including Micawber, Peggotty, Uriah Heep, Bill Sikes, Pecksniff, Chadband, and Mrs. Gamp proved unfailingly popular. In 1922 he produced David Copperfield at Brixton, doubling the parts of Micawber and Peggotty.

WILLIAMS, SIR GEORGE (1821-1905). Founder of the Y.M.C.A. He was born at Dulverton, Oct. 11, 1821, and in 1841 became an assistant in the drapery house of Hitchcock & Co., London, of which he became head. He arranged prayer meetings among his fellow employees, and in 1844, with eleven other young men, founded the Young Men's Christian Association (q.v.), of which he became president in 1886. Knighted in 1894, he died Nov. 6, 1905.

WILLIAMS, JOHN (1796-1839). British missionary. Born at Tottenham, June 20, 1796, he was sent by the L.M.S. in 1816 as a missionary to the Society Islands. Here and in the neighbouring islands he did excellent work. He was murdered by cannibals in Erromanga, Nov. 20, 1839.

William the Silent
After J. van Mierevelt

William I.
German Emperor

Sir George Williams,
Founder of Y.M.C.A.
Elliott & Fry

WILLIAMS, ROGER (c. 1600-84). English colonist and writer. Born probably in London, he took orders in the Church of England, but became a nonconformist and left England for America in 1631. Landing in Massachusetts, he became pastor of the church in the Puritan stronghold of Salem. In 1636 founded a settlement on Narragansett Bay, which he called Providence. The first Baptist church in America was established by him. He visited England in 1643 to obtain a charter for Rhode Island Colony, and again in 1651-54, when he became acquainted with Cromwell. From 1654-58 he was president of the colony.

WILLINGDON, FREEMAN FREEMAN-THOMAS, 1ST VISCOUNT (b. 1866). British administrator. Born Sept. 12, 1866, he was A.D.C. to Lord Brassey when governor of Victoria, 1895. Liberal M.P. for Hastings, 1900-6, and for the Bodmin div. of Cornwall, 1906-10, he was a junior lord of the treasury, 1905-12, governor of Bombay, 1913-10, and of Madras 1919-24. Created a baron, 1910, he was promoted viscount, 1924. In 1926 he succeeded Viscount Byng as governor-general of Canada, and became Viceroy of India, 1931.

Viscount Willingdon,
British administrator
H. W. Barnett

WILLINGTON. Urban dist. of Durham. On the Wear, 4 m. N. of Bishop Auckland, it is the centre of a colliery dist., with a station on the L.N.E. Rly. Pop. 9,197.

WILLOUGHBY, SIR HUGH (c. 1500-54). English explorer. Son of Sir Henry Willoughby of Risley, he served in the Scottish war of 1544, when he was knighted. In 1553 he was dispatched in command of three vessels to find a north-east passage to India and Cathay. The ships were dispersed by a gale off the Norwegian coast, but Willoughby's and one of the other vessels made the harbour of Arzina, in Lapland, where they all perished of scurvy.

Sir Hugh Willoughby,
English explorer
Wollaton Hall

WILLOW (*Salix*). Genus of trees and shrubs of the order Salicaceae. They are chiefly natives of the N. temperate regions, and some attain to a height of 80 ft. One of the commonest species is the crack willow (*S. fragilis*), so called from the readiness with which the branches break from the stem. The dwarf or shrubby species of willows are known as osiers (q.v.). The wood of the willow is used for cricket bats, chairs and other articles. The weeping willow (*S. babylonica*), native of E. Asia, is so called on account of the drooping habit of its leaves. The willow of the Babylonian district is really a species of poplar.

Willow. Leaves and male catkins of *Salix fragilis*

WILLOW HERB, ROSEMARY OR FRENCH WILLOW (*Epilobium angustifolium*). Perennial herb of the order Onagraceae, native of Europe, N. and W. Asia, and America. It has unbranched stems 4 ft. high, with alternate lance-shaped leaves. The stems end in a long spray of rosy-purple flowers, each an inch across. The slender seed capsules are 3 or 4 ins. long, and the seeds are attached to a bundle of long silky hairs.

WILLOW PATTERN WARE. Class of the L.M.S. Rly., and is largely residential. The parish church of S. Bartholomew contains a fine rood screen and monuments. Pop. 8,286

English chinaware printed with an elaborate design of Chinese origin. It was first produced about 1780 by Thomas Turner (1749-1809) at Caughley, Shropshire. The design, in blue on a white or bluish-white ground, represents a river with houses, gardens, a bridge, trees, human figures, and birds, and is supposed to illustrate the story of a mandarin's daughter who eloped with her father's secretary, the couple when pursued being transformed into a pair of doves. See Chinaware; Pottery

Willow Pattern Ware. Plate showing the story of the Chinese mandarin's daughter

WILLS. Name of a family famous in the tobacco trade and in the public life of Bristol. In the 18th century Henry Overton Wills (1761-1826) joined his father-in-law, William Day, in the business of tobacco manufacturers. This became later the firm of W. D. & H. O. Wills, its heads being the two sons of H. O. Wills the elder. W. D. Wills had a son, William Henry Wills (1830-1911), the first head of the Imperial Tobacco Co., formed in 1901. He was made a baronet in 1890 and Baron Winterstoke in 1906. He died Jan. 29, 1911, when his titles became extinct. In 1929 G. A. Wills was made Lord Dulverton.

WILLS, WILLIAM GORMAN (1828-91), British dramatist. Born at Kilmurry, he came to London, and attained some vogue as a portrait painter. He wrote a number of dramas, some of which still hold the stage. The best known are Charles I, 1872; Jane Shore, 1876; and A Royal Divorce, 1891. He was also the author of the song, I'll sing thee songs of Araby. He died Dec. 13, 1891.

William J. Wills,
Australian explorer

WILLS, WILLIAM JOHN (1834-61). Australian explorer. Born at Totnes, Devonshire, Jan. 5, 1834, he emigrated to Victoria in 1852, and in 1860 joined the expedition to cross the continent from south to north under Robert O'Hara Burke (q.v.), becoming second in command. With a few companions Wills and Burke pushed on to within a few miles of the Gulf of Carpentaria, but on their return they were overtaken by starvation, and all but one man died at Cooper's Creek, June, 1861.

WILMINGTON. Village of Sussex, 6 m. N.W. of Eastbourne. The ruins of a Benedictine priory, founded in 1088, are embodied in a farmhouse. On the down near is the Long Man of Wilmington, a gigantic figure, 230 ft. high, cut in the side of the hill. Pop. 200.

WILMINGTON. City and port of entry of Delaware, U.S.A. It stands on Delaware river and Christiana and Brandywine Creeks, 26 m. S.W. of Philadelphia. The Old Swedes' Church, Holy Trinity, erected in 1698, is probably the oldest church in the U.S.A. in which services are still held. Pop. 122,049.

Wilmington, in North Carolina, is a port of entry on Cape Fear river, about 30 m. from its embouchure into the Atlantic. Pop. 42,272.

WILMSLOW. Urban dist. of Cheshire. It is 6 m. N.W. of Macclesfield, on

Willow Herb. Spikes of the rosy flowers

the L.M.S. Rly., and is largely residential. The parish church of S. Bartholomew contains a fine rood screen and monuments. Pop. 8,286

WILSON, SIR ARTHUR KNYVET (1842-1921). British sailor. Born March 4, 1842, he entered the navy in 1855, and saw active service in the Crimean War, the China War of 1858, and the Egyptian War, winning the V.C. in the last for conspicuous gallantry at El Teb, Feb. 29, 1884. He was controller of the navy, 1897-1901, commanded the Channel and Home fleets successively from 1901 to 1907, and was first sea lord at the admiralty, 1910-11. He died May 25, 1921.

Sir Henry H. Wilson,
British soldier
Russell

WILSON, SIR HENRY (1864-1922). British soldier. Born May 5, 1864, he served in Burma, 1885-87, and in the S. African War. He was assistant director of staff duties, war office, 1904-6; commandant of the staff college, 1907-10; and director of military operations, 1910-14. On the outbreak of the Great War he went to France as assistant chief of staff to Sir John French, was later a corps commander, then chief liaison officer with the French command. He returned to France in 1917 as the British military representative on the Allies' war council at Versailles. In 1918 he became chief of the imperial staff. He was knighted in 1915, made a baronet, and promoted field-marshal in 1919 and awarded £10,000. He was elected M.P. for North Down in 1922, and became a trenchant critic of the government's Irish policy. Assassinated in London, June 22, 1922, he was buried in S. Paul's Cathedral.

WILSON, JOHN (1785-1854). Scottish author, also known by his pen-name of Christopher North. He was born at Paisley, May 18, 1785, and later settled in Edinburgh. He became connected with Blackwood's Magazine, and with Lockhart was the mainstay of that periodical. In 1820 Wilson was appointed professor of moral philosophy at Edinburgh. He died April 3, 1854.

WILSON, RICHARD (1714-82). English artist. The son of a clergyman, he was born in Montgomeryshire, Aug. 1, 1714. He studied art in London and passed some years in Italy. His first paintings were portraits, but later he turned to landscape and became one of the most famous of English landscape painters. Of a large number of works, Niobe and several others are in the National Gallery, London, and many are in private collections. Wilson was one of the original members of the Royal Academy and in 1776 became its librarian. He died May 15, 1782.

WILSON, THOMAS WOODROW (1856-1924). American politician and author. Born at Staunton, Virginia, Dec. 28, 1856, he was of mixed Scottish and Irish stock. He became a lawyer and practised for a time at Atlanta, Georgia.

Woodrow Wilson,
American president

Already a student of political science, his book, Congressional Government, appeared in 1885. In the same year he was chosen associate professor at Bryn Mawr College, moving in 1888 to the

Wesleyan University as professor of economics. In 1890 he became professor of jurisprudence and politics at Princeton, and from 1902-11 he was its president. In Nov., 1910, Wilson, a Democrat, was elected governor of New Jersey, where he initiated vigorous reforms. This brought him before the public, and in 1912 he was elected president of the U.S.A.

When the Great War broke out, Wilson refused to judge between the combatants. He kept the U.S.A. out of the war, and was re-elected president in Nov., 1916, by a narrow margin. But his second term had hardly begun when the German unlimited U-boat campaign forced him to assent to America's entry into the war. In an address to Congress, Jan. 8, 1918, he laid down his 14 points as a programme of world peace. After the armistice he went to Paris as the head of the U.S. delegation. He achieved there his first concern, the foundation of the League of Nations, but in the U.S.A. the idea was met with bitter hostility and opposition. He left office March 4, 1921, and died Feb. 3, 1924. See United States; Versailles, Treaty of.

WILTON. Borough of Wiltshire. It stands on the river Wylye, 2½ m. from Salisbury, on the Southern Rly. The church of SS. Mary and Nicholas is a Romanesque building. Wilton house, seat of the earl of Pembroke, is famous for its associations with Shakespeare, Sir Philip Sidney, and other Elizabethans, and for its collection of pictures and works of art. Wilton gives its name to a kind of carpet which is now made elsewhere. Pop. 2,011.

WILTSHIRE or **WILRS.** County of England. In the S. of the country, it covers 1,350 sq. m. It is divided into two portions by the Vale of Pewsey: the N. and more fertile one

includes the Marlborough Downs, while the S. one contains Salisbury Plain. Inkpen Beacon is 954 ft. high. The county embraces parts of Cranborne Chase and the New Forest, and the whole of Savernake Forest. The rivers include the Bristol Avon, Salisbury Avon, and Kennet. The chief industries are the keeping of sheep, dairy farming, and the production of cheese and bacon. Salisbury is the county town, others including Swindon, Marlborough, Devizes, and Wilton, after which the county is named. The G.W., Southern, and L.M.S. Rlys. serve the county. Pop. 292,208.

WILTSHIRE REGIMENT. Regiment of the British army, known officially as The Duke of Edinburgh's (Wiltshire Regiment) until 1920, when it became The Wiltshire Regiment (Duke of Edinburgh's). This regiment was originally the 62nd and the 99th Foot. Both were raised in Scotland. It fought under Wolfe at Quebec, served through the American War of Independence, earning the nickname of the Springers, and went to Spain in time to take part in the closing battles of the Peninsular War. Later it was engaged in the Sikh War and the Crimean War.

Wiltshire Regiment badge

in time to take part in the closing battles of the Peninsular War. Later it was engaged in the Sikh War and the Crimean War.

In addition to its three regular battalions, four territorial and three service served in the Great War. The 1st and 2nd were part of the expeditionary force, and fought in all the leading battles of 1914. The depot is at Devizes.

WIMBLEDON. Borough of Surrey. It is 7 m. from London and is served by the Southern and District Rlys. Its common of 1,000 acres, public property since 1871, was the scene of the N.R.A. meetings, 1860-89, and has remains of a Celtic earthwork, called Caesar's Camp. In 1922 it was enlarged by 42 acres, laid out as a memorial garden to service men of the district who fell in the Great War. Wimbledon is the headquarters of the All-England Lawn Tennis Club. In 1929 an electric rly. to Sutton was opened. Pop. 61,451.

WIMBORNE.

Urban dist. and market town of Dorset. It is 6 m. N. of Poole, on the Southern Rly. Probably a Roman station, it grew to importance with the building of the collegiate church or minster, founded by Edward the Confessor. Cruciform in plan, it has a transitional Norman tower and a 15th century Perpendicular tower at the W. end. Market day, Tues. Pop. 3,742.

The title of baron Wimborne was given to Sir Ivor Guest (1835-1914) in 1880. His son, Ivor Churchill Guest, the 2nd baron, having been

Winchester. West front of the cathedral, notable for its nave the longest in England. See below

lord lieutenant of Ireland 1915-18, was made a viscount in 1918.

WIMEREUX. Watering place of France. It stands 4 m. N. of Boulogne-sur-Mer, at the mouth of the small Wimereux stream. Wimereux was a British hospital base during the Great War and a headquarters of the W.A.A.C., and during the later stages of the withdrawal of the British Expeditionary Force became general headquarters. Pop. 1,498.

WINCEBY. Village of Lincolnshire. It is 5 m. E. of Horncastle, and is noted for a skirmish in which the parliamentary forces routed the royalists, Oct. 11, 1643.

WINCH (A.S. wince, bent handle). Device for drawing a load or lifting a weight. In its simple form it consists of a pair of frames spaced apart, fixed to a common base and providing secure bearings for a shaft which projects on either side, where it is twice bent to a right angle to form a cranked handle. A rope is secured to the shaft and wound round it by turning the handle. By this means a load may be drawn along, or by passing the rope round an elevated pulley a weight may be lifted.

WINCHCOMB. Market town of Gloucestershire. It lies in a valley of the Cotswolds, 7 m. N.E. of Cheltenham, on the G.W. Rly., and has a fine late Perpendicular church. Market day, Wed. Pop. 2,741.

WINCHELSEA. Seaport of Sussex. It is 8 m. N.E. of Hastings. The original town was made a Cinque Port by William I and was an important seaport. The new Winchelsea was founded by Edward I and was a busy seaport, but in the 16th century the harbour became choked, and since then the town has dwindled in size, although until 1832 it returned two members to Parliament. Its buildings include the parish church of S. Thomas Becket, the court house, and the old town gates. There is a station on the Southern Rly. Pop. 700.

WINCHESTER. City and co. town of Hampshire. It stands on the Itchen, 12 m. from Southampton, and is served by the Southern and G.W. Rlys. The cathedral, one of the longest Gothic churches in Europe, has some magnificent features, especially the nave. It is largely Gothic, but some Norman work survives. Early in the 20th century the foundations were found to be faulty and an extensive restoration scheme was completed. Of the other churches in the city S. Swithun's, a tiny building over the King's Gate, is the most notable. Secular buildings include Wolvesey Castle, the city cross, the Great Hall, containing the so-called round table of King Arthur, and Winchester College (q.v.). The West Gate stands at the top of the High Street, and the King's Gate leads to the close.

Winchester became the capital of Wessex, and for a time of England. Here the Anglo-

Wiltshire Map of the agricultural and pastoral county of England

Saxon kings held their court and here many are buried. William I built a castle here. Pop. 23,791. See Alfred; Almshouses; Austen, J.; Cross; Pilgrims' Way; Reredos.

WINCHESTER, MARQUESS OF. English title, the premier of its class. It has been borne by the family of Paulet since 1551, when Sir William Paulet was made marquess of Winchester. Charles, the 9th marquess, was made duke of Bolton in 1689, and from then until 1794 the two titles were united. In that year Henry Paulet, 6th duke and 11th marquess, died without sons; the dukedom became extinct, but the marquessate passed to George Paulet, a descendant of the 4th marquess.

WINCHESTER COLLEGE. English public school. Founded by William of Wykeham in 1382, it is the oldest of the great public schools, and on it the existing public school system has been largely modelled. Its full title is the College of S. Mary at Winchester, and it has had from the first a close connexion with New College, Oxford, where scholarships are still reserved for Winchester boys. The nucleus of the school are the chapel, cloisters, quadrangle, and other buildings of the 14th century. New cloisters form the Great War Memorial.

WINCKELMANN, JOHANN JOACHIM (1717-68). German art critic. Born at Stendal in Saxony, Dec. 9, 1717, he secured in 1754 a librarian's appointment at Rome, where he devoted himself to the study of antiquities. The result was his *History of Ancient Art*, 1764, which led to his becoming superintendent of antiquities at Rome. He was murdered June 8, 1768.

WINCOBANK. Parish in Yorkshire (W.R.). In the Sheffield district, it has a station on the L.N.E. Rly. There are remains of a British camp in the vicinity. Pop. 8,100.

WIND. Air in motion. The general planetary circulation of the atmosphere is as follows: In equatorial latitudes there is a belt, the doldrums, where low pressure calms, and light, variable winds are experienced. Towards this belt two great sets of winds blow from the horse latitudes, high pressure calms located about 30 deg.-50 deg. north and south of the equator. These are the trade winds, which blow equatorwards from the north-east in the northern hemisphere, and from the south-west in the southern hemisphere. From the horse latitudes other winds, the westerlies, blow polewards. North of the equator these are the south-westerlies; in the southern hemisphere they blow from the north-west, and are known as the trade winds.

Winds exercise a great influence on climate, not only directly, but also indirectly through the great ocean currents which they set in motion. See Air; Anemometer; Beaufort Scale; Meteorology; Monsoon; Trade Wind.

WINDERMERE. Lake of Westmorland. Its length is 10½ m., and its breadth from ½ to 1½ m. Places on its banks include Lakeside, at the foot, Waterhead at the other end, and Bowness in the middle. Various short streams flow into it, and its waters flow by the Leven

Windermere, Westmorland. Ferry and western shore of the lake from the Nab

to Morecambe Bay. Steamers ply regularly on the lake. See Lake District.

The urban dist. of Windermere is on the E. shore of the lake, 4 m. S.E. of Ambleside. It has a station on the L.M.S. Pop. 6,496.

WINDHAM, WILLIAM (1760-1810). British statesman. Born May 3, 1760, and educated at Eton and Oxford, he became, 1783, secretary to Lord Northborough, lord-lieutenant of Ireland. He was elected M.P. for Norwich, 1784, and retained that seat for 18 years. A staunch follower of Pitt, he was secretary at war, with a seat in the cabinet, 1794-1801, and in 1806 was secretary of state for war and for the colonies in Grenville's All the Talents ministry. He died June 4, 1810. Consult his *Diary*, 1784-1810, ed. Mrs. Baring, 1866.

WINDHOEK OR WINDHUK. Capital of the South-West Africa Protectorate. A rly. centre, it lies in good pasture country 253 m. from Walvis Bay. Pop. 4,602 (Europeans).

WINDLASS. Device for hoisting or hauling. It is used for raising weights, lifting water from a well, or on shipboard for raising the anchor. A common and simple form consists of a horizontal harrel for the hauling rope, supported in vertical standards and rotated by a cranked handle. See Winch.

WINDMILL. Mill operated by the wind. Large windmills have four, five, or six arms, 20-50 ft. long, carrying sails. A sail may be canvas backed by a wooden lattice attached to the arm, or a series of wooden slats arranged transversely.

The old-fashioned post mill, which revolved as a whole on a central vertical pivot, embedded in a masonry base, has been superseded by the tower mill, with a fixed body and a revolving top. The sails are kept square to the wind automatically by a fantail at the rear, driving the top through gearing. The sail-shaft, inclined upwards at an angle of about 10 deg. to the horizontal, has a large toothed wheel on its back end, engaging with another wheel on the vertical shaft of the mill or, if the sails drive a pump, on a secondary crank-shaft.

WINDOW. In a building, an opening in the wall for the admission of light and air; in modern usage, an opening filled with glass.

Tracery enormously enhanced the importance of the window as an architectural feature. From being a narrow slit in the wall, the Gothic window rapidly increased in width, and the single fixed light gave place to elaborately fitted casements with leaded panes. By the end of the 14th century immense windows, divided into many lights, had become common, and gave the opportunity for new devices of tracery. Renaissance influences asserted the square-headed type as the only one for Europe, though during the Tudor period the division of lights by mullion (q.v.) and transom (q.v.) gave the British window a purely national character. It was not before the middle of the 19th century that the large shop-window of plate glass was employed in the great European capitals. See Bow Window; Clerestory; Dormer; Glass; Gothic Architecture; Rose Window; Stained Glass.

WINDOW TAX. In Great Britain a tax was levied on windows in houses containing more

than six. It was first imposed in 1695, and was repealed in 1851. See Ancient Lights.

WINDSOR, NEW. Borough and market town of Berkshire. On the right bank of the Thames, 22 m. from London, it is served by the G.W. and Southern Rlys. Once a chapelry of Clewer, it was made a free bor. and given a market by Edward I. It is chiefly famous as the site of Windsor Castle (q.v.). Other buildings include the town hall, completed by Wren, 1686; the parish church of S. John the Baptist, rebuilt in 1822; royal mews, and a museum with Shakespeare relics. Market day, Sat. Pop. (1921) 20,115. The village of Old Windsor lies 2 m. to the S.E. of the town and castle. Edward the Confessor had a palace here.

Windsor, in New South Wales, 34 m. by rail from Sydney, is the seat of the state agricultural college. Pop. 4,240. Another Windsor is a suburb of Brisbane.

WINDSOR. Town and port of Nova Scotia, Canada. It stands at the mouth of the Avon, 45 m. from Halifax, on the C.P. Rly. Its industries include shipping. Gypsum is found. In March, 1919, the business part of the town was destroyed by fire. Pop. 3,591.

WINDSOR. City and port of Ontario, Canada. It stands on the Detroit river, opposite Detroit, U.S.A., has stations on the C.N. and C.P. Rlys., and is connected with Detroit by a tunnel under the river and a steam ferry. Steamers go from here to ports on the Great Lakes and the St. Lawrence river. Electric power is derived from Niagara. Pop. 38,591.

WINDSOR. Family name of the royal house of Great Britain and Ireland. The royal family of Britain belongs, by virtue of the marriage between Queen Victoria and Prince Albert, to the German family known as the house of Saxe-Coburg-Gotha, itself a scion of the family of the dukes and kings of Saxony, known also as that of Wettin. On July 17, 1917, King George V by proclamation declared that henceforward his family should be known as "the House and Family of Windsor." See Albert; George V; Royal Family.

WINDSOR CASTLE. Royal palace of England. Situated on an eminence overlooking the valley of the Thames and the town at its base, it covers, with its grounds, about 12 acres, and is divided into a lower ward, middle ward, and upper ward or quadrangle. In the centre is the Round Tower or Keep; the state and private apartments are on the N.E. and E.

Founded by William I on the site of an earlier fortress, and largely rebuilt and added to by William of Wykeham for Edward III, Windsor Castle was extended and renovated by George III and IV and Queen Victoria. S. George's Chapel, a beautiful example of Perpendicular Gothic, was reopened after extensive restoration in 1930.

The residential parts of the castle, library, etc., form a rich storehouse of artistic and other treasures. In the Home Park, lying N and E. and about 4 m. in circumference, is Frogmore House (q.v.). The Great Park, upwards of 1,800 acres, stocked with fallow deer, lies to the S.; its Long Walk runs in a straight line for nearly 3 m. in the direction of Virginia Water (q.v.). A fragment of Windsor Forest, William I's hunting ground, still exists on the W. side of the Great Park. See illus. p. 1438.

WINDWARD ISLANDS. Southern division of the Lesser Antilles, West Indies. They comprise the British colonies of St. Lucia,

Windmill. Left, tower type in which revolving top (A) is turned by fantail (B) to keep sails in the wind. Right, American or annular type, used for pumping

Windsor Castle. Aerial view of the royal palace. 1. Clewer or Curfew Tower. 2. St. George's Chapel. 3. Windsor Tower. 4. Round Tower. 5. State apartments. 6. Visitors' apartments. 7. Devil's Tower. 8. Henry III's Tower. 9. Henry VIII's Gateway. 10. Salisbury Tower. 11. Garter Tower. See article p. 1437

St. Vincent, Grenada, and the Grenadines (half under St. Vincent half under Grenada), forming the E. barrier to the Caribbean Sea, between Martinique and Trinidad. The group is under a governor and commander-in-chief, though each island has its own institutions, laws, revenue, tariffs, etc. The total area is 524 sq. m. Pop. about 190,000. See St. Vincent; West Indies

WINE. Fermented grapo-juice, used as a drink. For the finest wines only ripe, sound fruit goes to the press. For red wines, the skins, and for certain wines, the stalks, skins, seeds and all are thrown into the vat; these produce tannic and other acids. The best wine is made from juice expressed only by the weight of the grapes themselves. Fermentation is set up naturally, or by adding a wine yeast. Primary fermentation lasts from three or four days to two or three weeks, and the wine is drawn off from the lees and put into fresh vessels, where secondary fermentation takes place. During this process the sugar, or part of it, is converted into alcohol and carbon dioxide. Fermentation is stopped naturally, by reason of its product, alcohol, staying the process; or artificially, by the addition of spirits. A natural wine contains from 7 to 25 p.c. of proof spirit.

The residue, from the wine-press, called marc, is sometimes used in making cheap brandy; that from the fermentation vats, called argol, or lees, contains cream of tartar or acid potassium tartrate. Wine is stored for two, three, or four years to mature, before finally casking or bottling. See Alcohol; Claret; Fermentation; Port Wine; Vine, etc.

WING. Organ of flight in bats, birds, and insects. In the bats it consists of a lengthening of the finger-bones over which, when outspread, is stretched a web of skin, which is continued backwards to include the hind legs from the ankle upwards and the greater portion of the tail. In the bird the fore-limb is lengthened, certain bones are united, and only three of the fingers are represented. The movements of the wing are controlled by powerful muscles attached to the keeled breast-bone. In insects, wings are not modifications of limbs, but of part of the breathing apparatus. They consist of thin horny membrane, variously strengthened by ribs or network of firmer material, and may be naked or covered with minute scales or hairs. There are usually two pairs, but in the flies (Diptera) there is one. See: Bat; Bird; Feather; Insect.

WING. One of the supporting surfaces of an aeroplane. In military aeronautics wing is applied to a division of the Royal Air Force, which, under war conditions, consists of three

squadrons, each squadron comprising three flights of six aeroplanes each with their personnel and matériel. See Aeroplane; Flight.

A wing is under a wing commander, the rank just above that of squadron leader. He ranks equal to a commander in the navy and a lieutenant-colonel in the army.

-Wingate. Parish of Durham. It is 9 m. E. of Durham, on the L.N.E. Rly. There are brickworks and collieries. Pop. 11,424.

WINGATE, SIR FRANCIS REGINALD (b. 1861). British soldier and administrator. Born at Broadfield, Renfrewshire, June 25, 1861, he entered the Royal Artillery in 1880. He saw service in the Nile expedition, 1884-85, the Dongola campaign, 1896, and the Khartoum expedition, 1898. Sirdar of the Egyptian army and governor of the Sudan, 1899-1916, and high commissioner of Egypt, 1916-19, he became general in 1913, G.C.B. in 1914 and a baronet in 1920. His writings include *Mahdism and the Egyptian Sudan*, 1889; *Ten Years' Captivity in the Mahdi's Camp*, 1891.

Sir F. Reginald Wingate, British soldier. Russell

WINGFIELD SCULLS. Sculling race which forms the English Amateur (Seulling) Championship. Instituted in 1890, it is rowed annually in July on the Thames, from Putney to Mortlake, over a course of 4½ m.

WINNINGTON - INGRAM, ARTHUR FOLEY (b. 1858). British prelate. Born Jan. 26, 1858, he was curate of St. Mary's, Shrewsbury, 1884-85; private chaplain to the bishop of Lichfield, 1885-88 and head of Oxford House, Bethnal Green, 1888-97. Rector of St. Matthew's, Bethnal Green, 1895-97, he was bishop suffragan of Stepney and canon of St. Paul's Cathedral, 1897-1901, when he became bishop of London. Unconventional, sympathetic, tireless, and strong in his championship of social causes, Dr. Winnington-Ingram is regarded as one of London's most popular bishops. See Bishop.

A. F. Winnington-Ingram, British prelate. Russell

WINNIPEG. Lake of Manitoba, Canada. It has an area of 9,459 sq. m. It receives the Red river from the S., the Saskatchewan from the W., the Winnipeg, and other streams.

Lakes Manitoba and Winnipegosis send their waters down to Lake Winnipeg, whence the Nelson carries them to Hudson Bay.

WINNIPEG. City and capital of Manitoba, Canada. It stands on a plain at the junction of the Red river and Assiniboine, 1,414 m. from Montreal and 60 m. from the United States boundary. It is an important station on the three trans-continental rly. lines. The buildings include the city hall, parliament buildings, general hospital, and the colleges that compose the university of Manitoba.

Winnipeg is the great market for the grain of the west, and the distributing centre for the needs of the prairie provinces. There are large fur auctions and various manufactures. Electric power for its industries comes from the Winnipeg river. There was a trading post here before 1763, erected by the fur traders, and early in the 19th century a more extensive one, called Fort Garry, was put up. Just outside this a group of houses sprang up after 1850, and to this village the name of Winnipeg was given. Pop. 191,998; Greater Winnipeg, 280,000. See illus. below.

WINNIPEGOSIS. Lake of Canada. In the S. of the prov. of Manitoba, it covers 2,086 sq. m. Various rivers, including the Mossy, Swan, and Red Deer, flow into it, and its waters are carried to Lake Manitoba.

WINSFORD. Urban dist. of Cheshire. It stands on the Weaver, 3½ m. E. of Middlewich, and is served by the L.M.S. and Cheshire Lines Rlys. It is a centre of the salt industry, the salt being carried by river to Liverpool. Pop. 10,957.

Winnipeg, capital city of Manitoba. Portage Avenue East from Carlton Street. See above Courtesy of the Canadian Government

WINSLOW. Market town of Buckinghamshire. Between Aylesbury and Buckingham, 10 m. N.W. of the former, on the L.M.S. Rly., it is an agricultural centre. Market day, Mon. Pop. 1,532.

WINTER ACONITE (*Eranthis hyemalis*). Perennial herb of the order Ranunculaceae. A native of W. Europe, it has a stout creeping root-stock, from which arise the round lobed leaves. The flowers are solitary, pale yellow, and cup-shaped at the summit of a tall stem. It flowers from Jan. to March.

WINTER BERRY or **BLACK ALDER** (*Ilex verticillata*). Shrub of the order Aquifoliaceae. A native of N. America, it grows to a height of 6 ft. and has alternate long, lance-shaped leaves with toothed edges. The small white flowers are succeeded by red berries, about ¼ in. in diameter. The bark is bitter and has been used medicinally.

WINTER CHERRY (*Physalis alkekengi*). Perennial herb of the order Solanaceae. A native of the Caucasus and China, it has a creeping root-stock and scarcely

Winter Cherry. Left, flowers and leaves; right, fruit

branched stems. The leaves are wedge-shaped oval on long stalks, and the calyx becomes enlarged, inflated, and red after the white corolla has dropped. The fruit is a round edible berry of a scarlet colour.

WINTERGREEN (*Pyrola*). Small genus of evergreen perennial herbs of the order Ericaceae. Natives of Europe, Asia, and N. America, they have creeping root-stocks, from which grow most of the leathery leaves. The

Wintergreen. Sprays of *Pyrola rotundifolia*

white, pink, or yellowish flowers are globular.

Wintergreen oil, or oil of gaultheria, is an essential oil with a strongly aromatic odour obtained by distilling the leaves of *Gaultheria procumbens*, a low-growing N. American shrub of the order Ericaceae. It is employed externally in the treatment of rheumatism and mumps.

WINTER'S BARK (*Drimys winteri*).

Small evergreen tree of the order Magnoliaceae. A native of S. America, it has oblong leaves, glaucous beneath, and fragrant white flowers, an inch across. The bark has tonic stimulant properties, and is aromatic.

WINTER SPORTS. Term used for open air sports, mainly on the ice, carried on chiefly by visitors in Switzerland during the winter months. They include skating, tobogganing, sledging, skiing and curling, and are held at St. Moritz, Grindelwald, Mürren, etc.

WINTERTON, EARL. Irish title held by the Turnour family since 1766. The family was founded by Edward Turnour, who was created a baron in 1761, and five years later became Viscount Turnour and Earl Winterton. From him the title has passed in direct male succession to Edward (b. 1883), 6th earl, who was elected M.P. for Horsham in 1904. He was under-secretary for India, 1922-24 and again 1924-29.

WINTHROP, JOHN (1588-1649). English colonist. Born at Edwardstone, Suffolk, Jan. 12, 1588, he helped to found Boston, U.S.A., in 1629, and was four times appointed governor of Massachusetts. Holding strict Puritanical views, he opposed the action of Sir Harry Vane, governor at the time, in allowing Anne Hutchinson to propagate her religious opinions. He died March 26, 1649.

His son, John Winthrop (1606-76), emigrated to America in 1631 and was one of the founders of Ipswich, Saybrook, and New London.

Winton. Old name of Winchester (q.v.). It is used by the bishop as a signature.

Winton. Township in North Queensland. It is 320 m. from Townsville, and is the centre of a rich grazing dist. Pop. 1,400.

WIRE. Thread or slender rod of metal, usually circular in section. The metals chiefly used are highly ductile—gold, silver, copper, etc., and alloys, steel, iron-nickel, etc.

Most wires are made by drawing. For the manufacture of steel wire the billets or ingots of steel are rolled into round rods. The end of the rod is pointed by hammering, filing, or rolling, so that it can pass through the hole in the draw-plate and be gripped ready for drawing completely through. Wires may have to be drawn through a number of dies before they are reduced to the required size. The operations may be separate, or the wires may pass continuously through the series of dies. Soapy water, oil, tallow, wax, etc., are used as lubricants, and in some cases the rod is dipped in a solution of copper sulphate,

which is a preventive of rust. After several drawings the wire generally has to be annealed. See Rope.

WIRELESS. Term used for telephonic and telegraphic communication by means of electro-magnetic waves. In 1863 Clerk-Maxwell announced the existence of electro-magnetic waves, and Hertz in 1888 produced such waves by discharging a condenser across a spark gap. Lodge in 1894 demonstrated that the waves could be used for signalling, and in 1895 Marconi, who had been experimenting for some time, devised a practical apparatus for the purpose, comprising an elevated antenna, condenser, and earth connexion. Branly had invented his filings coherer some five years before, and this, improved by Marconi, was used as a detector of the signals.

In 1896 Marconi demonstrated his apparatus to the British postal authorities, and to the war office and admiralty. In 1898 wireless telegraphy was used in the naval manoeuvres, with a range of 60 miles. Communication between England and France was effected in 1899, and two years later the Atlantic was spanned by wireless. Many ships of the navy were equipped, and wireless was adopted by a number of steamship companies. Lodge in 1897 had utilised the principle of electrical tuning, which he termed syntony, and Marconi in 1900 applied the theory to sending and receiving circuits. The earborundum crystal detector was introduced in 1906, and, until displaced by the thermionic valve, was largely used as a rectifier. Fleming's valve, the diode, was invented in 1904, and the addition of a third electrode by Lee de Forest in 1906 made it a sensitive receiver and a most efficient amplifier of wireless signals. The carrying of wireless apparatus is compulsory on British sea-going ships over 1,600 tons.

In Marconi's spark system a series of highly damped oscillations are sent out at a given frequency, the current being furnished by an alternator. The signals consist of a succession of waves which is interrupted by the key of the sending apparatus to make the longs and shorts of Morse. The quenched spark system utilises a number of spark gaps in series, and the sparks are made to die out very quickly. In the continuous wave system the oscillations are undamped, and a uniform wave is radiated as long as the sending key is depressed. To generate the continuous oscillations a thermionic valve, an alternator, or the electric arc is employed. The arc was first used by V. Poulsen in Denmark in 1903, and the alternator, as a practical proposition, was first employed by R. Goldschmidt in Germany in 1911.

The use of the thermionic valve as a generator is due to Meissner (1913). Its employment to produce a carrier wave train capable of being modulated by speech brought wireless telephony within reach. In tests made for the Italian navy in 1914, Marconi transmitted speech over a distance of 50 miles. In 1915 the Arlington, U.S.A., station, using the Poulsen arc, communicated both with Paris and Honolulu. Marconi telephoned from Ireland to Canada in 1919, and in 1924 the Poldhu, Cornwall, station achieved speech communication with Australia.

COMMERCIAL WIRELESS. In 1927 a public wireless telephone service was opened between London and New York, and in 1929 between London and Sydney, N.S.W. Canada, Mexico, and Buenos Aires are also linked up with London by wireless telephone. These services are worked through the Government station at Rugby, which covers a site of 900 acres.

In 1928 the Government beam wireless services, including the stations at Bodmin, Bridgwater, Grimsby, and Skegness, were leased for 25 years to a merger including 13

Wireless receiver: simple three-valve set. 1. Aerial tuning condenser. 2. Plug-in coils. 3. High-frequency choke. 4. Anode resistance. 5. Low-frequency transformer. 6. Reaction condenser. 7. Aerial series condenser

cable and wireless telegraph companies. The Pacific, West Indian, and transatlantic cables of the post office were sold to the merger. Known as Imperial and International Communications, Ltd., the merger company controls 164,000 nautical miles of cables and 253 cable and wireless stations. The right to carry on the external wireless telephone services of Gt. Britain was reserved by the Government. Besides the beam stations enumerated the merger controls others at Dorchester and Somerton, and all-direction stations at Brentwood, Carnarvon, and Ongar. Communication is maintained between London and Australia, India, Japan, S. Africa, S. America and the U.S.A.

BROADCASTING. The apparatus used for transmission and reception follows the lines of that employed for commercial wireless telephony. Its leading features are dealt with in such articles as Aerial, Amplifier, Beat, Coil, Condenser, Detector, Grid, Loud Speaker, Microphone, Modulation, Potentiometer, Reaction, Rectifier, Resistance, Thermionic Valve, and Transformer.

The opening of the high-powered twin transmitter regional stations by the B.B.C. in 1929 and 1930 extended the range of reception for crystal detectors from 20 to 50 miles, and made it possible for either of two alternative programmes to be picked up with quite simple apparatus. The history of broadcasting is summarised in the article on p. 307.

WIREWORM. Popular name applied indiscriminately to the larvae of many beetles constituting several genera of the family Elateridae. They live a little below the surface of the ground, where they bore into and feed upon succulent roots. They spend several

Wireworm, much enlarged, at the root of a lettuce

years in this stage, then burrow deeper and enter the pupal stage. In the adult state they are known as click beetles (q.v.) or skip-jacks. *Agriotes lineatus*, one of six British species, is indicated in horticultural works as the wireworm.

WIRKSWORTH. Urban dist. and market town of Derbyshire. In a valley at the S. of the Peak, it is 13 m. N.W. of Derby on the L.M.S. Rly. The 13th century church contains relics of ancient sculpture. Market day, Tues. Pop. 3,615.

WISBECH. Borough, market town, and port of Cambridgeshire. On the Nen, in the Isle of Ely, it is 15 m. W. of King's Lynn, on the L.N.E. Rly. There is communication with Cambridge and London by the Wisbech canal. The parish church has Norman remains.

There is a shipping trade in agricultural produce, while agricultural implements, beer, and oilcake are made. Much fruit is grown. Market days, Thurs. and Sat. Pop. 11,316.

WISBY OR **VISBY**. City and seaport of Sweden. It is on the W. coast of the island of Gottland, 44 m. from the mainland and 150 m. from Stockholm. Wisby retains its extensive walls and their accompanying towers. The cathedral of S. Mary is a fine building of the 13th century, with later additions. Other churches include those of the Holy Ghost, S. Clement, S. Catherine, and S. Nicholas. Wisby became a member of the Hanseatic League, and was very prosperous in the 11th-14th centuries. Pop. 10,377.

WISCONSIN. State of the U.S.A. It is bounded in part on the E. by Lake Michigan, N. by Lake Superior, and W. by the Mississippi. An undulating plateau, Wisconsin presents little relief apart from the rocky masses holed by erosion. The St. Croix, Wisconsin, Chippewa, and Black rivers are affluents of the Mississippi, and the Fox, the longest river in the E., flows into Green Bay; Winnebago is the largest of the numerous lakes. The forests yield much lumber. Iron and lead ore and zinc are the chief mineral products. Madison is the capital, but Milwaukee is the most important city. Its area is 56,066 sq. m. Pop. 2,953,000. See American Indians, illus. p. 73.

WISDOM, **BOOK OF**. One of the O.T. Apocrypha, which purports to be the work of Solomon, and in Greek manuscripts is entitled *The Wisdom of Solomon*. It was written by an Alexandrian Jew, probably between A.D. 1 and 40, to counteract the scepticism and Epicureanism represented in the Book of Ecclesiasticus.

WISEMAN, **NICHOLAS** **PATRICK STEPHEN** (1802-65). British prelate. Born at Seville, of Irish parentage, from 1828-40 he was rector of the English College in Rome, where his learning won for him a position in the Vatican library and a professorship in the university. In 1840 he went to England, was ordained bishop, made president of Oscott College, and had charge of the churches in the midland counties. He had previously helped to found *The Dublin Review*. In 1846 he removed to London, and in 1850 Wiseman was made first archbishop of Westminster and a cardinal. He died Feb. 15, 1865.

WISHART, **GEORGE** (c. 1513-46). Scottish reformer and martyr. He became a schoolmaster at Montrose, and in 1538 was charged with heresy in teaching the Greek Testament and had to take refuge in England. Convicted in 1539 on a similar charge, he spent some time in Germany and Switzerland, afterwards entering Corpus Christi College, Cambridge. He returned to Scotland in 1543, in 1545 was arrested, tried for heresy at St. Andrews, and burnt, March 1, 1546.

George Wishart,
Scottish reformer

WISHAW. Coal and iron-working centre of Lanarkshire, Scotland. It stands near the Clyde, 15 m. from Glasgow, on the L.M.S. Rly. Formerly itself a burgh, in 1920 it was united with Motherwell (q.v.).

WISLEY. Village of Surrey. It is 3½ m. from Horsley, on the Southern Rly. Here are the gardens of the Royal Horticultural Society. Pop. 273.

WISTARIA. Genus of plants of the order Leguminosae, including *W. chinensis*, the Chinese kidney-bean tree. This is a climbing shrub or tree, a native of China. The long leaves are broken up into about six pairs of oval leaflets, clothed with silky down, and the flowers are borne in terminal racemes. *Wistaria* is a favourite wall plant in British gardens.

Wistaria. Spray of flowers and leaves of the climbing shrub

WIT (A.-S. *witt*, knowledge; in a personal sense A.-S. *wita*, a wise man). Term formerly equivalent to intelligence, still used in the plural for the mental faculties. Through the transitional sense of intellectual brilliance as practised by the men of letters of the 18th century, the word has come to mean the power, displayed in conversation and literature, of affording intellectual satisfaction by the unexpected association of apparently unconnected ideas. It differs from humour in appealing to the intelligence rather than to the feelings.

Witan. Short name for the Anglo-Saxon assembly known as the Witenagemot (q.v.).

WITCH. Term now generally restricted to a sorceress or female magician, the male counterpart being a wizard. The belief in witchcraft is very old, dating back to the time of the Old Testament, or perhaps earlier. It was taken up by the Christian church, and from 1258 was treated by the Inquisition as a heresy. For some hundreds of years the most barbarous tortures were inflicted upon witches. The persecution spread to America, where they were treated with equal brutality.

WITCHCRAFT. In England the penal laws were repealed in 1736, the last execution taking place at Dornoch, 1722. It is estimated that in Europe generally 300,000 supposed witches suffered death between 1484-1782. Late in the 19th century such persons were occasionally lynched, and the belief in witchcraft lingers in many parts.

WITCH HAZEL (*Hamamelis virginica*). Shrub or small tree of the order Hamamelidaceae, native of N. America. It has alternate oval leaves, and flowers late in autumn. The flowers are yellow, with four long strap-shaped petals, and the fruit is a capsule containing a single seed not mature till the summer. The leaves and bark are astringent.

WITENAGEMOT (A.-S. *witena gemôt*, assembly of the wise). The official national council of a Saxon or English kingdom, its powers depending upon custom, not upon written law. Broadly speaking, the supreme authority in the Saxon kingdom was the king, but he took no action of general importance without consulting the Witan, or wise men. On special occasions the Witan took the character of a general assembly, a meeting of such freemen as found it convenient to attend. In emergencies the magnates

Witch Hazel. Twig of leaves and flowers

acted in the character of a national assembly and chose or deposed a king.

WITHAM. River of England. It rises in Rutland, and flows through Lincolnshire past Grantham, Lincoln, and Boston to the Wash. It is about 70 m. long.

WITHAM. Urban dist. of Essex. On an affluent of the Blackwater, 14 m. S.W. of Colchester, it is a junction on the L.N.E. Rly. The church of S. Nicholas, mostly dating from the 14th century, contains effigies and monuments. Pop. 3,719.

WITHER OR **WITHERS**, **GEORGE** (1588-1667). English poet and pamphleteer. Born at Bentworth, Hampshire, June 11, 1588, he was several times imprisoned on account of his writings. He was by turns satirist, lyrical, puritan, hymn writer, and soldier; fighting for and against Charles II. He displayed notable courage during the plague, and died in the Savoy, May 2, 1667. One of his best lyrics is *Shall I, wasting in despair*.

WITNESS (A.-S. *witnes*, testimony). In legal proceedings, one who gives evidence. A witness must appear in accordance with the terms of the subpoena. He need answer no question tending to incriminate himself, but must not leave the court after giving evidence until the case is ended, being liable to recall. See Evidence; Oath; Subpoena; Trial.

WITNEY. Urban dist. and market town of Oxfordshire. On the river Windrush, 10 m. W. of Oxford, it is served by the G.W. Rly. The 13th century parish church was restored in 1867. The Butter Cross in the market place dates from 1683. Witney is famous for its blankets. Market day, Thurs. Pop. 3,364.

WITT, **JAN DE** (1625-72). Dutch statesman. Born at Dort, Sept. 24, 1625, he became a lawyer at The Hague. In 1653 he was chosen grand pensionary of Holland, becoming practically ruler of that country in domestic and foreign affairs. In 1654 he concluded an honourable peace with England, by one of the secret terms of which William of Orange was excluded from the Dutch stadtholdership. De Witt was responsible for the prosecution of the war with England and for the peace of Breda. The war with France in 1672, with the machinations of the followers of William of Orange, destroyed his popularity. He resigned Aug. 4, 1672, and on Aug. 21 was murdered by an infuriated mob.

WITTENBERG. Town of Prussia. It stands on the Elbe, 59 m. S.W. of Berlin, and is a rly. junction. The university, founded in 1502, in which Luther taught, was incorporated with that of Halle in 1815. Luther's house, of which part is a Luther museum, is in the Augusteum; adjacent is Melancthon's house. Luther fixed his famous theses on the doors of the castle church. Pop. 23,426.

WITWATERSRAND. Full name of the gold-bearing dist. in the Transvaal, known in brief as the Rand (q.v.). The university of the Witwatersrand was opened at Johannesburg in 1922.

WOAD (*Isatis tinctoria*). Biennial herb of the order Cruciferae, native of Europe and N. Asia. The root-leaves are oblong or oval; those of the stem arrow-shaped without stalks. The small yellow flowers are crowded in an elongated cluster. The seeds are contained in oblong pods, which are winged, and turn brown when ripe. Woad was once an important crop in Europe, but is almost supplanted as a source of blue dye by indigo. See illus. p. 1441.

Woad-waxen is another name for the dwarf shrub dyer's broom (q.v.).

WOBURN. Market town of Bedfordshire. It stands on the borders of Buckinghamshire, 15 m. from Bedford, its station on the L.M.S. Rly being Woburn Sands, 2 m. away. Market day, Fri. Pop. 1,062.

Near is Woburn Abbey, the seat of the duke of Bedford. It stands on land which belonged to a Cistercian abbey, founded in 1145. The present house, an 18th century building, contains one of the finest collections of paintings and other works of art in England. See Bedford, Duke of.

Wood. Left, flowers and fruit. Right, part of stem. See article page 1440

WODEHOUSE, PELHAM GRENVILLE (b. 1881). British humorist. Born Oct. 15, 1881, he was educated at Dulwich. After spending a short time in a London bank, he took to a literary career, and his first books were stories of school life. These were quite successful, but a much wider fame came when he began to write books of a distinctly humorous kind. In the course of a few years he had created such characters as Jeeves, Psmith, and Ukridge. Several of his books show his knowledge of American life and slang, while others are golfing stories of his own peculiar kind. In addition to the creation of extraordinary situations, Wodehouse's humour owes something to his use of hackneyed phrases in quite unexpected ways and to pleasing exaggerations.

Woden. A.S. form of Odin (q.v.). Wōdnes daeg is the origin of Wednesday.

WOFFINGTON, MARGARET OR PEC (1718-60). British actress. Born in Dublin, Oct. 18, 1718, she played in Dublin from quite an early age, and made her first London appearance at Covent Garden, Nov. 6, 1740, as Silvia in *The Recruiting Officer*. From 1742-48 she played with Garrick at Drury Lane, and afterwards in Dublin and at Covent Garden, achieving her main success as the fine lady of comedy. She retired in 1757, and died March 28, 1760. Charles Reade gave the name Peg Woffington to one of his novels. Consult *Life*, J. F. Molloy, 1884.

Peg Woffington, British actress

WOKING. Urban dist. of Surrey. On the Wey, 6 m. N. of Guildford, it consists of an old village and a newer quarter which has sprung up near the station on a main line of the Southern Rly. The old parish church contains portions of the original Norman work. The London Necropolis is at Brookwood, and in the neighbourhood also are the ruins of Newark priory. Pop. 26,430.

WOKINGHAM. Borough and market town of Berkshire. It is 7 m. S.E. of Reading, within the area of Windsor Forest, and is served by the Southern Rly. Market day, Tues. Pop. 7,551. See Bearwood.

WOLD (A.-S. weald, wood). Term used in England for open, hilly country. The Yorkshire wolds form a chalk ridge in the E. Riding, extending from Ferriby on the Humber to Flamborough Head. The Lincolnshire Wolds form a chalk ridge extending from Barton-upon-Humber to Spilsby. There are also wolds on the borders of Nottinghamshire and Leicestershire.

WOLF (*Canis lupus*). Member of the dog family. There is probably only one species, though many varieties or races are known.

The European wolf may be regarded as the type. Wolves only occur in the N. hemisphere, with the exception of a race found in the Falkland Islands. In colour the European wolf is brownish grey with lighter under parts, but white and black specimens are occasionally found. It lives mainly in the forests, and is usually found solitary or in pairs; but in the winter packs combine for hunting. It rarely attacks man, but it often raids the flocks.

The American wolf is greyer in colour and tends to become white in the N. districts.

In Alaska a very large race occurs. The timber wolf has a shorter tail, but is only a local race of the grey wolf. See Coyote; Dog.

WOLFE, JAMES (1727-59). British soldier. Born at Westerham, Kent, Jan. 2, 1727, he was educated at Greenwich, and in 1741 was commissioned in his father's corps of marines. Transferring to the 12th foot regiment, he fought in Flanders and Prussia, 1742-45. In 1745, by now a brigade major, he fought against Prince Charles Edward, and in the Netherlands, 1746-47. In Jan., 1758, he was appointed to command a brigade in America, where he distinguished himself at the siege of Louisbourg.

Promoted maj.-gen., Jan., 1759, he was given command of the force sent up the St. Lawrence against Quebec. He directed the operations from June 27 until the battle on the Plains of Abraham, in which he was killed, Sept. 13, 1759. His body was brought to England and buried in the church of St. Alfege, Greenwich. A statue of Wolfe was unveiled in Greenwich Park in 1930. See Abraham, Plains of; Quebec; Westerham.

James Wolfe British soldier Artist uncertain. Nat. Port. Gall.

WOLFE-BARRY, SIR JOHN WOLFE (1836-1918). British engineer. Son of Sir Charles Barry, the architect, he was born Dec. 7, 1836, and trained as an engineer under Sir John Hawkshaw. He devoted himself mainly to railway and dock work, and became engineer for the Barry Rly., the Tower Bridge, and for a number of important docks. He was a member of various royal commissions, and his influence led to the establishment of a standards committee in connexion with British engineering. In 1897 he was knighted, and in 1898 took the additional name of Wolfe. Wolfe-Barry died Jan. 22, 1918.

Sir Henry Wolfe, British diplomatist

WOLFE, SIR HENRY DRUMMOND (1830-1908). British diplomatist. Born at Malta, Oct. 12, 1830, he entered the foreign office and was employed in Florence, the Ionian Islands, Bulgaria, Turkey, Egypt, Persia, and Rumania. M.P. for Christchurch, 1874-80, and for Portsmouth, 1880-85, he was a member of the fourth party (q.v.). G.C.M.G. in 1878, P.C. 1885, and G.C.B. 1889, he was British ambassador at Madrid, 1892-1900, and died Oct. 11, 1908.

WOLFHOUND. Name often applied to the borzoi (q.v.) and other deerhounds employed abroad in wolf hunting. The name belongs particularly to the Irish wolfhound. See Deerhound; Dog; Irish Wolfhound.

Wolf. Specimen of the European or Siberian wolf W. S. Berridge, F.Z.S.

WOLFRAM. In mineralogy, an iron manganese tungstate, dark grey to brown in colour. It is the chief source of the metal tungsten (q.v.), and is found in Cornwall, France, N. and S. America, and elsewhere.

Wollaston Land. S.W. portion of Victoria Island (q.v.), British N. America.

WOLLATON HALL. Former seat of Lord Middleton in Nottinghamshire.

Regarded as one of the finest of Elizabethan houses, it was built for Sir Francis Willoughby, 1580-88. It is interesting as being probably the first house built in England with the elaborate stonework decorations borrowed from Italy. It is now the property of the city of Nottingham.

Wollongong. Port and watering place of N.S.W., Australia. It is 49 m. by rly. S. of Sydney. Pop. 8,950.

WOLSELEY, GARNET JOSEPH WOLSELEY, 1st Viscount (1833-1913). British soldier. Born of English ancestry at Golden Bridge, co. Dublin, June 4, 1833, he entered the 12th Foot in 1852, and fought in the Burmese War, 1852-53. He served also in the Crimean War, 1854-56; in the Indian Mutiny, 1857; and in the China expedition, 1860. In command of the Red River expedition in Canada, 1870, he suppressed the insurrection of Riel, and in 1873-74 he conducted the Ashanti campaign.

In 1882 Wolseley was appointed to the command in Egypt on the outbreak of the rebellion of Arabi Pasha, whom he decisively defeated at Tel-el-Kebir.

For this service he was raised to the peerage as Baron Wolseley. His last active service was the Nile Expedition for the relief of General Gordon, 1884-85, at the conclusion of which he was created a viscount. Field-marshal, 1894, and commander-in-chief, 1895-1900, he died March 26, 1913. Wolseley's writings include an autobiography, *The Story of a Soldier's Life*, 1903.

His title passed by special remainder to his elder daughter, Frances Garnet (b. 1872). She founded a college for lady gardeners at Glynde, Sussex, and wrote books on gardening and on the county of Sussex.

WOLSEY, THOMAS (c. 1475-1530). English cardinal and statesman. The son of an Ipswich grazier, also by report a butcher, he distinguished himself at Magdalen College, Oxford, took orders, and was introduced to Henry VII's service by Bishop Fox. In 1511 he became a member of the council of Henry VIII, whose confidence he won. In 1514 he became successively bishop of Lincoln and archbishop of York, and in 1515 lord chancellor.

Viscount Wolseley, British soldier Hated

Thomas Wolsey, cardinal and statesman After Holbein

Wolsey's great aim was to hold the balance between the emperor Charles V and Francis I of France, to make England the arbiter of Europe. But while under his direction, public business was despatched and justice administered with rapidity and thoroughness, his arrogance raised up a host of enemies.

The fatal moment arrived when Henry resolved to marry Anne Boloyne. Wolsey was entrusted with the task of compelling the pope to annul the king's marriage with Catherine of Aragon. When he failed, the king turned against him. In Nov., 1529, he was dismissed from all his offices and deprived of all his honours save the archbishopric of York. A charge of high treason was launched against him, and while journeying south, Wolsey died at Leicester Abbey, Nov. 29, 1530.

WOLSINGHAM. Industrial centre of Durham. It stands on the Wear, 16 m. S.W. of Durham, on the L.N.E. Rly. Woollens and steel are manufactured. Pop. 3,536.

WOLSTANTON. Urban dist. and parish of Staffordshire. In the Potteries, 1½ m. N. of Newcastle-under-Lyme, it is a busy centre of the pottery trade. There are also engineering works and cotton mills. Pop. 29,240.

WOLVERHAMPTON. County borough and market town of Staffordshire. It is 13 m. N.W. of Birmingham on the L.M.S. and G.W. Rlys.

The church of S. Peter is a cruciform building dating partly from the 13th century. In its churchyard is a 12th century Norman shaft, the so-called Danes' Cross. Wolverhampton is the centre of a large trade in been a special manufacture from early times. There are extensive ironworks. A large agricultural trade is carried on, and repairing sheds of the G.W.R. are here. In 1927 the borough boundary was extended. Market days, Wed and Sat. Pop. 131,000.

hardware. Locks and keys have manufacture from early times. There are extensive ironworks. A large agricultural trade is carried on, and repairing sheds of the G.W.R. are here. In 1927 the borough boundary was extended. Market days, Wed and Sat. Pop. 131,000.

WOLVERHAMPTON, HENRY HARTLEY FOWLER, 1ST VISCOUNT (1830-1911). British politician. Born at Sunderland, May 16, 1830, he became a solicitor in Wolverhampton and in London. Elected M.P. for Wolverhampton in 1880, he continued to represent that constituency until raised to the peerage in 1908 as Viscount Wolverhampton. As Sir Henry Fowler he was president of the local government board, 1892-94; secretary of state for India, 1894-95; and chancellor of the duchy of Lancaster, 1905-8. He died Feb. 25, 1911, and was succeeded by his only son.

WOLVERTON. Urban dist. of Buckinghamshire. It is 2 m. E. of Stony Stratford on the L.M.S. Rly. At New Wolverton are the L.M.S. Rly. carriage works. Pop. 14,052.

WOMAN SUFFRAGE. Exercise of the municipal and parliamentary vote by women. In the United Kingdom the first legal enactment which definitely excluded women from the franchise was the Reform Act of 1832, but the disabilities of women for the municipal franchise were removed in 1869.

From 1905 the Women's Social and Political Union, founded in 1902, advertised the suffrage movement by methods which, as time went on, became more and more violent, and resulted in imprisonment. Meanwhile, a suffrage committee had been formed in the House of Commons itself, and the constitutional party, represented by the National Union of Women's Suffrage Societies, redoubled their efforts.

In Oct., 1916, a conference of members of both Houses was appointed to consider the question of a Reform Bill which should alter the basis of the franchise, hitherto based mainly on occupation, and to include the consideration of the admission of women. The conference reported in favour of woman suffrage. The bill embodying the report of the conference, and establishing the right of women to vote at parliamentary elections, became law in Feb., 1918. It imposed a minimum age of 30, but this disability was removed in 1928, when an Act gave women the vote on the same terms as men.

Woman suffrage had been exercised in New Zealand since 1893. In Australia the suffrage for the Federal Parliament was conferred on women by the constitution in 1902. In the U.S.A. the first State to accord the suffrage to women was Wyoming in 1869. In 1919 all women became eligible. In Canada also the suffrage was obtained by instalments. See Franchise; Reform; Representation; Vote.

WOMBAT (Phascologydae). Genus of marsupial mammals. Found only in Australia and Tasmania, it includes four species. They are about 2 ft. long, and somewhat bear-like, with a strikingly bulky and heavy body, short broad head, small upstanding ears, and a rudimentary tail. The fur is thick and usually coarse, the colour ranging from black to yellowish brown. They live in burrows and feed at night upon grass and roots.

WOMBWELL. Urban dist. and colliery centre of Yorkshire (W.R.). It is 4 m. S.E. of Barnsley, and is served by the L.N.E. and L.M.S. Rlys. Pop. 19,035.

WOMBWELL, GEORGE (1778-1850). British showman. He was born at Maldon in Essex, and in 1804 started his career as a showman, afterwards founding the menageries which bore his name. He died Nov. 16, 1850.

WOOD. In commercial use the trunk and larger branches of a tree when it is divested of its bark and sawn up. Wood owes its usefulness to the fact that the fibro-vascular bundles are lignified and hard, and their comparative abundance accounts for the relative hardness or softness of different species. Besides the more ponderous woods used for structural purposes, a large number are used in cabinet-making; others when shredded or ground up afford important dye materials. See Mahogany; Oak; Timber, etc.; also Inlaying, illus. p. 770.

WOOD, ELLEN (1814-87). British novelist, familiar as Mrs. Henry Wood. Born at Worcester, Jan. 17, 1814, she spent twenty years in France before settling in London in 1856. In 1860 her novel Danesbury House won a prize of £100 offered by the Scottish Temperance League for a tale to inculcate temperance. East Lynne, which achieved extraordinary success, followed in 1861. Her works include Mrs. Halliburton's Troubles, 1862; The Channings, 1862; and

Johnny Ludlow, 1874. After 1867 her novels appeared in The Argosy, of which magazine she was editress and proprietress. She died Feb. 10, 1887.

Sir Evelyn Wood
British soldier
Russell

to India, where in 1858 he won the Victoria Cross. He served in the Ashanti campaign, 1874, in the Kaffir, Zulu, and Boer Wars, 1879-81, commanded a brigade in the Egyptian campaign, 1882, and from 1883-85 was sirdar of the Egyptian army. He died Dec. 2, 1919. He wrote an autobiography, From Midshipman to Field-Marshal, 1906.

WOOD, SIR HENRY JOSEPH (b. 1869). British orchestral conductor. Born in London, March 3, 1869, he started his career as an organist, attracting attention by his recitals in 1883 and 1885. He studied at the Royal Academy of Music, 1886-87, composed songs and cantatas, and made his debut as a conductor in 1889. In 1895 he founded the Promenade Concerts in Queen's Hall, London. The Queen's Hall Symphony Concerts were also under his baton from 1897. Wood was knighted in 1910.

Sir Henry Wood,
British conductor

WOOD, SIR KINGSLEY (b. 1881). British politician. The son of a Wesleyan minister, he became a solicitor. In 1911 he was elected by Woolwich to the London County Council, and in 1918 was chosen M.P. for West

Woolwich, being knighted in the same year. By then he was known as an authority on national insurance questions. He was parliamentary secretary to the ministry of health during the Conservative administration, 1924-29.

WOOD, LEONARD (1860-1927). American soldier. Born Oct. 9, 1860, at Winchester, N.H., he took a medical degree at Harvard in 1884, and entered the U.S.A. army medical service. Military governor of Cuba, 1899-1902, he later served in the Philippines. As chief of staff of the American army, 1910-14, he reorganized it, and in April, 1914, commanded the eastern division. He served in France with the American forces, and in 1921 became governor-general of the Philippines. He died Aug. 7, 1927.

WOOD, MATILDA CHARLOTTE (1833-1915). British actress, better known as Mrs. John Wood. Born in Liverpool, she made her stage debut at Southampton in 1841, but scored her first great success as a burlesque actress in the U.S.A. Returning to England about 1853, she appeared at The Princess's, London. In 1869 she took over the St. James's Theatre, which she ran successfully for four years. At the old Court Theatre she was successful in the Pincro farces. She died Jan. 11, 1915.

Wolverhampton,
British politician
Russell

Woodbine or **WOODBIND**. Name originally of general application to twining plants, but now restricted to the honeysuckle (q.v.).

WOODBRIDGE. Market town and urban dist. of Suffolk. It stands on the Dehen, 8 m. N.E. of Ipswich, and is a station on the L.N.E. Rly. There is a fine Perpendicular church. The town is chiefly an agricultural centre. Edward Fitzgerald (q.v.) lived here for many years. Market day, Thurs. Pop. 4,598.

Woodchuck. Popular name of a species of marmot (q.v.) occurring in N. America.

WOODCOCK (*Scolopax rusticula*). British wild bird. Belonging to the plover tribe, it is closely allied to the snipe. It is about 14 ins. long. The plumage is reddish brown barred and striped with black on the upper parts, and pale brown barred with darker brown below. Its long and straight beak is a characteristic feature. It occurs in most parts of Great Britain, the majority of the birds being winter migrants. The woodcock keeps under cover during the day, and visits its feeding grounds at dusk. Its food consists of worms and grubs procured by probing damp soil with its beak. It is esteemed for the table.

Woodcock. Long-beaked British gamebird of the plover tribe

WOODCUT. Print taken from a wooden block. It is obtained by cutting away the wood to a certain depth from all the blank portions between and around the lines of a design. The lines are thus left standing in relief, and so preserve a surface from which a print can be taken. This method was used in early book illustrations. See Wood Engraving.

WOODCUTS. Hamlet of Dorset. The site of a prehistoric village, it is 6 m. N.W. of Cranborne. With neighbouring villages it was dug 1884-90, when bronze and iron implements, Samian ware, Roman coins, and hypocausts attested the Romano-British occupation of a pre-Roman settlement. There are traces of a prehistoric road here.

WOOD ENGRAVING. Method of obtaining a wooden block from which prints can be taken. A development of wood-cutting, it is a reversal of that process, the lines being cut into the block, instead of the wood between them being cut away, and thus printing white. Thomas Bewick temporarily revived the use of the wood block in the late 18th cent. and introduced the graver instead of the knife as the cutting tool. About 1860 there was a great revival, encouraged by the brothers Dalziel and others, in the art for book and magazine illustrations, but it was later superseded by mechanical methods of reproduction. A number of modern British and Continental artists have again revived the art, with considerable success. See Bewick, T.; Woodcut.

WOODFORD. Urban dist. of Essex. On the edge of Epping Forest, it is a suburb of London, from which it is 11 m. distant. It is served by the L.N.E. Rly. Woodford Wells and Woodford Green are parishes in the district. Pop. 21,245.

WOOD GREEN. Urban dist. of Greater London, in Middlesex. Between Hornsey and Palmer's Green, it is 5 m. from King's Cross on the L.N.E. Rly. Pop. 51,960.

WOODHALL SPA. Urban dist. and inland watering place of Lincolnshire. It is 6 m. from Horncastle, on the L.N.E. Rly., and is frequented for its bromo-iodine springs. The latter were accidentally discovered during an unsuccessful boring to find coal, and the yield is from 16,000 to 20,000 gallons a day. The place is beautifully situated on sandy soil amid extensive pine and birch woods. Pop. 1,635.

WOODLOUSE (*Oniscus*). Genus of equal-footed crustaceans (*Isopoda*) which have become adapted to a terrestrial life and the breathing of damp air. It has seven pairs of feet, all adapted for walking, and two pairs of antennae, though, as a rule, only one pair is actively employed. It is nocturnal in its habits, and feeds upon decaying vegetation, seedlings, and ferns, and frequently attacks ripe fruit on walls.

WOODPECKER (*Picidae*). Family of picarian birds. They are distinguished by feet adapted for climbing, and a modification of the barbed tongue which enables it to be thrust forward to extract insects from crevices. They include many species, widely distributed in temperate and tropical regions. In Great Britain there are three distinct species.

The green woodpecker (*Picus viridis*) is common in S. and mid England. It excavates a hole in a tree trunk as a nesting site, usually selecting a rotten tree. The plumage is olive green above, crimson on the crown of the head, black on the face, yellow on the rump, and greenish grey below. The greater spotted woodpecker (*Dendrocopos major*) is smaller and less common.

WOOD PIGEON or **RING DOVE** (*Columba palumbus*). Largest of the British wild pigeons, common in Europe, Asia, and North Africa. It measures about 17 inches in length. The plumage is ashy blue above, ashy to white beneath, and the beak is reddish. The name ring dove refers to a semicircular white marking at the back of the neck. See Pigeon.

WOODRUFF (*Asperula odorata*). Perennial herb of the order Rubiaceae. A native of Europe and N and W. Asia, it has a creeping root-stock, and sends up many short stems. The lance-shaped, firm, smooth leaves are arranged in whorls at intervals up the stem. The tiny white funnel-shaped flowers are clustered at the top. The whole plant in drying gives off the fragrance of new-mown hay.

Woodruff. White flowers of the fragrant herb

with runners. The stems are about two feet high, with a few short leaves, and the leaves from the root-stock are grass-like, often a foot long. The pale brown flowers are very minute, in loose clusters.

WOODS, FRANK THEODORE (b. 1874). English prelate. Born Jan. 15, 1874, he was ordained in 1897 and, after serving in Eastbourne and Huddersfield as a curate, he became, in 1901, vicar of a London parish. He then went to Manchester and later to Auckland, before becoming vicar of Bradford in 1913. In 1916 he was chosen bishop of Peterborough, and in 1924 was translated to Winchester.

WOODSIA. Genus of ferns of the natural order Polypodiaceae. Natives of the N.

temperate and Arctic regions, the Andes and S. Africa, they have short tufted root-stocks, and the frond-stalk is usually jointed near the base. There are from three to five heaps of spore capsules on the back of each pinna, each enclosed in a bag which splits up later into hairlike segments.

Woodpecker. Two British species. 1. Greater spotted. 2. Green woodpecker. W. S. Berridge, F.Z.S.

WOOD SORREL (*Oxalis acetosella*). Perennial herb of the order Geraniaceae. A native of Europe, Asia, N. Africa, and N. America, it has a slender, creeping, scaly root-stock, from which the leaves and flowers arise direct, on long slender stalks. The leaves are divided into three heart-shaped leaflets, after the manner of a clover leaf. The leaflets fold and droop close to the stalk in darkness and rain. The solitary flowers of the wood sorrel are white, and they are delicately veined with purple.

WOODSTOCK. Borough of Oxfordshire. It is 8 m. N. of Oxford, on the G.W. Rly, the station being Blenheim and Woodstock. Of its famous manor house, the last vestige disappeared in 1723, soon after the completion of Blenheim (q.v.). Fair Rosamund (q.v.) is said to have lived at Woodstock in a bower built for her by Henry II. Here the Black Prince and other princes were born. Pop. 1,510.

WOODSTOCK. Town of New Brunswick, Canada. It stands on the St. John river, 64 m. from Fredericton, and is a station on the C.P. Rly. It is the centre of a farming dist. Pop. 3,380.

WOOD SWALLOW or **SWALLOW SHRIKE** (*Artamus*). Genus of about 17 species of birds, natives of India, Australia, and the intervening countries. Their family relationship has not been determined satisfactorily. They have a long, pointed, and slightly curved bill with wide gape, long wings, and a short tail. They are black, blue, grey, or rufous above, and more or less white beneath. They catch insects on the wing, and nest in forks or holes of trees.

Wood Sorrel. Flowers and triolate sensitive leaves

WOOD SWALLOW or **SWALLOW SHRIKE** (*Artamus*). Genus of about 17 species of birds, natives of India, Australia, and the intervening countries. Their family relationship has not been determined satisfactorily. They have a long, pointed, and slightly curved bill with wide gape, long wings, and a short tail. They are black, blue, grey, or rufous above, and more or less white beneath. They catch insects on the wing, and nest in forks or holes of trees.

WOODVILLE, RICHARD CATON (1856-1927). Anglo-American painter and illustrator. Born in London, Jan. 7, 1856, son of a Baltimore artist, he studied at Düsseldorf. As a war artist he saw much service in the East, especially in Turkey, 1878, and Egypt, 1882, and he was a popular contributor to English illustrated journals. From 1879 he exhibited.

Wood Swallow, the masked species. W. S. Berridge, F.Z.S.

Woodsia. Fronds and roots of woodsia ilvensis

battle pictures regularly at the R.A. He published *Random Recollections*, 1913. Woodville died Aug. 17, 1927.

WOODWORM. Popular name for the larvae of various longicorn and lamellicorn beetles, *Xestobium*, etc., which feed in wood. See *Beetle*; *Longicorn*.

WOOKEY HOLE. Dolomitic cave near Wells, Somerset. It contains palaeolithic implements and fossil bones, including reindeer, mammoth, woolly rhinoceros, and cavebear. Exploration from 1910 onwards showed it had been occupied from 200 B.C. to A.D. 400.

WOOL. Curly variety of hair on sheep and other animals distinguished by its scaly surface. The world's annual yield of raw wool is computed at about 3,000 million lb., of which some 40 p.c. is produced in countries of the British Empire. Outside the industrial countries, Australia, New Zealand, and the Cape are the chief sources of wools of fine and medium quality, and Argentina and Uruguay are the only considerable external sources of supply.

The finest wools are borne by a breed of sheep mainly grown for their wool—the merino type. A medium type of wool called crossbred is obtained from mixed breeds of English and merino. Raw wool is greasy with the suint or perspiration of the animal, and is loaded also with dust. The raw material is bought with an eye to its yield of clean wool.

Periodical auctions of imported wool are held in London and Liverpool. Antwerp and Havre are markets especially for S American wool. Boston is the principal wool market of the U.S.A. Bradford, Yorkshire, is the centre of the greatest wool-manufacturing district in the world. The woollen and worsted manufacturing industries employ over 257,000 persons in the United Kingdom.

WOOLEN AND WORSTED. Woollen is uncombed wool. To make woollen yarn the wool is put through the process of carding. Woollen cloth is not synonymous with all-wool cloth, since by legal sanction woollen is understood to mean material containing wool and manufactured according to the carding system. Worsted is yarn from wool combed for the extraction of fibre below a certain average of length. The longer material thus isolated is spun in such a way as to keep its fibres parallel. Owing to the method of its manufacture, woollen is a more plastic material than worsted and susceptible of much greater changes after arriving at the woven state. See *Blanket*; *Carpet*; *Merino*; *Sheep*; *Spinning*; *Weaving*; *Worsted*.

WOOLER. Town of Northumberland. Situated 15 m. S. of Berwick-upon-Tweed, it has a station on the L.N.E. Rly., and is an agricultural centre. Pop. 1,577.

WOOLLETT, WILLIAM (1735–85). English engraver. Born at Maidstone, Aug. 15, 1735, he studied under Tinney in London and at the St. Martin's Lane Academy. Engravings after the landscapes of Richard Wilson were his first important work. Later he engraved Benjamin West's *Death of Wolfe*, and other historical and genre pictures. In 1775 he was appointed engraver to George III. He died May 23, 1785.

WOOLMER FOREST. Heath of Hampshire and Sussex. Some 7 m. long from N. to S., and 3 m. wide, it lies mostly in Hampshire, S.E. of Alton. In the form Wolmer it gives the title of viscount to the eldest son of the earl of Selborne (q.v.).

WOOLNER, THOMAS (1825–92). British sculptor and poet. Born at Hadleigh, Suffolk, Dec. 17, 1825, he joined the Pre-Raphaelite

Brotherhood, and contributed poems to *The Germ*. In 1857 medallion portraits of Tennyson (Trinity College, Cambridge) and Carlyle established his reputation. He became A.R.A. in 1871, R.A. in 1874, and modelled busts or statues of most of the great men of his time. He died Oct. 7, 1892.

WOOLSAK. In the British Parliament, seat of the lord chancellor when presiding over the sittings of the House of Lords. At an early date a sack of wool was placed in the House as a seat, and in time this became the official seat. To-day the sack is a large square cushion of wool, covered with red cloth. See *Lord Chancellor*; *Lords*; *House of*.

Woolsock, standing before the throne in the House of Lords

WOOLWICH. Met. bor. of the co. of London. It lies on the S. bank of the Thames, 9 m. below London Bridge, and is served by the Southern Rly. It includes the districts of Woolwich proper, Plumstead, and Eltham.

North Woolwich, on the other side of the river, is connected by ferry and subway. In the Royal Dockyard, used since 1569 for military stores, the *Great Harry* was launched in 1515. The Royal Arsenal occupies an area $3\frac{1}{2}$ m. long by 1 m. broad. Since the Great War the making of armaments has diminished. The Arsenal (q.v.) football club, founded 1886, now has its ground at Highbury.

At Woolwich is the Royal Military Academy, where officers of the artillery and engineering branches of the British army receive their training. There are handsome municipal buildings, public libraries, and several theatres. The Rotunda houses a collection of ancient and modern guns, models, etc. During the Great War the hor. witnessed an enormous industrial expansion, thousands of houses being built for munition workers. Pop. 140,389.

WOOLWORTH, FRANK WINFIELD (1852–1919). American business man. He was born at Rodman, N.Y., April 13, 1852, and at the age of 27 invested his total capital of £60 in a store in Utica devoted to articles retailed at low prices. After ten years he opened another "sixpenny store," followed by others, until in 1919, the year of his death, the Woolworth Corporation controlled 800 stores in the U.S.A. and Canada, and about 60 in Great Britain. He erected in Broadway the Woolworth Building, for long New York's highest skyscraper. He died April 7, 1919, leaving a fortune of £9,000,000.

Frank Woolworth, American business man

WOOTTON, FRANK (b. 1893). Australian jockey. Born in Australia, Dec. 14, 1893, he rode his first winner, *Retrieve*, in England at Folkestone, Aug. 23, 1906. In the seasons of 1909, 1910, 1911, and 1912 he headed the list of winning jockeys. By 1914 he had relinquished the occupation of jockey for that of

trainer, eventually taking over his father's training establishment at Epsom.

WORCESTER. City, county borough, and county town of Worcestershire. On the left bank of the Severn, 22 m. S.W. of Birmingham, and served by the G.W. and L.M.S. Rlys., the city has been the seat of a bishop since 680. The cathedral dates from the 13th century, and was extensively restored, 1851–74. It has a fine central tower, 196 ft. in height, completed in 1374. The transepts are Norman and Perpendicular, and beyond the crossing is a screen, by Sir Gilbert Scott, which cuts off the chancel. This and the Lady Chapel beyond contain carved 14th century stalls. Under the choir and aisles is a fine crypt. The old refectory forms part of the King's School. Near the cathedral is Edgar Tower, all that remains of the castle. Gloves are manufactured, and there is a trade in hops. Pop. 49,160. See *Aisle*.

BATTLE OF WORCESTER. This was fought between the English and the Scots, Sept. 3, 1651. After his coronation at Scone, Charles II left Stirling on July 31 for England, where he hoped for further support, and entered Worcester on Aug. 22. There he was attacked by Cromwell and his army of Scots, estimated at 16,000, was scattered.

Worcester. The cathedral from the right bank of the Severn. It dates from the 13th century

WORCESTER CHINA. Porcelain ware produced in the factory established at Worcester, 1751. The works were founded by John Dale, a scientific chemist and a good painter. Soft paste porcelain mixed with staeatite was employed. Early pieces include mugs with portraits printed in black, purple, and blue. See *Chinaware*.

WORCESTER. City of Massachusetts, U.S.A. It stands on the Blackstone river, 45 m. W.S.W. of Boston, and is served by the New York, New Haven and Hartford and other rlys. It became a city in 1848. Pop. 190,757.

WORCESTER. British training ship. Officially known as the *Thames Nautical Training College*, H.M.S. Worcester, it lies off Greenwich. Established about 1860, the ship is a wooden man-of-war. There is also a torpedo-boat destroyer of this name of 1,325 tons, with four 4.7-in. guns.

WORCESTER, EDWARD SOMERSET, 2ND MARQUESS OF (1601–67). English nobleman and inventor. He early took a great interest in experimental mechanics and mathematics, though his position brought him into political prominence and interfered greatly with his experiments. During the civil war he was sent to Ireland to treat secretly with the Roman Catholics for troops to fight in England. He died April 3, 1667. Worcester's chief claim to fame is due to his experiments in connexion with the use of the power of steam. Consult *Life*, *Times*, and *Scientific Labours of the 2nd Marquis of Worcester*, H. Dicks, 1865.

Worcestershire. Map of the midland county famous for its orchards

WORCESTERSHIRE. County of England. In the west midlands, it has an area of 716 sq. m. On the Herefordshire border are the Malvern Hills; in the S.E. is Bredon Hill, a spur of the Cotswolds; and in the N. and N.E. are the Cleat Hills and Lickey Hills. The Severn traverses the entire length of the county from N. to S. and the Avon waters the S.E. portion. Other rivers are the Stour and the Teme. A large area is under orchards, plums, apples, and pears being extensively grown. Hops are cultivated, also wheat, oats, and potatoes, and there are many market gardens. The manufacturing district of the N. forms part of the Black Country. The G.W. and L.M.S. Rlys., together with several canals, serve the co. Worcester is the county town. Other places include Dudley, Kidderminster, Droitwich, Evesham, Bewdley, Stourbridge, and Malvern. Pop. 405,842.

WORCESTERSHIRE REGIMENT. Regiment of the British army. Originally the 29th and 36th Foot, it was raised in 1694, and while one battalion helped to win the battle of Ramillies, 1706, the other was involved in the disaster at Almanza, 1707. The regiment served against the Jacobites in 1715 and 1745, and shared in the defence of Gibraltar in 1727. It fought through the American War of Independence and in the Peninsular War. In 1899-1902 it did good work in S. Africa.

During the Great War six regular and special reserve battalions, two territorial, and seven service battalions were engaged. In 1914 the regiment's outstanding feat was the magnificent stand of the 2nd batt. in the first battle of Ypres (q.v.). This and other battalions fought with distinction in France and elsewhere throughout the War. The regimental depot is at Worcester.

WORDE, WYNKYN DE (d. 1534). English printer. Born at Worth, Alsace, his real name appears to have been Jan van Wynkyn. He took over Caxton's business at Westminster in 1491, set up business at the sign of The Sunne, in Fleet Street, 1500, and removed to St. Paul's Churchyard in 1509. Among the 600-700 books, pamphlets, and new editions issued by him was an English version of the *De Proprietatibus Rerum* of Bartholomew Anglicus, the first book to be printed on paper made in England.

WORDSWORTH, CHRISTOPHER (1807-85). British prelate. Born in London, Oct. 30,

1807, he was a nephew of the poet, being a son of Rev. Christopher Wordsworth. Educated at Winchester and Trinity College, Cambridge, he graduated as senior classic, and was ordained. He was also famous as an athlete. He was made headmaster of Harrow in 1836, from 1844-69 he was canon of Westminster, and from 1869-85 bishop of Lincoln. He died March 20, 1885.

His brother, Charles Wordsworth (1806-92), became an assistant master at Winchester in 1835. In 1846 he went to Trinity College, Glenalmond as its first warden, and in 1852 became bishop of St. Andrews.

WORDSWORTH, WILLIAM (1770-1850). British poet. Born at Cockermouth, Cumberland. April 7, 1770, he was educated at the Hawkshead Grammar School and at St. John's College, Cambridge. In 1790 he made a walking tour on the Continent, and the next year his enthusiasm for the revolutionary cause prompted him to return to France, where he spent 13 months. He has given a full account of his connexion with the revolutionary movement and of other formative influences in his early life in his autobiographical poem *The Prelude*. He opened his career as poet in 1793 with *An Evening Walk* and *Descriptive Sketches*.

The *Lyrical Ballads*, 1798, were produced in conjunction with Coleridge. After a visit to Germany, Sept., 1798-April, 1799, he settled at Grasmere, Westmorland; in 1802 he married Mary Hutchinson; and, after three years at Allan Bank, 1808-11, he took up his residence in 1813 at Rydal Mount, his home for the rest of his life. In 1800 he had published a second edition of *Lyrical Ballads*. This was followed, 1807, by two volumes containing, in such poems as the *Ode to Duty* and the *Ode on the Intimations of Immortality*, some of his finest work; in 1814 by a long philosophical poem, *The Excursion*; and in 1815 by a romantic narrative poem, *The White Doe of Rylstone*. In 1843 he succeeded Southey as poet laureate, and he died April 23, 1850.

His only sister, Dorothy Wordsworth, (1771-1855), shared in his poetical labours and herself produced journals of her life in the Lake District and her tour in Scotland.

WORKINGTON. Bor., seaport, and market town of Cumberland. It stands at the mouth of the Derwent, 34 m. from Carlisle, and is served by the L.M.S. Rly. The chief industries are iron working and coal mining, the mines here extending below the sea. There are shipbuilding yards, steel works, engineering works, and some fishing. Market days, Wed. and Sat. Pop. 26,480.

WORKMEN'S COMPENSATION. Payments made to workers (or their dependents) who are killed or injured in the course of their employment. They are regulated by a series of Acts of Parliament, which were consolidated in 1925. To be eligible for compensation the worker's salary or wages must not exceed £350 a year. The amount payable is calculated according to rules laid down by law. For total incapacity it must not exceed 30s. a week, with smaller sums for partial incapacity. In case of death not more than £600 in all can be paid to the widow and children, and for a widow only, not more than £300. Most firms cover themselves against this liability by insurance.

WORKS. OFFICE OF. English government department. It is under a commissioner and has charge of all the royal palaces and parks, public offices, and other buildings which are the property of the nation as a whole. The headquarters are in Storey's Gate, London, S.W. There is a Scottish office of works, at 4-5, Drumshugh Gardens, Edinburgh.

Christopher Wordsworth, British prelate

WORKSOP. Market town and urban dist. of Nottinghamshire. It is on the borders of Sherwood Forest, 15 m. from Sheffield, on the L.N.E. and L.M.S. Rlys. The priory, founded about 1100, survives in the nave of S. Cuthbert's church, a splendid piece of Norman work, the lady chapel (restored in 1922 as a war memorial), and an old gatehouse. The manor house replaced the one in which Mary Queen of Scots was imprisoned. The town is an agricultural centre. Worksop College is a public school. Market day, Wed. Pop. 23,206.

WORLD, THE. Word used as an alternative for earth. Usually the term implies a reference to the human aspects of the habitable globe, as in the figurative use of the word in the phrase the world of letters. Physically the earth is a planet, while the round world is the home of man. See Africa; America; Antarctic Exploration; Arctic Exploration; Asia; British Empire, etc.

WORM. In popular usage, word denoting any long, slender animal, whether reptile (slow-worm), mollusc (shipworm), insect (glow-worm, silkworm, wireworm, blood-worm), entozoan (tape-worm, round-worm), earthworm. See Ascaris; Bladder Worm; Earthworm; Filaria; Lob Worm; Serpula, etc.

In mechanics, worm is the name given to a helical thread or threads cut on a shaft to transmit motion to, or receive motion from, a cog wheel. See Gear.

WORMS. City and river port of Hesse, Germany. It stands on the left bank of the Rhine, 10 m. from Mannheim. The Romanesque cathedral dates mainly from the 11th and 12th centuries. Machinery and leather are manufactured. Early in the 6th century Worms became the seat of a bishop, who ruled a small territory around it until 1805. Many of the imperial diets were held here, the most notable being that of 1521, at which Martin Luther appeared before the emperor Charles V. Pop. 47,015.

Worms. Cathedral of SS. Peter and Paul, mainly 11-12th century

WORMWOOD (*Artemisia absinthium*). Aromatic perennial herb of the order Compositae. A native of Europe, Asia, N. Africa, and N. America, it has grooved and angled stems about 3 ft. high.

WORMWOOD SCRUBS. District of W. London. It lies N. of Shepherd's Bush (q.v.), with a station, St. Quintin Park, on the L.M.S. Rly. It gives its name to an open space used as a recreation ground. Here is a large prison. See London.

WORSBOROUGH. Urban dist. of Yorkshire (W.R.). It is 3 m. S. of Barnsley on the L.N.E. Rly. The industries include collieries and steel works. Pop. 12,720.

Worcestershire Regiment badge

WORSTED. Yarn from wool, combed for the extraction of fibre below a certain average of length. The name is taken from the Norfolk village of Worstead. See Wool.

WORTH, CHARLES FREDERICK (1825-95). British dress designer. Born at Bourne, Lincolnshire, he was apprenticed to Swan & Edgar, London, and then served in a wholesale silk house in Paris, 1846-58. In partnership with a Swede, he then set up in business as a dressmaker and ladies' tailor, and, his genius for design having attracted the notice of the Empress Eugénie, rapidly achieved fortune. He died March 10, 1895.

WÖRTH. Village of Alsace, France. It is 12 m. from Weissenhurg (Wissembourg), and is famous as the scene of a French defeat, Aug. 6, 1870. The French call the battle Reichshofen. See Franco-Prussian War.

WORTHING. Borough and watering place of Sussex. Situated 10½ m. from Brighton and 57 from London, on the Southern Rly., with two stations, Worthing and West Worthing, it has an extensive marine parade, a pier, and good bathing facilities. At Broadwater is the fine cruciform church of S. Mary. Fruit and flower growing are carried on. The bor. includes Broadwater, and a further enlargement brought Goring and Durrington within it. Pop. 37,500.

WORTHINGTON-EVANS, SIR LAMING (b. 1865). British politician. Born Aug. 23, 1865, he became a solicitor in 1890, and in 1910 was elected M.P. for Colchester. On the outbreak of the Great War he obtained a military administrative position. Controller of the foreign trade department at the foreign office, 1916, he was promoted to be parliamentary secretary to the ministry of munitions, became minister of blockade, 1918, minister for pensions, 1919, minister without portfolio, 1920, secretary for war, 1921-22, and postmaster-general, 1923-24. From 1924-29 he was secretary for war. In 1916 he was made a baronet.

WOTTON, SIR HENRY (1568-1639). English diplomat and poet. He became an agent of the earl of Essex, was knighted in 1603, and acted as ambassador at Venice, 1604-12, 1616-19, and 1621-24. He was employed on diplomatic missions to France, 1612; The Hague, 1614; Vienna, 1620. He became M.P. for Appleby, 1614; was provost of Eton, 1624-39; and M.P. for Sandwich, 1625. He died at Eton, Dec., 1639. His poems were posthumously issued.

WOUNDWORT (*Stachys sylvatica*). Perennial herb of the order Labiatae. A native of Europe, Siberia, and the Himalayas, it has a creeping root-stock and branching stems about three feet high. The large, heart-shaped leaves have coarse toothed edges and are covered with soft bristles: the upper leaves are lance-shaped. When bruised, the plant gives out a strong, fetid odour. The tubular, dark crimson or red-purple flowers are in whorls around the upper part of the stem.

WOUWERMAN, PHILIP (1619-68). Dutch painter. Born at Haarlem, he studied under his father, P. J. Wouwerman, and Jan Wynants. He painted figures and animals with great technical skill and industry, and is represented in most of the European galleries. He lived and died at Haarlem.

WRANGEL, PETER, COUNT (1879-1928). Russian soldier. Born in St. Petersburg, he entered the army and served in the Russo-Japanese War. In the Great War he was first a colonel of cavalry and later general of a division. After the Bolsheviks came into power he sided with Denikin, succeeding that general as leader of the anti-Bolshevik forces, by whom, however, he was defeated in 1920. He died in Brussels, April 24, 1928.

Count Peter Wrangel, Russian soldier

WRANGELL OR WRANGEL ISLAND. Island in the Arctic Ocean, off the N.E. coast of Soviet Asia. It is situated in lat. 71° N. and long. 179° E., and is separated from the mainland by Long Strait. It was discovered by an Englishman named Kellett in 1849, and named after a Russian explorer named Wrangel. It now belongs to Russia.

The Wrangell Mts. are a group of volcanic mts. in Alaska, at the great bend of the Copper river. Wrangell Peak is 14,005 ft. high.

WRANGLER. One who wrangles or disputes. The term was applied at an early date in Cambridge University to those who took part in the disputations. Later it was given to an undergraduate taking a first class in Part I of the mathematical tripos. Until 1909 the title senior wrangler was given to the undergraduate who headed the list. Since that date the successful candidates have been classed into divisions, the names in each being arranged in alphabetical order.

WRASSE. Family of fishes (Labridae), notable for their thick lips and beautiful coloration. They include many species, and are found about rocky shores and coral reefs. The majority feed upon molluscs and crustaceans, and are provided with powerful crushing teeth. Typical wrasses are found in the Mediterranean.

Wrath, CAPE. Headland of Sutherlandshire, the N.W. extremity of Scotland. It is 523 ft high and has a lighthouse.

WREKIN.

Hill of Shropshire, 2½ m. S. of Wellington. The summit is 1,335 ft. high and commands an extensive view. Wrekin College is a public school.

Wren. Small song bird, familiar in British hedgerows W. S. Berridge, F.Z.S.

WREN (Troglodytes parvulus). Small insectivorous bird of the family Troglodytidae. It is a native of Europe, Asia, and N Africa, and a familiar British bird. About four inches in length (the male slightly larger), it is brown in colour, pencilled with darker and lighter tints. Its short, cocked-up tail is a distinctive feature.

WREN, SIR CHRISTOPHER (1632-1723). English architect. Born at East Knoyle, Wilts, Oct. 20, 1632, in 1657 he became professor of astronomy at Gresham College, and in 1660 Savilian professor of astronomy at Oxford. He did not apply his talent for drawing to architecture until 1661, and the chapel of Pembroke College, Cambridge, was his first building, 1663. His first design for S. Paul's, 1673, was rejected, but in 1675 an

amended version was approved. He was knighted in 1672, and in 1685 he became M.P. for Plympton. He died Feb. 25, 1723, and was buried in S. Paul's Cathedral (q.v.).

Sir Christopher Wren English architect After Kneller

Besides S. Paul's Wren designed 52 London churches and 36 Companies' halls: the Monument; the Ashmolean, and Sheldonian Theatre, Oxford; the west towers of Westminster Abbey; and restored Salisbury and Rochester cathedrals.

WRESTLING. Form of athletic exercise. Various styles of wrestling exist, one of the most popular being the catch-as-catch-can (Lancashire or free) style. Tripping is included, as is struggling on the ground. A fall is obtained when both shoulders are made to touch the mat at the same moment. In the Greco-Roman style all holds are taken above the waist, tripping or the offensive use of legs and feet is prohibited, and ground wrestling is encouraged.

The Cumberland and Westmorland stylo requires the taking of a preliminary hold before the struggle begins. Each contestant passes his right arm under the other's left, and the hands are joined across the spine, giving to both an equal hold. A wrestler is considered down when any part of the person other than the feet touches the ground. Tripping is an essential feature. See Jujitsu.

WREXHAM. Borough and market town of Denbighshire, Wales. It is 12 m. S.W. of Chester, and is served by the G.W. and L.N.E. Rlys. The town has grown with the development of the neighbouring coalfields. The 15th century church of S. Giles has a magnificent W. tower, one of the Seven Wonders of Wales. Its N. porch was restored in 1901 by graduates of Yale in honour of Elihu Yale, who was buried here. The chief industries of the town are brewing, malting, and tanning. Market days, Mon., Thurs. and Sat. Pop. 18,703.

WRIGHT, SIR ALMROTH EDWARD (b. 1861). British scientist. From 1893-1902 he was professor of pathology at the Army medical school, Netley, and later was professor of experimental pathology, London University, and principal of the institute of pathology at S. Mary's Hospital. He carried out a series of important investigations on inoculation by dead cultures against typhoid, etc., and during the Great War his methods proved of great value against wound infection. Knighted and elected F.R.S. in 1906, he wrote a number of books on inoculation and other subjects. These include System of Anti-Typhoid Inoculation and Studies in Immunisation.

WRIGHT, ORVILLE (b. 1871). American airman. Born at Dayton, Ohio, Aug. 19, 1871, from 1900 onwards he devoted himself to the solution of the problem of human flight, with his brother, Wilbur Wright. The latter died of typhoid fever in May, 1912.

The Wright brothers began their famous gliding experiments on the sand dunes at Kitty Hawk, N. Carolina, and by the end of 1902 had practically solved all the problems of

Sir Almroth Wright, British scientist Russell

Orville and Wilbur Wright, American pioneers of flight

acroplane control. To the glider they built the brothers added a petrol engine, and on Dec. 17, 1903, they made four flights, the highest being 852 ft. See Aeronautics.

WRIGHT, WHITAKER (d. 1904). British financier. He was sentenced in London, Jan. 26, 1904, to seven years' penal servitude for frauds on the shareholders and creditors of the London and Globe Finance Corporation by the issue of fraudulent balance sheets. The company collapsed in 1901, and two other Whitaker Wright ventures failed, the total deficit being £5,500,000. Wright fled to the U.S.A., but was extradited in 1903. After sentence, he committed suicide, Jan. 26, 1904.

WRINGTON. Village of Somerset. It is 4 m. from Yatton, on the G.W. Rly. It is famous for its church, the tower of which is perhaps the finest in Somerset, and as the birthplace of John Locke. Pop. 1,369.

WRIST OR **CARPUS**. In man, the joint and structures which separate the bones of the arm from those of the hand. It is composed of eight bones arranged in two rows, namely, the scaphoid, lunar, pyramidal, pisiform, trapezium, trapezoid, os magnum, and unciform. The bones articulate above with the radius and ulna of the forearm, and below with the metacarpal bones of the palm.

WRIT. Order issued by the courts of law. In the United Kingdom almost all legal proceedings begin with the serving of a writ by the plaintiff upon the defendant, stating what the plaintiff demands. Writs must be served, i.e. handed to, the defendant in person, unless he agrees to accept service through a solicitor, although the courts can order a substituted service. The term is also used in connexion with parliamentary elections, as these take place on receipt of a writ addressed to the returning officer.

WRITER'S CRAMP. Spasmodic contraction of some of the muscles of the fingers and hand, associated with neuralgic pains, which comes on whenever the sufferer attempts to write. The spasm is due to fatigue of the brain centres governing the particular movements involved in writing. A similar spasm may occur in other occupations owing to the excessive use of a particular group of muscles. Prolonged rest is essential, and massage is helpful.

WRITING. Art of communicating ideas, on some more or less durable surface, by means of signs intelligible to the eye. The two main stages in the development of writing are ideography, the representation of objects or ideas by means of pictures, and phonography, the representation of sounds by written symbols.

The earliest method was pictography or picture writing. The Latin system of writing originally did not distinguish the forms of the letters for use in MSS. and inscriptions. Both were what is known as capital, each letter having a separate outline. By rounding off the letters and altering their original proportions capitals became uncials; a later development was the semi-uncial, in which majuscule (large letters) more and more gave way to minuscule (small letters).

In early times the Romans had a cursive system, which was the origin of the

national systems of writing. The Irish script was probably brought to Ireland by missionaries from Gaul. It exercised great influence on European writing. Anglo-Saxon, derived partly from Irish and partly from Roman script, was the parent of the Caroline minuscule, introduced in the 9th century by Charlemagne. By the 14th century this had developed into Gothic or black letter, which is the origin of the modern German printing script. In Italy, however, there was a renaissance of the Caroline style in the form of an elegant script, which, through the medium of the great printers, such as Aldus, became the basis of the modern types of writing. See Alphabet; Cuneiform; Ink; Manuscript; Palaeography; Paper; Papyrus.

WROTHAM. Urban dist. of Kent. It is 6 m. from Sevenoaks, on the Southern Rly. The church of S. George, an Early English building, has some old brasses. Here until about 1350 the archbishops of Canterbury had a palace. Pop. 4,240. Pron. Rootem.

WROXETER. Village of Shropshire. It is on the Severn, 6 m. S.E. of Shrewsbury. The Roman Uriconium or Viroconium, it contains interesting remains. Pop. 600.

WRYNECK (lynx). Small British bird, related to the woodpecker. Its name is due to the habit of twisting its neck as it picks up ants. The general colour of the upper parts is grey, spotted and barred with brown. It is fairly common in the S. of England, but rare in the N.

WUCHANG. Capital of Hupeh prov., China. It is on the Yang-tze river, opposite Hankow and Hanyang, which, together with Wuchang, form "the three cities," the chief trade centre of central China, with a total population of 1,583,900. It has cotton and ore crushing mills, and is the seat of a university.

WÜRTTEMBERG. Republic of Germany. In the S.W. of the country, it has an area of 7,530 sq. m. It is surrounded by Bavaria, Baden, and Switzerland, and has some detached pieces of territory. It contains some of the mountains of the Black Forest and spurs of the Alps. The chief rivers are the Neckar and Danube. Stuttgart is the capital and largest town; Ulm, Heilbronn, and Esslingen rank next in population. Agricultural pursuits afford the main occupation of the people, but there are some manufactures. Over a quarter of the surface is covered with forests.

The kingdom of Württemberg joined the German empire in 1871. In Nov., 1918, the king abdicated, and the country was declared a people's republic. A constitution was adopted in Sept., 1919. Württemberg is governed by a president, ministry, and landtag. The landtag consists of 80 members, elected for four years by universal suffrage. Pop. 2,580,235.

WÜRZBURG. City of Bavaria. It stands on both sides of the Main, 70 m. S.E. of Frankfurt. The cathedral is an imposing Romanesque building, mainly of the 12th century. Other churches include the beautiful Gothic Marienkapelle, the Neumünster church, and the churches of S. Burkhard and S. Stephen. The university was founded in 1582. The palace was built in the 18th century on the model of Versailles. On a hill overlooking the city is the fortress of Marienberg, where, from 1261 to 1720, the bishop lived. The city is a rly. junction. Pop. 89,910.

Wyalong. Town of Australia, in New South Wales. A centre for gold mining, it is 342 m. by rail from Sydney. Pop. 3,300.

WYANDOT. N. American Indian tribe of Iroquoian stock. A confederacy of four tribes, called by the French colonists Huron, and numbering about 10,000, occupied a region S. and E. of Georgian Bay, Ontario, when dispersed by Champlain in 1615. After the Iroquois exterminated the Huron settlements in 1648 there arose a new tribal grouping. See American Indians; Huron.

WYANDOTTE. Breed of domestic fowl. It originated in the U.S.A. about 1872, when they were mentioned as American

Wyandotte. White hen of this good laying breed.

Sehrights. They are descended from Brahmas crossed probably with Polish. In shape they resemble the Brahma, but are rounder and fuller-breasted. They are hardy birds, good layers, and good sitters.

Wyandotte Cave is a natural cave in Indiana, U.S.A. Situated

about 5 m. N.E. of Leavenworth, it measures over 23 m. in length.

WYATT OR **WYAT**, **SIR THOMAS** (c. 1503-42). English courtier, diplomat, and poet. Son of Sir Henry Wyatt (d. 1537), he enjoyed the favour of Henry VIII, and was ambassador to Charles V, 1537-39. His too intimate relations with Anne Boleyn, and then his friendship with Thomas Cromwell, led to his imprisonment in the Tower in 1536 and 1541. He was knighted in 1537, and was M.P. for Kent, 1542. A student of foreign literature, he wrote epigrams and satires. He died Oct. 11, 1542.

His son, Sir Thomas Wyatt (d. 1554), became a leading spirit in the plot to prevent Mary's marriage with Philip of Spain and to place Elizabeth on the throne. On Jan. 26 he raised his standard at Rochester and advanced on London, entering Southwark, Feb. 3. London Bridge was closed against him, but Wyatt made his way by Kingston. His army was beaten, and he was beheaded, April 11, 1554.

Sir Thomas Wyatt, English conspirator.

WYCHERLEY, **WILLIAM** (c. 1640-1716). English dramatist. Born at Clive, near Shrewsbury, and educated in France and at Queen's College, Oxford, he won popularity at court with his plays. In 1679 he married secretly the dowager countess of Drogheda (d. 1681), who left him her fortune. Impoverished by a lawsuit, he was rescued from prison by James II, and died Jan. 1, 1716. Wycherley's comedies are *Love in a Wood*, or *St. James's Park*, 1672; *The Gentleman Dancing Master*, 1673; *The Country Wife*, 1675, and *The Plain Dealer*, 1677.

WYCHWOOD. District of Oxfordshire, formerly a royal forest. In the W. of the co., between the rivers Windrush and Evenlode, it was made a royal hunting ground about 1200, and was disafforested in 1862.

William Wycherley, English dramatist. After Sir P. Lely.

However, Ernie was quite to be trusted. He was a steady little fellow, and well liked by

Writing. Scripts taught in the 20th century, founded on the distinctive lettering of the 16th century (reduced to quarter size)

By courtesy of Sir Isaac Pitman & Sons

WYCLIFFE, JOHN (c. 1325-84). English reformer. A native of Hipswell, near Richmond, Yorkshire, he was made master of Balliol College, Oxford, 1360, and achieved a reputation as a scholar and preacher.

John Wycliffe,
English reformer
From a print by O.
White

Later he became parish priest at Fillingham, Luddershall, and in 1374 at Lutterworth. As a zealous reformer of clerical abuses, his services as an able controversialist were called in by the party headed by John of Gaunt, in 1375.

In 1378 he began his translation of the Scriptures into the vernacular, a rendering which was the basis of all later translations.

He disseminated his doctrine by pamphlets in English, and by the organization of a sort of missionary association of preachers. Such teaching could be easily adapted to their own ends by communistic social reformers, who played their part in the rising of 1381; and the Lollards, as Wycliffe's followers came to be called, were soon regarded rather as political anarchists than as reformers of clerical abuses. He died Dec. 31, 1384. See Lollards.

Wycombe, High. Borough of Buckinghamshire, usually called High Wycombe (q.v.).

WYE. River of Wales and England. It rises on Plynlimmon, in Montgomeryshire, and flows into the estuary of the Severn just below Chepstow. Its length is 130 m. Among places on its banks are Hereford, Ross, Monmouth, and Chepstow. The Wye valley is noted for its beautiful scenery. (See Chepstow; Hereford; Symond's Yat.) There is also a Wye in Derbyshire.

WYE. Village of Kent. Situated 4 m. from Ashford, on the Southern Rly., it is the seat of the South-Eastern Agricultural College, associated with the university of London. Pop. 1,390.

WYMONDHAM. Market town of Norfolk. It stands on the L.N.E. Rly., 10 m. from Norwich. The chief building is the church of S. Mary the Virgin, at one time the church of an abbey. It has a Norman nave and a fine modern altar screen. There is a market cross. Market day, Fri. Pop. 4,814. Pron. Windham.

WYNDHAM, SIR CHARLES (1837-1919). British actor. Born in Liverpool, May 23, 1837, he changed his paternal name of Culverwell to that of Wyndham and took to acting. In 1874 he began his long connexion with the Criterion Theatre, where he played in a successful series of farces, and later in several modern comedies by Henry Arthur Jones. In 1893 he left the Criterion for Wyndham's, and in 1903 went to the New Theatre. He was knighted in 1902, and his second wife was Mary Moore (q.v.), long his leading lady. He died Jan. 12, 1919.

Sir Charles Wyndham,
British actor
Elliott & Fry

George Wyndham,
British politician
Elliott & Fry

WYNDHAM, GEORGE (1863-1913). British politician and man of letters. Son of the Hqn. Percy Wyndham and a grandson of the 1st Lord Leconfield, he was born Aug. 29, 1863. He served with the Coldstream Guards in Egypt in 1885, but, forsaking a military career for politics, he began as private secretary to A. J. Balfour, and in 1889 entered the House of Commons as M.P. for Dover. In 1898 he was

made under-secretary to the war office, and from 1900-5 was Irish secretary. He died June 9, 1913. Wyndham wrote on Ronsard and Shakespeare, and in 1919 a volume of Essays in Romantic Literature appeared.

WYOMING. State of the U.S.A. It forms part of a great plateau, and is traversed by branches of the Rocky Mts. It contains most of Yellowstone Park (q.v.). The North Platte, Big Horn, Powder, and Green are the longest rivers. The soil is semi-arid, and agriculture is aided by irrigation; a considerable area is utilised for grazing. Coal is yielded in large quantities, as well as petroleum and natural gas. Cheyenne is the capital. The area is 97,914 sq. m. Pop. 247,000.

WYOMING VALLEY. Picturesque valley of Pennsylvania, U.S.A. It extends about 30 m. along the Susquehanna river, and has a breadth of some 5 m. Its possession was long disputed by Connecticut and Pennsylvania settlers.

WYRLEY. Name of two villages of Staffordshire. Great Wyrley is 6 m. N. of Walsall, and has a station, Wyrley and Cheslyn Hay, on the L.M.S. Rly. Around are coal and ironstone mines. Pop. 2,701. Little Wyrley is about 2 m. away. See Maiming.

Wyvern. In heraldry, two-legged dragon, with serpentine forked tail. It is the typical dragon of continental heraldry.

X. Twenty-fourth letter of the English and twenty-third of the Latin alphabet. In form, but not in sound, it is the Greek X (Chi), which answers to the German ch in doch, and the Scottish ch in loch. At the beginning of words, chiefly of Greek origin, it has the sound of z, e.g. Xenophon, xylonite. Its normal sound is that of ks in an accented syllable, as in exit, excellent, and of gs in an unaccented syllable, as in exert, exalt. See Alphabet; Phonetics.

XANTHUS. Chief city of ancient Lycia, Asia Minor. It stood on the river of the same name about 8 m. from the mouth. In 546 B.C. it was besieged by the Persians, and after its destruction by the Romans in 42 B.C. it fell into ruins. Excavation has revealed a stele inscribed in Lycian and Greek, tombs, and other interesting remains.

XANTIPPÉ or **XANTIPPÉ** (Gr. yellow mare). Wife of Socrates (q.v.). She is said to have made his home life wretched by her quarrelsome disposition and shrewish tongue, and her name has become synonymous with virago. Pron. Zan-tippy.

XAVIER, FRANCIS (1506-52). Spanish missionary and saint. He was born at Xavier, near Sanguesa, April 7, 1506, and was educated in Paris, where he met Ignatius Loyola, with whom he was associated in founding the Society of Jesus. He laboured for a time in the hospitals of N. Italy, was ordained in 1537, and founded the first Jesuit mission in India, at Goa, 1542. After visiting Travancore, the Fishery Coast, Madura, Celebes, the Spice Islands, and Japan, he died of fever, on the island of Sancien, near Macao, Dec. 22, 1552, while trying to penetrate into China. He was canonised in 1622. His day is Dec. 3. See Goa; Jesuits.

Xebec (Ital. scabiocco, zambiocco). Name for a three-masted lateen-rigged trading ship. It is used only in the Mediterranean.

XENON (Gr. strange). Gaseous element, symbol

Xe. Its atomic weight is 130.2; atomic number 54. Xenon exists in the atmosphere in minute quantities.

XENOPHON (430-354 B.C.). Greek writer and general. An Athenian by birth, he joined the expedition of Cyrus the Younger against his brother Artaxerxes. On the death of Cyrus at the battle of Cunaxa the command devolved upon Xenophon, who, led his 10,000 fellow countrymen back to the coast. He preserved the story in his Anabasis. His chief work after the Anabasis is the Hellenica, a history of Greece. Memorabilia was written to vindicate Socrates, whose pupil he had been. Xenophon also wrote treatises on domestic economy, hunting, etc.

Xenotime. In mineralogy, phosphate of yttrium. One of the sources of yttrium (q.v.) it is found in Brazil and the U.S.A.

XERXES. King of Persia, 485-465 B.C. His first task on the death of his father Darius was to quell a revolt which had broken out in Egypt. In 480 Xerxes and his army set out from Sardis in Asia Minor to conquer Greece. The Hellespont was crossed by a bridge of boats, and a canal was cut through Mt. Athos. His army, after a temporary repulse at Thermopylae, reached Athens, but his fleet was beaten at Salamis. Xerxes returned with the bulk of his army, but was assassinated in 465 by Artabanus, commander of his bodyguard. Pron. Zerx-eex.

XIMENES, OR JIMENES, DE CISNEROS, FRANCISCO (1436-1517). Spanish ecclesiastic. After studying at Salamanca, he was ordained priest and went to Rome. In 1492 he became confessor to Queen Isabella and in 1495 was made archbishop of Toledo. He retained his power during the difficult times that followed Isabella's death in 1504, receiving the red hat in 1507 and becoming grand inquisitor of Castile and Leon. In 1509 he led a strong force to Africa and conquered Mers-el-Kebir. On the death of Ferdinand in 1516 Ximenes became regent of Castile for Charles V, but in 1517 Charles dismissed him, and he died Nov. 8, 1517.

X-RAY. Rays discovered in 1895 by Röntgen. While investigating the passage of high-voltage electric currents through vacuum tubes (Crookes' tubes) he noticed that invisible rays were emitted which caused fluorescence in certain crystals, and penetrated certain substances opaque to light,

X-Rays. Explanatory diagram of method of applying X-ray treatment to a patient, and the precautions taken to protect the operators

such as wood and aluminium. The rays were stopped by the heavy metals and other dense substances.

Further research on the rays has been directed into three main channels: (1) physical; (2) chemical; and (3) medical. By passing X-rays through crystals, a spectrum is obtained which furnishes a method of studying the actual form of crystals and of measuring the wave lengths. Each chemical element has the power of emitting X-rays of a particular wave length—under suitable stimulation. The square root of the vibration-frequency of each element is proportional to the atomic number of the element. This law has enabled many discoveries to be made about electrons and the atomic structure of the elements.

In industry the X-rays are applied with success in detecting flaws in metallic castings and the like. The applications of the X-rays to diagnosis are numerous. Certain diseases of the skin yield readily to X-ray treatment and some measure of success has attended the X-ray treatment of cancer. See Atom; Electron; Light; Radiation; Röntgen, W. K.

XYLENE. Liquid hydrocarbon obtained from coal tar and existing in three isomeric forms—ortho-xylene, meta-xylene, and para-xylene. Xylene is employed as a solvent and in the manufacture of aniline dyes.

Xylonite. Alternative name for celluloid (q.v.). It is prepared by mixing, under pressure, pyroxylin and camphor.

XYLOPHONE (Gr. xylon, wood; phonē, voice). Percussion instrument in the orchestra. It consists of 27 bars of hard wood slightly rounded on the upper surface and arranged in two rows, with resonators below. They are struck with two small wooden mallets, producing a dry and clattering sound.

Y. Twenty-fifth letter of the English and twenty-fourth of the Latin alphabet, both a vowel and a consonant. In form it corresponds to the Greek Υ (upsilon), and in Latin is only found in Greek words. As a consonant it has almost the same value as ee, as in the pronunciation of yes, yet. As a vowel, y may be phonetically compared to i, its values being long i, the diphthong, not the Italian sound, and short i, as in by, fly, synonym, system. As a general rule, at the end of a word, when preceded by a consonant, it has a shortened sound, as in colony. See Alphabet; Phonetics.

YACHTING. Navigation of a sailing, steam, or motor yacht. The real beginning of pleasure yachting dates from the early years of the 18th century, and the foundation of the first yacht club is credited to Ireland, the Cork Harbour Water Club having been established in 1720. English yachting progressed on the foundation of the Yacht Club, now the Royal Yacht Squadron, at Cowes in 1815 by 50 noblemen and gentlemen owning yachts. Its institution was followed in 1823 by that of the Royal Thames Yacht Club.

In yacht construction early designers concentrated chiefly on sharp bow and stern, a stern-post with upward and backward slant, a somewhat narrow beam, gigantic sails, and fine water-lines, but these characteristics underwent drastic modification following the appearance in English waters of the famous *America* in 1851, when she defeated the *Aurora* and 16 other yachts in the race for the Queen's Cup at Cowes, a trophy that has since been known as the *America Cup* (q.v.).

The variation in the size of racing yachts made necessary a measurement rule to reduce to a minimum the advantage held by one type over another. The original tonnage rules were frequently amended, and in 1907 a number of delegates met in conference to unify the rules of yacht racing, the result being the formation of the International Yacht Racing Union. See Lipton, Sir T.; Shamrock.

YAHOO. Degraded human servants of the horses inhabiting the island of the Houyhnhnms, described in the fourth voyage of Gulliver in Swift's *Gulliver's Travels*

Yak. Domesticated shaggy-haired bull of Tibet
Gambier Bolton, F.Z.S.

YAK (*Bos grunniens*). Ungulate mammal, belonging to the ox family, and found only in Tibet and in parts of China. The yak is a massive and heavy animal, with short legs and a long narrow head. Long hair grows from the limbs, tail, and under parts and often reaches the ground. Fine male specimens stand nearly 6 ft. high at the shoulders and weigh well over 1,000 lb. Yaks are used by the Tibetans as beasts of burden as well as for food.

Xylophone. Diagram showing arrangement of notes in the wooden musical instrument
By courtesy of J. W. D. Hawkes & Son

YAKUTSK. Autonomous republic of Soviet Asia. It is a vast triangular region, E. of the Siberian Area, with a long coastline on the Arctic Ocean, and consists of the basin of the Lena and other rivers flowing into the Arctic. The climate is very severe. An air service has been established between Yakutsk (pop. 10,513), the capital, and Irkutsk. The republic was established in 1922. The area is 1,457,068 sq. m. Pop. 236,728.

YALE UNIVERSITY. American university. It is at Hartford, Connecticut, and owes its name to Elihu Yale (1648-1721), an Anglo-Indian official, who was an early benefactor. It dates from 1701, and was at first the collegiate school of Connecticut, at Saybrook. It was founded by Puritans, who made theology an important subject of study. In 1717 it was removed to Hartford, and took the name of Yale, although not officially declared a university until 1887. Since 1892 it has been opened to women.

YALU. River of E. Asia. Rising in the Peishan, it follows a winding S. course between Manchuria and Korea, whose frontier it forms, to the bay of Korea. It is about 300 m. long and navigable to Wiju.

The battle of the Yalu was fought at the mouth of the river, Sept. 17, 1894, between Japanese and Chinese. The action lasted over four hours, at the end of which three of the Chinese vessels had been sunk, while a fourth had been beached owing to injuries.

YAM (*Dioscorea sativa*). Perennial climbing herb of the order Dioscoreaceae. A native of the East Indies and the Philippines, it is extensively cultivated in the West Indies.

It has large, fleshy, tuberous roots, long twining stems, and alternate, heart-shaped leaves. The tubers are rich in starch and are used in the same ways as the potato.

YANGTZE KIANG. River of China. It is over 3,000 m. long, rising in the centre of the high plateau of Tibet, and flowing across the breadth of China into the Yellow Sea. Its early course is known as the Kinsha Kiang. Though marked in places by rapids, it is an immensely valuable commercial waterway. Among important towns on its banks are Nanking, Hankow, Wuchang, Ichang, and Chungking.

YANKEE. Word of uncertain origin used in America for a citizen of New England, and in Europe generally for a native of the U.S.A. The name was applied in the War of Independence by the British to the Americans, in the Civil War by the Confederates to the Union soldiers (often shortened to "Yank"), and by the South to the North.

Yankee Doodle is the name of an American tune. It dates from about the middle of the 18th century, its origin being obscure. There are many versions. Words, more or less nonsensical in general, are fitted to it.

YAP. Island of the Caroline group, Pacific Ocean. Previously a German possession, it passed by the treaty of Versailles, 1919, under mandate to Japan. It is an important cable centre with direct communication to Guam, Shanghai, and Menado in the Dutch East Indies. Friction arose between the U.S.A. and Japan over the cable rights. A settlement was reached in 1921 and embodied in a treaty the following year, by which the U.S.A. obtained the right of free access to the island to operate the cables. Pop. 7,332.

YARD. British standard linear measure. It is the length between two gold studs on an iridio-platinum bar, copies of which are kept in the Houses of Parliament, the Standards office, the Royal Observatory, Greenwich, and elsewhere. The yard is divided into three feet and thirty-six inches. See Ell; Foot; Inch; Weights and Measures.

YARE. River of Norfolk. It rises near Cranworth, in the centre of the county, and, flowing past Norwich, enters the sea at Yarmouth. It is about 60 m. long. Its tributaries are the Wensum, Waveney, and Bure.

YARKAND. Town of central Asia. It is in Sinkiang, a dependency of China. On the river Yarkand, about 100 m. S.E. of Kashgar, it manufactures silk, felt, and cotton goods. Pop. 100,000.

YARMOUTH, GREAT. Co. bor. and watering place of Norfolk. Near the mouth of the Yare, it is 19 m. E. of Norwich on the L.N.E. and L.M.S. Ryhs. The church of S. Nicholas, one of the largest parish churches in England, was founded in the 12th century. Characteristic of the old town are the Rows, numerous narrow lanes, often but a few feet wide. There are some interesting old houses, including the Star Hotel, a Tudor building, and the 14th century toll house, now a library and museum. There is a grammar school. On the S. Dunes is the Nelson monument, a column 144 ft. high. A new bridge was opened by the Prince of Wales,

Yam. Tubers and heart-shaped leaves

Elihu Yale, Anglo-Indian official

Oct 21, 1930. The town is an important centre of the herring fishery, Yarmouth boats being famous. One member is returned to Parliament. On Nov 3, 1914, and again on April 25, 1916, German battle-cruisers bombarded Yarmouth. Pop 60,710

YARMOUTH. Seaport of the Isle of Wight. On the Solent, at the W. end of the island, at the mouth of the Yar, it has a station on the Southern Rly. and steamer connexion with Lymington. It has a castle built by Henry VIII and is a yachting centre. Until 1883 Yarmouth had its own mayor and corporation, and it sent members to Parliament from 1584 to 1832. Pop. 893

YARMOUTH. Town and seaport of Nova Scotia. It is 215 m. from Halifax, on a good harbour at the S.W. end of the peninsula, and is a station on the C.P.R. and C.N. Rlys. Steamers go to Boston and Halifax. The chief industries are shipbuilding and exporting lumber. Pop. 7,073.

YAROSLAVL. City of Soviet Russia, capital of the prov. of the same name. On the Volga, 160 m. N.E. of Moscow, it is a rly. junction and a centre of water communication. The university dates from 1919. Pop. 121,103.

YARRA YARRA. River of Victoria, Australia. It discharges into Port Philip and is navigable for large vessels to Melbourne. Its length is 100 miles.

YARROW. (*Achillea millefolium*) on MILFOL. Perennial herb of the order Compositae, native of Europe, N. and W. Asia, and N. America; a common weed in British pastures, and closely related to the sneezewort (q.v.) It differs in the long leaves being cut into fine segments, featherlike, and in the flower heads being smaller, but more numerous.

YARROW. River of Selkirkshire, Scotland. It rises above St. Mary's Loch and flows to the Ettrick Water, which it joins near Selkirk. It is known for its historic and literary associations and for its beautiful scenery, described in one or two of Wordsworth's poems. On its banks are the ruins of Dryhope Tower and Newark Castle.

YARROW, SIR ALFRED FERNANDEZ (b. 1842). British engineer. Born Jan. 13, 1842, he became a shipbuilder and engineer at Poplar, London, in 1866, where he specialised in high-speed vessels, particularly torpedo-boats and torpedo-boat destroyers, boats of shallow draught, the Yarrow boiler, now generally adopted in the navies of the world, etc. In 1906 the works of Yarrow and Co., which he founded, were removed to Scotstown, Glasgow, and later a branch was opened at Vancouver.

Sir Alfred Yarrow,
British engineer
Elliott & Fry

Yarrow was created a baronet in 1916.

YASHMAK. Veil sometimes worn by Mahomedan women of Egypt and Turkey, when in public. Triangular in shape and about a yard long, it covers the face below the eyes. See Turkey.

YASS. Township of New South Wales. It is about 43 m. N. of Canberra, and is the terminus of the projected rly. to the federal capital. Gold is mined in the neighbourhood. Pop. 2,200. See Canberra.

YATAGHAN. Turkish short sword or long knife, with a double curved blade running to a point and a handle without a guard. The weapon is common among Mahomedan peoples. In the 19th century it was worn by some of the French infantry. See Sword.

YATES, EDMUND HODGSON (1831-94). British journalist. Born at Edinburgh, July 3, 1831, he began his journalistic work as a con-

tributor of verses and theatrical criticism to The Court Journal in 1852, and was dramatic critic and reviewer on the Daily News, 1854-60. As editor of Town

Edmund Yates,
British journalist

Talk, 1858, he wrote an article on Thackeray which led the last named to insist on his resignation from the Garrick Club. He became acting editor of Temple Bar, 1860, sole editor, 1863-67; and edited Tinsley's Magazine, 1867-74. He was European representative of The New York Herald, 1873, and, with Grenville Murray, founded a society paper, The World, 1874. He died May 20, 1894.

YAWL. Name for a two-masted craft. The mainmast is tall, and carries several sails; the mizzenmast is short, and carries only one small sail, which, projecting over the stern, helps to make steering easy. See Ship.

Yeadon. Urban dist. of Yorkshire (W.R.). It is 8 m. N.W. of Leeds. The chief industry is the manufacture of woollens. Pop. 7,590.

YEAMES, WILLIAM FREDERICK (1835-1918). British artist. Born at Taganrog, S. Russia, where his father was British consul, he studied in Florence and London, where he was associated with G. A. Storey, H. S. Marks, P. H. Calderon, and others in what was known as the St. John's Wood School. Made A.R.A. in 1866 and R.A. in 1878, Yeames taught in the R.A. school, was librarian at the R.A., and curator of the Painted Hall, Greenwich Hospital. He died May 3, 1918.

YEAR. Period of time. The sidereal year is 365 days, 6 hours, 9 minutes, 9 seconds, and is the actual period taken by the earth to make one complete revolution in its orbit. The anomalistic year, the interval between two successive passages of perihelion by the earth, is 365 days, 6 hours, 13 minutes, 53 seconds. The tropical year is 365 days, 5 hours, 48 minutes, 46 seconds, the time taken by the earth to pass from any point in the ecliptic to the same point again.

The tropical year is the year of the calendar, and is divided into 12 months. The Jews and Mahomedans use a lunar year. See Calendar.

YEAST. Class of fungi of the genus Saccharomyces. They have the power of setting up alcoholic fermentation in sugar, the latter being broken up in the process into alcohol and carbon dioxide. Among the chief varieties of yeast are *S. cerevisiae*, used in the manufacture of beer, and *S. ellipsoidea*, in the manufacture of wine. *S. mycoderma* is the so-called vinegar plant. If a small quantity of yeast is introduced into a fermentable liquid, the yeast cells increase and the liquid actively ferments. The fermenting liquid is covered with a frothy mass, known as top yeast, which is compressed and used by bakers. See Enzyme; Fermentation.

YEATS, WILLIAM BUTLER (b. 1865). Irish poet and dramatist. A son of the portrait painter, J. B. Yeats (1839-1922), he was born at Sandymount, near Dublin, June 13, 1865. His verse combines the beautiful with the weird and fantastic. Among his many publications are The Countess Kathleen, 1892; The Celtic Twilight, 1893; The Secret Rose, 1897; The Shadowy Waters, 1900; Cathleen ni Hoolihan, 1902; Deirdre, 1907; J. M. Synge

and the Ireland of His Time, 1911; Reveries, 1916; A Vision, 1926; and The Tower, 1928. In 1899 Yeats helped to found the Abbey Theatre in Dublin. In 1922 he was made a senator of the Free State, and he received a Nobel prize for literature in 1923.

YELL. One of the Shetland Islands. It is 25 m. N. of Lerwick, and is separated from Mainland by Yell Sound. The island is 17 m. from N. to S. and its greatest breadth is about 6 m. Pop. 2,300. See Shetland.

YELLOW FEVER. Acute non-contagious fever occurring in endemic form on the Atlantic coasts of Mexico and Central S. America, on the W. coast of Africa, etc. It is spread by a species of mosquito—the *Stegomyia calopus*—the bites of which convey a parasite from the mosquito to human beings.

The symptoms generally appear from two to six days after infection has occurred. There is a rise of temperature to 103° F. or more, with chilliness, severe headache, pain in the back and limbs, and increase in the pulse rate. In most cases, after a few hours' remission, the temperature again rises and jaundice appears, the yellow tint of the skin gradually increasing. It is this symptom which has given the disease its name. In some cases the symptoms decrease in from three to four days, in others the patient dies.

Yawl. A racing yawl sailing close to the wind
Cribb, Southsea

YELLOWHAMMER (*Emberiza citrinella*) Species of bunting, common in Great Britain and N. Europe. The head, neck, and under parts are bright yellow, while the upper parts are reddish brown. It occurs chiefly on commons and waste ground, and feeds upon insects during summer and seeds in winter.

YELLOWHEAD. Pass in the Rocky Mts., Canada. It connects British Columbia with Alberta, and was discovered in 1858. See Rocky Mountains.

YELLOW PRESS. Name given to American and other newspapers of a sensational kind. It is due to Mr. R. F. Oatcault, who died in Sept., 1928. In 1895 he published in The Sunday World, New York, a comic supplement called the Yellow Kid.

Yellow River. Alternative name for the Chinese river Hwang-ho (q.v.).

YELLOW SEA (Chinese Hwanghai). Arm of the Pacific Ocean, between Manchuria on the N., China on the W., and Korea on the E. It washes the shores of the Chinese provs. of Shantung, Chihli, and Kiangsu, and communicates on the S. with the East China Sea. The northern portion embraces the gulfs of Korea, Liautung, and Chihli, and the most prominent projections are the peninsulas of Liautung and Shantung. The river Hwang-ho brings down enormous quantities of yellow mud, hence the name of the sea.

Lafayette

YELLOWSTONE PARK. Government reservation of the U.S.A. Occupying the N.W. corner of Wyoming, and small adjoining portions of Montana and Idaho, it covers 3,426 sq. m. and was opened to the public in 1872 as a national park with game preserve. It consists mainly of a plateau relieved by mountain groups. Within the reserve are numerous magnificent geysers, and near the centre is Yellowstone Lake. The Yellowstone river, a tributary of the Missouri, enters the lake at the S. end and issues from the N. To the S. and E. of the park is a timber preserve.

YEMEN. Imamate of Arabia. It occupies the S.W. corner of the peninsula, between Asir and the Aden Protectorate, and its capital is Sana. The area is about 75,000 sq. m.; pop. between two and three millions. See Arabia.

YEN. Japanese monetary unit. It is coined in 5, 10, and 20 yen gold pieces. The yen is divided into 100 sen. Its nominal value is 2s. 0½d. See Sen.

YENISEI. River of Soviet Asia. It rises in N. Mongolia, crosses the Siberian area from S. to N., and flows into the Arctic Ocean. It is over 3,000 m. in length.

Yokohama. Part of the city as reconstructed after the earthquake of 1923. Centre, City Hall, surrounded by wide roadways and buildings of Western style

"The Times" copyright

YEOMAN. English word originally meaning a countryman, and later used for a class of those who cultivate the soil. The yeomen are retainers in Chaucer, but later appear to have become small freeholders, the intermediate class between the gentry and the labourers. The word was also used for farmers, those who rented land

YEOMANRY. Name given in England and Wales to mounted auxiliary troops. They were so called because they were recruited mainly from among yeoman farmers. The force was first raised in 1761 for home defence, but it was not organized until 1794. The men were organized in regiments, on a county basis. In 1900-2 regiments of mounted men were raised for service in S. Africa, and were called imperial yeomanry.

Up to and during the Great War, in which they had a distinguished record, there were 55 regiments of yeomanry. When, in 1921, the territorial army was reorganized, only 10 of the 55 yeomanry regiments were retained. There are now 14. See Territorial Army.

YEOMEN OF THE GUARD. Small military corps, officially styled the King's Body Guard of the Yeomen of the Guard, and popularly known as the Beefeaters. They are members of the royal household and are in receipt of pensions for distinguished conduct in the field. They were founded by Henry VII in 1485, after the battle of Bosworth.

YEOVIL. Borough and market town of Somerset. It stands on the river Yeo, 22 m. E. of Taunton, with stations on the G.W. and Southern Rlys. The church of S. John the Baptist is a fine Perpendicular building. The town is noted for gloves and is also an agricultural centre. Market day, Fri. Pop. 14,994.

Yes Tor. Mt. of Devon. On Dartmoor, 3 m. S. of Okehampton, it is 2,028 ft. high.

Yetholm. Village of Roxburghshire, Scotland, 8 m. S.E. of Kelso. It was the headquarters of the Scottish gypsies. Pop. 772.

YEW (Taxus).

Genus of evergreen trees of the order Coniferae. The common yew (*T. baccata*) is a native of Britain, and other species have been introduced from America and Japan at various dates. The

Yew. Foliage of the common yew, *Taxus baccata*

foliage is poisonous to cattle. The yew is of very slow growth, and reaches an age of 300 to 400 years. Of stately spreading habit, it rarely attains to a height of more than 40 ft. The Irish yew is an ornamental variety.

YIDDISH (Ger. jüdisch, Jewish). Name given to a dialect or dialects spoken by the Jews in various parts of the world. The Jews who migrated from Germany to the east of Europe in the 14th century took with them their mother tongue. This, with an admixture of Hebrew and foreign words, gradually developed into a peculiar jargon. After the return to the west in the 17th century this jargon held its ground, and forms the basis of a popular dialect of German-Jewish in all parts of Europe and also in America. The Hebrew characters are used. See Jews.

YMUUDEN or IJMUUDEN. Town of the Netherlands. It lies at the W. end of the North Sea Canal, 15 m. from Amsterdam. Quays and other shipping facilities make the place a growing outpost for Amsterdam. There are ice and chemical works. A large new lock was erected in 1927-28. Pop. 10,000.

Ynshir. Coal mining centre of Glamorganshire, Wales. It is 4 m. N.W. of Pontypridd and is served by the G.W. Rly. Pop. 11,100.

YOKOHAMA. Principal seaport of Japan. It stands on Tokyo Bay, 15 m. S. by W. of Tokyo, with which it is connected by rly. Its commodious harbour is well equipped. Silk is one of the chief articles of export. On Sept. 1, 1923, Yokohama was almost destroyed by an earthquake, but has since been rebuilt. The area of the city was increased in 1927. Pop. 518,902.

YONGE, CHARLOTTE MARY (1823-1901). British novelist and author. She was born Aug. 11, 1823, at Otterbourne, Hants, where she lived all her life, and died March 23, 1901. The inculcation of the High Church faith is the dominating note of her long series of novels, the first of which to achieve a striking success being *The Heir of Redclyffe*, 1853. She also wrote a number of historical works of a simple character.

Yonkers. City of New York, U.S.A. It is a residential suburb of New York City, which it adjoins on the N. Pop. 113,647. See New York.

YORK. City, county borough, and market town of Yorkshire, also the co. town and the seat of an archbishop. It stands at the confluence of the Ouse and Foss, 188 m. N.W. of London, and is served by the L.M.S. and L.N.E. Rlys. The industries

include iron founding, rly. carriage building, printing, glass making, and cocoa, chocolate and confectionery manufacture. The old city walls still stand; they retain four of the original gates or "bars." The Eboracum of the Romans, York became the capital of the British province and headquarters of the 6th legion.

The minster, or cathedral church of S. Peter, was built on the site of a 7th century church, and has been several times damaged by fire. Famous especially for its stained glass and chapter house, the existing structure includes examples of Early English, Decorated, and Early and Late Perpendicular. On both sides of the beautiful W. façade rise two towers; in the N.W. tower is hung the bell called Great Peter. The central tower or Great Lantern rises 198 ft. The choir is separated from the nave by a Late Gothic screen. There is a Late Norman crypt. Paulinus was the first bishop of York, 627-33.

There are many other churches of note, some with beautiful old glass. In the grounds of the Yorkshire Philosophical Society are the ruins of S. Leonard's Hospital and the Multangular Tower. Adjacent are the ruins of the 11th

century S. Mary's Ahhey, a Benedictine foundation. The castle, of which the oldest part is Clifford's Tower (Norman), is now the site of the assize court and military prison. Among other features of interest are the Gothic guildhall, the hall of the Merchant Adventurers, S. Mary's Convent, and S. Peter's School, refounded in 1557. Market day, Sat. Pop. 86,530. See Chapter.

YORK. British cruiser. The nameship of a class of six cruisers, she was laid down in 1927. Her length is 575 ft. and she displaces 8,400 tons. She carries 12 guns and has six torpedo tubes. Her designed speed is 31.25 knots.

York. The cathedral or minster of S. Peter, which presents one of the most perfect examples of Perpendicular architecture in England

YORK, HOUSE OF. Name given to the descendants of Edward, duke of York. They reigned in England 1461-85, and on their behalf the Wars of the Roses were fought. In 1385 Richard II made his uncle, Edmund of Langley, duke of York. Edmund had two sons. The elder, Edward, became duke of York, but left no sons when he was killed at Agincourt. The younger son, Richard, earl of Cambridge, had been executed for treason against Henry V, 1415. His son Richard succeeded to his uncle's dukedom. After the death of Richard his sons, Edward IV and Richard III, represented the family. See Lancaster; Roses, Wars of the.

YORK, ALBERT, DUKE OF (b. 1895). British prince. The second son of George V, he was born at York Cottage, Sandringham, Dec. 14, 1895, and was baptized Albert Frederick Arthur George. In Jan., 1909, he entered the Royal Naval College, Osborne. In Sept., 1913, he joined the Collingwood as midshipman, and in 1916 was made a K.G. Created duke of York, 1920, he married Lady Elizabeth Angela Marguerite Bowes-Lyon, daughter of the earl of Strathmore, in 1923. A daughter, Elizabeth, was born in 1926, and a second daughter, Margaret Rose, in 1930. In May, 1927, the Duke opened the new Australian Houses of Parliament at Canberra. See Elizabeth; Glamis; Royal Family; Strathmore.

Frederick Augustus, Duke of York, British soldier After T. Phillips

over, with a number of reverses, and in 1794 was recalled. In 1799 he took another force to the Netherlands. York was made commander-in-chief in 1798, and he died Jan. 5, 1827.

YORK, RICHARD, DUKE OF (1411-60). English nobleman. Born Sept. 21, 1411, he was the son of Richard, earl of Cambridge. His grandfather was Edmund, duke of York, a son of Edward III, and when his uncle, Edward, was killed at Agincourt, in 1415, he became the head of his family. In 1455 the Wars of the Roses began, and York gained the upper hand. In 1459, however, he was worsted, and took refuge in Ireland. He returned to England in 1460, and formally claimed the throne. His foes, however, caught him at Sandal Castle, near Wakefield, where he was killed, Dec. 30, 1460. See Edward IV.

YORK AND LANCASTER REGIMENT. Regiment of the British army. Originally the 65th and 84th Foot, the former raised in 1756,

it saw active service in the West Indies and against the American colonists. In 1794 it helped to capture Martinique, and its other services during the French War include the seizure of the Cape of Good Hope and several battles in the Peninsular War. During the Indian Mutiny the regiment helped to defend Lucknow, and its more recent campaigns include the New Zealand War, 1861-65; the Egyptian War, 1882; and the South African War, where it took part in the relief of Ladysmith. The regiment had, in addition to its regular and special reserve battalions, twelve service and two territorial battalions in the Great War. The depot is at Pontefract.

York and Lancaster Regiment badge

YORK HOUSE. Royal residence in London. Part of St. James's Palace (q.v.), so named since it was the residence of George V when duke of York, it became the home of his son, the prince of Wales.

YORKSHIRE. County of England. It is divided into three ridings (q.v.). Its area is 6,077 sq. m., the west riding containing 2,771 sq. m., the north 2,128, and the east 1,172, and the city of York six. In the W. is the Pennine Chain (Mickle Fell, 2,591 ft.), in the N.E. the moorland dist. of Cleveland and Hambleton Hills, and in the E. the wolds. E. of the Pennines are Wensleydale, Wharfedale, and other dales. The second of its tributaries, Swale, Ure, Wharfe, Aire, Derwent, and Don, and partly by the Ribble, Tees, and Esk. From the mouth of the Tees to Flamborough Head the coast is generally high and rocky, the chief indentations being Robin Hood's, Filby, and Bridlington bays, but thence to Spurn Head it is low and unrelieved.

Next to coal, iron ore, fireclay, limestone, and sandstone are the chief minerals worked. Much of the N. riding is pasture, and sheep farming and horse breeding largely engage attention. Yorkshire is noted for its health

resorts. There are numerous ancient castles, and the monastic ruins include Fountains, Jervaulx, Kirkstall, Bolton, Whitby, and other abbeys. York is the co. town. Pop. (1921) W. Riding, 3,181,174; N. Riding, 456,436; E. riding, 460,880. See Whitby; York.

YORKSHIRE LIGHT INFANTRY.

Regiment of the British army. Officially known since Dec., 1920, as The King's Own (Yorkshire Light Infantry), this regiment is made up of the old 51st and 105th regiments of the line. The 51st was raised in 1755, and was one of the six British regiments which fought at Minden. It fought under Moore at Corunna, and was at Salamanca, Vittoria, and the storming of Badajoz before it formed part of the line at Waterloo. Regular, territorial, and service battalions rendered good service during the Great War. The depot is at Pontefract.

Yorkshire Light Infantry badge

YORKSHIRE REGIMENT. Regiment of the British army. Its official title since Dec., 1920, is The Green Howards (Alexandra, Princess of Wales's Own Yorkshire Regiment). Originally the 19th Foot, dating from 1688, it served under William III and Marlborough in Flanders, and at the siege of Douai it showed the utmost gallantry. In 1745-46 it fought at Fontenoy and Lawfield. The Yorkshires served in the Crimea, went to the Tirah in 1897, and in S. Africa were at Paardeberg. In the Great War this regiment had six service and two territorial, in addition to its regular and special reserve battalions. The regimental depot is at Richmond.

Yorkshire Regiment badge

YORKSHIRE TERRIER. Small breed of dog descended from the Scotch terrier, but with longer and more silky hair. Similar in general shape to the smooth terrier, the body is longer and the limbs much shorter. The coat is of three colours—the back being blue-slate, the head and legs silvery fawn, and the under parts tan. The nose is perfectly black and the small ears are carried half-erect. See Dog; Terrier; also p. 1453.

YORKTOWN. Town of Virginia, U.S.A. It stands on York River, 65 m. S.E. of Richmond. Yorktown has twice been besieged. In 1781, during the American War of Independence, Lord Cornwallis had withdrawn into it his whole force, about 7,200 men. The investment by 16,000 Americans and French began on Oct. 5, and Cornwallis surrendered on Oct. 19. The second siege occurred in April-May, 1862, during the American Civil War, when the Confederates held the town from April 4 to May 3.

YOSEMITE VALLEY. Gorge in California, U.S.A. It is situated at the S.W. base of the Sierra Nevada. Remarkable for its wildly picturesque scenery, it is between 7

Yorkshire. Map of the largest English county, famous for its manufactures and coal mines

and 8 m. long, and from $\frac{1}{2}$ m. to more than 1 m. in breadth. It is enclosed on three sides by almost vertical walls of granite. The Merced river, which traverses the valley, forms a number of magnificent waterfalls. The valley forms part of the Yosemite National Park, covering 1,126 sq. m. Pron. Yo-sem-mity.

YOUGHAL. Seaport and urban dist. of co. Cork, Irish Free State. It stands on the estuary of the Blackwater, 27 m. from Cork, and is served by the G.S. Rlys. The collegiate church of S. Mary dates from the 13th century. The town has a good harbour and a trade in agricultural products, etc. It is a centre for salmon fishing. Sir Walter Raleigh lived near, at Myrtle Grove. Pop. 5,339. Pron. Yawl.

Yorkshire Terrier, a silky-haired breed. See article p. 1452

YOUNG, ARTHUR (1741-1820): British writer. Born in London, Sept. 11, 1741. He wrote a number of works which gave a great impetus to scientific agriculture in England. They include A Tour Through the Southern Counties, 1768; A Tour Through the North of England, 1771; A Tour in Ireland, 1780. His Travels in France during 1787-89 has great historical value for the accurate pictures of that country just before the Revolution. He died April 20, 1820.

YOUNG, BRIGHAM (1801-77). Mormon leader. Born at Whitingham, Vermont, June 1, 1801. He entered the Mormon Church in 1832, and was chosen president in 1847. By his skill and perseverance he established his people at Salt Lake City in 1847. In 1852 he published the Mormon doctrine of polygamy, and enjoined its practice on all his followers, himself marrying over 20 wives and becoming the father of 57 children. He died at Salt Lake City, Utah, Aug. 29, 1877. See Mormons; Salt Lake City.

Brigham Young, Mormon leader

YOUNG ENGLAND. Name given to an English political party that appeared about 1842-46. Its members were young Tories who in many ways followed the policy of the party leader, Sir Robert Peel. Drawn chiefly from the aristocracy, its members advocated friendlier relations between rich and poor. Disraeli belonged to the party, whose ideas he described in Sybil, or The Two Nations.

YOUNGHUSBAND, SIR FRANCIS EDWARD (b. 1863). British soldier and traveller. Born at Murree, India, May 31, 1863, he joined the 1st Dragoon Guards in 1882. In 1890 he was transferred to the Indian service, and he held various political appointments, being British commissioner to Tibet, 1902-4, and British resident in Kashmir, 1906-9. His travels included a journey from Peking to India through Chinese Turkistan in 1887. His writings include The Relief of Chitral. His brother, Sir George John Younghusband (b. 1859), had also a long career of active service in India and elsewhere. He wrote The Story of the Guides, 1908.

Sir F. E. Younghusband, Lafayette

YOUNG MEN'S CHRISTIAN ASSOCIATION. International organization for promoting the spiritual, social, physical, and educational welfare of young men. In its present form it was founded by Sir George Williams (q.v.) in 1844. The movement spread rapidly, and associations, as they were called, were formed all over the country, as well as on the continent of Europe. In 1851 it was started in America, in 1853 in Australia, New Zealand, and S. Africa, and in 1854 an alliance of associations of the U.S.A. and Canada was established.

During the Great War the British Y.M.C.A. rendered invaluable service by its welfare work at home and in the battle areas. It organized huts and canteens for war workers and soldiers in camp and billets. The national headquarters are at Tottenham Court Road and 12-13, Russell Square, London.

The Young Women's Christian Association is a similar organization. It was founded in 1857 in England and in the following year in America. The British headquarters are at 17, Clifford Street, W.1.

YOUNGSTOWN. City of Ohio, U.S.A. It stands on Mahoning river, 64 m. E. by S. of Cleveland, and is served by the Baltimore and Ohio and other rlys. There are blast furnaces, iron and steel works, and rolling mills. Pop. 180,680.

YPRES (Flemish Yper). Town of Belgium, in West Flanders. It lies in flat country, overlooked by low ridges to the E. and by the higher hills of the Kemmel chain, 36 $\frac{1}{2}$ m.

Ypres. The cathedral, in course of rebuilding after its destruction by bombardment in 1914-18

by rly. S.W. of Bruges. During the Great War the town was almost completely destroyed, by German bombardment, only a few fragments of the Cloth Hall and of S. Martin's church remaining. The Cloth Hall, on the Grand Place, built in the 13th and 14th centuries, was one of the most remarkable buildings of its kind in Belgium. The church of S. Martin, formerly the cathedral, was chiefly built in the 13th century, with 15th century tower. Most of the buildings have been restored. In 1927 a memorial arch, known as the Menin Gate (q.v.), was erected on the Menin Road at Ypres in honour of the fallen.

YPRES, BATTLES OF. The four battles of Ypres were fought between the Germans and the Allies in the Great War. The first battle, Oct.-Nov., 1914, was a great German offensive, with the Channel ports as its objective. On the British left were French and Belgian troops. On Oct. 21 the British 1st corps (Haig) took up its position on the left of the British 7th division in what afterwards became known as "The Salient" of Ypres, and advanced towards Passchendaele just at the moment when the 4th German army was opening its great offensive. The Germans drove back the French under Mitry and threatened the British left flank. On Oct. 29, at the centre of the salient the Germans broke through the British front near Gheluvelt on the Ypres-Menin road. British reserves counter-attacked

and recovered almost all the lost ground. On Oct. 30 the Germans were repulsed at Messines, but carried Zandvoorde and Hollebeke, and the British were pushed back to near Wytshaete and St. Eloi. On the following day the Germans made a furious attack on Gheluvelt, held by only 2,000 infantry, and carried it. Beyond that point they were stopped by a most gallant counter-attack of the 2nd Worcesters, but Messines fell to them. After a day's fighting died down.

The second battle began with a serious attack which was delivered by the Germans on Nov. 22, 1915, along the N. section of the front from Steenstraete to near Langemark. In this battle the Germans used chlorine gas for the first time, and, being defenceless against it, French Colonial troops gave way, leaving the flank of the 3rd Canadian Brigade in the air. On April 23, with fearful casualties, two Canadian battalions counter-attacked and carried the Allied front 1,000 yards N. Further German attacks forced back the British line.

The third battle consisted of a series of fierce and costly engagements in which the British attacked the German positions held by the 4th army round the salient. The opening attack took place on July 31, 1917, and fighting continued until Nov. 6, when Canadian troops stormed Passchendaele. The British casualties reached 400,000.

The fourth battle, which is sometimes called the battle of the Lys, opened on April 9, 1918. It was the continuation in the N. of the great German offensive described as the second battle of the Somme (q.v.). It opened on April 9 with a strong infantry attack on the Portuguese front in the sector on both sides of the Lys, from Richebourg l'Avoué to Picantin. The Portuguese, after a brief resistance, were overpowered. Thus a great gap was torn in the British front, and through it poured the Germans. At Merville, on April 11, the Germans broke through the British front as far as a point S.W. of Bailleul. On April 12 Australian troops went into action and harried the German road to the sea. Later in the month the Germans stormed Kemmel Hill and gained more ground, but by the 28th they had definitely been held. See Bixchoote; Gheluvelt; Hill 60; Kemmel; Passchendaele, etc.

YPRES, JOHN DENTON PINKSTONE FRENCH, 1ST EARL OF (1852-1925). British soldier. He was born at Ripple, Kent, Sept. 28, 1852. After four years in the Britannia he joined the militia, and in 1874 obtained a commission in the 8th Hussars. He received his majority

in 1883, and the following year was attached to the force sent to relieve Gordon. In 1893 he became assistant adjutant-general of cavalry. In the South African War French commanded the cavalry division in Natal, won the battle of Elandslaagte, and relieved Kimberley.

1st Earl of Ypres
British soldier
Russell

On his return he was knighted and was given the command at Aldershot. In 1911 he was made chief of the imperial general staff in 1912, and in 1913 a field-marshal.

When the Great War began he was selected to lead the expeditionary force. He fought the battle of Mons and was in command of the famous

retreat and the later advance to the Aisne. He fought the first two battles of Ypres, and the battle of Festubert in May, 1915, and banded over the command to Haig in Dec., 1915. In 1916 a viscounty was conferred upon him. He took command of the forces in Britain until, in 1918, he was appointed viceroy of Ireland. In 1921 he retired and was created earl of Ypres. He died May 22, 1925. His book entitled 1914 was a justification of his war record.

YSER (Flemish IJzer). River of France and Belgium. Rising W. of Cassel, dept. of Nord, France, it flows past Dixmude, and enters the North Sea near Nieuport. Its length is 55 m.

BATTLE OF THE YSER. This battle, fought Oct. 15-31, 1914, was the successful defence of the line of the river Yser from Nieuport to Dixmude by the Belgian army with French support against the 4th German army. On Oct. 18 the Germans stormed Mannekeasvere (E. of the Yser) and Kewem; at Nieuport they were repulsed by the Belgians, and at Dixmude all their assaults shattered on the strong brigade of French marines. But the Allies had been forced back to the W. bank of the Yser except at Nieuport and Dixmude.

On Oct. 21 the assaults were renewed at these two points, and also against the centre of the Yser line at Schoorbeke. On the 29th the Germans made preparations for a final attack. They penetrated to Ramsappelle, beyond the embankment, but on the 31st the Belgians and the French drove out the Germans, hundreds of whom perished in the area flooded by the Belgians. In Oct., 1930, a monument commemorating the battle was unveiled at Nieuport.

YSSEL or **ISSSEL.** River of the Netherlands. A distributary of the lower Rhine, it branches off 2 m. above Arnhem, and flows N. and N.E. through the provs. of Gelderland and Overijssel (Overijssel) to enter the Zuider Zee near Kampen. On its banks are Zutphen, Deventer, and Kampen. Its length is 87 m.

YSTALYFERA. Iron working centre of Glamorganshire, Wales. It is 7½ m. N. of Neath, and is served by the L.M.S. Rly. Pop. 7,200.

YSTRADGYNLAIS. Coal mining centre of Brecknockshire, Wales. Standing on the Tawe, 12½ m. N.E. of Swansea, it is served by the G.W. Rly. Pop. 10,761.

YTHAN. River of Aberdeenshire, Scotland. It rises at Ythan Wells, 7 m. E. of Huntly, and flows past Fyvie and Ellon to the North Sea, where it discharges 12 m. N. of Aberdeen. Its length is 36 m.

YTTERBIUM. Rare element discovered in 1878 by Marignac in the mineral gadolinite. In 1907 Urbain announced that he had been able to separate ytterbium by fractional

crystallisation into two elements, which he called neoytterbium and lutecium. Its symbol is Yb, atomic weight 173.6, and atomic number 70. See Lutecium.

YTTRIUM. One of the metallic elements. Its chemical symbol is Yt, atomic weight 88.9, and atomic number 39. It is a dark grey powder, and is found in the mineral gadolinite and other rare earths.

YUCATAN PENINSULA. Land mass of Central America. It comprises parts of Mexico, British Honduras and Guatemala, and separates the Gulf of Mexico from the Caribbean Sea. It is about 400 m. long and some 200 broad. It contains forests of mahogany, rosewood, and other valuable woods, and produces henequen or sisal hemp, maize, rice, and tobacco. The peninsula is rich in antiquities. It remained a Spanish possession until 1821, and in 1852, after periods of independence, became part of Mexico.

The Mexican state of Yucatan covers 15,939 sq. m. Mérida is the capital. Pop. 358,221. See Aztec; Maya.

Yucca. Genus of plants of the order Liliaceae. See Adam's Needle.

YUGOSLAVIA. Kingdom of S. Europe. It came into being after the Great War as a result of the collapse of Austria-Hungary and the union of its Yugoslav (S. Slav) territories with the former kingdoms of Serbia and Montenegro. It includes Bosnia and Herzegovina, Croatia-Slavonia, Dalmatia, parts of Baranya, Bačka, and the Banat, and some small areas detached from Bulgaria. The frontier with Italy was determined by the treaty of Rapallo (q.v.), except as regards Fiume, which in 1924 was awarded to Italy, Baros going to Yugoslavia. In 1923 Serbia obtained from Greece a free zone in the harbour of Salonica. Belgrade is the capital and the largest city. The area of the kingdom is 96,134 sq. m. Pop. 13,290,000.

Yugoslavia is mainly an agricultural and pastoral country. The chief crops are maize, wheat, barley, oats, and rye, others including

the Croats began to agitate for autonomy, and so high did feeling run that in June four Croat deputies were shot during a debate in the National Assembly (Narodna Skupština).

On Jan. 6, 1929, King Alexander abolished the constitution, suspended parliament, and took the executive power into his own hands, choosing a ministry from persons outside political life. On Feb. 17, 1929, a royal decree brought into being a supreme legislative council of 17 nominated members (11 Serbs, 4 Croats, and 2 Slovenes); the old chamber had consisted of 315 representatives. The name of the state was changed in the following Oct. from the kingdom of the Serbs, Croats and Slovenes to the kingdom of Yugoslavia. See Belgrade; Serbia.

YUKON. Territory of Canada. Previously part of the North-West Territories, it was made into a separate political unit in 1898, after the discovery of gold on the Klondike. It is bounded by the Arctic Ocean, Alaska, British Columbia, and the North-West Territories. Mt. Logan is 19,540 ft. high; Mt. St. Elias and several other peaks are over 15,000 ft. The chief river is the Yukon, which flows N.W. into Alaska, and, after a total course of 2,300 m., enters the Bering Sea.

The territory is governed by a Gold commissioner and a territorial council of three members. Dawson is the capital; White Horse, in the S., is a mining settlement. The chief industry is mining, the minerals including gold, silver, lead, coal, and copper. Big game and fur-bearing animals are plentiful. There is a rly. from Skagway, in Alaska, to White Horse. The area is 207,076 sq. m. Pop. (1921) 4,157; in 1901 it was 27,219.

YUNCA (Quichua Yucacuna, inhabitants of a hot land). Name of an ancient Peruvian nation. They lived on the Pacific coast, with their capital near the modern city of Trujillo. Yunca culture produced some of the greatest prehistoric works of S. America. See Peru.

Yuriev. Russian name of the Estonian town Tartu (q.v.)

fruit and sugar beet. Minerals include coal, iron, copper, lead, chrome, and antimony. There are over 6,000 m. of rlys., mostly controlled by the state. A passenger air line was opened in 1928 between Belgrade and Zagreb (Agram). Yugoslavia unites under one rule the majority of the S. Slavs, who, early in 20th century, were living under six different governments and were represented in 14 different national or provincial parliaments. In 1928

Yugoslavia Map of the kingdom composed of the former states of Serbia and Montenegro and parts of Bulgaria and the former Austrian empire

Z. Twenty-sixth letter of the English and twenty-fifth of the Latin alphabet. It is a soft sibilant. In the Latin alphabet its use is reserved for Greek words. Its usual English value is that of *s* in *rose*. The words in modern English beginning with *z* are of foreign origin. See Alphabet; Phonetics.

ZADKIEL. Pseudonym of Riebard James Morrison (1795-1874), writer on astrology and astronomy. Born June 15, 1795, he entered the navy in 1806, becoming lieutenant in 1815, served in the coastguard, 1827-29, and in 1831 founded *The Herald of Astrology*, known later as *Zadkiel's Almanac*. He died April 5, 1874.

ZAGHLUL, SAAD OR SAADALLAH (1852-1927). Egyptian nationalist leader. Born at Biana, he was educated at the university of Al Azhar, and took part in Arabi's rebellion. He then became actively associated with the Egyptian national movement, and in 1906 was minister of education and later of justice. Dismissed from office, he began to show anti-British tendencies and inaugurated a furious anti-British campaign. He was arrested in Dec., 1921, but, allowed to return to Egypt, was prime minister, Jan.-Nov., 1924. He died Aug. 23, 1927.

Zagreb. Alternative name for the Yugoslavian town Agram (q.v.).

ZAHAROFF, SIR BASIL (b. 1850). Greek financier. A prominent member of the Greek community in London, he was naturalised in France, where he also lived. His munificent donations to charity and science included £25,000 to the British Government to endow a professorship of aviation attached to the Imperial college of science. He was created G.B.E. in 1918 and G.C.B. in 1919.

Sir Basil Zaharoff, Greek financier

ZAMA. City in the Roman prov. of Numidia. Five days' march W. of Carthage, near Sicca Veneria (El Kef), it was the scene of the defeat of Hannibal by the younger Scipio in 202 B.C. which ended the second Punic War. See Hannibal.

ZAMBEZI. River of Africa. It rises in Angola near the headstreams of the Kasai, an affluent of the Congo, and flows with a great double curve to its mouth in Mozambique on the E. coast of the continent. It is navigable for 400 m. to its mouth, where is a delta covering 2,500 sq. m. The chief affluent is the Shire (q.v.). Its length is some 1,600 m. The Trans-Zambezia rly., 175 m. long, connects Dondo, on the Beira Junction Rly., with Murraça, on the S. bank of the river. It has been decided to build a bridge across the river to give rly. connexion between Nyasaland and Beira. See Victoria Falls.

ZAMIA. Genus of perennial palm-like or fern-like plants of the order Cycadaceae. They are natives of tropical America and the West Indies. The leaves are produced one at a time, and form a crown. In some species they are 8 ft. or more in length. The fruit of the zamia is in the form of cones.

ZANGWILL, ISRAEL (1864-1926). British novelist. Born in London, the foundation of his literary reputation was his series of masterly studies of Jewish life, of which *Children of the Ghetto*, 1892, is the best known. His other works include *Ghetto Tragedies*, 1893; *The King of Schnorrers*, 1894; *The Master*, 1895;

Israel Zangwill, British novelist
Russell

Dreamers of the Ghetto, 1898; *They That Walk in Darkness*, 1899; *The Mantle of Elijah*, 1900; *Ghetto Comedies*, 1907. Among his plays are *Merely Mary Ann*, 1903; *The Melting Pot*, 1908; *The War God*, 1911; *Too Much Money*, 1918; *The Voice of Jerusalem*, 1920. He died Aug. 1, 1926.

ZANTE. One of the Ionian Islands, a department of Greece. Currants are exported. The chief town is also named Zante. Pop. dept., 40,492; town, 11,609.

ZANZIBAR. British protectorate in E. Africa. It consists of the islands of Zanzibar and Pemba (q.v.) and adjacent small islands. Zanzibar island lies off the N.E. coast of Tanganyika Territory, 25 m. N. of Dar-es-Salaam. The clove industry is the most important, the protectorate yielding the bulk of the world's supply. There is cable communication with Europe, and both Zanzibar and Pemba have wireless stations. The area of Zanzibar island is 640 sq. m. Zanzibar town, on the W. coast of the island, has a magnificent harbour. Pop. island, 128,099; town, 38,700.

In 1832 the Imam of Muscat made Zanzibar town his capital, but on his death in 1856 his dominions were divided between his sons, and the African possessions were declared independent of the parent state. They included the island of Pemba and a coastal strip on the mainland. In 1890 the islands were declared a British protectorate, the mainland territory being divided between Germany, Italy, and Great Britain. The British mainland portion is now the Kenya Protectorate. In 1926 executive and legislative councils were set up, presided over respectively by the sultan and the British resident. See Africa.

ZARA. Seaport of Dalmatia, assigned to Italy by the treaty of Rapallo (q.v.). It is on the Adriatic Sea, 72 m. N.W. of Spalato (Split), and contains Roman remains and relics of Venetian rule. The round church of S. Donatus was built in the 9th century over the pavement of the Roman forum. The Romanesque cathedral dates from the 13th century. Pop. 18,779.

Zarathustra. Founder of the religion of ancient Persia and the Parsees, known as Zoroaster (q.v.).

ZEALAND (Dan. Sjaelland). Island of Denmark (q.v.), containing most of the capital, Copenhagen. It lies between the Great Belt and the Sound, its N.E. part being barely 3 m. from the coast of Sweden. To the N. is the Kattegat, and to the S. are the islands of Laaland, Falster, and Møen, which separate it from the Baltic Sea. The area is 2,680 sq. m. Pop., including Møen, Amager, and adjacent islets, 1,270,000.

ZEBRA. Group of animals of the horse family, found only in Africa. They are distinguished by the elaborate black striping on their tawny coats. The common or mountain zebra (*Equus zebra*) occurs in S. Africa. Grévy's zebra, found in Somaliland and Shoa, is larger than the mountain species. The ground colour of its pelt is almost white, and the stripes are very narrow and numerous. A rare species, Foà's zebra, confined to the mountains of the Zambezi dist., is distinguished by a peculiar arrangement of its narrow stripes. Burchell's zebra (*E. Burchelli*) which is found on the South African plains, resembles the variety known as the quagga, and has a tail like a horse. See Quagga.

Zebra. Grévy's species, distinguished by its large size and closer stripes

ZEBU (*Bos Indicus*). Humped race of horned cattle. They are bovine mammals centring in India, but represented by numerous

Zebu. Domesticated ox used in India for draught purposes
Gambier Bolton, F.Z.S.

varieties in all tropical countries. They are mainly kept for work, for which their ability to withstand the tropical sun, tropical parasites and infectious diseases, and their wiry frame, render them suitable.

ZECHARIAH. Minor prophet of the Old Testament. He prophesied from the second to the fourth year of Darius Hystaspis. The first six chapters of his book consist of a series of visions dealing with the circumstances of his own time. The remainder is obscure in meaning and of uncertain date; but it appears to be the work of some anonymous writer shortly after the time of Alexander the Great.

ZEDEKIAH. Last king of Judah. The youngest son of Josiah, he was placed on the throne by Nebuchadnezzar when Jehoiachin was taken captive to Babylon. He was 21 years old when he became king, and his reign lasted for 11 troublous years. Against the warnings and advice of Jeremiah he joined in an intrigue against the king of Babylon. His eyes were put out, and he spent the rest of his life as a prisoner at Babylon.

ZEDOARY (*Cureuma zedoaria*). Perennial herb of the order Zingiberaceae. A native of the East Indies, it has tuberous roots, and broad leaves which are silky beneath. The red, tubular flowers are produced in spikes. The tubers are used for making a perfume and as an aromatic tonic; *C. aromatica* is used for similar purposes. The tubers of *C. longa* yield turmeric.

Zedoary. Aromatic tuberous roots and spike of flowers

ZEEBRUGGE. Town of Belgium, in the prov. of W. Flanders. It lies on the coast, 8 m. by rly. N. of Bruges at the mouth of the canal which links Bruges with the sea. A train ferry service with Harwich was opened in 1924. In the Great War the Germans made it a centre of the coastal defences and a submarine base for war on allied shipping.

ATTACK ON ZEEBRUGGE. This was a British naval operation undertaken with the object of blocking the exit of the Bruges canal at Zeebrugge so as to prevent the passage of German submarines. On the night of April 22-23, 1918, a British naval contingent under vice-admiral Sir R. Keyes (q.v.) crept across the Channel and dashed into the harbour of Zeebrugge. A landing was effected on the mole to distract attention, while three blockships, filled with cement, were sunk in the canal. The old cruiser, *Vindictive*, and the ferry boats *Iris* and *Daffodil* carried the landing parties, who blew up the viaduct. See Carpenter, A. F. B.; Ostend; *Vindictive*; also illus. p. 1393, 1456.

Zeerust. Town in the Transvaal. It is 149 m. by rly. N.N.W. of Johannesburg, and lies in the fertile Marico valley. Pop. 2,000.

ZENANA (Persian, xanana, from zan, woman). Term used for a Hindu harem, i.e. for the apartments in which the women of a family are secluded, and also for the women.

ZEND-AVESTA. Name by which the sacred books of the Parsees are known in the West. Correctly, the name should be Avesta and Zenda, Law and Commentary. Written originally in Zend, a language allied to Sanskrit, translated into Pahlavi about the 3rd cent. A.D., and later into Parsee, what exists is regarded as a fragment. The work is attributed in part to Zoroaster (q.v.).

ZENO (b. 490 B.C.). Greek philosopher. He lived at Elea in Italy. Friend and associate of Parmenides, he is chiefly remembered as the author of the famous paradoxes of Achilles and the Tortoise and the Arrow.

Another Zeno (c. 340-264 B.C.) was a Greek philosopher, founder of the Stoic school of philosophy, and known as Zeno of Citium, a town in Cyprus. In succession an adherent of the Cynic, Megarian, and Academic schools, but dissatisfied with each, about 310 he founded a new system and a school of his own at Athens. He opened his school in the Stoa Poikile (painted porch), and was its president for fifty-six years. See Stoicism.

ZENO (426-491). East Roman emperor, 474-491. An Isaurian by birth, he became chief of the bodyguard of Leo I, whose daughter Ariadne he married and whom he succeeded. Through the intrigues of Verina, widow of Leo I, her brother Basiliscus was proclaimed emperor. Zeno fled to Isauria, but the people soon tired of Basiliscus and Zeno was re-instated, and reigned until 491.

ZENOBLIA. Queen of Palmyra; A.D. 267-272. Famed for her beauty and strength of character, she was the wife of Odenathus and after his assassination became regent for her son, Vaballath. While Claudius II was repelling an invasion of the Goths, she occupied Egypt, A.D. 270, and after Aurelian had been defeated by the Goths, she proclaimed her son Augustus. Aurelian, however, defeated her at Emesa, and took Palmyra, 273. Zenobia was taken prisoner, and spent her remaining years in retirement at Tibur. See Aurelian; Palmyra.

ZEOLITE. In mineralogy, an important group of hydrous silicates of aluminium, sodium, and calcium. The group includes the minerals analcite, laumontite, natrolite, stilbite, and chabazite. They are nearly all secondary minerals, and are found in fissures and cavities of basalts and similar rocks.

ZEPHANIAH. Minor prophet of the O.T. in the days of King Josiah. A son of Cushi, probably of the royal house, his short book has been called a compendium of prophecy, dealing first with universal judgement for sin, and then briefly with universal salvation.

ZEPHYRUS. In Greek mythology, the personification of the west wind. He was a son of Eos, the Dawn, and was regarded as beneficent to sailors, as opposed to such violent winds as Aquilo, the N.E. wind.

ZEPPELIN, FERDINAND, COUNT (1838-1917). German airship designer. Born at Constance, July 8, 1838, he joined the army at the age of 20. Retiring in 1891, he devoted the remainder of his life to constructing airships of a rigid type. In 1906 he made a successful airship flight of 60 miles in two hours. The German government then came to his help, and in 1908 his fourth airship, passed the government tests. A national Zeppelin fund was started, and thereafter numerous airships were built. He died March 8, 1917. See Aeronautics; Air Raid; Airship.

Count Zeppelin, German airship designer

ZERMATT. Village and tourist centre of Switzerland. It stands in a valley surrounded by mountains, at an alt. of 5,315 ft., 22 m. by rly. S. of Visp. Near the base of the Matterhorn (q.v.) and Monte Rosa, it is the starting point of the rly. to the top of the Gornergrat. Pop. 750.

ZERO. Mathematical symbol which signifies the absence of quantity or number. It is written 0. In thermometry it is used as one of the fixed points of temperature.

Absolute zero (-273° C.) is the temperature at which the molecules of a gas exert no pressure on the sides of a containing vessel. Absolute zero has not been reached, but by 1922 a scientist had got within three degrees of it by allowing liquefied helium to boil. See Heat.

ZETLAND, MARQUESS or. British title borne since 1892 by the family of Dundas. In 1762 Lawrence Dundas, a contractor and an M.P., was made a baronet. The family obtained estates in Shetland, and Sir Thomas, the 2nd baronet, was made a peer as Baron Dundas in 1794. His son, the 2nd baron, was made earl of Zetland in 1838, this being a variant spelling of Shetland. Lawrence (1844-1929), the 3rd earl, was lord-lieutenant of Ireland, 1880-92, being made a marquess on his retirement.

His son Lawrence, the 2nd marquess (b. 1876), made a reputation as a traveller, politician, and writer. As earl of Ronaldshay he was Unionist M.P. for Horsey, 1907-16, and governor of Bengal, 1917-22.

ZEUS. In Greek mythology, the supreme god, identified by the Romans with Jupiter (q.v.). A god of the weather, especially thunder and rain, he was associated with Thessaly, especially Mt. Olympus. His chief shrine and oracle were at Dodona, where the oak was sacred to him. Son of Cronos and Rhea, he dethroned his father, and overthrew the Titans and Gigantes. His chief consort is Hera, and among his many children are Athena and Apollo. See Hera; Olympia; Pergamum; Titans; also illus. above.

ZIGGURAT. Temple-tower constructed in diminishing stages, in Babylonia and Assyria. The word means a high place. The external ascent, usually spiral, was sometimes an upright stairway. See Ur; also illus. p. 1373.

ZIMBABWE (Karanga, houses of stone). Bantu name for various ancient stone strongholds, especially in S. Rhodesia. Great Zimbabwe denotes three adjacent groups of ruins 17 m. S.E. of Victoria.

Explored by J. T. Bent in 1891, they were found to comprise an irregular oval 331 ft. in circuit, enclosed by a wall of unmortared granite blocks, in parts 31 ft. high and 15 ft. thick at the base. An inner parallel wall 190 ft. long forms a narrow passage from one entrance to a confined area containing a solid conical tower 31 ft. high and 57 ft. round the base. Within the ruins were found steatite carvings, especially of hawk-like birds, bowls, phallic emblems, crucibles, an ingot-mould of an old Phoenician type, and gold objects. In 1928 the British Association organized an expedition to examine the ruins, and in 1930 fresh discoveries were made.

ZINC. One of the metallic elements. Its chemical symbol is Zn, atomic weight 65.38; atomic number 30. When pure it is a bluish-white crystalline metal, brittle at ordinary temperatures, but malleable between 100°-200° C., after which it becomes extremely brittle. It is a fair conductor of electricity, and is known in the trade as spelter.

The metal is not found native in any quantity. The chief sources are the sulphide, sphalerite or blende, and the carbonate, calamine. Red zinc ore is the monoxide. Zinc ores occur in Cumberland, Derbyshire, Cornwall, and N. Wales in Britain; in Belgium, Poland, Germany, Spain, Sardinia, etc., on the Continent; in the U.S.A., etc. In 1929 the world's output was 1,611,610 tons, of which the U.S.A. furnished 628,062 tons, and Belgium 220,315 tons.

Zinc is prepared by conversion of the ores into the oxide, which is afterwards distilled with carbon. Zinc is used for galvanising iron wire, and iron sheets for roofing, as it tarnishes only slowly in the air. It is one of the alloys of brass, German silver, etc., and is widely employed as a chemical reagent and in electric batteries.

ZINNIA. Small genus of annual and perennial herbs of the order Compositae. Natives of Central America, they have opposite, undivided leaves, and brightly coloured flower heads. Zinnias, from which most of the garden varieties have been derived, is an annual.

Zinnia. Bright-coloured flower heads and leaves

ZION, MOUNT. One of the hills on which Jerusalem was built. S. of Mt. Moriah, on which the Temple stood, it was called the City of David. The name Zion is sometimes used in a general sense for Jerusalem (q.v.).

ZIONISM. Jewish movement founded by Theodor Herzl (1860-1904). It arose from a pamphlet, Der Judenstaat, 1896, in which Dr. Herzl advocated the establishment of an autonomous Jewish state in Palestine. Orthodox Messianic Judaism condemned it. Under

the present mandatory government of Palestine the Zionist Organization is an officially recognized public body which advises and cooperates with the government in all that concerns Jewish interests. In 1929 the third of three serious outbreaks in Palestine between Moslems and Jews took place. A commission was appointed to investigate the cause of the riot. See Jerusalem; Jews; Palestine.

ZIRCONIUM. One of the metallic elements. Its chemical symbol is Zr, atomic weight 91, atomic number 40. It occurs either as a black amorphous powder or a lustrous grey crystalline solid. Its chief source is the mineral zircon, and it is found in certain of the rare earths. The metal is alloyed with steel to make armour plate and high speed tool steels.

ZISKA OR **ZIZKA**, JOHN (c. 1360-1424). Bohemian soldier. Born at Trocznov, Bohemia, he served as a soldier of fortune in the German, Hungarian, and English armies. Returning to Bohemia in 1419, he turned the Hussite army into a disciplined host, his followers being called Taborites. He defeated the Germans at Prague, 1420, and though blinded, 1421, won many more victories. He died Oct. 11, 1424.

ZITHER. Musical stringed instrument. Popular in the highlands of Bavaria, Styria, and Tirol, it is a shallow box of about 20 ins. long, 10 ins. wide, and 8 ins. deep, and having a round opening in the upper sound-board. The strings fall into three categories: (1) five melody strings of wire tuned like the viola (q.v.), but having the A duplicated; (2) a varying number of accompaniment strings of gut; and (3) twelve bass strings, an octave lower in pitch than the accompaniment strings on the side which is farthest from the player.

Zither. Stringed musical instrument.

ZOAR. One of the five cities of the Plain near the Dead Sea. At the destruction of Sodom and Gomorrah it was spared as a refuge for Lot (Gen. 18, 19).

ZODIAC. In astronomy, a belt of the sky 16° wide containing the apparent paths of the sun, moon, and the chief planets. The zodiac was divided into twelve signs of 30° each. All these signs have their own names and symbols and are as follows: Aries; Taurus; Gemini; Cancer; Leo; Virgo; Libra; Scorpio; Sagittarius; Capricorn; Aquarius; and Pisces. The first six of these signs are N. of the equator, the remainder S. See Aries; Equinox; Precession; Sagittarius.

ZODIACAL LIGHT. This is a faint luminosity that appears in the W. sky after twilight or in the E. before dawn. It is thought to be caused by the reflection of sunlight from meteoric masses still in the original plane of the solar system.

ZOOTROPE. Mechanical invention, sometimes termed a wheel of life, conveying an impression of figures in actual motion. It consists of a rotating drum or cylinder perforated with slits. On the inside surface of the drum are represented figures in different progressive actions of running, jumping, etc. The drum being made to revolve, a visual impression of continuous motion is imparted to the various objects which are represented therein, when viewed through the slits. Pron. zoy-trope.

Zoetrope, consisting of rotating drum perforated with slits.

ZOFFANY, JOHANN (1725-1810). German painter. Born at Ratisbon, he studied in Rome, and in 1758 came to England, where he established a reputation for portraits of actors in character and conversation pieces. He became R.A. in 1769, worked in Italy, 1772-79, and in India, 1783-90, and died at Kew.

Johann Zoffany, German painter.

ZOLA, EMILE EDOUARD CHARLES-ANTOINE (1840-1902). French novelist. Born in Paris, April 2, 1840, in 1861-64 he started literary work with journalism, and the Contes à Ninon, issued in 1864, followed by the novel, *Thérèse Raquin*, 1867. Zola was one of the school of naturalist or realist novelists. His main contribution to this theory was the Rougon-Macquart series of twenty novels. In the trilogy of Lourdes, 1894; Rome, 1896; and Paris, 1898, Zola traced the movements of a priest from Catholicism to free thought. Zola's great popularity was affected by his violent championship of Dreyfus (q.v.). In Jan., 1898, he published the denunciation of the anti-Dreyfus conspiracy, beginning with *J'accuse* in *L'Aurore*, and was sentenced to a year's imprisonment. He was accidentally poisoned by tea in Paris on the night of Sept. 28-29, 1902.

Emile Zola, French novelist.

ZONE (Gr. zōnē). Division of the earth's surface determined by astronomical considerations. The zones are bounded by parallels of latitude and include two frigid, two temperate, and one torrid zone. The last lies 23° 28' each side of the equator, and the first two between the poles and 66° 32' N. and S., the temperate zones lying between the frigid and torrid zones. See Time.

ZOOLOGICAL GARDENS. Area set apart for the exhibition and study of living animals. The Jardin des Plantes, Paris, the zoological garden, Berlin, the National Zoological Park at Washington and the zoological gardens at Dublin are some of the largest. Those of the Zoological Society of London in Regent's Park, founded 1828, include mammals, birds and reptiles from all parts of the world. By the building of the Mappin Terraces a greater amount of freedom has been given to many of the animals. In 1927 the trustees bought a tract of land at Whipsnade (q.v.).

ZOOLOGY (Gr. zōon, living creature; logos, discourse). That branch of the science of biology concerned with the structure, life, habits, and classification of animals as distinguished from the other branch, botany which deals with plants. See Animal Biology; Mammal, etc.

Zodiac. Representation of the signs of the zodiac, from a 16th century MS.

habits, and classification of animals as distinguished from the other branch, botany which deals with plants. See Animal Biology; Mammal, etc.

ZOROASTER OR **ZARATHUSTRA** (Pers. Zaradusht). Founder or prophet of the old Persian religion. He figures as an historical person in the oldest portion of the Zend-Avesta (q.v.). He is believed to have been born in NW Persia, not later than 660 B.C.

ZOROASTRIANISM. Religion of ancient Persia. Named after its founder, it aimed at a reformation in the life of the people. It was monotheistic, and inculcated hospitality, philanthropy, and benevolence as against Turanian brigandage and the polytheistic idolatry, and licentiousness of the primitive Aryans. Its central idea was of a world contest between forces of good and evil, or between light and darkness, personified as Ormuzd and Ahriman. Flourishing between the 6th and 4th centuries B.C., it was made the state religion under the Sassanids, A.D. 227-651, and suffered partial extinction by Mahomedanism. Great reverence was paid to the elements.

Zouave in Moorish uniform.

ZOUAVE. Name given to a certain class of African infantry in the service of France, originally recruited from the Zwawa, a tribe of Berbers, in 1831. To-day they consist exclusively of Frenchmen, and are regarded as a corps d'élite. The uniform is an adaptation of Moorish dress, consisting of the short blue Zouave jacket, the baggy red trousers being distinctive.

ZUCCHERO, FEDERIGO (1543-1609). Italian painter. Born at St. Angelo in Vado, he studied under his brother Taddeo. After cooperating with the latter in the decoration of the Vatican, Belvedere, and other buildings, he visited France and the Netherlands, and, in 1574, England, where he painted portraits of Queen Elizabeth and Mary Queen of Scots. See illus. pp. 174, 556, 1018, 1194.

ZUG. Lake in Switzerland. Formed by the river Aa, and situated mostly in canton Zug and partly in Schwyz, it is 9 m. long and 2½ m. broad. It gives its name to a canton, the capital of which is Zug, to the S of Zürich. Pop. 9,500. Pron. Toop.

ZUIDER ZEE OR **ZEYDER ZEE** (Dutch, South sea). Inland sea of the Netherlands. The islands of Texel, Vlieland, Terschelling, and Ameland lie across the N. opening. Its greatest length is about 83 m., and its greatest width about 34 m. The chief islands are Wieringen, Marken, Urk, and Schokland, and the North Sea Canal joins it with the North Sea at Ymuiden (Ijmuiden). Ports include Amsterdam, Nieuwediep, Kampen, Harderwijk, and Harlingen. The fishing is important.

The Zuider Zee in early historical times was forest land, the enclosing islands being part of the mainland. During the 12-14th centuries enormous encroachments were made by the sea. Since the 17th century the prov. of N. Holland has regained several thousands of acres. In 1918 a bill was passed providing for the drainage of the Zuider Zee, and work was begun in 1924 on the construction of a great dyke from the N. Holland coast to Wieringen, and thence to Friesland. Pron. Zoider zay. See Netherlands.

ZULOAGA, IGNACIO DE (b 1870) Spanish painter. Born at Eibar, Vizcaya, he came of a family noted in Spanish art. He studied in Paris, 1888-93, and exhibited at the Salon in 1898. His portrait group Daniel de Zuloaga and his Daughters, 1891, firmly established

his reputation. Then followed a period of travel, as a result of which his later works acquired a new vigour and characterisation, chief among his subjects being bull-fighters, fruit-sellers, and various other Spanish types.

I. de Zuloaga.
Spanish painter.
See portrait.

ZULULAND. Division of Natal, South Africa. N. and N.W. it is bounded by Mozambique, Swaziland, and the Utrecht and Vryheid dists. of Natal, E.

by the Indian Ocean and W. by the rest of Natal.

Beyond the coastal plains the country consists of ranges of hills and plateaux. It is well watered. The inhabitants are mainly Zulus, with a sprinkling of Basutos and other races.

ZULU WARS. The Zulus about 1820 became a powerful kingdom. Chaka was succeeded by Dingaan, who was deposed in 1839. In 1873 Cetshwayo became king, and in 1879 he came into conflict with the British forces. Several engagements took place, notably at Isandhlwana, Jan. 22, 1879, at Rorke's Drift on the same day, and at Ulundi, July 4. At the last battle the power of the Zulus was completely broken. Zululand was declared British territory in 1887. The area is 10,427 sq. m. Pop. about 260,000. See Cetshwayo; Isandhlwana; Natal; South Africa.

ZÜRICH. City of Switzerland. Capital of the canton of Zürich, it stands at the N. end of the lake of Zürich 41 m. by rly. and 25 m. direct N.N.E. of Lucerne. The Limmat separates the Grosse from the Kleine Stadt. The Grossmünster is a Romanesque church with Gothic features, built 1090-1150, 1225-1300, in which Zwingli preached. Other fine churches include the Frau Münster, built in the 13th and 14th centuries, and modernised in 1912, and S. Peter's, dating partly from the 13th century. The Swiss National Museum, a magnificent building opened in 1898, occupies the tongue of land between the Limmat and its affluent, the Sihl. The university was founded in 1832. The lake of Zürich is 25 m. long, and its breadth is 2½ m. Pop. 222,900.

ZUTPHEN. Town of the Netherlands, in Gelderland. It lies on the IJssel (Yssel), 19 m. by rly. N.E. of Arnhem. There is trade in timber and dairy and agricultural produce. The Great Church (S. Walpurgis) is a 12th century foundation; it has a pre-Reformation library. The Wyngaert tower and the remains

Zurich. General view looking towards the lake and the snow-clad Albis Alps. See above.

of the town walls are notable. The battle of Zutphen, between the English and Spaniards, was fought Sept. 22, 1586. Pop. 20,000.

ZWINGLI, ULRICH (1484-1531). Swiss religious reformer. Born at Wildhaus, Jan. 1, 1484, he became a parish priest in 1506, publicly denounced the authority of the pope

in matters of faith, and opposed the sale of indulgences. In 1518 he became pastor at Zürich, and under a Protestant government was able to teach reformed doctrines freely. He broke with Luther over the doctrine of the Eucharist. He was killed fighting for Zurich, Oct. 11, 1531.

ADDENDA AND CORRIGENDA

Later information and events, occurring while the Encyclopedia was at press are noted below together with corrections of the few errors which had escaped editorial vigilance before printing.
